lithium bromide [INORG CHEM] $LiBr \cdot H_2O$ A white, deliquescent, granular powder with a bitter taste, melting at 547°C; soluble in alcohol and glycol; used to add moisture to air-conditioning systems and as a sedative and hypnotic in medicine.

lithium carbonate [INORG CHEM] Li_2CO_3 A colorless, crystalline compound that melts at 700°C and has slight solubility in water; used in ceramic industries in the manufacture of powdered glass for porcelain enamel formulation.

lithium cell [CHEM] An electrolytic cell for the production of metallic lithium. [ELEC] A primary cell for producing electrical energy by using lithium metal for one electrode immersed in usually an organic electrolyte.

lithium chloride [INORG CHEM] $LiCl \cdot {}_2H_2O$ A colorless, water-soluble compound, forming octahedral crystals and melting at 614°C; used to form concentrated brine in commercial air-conditioning systems and as a pyrotechnic in welding and brazing fluxes.

lithium citrate [ORG CHEM] $Li_3C_6H_5O_7 \cdot 4H_2O$ White powder that decomposes when heated; slightly soluble in alcohol; soluble in water; used in beverages and pharmaceuticals.

lithium-drifted germanium crystal [ELECTR] A high-resolution junction detector, used especially for more penetrating gamma-radiation and higher-energy electrons, produced by drifting lithium ions through a germanium crystal to produce an intrinsic region where impurity-based carrier generation centers are deactivated, sandwiched between a *p* layer and an *n* layer.

lithium-drifted silicon detector [NUCLEO] A type of junction detector fabricated by applying a reverse bias to a *pn* junction consisting of a lithium-diffused *n*-type region on *p*-type silicon, causing the lithium ions to migrate toward the negative side and to compensate negative ions, fixed in the silicon crystal lattice, to create a wide depletion layer.

lithium fluoride [INORG CHEM] LiF Poisonous, white powder melting at 870°C, boiling at 1670°C; insoluble in alcohol, slightly soluble in water, and soluble in acids; used as a heat-exchange medium, as a welding and soldering flux, in ceramics, and as crystals in infrared instruments.

lithium fluoride dosimetry [NUCLEO] A method of dosimetry in which the radiation dose received by a sample of the phosphor lithium fluoride is determined by measuring the thermoluminescent output of the phosphor upon heating, following the irradiation.

lithium grease [MATER] Heat-stable, water-resistant lubricating grease with lithium salts of higher fatty acids (or lithium soaps of fatty glycerides) as a base; used for low-temperature service in aircraft.

lithium halide [INORG CHEM] A binary compound of lithium, LiX, where X is a halide; examples are lithium chloride, LiCl, and lithium fluoride, LiF.

lithium hydride [INORG CHEM] LiH Flammable, brittle, white, translucent crystals; decomposes in water; insoluble in ether, benzene, and toluene; used as a hydrogen source and desiccant, and to prepare lithium amide and double hydrides.

lithium hydroxide [INORG CHEM] LiOH; $LiOH \cdot H_2O$ Colorless crystals; used as a storage-battery electrolyte, as a carbon dioxide absorbent, and in lubricating greases and ceramics.

lithium iodide [INORG CHEM] LiI; $LiI \cdot 3H_2O$ White, water- and alcohol-soluble crystals; LiI melts at 446°C; $LiI \cdot 3H_2O$ loses water at 72°C; used in medicine, photography, and mineral waters.

lithium mica *See* lepidolite.

lithium molybdate [INORG CHEM] Li_2MoO_4 Water-soluble white crystals melting at 705°C; used as a catalytic cracking (petroleum) catalyst and as a mill additive for steel.

lithium nitrate [INORG CHEM] $LiNO_3$ Water- and alcohol-soluble colorless powder melting at 261°C; used as a heat-exchange medium and in ceramics, pyrotechnics, salt baths, and refrigeration systems.

lithium perchlorate [INORG CHEM] $LiClO_4 \cdot 3H_2O$ A compound with high oxygen content (60% available oxygen), used as a source of oxygen in rockets and missiles.

lithium stearate [ORG CHEM] $LiC_{18}H_{35}O_2$ A white, crystalline compound with a melting point of 220°C; used in cosmetics, plastics, and greases, and as a corrosion inhibitor in petroleum.

lithium-sulfur battery [ELEC] A storage battery in which the cells use a molten lithium cathode and a molten sulfur anode separated by a molten salt electrolyte that consists of lithium iodide, potassium iodide, and lithium chloride.

lithium tetraborate [INORG CHEM] $Li_2B_4O_7 \cdot 5H_2O$ White crystals that lose water at 200°C; insoluble in alcohol, soluble in water; used in ceramics.

lithium titanate [INORG CHEM] Li_2TiO_3 A water-insoluble white powder with strong fluxing ability when used in titanium-containing enamels; also used as a mill additive in vitreous and semivitreous glazes.

Lithobiomorpha [INV ZOO] An order of chilopods in the subclass Pleurostigmophora; members are anamorphic and have 15 leg-bearing trunk segments, and when eyes are present, they are ocellar.

lithocholic acid [BIOCHEM] $C_{24}H_{40}O_3$ A crystalline substance with a melting point of 184–186°C; soluble in hot alcohol; found in ox, human, and rabbit bile.

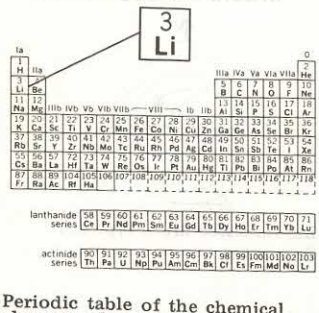
lithoclase [GEOL] A naturally produced rock fracture.

lithocyst [BOT] Epidermal plant cell in which cytoliths are formed. [INV ZOO] One of the minute sacs containing lithites in many invertebrates; thought to function in audition and orientation.

lithocyte [INV ZOO] A special cell in anthomedusae containing a statolith.

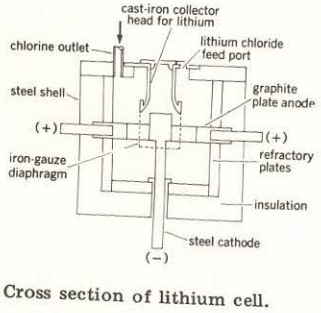
Lithodidae [INV ZOO] The king crabs, a family of anomuran decapods in the superfamily Paguridea distinguished by reduced

LITHIUM



Periodic table of the chemical elements showing the position of lithium.

LITHIUM CELL



Cross section of lithium cell.

last pereiopods and by the asymmetrical arrangement of the abdominal plates in the female.

lithodomous [ZOO] Burrowing in rock.

lithofacies [GEOL] A subdivision of a specified stratigraphic unit distinguished on the basis of lithologic features.

lithofacies map [GEOL] The facies map of an area based on lithologic characters; shows areal variation in all aspects of the lithology of a stratigraphic unit.

lithogenesis [PATH] The process of formation of calculi or stones. [PETR] The branch of science dealing with the formation of rocks, especially the formation of sedimentary rocks.

lithogeochemical survey [GEOCHEM] A geochemical survey that involves the sampling of rocks.

lithograph [GRAPHICS] Originally, a reproduction of a writing sample or a drawing made from a litho stone onto which the writing or drawing had been drawn with a greasy ink or crayon; now, a reproduction from litho metal plates produced by photolithography and run on an offset press.

lithographic film [GRAPHICS] Orthochromatic film used in the production of lithographic plates.

lithographic limestone [GEOL] A dense, compact, fine-grained crystalline limestone having a pale creamy-yellow or grayish color. Also known as lithographic stone; litho stone.

lithographic plate [GRAPHICS] A metal plate, usually having little porosity, on which an image is produced for lithographic printing.

lithographic stone *See* lithographic limestone.

lithographic texture [GEOL] The texture of certain calcareous sedimentary rocks characterized by grain size of less than 1/256 millimeter and having a smooth appearance.

lithography [GRAPHICS] A printing process in which a design is sketched with an oily ink or a litho crayon on a flat, smooth stone; in printing, the entire surface of the stone is wetted, and the design areas repel the water, but accept a greasy ink; a clean impression is then made by pressing a sheet of paper against the surface of the stone and running the whole through a press.

lithologic map [GEOL] A kind of geologic map showing the rock types of a particular area.

lithologic unit *See* rock-stratigraphic unit.

lithology [GEOL] The description of the physical character of a rock as determined by eye or with a low-power magnifier, and based on color, structures, mineralogic components, and grain size.

lithol red [MATER] Any of various pigments derived from combination of β-naphthol and Tobias acid; available as sodium, barium, and calcium toners and lakes; used in outside, drum, and toy enamels.

lithometeor [METEOROL] The general term for dry atmospheric suspensoids, including dust, haze, smoke, and sand.

lithomorphic [GEOL] Referring to a soil whose characteristics are derived from events or conditions of a former period.

lithopedion [MED] A retained fetus that has become calcified.

lithophagous [ZOO] Feeding on stone, as certain mollusks.

lithophile [GEOCHEM] **1.** Pertaining to elements that have become concentrated in the silicate phase of meteorites or the slag crust of the earth. **2.** Pertaining to elements that have a greater free energy of oxidation per gram of oxygen than iron. Also known as oxyphile.

lithophone *See* lithopone.

lithophysa [GEOL] A large spherulitic hollow or bubble in glassy basalts and certain rhyolites. Also known as stone bubble.

lithophyte [ECOL] A plant that grows on rock.

lithopone [MATER] A white pigment produced as a filtered, heated, quenched precipitate from reaction of barium sulfide and zinc sulfide; used as a pigment for paint, ink, filled leather, paper, linoleum, oilcloth, and cosmetics. Also known as Charlton white; Griffith's white; lithophone; Orr's white; zinc baryta white; zinc sulfide white.

lithosere [ECOL] A succession of plant communities that originate on rock.

lithosiderite *See* stony-iron meteorite.

lithosol [GEOL] A group of shallow soils lacking well-defined horizons and composed of imperfectly weathered fragments of rock.

lithospar [MINERAL] A combination of spodumene and feldspar which occurs naturally.

lithosphere [GEOL] **1.** The rigid outer crust of rock on the earth about 50 miles (80 kilometers) thick, above the asthenosphere. Also known as oxysphere. **2.** Since the development of plate tectonics theory, a term referring to the rigid, upper 100 kilometers of the crust and upper mantle, above the asthenosphere.

lithostatic pressure *See* ground pressure.

litho stone *See* lithographic limestone.

lithostratic unit *See* rock-stratigraphic unit.

lithostratigraphic unit *See* rock-stratigraphic unit.

lithostyle [INV ZOO] A static organ in Narcomedusae. Also known as tentaculocyst.

lithotomy [MED] Surgical removal of a calculus.

lithotope [GEOL] **1.** The environment under which a sediment is deposited. **2.** An area of uniform sedimentation.

lithotype [GEOL] A macroscopic band in humic coals, analyzed on the basis of physical characteristics rather than botanical origin.

lithuria [MED] A condition marked by excess of uric (lithic) acid or its salts in the urine.

litmus [MATER] Blue, water-soluble powder from various lichens, especially *Variolaria lecanora* and *V. rocella*; turns red in solutions at pH 4.5, and blue at pH 8.3; used as an acid-base indicator. Also known as lacmus; lichen blue.

litmus paper [MATER] White, unsized paper saturated by litmus in water; used as a pH indicator.

Litopterna [PALEON] An order of hoofed, herbivorous mammals confined to the Cenozoic of South America; characterized by a skull without expansion of the temporal or squamosal sinuses, a postorbital bar, primitive dentition, and feet that were three-toed or reduced to a single digit.

lit-par-lit [GEOL] Pertaining to the penetration of bedded, schistose, or other foliate rocks by innumerable narrow sheets and tongues of granitic rock.

Little Bear *See* Ursa Minor.

little brother [METEOROL] A subsidiary tropical cyclone that sometimes follows a more severe disturbance.

little cherry disease [PL PATH] A virus disease of sweet cherries characterized by small, angular pointed fruits which retain the bright red color of immaturity and never reach mature size.

Little Dipper *See* Ursa Minor.

little-drop technique [BIOL] A method for isolating single cells in which a drop of a cellular suspension containing a single cell, as determined by microscopic examination, is transferred with a capillary pipet to an appropriate culture medium.

Little Fox *See* Vulpecula.

little giant [MIN ENG] A jointed iron nozzle used in hydraulic mining.

Little Horse *See* Equuleus.

Little Ice Age [GEOL] A period of expansion of mountain glaciers, marked by climatic deterioration, that began about 5500 years ago and extended to as late as A.D. 1550–1850 in some regions, as the Alps, Norway, Iceland, and Alaska.

Little John [ORD] Name applied to a U.S. Army rocket system (318-millimeter) consisting of a surface-to-surface tactical missile, similar to but smaller than Honest John, and employing solid fuel.

little leaf [PL PATH] Any of various plant diseases and disorders characterized by chlorotic, underdeveloped, and sometimes distorted leaves.

little peach disease [PL PATH] A virus disease of the peach tree in which the fruit is dwarfed and delayed in ripening, the leaves yellow, and the tree dies.

Little Ruler *See* Regulus.

Little's disease [MED] Spastic diplegia of infants which is characterized by spasticity of the lower extremities; involves degenerative and atrophic cerebral changes as well as congenital malformation.

littoral current [OCEANOGR] A current, caused by wave action, that sets parallel to the shore; usually in the nearshore region within the breaker zone. Also known as alongshore current; longshore current.

littoral drift [GEOL] Materials moved by waves and currents of the littoral zone. Also known as longshore drift.

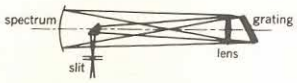
littoral sediments [GEOL] Deposits of littoral drift.

littoral transport [GEOL] The movement of littoral drift.

littoral zone [ECOL] Of or pertaining to the biogeographic zone between the high- and low-water marks.

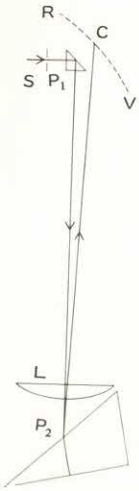
Littorinacea [PALEON] An extinct superfamily of gastropod mollusks in the order Prosobranchia.

LITTROW GRATING SPECTROGRAPH



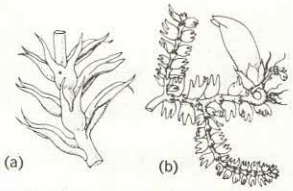
Littrow mounting of a plane grating.

LITTROW QUARTZ SPECTROGRAPH



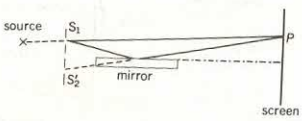
Littrow quartz spectrograph, typical arrangement for double-beam recording instrument. S, slit; P_1, totally reflecting quartz prism; L, autocollimating quartz lens; P_2, Littrow quartz prism; C, camera; RV, red to violet spectrum.

LIVERWORT



Leafy liverworts of the Jungermanniales. *(a) Herberta*, showing three ranks of equal bifid leaves *(after Muller)*. *(b) Lepidozia*, ventral aspect, showing reduced ventral leaves *(after A. Lorenz)*. *(From E. W. Sinnott and K. S. Wilson, Botany: Principles and Problems, 5th ed., McGraw-Hill, 1955)*

LLOYD'S MIRROR INTERFERENCE



Splitting of a light source with Lloyd's mirror. The slit S_1 and its virtual image S_2' constitute the double source. Part of the light falls directly on the screen at P, and part is reflected at grazing incidence from a plane mirror.

Littorinidae [INV ZOO] The periwinkles, a family of marine gastropod mollusks in the order Pectinibranchia distinguished by their spiral, globular shells.

Littrow grating spectrograph [SPECT] A spectrograph having a plane grating at an angle to the axis of the instrument, and a lens in front of the grating which both collimates and focuses the light.

Littrow mounting [SPECT] The arrangement of the grating and other components of a Littrow grating spectrograph, which is analogous to that of a Littrow quartz spectrograph.

Littrow prism [OPTICS] A prism having angles of 30, 60, and 90°, silvered on the side opposite the 60° angle; a lens used with it can serve both as a telescope and as a collimator.

Littrow quartz spectrograph [SPECT] A spectrograph in which dispersion is accomplished by a Littrow quartz prism with a rear reflecting surface that reverses the light; a lens in front of the prism acts as both collimator and focusing lens.

lituate [BOT] Having a forked member or part with the ends turned slightly outward, as in certain fungi.

Lituolacea [INV ZOO] A superfamily of benthic marine foraminiferans in the suborder Textulariina having a multilocular, rectilinear, enrolled or uncoiled test with a simple to labyrinthic wall.

lituus [MATH] The trumpet-shaped plane curve whose points in polar coordinates (r, θ) satisfy the equation $r^2 = a/\theta$.

Litzendraht wire *See* Litz wire.

Litz wire [ELEC] Wire consisting of a number of separately insulated strands woven together so each strand successively takes up all possible positions in the cross section of the entire conductor, to reduce skin effect and thereby reduce radio-frequency resistance. Derived from Litzendraht wire.

live [COMMUN] Being broadcast directly at the time of production, instead of from recorded or filmed program material. [ELEC] *See* energized.

live ammunition [ORD] Ammunition containing explosives or active chemicals, as distinguished from inert or drill ammunition.

live axle [MECH ENG] An axle to which wheels are rigidly fixed.

live center [MECH ENG] A lathe center that fits into the headstock spindle.

live chassis [ELECTR] A radio, television, or other chassis that has a direct chassis connection to one side of the alternating-current line.

live end [ACOUS] The end of a radio studio that gives almost complete reflection of sound waves.

live load [MECH] A moving load or a load of variable force acting upon a structure, in addition to its own weight.

live oil [MATER] An oil containing dissolved gas.

liver [ANAT] A large vascular gland in the body of vertebrates, consisting of a continuous parenchymal mass covered by a capsule; secretes bile, manufactures certain blood proteins and enzymes, and removes toxins from the systemic circulation. [MATER] Intermediate layer of dark-colored, oily material formed by hydrolyzation of acid sludge from sulfuric acid treatment of petroleum oil; insoluble in weak acid and oil.

liver failure [MED] Severe functional disability of the liver marked clinically by a variety of signs and symptoms, including jaundice, coma, and abnormal blood levels of such things as ammonia, bilirubin, and alkaline phosphatase.

liver fluke [INV ZOO] Any trematode, especially *Clonorchis sinensis*, that lodges in the biliary passages within the liver.

live-roller conveyor [MECH ENG] Conveying machine which moves objects over a series of rollers by the application of power to all or some of the rollers.

live room [ACOUS] A room having a minimum of sound-absorbing material.

liver phosphorylase [BIOCHEM] An enzyme that catalyzes the breakdown of liver glycogen to glucose-1-phosphate.

liverwort [BOT] The common name for members of the Marchantiatae.

live-virus vaccine [IMMUNOL] A suspension of attenuated live viruses injected to produce immunity.

living fossil [BIOL] A living species belonging to an ancient stock otherwise known only as fossils.

Livingstone sphere [ENG] A clay atmometer in the form of a sphere; evaporation indicated by this instrument is supposed to be somewhat representative of that from plant growth.

livingstonite [MINERAL] $HgSb_4S_7$ A lead-gray mineral with red streak and metallic luster; a source of mercury.

livor mortis [PATH] The reddish-blue discoloration of the cadaver that occurs in the dependent portions of the body due to gradual gravitational flow of unclotted blood.

livre [MECH] A unit of mass, used in France, equal to 0.5 kilogram.

lixiviate [CHEM ENG] To extract a soluble component from a solid mixture by washing or percolation processes.

lixuration *See* leaching.

lizard [VERT ZOO] Any reptile of the suborder Sauria.

Lizard *See* Lacerta.

lizard-hipped dinosaur [PALEON] The name applied to members of the Saurichia because of the comparatively unspecialized three-pronged pelvis.

L joint *See* primary flat joint.

Ljungström heater [MECH ENG] Continuous, regenerative, heat-transfer air heater (recuperator) made of slow-moving rotors packed with closely spaced metal plates or wires with a housing to confine the hot and cold gases to opposite sides.

Ljungström steam turbine [MECH ENG] A radial outward-flow turbine having two opposed rotation rotors.

LK virus [VIROL] A type of equine herpesvirus.

LL *See* line link.

llama [VERT ZOO] Any of three species of South American artiodactyl mammals of the genus *Lama* in the camel family; differs from the camel in being smaller and lacking a hump.

Llandeilian [GEOL] Upper Middle Ordovician geologic time.

Llandoverian [GEOL] Lower Silurian geologic time.

llano [ECOL] A savannah of Spanish America and the southwestern United States generally having few trees.

Llanvirnian [GEOL] Lower Middle Ordovician geologic time.

llebetjado [METEOROL] In northeastern Spain, a hot, squally wind descending from the Pyrenees and lasting for a few hours.

llerzolite [PETR] A form of periodotite containing olivine and monoclinic and orthorhombic pyroxenes.

LLL circuit *See* low-level logic circuit.

Lloyd's mirror interference [OPTICS] The interference pattern produced when part of the light from a slit falls directly on a screen, and part is reflected from a mirror whose surface makes a small angle with the incident beam.

lm *See* lumen.

LM *See* lunar excursion model.

L/M [NUC PHYS] The ratio of the number of internal conversion electrons emitted from the L shell in the de-excitation of a nucleus to the number of such electrons emitted from the M shell.

LMC *See* Large Magellanic Cloud.

L meson [PARTIC PHYS] A K-meson resonance having a mass of 1781±14 MeV (megaelectronvolts), and a width of 70 MeV; its decay modes are dominantly $K\pi\pi$, with some $K\omega$ (5%).

lm-hr *See* lumen-hour.

lm-sec *See* lumen-second.

lm/w *See* lumen per watt.

L network [ELECTR] A network composed of two branches in series, with the free ends connected to one pair of terminals; the junction point and one free end are connected to another pair of terminals.

LNG *See* liquefied natural gas.

LNG ship [NAV ARCH] A specially designed, insulated tanker for shipping liquefied natural gas.

loach [VERT ZOO] The common name for fishes composing the family Cobitidae; most are small and many are eel-shaped.

load [COMPUT SCI] **1.** To place data into an internal register under program control. **2.** To place a program from external storage into central memory under operator (or program) control, particularly when loading the first program into an otherwise empty computer. **3.** An instruction, or operator control button, which causes the computer to initiate the load action. [ELEC] **1.** A device that consumes electric power. **2.** The amount of electric power that is drawn from a power line, generator, or other power source. **3.** The material to be heated by an induction heater or dielectric heater. Also known as work. [ELECTR] The device that receives the useful signal output of an amplifier, oscillator, or other signal source. [ENG] **1.** To place ammunition in a gun, bombs on an airplane, explosives in a missile or borehole, fuel in a fuel tank, cargo or passengers into a vehicle, and the like. **2.** The quantity of

gas delivered or required at any particular point on a gas supply system; develops primarily at gas-consuming equipment. [MECH] **1.** The weight that is supported by a structure. **2.** Mechanical force that is applied to a body. **3.** The burden placed on any machine, measured by units such as horsepower, kilowatts, or tons. [MIN ENG] Unit of weight of ore used in the South African diamond mines; equal to 1600 pounds (725 kilograms); the equivalent of about 16 cubic feet (0.453 cubic meter) of broken ore.

load-and-carry equipment [MECH ENG] Earthmoving equipment designed to load and transport material.

load-and-go [COMPUT SCI] An operating technique with no stops between the loading and execution phases of a program; may include assembling or compiling.

load-bearing tile [MATER] A tile with the capacity to support superimposed loads.

load-break switch [ELEC] An electric switch in a circuit with several hundred thousand volts, designed to carry a large amount of current without overheating the open position, having enough insulation to isolate the circuit in closed position, and equipped with arc interrupters to interrupt the load current.

load cast [GEOL] An irregularity at the base of an overlying stratum, usually sandstone, that projects into an underlying stratum, usually shale or clay.

load cell [ELEC] A device which measures large pressures by applying the pressure to a piezoelectric crystal and measuring the voltage across the crystal; the cell plus a recording mechanism constitutes a strain gage.

load characteristic [ELECTR] Relation between the instantaneous values of a pair of variables such as an electrode voltage and an electrode current, when all direct electrode supply voltages are maintained constant. Also known as dynamic characteristic.

load chart [IND ENG] A graph showing the amount of work still to be performed by a factory producing unit such as a machine or assembly group.

load circuit [ELECTR] Complete circuit required to transform power from a source such as an electron tube to a load.

load circuit efficiency [ELECTR] Ratio between useful power delivered by the load circuit to the load and the load circuit power input.

load compensation [CONT SYS] Compensation in which the compensator acts on the output signal after it has generated feedback signals. Also known as load stabilization.

load controller [MIN ENG] A device to control the load and prevent spillage on a gathering conveyor receiving coal or mineral from several loading points or subsidiary conveyors; it is a simplified weightometer.

load curve [ELEC] A graph that plots the power supplied by an electric power system versus time.

load diagram [CIV ENG] A diagram showing the distribution and intensity of loads on a structure.

load divider [ELEC] Unit for distributing power to various units.

loaded concrete [MATER] Concrete to which elements of high atomic number or capture cross section have been added to increase its effectiveness as a radiation shield in nuclear reactors.

loaded line [ELEC] Wire line in which loading coils have been inserted at regular intervals to reduce attenuation and phase lag at the frequencies within the band used.

loaded motional impedance *See* motional impedance.

loaded Q [ELEC] The Q factor of an impedance which is connected or coupled under working conditions. Also known as working Q. [ELECTROMAG] The Q factor of a specific mode of resonance of a microwave tube or resonant cavity when there is external coupling to that mode.

loaded wheel [ENG] A grinding wheel that is dull as a result of becoming filled with particles from the material being ground.

loader [COMPUT SCI] A computer program that takes some other program from an input or storage device and places it in memory at some predetermined address. [MECH ENG] A machine such as a mechanical shovel used for loading bulk materials. [ORD] Mechanical device which loads guns with cartridges.

load factor [ELEC] The ratio of average electric load to peak load, usually calculated over a 1-hour period. [MECH] The ratio of load to the maximum rated load.

load impedance [ELECTR] The complex impedance presented to a transducer by its load.

loading [CHEM ENG] Condition of vapor overcapacity in a liquid-vapor-contact tower, in which rising vapor lifts or holds falling liquid. [ELEC] The addition of inductance to a transmission line to improve its transmission characteristics throughout a given frequency band. Also known as electrical loading. [ENG] **1.** Buildup on a cutting tool of the material removed in cutting. **2.** Filling the pores of a grinding wheel with material removed in the grinding process. [ENG ACOUS] Placing material at the front or rear of a loudspeaker to change its acoustic impedance and thereby alter its radiation. [MET] Filling of a die cavity with powdered metal. [NUCLEO] Placing fuel in a nuclear reactor.

loading angle [ORD] Angle of elevation specified for loading a particular weapon with its ammunition.

loading coil [ELECTROMAG] **1.** An iron-core coil connected into a telephone line or cable at regular intervals to lessen the effect of line capacitance and reduce distortion. Also known as Pupin coil; telephone loading coil. **2.** A coil inserted in series with a radio antenna to increase its electrical length and thereby lower the resonant frequency.

loading density [ENG] The number of pounds of explosive per foot length of drill hole. [ORD] A term applied specifically to explosive charges of projectiles, bombs, warheads, and so on; it is the quantity of explosive per unit volume, usually expressed as grams per cubic centimeter.

loading disk [ELECTROMAG] Circular metal piece mounted at the top of a vertical antenna to increase its natural wavelength.

loading head [MECH ENG] The part of a loader which gathers the bulk materials.

loading pan [MIN ENG] A box or scoop into which broken rock is shoveled in a sinking shaft while the hoppit is traveling in the shaft.

loading program [COMPUT SCI] Program used to load other programs into computer memory. Also known as bootstrap program.

loading rack [ENG] The shelter and associated equipment for the withdrawal of liquid petroleum or a chemical product from a storage tank and loading it into a railroad tank car or tank truck.

loading routine *See* input routine.

loading space [ENG] Space in a compression mold for holding the plastic molding material before it is compressed.

loading station [MECH ENG] A device which receives material and puts it on a conveyor; may be one or more plates or a hopper.

loading tray [ENG] A tray with a sliding bottom used to simultaneously load the plastic charge into the cavities of a multicavity mold. [ORD] **1.** Trough-shaped carrier on which heavy projectiles are placed so that they can be more easily and safely slipped into the breech of a gun. **2.** Hollowed slide which guides the projectiles into the breech of some types of automatic weapons.

loading weight [ENG] Weight of a powder put into a container.

load isolator [ELECTROMAG] Waveguide or coaxial device that provides a good energy path from a signal source to a load, but provides a poor energy path for reflections from a mismatched load back to the signal source.

load line [ELECTR] A straight line drawn across a series of tube or transistor characteristic curves to show how output signal current will change with input signal voltage when a specified load resistance is used. [NAV ARCH] A line, painted or cut on the outside of a ship, which marks the maximum waterline when the ship is loaded with the greatest cargo which it can carry safely.

load loss [ELEC] The sum of the copper loss of a transformer, due to resistance in the windings, plus the eddy current loss in the winding, plus the stray loss.

load metamorphism *See* static metamorphism.

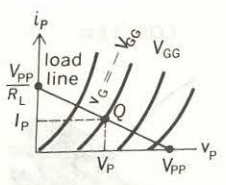
load module [COMPUT SCI] A program in a form suitable for loading into memory and executing.

load point [COMPUT SCI] Preset point on a magnetic tape from which reading or writing will start.

load power [ELEC] Of an energy load, the average rate of flow of energy through the terminals of that load when connected to a specified source.

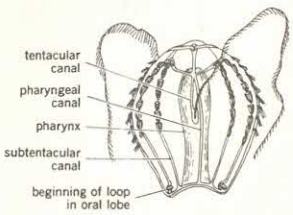
load regulation [ELEC] The maximum change in the output

LOAD LINE



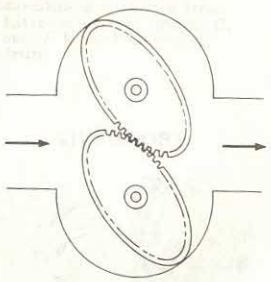
Load line drawn across characteristic curves giving plate current, i_P, as function of plate voltage, v_P, for various values of grid supply voltage, V_{GG}. V_{PP} = plate supply voltage, R_L = load resistance, v_G = grid voltage. Quiescent point, Q, determines quiescent plate current, I_P, and quiescent plate voltage, V_P.

LOBATA



Bolinopsis mikado.

LOBED IMPELLER METER



Meshing impellers in the lobed impeller meter. Arrows show direction of fluid flow.

LOBSTER

The lobster, showing the stout pincers on the front legs which are used to crush prey.

voltage or current of a regulated power supply for a specified change in load conditions.

load shedding [ELEC] A procedure in which parts of an electric power system are disconnected in an attempt to prevent failure of the entire system due to overloading.

load stabilization *See* load compensation.

loadstone *See* lodestone.

load stress [MECH] Stress that results from a pressure or gravitational load.

load waterline [NAV ARCH] The waterline of a fully loaded vessel.

load water plane [NAV ARCH] The water plane of a fully loaded vessel.

loam [GEOL] Soil mixture of sand, silt, clay, and humus. [MET] Molding material consisting of sand, silt, and clay used over backup material for producing massive castings, usually of iron or steel.

loaming [GEOCHEM] In geochemical prospecting, a method in which samples of material from the surface are tested for traces of a sought-after metal; its presence on the surface presumably indicates a near-surface ore body.

LOB *See* line of balance.

Lobachevski geometry [MATH] A system of planar geometry in which the euclidean parallel postulate fails; any point p not on a line L has at least two lines through it parallel to L. Also known as Bolyai geometry; hyperbolic geometry.

lobar pneumonia [MED] An acute febrile disease involving one or more lobes of the lung, usually following pneumococcal infection.

lobar sclerosis [MED] Neuroglial proliferation accompanied by atrophy of a cerebral lobe leading to mental and neurological deficits; most common in infants and children who have suffered prolonged hypoxia.

Lobata [INV ZOO] An order of the Ctenophora in which the body is helmet-shaped.

lobate [BIOL] Having lobes. [VERT ZOO] Of a fish, having the skin of the fin extend onto the bases of the fin rays.

lobate rill mark [GEOL] A flute cast formed by current action.

lobe [BIOL] A rounded projection on an organ or body part. [DES ENG] A projection on a cam wheel or a noncircular gear wheel. [ELECTROMAG] A part of the radiation pattern of a directional antenna representing an area of stronger radio-signal transmission. Also known as radiation lobe. [ENG ACOUS] A portion of the directivity pattern of a transducer representing an area of increased emission or response. [HYD] A curved projection on the margin of a continental ice sheet.

lobectomy [MED] Surgical removal of a lobe of an organ, particularly of a lung.

lobed impeller meter [ENG] A type of positive displacement meter in which a fluid stream is separated into discrete quantities by rotating, meshing impellers driven by interlocking gears.

lobefin fish [VERT ZOO] The common name for members composing the subclass Crossopterygii.

lobe-half-power width [ELECTROMAG] In a plane containing the direction of the maximum energy of a lobe, the angle between the two directions in that plane about the maximum in which the radiation intensity is one-half the maximum value of the lobe.

lobeline [PHARM] $C_{22}H_{27}NO_2$ A crystalline compound isolated from the herb and seeds of Indian tobacco (*Labelia inflata*); melting point is 130–131°C; soluble in hot alcohol, chloroform, and benzene; used in medicine as a respiratory stimulant.

lobe penetration [ELECTROMAG] Penetration of the radar coverage of a station which is not limited by pulse repetition frequency, scope limitations, or the screening angle at the azimuth of penetration.

lobe switching *See* beam switching.

lobing [ELECTROMAG] Formation of maxima and minima at various angles of the vertical plane antenna pattern by the reflection of energy from the surface surrounding the radar antenna; these reflections reinforce the main beam at some angles and detract from it at other angles, producing fingers of energy.

loblolly pine [BOT] *Pinus taeda*. A hard yellow pine of the central and southeastern United States having a reddish-brown fissured bark, needles in groups of three, and a full bushy top.

lobopodia [INV ZOO] Broad, thick pseudopodia.

Lobosia [INV ZOO] A subclass of the protozoan class Rhizopodea generally characterized by lobopodia.

lobotomy [MED] An operative section of the fibers between the frontal lobes of the brain. Also known as leukotomy; prefrontal lobotomy.

Lobry de Bruyn–Ekenstein transformation [ORG CHEM] The change in which an aldose sugar treated with dilute alkali results in a mixture of an epimeric pair and 2-keto-hexose due to the production of enolic forms in the presence of hydroxyl ions, followed by a rearrangement.

lobster [INV ZOO] The common name for several bottom-dwelling decapod crustaceans making up the family Homaridae which are commercially important as a food item.

lobular pneumonia *See* bronchopneumonia.

lobule [BIOL] **1.** A small lobe. **2.** A division of a lobe.

local action [ELEC] **1.** Internal losses of a battery caused by chemical reactions producing local currents between different parts of a plate. **2.** Quantitatively, the percentage loss per month in the capacity of a battery on open circuit, or the amount of current needed to keep the battery fully charged. [MET] Electrochemical corrosion resulting from the action of local cells.

local anesthetic [PHARM] A drug which induces loss of sensation only in the region to which it is applied.

local angular momentum [METEOROL] Angular momentum about an arbitrarily located vertical axis which is fixed with respect to the earth.

local apparent noon [ASTRON] Twelve o'clock local apparent time, or the instant the apparent sun is over the upper branch of the local meridian.

local apparent time [ASTRON] The arc of the celestial equator, or the angle at the celestial pole, between the lower branch of the local celestial meridian and the hour circle of the apparent or true sun, measured westward from the lower branch of the local celestial meridian through 24 hours.

local-area network [COMPUT SCI] A communications network connecting various hardware devices together within a building by means of a continuous cable or an in-house voice-data telephone system.

local attraction *See* local magnetic disturbance.

local base level *See* temporary base level.

local battery [ELEC] Battery that actuates the telegraphic station recording instruments, as distinguished from the battery furnishing current to the line.

local battery telephone set [ELECTR] Telephone set for which the transmitter current is supplied from a battery, or other current supply circuit, individual to the telephone set; the signaling current may be supplied from a local hand generator or from a centralized power source.

local buckling [MECH] Buckling of thin elements of a column section in a series of waves or wrinkles.

local cable [COMMUN] Handmade cable form for terminations of circuits at the attendant's switchboard, at unit equipment, and other locations, where wiring is run inside the section or unit.

local cell [ELEC] A galvanic cell resulting from differences in potential between adjacent areas on the surface of a metal immersed in an electrolyte.

local central office [COMMUN] A telephone central office, which terminates subscriber lines and makes connections with other central offices, usually equipped to serve 10,000 main telephones of its immediate community.

local change [OCEANOGR] The time rate of change of a scalar quantity (such as temperature, salinity, pressure, or oxygen content) in a fixed locality.

local circuit [COMMUN] Circuit to a main or auxiliary circuit which can be made available at any station or patched from point to point through one or more stations.

local civil time [ASTRON] United States terminology during 1925–1952 for local mean time.

local cluster of stars *See* local star system.

local coefficient [MATH] By using fiber bundles where the fiber is a group, one may generalize cohomology theory for spaces; one uses such bundles as the algebraic base for such a theory and calls the bundle a system of local coefficients.

local coefficient of heat transfer [THERMO] The heat transfer coefficient at a particular point on a surface, equal to the amount of heat transferred to an infinitesimal area of the surface at the point by a fluid passing over it, divided by the product of

this area and the difference between the temperatures of the surface and the fluid.

local control [COMMUN] System or method of radio-transmitter control whereby the control functions are performed directly at the transmitter.

local controller *See* first-level controller.

local coordinate system [MATH] The coordinate system about a point which is induced when the global space is locally euclidean.

local derivative [FL MECH] The rate of change of a quantity with respect to time at a fixed point of a fluid, $\partial f/\partial t$; it is related to the individual derivative df/dt through the expression $\partial f/\partial t = df/dt - V \cdot \nabla f$, where f is a thermodynamic property $f(x,y,z,t)$ of the fluid, V the vector velocity of the fluid, and ∇ the del operator.

local exchange *See* exchange.

local extra observation [METEOROL] An aviation weather observation taken at specified intervals, usually every 15 minutes, when there are impending aircraft operations and when weather conditions are below certain operational weather limits; the observation includes ceiling, sky condition, visibility, atmospheric phenomena, and pertinent remarks.

local first selector [COMMUN] The second portion of a line that connects to a calling line, through a line primary switch, to a local second selector and special service second selector, and returns a dial tone to the calling subscribers.

local forecast [METEOROL] Generally, any weather forecast of conditions over a relatively limited area, such as a city or airport.

local group [ASTRON] A group of at least 20 known galaxies in the vicinity of the sun; the Andromeda Spiral is the largest of the group, and the Milky Way Galaxy is the second largest.

local hour angle [ASTRON] Angular distance west of the local celestial meridian.

local immunity [IMMUNOL] Immunity localized in a specific tissue or region of the body.

local inflow [HYD] The water that enters a stream between two stream-gaging stations.

local invariance [PHYS] The property of physical laws which remain unchanged under a specified set of symmetry transformations even when these transformations are chosen independently at every point of space and time.

localization [COMPUT SCI] Imposing some physical order upon a set of objects, so that a given object has a greater probability of being in some particular regions of space than in others.

localized state [QUANT MECH] A state of motion in which an electron may be found anywhere within a region of a material of linear extent smaller than that of the material.

localized vector [MECH] A vector whose line of application or point of application is prescribed, in addition to its direction.

localizer [NAV] A directional radio beacon to provide aircraft with signals for lateral guidance with respect to the runway centerline.

local level [NAV] The plane normal to the local vertical.

local line [COMMUN] A telephone line terminating at the local central office.

local loop *See* home loop.

local lunar time [ASTRON] The arc of the celestial equator, or the angle at the celestial pole, between the lower branch of the local celestial meridian and the hour circle of the moon, measured westward from the lower branch of the local celestial meridian through 24 hours; local hour angle of the moon, expressed in time units, plus 12 hours; local lunar time at the Greenwich meridian is called Greenwich lunar time.

locally arcwise connected topological space [MATH] A topological space in which every point has an arcwise connected neighborhood, that is, an open set any two points of which can be joined by an arc.

locally compact topological space [MATH] A topological space in which every point lies in a compact neighborhood.

locally connected topological space [MATH] A topological space in which every point has a connected neighborhood.

locally euclidean topological space [MATH] A topological space in which every point has a neighborhood which is homeomorphic to a euclidean space.

locally one to one [MATH] A function is locally one to one if it is one to one in some neighborhood of each point.

local Mach number [AERO ENG] The Mach number of an isolated section of an airplane or its airframe.

local magnetic disturbance [GEOPHYS] An anomaly of the magnetic field of the earth, extending over a relatively small area, due to local magnetic influences. Also known as local attraction.

local maximum [MATH] A local maximum of a function f is a value $f(c)$ of f where $f(x) \leq f(c)$ for all x in some neighborhood of c; if $f(c)$ is a local maximum, f is said to have a local maximum at c.

local mean noon [ASTRON] Twelve o'clock local mean time, or the instant the mean sun is over the upper branch of the local meridian; local mean noon at the Greenwich meridian is called Greenwich mean noon.

local mean time [ASTRON] The arc of the celestial equator, or the angle at the celestial pole, between the lower branch of the local celestial meridian and the hour circle of the mean sun, measured westward from the lower branch of the local celestial meridian through 24 hours.

local meridian [ASTRON] The meridian through any particular position which serves as the reference for local time.

local minimum [MATH] A local minimum of a function f is a value $f(c)$ of f where $f(x) \geq f(c)$ for all x in some neighborhood of c; if $f(c)$ is a local minimum, f is said to have a local minimum at c.

local noon [ASTRON] Noon at the local meridian.

Local Notice to Mariners [NAV] A locally disseminated issue of *Notice to Mariners* affecting a specific area.

local oscillator [ELECTR] The oscillator in a superheterodyne receiver, whose output is mixed with the incoming modulated radio-frequency carrier signal in the mixer to give the frequency conversions needed to produce the intermediate-frequency signal.

local oscillator injection [ELECTR] Adjustment used to vary the magnitude of the local oscillator signal that is coupled into the mixer.

local oscillator radiation [ELECTR] Radiation of the fundamental or harmonics of the local oscillator of a superheterodyne receiver.

local peat [GEOL] Peat formed by groundwater. Also known as basin peat.

local preheating [MET] The heating of a specific portion of a material or structure prior to the performance of a joining or fabrication process.

local procurement [ORD] **1.** Procurement of supplies or equipment in the continental United States by other than a centralized purchasing office, such as purchase by an installation of supplies and equipment for use of that installation. **2.** Procurement of supplies or equipment for its own use in an area outside the United States by a United States military command located in that area.

local quasi–F martingale [MATH] A stochastic process $\{X_i\}$ such that the process obtained from $\{X_i\}$ by stopping it when it reaches n or $-n$ is a quasi–F martingale for each integer n.

local register [COMPUT SCI] One of a relatively small number (usually less than 32) of high-speed storage elements in a computer system which may be directly referred to by the instructions in the programs. Also known as general register.

local relief [GEOL] The vertical difference in elevation between the highest and lowest points of a land surface within a specified horizontal distance or in a limited area. Also known as relative relief.

local second selector [COMMUN] Interconnects a local first selector to a connector switch which is controlled and directed by impulses received from the local first selector.

local side [COMMUN] Terminal connections to an internal or in-station source such as data terminal connections to input or output devices.

local sidereal noon [ASTRON] Zero hour local sidereal time, or the instant the vernal equinox is over the upper branch of the local meridian; local sidereal noon at the Greenwich meridian is called Greenwich sidereal noon.

local sidereal time [ASTRON] The arc of the celestial equator, or the angle at the celestial pole which is between the upper branch of the local celestial meridian and the hour circle of the vernal equinox.

local solution [MATH] A function which solves a system of equations only in a neighborhood of some point.

local star cloud *See* local star system.

local star system [ASTRON] The group of stars of which the sun is a member. Also known as local cluster of stars; local star cloud.

local storage [COMPUT SCI] The collection of local registers in a computer system.

local storm [METEOROL] A storm of mesometeorological scale; thus, thunderstorms, squalls, and tornadoes are often put in this category.

local structural discontinuity [MECH] The effect of intensified stress on a small portion of a structure.

local supercluster [ASTRON] A great flattened system of groups and clusters of galaxies, about 1.5 to 2 $\times 10^8$ light-years (1.4 to 1.9×10^{24} meters) across, which includes the local group of galaxies and the Virgo Cluster. Also known as Virgo supercluster.

local time [ASTRON] **1.** Time based upon the local meridian as reference, as contrasted with that based upon a zone meridian, or the meridian of Greenwich. **2.** Any time kept locally.

local trunk [COMMUN] Trunk between local and long-distance switchboards, or between local and private branch exchange switchboards.

local variable [COMPUT SCI] A variable which can be accessed (used or changed) only in one block of a computer program.

local vertical [NAV] A reference direction determined through the use of a plumb-bob or level.

local winds [METEOROL] Winds which, over a small area, differ from those which would be appropriate to the general pressure distribution, or which possess some other peculiarity.

locate [MIN ENG] To mark out the boundaries of a mining claim and establish the right of possession.

locate mode [COMPUT SCI] A method of communicating with an input/output control system (IOCS), in which the address of the data involved, but not the data themselves, is transferred between the IOCS routine and the program.

locating [MECH ENG] A function of tooling operations accomplished by designing and constructing the tooling device so as to bring together the proper contact points or surfaces between the workpiece and the tooling.

locating hole [MECH ENG] A hole used to position the part in relation to a cutting tool or to other parts and gage points.

location [COMPUT SCI] Any place in which data may be stored; usually expressed as a number.

location constant [COMPUT SCI] A number that identifies an instruction in a computer program, written in a higher-level programming language, and used to refer to this instruction at other points in the program. Also known as label constant.

location counter *See* instruction counter.

location damages [MIN ENG] Compensation by an operator to the surface owner for injury to the surface or to growing crops, resulting from the drilling of a well.

location dimension [DES ENG] A dimension which specifies the position or distance relationship of one feature of an object with respect to another.

location fit [DES ENG] The characteristic wherein mechanical sizes of mating parts are such that, when assembled, the parts are accurately positioned in relation to each other.

location notice [MIN ENG] A written sign placed prominently on a claim, showing the locator's name and describing the claim's extent and boundaries.

location plan [MIN ENG] A scale map of the projected mine development indicating, among other things, proposed shafts and works in relation to existing surface features.

location work [MIN ENG] Labor required by law to be done on mining claims within 60 days of location, in order to establish ownership.

locator [ENG] A radar or other device designed to detect and locate airborne aircraft.

locellus [BOT] **1.** In some legumes, a secondary compartment of a unilocular ovary that is formed by a false partition. **2.** One of the two cavities of a pollen sac.

lochia [MED] The discharge from the uterus and vagina during the first few weeks after labor.

lociation [ECOL] One of the subunits of a faciation, distinguished by the relative abundance of a dominant species.

lock [CIV ENG] A chamber with gates on both ends connecting two sections of a canal or other waterway, to raise or lower the water level in each section. [DES ENG] A fastening device in which a releasable bolt is secured. [ELECTR] To fasten onto and automatically follow a target by means of a radar beam. [MET] A condition in forging in which the flash line is in more than one plane. [ORD] **1.** Position of a safety mechanism which prevents a weapon from being fired. **2.** Fastening device used to secure against accidental movement, as on a control surface. **3.** To secure or make safe, as to set the safety on a weapon.

lockalloy [MET] A beryllium-base alloy composed of 62% beryllium and 38% aluminum; used as a structural aerospace alloy because of low density and high (47,000 pounds per square inch or 3.2×10^8 newtons per square meter) yield strength.

lock bolt [ENG] **1.** The bolt of a lock. **2.** A bolt equipped with a locking collar instead of a nut. **3.** A bolt for adjusting and securing parts of a machine.

lock chamber [CIV ENG] A compartment between lock gates in a canal.

locked-coil rope [DES ENG] A completely smooth wire rope that resists wear, made of specially formed wires arranged in concentric layers about a central wire core. Also known as locked-wire rope.

locked groove [DES ENG] A blank and continuous groove placed at the end of the modulated grooves on a disk recording to prevent further travel of the pickup. Also known as concentric groove.

locked-in line [COMMUN] A telephone line that remains established after the caller has hung up.

locked oscillator [ELECTR] A sine-wave oscillator whose frequency can be locked by an external signal to the control frequency divided by an integer.

locked-oscillator detector [ELECTR] A frequency-modulation detector in which a local oscillator follows, or is locked to, the input frequency; the phase difference between local oscillator and input signal is proportional to the frequency deviation, and an output voltage is generated proportional to the phase difference.

locked-rotor current [ELEC] The current drawn by a stalled electric motor.

locked-wire rope *See* locked-coil rope.

lock frame [ORD] A mechanical unit in certain firearms, used to assist in unlocking the bolt from the barrel after recoil has started.

lock front [DES ENG] On a door lock or latch, the plate through which the latching or locking bolt (or bolts) projects.

lock gate [CIV ENG] A movable barrier separating the water in an upper or lower section of waterway from that in the lock chamber.

lock-in [ELECTR] Shifting and automatic holding of one or both of the frequencies of two oscillating systems which are coupled together, so that the two frequencies have the ratio of two integral numbers.

lock-in amplifier [ELECTR] An amplifier that uses some form of automatic synchronization with an external reference signal to detect and measure very weak electromagnetic radiation at radio or optical wavelengths in the presence of very high noise levels.

locking [ELECTR] Controlling the frequency of an oscillator by means of an applied signal of constant frequency. [ENG] Automatic following of a target by a radar antenna.

locking fastener [DES ENG] A fastening used to prevent loosening of a threaded fastener in service, for example, a seating lock, spring stop nut, interference wedge, blind, or quick release.

locking lugs [ORD] Metal projections on the bolt of a small-arms weapon which cam into recesses cut in the side of the receiver to lock the weapon prior to firing.

lockjaw *See* tetanus.

lock joint [DES ENG] A joint made by interlocking the joined elements, with or without other fastening.

locknut [DES ENG] **1.** A nut screwed down firmly against another or against a washer to prevent loosening. Also known as jam nut. **2.** A nut that is self-locking when tightened. **3.** A nut fitted to the end of a pipe to secure it and prevent leakage.

lock-on [ELECTR] **1.** The procedure wherein a target-seeking system (such as some types of radars) is continuously and automatically following a target in one or more coordinates (for example, range, bearing, elevation). **2.** The instant at which radar begins to track a target automatically.

lockout [COMMUN] **1.** In a telephone circuit controlled by two voice-operated devices, the inability of one or both subscribers to get through, because of either excessive local circuit noise or continuous speech from one or both subscribers. Also known as receiver lockout system. **2.** In mobile communications, an arrangement of control circuits whereby only one receiver can feed the system at one time to avoid distor-

tion. Also known as receiver lockout system. [COMPUT SCI] **1.** In computer communications, the inability of a remote terminal to achieve entry to a computer system until project programmer number, processing authority code, and password have been validated against computer-stored lists. **2.** The precautions taken to ensure that two or more programs executing simultaneously in a computer system do not access the same data at the same time, make unauthorized changes in shared data, or otherwise interfere with each other.

lockout circuit [ELECTR] A switching circuit which responds to concurrent inputs from a number of external circuits by responding to one, and only one, of these circuits at any time. Also known as finding circuit; hunting circuit.

lock primer [ORD] Primer intended to be placed by hand in the firing lock of a gun; it is used for initiation of the ignition of bag charges.

lock rail [BUILD] An intermediate horizontal structural member of a door, between the vertical stiles, at the height of the lock.

lockset [ENG] **1.** A complete lock including the lock mechanism, keys, plates, and other parts. **2.** A jig or template for making cuts in a door for holding a lock.

lock up [GRAPHICS] To position a form in the frame in which type and plates are locked up for letterpress printing.

lock-up relay [ELEC] A relay that locks in its energized position either by permanent magnetic biasing which can be released only by applying a reverse magnetic pulse or by auxiliary contacts that keep its coil energized until the circuit is interrupted.

lock washer [DES ENG] A solid or split washer placed underneath a nut or screw to prevent loosening by exerting pressure.

loco disease [VET MED] Poisoning in livestock resulting from ingestion of selenium-containing plants (loco weed); characterized by atrophy, delirium, convulsions, and stupor, often terminating in death.

locomotion [SCI TECH] Progressive movement, as of an animal or a vehicle.

locomotive [MECH ENG] A self-propelling machine with flanged wheels, for moving loads on railroad tracks; utilizes fuel (for steam or internal combustion engines), compressed air, or electric energy.

locomotive boiler [MECH ENG] An internally fixed horizontal fire-tube boiler with integral furnace; the doubled furnace walls contain water which mixes with water in the boiler shell.

locomotive crane [MECH ENG] A crane mounted on a railroad flatcar or a special chassis with flanged wheels. Also known as rail crane.

locomotive gradient [MIN ENG] The gradient set by law for a locomotive haulage; maximum is 1 in 15, but the limit for practical purposes is 1 in 25.

locomotive haulage [MIN ENG] The use of locomotive-hauled mine cars to carry coal ore, workers, and materials in a mine.

locomotor ataxia *See* tabes dorsalis.

locomotor system [ZOO] Appendages and associated parts, such as muscles, joints, and bones, concerned with motor activities and locomotion of the animal body.

loco weed [BOT] Any species of *Astragalus* containing selenium taken up from the soil.

loculate [BIOL] Having, or divided into, loculi.

loculus [BIOL] A small cavity or chamber.

locus [GEN] The fixed position of a gene in a chromosome. [MATH] A collection of points in a euclidean space whose coordinates satisfy one or more algebraic conditions.

locus of an equation [MATH] A collection of points, all of which satisfy a single equation.

locust [BOT] Either of two species of commercially important trees, black locust (*Robinia pseudoacacia*) and honey locust (*Gladitsia triacanthos*), in the family Leguminosae. [INV ZOO] The common name for various migratory grasshoppers of the family Locustidae.

Locustidae [INV ZOO] A family of insects in the order Orthoptera; antennae are usually less than half the body length, hindlegs are adapted for jumping, and the ovipositor is multipartite.

lodar [NAV] A direction finder used to determine the direction of arrival of loran signals, free of night effect, by observing the separately distinguishable ground and sky-wave loran signals on a cathode-ray oscilloscope and positioning a loop antenna to obtain a null indication of the component selected to be most suitable. Also known as lorad.

lode [GEOL] A fissure in consolidated rock filled with mineral; usually applied to metalliferous deposits.

lode claim [MIN ENG] That portion of a vein or lode, and of the adjoining surface, which has been acquired by a compliance with the law, both Federal and state.

loden cloth [TEXT] A fleecy fabric woven from coarse wool in the Tyrolese area of Austria and Germany; it is naturally water-repellent.

lodestone [MINERAL] The naturally occurring magnetic iron oxide, or magnetite, possessing polarity, and attracting iron objects to itself. Also known as Hercules stone; leading stone; loadstone.

lodos [METEOROL] A southerly wind on the Black Sea coast of Bulgaria.

lodranite [GEOL] A stony iron meteorite composed of bronzite and olivine within a fine network of nickel-iron.

Loeffler's syndrome [MED] Extensive infiltration of the lung by eosinophils, and eosinophilia of the peripheral circulation. Also known as eosinophilic pneumonitis.

loellingite [MINERAL] $FeAs_2$ A silver-white to steel-gray mineral composed of iron arsenide with some cobalt, nickel, antimony, and sulfur; isomorphous with arsenopyrite; a source of arsenic. Also known as leucopyrite; löllingite.

loess [GEOL] An essentially unconsolidated, unstratified calcareous silt; commonly it is homogeneous, permeable, and buff to gray in color, and contains calcareous concretions and fossils.

loess kindchen [GEOL] An irregular or spheroidal nodule of calcium carbonate that is found in loess.

loeweite [MINERAL] $Na_4Mg_2(SO_4)_4 \cdot 5H_2O$ A white to pale-yellow mineral composed of hydrous sulfate of sodium and magnesium.

lofar [NAV] A submarine detection system using autocorrelation techniques for long-range analysis of patterned sound picked up at the low-frequency end of the sound spectrum by underwater hydrophones of the Caesar submarine detection system. Derived from low-frequency acquisition and ranging.

Lofco car feeder [MIN ENG] A carrying chain running between the rails that controls mine cars at loading points, for marshaling trains and for loading cars into cages and tipplers.

loft [BUILD] **1.** An upper part of a building. **2.** A work area in a factory or warehouse. [TEXT] **1.** The quality of resilience possessed by wool that permits it to return to its original shape after deformation. **2.** The degree of bulkiness of manufactured fibers and blends.

loft bombing [ORD] A method of aerial bombing in which the delivery plane approaches the target at a very low altitude, makes a definite pull-up at a given point, releases bomb at predetermined point during the pull-up, and tosses the missile on the target.

loft building [BUILD] A building with a large open floor area.

log [COMMUN] A written record of radio and television station operating data, required by law. [COMPUT SCI] A record of computer operating runs, including tapes used, control settings, halts, and other pertinent data. [ENG] The record of, or the act or process of recording, events or the type and characteristics of the rock penetrated in drilling a borehole as evidenced by the cuttings, core recovered, or information obtained from electronic devices. [MATER] Unshaped timber either rough or squared. [NAV] **1.** An instrument for measuring the speed or distance or both traveled by a vessel. **2.** A written record of the movements of a craft, with regard to courses, speeds, positions, and other information of interest to navigators, and of important happenings aboard the craft. **3.** A written record of specific related information, such as that concerning performance of an instrument.

Loganiaceae [BOT] A family of mostly woody dicotyledonous plants in the order Gentianales; members lack a latex system and have fully united carpels and axile placentation.

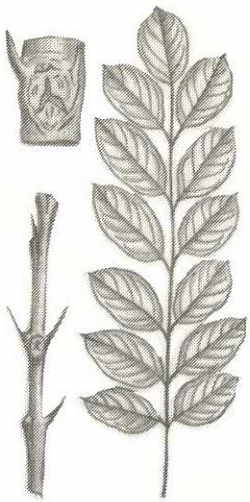
Logan slabbing machine [MIN ENG] A machine that has three cutting chains; two are horizontal—one at the base of the coal seam, the other at a distance from the floor; the third is mounted vertically and shears off the coal at the back of the cut; a short conveyor transfers the coal to the face conveyor.

logarithm [MATH] **1.** The real-valued function $\log u$ defined by $\log u = v$ if $e^v = u$, e^v denoting the exponential function. Also known as hyperbolic logarithm; Naperian logarithm;

LOCOMOTIVE

Electric locomotive rated at 5000 horsepower (3.7×10^6 watts). *(General Electric Co.)*

LOCUST



Leaf scar, branch, and leaves of the black locust *(Robinia pseudoacacia)*.

LOCUSTIDAE

Drawing of the grasshopper *(Melanoplus mexicanus)*.

natural logarithm. **2.** An analog in complex variables relative to the function e^z.

logarithmic amplifier [ELECTR] An amplifier whose output signal is a logarithmic function of the input signal.

logarithmic coordinate paper [MATH] Paper ruled with two sets of mutually perpendicular, parallel lines spaced according to the logarithms of consecutive numbers, rather than the numbers themselves.

logarithmic coordinates [MATH] In the plane, logarithmic coordinates are defined by two coordinate axes, each marked with a scale where the distance between two points is the difference of the logarithms of the two numbers.

logarithmic curve [MATH] A curve whose equation in cartesian coordinates is $y = \log ax$, where a is greater than 1.

logarithmic decrement [PHYS] The natural logarithm of the ratio of the amplitude of one oscillation to that of the next which has the same polarity, when no external forces are applied to maintain the oscillation.

logarithmic derivative [MATH] The logarithmic derivative of a function $f(z)$ of a real (complex) variable is the ratio $f'(z)/f(z)$, that is, the derivative of $\log f(z)$.

logarithmic differentiation [MATH] A technique often helpful in computing the derivatives of a differentiable function $f(x)$; set $g(x) = \log f(x)$ where $f(x) \neq 0$, then $g'(x) = f'(x)/f(x)$, and if there is some other way to find $g'(x)$, then one also finds $f'(x)$.

logarithmic diode [ELECTR] A diode that has an accurate semilogarithmic relationship between current and voltage over wide and forward dynamic ranges.

logarithmic distribution [STAT] A frequency distribution whose value at any integer $n = 1,2,\ldots$ is $\lambda^n/(-n)\log(1-\lambda)$, where λ is fixed.

logarithmic equation [MATH] An equation which involves a logarithmic function of some variable.

logarithmic fast time constant [ELECTR] Constant false alarm rate scheme which has a logarithmic intermediate-frequency amplifier followed by a fast time constant circuit.

logarithmic growth *See* exponential growth.

logarithmic multiplier [ELECTR] A multiplier in which each variable is applied to a logarithmic function generator, and the outputs are added together and applied to an exponential function generator, to obtain an output proportional to the product of two inputs.

logarithmic potential [PHYS] A potential function that is proportional to the logarithm of some coordinate; for example, a straight, electrically charged cylinder of circular cross section and effectively infinite length gives rise to an electrostatic potential that is the sum of a constant and a term proportional to the logarithm of the distance from the cylinder's axis.

logarithmic profile of velocity [FL MECH] The mean velocity parallel to a boundary of a fluid in turbulent motion as a function of distance from the boundary, on the assumption that the shearing stress is independent of distance from the boundary, and the mixing length is proportional either to the distance from the boundary or to the ratio of the first derivative of the profile of velocity itself to the second derivative.

logarithmic scale [MATH] A scale in which the distances that numbers are at from a reference point are proportional to their logarithms.

logarithmic spiral [MATH] The spiral plane curve whose points in polar coordinates (r,θ) satisfy the equation $\log r = a\theta$. Also known as equiangular spiral.

logarithmic transformation [STAT] The replacement of a variate y with a new variate $z = \log y$ or $z = \log(y + c)$, where c is a constant; this operation is often performed when the resulting distribution is normal, or if the resulting relationship with another variable is linear.

logarithmic velocity profile [METEOROL] The theoretical variation of the mean wind speed with height in the surface boundary layer under certain assumptions.

logbook [COMPUT SCI] A bound volume in which operating data of a computer is noted. [NAV] A book in which all affairs and events of navigational importance of a ship are recorded, such as speed and ship's progress.

logger [ENG] A recorder that automatically scans measured quantities at specified times and records, or logs, their values on a chart.

loggia [ARCH] A roofed open arcade on the side of a building.

logging [ENG] Continuous recording versus depth of some characteristic datum of the formations penetrated by a drill hole; for example, resistivity, spontaneous potential, conductivity, fluid content, radioactivity, or density. [FOR] The cutting and removal of the woody stem portions of forest trees.

logic [ELECTR] **1.** The basic principles and applications of truth tables, interconnections of on/off circuit elements, and other factors involved in mathematical computation in a computer. **2.** General term for the various types of gates, flip-flops, and other on/off circuits used to perform problem-solving functions in a digital computer.

logical addition [MATH] The additive binary operation of a Boolean algebra.

logical comparison [COMPUT SCI] The operation of comparing two items in a computer and producing a one output if they are equal or alike, and a zero output if not alike.

logical connectives [MATH] Symbols which link mathematical statements; these symbols represent the terms "and," "or," "implication," and "negation."

logical construction [COMPUT SCI] A simple logical property that determines the type of characters which a particular code represents; for example, the first two bits can tell whether a character is numeric or alphabetic.

logical data independence [COMPUT SCI] A data base structured so that changing the logical structure will not affect its accessibility by the program reading it.

logical data type [COMPUT SCI] A scalar data type in which a data item can have only one of two values: true or false. Also known as Boolean data type.

logical decision [COMPUT SCI] The ability to select one of many paths, depending upon intermediate programming data.

logical device table [COMPUT SCI] A table that is used to keep track of information pertaining to an input/output operation on a logical unit, and that contains such information as the symbolic name of the logical unit, the logical device type and the name of the file currently attached to it, the logical input/output request currently pending on the device, and a pointer to the buffers currently associated with the device.

logical expression [COMPUT SCI] Two arithmetic expressions connected by a relational operator indicating whether an expression is greater than, equal to, or less than the other, or connected by a logical variable, logical constant (true or false), or logical operator.

logical file [COMPUT SCI] A file as seen by the program accessing it.

logical flow chart [COMPUT SCI] A detailed graphic solution in terms of the logical operations required to solve a problem.

logical gate *See* switching gate.

logical instruction [COMPUT SCI] A digital computer instruction which forms a logical combination (on a bit-by-bit basis) of its operands and leaves the result in a known location.

logical multiplication [MATH] The multiplicative binary operation of a Boolean algebra.

logical record [COMPUT SCI] A group of adjacent, logically related data items.

logical shift [COMPUT SCI] A shift operation that treats the operand as a set of bits, not as a signed numeric value or character representation.

logical sum [COMPUT SCI] A computer addition in which the result is 1 when either one or both input variables is 1, and the result is 0 when the input variables are both 0.

logical symbol [COMPUT SCI] A graphical symbol used to represent a logic element.

logical unit [COMPUT SCI] An abstraction of an input/output device in the form of an additional name given to the device in a computer program.

logic-arithmetic unit *See* arithmetical unit.

logic card [ELECTR] A small fiber chassis on which resistors, capacitors, transistors, magnetic cores, and diodes are mounted and interconnected in such a way as to perform some computer function; computers employing this type of construction may be repaired by removing the faulty card and replacing it with a new card.

logic circuit [COMPUT SCI] A computer circuit that provides the action of a logic function or logic operation.

logic design [COMPUT SCI] The design of a computer at the level which considers the operation of each functional block and the relationships between the functional blocks.

logic diagram [COMPUT SCI] A graphical representation of the logic design or a portion thereof; displays the existence of

functional elements and the paths by which they interact with one another.

logic element [COMPUT SCI] A hardware circuit that performs a simple, predefined transformation on its input and presents the resulting signal as its output. Occasionally known as functor.

logic level [ELECTR] One of the two voltages whose values have been arbitrarily chosen to represent the binary numbers 1 and 0 in a particular data-processing system.

logic operation [COMPUT SCI] A nonarithmetical operation in a computer, such as comparing, selecting, making references, matching, sorting, and merging, where logical yes-or-no quantities are involved.

logic operator [COMPUT SCI] A rule which assigns, to every combination of the values "true" and "false" among one or more independent variables, the value "true" or "false" to a dependent variable.

logic section *See* arithmetical unit.

logic swing [ELECTR] The voltage difference between the logic levels used for 1 and 0; magnitude is chosen arbitrarily for a particular system and is usually well under 10 volts.

logic switch [ELECTR] A diode matrix or other switching arrangement that is capable of directing an input signal to one of several outputs.

logic unit [COMPUT SCI] A separate unit which exists in some computer systems to carry out logic (as opposed to arithmetic) operations.

logic word [COMPUT SCI] A machine word which represents an arbitrary set of digitally encoded symbols.

logistic curve [STAT] **1.** A type of growth curve, representing the size of a population y as a function of time t: $y = k/(1 + e^{-bt})$, where k and b are positive constants. Also known as Pearl-Reed curve. **2.** More generally, a curve representing a function of the form $y = k/(1 + e^{cf(t)})$, where c is a constant and $f(t)$ is some function of time.

log line *See* current line.

log-mean temperature difference [THERMO] The log-mean temperature difference $T_{LM} = (T_2 - T_1)/\ln T_2/T_1$, where T_2 and T_1 are the absolute (K or °R) temperatures of the two extremes being averaged; used in heat transfer calculations in which one fluid is cooled or heated by a second held separate by pipes or process vessel walls.

logo *See* logotype.

logomania [MED] Logorrhea so excessive as to be a form of a manic state; new words may be invented to keep up the garrulity.

log-on [COMPUT SCI] The procedure for users to identify themselves to a computer system for authorized access to their programs and information.

logoplegia [MED] Loss of ability to articulate, usually due to paralysis of the speech organs.

logorrhea [MED] Excessive, usually rapid, incoherent, and uncontrollable talkativeness.

logotype [GRAPHICS] A single slug or line of type cast in one piece, that carries one or more words such as the name of a firm or a product; a special style of type may be used, and the logotype may include a trademark or other art work with the type. Also known as logo. [SYST] The selection or designation of a genotype after the generic name was published.

log-periodic antenna [ELECTROMAG] A broad-band antenna which consists of a sheet of metal with two wedge-shaped cutouts, each with teeth cut into its radii along circular arcs; characteristics are repeated at a number of frequencies that are equally spaced on a logarithmic scale.

log problem *See* linear-quadratic-Gaussian problem.

log rule [FOR] A table showing expected log output in board feet or other units.

log volume [FOR] The cubic volume of a log computed inside the bark as determined by any of several formulas; parameters are the cross-sectional areas of log midpoint, large end and small end of log, and log length.

logwood *See* hematoxylon.

loiasis [MED] A filariasis of tropical Africa, caused by the filaria *Loa*, and characterized by diurnal periodicity of microfilariae in the blood, and transient cutaneous swelling caused by migrating adult worms.

loktal base [ELECTR] A special base for small vacuum tubes, so designed that it locks the tube firmly in a corresponding special eight-pin loktal socket; the tube pins are sealed directly into the glass envelope.

löllingite *See* loellingite.

lolly ice [OCEANOGR] Saltwater frazil, a heavy concentration of which is called sludge.

lombarde [METEOROL] An easterly wind (from Lombardy) that predominates along the French-Italian frontier, and comes from the High Alps; in winter it is violent and forms snow drifts in the mountain valleys; in the plains it is gentle and very dry.

loment [BOT] A dry, indehiscent single-celled fruit that is formed from a single superior ovary; splits transversely in numerous segments at maturity.

lomonite *See* laumontite.

Lomonosov ridge [GEOL] An undersea ridge which subdivides the Arctic Basin, extending from Ellesmere Land to the New Siberian Islands.

lomontite *See* laumontite.

Lonchaeidae [INV ZOO] A family of minute myodarian cyclorrhaphous dipteran insects in the subsection Acalyptreatae.

London dispersion force *See* Van der Waals force.

London equations [SOLID STATE] Equations for the time derivative and the curl of the current in a superconductor in terms of the electric and magnetic field vectors respectively, derived in the London superconductivity theory.

London penetration depth [SOLID STATE] A measure of the depth which electric and magnetic fields can penetrate beneath the surface of a superconductor from which they are otherwise excluded, according to the London superconductivity theory.

London shrinkage [TEXT] Method of shrinking by a cold-water bath, followed by drying and pressing.

London superconductivity theory [SOLID STATE] An extension of the two-fluid model of superconductivity, in which it is assumed that superfluid electrons behave as if the only force acting on them arises from applied electric fields, and that the curl of the superfluid current vanishes in the absence of a magnetic field.

London superfluidity theory [CRYO] A theory, based on the fact that helium-4 obeys Bose-Einstein statistics, in which helium-4 is treated as an ideal Bose-Einstein gas, and its superfluid component is equated with the finite fraction of the atoms of such a gas which are in the ground state at very low temperatures.

long-base-line system [COMMUN] System in which the distance separating ground stations approximates the distance to the target being tracked.

long bone [ANAT] A bone in which the length markedly exceeds the width, as the femur or the humerus.

long clay [MATER] A clay used in ceramics that has a high degree of plasticity.

long column [CIV ENG] A column so slender that bending is the primary deformation, generally having a slenderness ratio greater than 120–150.

long-conductor antenna *See* long-wire antenna.

long-day plant [BOT] A plant that flowers in response to a long photoperiod.

long discharge [ELEC] **1.** A capacitor or other electrical charge accumulator which takes a long time to leak off. **2.** A gaseous electrical discharge in which the length of the discharge channel is very long compared with its diameter; lightning discharges are natural examples of long discharges. Also known as long spark.

long-distance loop [COMMUN] Line from a subscriber's station directly to a long-distance switchboard.

long-distance navigation [NAV] Navigation performed in an area where aids to navigation are spaced more than 200 miles (322 kilometers) apart, exclusive of the short-range, the approach and landing zone, and the airport zone.

long-distance xerography [COMMUN] A facsimile system that uses a cathode-ray scanner at the microwave transmitting terminal; at the receiving terminal, a lens projects the received cathode-ray image onto the selenium-coated drum of a xerographic copying machine.

longeron [AERO ENG] A principal longitudinal member of the structural framework of a fuselage, nacelle, or empennage boom.

long-flame burner [ENG] A burner in which fuel and air do not readily mix, resulting in a comparatively long flame.

long-haul carrier system [COMMUN] An intercity telephone communication system in which a frequency-division multiplexed signal modulates a subcarrier.

long-haul radio [COMMUN] A microwave radio system for

transmitting telephone and telegraph signals over distances on the order of 4000 miles (6500 kilometers) or more on line-of-sight paths between a series of repeaters which demodulate the signal to intermediate frequency.

long hole [MIN ENG] An underground borehole and blasthole exceeding 10 feet (3 meters) in depth or requiring the use of two or more lengths of drill steel or rods coupled together to attain the desired depth.

long-hole drill [MIN ENG] A rotary- or a percussive-type drill used to drill long holes.

long-hole jetting [MIN ENG] A hydraulic mining system consisting essentially of drilling a hole down the pitch of the vein, replacing the drilling head with a jet cutting head, and then retracting the drill column with the jets in operation to remove the coal.

long hundredweight *See* hundredweight.

Longhurst-Hardy plankton sampler [ENG] A nonquantitative metal-shrouded net for trapping plankton.

longicollous [BIOL] Having a long beak or neck.

Longidorinae [INV ZOO] A subfamily of nematodes belonging to the Dorylaimoidea including economically important plant parasites.

long ink [GRAPHICS] Printing ink that has the characteristic of good flow on the ink rollers of a printing press.

Longipennes [VERT ZOO] An equivalent name for Charadriiformes.

longitude [GEOD] Angular distance, along the Equator, between the meridian passing through a position and, usually, the meridian of Greenwich.

longitude factor [NAV] The change in longitude along a celestial line of position per 1-minute change in latitude.

longitude line [NAV] A line of position extending in a north-south direction generally.

longitude method [NAV] In celestial navigation, the establishing of a line of position from the observation of the altitude of a celestial body by assuming a latitude (or longitude), and calculating the longitude (or latitude) through which the line of position passes, and the azimuth; the line of position is drawn through the point thus found, perpendicular to the azimuth.

longitude signal [NAV] A radio or telegraphic time signal transmitted by a station of known longitude and received at stations whose longitude can then be calculated from differences in local time.

longitudinal [SCI TECH] Pertaining to the lengthwise dimension.

longitudinal aberration [OPTICS] **1.** The distance along the optical axis from the focus of paraxial rays to the point where rays coming from the outer edges of its lens or reflecting surface intersect this axis. **2.** In chromatic aberration, the distance along the optical axis between the foci of two standard colors.

longitudinal acceleration [MECH] The component of the linear acceleration of an aircraft, missile, or particle parallel to its longitudinal, or X, axis.

longitudinal baffle [CHEM ENG] Baffle sheets or plates within a process vessel (such as a heat exchanger) that are parallel to the long dimension of the vessel; used to direct fluid flow in the desired flow pattern.

longitudinal bulkhead [NAV ARCH] A partition wall running fore and aft, made of planking or plating.

longitudinal center of gravity [NAV ARCH] That point at which the combined weight of all the items that constitute a ship's weight are considered to be concentrated; usually stated as either aft or forward of the middle perpendicular or the midship frame.

longitudinal circuit [ELEC] Circuit formed by one telephone wire (or by two or more telephone wires in parallel) with return through the earth or through any other conductors except those which are taken with the original wire or wires to form a metallic telephone circuit.

longitudinal coefficient [NAV ARCH] The ratio of the volume of water displaced by a ship to the product of its length on the waterline and the area of its midship section below the water plane. Also known as prismatic coefficient.

longitudinal controller [AERO ENG] A primary flight control mechanism which controls pitch attitude; located in the cockpit, this may be a control column or a side stick.

longitudinal current [ELEC] Current which flows in the same direction in the two wires of a parallel pair using the earth or other conductors for a return path.

longitudinal direction [MET] The principal direction of flow in a plastically deformed metal.

longitudinal drum boiler [MECH ENG] A boiler in which the axis of the horizontal drum is parallel to the tubes, both lying in the same plane.

longitudinal dune [GEOL] A type of linear dune ridge that extends parallel to the direction of the dominant dune-building winds.

longitudinal fault [GEOL] A fault parallel to the trend of the surrounding structure.

longitudinal flow reactor [CHEM ENG] Theoretical reactor system in which there is no longitudinal mixing (back mixing) of reactants and products as they flow through the reactor, but in which there is complete radial (side-to-side) mixing.

longitudinal frame [NAV ARCH] Any of the frames of a ship running fore and aft.

longitudinal framed ship [NAV ARCH] A ship constructed of widely spaced, transverse frames, which support a number of small fore and aft frames.

longitudinal-made delay line [ELECTR] A magnetostrictive delay in which signals are propagated by means of longitudinal vibrations in the magnetostrictive material.

longitudinal magnetoresistance [ELECTROMAG] The change of electrical resistance produced in a current-carrying metal or semiconductor upon application of a magnetic field parallel to the current flow.

longitudinal magnetorestriction *See* Joule effect.

longitudinal mass [RELAT] The ratio of a force acting on a relativistic particle in the direction of its velocity to the resulting acceleration; equal to $m_0(1 - v^2/c^2)^{-3/2}$, where m_0 is the particle's rest mass, v is its speed, and c is the speed of light.

longitudinal parity [COMMUN] Parity associated with bits recorded on one track in a data block, to indicate whether the number of recorded bits in the block is even or odd.

longitudinal parity check [COMMUN] The count for even or odd parity of all the bits in a message as a precaution against transmission error. Also known as horizontal parity check.

longitudinal quadrupole [ACOUS] A sound source resulting from a variation of a component of the velocity of matter in a direction parallel to the velocity component. [ELECTROMAG] An electric or magnetic quadrupole which produces a field equivalent to that of two equal and opposite electric or magnetic dipoles separated by a small distance parallel to the direction of the dipoles. Also known as axial quadrupole.

longitudinal redundancy check [COMMUN] A method of checking for errors, in which data are arranged in blocks according to some rule, and the correctness of each character in the block is determined according to the rule. Abbreviated LRC.

longitudinal resistance seam welding [MET] The performance of resistance seam welding parallel to the throat depth of the welding machine.

longitudinal section [SCI TECH] A section taken through the lengthwise dimension of a structure, organism, or other object.

longitudinal separation [NAV] In air-traffic control, the separation of aircraft along a longitudinal line.

longitudinal sequence [MET] The sequence in which successive welds are deposited along the length of a continuous weld.

longitudinal stability [ENG] The ability of a ship or aircraft to recover a horizontal position after a vertical motion of its ends about a horizontal axis perpendicular to the centerline.

longitudinal strain *See* linear strain.

longitudinal stream *See* subsequent stream.

longitudinal vibration [MECH] A continuing periodic change in the displacement of elements of a rod-shaped object in the direction of the long axis of the rod.

longitudinal wave [PHYS] A wave in which the direction of some vector characteristic of the wave, for example, the displacement of particles of the transmitting medium, is along the direction of propagation.

long-life items [ORD] Ordnance items which have an estimated average service life of 5 years or more.

long-line current [ELEC] A current that flows through the earth from an anodic to a cathodic area and returns along an underground pipe or other metal structure, often over a considerable distance and as the result of concentration cell action.

long-line effect [ELECTR] An effect occurring when an oscillator is coupled to a transmission line with a bad mismatch; two or more frequencies may then be equally suitable for os-

cillation, and the oscillator jumps from one of these frequencies to another as its load changes.

long-lines engineering [COMMUN] Engineering performed to develop, modernize, or expand long-haul, point-to-point communications facilities using radio, microwave, or wire circuits.

long-nose pliers [DES ENG] Small pincer with long, tapered jaws.

long oil [MATER] Varnish containing a large percentage of oil.

long-period tide [OCEANOGR] A tide or tidal current constituent with a period which is independent of the rotation of the earth but which depends upon the orbital movement of the moon or of the earth.

long period variable [ASTRON] A variable star with a period from about 100 to more than 600 days.

long-persistence screen [ELECTR] A fluorescent screen containing phosphorescent compounds that increase the decay time, so a pattern may be seen for several seconds after it is produced by the electron beam.

long-pillar work [MIN ENG] A coal-winning technique used in underground mining in which large pillars of coal are left as the face is advanced; finally all the pillars are removed together.

long-playing record [ENG ACOUS] A 10- or 12-inch (25.4- or 30.48-centimeter) phonograph record that operates at a speed of 33⅓ rpm (revolutions per minute) and has closely spaced grooves, to give playing times up to about 30 minutes for one 12-inch side. Also known as LP record; microgroove record.

long primer [ORD] Primer with relatively long body, designed to provide central ignition for a propelling charge.

long-range chart [NAV] An aeronautical chart of small scale, covering a large area, designed for long flights in which celestial or electronic navigation is expected to be used principally.

long-range forecast [METEOROL] A weather forecast covering periods from 48 hours to a week in advance (medium-range forecast), and ranging to even longer forecasts over periods of a month, a season, and so on.

long-range materiel requirements [ORD] Ordnance items required by operational and organizational concepts established for a period 5 to 10 years hence.

long-range navigation zone [NAV] **1.** A zone in which navigational aids furnish service at distances greater than 200 miles (322 kilometers). **2.** *See* loran.

long-range order [SOLID STATE] A tendency for some property of atoms in a lattice (such as spin orientation or type of atom) to follow a pattern which is repeated every few unit cells.

long residuum [MATER] Residue from crude-oil distillation in a petroleum refinery when a relatively small proportion of the feed is distilled overhead.

long run frequency [STAT] The ratio of the number of occurrences of an event in a large number of trials to the number of trials.

Long's coefficient [PATH] The number 2.6, multiplied by the last two figures of the urine specific gravity, determined at 25°C, to derive the number of grams of solids per liter of urine.

longshore bar [GEOL] A ridge of sand, gravel, or mud built on the seashore by waves and currents, generally parallel to the shore and submerged by high tides. Also known as offshore bar.

longshore current *See* littoral current.

longshore drift *See* littoral drift.

longshore trough [GEOL] A long, wide, shallow depression of the sea floor parallel to the shore.

long span [ENG] Span of open wire exceeding 250 feet (76 meters) in length.

long-span steel framing [BUILD] Framing system used when there is a greater clear distance between supports than can be spanned with rolled beams; girders, simple trusses, arches, rigid frames, and cantilever suspension spans are used in this system.

long spark *See* long discharge.

long-staple cotton [TEXT] A grade of cotton whose staple is 1⅛ inches (29 millimeters) or over in length.

long string [PETRO ENG] The last string of casing that is set in a well, through the producing zone. Also known as oil string.

long-tail pair [ELECTR] A two-tube or transistor circuit that has a common resistor (tail resistor) which gives strong negative feedback.

long-time burning oil [MATER] Carefully refined kerosine used in railway semaphore signal lamps; heavy ends are removed so that the oil will burn without charring the wick.

long tom [MIN ENG] A trough, longer than a rocker, for washing gold-bearing earth.

Long Tom [ORD] Popular name for 155-millimeter self-propelled gun.

long ton *See* ton.

long-tube vertical evaporator [CHEM ENG] A liquid evaporator in which the material is force-fed into the bottom of a bundle of long, vertical tubes; hot liquid on the outsides of the tubes transfers heat to the rising liquid feed, causing partial evaporation.

longwall coal cutter [MIN ENG] Compact machine driven by electricity or compressed air which cuts into the coal on relatively long faces, with its jib at right angles to its body.

longwall peak stoping [MIN ENG] An underland stoping method in which the rapid advance of the face goes on, and by working the faces at a 60° angle to the strike, the peak travels down the dip at twice the face advance rate.

longwall pillar working [MIN ENG] A technique used to extract coal pillars left behind in long-pillar working.

longwall retreating [MIN ENG] A longwall working system in which all the roadways are in the solid coal seam and the waste areas are left behind; developing headings are driven close to the boundary or limit, and the coal is taken out by the longwall retreating toward the shaft.

longwall system [MIN ENG] A method of mining in which the faces are advanced from the shaft toward the boundary, and the roof is allowed to cave in behind the miners as work progresses.

long wave [COMMUN] An electromagnetic wave having a wavelength longer than the longest broadcast-band wavelength of about 545 meters, corresponding to frequencies below about 550 kilohertz. [METEOROL] With regard to atmospheric circulation, a wave in the major belt of westerlies which is characterized by large length (thousands of kilometers) and significant amplitude; the wavelength is typically longer than that of the rapidly moving individual cyclonic and anticyclonic disturbances of the lower troposphere. Also known as major wave; planetary wave.

long-wave radio [COMMUN] A radio which can receive frequencies below the lowest broadcast frequency of 550 kilohertz.

long-wire antenna [ELECTROMAG] An antenna whose length is a number of times greater than its operating wavelength, so as to give a directional radiation pattern. Also known as long-conductor antenna.

long-wool [TEXT] A straight wool with a shine or gloss and a staple length of 7 to 20 inches (18 to 51 centimeters).

lonsdaleite [MINERAL] A mineral composed of a form of carbon; found in meteorites.

loo [METEOROL] A hot wind from the west in India.

lookahead [COMPUT SCI] A procedure in which a processor is preparing one instruction in a computer program while executing its predecessor.

lookahead tree *See* game tree.

look angle [AERO ENG] The elevation and azimuth at which a particular satellite is predicted to be found at a specified time. [ENG] The solid angle in which an instrument operates effectively, generally used to describe radars, optical instruments, and space radiation detectors.

look box [CHEM ENG] Box with glass windows built into distillation-column rundown lines (or other flow lines) so that the stream of condensate from the condenser can be watched.

lookout [BUILD] A horizontal wood framing member that extends out from the studs to the end of rafters and overhangs a part of a roof, such as a gable.

lookout station [ENG] A structure or place on shore at which personnel keep watch of events at sea or along the shore.

lookout tower [ENG] In marine operations, any tower surmounted by a small house in which a watch is habitually kept, as distinguished from an observation tower in which no watch is kept.

look-through [ELECTR] **1.** When jamming, a technique whereby the jamming emission is interrupted irregularly for extremely short periods to allow monitoring of the victim signal during jamming operations. **2.** When being jammed, the technique of observing or monitoring a desired signal during interruptions in the jamming signal.

look-up [COMPUT SCI] An operation or process in which a

table of stored values is scanned (or searched) until a value equal to (or sometimes, greater than) a specified value is found.

look-up table [COMPUT SCI] A stored matrix of data for reference purpose.

loom [METEOROL] The glow of light below the horizon produced by greater-than-normal refraction in the lower atmosphere; it occurs when the air density decreases more rapidly with height than in the normal atmosphere. [TEXT] A machine on which fabrics are woven.

looming [OPTICS] A form of mirage in which images of objects normally hidden below the horizon are seen in the sky, sometimes upside down; a common occurrence in the Far North.

Loomis-Wood diagram [SPECT] A graph used to assign lines in a molecular spectrum to the various branches of rotational bands when these branches overlap, in which the difference between observed wave numbers and wave numbers extrapolated from a few lines that apparently belong to one branch are plotted against arbitrary running numbers for that branch.

loon [VERT ZOO] The common name for birds composing the family Gaviidae, all of which are fish-eating diving birds.

loop [AERO ENG] A flight maneuver in which an airplane flies a circular path in an approximately vertical plane, with the lateral axis of the airplane remaining horizontal, that is, an inside loop. [COMPUT SCI] A sequence of computer instructions which are executed repeatedly, but usually with address modifications changing the operands of each iteration, until a terminating condition is satisfied. [ELEC] **1.** A closed path or circuit over which a signal can circulate, as in a feedback control system. **2.** Commercially, the portion of a connection from central office to subscriber in a telephone system. **3.** *See* mesh. [ELECTROMAG] *See* coupling loop; loop antenna. [ENG] **1.** A reel of motion picture film or magnetic tape whose ends are spliced together, so that it may be played repeatedly without interruption. **2.** A closed circuit of pipe in which materials and components may be placed to test them under different conditions of temperature, irradiation, and so forth. [MATH] A line which begins and ends at the same point of the graph. [PHYS] **1.** A closed curve on a graph, such as a hysteresis loop. **2.** That part of a standing wave where the vertical motion is greatest and the horizontal velocities are least. **3.** *See* antinode.

loop antenna [ELECTROMAG] A directional-type antenna consisting of one or more complete turns of a conductor, usually tuned to resonance by a variable capacitor connected to the terminals of the loop. Also known as loop.

loop body [COMPUT SCI] The set of statements to be performed iteratively with the range of a loop.

loop checking [COMMUN] Sending signals from the central office to test the integrity of local loops.

loop circuit [COMMUN] Common communications circuit shared by more than two parties; when applied to a teletypewriter operation, all machines print all data entered on the loop.

loop control *See* photoelectric loop control.

loop coupling [ELECTROMAG] A method of transferring energy between a waveguide and an external circuit, by inserting a conducting loop into the waveguide, oriented so that electric lines of flux pass through it.

loop dialing [COMMUN] Return-path method of dialing in which the dial pulses are sent out over one side of the interconnecting line or trunk and are returned over the other side; limited to short-haul traffic.

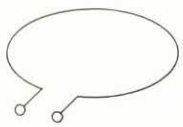
looped pipeline [PETRO ENG] A pipeline that is paralleled (looped) by a second pipeline, both of which serve the same liquid or gas source and destination.

loop filter [ELECTR] A low-pass filter, which may be a simple *RC* filter or may include an amplifier, and which passes the original modulating frequencies but removes the carrier-frequency components and harmonics from a frequency-modulated signal in a locked-oscillator detector.

loop gain [CONT SYS] The ratio of the magnitude of the primary feedback signal in a feedback control system to the magnitude of the actuating signal. [ELECTR] Total usable power gain of a carrier terminal or two-wire repeater; maximum usable gain is determined by, and may not exceed, the losses in the closed path.

loop head [COMPUT SCI] The first instruction of a loop, which contains the mode of execution, induction variable, and indexing parameters.

LOOP ANTENNA



Shape of loop antenna.

LOOP PATTERN

Loop fingerprint patterns. *(a)* Twelve-count ulna loop. *(b)* Radial loop. *(Federal Bureau of Investigation)*

looping [ENG] Laying a parallel pipeline along another, or along just a section of it, to increase capacity.

looping mill [MET] An arrangement of mills such that a hot bar discharged from one mill is fed into a second mill in the opposite direction.

loop lake *See* oxbow lake.

loop-mile [ELEC] Length of wire in a mile of two-wire line.

Loop Nebula [ASTRON] A large, bright gaseous nebula in the Large Magellanic Cloud; its diameter is about 260 light-years. Also known as 30 Doradus; Tarantula.

loop network *See* ring network.

loop of Henle [ANAT] The U-shaped portion of a renal tubule formed by a descending and an ascending tubule. Also known as Henle's loop.

loop of retrogression [ASTRON] A loop in the apparent path of a planet, relative to the stars, that is described when the planet undergoes retrograde motion.

loop pattern [ANAT] A type of fingerprint pattern in which one or more of the ridges enter on either side of the impression, recurve, touch, or pass an imaginary line from the delta to the core and terminate on the entering side.

loop pulsing [COMMUN] Regular, momentary interruptions of the direct-current path at the sending end of a transmission line. Also known as dial pulsing.

loop rating [HYD] A rating curve that has higher values of discharge for a certain stage when the river is rising than it does when the river is falling; thus, the curve (stage versus discharge) describes a loop with each rise and fall of the river.

loop ratio *See* loop transfer function.

loop seal [CHEM ENG] Antivapor seal for liquid drawoffs from process or storage vessels; liquid drawoff is made to flow through an immersed loop or beneath an obstruction, thus sealing off vapor flow.

loopstick antenna *See* ferrite-rod antenna.

loop stop [COMPUT SCI] A small closed loop that is entered to stop the progress of a computer program, usually when some condition occurs that requires intervention by the operator or that should be brought to the operator's attention. Also known as stop loop.

loop test [ELEC] A telephone or telegraph line test that is made by connecting a faulty line to good lines in such a way as to form a loop in which measurements can be made to determine the position of the fault.

loop transfer function [CONT SYS] For a feedback control system, the ratio of the Laplace transform of the primary feedback signal to the Laplace transform of the actuating signal. Also known as loop ratio.

loop transmission [COMMUN] A series connection of subscribers in a communications system, as in the ARPA computer network or McCullough burglar alarm loops.

loop transmittance [CONT SYS] **1.** The transmittance between the source and sink created by the splitting of a specified node in a signal flow graph. **2.** The transmittance between the source and sink created by the splitting of a node which has been inserted in a specified branch of a signal flow graph in such a way that the transmittance of the branch is unchanged.

loop tunnel [ENG] A tunnel which is looped or folded back on itself to gain grade in a tunnel location.

loop-type pit bottom [MIN ENG] An arrangement at the pit bottom in which loaded cars are fed to the cage on one side only, and the empties are returned by a loop roadway to the same place.

loop-type radio range [NAV] An A-N radio range employing two loop antennas placed at right angles to one another.

loopway [MIN ENG] A double-track loop in a main single-track haulage plane at which mine cars may pass.

loose connective tissue [HISTOL] A type of irregularly arranged connective tissue having a relatively large amount of ground substance.

loose coupling [ELEC] Coupling of a degree less than the critical coupling.

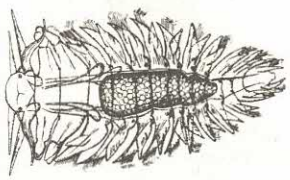
loose-detail mold [ENG] A plastics mold with parts that come out with the molded piece.

loose fit [DES ENG] A fit with enough clearance to allow free play of the joined members.

loose ground [MIN ENG] Broken, fragmented, or loosely cemented bedrock material that tends to slough from sidewalls into a borehole and must be supported, as with timber sets. Also known as broken ground.

loose-joint butt [DES ENG] A knuckle hinge in which the pin on one half slides easily into a slot on the other half.
loose kernel smut [PL PATH] A type of kernel smut disease distinguished by the ruptured spore-containing gall.
loose list [COMPUT SCI] A list, some of whose cells are empty and thus do not contain records of the file. Also known as thin list.
loose pulley [MECH ENG] In belt-driven machinery, a pulley which turns freely on a shaft so that the belt can be shifted from the driving pulley to the loose pulley, thereby causing the machine to stop.
Looser-Milkman syndrome *See* Milkman's syndrome.
loose round [ORD] Defective cartridge in which the bullet is loose in the cartridge case.
Lopadorrhynchidae [INV ZOO] A small family of pelagic polychaete annelids belonging to the Errantia.
loparite [MINERAL] $(Ce,Na,Ca)_2(Ti,Nb)_2O_6$ A brown to black mineral; a variety of perovskite containing alkalies and cerium.
lopezite [MINERAL] $K_2Cr_2O_7$ An orange-red mineral composed of potassium dichromate.
Lophialetidae [PALEON] A family of extinct perissodactyl mammals in the superfamily Tapiroidea.
Lophiiformes [VERT ZOO] A modified order of actinopterygian fishes distinguished by the reduction of the first dorsal fin to a few flexible rays, the first of which is on the head and bears a terminal bulb; includes anglerfish and allies.
lophine [ORG CHEM] $C_{21}H_{16}O_2$ A colorless, crystalline, water-insoluble compound that melts at 275°C; used as an indicator in fluorescent neutralization tests.
Lophiodontidae [PALEON] An extinct family of perissodactyl mammals in the superfamily Tapiroidea.
lophocercous [VERT ZOO] Having a ridgelike caudal fin that lacks rays.
lophocyte [INV ZOO] A specialized cell of uncertain function beneath the dermal membrane of certain Demospongiae which bears a process terminating in a tuft of fibrils.
lophodont [VERT ZOO] Having molar teeth whose grinding surfaces have transverse ridges.
Lophogastrida [INV ZOO] A suborder of free-swimming marine crustaceans in the order Mysidacea characterized by imperfect fusion of the sixth and seventh abdominal somites, seven pairs of gills and brood lamellae, and natatory, biramous pleopods.
lophophore [INV ZOO] A food-gathering organ consisting of a fleshy basal ridge or lobe, from which numerous ciliated tentacles arise; found in Bryozoa, Phoronida, and Brachiopoda.
lophotrichous [CYTOL] Having a polar tuft of flagella.
lopolith [GEOL] A large, floored intrusive body that is sunken centrally into the shape of a basin due to sagging of the underlying country rock.
lopping shears [DES ENG] Long-handled shears used for pruning branches.
lorac [NAV] A radio navigation system which utilizes phase comparison techniques to provide hyperbolic lines of position; the system permits an unlimited number of users. Derived from long-range accuracy.
lorad *See* lodar.
loran [NAV] The designation of a family of radio navigation systems by which hyperbolic lines of position are determined by measuring the difference in the times of reception of synchronized pulse signals from two or more fixed transmitters. Derived from long-range navigation.
loran A [NAV] A medium-frequency radio navigation system by which hyperbolic lines of position are determined by measuring the difference in the times of reception of synchronized pulse signals from two fixed transmitters. Also known as standard loran.
loran C [NAV] A low-frequency radio navigation system by which hyperbolic lines of position are determined by measuring the difference in the times of reception of synchronized pulse signals from two fixed transmitters; as compared to loran A, time difference measurements are increased in accuracy through utilizing phase comparison techniques in addition to relatively coarse matches of pulse envelopes of received signals within the loran C receiver.
loran chain [NAV] **1.** A system or combination of three or more loran A stations, forming two or more pairs of stations for loran A navigation. **2.** A system or combination of a master loran C station and two or more loran C slave stations, forming two or more pairs of stations for loran C navigation.
loran chart [NAV] A chart showing loran lines of position along with a limited amount of topographic detail.
loran D [NAV] Tactical loran system that uses the coordinate converter of low-frequency loran C and can operate in conjunction with inertial systems on aircraft, independently of ground facilities and without radiating radio-frequency energy that could reveal the aircraft's location.
lorandite [MINERAL] $TlAsS_2$ A cochineal- to carmine-red or dark lead-gray mineral composed of thallium sulfarsenide, occurring in monoclinic form.
loran fix [NAV] A fix established by means of loran lines of position.
loran line [NAV] A line of position on a loran chart; each line is the locus of points whose distances from two fixed stations differ by a constant amount.
loran rate [NAV] **1.** The frequency channel and pulse repetition rate by which a pair of loran stations is identified. **2.** By extension, the term refers to a pair of transmitting stations, their signals, and resulting lines of position.
loranskite [MINERAL] $(Y,Ce,Ca,Zr)TaO_4$ A black mineral composed of an oxide of yttrium, cerium, calcium, tantalum, and zirconium.
loran tables [NAV] A series of tables containing tabular data for constructing loran hyperbolic lines of position.
Loranthaceae [BOT] A family of dicotyledonous plants in the order Santalales in which the ovules have no integument and are embedded in a large, central placenta.
lorate [BIOL] Strap-shaped.
lordosis [MED] Exaggerated forward curvature of the lumbar spine.
Lorentz-Boltzmann equation [STAT MECH] An approximation to the Boltzmann transport equation for states that are near equilibrium, which shows that the Maxwell-Boltzmann distribution applies at equilibrium.
Lorentz conductivity theory *See* classical conductivity theory.
Lorentz contraction *See* FitzGerald-Lorentz contraction.
Lorentz electron [ELECTROMAG] A model of the electron as a damped harmonic oscillator; used to explain the variation of the real and imaginary parts of the index of refraction of a substance with frequency.
Lorentz equation [ELECTROMAG] The equation of motion for a charged particle, which sets the rate of change of its momentum equal to the Lorentz force.
Lorentz-FitzGerald contraction *See* FitzGerald-Lorentz contraction.
Lorentz force [ELECTROMAG] The force on a charged particle moving in electric and magnetic fields, equal to the particle's charge times the sum of the electric field and the cross product of particle's velocity with the magnetic flux density.
Lorentz force density [ELECTROMAG] The force per unit volume on a charge density and current density, assuming that these densities arise from large numbers of charged particles experiencing a Lorentz force.
Lorentz four-vector *See* four-vector.
Lorentz frame [RELAT] Any of the family of inertial coordinate systems, with three space coordinates and one time coordinate, used in the special theory of relativity; each frame is in uniform motion with respect to all the other Lorentz frames, and the interval between any two events is the same in all frames.
Lorentz gage [ELECTROMAG] Any gage in which the sum of the divergence of the vector potential and the partial derivative of the scalar potential divided by the speed of light (in Gaussian units) vanishes identically; it is always possible to find a gage satisfying this condition.
Lorentz gas [ELECTR] A model of completely ionized gas in which ions are assumed to be stationary and interactions between electrons are neglected.
Lorentz group [MATH] The group of all Lorentz transformations of euclidean four-space with composition as the operation.
Lorentz-Heaviside system *See* Heaviside-Lorentz system.
Lorentz invariance [RELAT] The property, possessed by the laws of physics and of certain physical quantities, of being the same in any Lorentz frame, and thus unchanged by a Lorentz transformation.
Lorentz line-splitting theory [ATOM PHYS] A theory predicting that when a light source is placed in a strong magnetic field, its spectral lines are each split into three components, one of them retaining the zero-field frequency, and the other two

LOPADORRHYNCHIDAE

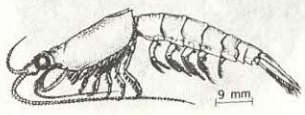


Lopadorrhynchus, dorsal view. *(After McIntosh)*

LOPHOCYTE

Lophocyte of a freshwater sponge showing terminal tuft of fibrils. *(After Ankel and Wintermann-Kilian)*

LOPHOGASTRIDA



Lophogaster typicus, adult male.

shifted upward and downward in frequency by the Larmor frequency (the normal Zeeman effect).

Lorentz local field [ELEC] In a theory of electric polarization, the average electric field due to the polarization at a molecular site that is calculated under the assumption that the field due to polarization by molecules inside a small sphere centered at the site may be neglected. Also known as Mossotti field.

Lorentz-Lorenz equation [OPTICS] The equation that results from replacing the relative dielectric constant with the square of the index of refraction in the Clausius-Mossotti equation.

Lorentz-Lorenz molar refraction *See* molar refraction.

Lorentz matrix [RELAT] A matrix whose product with a vector whose components are the space and time coordinates of an event yields a vector whose components are new coordinates derived from the original ones by a Lorentz transformation.

Lorentz number [PL PHYS] The ratio of the velocity of a fluid to the velocity of light. Symbolized N_{Lo}. [SOLID STATE] The thermal conductivity of a metal divided by the product of its temperature and its electrical conductivity, according to the Wiedemann-Franz law.

Lorentz polarization factor [OPTICS] A geometric factor in the equation for the intensity of x-rays or other radiation diffracted through a given angle by a crystalline substance.

Lorentz relation *See* Wiedemann-Franz law.

Lorentz theory of light sources [ATOM PHYS] A theory according to which light is emitted by vibrations of electrons, which are damped harmonic oscillators attached to atoms.

Lorentz transformation [MATH] Any linear transformation of euclidean four space which preserves the quadratic form $q(x,y,z,t) = t^2 - x^2 - y^2 - z^2$. [RELAT] Any of the family of mathematical transformations used in the special theory of relativity to relate the space and time variables of different Lorentz frames.

Lorentz unit [SPECT] A unit of reciprocal length used to measure the difference, in wave numbers, between a (zero field) spectrum line and its Zeeman components; equal to $eH/4\pi mc^2$, where H is the magnetic field strength, c is the speed of light, and e and m are the charge and mass of the electron respectively (gaussian units).

Lorenz curve [STAT] A graph for showing the concentration of ownership of economic quantities such as wealth and income; it is formed by plotting the cumulative distribution of the amount of the variable concerned against the cumulative frequency distribution of the individuals possessing the amount.

lorettoite [MINERAL] $Pb_7O_6Cl_2$ A honey-yellow to brownish-yellow mineral composed of lead oxychloride.

L organisms [MICROBIO] Pleomorphic forms of bacteria occurring spontaneously, or favored by agents such as penicillin, which lack cell walls and grow in minute colonies; transition may be reversible under certain conditions.

lorhumb line [NAV] A line along which the rates of change of the values of two families of hyperbolas are constants.

lorica [INV ZOO] A hard shell or case in certain invertebrates, as in many rotifers and protozoans; functions as an exoskeleton.

Loricaridae [VERT ZOO] A family of catfishes in the suborder Siluroidei found in the Andes.

Loricata [INV ZOO] An equivalent name for Polyplacophora.

loricate [INV ZOO] Of, pertaining to, or having a lorica.

loris [VERT ZOO] Either of two slow-moving, nocturnal, arboreal primates included in the family Lorisidae: the slender loris (*Loris tardigradus*) and slow loris (*Nycticebus coucang*).

Lorisidae [VERT ZOO] A family of prosimian primates comprising the lorises of Asia and the galagos of Africa.

lorry *See* larry.

Loschmidt number [PHYS] The number of molecules in 1 cubic centimeter of an ideal gas at 1 atmosphere pressure and 0°C, equal to approximately 2.687×10^{19}.

lose returns *See* lost circulation.

lose water *See* lost circulation.

loseyite [MINERAL] $(Mn,Zn)_7(CO_3)_2(OH)_{10}$ A bluish-white or brownish, monoclinic mineral consisting of a basic carbonate of manganese and zinc.

losing stream *See* influent stream.

loss [COMMUN] *See* transmission loss. [ENG] Power that is dissipated in a device or system without doing useful work. Also known as internal loss.

loss angle [ELECTROMAG] A measure of the power loss in an inductor or a capacitor, equal to the amount by which the angle between the phasors denoting voltage and current across the inductor or capacitor differs from 90°.

loss cone [PL PHYS] A cone in the velocity space of particles in a plasma confined by magnetic mirrors; particles with velocities in the cone are not trapped by the mirrors and are lost out of the system.

loss-cone instability [PL PHYS] An instability in a plasma confined between magnetic mirrors.

loss current [ELEC] The current which passes through a capacitor as a result of the conductivity of the dielectric and results in power loss in the capacitor. [ELECTROMAG] The component of the current across an inductor which is in phase with the voltage (in phasor notation) and is associated with power losses in the inductor.

losser circuit [ELEC] Resonant circuit having sufficient high-frequency resistance to prevent sustained oscillation at the resonant frequency.

loss evaluation [ELEC] A method of achieving an economic balance between buyer and seller in adding material to a transformer design to get lower losses, in which one calculates a value in dollars per kilowatt for load loss and for no-load loss.

Lossev effect *See* injection electroluminescence.

loss factor [ELEC] The power factor of a material multiplied by its dielectric constant; determines the amount of heat generated in a material.

loss function [MATH] In decision theory, the function, dependent upon the decision and the true underlying distributions, which expresses the loss produced in taking the decision.

loss-in-weight feeder [MECH ENG] A device to apportion the output of granulated or powdered solids at a constant rate from a feed hopper; weight-measured decrease in hopper content actuates further opening of the discharge chute to compensate for flow loss as the hopper overburden decreases; used in the chemical, fertilizer, and plastics industries.

lossless junction [ELECTROMAG] A waveguide junction in which all the power incident on the junction is reflected from it.

lossless material [PHYS] An ideal material that dissipates none of the energy of electromagnetic or acoustic waves passing through it.

loss modulation *See* absorption modulation.

loss of head [FL MECH] Energy decrease between two points in a hydraulic system due to such causes as friction, bends, obstructions, or expansions.

loss-of-head gage [ENG] A gage on a rapid sand filter, which indicates loss of head for a filtering operation.

loss of information *See* walk-down.

lossy attenuator [ELECTROMAG] In waveguide technique, a length of waveguide deliberately introducing a transmission loss by the use of some dissipative material.

lossy line [ELEC] **1.** Cable used in test measurements which has a large attenuation per unit length. **2.** Transmission line designed to have a high degree of attenuation.

lossy material [PHYS] A material that dissipates energy of electromagnetic or acoustic energy passing through it.

lost circulation [PETRO ENG] A condition that occurs when the drilling fluid escapes into crevices or porous sidewalls of a borehole and does not return to the collar of the drill hole. Also called lose returns; lose water; lost returns; lost water.

lost motion [MECH ENG] The delay between the movement of a driver and the movement of a follower.

lost returns *See* lost circulation.

lost stream [HYD] **1.** A stream that disappears from the surface into an underground channel without reappearing in the same or even a neighboring drainage basin. **2.** An evaporated stream in a desertlike region.

lost time [ENG ACOUS] The period in a frequency-modulation sonar, just after flyback, during which the sound field must be reestablished; its duration equals travel time of the signal to and from the target.

lost water *See* lost circulation.

lost-wax process [MET] A method used in investment casting in which a wax pattern between a two-layered mold is removed by melting and replaced with molten metal; used for casting bronze statues and in jewelry casting.

lot [CIV ENG] A piece of land with fixed boundaries. [IND ENG] A quantity of material, such as propellant, the units of which were manufactured under identical conditions.

lotic [ECOL] Of or pertaining to swiftly moving waters.

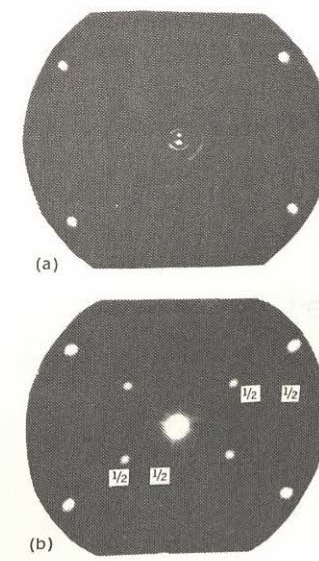
lot line [CIV ENG] The legal boundary line of a piece of property.

lot number [IND ENG] Identification number assigned to a particular quantity or lot of material from a single manufacturer.
lot plot method [IND ENG] A variables acceptance sampling plan based on the frequency plot of a random sample of 50 items taken from a lot.
lotrite *See* pumpellyite.
lot tolerance percent defective [IND ENG] The percent of defectives in a lot which is considered bad and should be rejected for some specified fraction, usually 90%, of the time.
loturine *See* harman.
loudness [ACOUS] The magnitude of the physiological sensation produced by a sound, which varies directly with the physical intensity of sound but also depends on frequency of sound and waveform.
loudness analyzer [ELECTR] An instrument that produces a cathode-ray display which shows the loudness of airborne sounds at a number of subdivisions of part or all of the audio spectrum.
loudness control [ENG ACOUS] A combination volume and tone control that boosts bass frequencies when the control is set for low volume, to compensate automatically for the reduced response of the ear to low frequencies at low volume levels. Also known as compensated volume control.
loudness level [ACOUS] The level of a sound, in phons, equal to the sound pressure level in decibels, relative to 0.0002 microbar, of a pure 1000-hertz tone that is judged to be equally loud by listeners.
loudness unit [ACOUS] A unit of loudness equal to the loudness of a sound having a loudness level of 0 phon; the loudness unit has been replaced by the sone.
loudspeaker [ENG ACOUS] A device that converts electrical signal energy into acoustical energy, which it radiates into a bounded space, such as a room, or into outdoor space. Also known as speaker.
loudspeaker dividing network *See* crossover network.
loudspeaker voice coil *See* voice coil.
loughlinite [MINERAL] $Na_2Mg_3Si_6O_{16}\cdot 8H_2O$ A pearly-white mineral that resembles asbestos, consisting of a hydrous silicate of sodium and magnesium.
louping ill [VET MED] A virus disease of sheep, similar to encephalomyelitis, transmitted by the tick *Ixodes racinus*. Also known as ovine encephalomyelitis; trembling ill.
louping-ill virus [VIROL] A group B arbovirus that is infectious in sheep, monkeys, mice, horses, and cattle.
louse [INV ZOO] The common name for the apterous ectoparasites composing the orders Anoplura and Mallophaga.
louver [BUILD] An opening in a wall or ceiling with slanted or sloping slats to allow sun and ventilation and exclude rain; may be fixed or adjustable, and may be at the opening of a ventilating duct. [ENG] Any arrangement of fixed or adjustable slatlike openings to provide ventilation. [ENG ACOUS] An arrangement of concentric or parallel slats or equivalent grille members used to conceal and protect a loudspeaker while allowing sound waves to pass.
lovage oil [MATER] A yellow-brown essential oil, soluble in alcohol and fixed oils, obtained from the root and fruit of *Levisticum officinale*; used for flavors and perfumes. Also known as levisticum oil.
lovchorrite *See* mosandrite.
Love wave [GEOPHYS] A horizontal dispersive surface wave, multireflected between internal boundaries of an elastic body, applied chiefly in the study of seismic waves in the earth's crust.
Lovibond tintometer [OPTICS] A colorimeter which compares a solution or object under examination with a series of slides of each of three colors.
lovozerite [MINERAL] $(Na,K)_2(Mn,Ca)ZrSi_6O_{16}\cdot 3H_2O$ Mineral composed of hydrous silicate of sodium, potassium, manganese, calcium, and zirconium.
low *See* depression.
low-alloy steel [MET] A hardenable carbon steel generally containing not more than about 1% carbon and one or more of the following alloyed components: < (less than) 2% manganese, < 4% nickel, < 2% chromium, < 0.6% molybdenum, and < 0.2% vanadium.
low aloft *See* upper-level cyclone.
low-altitude bombing [ORD] Horizontal bombing at altitudes between about 900 and 8000 feet (0.27 and 2.4 kilometers). Also known as low-level bombing.
low-angle bombing [ORD] Bombing from an airplane at a slight dive angle.
low-angle fault [GEOL] A fault that dips at an angle less than 45°.
low-angle fire [ORD] Gunfire delivered at angles of elevation below the elevation that corresponds to the maximum range of the piece, so that ranges increase with increases in angles of elevation.
low-angle thrust *See* overthrust.
low-approach system [NAV] A means for furnishing guidance in the vertical and horizontal planes to aircraft during descent from an initial approach altitude to a point near the ground.
low band [COMMUN] The band that includes television channels 2 to 6, extending from 54 to 88 megahertz.
low boiler [MATER] A fast-evaporating solvent used in lacquer thinner to give a rapid initial set; boiling point is 70–100°C.
low-boiling butene-2 *See* butene-2.
low brass [MET] Brass containing 20% zinc, 80% copper.
low-carbon steel [MET] Steel containing 0.15% or less of carbon.
low clouds [METEOROL] Types of clouds, the mean level of which is between the surface and 6500 feet (1980 meters); the principal clouds in this group are stratocumulus, stratus, and nimbostratus.
low-definition television [COMMUN] Television that involves less than about 200 scanning lines per complete image.
low-density dynamite [MATER] Any dynamite containing up to 80% ammonium nitrate as the principal explosive ingredient.
low-energy electron diffraction [SOLID STATE] A technique for studying the atomic structure of single crystal surfaces, in which electrons of uniform energy in the approximate range 5–500 electron volts are scattered from a surface, and those scattered electrons that have lost no energy are selected and accelerated to a fluorescent screen where the diffraction pattern from the surface can be observed. Abbreviated LEED.
low-energy environment [GEOL] An aqueous sedimentary environment in which there is standing water with a general lack of wave or current action, permitting accumulation of very fine-grained sediments.
low-energy np scattering [NUC PHYS] An elastic collision of a neutron, having an energy from less than 1 electronvolt to 10,000,000 electronvolts, with a proton (usually the nucleus of a hydrogen atom).
low-energy physics [PHYS] That part of physics which studies microscopic phenomena involving energies of several million electronvolts or less, such as the arrangement of electrons in an atom or a solid, and the arrangement of protons and neutrons within the atomic nucleus, and the nature of forces between these particles.
low-energy pp scattering [NUC PHYS] An elastic collision of a proton, having an energy of less than 10,000,000 electronvolts, with another proton (usually the nucleus of a hydrogen atom).
Lowenhertz thread [DES ENG] A screw thread that differs from U.S. Standard form in that the angle between the flanks measured on an axial plane is 53°8′; height equals 0.75 times the pitch, and width of flats at top and bottom equals 0.125 times the pitch.
lower atmosphere [METEOROL] That part of the atmosphere in which most weather phenomena occur (that is, the troposphere and lower stratosphere); in other contexts, the term implies the lower troposphere.
Lower Austral life zone [ECOL] A term used by C.H. Merriam to describe the southern portion of the Austral life zone, characterized by accumulated temperatures of 18,000°F (10,000°C).
lower bound [MATH] A lower bound of a subset A of a set S is a point of S which is smaller than every element of A.
lower branch [ASTRON] That half of a meridian or celestial meridian from pole to pole which passes through the antipode or nadir of a place.
Lower Cambrian [GEOL] The earliest epoch of the Cambrian period of geologic time, ending about 540,000,000 years ago.
lower chord [CIV ENG] The bottom member of a truss.
Lower Cretaceous [GEOL] The earliest epoch of the Cretaceous period of geologic time, extending from about 140- to 120,000,000 years ago.

LOUSE

The head louse of humans, a pale-gray-brown insect with black margins and a maximum length of 1/10 inch (0.25 centimeter).

LOW-ENERGY ELECTRON DIFFRACTION



Low-energy electron diffraction patterns from a (110) tungsten surface. *(a)* Clean, 54 volts. *(b)* Half monolayer of oxygen atoms, 53 volts. Fractions refer to Miller indices of superstructure produced by oxygen absorption. *(From L. H. Germer and J. W. May, Diffraction study of oxygen absorption on a (110) tungsten face, Surface Sci., 4:452, 1966)*

lower culmination *See* lower transit.

lower curtate [COMPUT SCI] The lower or bottom part of a punch card; on a standard punch card, it contains the punch positions designated 1 through 9.

Lower Devonian [GEOL] The earliest epoch of the Devonian period of geologic time, extending from about 400- to 385,000,000 years ago.

lower half-power frequency [ELECTR] The frequency on an amplifier response curve which is smaller than the frequency for peak response and at which the output voltage is $1/\sqrt{2}$ of its midband or other reference value.

lower heating value *See* low heat value.

lower high water [OCEANOGR] The lower of two high tides occurring during a tidal day.

Lower Jurassic [GEOL] The earliest epoch of the Jurassic period of geologic time, extending from about 185- to 170,000,000 years ago.

lower limb [ASTRON] That half of the outer edge of a celestial body having the least altitude.

lower low water [OCEANOGR] The lower of two low tides occurring during a tidal day.

lower mantle [GEOL] The portion of the mantle below a depth of about 1000 kilometer. Also known as inner mantle; mesosphere; pallasite shell.

Lower Mississippian [GEOL] The earliest epoch of the Mississippian period of geologic time, beginning about 350,000,000 years ago.

lower motor neuron [ANAT] An efferent neuron which has its body located in the anterior gray column of the spinal cord or in the brainstem nuclei, and its axon passing by way of a peripheral nerve to skeletal muscle. Also known as final common pathway.

lower motor neuron disease [MED] An injury to any part of a lower motor neuron, characterized by flaccid paralysis of the muscle, diminished or absent reflexes, and progressive atrophy of the muscle.

lower nephron nephrosis [MED] Retrogressive kidney changes following traumatic injury and other conditions producing shock; sometimes accompanied by distal and collecting tubule necrosis. Also known as acute tubular necrosis; crush kidney; hemoglobinuric nephrosis; ischemic tubulorrhexis.

Lower Ordovician [GEOL] The earliest epoch of the Ordovician period of geologic time, extending from about 490- to 460,000,000 years ago.

lower pair [MECH ENG] A link in a mechanism in which the mating parts have surface (instead of line or point) contact.

Lower Pennsylvanian [GEOL] The earliest epoch of the Pennsylvanian period of geologic time, beginning about 310,000,000 years ago.

Lower Permian [GEOL] The earliest epoch of the Permian period of geologic time, extending from about 275- to 260,000,000 years ago.

lower pitch limit [ACOUS] Minimum frequency, for a sinusoidal sound wave, that will produce a pitch sensation.

lower plate *See* footwall.

lower punch [MET] In powder metallurgy, the portion of the die forming the bottom of the die cavity.

lower rib height [ANTHRO] The measure of the vertical distance taken from the lower edge of the last front-attached rib to the floor as the subject stands.

lower sideband [COMMUN] The sideband containing all frequencies below the carrier-frequency value that are produced by an amplitude-modulation process.

lower-sideband upconverter [ELECTR] Parametric amplifier in which the frequency, power, impedance, and gain considerations are the same as for the nondegenerate amplifier; here, however, the output is taken at the difference frequency, or the lower sideband, rather than the signal-input frequency.

Lower Silurian [GEOL] The earliest epoch of the Silurian period of geologic time, beginning about 420,000,000 years ago.

Lower Sonoran life zone [ECOL] A term used by C.H. Merriam to describe the climate and biotic communities of subtropical deserts and thorn savannas in the southwestern United States.

lower transit [ASTRON] Transit across the lower branch of the celestial meridian. Also known as lower culmination.

Lower Triassic [GEOL] The earliest epoch of the Triassic period of geologic time, extending from about 230- to 215,000,000 years ago.

lower yield point [MET] In annealed carbon steels, the lowest value of stress after the initial dropoff and before the load begins to rise continuously.

lowest required radiating power [COMMUN] The smallest power output of an antenna which will suffice to maintain a specified grade of broadcast service. Abbreviated LRRP.

lowest safe waterline [MECH ENG] The lowest water level in a boiler drum at which the burner may safely operate.

lowest useful high frequency [COMMUN] The lowest high frequency that is effective at a specified time for ionospheric propagation of radio waves between two specified points. Abbreviated LUHF.

low-expansion alloy [MET] An alloy whose dimensions do not vary appreciably with temperature.

low explosive [MATER] An explosive which when used in its normal manner deflagrates or burns rather than detonates; used when shattering must be prevented.

low-freezing dynamite [MATER] A dynamite designed to work under freezing conditions; part of the nitroglycerin of the straight dynamite is replaced by nitrated sugar, nitrotoluene, nitrated polymerized glycerin, or ethylene glycol dinitrate.

low-frequency [COMMUN] A Federal Communications Commission designation for the band from 30 to 300 kilohertz in the radio spectrum. Abbreviated LF.

low-frequency acquisition and ranging *See* lofar.

low-frequency antenna [ELECTROMAG] An antenna designed to transmit or receive radiation at frequencies of less than about 300 kilohertz.

low-frequency compensation [ELECTR] Compensation that serves to extend the frequency range of a broad-band amplifier to lower frequencies.

low-frequency current [ELEC] An alternating current having a frequency of less than about 300 kilohertz.

low-frequency cutoff [ELECTR] A frequency below which the gain of a system or device decreases rapidly.

low-frequency cycle [MET] In resistance welding, one positive- and one negative-current pulse within a heat time at a lower frequency than the electrical power source.

low-frequency gain [ELECTR] The gain of the voltage amplifier at frequencies less than those frequencies at which this gain is close to its maximum value.

low-frequency impedance corrector [ELEC] Electric network designed to be connected to a basic network, or to a basic network and a building-out network, so that the combination will simulate, at low frequencies, the sending-end impedance, including dissipation, of a line.

low-frequency induction furnace [ENG] An induction furnace in which current flow at the commercial power-line frequency is induced in the charge to be heated.

low-frequency loran [NAV] A modification of standard loran, which operates in the low-frequency range of approximately 100 to 200 kilohertz to increase range over land and during daytime, and which matches cycles rather than envelopes of pulses to obtain a more accurate fix. Abbreviated LF loran. Also known as cycle-matching loran.

low-frequency padder [ELECTR] In a superheterodyne receiver, a small adjustable capacitor connected in series with the oscillator tuning coil and adjusted during alignment to obtain correct calibration of the circuit at the low-frequency end of the tuning range.

low-frequency propagation [ELECTROMAG] Propagation of radio waves at frequencies between 30 and 300 kilohertz.

low-frequency spectrum [SPECT] Spectrum of atoms and molecules in the microwave region, arising from such causes as the coupling of electronic and nuclear angular momenta, and the Lamb shift.

low-frequency transconductance [ELECTR] The change in the plate current of a vacuum tube divided by the change in the control-grid voltage that produces it, at frequencies small enough for these two quantities to be considered in phase.

low-frequency tube [ELECTR] An electron tube operated at frequencies small enough so that the transit time of an electron between electrodes is much smaller than the period of oscillation of the voltage.

low-grade [MATER] An arbitrary designation of dynamites of less strength than 40%. [MIN ENG] Pertaining to ores that have a relatively low content of minerals. Also known as coarse; lean. [SCI TECH] Being of inferior quality.

low-heat cement [MATER] A chemically altered portland cement with a low initial heat liberation.

low heat value [THERMO] The heat value of a combustion process assuming that none of the water vapor resulting from the process is condensed out, so that its latent heat is not available. Also known as lower heating value; net heating value.

low-helix drill [DES ENG] A two-flute twist drill with a lower helix angle than a conventional drill. Also known as slow-spiral drill.

low-hydrogen electrode [MET] A covered electrode used in arc welding that provides an atmosphere low in hydrogen.

low-impedance measurement [ELECTR] The measurement of an impedance which is small enough to necessitate use of indirect methods.

low-impedance switching tube [ELECTR] A gas tube which has a static impedance on the order of 10,000 ohms, but zero or negative dynamic impedance, and therefore can be used as a relay and transmits information with negligible loss as well.

low index [METEROL] A relatively low value of the zonal index which, in middle latitudes, indicates a relatively weak westerly component of wind flow (usually implying stronger north-south motion), and the characteristic weather attending such motion; a circulation pattern of this type is commonly called a low-index situation.

low-intensity atomizer [MECH ENG] A type of electrostatic atomizer operating on the principle that atomization is the result of Rayleigh instability, in which the presence of charge in the surface counteracts surface tension.

low-intensity reciprocity failure [GRAPHICS] The loss of sensitivity of a photographic plate at low light levels and long exposure times, so that the exposing intensity required to produce a given photographic density is no longer proportional to the reciprocal of the exposure time.

low-key photograph [GRAPHICS] A photograph which has mostly dark tones and very few light or white areas.

low level [ELECTR] The less positive of the two logic levels or states in a digital logic system.

low-level bombing *See* low-altitude bombing.

low-level condenser [MECH ENG] A direct-contact water-cooled steam condenser that uses a pump to remove liquid from a vacuum space.

low-level counting [NUCLEO] The measurement of very small amounts of radioactivity, such as that generated by long-lived natural radioactive isotopes, and isotopes produced by cosmic rays and nuclear explosions.

low-level language [COMPUT SCI] A computer language consisting of mnemonics that directly correspond to machine language instructions; for example, an assembler that converts the interpreted code of a higher-level language to machine language.

low-level logic circuit [ELECTR] A modification of a diode-transistor logic circuit in which a resistor and capacitor in parallel are replaced by a diode, with the result that a relatively small voltage swing is required at the base of the transistor to switch it on or off. Abbreviated LLL circuit.

low-level modulation [ELECTR] Modulation produced at a point in a system where the power level is low compared with the power level at the output of the system.

low-lift truck [MECH ENG] A hand or powered lift truck that raises the load sufficiently to make it mobile.

low-loss [ELEC] Having a small dissipation of electric or electromagnetic power.

low-melting glass [MATER] Glass to which selenium, thallium, arsenic, or sulfur is added to give melting points of 260–660°F (127–349°C).

low-melting solder *See* soft solder.

low-moor bog [GEOL] A bog that is at or slightly below the ground water table.

low-moor peat [GEOL] Peat found in low-moor bogs or swamps and containing little or no sphagnum. Also known as fen peat.

low-noise amplifier [ELECTR] An amplifier having very low background noise when the desired signal is weak or absent; field-effect transistors are used in audio preamplifiers for this purpose.

low-noise preamplifier [ELECTR] A low-noise amplifier placed in a system prior to the main amplifier, sometimes close to the source; used to establish a satisfactory noise figure at an early point in the system.

low-order [COMPUT SCI] Pertaining to the digit which contributes the smallest amount to the value of a numeral, or to its position, or to the rightmost position of a word.

low-order burst [ORD] Functioning of a projectile or bomb in which the explosive fails to attain a high-order detonation.

low-pass band-pass transformation *See* frequency transformation.

low-pass filter [ELEC] A filter that transmits alternating currents below a given cutoff frequency and substantially attenuates all other currents.

low population zone [ENG] An area of low population density sometimes required around a nuclear installation; the number and density of residents is of concern in providing, with reasonable probability, that effective protection measures can be taken if a serious accident should occur.

low-pressure area [MECH ENG] The point in a bearing where the pressure is the least and the area or space for a lubricant is the greatest.

low-pressure fluid flow [FL MECH] Flow of fluids below atmospheric pressures, particularly gases and vapors following ideal gas laws, in pipes, fittings, and other common configurations.

low-pressure laminate [MATER] A plastic laminate molded and cured at pressures in general of 400 psi (approximately 27 atmospheres or 2.8×10^6 newtons per square meter).

low-pressure torch [ENG] A type of torch in which acetylene enters a mixing chamber, where it meets a jet of high-pressure oxygen; the amount of acetylene drawn into the flame is controlled by the velocity of this oxygen jet. Also known as injector torch.

low-pressure well [PETRO ENG] An oil or gas well with a shut-in wellhead pressure of less than 2000 psia (1.38×10^7 newtons per square meter).

low-Q filter [ELECTR] A filter in which the energy dissipated in each cycle is a fairly large fraction of the energy stored in the filter.

low quartz [MINERAL] Quartz that has been formed below 573°C; the tetrahedral crystal structure is less symmetrically arranged than a quartz formed at a higher temperature.

low-rank graywacke [PETR] A graywacke that is nonfeldspathic.

low-rank metamorphism [GEOL] A metamorphic process that occurs under conditions of low to moderate pressure and temperature.

low-reactance grounding [ELEC] Use of grounding connections with a moderate amount of inductance to effect a moderate reduction in the short-circuit current created by a line-to-ground fault.

low-reflection film [OPTICS] A transparent film covering a glass surface, designed so that a small proportion of the light incident will be reflected and a correspondingly large proportion transmitted into the glass.

low relief [GRAPHICS] Sculpture having only a slight projection. Also known as bas-relief.

low-residual-phosphorus copper [MET] Deoxidized copper with a 0.004–0.012% residual phosphorus content.

Lowry process [ENG] A system for wood preservation which uses atmospheric pressure at the start and then introduces preservative into the wood in a vacuum.

low-shaft furnace [MET] A blast furnace having a short shaft; used to produce pig iron, ferroalloys, alumina, and other products from low-grade ores using low-grade fuel.

low-speed wind tunnel [ENG] A wind tunnel that has a speed up to 300 miles (480 kilometers) per hour and the essential features of most wind tunnels.

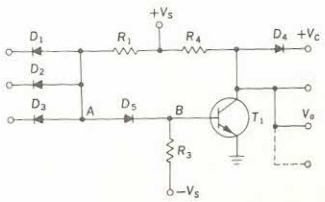
low-temperature carbonization [CHEM ENG] Low-temperature destructive distillation of coal to produce liquid products.

low-temperature coke [MATER] Coke produced at temperatures of 500–750°C, used chiefly for house heating, particularly in England. Also known as char.

low-temperature hygrometry [ENG] The study that deals with the measurement of water vapor at low temperatures; the techniques used differ from those of conventional hygrometry because of the extremely small amounts of moisture present at low temperatures and the difficulties imposed by the increase of the time constants of the standard instruments when operated at these temperatures.

low-temperature physics [CRYO] A study of the properties of gross matter at low temperature's especially at temperatures so low that the quantum character of the substance becomes observable in effects such as superconductivity, superfluid liquid helium, magnetic cooling, and nuclear orientation.

LOW-LEVEL LOGIC CIRCUIT



Circuit diagram of low-level logic circuit. D_1–D_5 = diodes; R_1–R_4 = resistors; T = transistor; $+V_s$ = positive supply voltage; B = common node.

low-temperature production [CRYO] Production of temperatures from about 80K down to about 10^{-6}K by techniques such as isentropic expansion of gases, refrigeration cycles, and adiabatic demagnetization.

low-temperature separation [CHEM ENG] Liquid condensate recovery from wet gases at temperatures of 20 to −20°F (−6.7 to −28.9°C), the temperature range at which the gas-oil separator operates.

low-temperature thermometry [CRYO] The assignment of numbers on the Kelvin absolute temperature scale to achievable and reproducible low-temperature states, and the choice and calibration of suitable instruments for the practical measurement of low temperatures, such as thermocouples, and resistance, vapor-pressure, gas, and magnetic thermometers.

low tide *See* low water.

low-tide terrace [GEOL] A flat area of a beach adjacent to the low-water line.

low velocity [MECH] Muzzle velocity of an artillery projectile of 2499 feet (762 meters) per second or less.

low-velocity drop [ORD] The act or process of delivering personnel, supplies, or equipment from aircraft in flight, utilizing sufficient parachute retardation to prevent injury or damage upon ground impact.

low-velocity layer [GEOPHYS] A layer in the solid earth in which seismic wave velocity is lower than the layers immediately below or above.

low-velocity star [ASTRON] Population I stars in the spiral arms of a galaxy which participate in the galactic rotation, thus exhibiting low velocity with respect to the sun and high velocity with respect to the galactic center.

low-volatile coal [GEOL] A coal that is nonagglomerating, has 78% to less than 86% fixed carbon, and 14% to less than 22% volatile matter.

low voltage [ELEC] **1.** Voltage which is small enough to be regarded as safe for indoor use, usually 120 volts in the United States. **2.** Voltage which is less than that needed for normal operation; a result of low voltage may be burnout of electric motors due to loss of electromotive force.

low-voltage relay [COMMUN] A relay that responds to the drop in voltage (increase in current) when a telephone line becomes active; used to activate bugging equipment.

low-voltage winding [ELECTROMAG] The coil of wire wound around the core of a power transformer which has the smaller number of turns, and therefore the lower voltage.

low water [OCEANOGR] The lowest limit of the surface water level reached by the lowering tide. Also known as low tide.

low-water fuel cutoff [MECH ENG] A float device which shuts off fuel supply and burner when boiler water level drops below the lowest safe waterline.

low-water inequality [OCEANOGR] The difference between the heights of two successive low tides.

low-water interval *See* low-water lunitidal interval.

low-water lunitidal interval [GEOPHYS] For a specific location, the interval of time between the transit (upper or lower) of the moon and the next low water. Also known as low-water interval.

low-water neaps *See* mean low-water neaps.

low-water springs *See* mean low-water springs.

LOX *See* liquid-oxygen explosive.

loxodont [VERT ZOO] Having molar teeth with shallow hollows between the ridges.

loxodrome *See* rhumb line.

loxodromic spiral [MATH] A curve on a surface of revolution which cuts the meridians at a constant angle other than 90°.

loxolophodont [VERT ZOO] Having crests on the molar teeth that connect three of the tubercles and with the fourth or posterior inner tubercle being rudimentary or absent.

Loxonematacea [PALEON] An extinct superfamily of gastropod mollusks in the order Prosobranchia.

lozenge file [DES ENG] A small file with four sides and a lozenge-shaped cross section; used in forming dies.

L pad [ENG ACOUS] A volume control having essentially the same impedance at all settings.

LPF process [MIN ENG] Recovery of metals from tailings by a sequence of leaching, precipitation, and flotation.

LPG *See* liquefied petroleum gas.

LPM *See* lines per minute.

LP record *See* long-playing record.

l-process [NUC PHYS] The synthesis of certain light nuclides through the breakup of heavier nuclides, probably by cosmic-ray bombardment of the interstellar medium.

Lr *See* lawrencium.

LRC *See* longitudinal redundancy check.

LRRP *See* lowest required radiating power.

LSA diode [ELECTR] A microwave diode in which a space charge is developed in the semiconductor by the applied electric field and is dissipated during each cycle before it builds up appreciably, thereby limiting transit time and increasing the maximum frequency of oscillation. Derived from limited space-charge accumulation diode.

LSB *See* least significant bit.

L scan *See* L scope.

L scope [ELECTR] A cathode-ray scope on which a trace appears as a vertical or horizontal range scale, the signals appearing as left and right horizontal (or up and down vertical) deflections as echoes are received by two antennas, the left and right (or up and down) deflections being proportional to the strength of the echoes received by the two antennas. Also known as L indicator; L scan.

LS coupling *See* Russell-Saunders coupling.

LSD *See* dock landing ship; lysergic acid diethylamide.

LSD-25 *See* lysergic acid diethylamide.

L shell [ATOM PHYS] The second shell of electrons surrounding the nucleus of an atom, having electrons whose principal quantum number is 2.

LSI circuit *See* large-scale integrated circuit.

L-1 test [ENG] A 480-hour engine test in a single-cylinder Caterpillar diesel engine to determine the detergency of heavy-duty lubricating oils.

L-2 test [ENG] An engine test made in a single-cylinder Caterpillar diesel engine to determine the oiliness of an engine oil. Also known as scoring test.

L-3 test [ENG] An engine test in a four-cylinder Caterpillar engine to determine stability of crankcase oil at high temperatures and under severe operating conditions.

L-4 test [ENG] An engine test in a six-cylinder spark-ignition Chevrolet engine to evaluate crankcase oil oxidation stability, bearing corrosion, and engine deposits.

L-5 test [ENG] An engine test in a General Motors diesel engine to determine detergency, corrosiveness, ring sticking, and oxidation stability properties of lubricating oils.

LTPD *See* lot tolerance percent defective.

LTRS *See* letters shift.

Lu *See* lutetium.

lub *See* least upper bound.

lubber line *See* lubber's line.

lubber's line [NAV] A reference line on any direction-indicating instrument, marking the reading which coincides with the heading. Also known as lubber line; lubber's point.

lubber's line error [NAV] In a magnetic compass, the angular difference between the heading as indicated by a lubber's line, and the actual heading; this error is caused by faulty calibration.

lubber's point *See* lubber's line.

lube cut [MATER] The distilled fraction of crude oil with suitable boiling range and viscosity to yield a lubricating oil when it is completely refined. Also known as lube-oil distillate; lube stock.

lube oil *See* lubricating oil.

lube-oil distillate *See* lube cut.

lube stock *See* lube cut.

lubricant [MATER] A substance used to reduce friction between parts or objects in relative motion.

lubricant additive [MATER] Any material added to lubricants (greases or oils) to give the product special properties, such as resistance to extremes of pressure, cold, or heat, improved viscosity, and detergency.

lubricated gasoline [MATER] A motor gasoline into which a lubricant has been added.

lubricating film [MATER] A thin layer of oil or grease applied between rubbing surfaces.

lubricating grease [MATER] A solid or semisolid lubricant consisting of a thickening agent (soap or other additives) in a fluid lubricant (usually petroleum lubricating oil).

lubricating oil [MATER] Selected fractions of refined petroleum or other oils (with or without additives) used to lessen friction between moving surfaces. Also known as lube oil.

lubrication action [MATER] The ability of the lubricant to

maintain a fluid film between solid surfaces and to prevent their physical contact.

lubricator [ENG] A device for applying a lubricant.

lubricity [MATER] The ability of a material to lubricate.

Lucanidae [INV ZOO] The stag beetles, a cosmopolitan family of coleopteran insects in the superfamily Scarabaeoidea.

lucca oil *See* olive oil.

lucerne *See* alfalfa.

Lucibacterium [MICROBIO] A genus of light-emitting bacteria in the family Vibrionaceae; motile, asporogenous rods with peritrichous flagella.

luciferase [BIOCHEM] An enzyme that catalyzes the oxidation of luciferin.

luciferin [BIOCHEM] A species-specific pigment in many luminous organisms that emits heatless light when combined with oxygen.

Luciocephalidae [VERT ZOO] A family of fresh-water fishes in the suborder Anabantoidei.

Luckiesh-Moss visibility meter [ENG] A type of photometer that consists of two variable-density filters (one for each eye) that are adjusted so that an object seen through them is just barely discernible; the reduction in visibility produced by the filters is read on a scale of relative visibility related to a standard task.

Lüders' lines [MET] Surface markings on a metal caused by flow of the material strained beyond its elastic limit. Also known as deformation bands; Hartmann lines; Lüders' bands; Piobert lines; stretcher strains.

Ludian [GEOL] A European stage of geologic time in the uppermost Eocene, above the Bartonian and below the Tongrian of the Oligocene.

ludlamite [MINERAL] $(Fe,Mg,Mn)_3(PO_4)_2 \cdot 4H_2O$ A green mineral crystallizing in the monoclinic system and occurring in small, transparent crystals.

Ludlovian [GEOL] A European stage of geologic time; Upper Silurian, below Gedinnian of Devonian, above Wenlockian.

ludwigite [MINERAL] $(Mg,Fe)_2FeBO_5$ Blackish-green mineral that crystallizes in the monoclinic system and occurs in fibrous masses; isomorphous with ronsenite.

Ludwig's angina [MED] Acute streptococcal cellulitis of the floor of the mouth.

Luenberger observer [CONT SYS] A compensator driven by both the inputs and measurable outputs of a control system.

lueneburgite [MINERAL] $Mg_3B_2(OH)_6(PO_4)_2 \cdot 6H_2O$ A colorless mineral composed of hydrous basic phosphate of magnesium and boron.

lueshite [MINERAL] $NaNbO_3$ An orthorhombic mineral having perovskite-type structure; it is dimorphous with natroniobite.

lug [DES ENG] A projection or head on a metal part to serve as a cap, handle, support, or fitting connection.

luganot [METEOROL] A strong south or south-southeast wind of Lake Garda, Italy.

lug bolt [DES ENG] **1.** A bolt with a flat extension or hook instead of a head. **2.** A bolt designed for securing a lug.

lug brick [MATER] A brick with lugs for spacing adjacent bricks.

Luggin probe [PHYS CHEM] A device which transmits a significant current density on the surface of an electrode to measure its potential.

Lugol solution [CHEM] A solution of 5 grams of iodine and 10 grams of potassium iodide per 100 milliliters of water; used in medicine.

LUHF *See* lowest useful high frequency.

Luidiidae [INV ZOO] A family of echinoderms in the suborder Paxillosina.

Luisian [GEOL] A North American stage of geologic time: Miocene (above Relizian, below Mohnian).

Lukasiewicz notation *See* Polish notation.

lum *See* trolley.

lumbago [MED] Backache in the lumbar or lumbosacral region.

lumbang oil [MATER] Colorless or yellow liquid with pleasant aroma and bland taste; soluble in alcohol, ether, chloroform, and carbon disulfide; expressed from candlenut; used as an illuminant and wood preservative, and in paints, calking, and soap manufacture. Also known as candlenut oil.

lumbar artery [ANAT] Any of the four or five pairs of branches of the abdominal aorta opposite the lumbar region of the spine; supplies blood to loin muscles, skin on the sides of the abdomen, and the spinal cord.

lumbar nerve [ANAT] Any of five pairs of nerves arising from lumbar segments of the spinal cord; characterized by motor, visceral sensory, somatic sensory, and sympathetic components; they innervate the skin and deep muscles of the lower back and the lumbar plexus.

lumbar vertebrae [ANAT] Those vertebrae located between the lowest ribs and the pelvic girdle in all vertebrates.

lumber [MATER] Logs that have been sawed and prepared for market.

lumberg [OPTICS] A unit of luminous energy equal to the luminous energy corresponding to a radiant energy of $1/K$ ergs, where K is the luminous efficiency in lumens per watt. Formerly known as lumerg.

lumbodorsal fascia [ANAT] The sheath of the erector spinae muscle alone, or the sheaths of the erector spinae and the quadratus lumborum muscles.

lumbosacral plexus [ANAT] A network formed by the anterior branches of lumbar, sacral, and coccygeal nerves which for descriptive purposes are divided into the lumbar, sacral, and pudendal plexuses.

Lumbricidae [INV ZOO] A family of annelid worms in the order Oligochaeta; includes the earthworm.

Lumbriclymeninae [INV ZOO] A subfamily of mud-swallowing sedentary worms in the family Maldanidae.

Lumbriculidae [INV ZOO] A family of aquatic annelids in the order Oligochaeta.

Lumbricus [INV ZOO] A genus of earthworms recognized as the type genus of the family Lumbricidae.

Lumbrineridae [INV ZOO] A family of errantian polychaetes in the superfamily Eunicea.

lumen [OPTICS] The unit of luminous flux, equal to the luminous flux emitted within a unit solid angle (1 steradian) from a point source having a uniform intensity of 1 candela, or to the luminous flux received on a unit surface, all points of which are at a unit distance from such a source. Symbolized lm. [SCI TECH] The space within a tube.

lumen-hour [OPTICS] A unit of quantity of light (luminous energy), equal to the quantity of light radiated or received for a period of 1 hour by a flux of 1 lumen. Abbreviated lm-hr.

lumen per watt [OPTICS] The unit of luminosity factor and of luminous efficacy. Abbreviated lm/w.

lumen-second [OPTICS] A unit of quantity of light (luminous energy), equal to the quantity of light radiated or received for a period of 1 second by a flux of 1 lumen. Abbreviated lm-sec.

lumerg *See* lumberg.

luminaire [ELEC] An electric lighting fixture, wall bracket, portable lamp, or other complete lighting unit designed to contain one or more electric lighting sources and associated reflectors, refractors, housing, and such support for those items as necessary.

luminance [OPTICS] The ratio of the luminous intensity in a given direction of an infinitesimal element of a surface containing the point under consideration, to the orthogonally projected area of the element on a plane perpendicular to the given direction. Formerly known as brightness.

luminance carrier *See* picture carrier.

luminance channel [COMMUN] A path intended primarily for the luminance signal in a color television system.

luminance factor [OPTICS] The ratio of the luminance of a body when illuminated and observed under certain conditions to that of a perfect diffuser under the same conditions.

luminance primary [COMMUN] One of the three transmission primaries whose amount determines the luminance of a color in a color television system.

luminance signal [COMMUN] The color television signal that is intended to have exclusive control of the luminance of the picture. Also known as Y signal.

luminescence [PHYS] Light emission that cannot be attributed merely to the temperature of the emitting body, but results from such causes as chemical reactions at ordinary temperatures, electron bombardment, electromagnetic radiation, and electric fields.

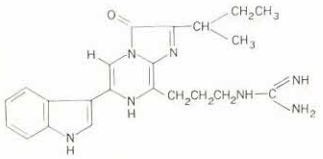
luminescent [PHYS] Capable of exhibiting luminescence.

luminescent cell *See* electroluminescent panel.

luminescent center [SOLID STATE] A point-lattice defect in a transparent crystal that exhibits luminescence.

luminescent dye [MATER] A dye that is made luminous by

LUCIFERIN

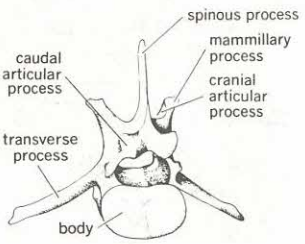


Structural formula of *Cypridina* luciferin.

LUCKIESH-MOSS VISIBILITY METER

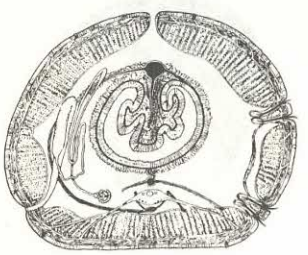
Photograph of Luckiesh-Moss visibility meter. *(General Electric Co.)*

LUMBAR VERTEBRAE



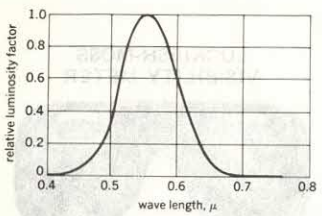
Fifth lumbar vertebra of the dog, the caudal lateral aspect showing the body or centrum. *(From M. E. Miller, G. C. Christensen, and H. E. Evans, Anatomy of the Dog, Saunders, 1964)*

LUMBRICUS



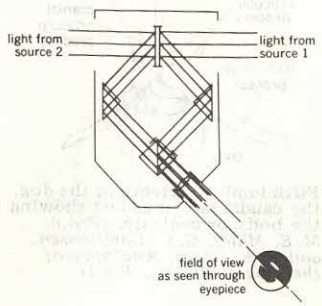
Cross section of the earthworm *(Lumbricus terrestris). (From T. I. Storer, General Zoology, 3d ed., McGraw-Hill, 1957)*

LUMINOSITY FUNCTION



Human-eye luminosity function. *(From W. B. Boast, Illumination Engineering, 2d ed., McGraw-Hill, 1953)*

LUMMER-BRODHUN SIGHT BOX



Lummer-Brodhun contrast sight box.

excitation with an outside energy source; used in luminous paint.

luminescent screen [ELECTR] The screen in a cathode-ray tube, which becomes luminous when bombarded by an electron beam and maintains its luminosity for an appreciable time.

luminol [ORG CHEM] $NH_2 \cdot C_6H_3 \cdot (CO \cdot NH)_2$ A white, water-soluble, crystalline compound that melts at 320°C; used in an alkaline solution for analytical testing in chemistry. Also known as 3-aminophthalic acid cyclic hydrazide.

luminophor [PHYS] A luminescent material that converts part of the absorbed primary energy into emitted luminescent radiation. Also known as fluophor; fluor; phosphor.

luminosity *See* luminosity factor.

luminosity classes [ASTRON] A classification of stars in an orderly sequence according to their absolute brightness.

luminosity curve *See* luminosity function.

luminosity factor [OPTICS] The ratio of luminous flux in lumens emitted by a source at a particular wavelength to the corresponding radiant flux in watts at the same wavelength; thus this is a measure of the visual sensitivity of the eye. Also known as luminosity.

luminosity function [ASTRON] The functional relationship between stellar magnitude and the number and distribution of stars of each magnitude interval. Also known as relative luminosity factor. [OPTICS] A standard measure of the response of an eye to monochromatic light at various wavelengths; the function is normalized to unity at its maximum value. Also known as luminosity curve; spectral luminous efficiency; visibility function.

luminous cloud *See* sheet lightning.

luminous coefficient [OPTICS] A measure of the fraction of the radiant power of a light source which contributes to its luminous properties, equal to the average of the luminosity function at various wavelengths, weighted according to the spectral intensity of the source. Also known as luminous efficiency.

luminous efficacy [OPTICS] **1.** The ratio of the total luminous flux in lumens emitted by a light source over all wavelengths to the total radiant flux in watts. Formerly known as luminous efficiency. **2.** The ratio of the total luminous flux emitted by a light source to the power input of the source; expressed in lumens per watt.

luminous efficiency *See* luminous coefficient; luminous efficacy.

luminous emittance [OPTICS] The emittance of visible radiation weighted to take into account the different response of the human eye to different wavelengths of light; in photometry, luminous emittance is always used as a property of a self-luminous source, and therefore should be distinguished from luminance. Also known as luminous exitance.

luminous energy [OPTICS] The total radiant energy emitted by a source, evaluated according to its capacity to produce visual sensation; measured in lumen-hours or lumen-seconds.

luminous exitance *See* luminous emittance.

luminous flux [OPTICS] The time rate of flow of radiant energy, evaluated according to its capacity to produce visual sensations; measured in lumens.

luminous flux density *See* illuminance.

luminous intensity [OPTICS] The luminous flux incident on a small surface which lies in a specified direction from a light source and is normal to this direction, divided by the solid angle (in steradians) which the surface subtends at the source of light. Also known as light intensity.

luminous meteor [METEOROL] According to United States weather observing practice, any one of a number of atmospheric phenomena which appear as luminous patterns in the sky, including halos, coronas, rainbows, aurorae, and their many variations, but excluding lightning (an igneous meteor or electrometeor).

luminous nebula [ASTRON] A nebula made bright by radiation from stars in the vicinity.

luminous paint [MATER] A type of paint in which luminous pigments are used.

luminous pigment [MATER] A pigment that absorbs light energy and radiates visible light when exposed to ultraviolet light; made of phosphors such as strontium, zinc, and cadmium sulfides.

luminous quantities [OPTICS] Physical quantities used in photometry, such as luminous intensity and luminance, which are based on the response of the human eye, and are thus weighted to take into account the difference in response at different wavelengths of light.

luminous range [NAV] The distance at which a marine light may be seen in clear weather, expressed in nautical miles.

luminous sensitivity of phototube [ELECTR] Quotient of the anode current by the incident luminous flux.

luminous time ratio [NAV] Of a navigational light, the ratio of the length of a flash to the period of rotation.

luminous visibility diagram [NAV] A diagram by which the luminous ranges, as given in light lists, may be adjusted to various conditions of visibility.

Lummer-Brodhun sight box [OPTICS] A device, having a series of prisms, for viewing simultaneously the two sides of a white diffuse plaster screen illuminated by light sources whose luminous intensities are being compared.

Lummer-Gehrcke plate [OPTICS] An interferometer consisting of a glass or quartz plate with parallel surfaces and sizable thickness in which multiple reflections take place.

lump coal [MIN ENG] Bituminous coal that passes through a 6-inch (15-centimeter) round mesh in initial screening.

lumped constant [ELEC] A single constant that is electrically equivalent to the total of that type of distributed constant existing in a coil or circuit. Also known as lumped parameter.

lumped-constant network [ELEC] An analytical tool in which distributed constants (inductance, capacitance, and resistance) are represented as hypothetical components.

lumped discontinuity [ELECTROMAG] An analytical tool in the study of microwave circuits in which the effective values of inductance, capacitance, and resistance representing a discontinuity in a waveguide are shown as discrete components of equivalent value.

lumped element [ELECTROMAG] A section of a transmission line designed so that electric or magnetic energy is concentrated in it at specified frequencies, and inductance or capacitance may therefore be regarded as concentrated in it, rather than distributed over the length of the line.

lumped impedance [ELECTROMAG] An impedance concentrated in a single component rather than distributed throughout the length of a transmission line.

lumped parameter *See* lumped constant.

lumper [SYST] A taxonomist who tends to recognize large taxa.

lumpy jaw *See* actinomycosis.

Luna [ASTRON] A name for the moon.

lunabase [ASTRON] The basic rocks that make up the dark portions of the lunar surface. Also known as marebase; marial rocks.

Luna program [AERO ENG] A series of Soviet space probes launched for flight missions to the moon.

lunar appulse [ASTRON] An eclipse of the moon in which the penumbral shadow of the earth falls on the moon. Also known as penumbral eclipse.

lunar atmosphere [ASTROPHYS] The volatile elements postulated to have been present on the moon's surface at one time.

lunar atmospheric tide [METEOROL] An atmospheric tide due to the gravitational attraction of the moon; the only detectable components are the 12-lunar-hour or semidiurnal component, as in the oceanic tides, and two others of very nearly the same period; the amplitude of this atmospheric tide is so small that it is detected only by careful statistical analysis of a long record.

lunar crater [ASTRON] A crater on the moon's surface.

lunar crust [ASTRON] The outer layer of the moon.

lunar day [ASTRON] The time interval between two successive crossings of the meridian by the moon.

lunar dust [ASTRON] Small particles adhering to the moon's surface.

lunar eclipse [ASTRON] Obscuration of the full moon when it passes through the shadow of the earth.

lunar ephemeris [ASTRON] A computed list of positions the moon will occupy in the sky on certain dates.

lunar excursion module [AERO ENG] A manned spacecraft designed to be carried on top of the Apollo service module and having its own power plant for making a manned landing on the moon and a return from the moon to the orbiting Apollo spacecraft. Abbreviated LEM. Also known as lunar module (LM).

lunar flight [AERO ENG] Flight by a spacecraft to the moon.

lunar geology *See* selenology.

lunar inequality [ASTRON] Variation in the moon's motion in its orbit, due to attraction by other bodies of the solar sys-

tem. [GEOPHYS] A minute fluctuation of a magnetic needle from its mean position, caused by the moon.

lunar interval [ASTRON] The difference in time between the transit of the moon over the Greenwich meridian and a local meridian; the lunar interval equals the difference between the Greenwich and local intervals of a tide or current phase.

lunarite [ASTRON] The rocks that make up the bright portions of the lunar surface.

lunar libration [ASTRON] **1.** The effect wherein the face of the moon appears to swing east and west about 8° from its central position each month. Also known as apparent libration in longitude. **2.** The state wherein the inclination of the moon's polar axis allows an observer on earth to see about 59% of the moon's surface. Also known as libration in latitude. **3.** The small oscillation with which the moon rocks back and forth about its mean rotation rate. Also known as physical libration of the moon.

lunar magnetic field [ASTROPHYS] The magnetic field of the moon.

lunar mass [ASTROPHYS] The mass of the moon.

lunar meteoroid [ASTRON] A meteoric particle before it strikes the moon.

lunar module *See* lunar excursion module.

lunar month [ASTRON] The period of revolution of the moon about the earth, especially a synodical month.

lunar mountain [ASTRON] A mountain on the moon.

lunar node [ASTRON] A node of the moon's orbit.

lunar nodule [ASTRON] A rock nodule found on the moon.

lunar noon [ASTRON] The instant at which the sun is over the upper branch of any meridian of the moon.

lunar nutation [ASTRON] A nodding motion of the earth's axis caused by the inclination of the moon's orbit to the ecliptic; it can displace the celestial pole by 9 seconds of arc from its mean position and has a period of 18.6 years.

lunar orbit [AERO ENG] Orbit of a spacecraft around the moon.

lunar polarization [ASTROPHYS] Polarization of light by the moon's surface.

lunar pole [ASTRON] A pole of the moon.

lunar probe [AERO ENG] Any space probe launched for flight missions to the moon.

lunar rainbow *See* moonbow.

lunar rock [ASTRON] Rock found on the moon.

lunar satellite [AERO ENG] A satellite making one or more revolutions about the moon.

lunar spacecraft [AERO ENG] A spacecraft designed for flight to the moon.

lunar tide [OCEANOGR] The portion of a tide produced by forces of the moon.

lunar time [ASTRON] **1.** Time based upon the rotation of the earth relative to the moon; it may be designated as local or Greenwich, as the local or Greenwich meridian is used as the reference. **2.** Time on the moon.

lunar topology [ASTRON] Topology of the moon.

lunar year [ASTRON] A time interval comprising 12 lunar (synodic) months.

lunate [BIOL] Crescent-shaped

lunate bar [GEOL] A crescent-shaped bar of sand that is frequently found off the entrance to a harbor.

lunation [ASTRON] The time period between two successive new moons.

Lundegardh vaporizer [ANALY CHEM] A device used for emission flame photometry in which a compressed air aspirator vaporizes the solution within a chamber; smaller droplets are carried into the fuel-gas stream and to the burner orifice where the solvent is evaporated, dissociated, and optically excited.

lune [MATH] A section of a plane bounded by two circular arcs, or of a sphere bounded by two great circles.

Luneberg lens [ELECTROMAG] A type of antenna consisting of a dielectric sphere whose index of refraction varies with distance from the center of the sphere so that a beam of parallel rays falling on the lens is focused at a point on the lens surface diametrically opposite from the direction of incidence, and, conversely, energy emanating from a point on the surface is focused into a plane wave. Also spelled Luneburg lens.

Luneburg lens *See* Luneberg lens.

lunette [GEOL] A broad, low crescentic mound of wind-blown fine silt and clay. [ORD] Towing ring in the trial plate or tongue of a towed vehicle, such as a gun carriage or trailer, used for attaching the towed vehicle to the prime mover or towing vehicle.

lung [ANAT] Either of the paired air-filled sacs, usually in the anterior or anteroventral part of the trunk of most tetrapods, which function as organs of respiration.

lung bud [EMBRYO] A primary outgrowth of the embryonic trachea; the anlage of a primary bronchus and all its branches.

lungfish [VERT ZOO] The common name for members of the Dipnoi; all have lungs that arise from a ventral connection with the gut.

lung-governed breathing apparatus [ENG] A breathing apparatus in which the oxygen that is supplied to the wearer is governed by the wearer's demand.

lunisolar precession [ASTROPHYS] Precession of the earth's equinox caused by the gravitational attraction of the sun and moon.

lunisolar tides [OCEANOGR] Harmonic tidal constituents attributable partly to the development of both the lunar tide and the solar tide and partly to the lunisolar synodic fortnightly constituent.

lunitidal interval [OCEANOGR] The period between the moon's upper or lower transit over a specified meridian and a specified phase of the tidal current following the transit.

lunk [COMMUN] Access line that terminates in an automatic dial exchange where it functions as an access line for subscribers, but functions as a trunk for the automatic dial exchange equipment.

lunule [BIOL] A crescent-shaped organ, structure, or mark.

lupine [BOT] A leguminous plant of the genus *Lupinus* with an upright stem, leaves divided into several digitate leaflets, and terminal racemes of pea-shaped blossoms.

lupinidine *See* sparteine.

Lupus [ASTRON] A southern constellation lying between Centaurus and Scorpius. Also known as Wolf.

lupus erythematosus [MED] An acute or subacute febrile collagen disease characterized by a butterfly-shaped rash over the cheeks and perilingual erythema.

lupus erythematosus factor *See* LE factor.

lupus vulgaris [MED] True tuberculosis of the skin; a slow-developing, scarring, and deforming disease, often asymptomatic, frequently involving the face, and occurring in a wide variety of appearances.

lusec [PHYS] A unit used for the measurement of power of evacuation of a vacuum pump, equal to the power associated with a leak rate of 1 liter per second at a pressure of 1 millitorr, or to approximately 1.33322×10^{-4} watt.

Lusin's theorem [MATH] Given a measurable function f which is finite almost everywhere in a euclidean space, then for every number $\epsilon > 0$ there is a continuous function g which agrees with f except on a set of measure less than ϵ.

Lusitanian [GEOL] Lower Jurassic geologic time.

luster [OPTICS] The appearance of a surface dependent on reflected light; types include metallic, vitreous, resinous, adamantine, silky, pearly, greasy, dull, and earthy; applied to minerals, textiles, and many other materials.

lustering [TEXT] A series of processes used to treat cottons to improve their sales appeal; the processes are mercerizing, frictioning, and filling.

lusterless paint [MATER] Paint which absorbs light rays so that no shine or polish appears on its surface; used extensively on U.S. Army vehicles.

luster mottlings [GEOL] The spotted, shimmering appearance of certain rocks caused by reflection of light from cleavage faces of crystals that contain small inclusions of other minerals.

lutaceous [GEOL] Claylike.

lute [MATER] A substance, such as cement or clay, for packing a joint or coating a porous surface to produce imperviousness to gas or liquid.

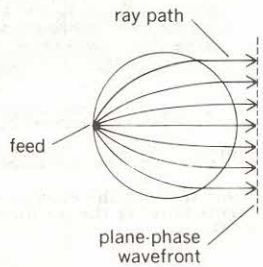
lutecite [GEOL] A fibrous, chalcedonylike quartz with optical anomalies that have led to its being considered a distinct species.

lutein [BIOCHEM] **1.** A dried, powdered preparation of corpus luteum. **2.** *See* xanthophyll.

luteinization [PHYSIO] Acquisition of characteristics of cells of the corpus luteum by ovarian follicle cells following ovulation.

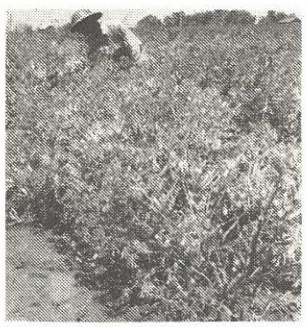
luteinizing hormone [BIOCHEM] A glycoprotein hormone secreted by the adenohypophysis of vertebrates which stimu-

LUNEBERG LENS



Luneberg lens with dielectric sphere between feed and plane-phase wavefront.

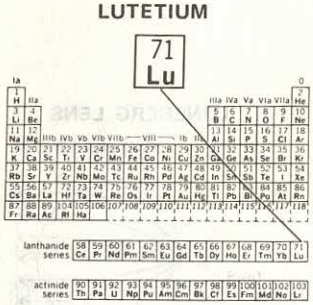
LUPINE



A field crop of lupine near maturity.

LUPUS ERYTHEMATOSUS

Manifestation of lupus erythematosus. *(From W. A. N. Dorland, American Illustrated Medical Dictionary, 24th ed., Saunders, 1965)*



Periodic table of the chemical elements showing the position of lutetium.

lates hormone production by interstitial cells of gonads. Also known as interstitial-cell-stimulating hormone (ICSH).

luteinizing-hormone releasing factor [BIOCHEM] A small peptide hormone released from the hypothalamus which acts on the pituitary gland to cause release of luteinizing hormone.

luteoma [MED] A tumor of the ovary composed of cells resembling those of the corpus luteum.

luteotropic hormone *See* prolactin.

lutetium [CHEM] A chemical element, symbol Lu, atomic number 71, atomic weight 174.97; a very rare metal and the heaviest member of the rare-earth group.

Lutheran blood group [IMMUNOL] The erythrocyte antigens defined by reactions with an antibody designated anti-Lu^a, initially detected in the serum of a multiply transfused patient with lupus erythematosus, who developed antibodies against erythrocytes of a donor named Lutheran, and by anti-Lu^b.

lutite [GEOL] A consolidated rock or sediment formed principally of clay or clay-sized particles.

Lutjanidae [VERT ZOO] The snappers, a family of perciform fishes in the suborder Percoidei.

lux [OPTICS] A unit of illumination, equal to the illumination on a surface 1 square meter in area on which there is a luminous flux of 1 lumen uniformly distributed, or the illumination on a surface all points of which are at a distance of 1 meter from a uniform point source of 1 candela. Symbolized lx. Also known as meter-candle.

Luxemburg effect [COMMUN] Cross modulation between two radio signals during their passage through the ionosphere, due to the nonlinearity of the propagation characteristics of free charges in space.

luxon *See* troland.

luzonite *See* enargite.

LVDT *See* linear variable-differential transformer.

L wave [GEOPHYS] A phase designation for an earthquake wave that is a surface wave, without respect to type.

lx *See* lux.

Lyapunov function [MATH] A function of a vector and of time which is positive-definite and has a negative-definite derivative with respect to time for nonzero vectors, is identically zero for the zero vector, and approaches infinity as the norm of the vector approaches infinity; used in determining the stability of control systems. Also spelled Liapunov function.

Lyapunov stability criterion [CONT SYS] A method of determining the stability of systems (usually nonlinear) by examining the sign-definitive properties of an associated Lyapunov function.

lyase [BIOCHEM] An enzyme that catalyzes the nonhydrolytic cleavage of its substrate with the formation of a double bond; examples are decarboxylases.

Lycaenidae [INV ZOO] A family of heteroneuran lepidopteran insects in the superfamily Papilionoidea including blue, gossamer, hairstreak, copper, and metalmark butterflies.

Lycaeninae [INV ZOO] A subfamily of the Lycaenidae distinguished by functional prothoracic legs in the male.

lychee [BOT] A tree of the genus *Litchi* in the family Sapindaceae, especially *L. chinensis* which is cultivated for its edible fruit, a one-seeded berry distinguished by the thin, leathery, rough pericarp that is red in most varieties. Also spelled litchi.

lychnisc [INV ZOO] A hexactin in which the central part of the spicule is surrounded by a system of 12 struts.

Lychniscosa [INV ZOO] An order of sponges in the subclass Hexasterophora in which parenchymal megascleres form a rigid framework and are all or in part lychniscs.

lycine *See* betaine.

lycopene [BIOCHEM] $C_{40}H_{50}$ A red, crystalline hydrocarbon that is the coloring matter of certain fruits, as tomatoes; it is isomeric with carotene.

lycoperdonosis [MED] A respiratory disease caused by inhalation of spores from the puffball mushroom, *Lycoperdon*.

lycophore larva [INV ZOO] A larva of certain cestodes characterized by cilia, large frontal glands, and 10 hooks. Also known as decanth larva.

Lycopodiales [BOT] The type order of Lycopodiopsida.

Lycopodiatae *See* Lycopodiopsida.

Lycopodineae [BOT] The equivalent name for Lycopodiopsida.

Lycopodiophyta [BOT] A division of the subkingdom Embryobionta characterized by a dominant independent sporophyte, dichotomously branching roots and stems, a single vascular bundle, and small, simple, spirally arranged leaves.

Lycopodiopsida [BOT] The lycopods, the type class of Lycophodiophyta.

lycopodium [MATER] A yellow powder prepared from the spores of *Lycopodium clavatum*; used as a desiccant and absorbent.

Lycopsida [BOT] Former subphylum of the Embryophyta now designated as the division Lycopodiophyta.

Lycoriidae [INV ZOO] A family of small, dark-winged dipteran insects in the suborder Orthorrhapha.

Lycosidae [INV ZOO] A family of hunting spiders in the suborder Dipneumonomorphae that actively pursue their prey.

Lycoteuthidae [INV ZOO] A family of squids.

Lyctidae [INV ZOO] The large-winged beetles, a large cosmopolitan family of coleopteran insects in the superfamily Bostrichoidea.

Lyddane-Sachs-Teller relation [SOLID STATE] For an infinite ionic crystal, the relation $\epsilon(0)/\epsilon(\infty) = \omega_L^2/\omega_T^2$, where $\epsilon(0)$ is the crystal's static dielectric constant, $\epsilon(\infty)$ is the dielectric constant at a frequency at which electronic polarizability is effective but ionic polarizability is not, ω_L is the frequency of longitudinal optical phonons with zero wave vectors, and ω_T is the frequency of transverse optical phonons with large wave vector.

lyddite [MATER] An explosive composed chiefly of picric acid.

Lydian stone *See* basanite.

lydite *See* basanite.

lye [INORG CHEM] **1.** A solution of potassium hydroxide or sodium hydroxide used as a strong alkaline solution in industry. **2.** The alkaline solution that is obtained from the leaching of wood ashes.

Lygaeidae [INV ZOO] The lygaeid bugs, a large family of phytophagous hemipteran insects in the superfamily Lygaeoidea.

Lygaeoidea [INV ZOO] A superfamily of pentatomorphan insects having four-segmented antennae and ocelli.

Lyginopteridaceae [PALEOBOT] An extinct family of the Lyginopteridales including monostelic pteridosperms having one or two vascular traces entering the base of the petiole.

Lyginopteridales [PALEOBOT] An order of the Pteridospermae.

Lyginopteridatae [PALEOBOT] The equivalent name for Pteridospermae.

Lyman-alpha radiation [SPECT] Radiation emitted by hydrogen associated with the spectral line in the Lyman series whose wavelength is 1215 angstrom units.

Lyman band [SPECT] A band in the ultraviolet spectrum of molecular hydrogen, extending from 125 to 161 nanometers.

Lyman continuum [SPECT] A continuous range of wavelengths (or wave numbers or frequencies) in the spectrum of hydrogen at wavelengths less than the Lyman limit, resulting from transitions between the ground state of hydrogen and states in which the single electron is freed from the atom.

Lyman ghost [SPECT] A false line observed in a spectroscope as a result of a combination of periodicities in the ruling.

Lyman limit [SPECT] The lower limit of wavelengths of spectral lines in the Lyman series (912 angstrom units), or the corresponding upper limit in frequency, energy of quanta, or wave number (equal to the Rydberg constant for hydrogen).

Lyman series [SPECT] A group of lines in the ultraviolet spectrum of hydrogen covering the wavelengths of 1215–912 angstrom units.

Lymantriidae [INV ZOO] The tussock moths, a family of heteroneuran lepidopteran insects in the superfamily Noctuoidea; the antennae of males is broadly pectinate and there is a tuft of hairs on the end of the female abdomen.

Lymexylonidae [INV ZOO] The ship timber beetles composing the single family of the coleopteran superfamily Lymexylonoidea.

Lymexylonoidea [INV ZOO] A monofamilial superfamily of wood-boring coleopteran insects in the suborder Polyphaga characterized by a short neck and serrate antennae.

lymph [HISTOL] The colorless fluid which circulates through the vessels of the lymphatic system.

lymphadenitis [MED] Inflammation of lymph nodes.

lymphadenoid goiter *See* struma lymphomatosa.

lymphadenoma [MED] A tumorlike enlargement of a lymph node.

lymphadenomatosis [MED] A malignant neoplasm of lymphoid tissue.

lymphadenopathy [MED] Enlargement or disease of lymph nodes.
lymphadenosis [MED] Neoplasia or hyperplasia of lymph nodes.
lymphagogue [PHARM] An agent that stimulates lymph flow.
lymphangiectasis [MED] Dilation in the wall of a lymphatic vessel.
lymphangiectomy [MED] Surgical removal of a pathologic lymphatic channel, as for cancer.
lymphangioendothelial sarcoma *See* lymphangiosarcoma.
lymphangioendothelioma [MED] A tumor composed of aggregations of lymphatic vessels, between which are large mononuclear cells presumed to be endothelial cells.
lymphangiofibroma [MED] A benign tumor composed of lymphangiomatous and fibromatous elements.
lymphangioma [MED] An abnormal mass of lymphatic vessels.
lymphangiosarcoma [MED] A sarcoma whose parenchymal cells form vascular channels resembling lymphatics. Also known as lymphangioendothelial sarcoma.
lymphangitis [MED] Inflammation of lymphatic vessels.
lymphatic system [ANAT] A system of vessels and nodes conveying lymph in the vertebrate body, beginning with capillaries in tissue spaces and eventually forming the thoracic ducts which empty into the subclavian veins.
lymphatic tissue [HISTOL] Tissue consisting of networks of lymphocytes and reticular and collagenous fibers. Also known as lymphoid tissue.
lymphedema [MED] Edema resulting from lymph vessel obstruction.
lymph gland *See* lymph node.
lymph heart [VERT ZOO] A muscular expansion of a lymphatic vessel which contracts, driving lymph to the veins, as in amphibians.
lymph node [ANAT] An aggregation of lymphoid tissue surrounded by a fibrous capsule; found along the course of lymphatic vessels. Also known as lymph gland.
lymphoblast [HISTOL] Precursor of a lymphocyte.
lymphoblastic leukemia *See* acute lymphocytic leukemia.
lymphoblastic reticulosarcoma [MED] A sarcoma of reticulum cells.
lymphoblastoma [MED] Malignant neoplasm of lymphoid tissue composed of lymphoblasts.
lymphoblastosis [MED] An excessive number of lymphoblasts in peripheral blood; occasionally found in tissues.
lymphocyte [HISTOL] An agranular leukocyte formed primarily in lymphoid tissue; occurs as the principal cell type of lymph and composes 20–30% of the blood leukocytes.
lymphocytic angina *See* infectious mononucleosis.
lymphocytic choriomeningitis [MED] An acute viral meningitis caused by a specific virus endemic in mice; characterized clinically by rapid onset of symptoms of meningeal irritation, pleocytosis and often a rise in protein in the cerebrospinal fluid, and a short, benign course with recovery.
lymphocytic leukemia [MED] A type of leukemia in which lymphocytic cells predominate.
lymphocytic lymphoma [MED] A malignant neoplasm of lymphoid tissue composed predominantly of lymphocytic cells.
lymphocytic sarcoma *See* lymphosarcoma.
lymphocytoma [MED] A malignant neoplasm of lymphoid tissue composed principally of cells which resemble mature lymphocytes.
lymphocytopenia [MED] Reduction of the absolute number of lymphocytes per unit volume of peripheral blood. Also known as lymphopenia.
lymphocytosis [MED] An abnormally high lymphocyte count in the blood.
lymphoepithelioma [MED] A squamous-cell carcinoma of the nasopharynx whose parenchymal cells resemble elements of the reticuloendothelial system.
lymphogranuloma inguinale *See* lymphogranuloma venereum.
lymphogranulomatosis *See* Hodgkin's disease.
lymphogranuloma venereum [MED] A systemic infectious venereal disease caused by a microorganism belonging to the PLT-Bedsonia group, characterized by enlargement of inguinal lymph nodes and genital ulceration. Abbreviated LGV. Also known as lymphogranuloma inguinale; lymphopathia venereum; venereal bubo.
lymphoid cell [HISTOL] A mononucleocyte that resembles a leukocyte.
lymphoid hemoblast of Pappenheim *See* pronormoblast.
lymphoid tissue *See* lymphatic tissue.
lymphoma [MED] Any neoplasm, usually malignant, of the lymphoid tissues.
lymphomatosis [MED] Multiple malignant lymphomas.
lymphopathia venereum *See* lymphogranuloma venereum.
lymphopenia *See* lymphocytopenia.
lymphopoiesis [PHYSIO] The production of lymph.
lymphosarcoma [MED] A malignant lymphoma composed of anaplastic lymphoid cells resembling lymphocytes or lymphoblasts, according to the degree of differentiation. Also known as lymphocytic sarcoma.
lymph sinus [ANAT] One of the tracts of diffuse lymphatic tissue between the cords and nodules, and between the septa and capsule of a lymph node.
lymph vessel [ANAT] A tubular passage for conveying lymph.
lyngbyatoxin A [BIOCHEM] An indole alkaloid toxin produced by *Lyngbya majuscula*.
lynx [VERT ZOO] Any of several wildcats of the genus *Lynx* having long legs, short tails, and usually tufted ears; differs from other felids in having 28 instead of 30 teeth.
Lyomeri [VERT ZOO] The equivalent name for Saccopharyngiformes.
Lyon hypothesis [GEN] The assumption that mammalian females are X-chromosome mosaics as a result of the inactivation of one X chromosome in some embryonic cells and the other in the rest.
Lyon phenomenon [GEN] In the normal human female, the rendering of two X chromosomes inactive, or at least largely so, at an early stage in embryogenesis.
lyons velvet [TEXT] A stiff crisp velvet with a short dense erect pile.
lyophilic [CHEM] Referring to a substance which will readily go into colloidal suspension in a liquid.
lyophilization [CHEM ENG] Rapid freezing of a material, especially biological specimens for preservation, at a very low temperature followed by rapid dehydration by sublimation in a high vacuum.
lyophobic [CHEM] Referring to a substance in a colloidal state that has a tendency to repel liquids.
Lyopomi [VERT ZOO] An equivalent name for Notacanthiformes.
Lyot filter *See* birefringent filter.
lyotopic series *See* Hofmeister series.
lyotropic liquid crystal [PHYS CHEM] A liquid crystal prepared by mixing two or more components, one of which is polar in character (for example, water).
Lyra [ASTRON] A northern constellation; right ascension 19 hours, declination 40° north; its first-magnitude star, Vega, is a navigational star and the most brilliant star in this part of the sky.
α Lyrae *See* Vega.
Lyrids [ASTRON] An important meteor shower occurring about April 22; it is regular and predictable, but not heavy, the hourly rate usually being about 7–10.
Lysaretidae [INV ZOO] A family of errantian polychaete worms in the superfamily Eunicea.
lyse [CYTOL] To undergo lysis.
lysergic acid [ORG CHEM] $C_{16}H_{16}N_2O_2$ A compound that crystallizes in the form of hexagonal plates that melt and decompose at 240°C; derived from ergot alkaloids; used as a psychotomimetic agent.
lysergic acid diethylamide [ORG CHEM] $C_{15}H_{15}N_2$-$CON(C_2H_5)_2$ A psychotomimetic drug synthesized from compounds derived from ergot. Abbreviated LSD; LSD-25.
Lysianassidae [INV ZOO] A family of pelagic amphipod crustaceans in the suborder Gammaridea.
lysigenous [BIOL] Of or pertaining to the space formed following lysis of cells.
lysimeter [ENG] An instrument for measuring the water percolating through soils and determining the materials dissolved by the water.
lysin [IMMUNOL] A substance, particularly antibodies, capable of lysing a cell.
lysine [BIOCHEM] $C_6H_{14}O_2N_2$ An essential, basic amino acid obtained from many proteins by hydrolysis.
Lysiosquillidae [INV ZOO] A family of crustaceans in the order Stomatopoda.

LYMPH NODE

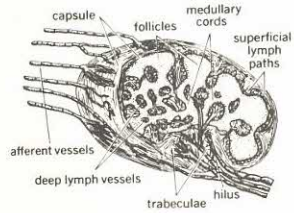


Diagram of a lymph node. *(After C. Toldt, An Atlas of Human Anatomy for Students and Physicians, vol. 1, 2d ed., copyright 1941 by Macmillan Publishing Co., Inc.; reprinted with permission)*

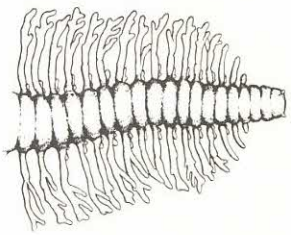
LYNX

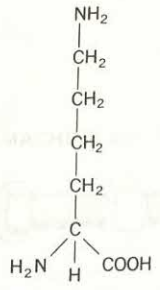
Lynx canadensis, with tufted ears, large broad feet, long legs, and a short tail.

LYSARETIDAE



Anterior end of *Iphitime* in dorsal view.

LYSINE



Structural formula of lysine.

lysis [CYTOL] Dissolution of a cell or tissue by the action of a lysin. [MED] **1.** Gradual decline in the manifestations of a disease, especially an infectious disease. Also known as defervescence. **2.** Gradual fall of fever.

Lysithea [ASTRON] A small satellite of Jupiter with a diameter of about 15 miles (24 kilometers), orbiting at a mean distance of about 7.30×10^6 miles (11.75×10^6 kilometers). Also known as Jupiter X.

lysogeny [MICROBIO] Lysis of bacteria, with the liberation of bacteriophage particles.

lysosome [CYTOL] A specialized cell organelle surrounded by a single membrane and containing a mixture of hydrolytic (digestive) enzymes.

lysosomotropic drug [PHARM] A drug which can enter selectively the lysosomes of certain cell types; may be useful in chemotherapy for destruction of tumor cells.

lysozyme [BIOCHEM] An enzyme present in certain body secretions, principally tears, which acts to hydrolyze certain bacterial cell walls.

lyssacine [INV ZOO] An early stage of the skeletal network in hexactinellid sponges.

Lyssacinosa [INV ZOO] An order of sponges in the subclass Hexasterophora in which parenchymal megascleres are typically free and unconnected but are sometimes secondarily united.

lyssophobia [PSYCH] **1.** Abnormal fear of hydrophobia. **2.** Abnormal fear of becoming insane.

lysyl oxidase [BIOCHEM] Any of a group of enzymes found in bone and connective tissue which oxidize terminal amino groups of lysine residues in tropocollagen molecules to aldehyde residues.

lytic infection [MICROBIO] Penetration of a host cell by lytic phage.

lytic phage [VIROL] Any phage that causes host cells to lyse.

lytic reaction [CYTOL] A reaction that leads to lysis of a cell.

M

m *See* meter; milli-.

M *See* mega-; molarity.

M_s [MET] In a carbon steel, the temperature at which martensite formation begins during cooling of austenite.

mA *See* milliampere.

MAA *See* methanearsonic acid.

maar [GEOL] A volcanic crater that was created by violent explosion but not accompanied by igneous extrusion; frequently, it is filled by a small circular lake.

maarad [TEXT] A type of Egyptian cotton cultivated from American pima seeds.

MAC *See* message authentication code.

macadam [CIV ENG] Uniformly graded stones consolidated by rolling to form a road surface; may be bound with water or cement, or coated with tar or bitumen.

macadamia nut [BOT] The hard-shelled seed obtained from the fruit of a tropical evergreen tree, *Macadamia ternifolia*.

macaluba *See* mud volcano.

macanilla oil [MATER] An oil obtained from the nuts of the palm *Guilielma garipaes* of Venezuela and Central America.

macaque [VERT ZOO] The common name for 12 species of Old World monkeys composing the genus *Macaca*, including the Barbary ape and the rhesus monkey.

Macarthur and Forest cyanide process [MET] A process for recovering gold by leaching the pulped gold ore with a solution of 0.2–0.8% potassium cyanide and next with water; the gold is then obtained by precipitation on zinc or aluminum or by electrolysis.

Macassar oil [MATER] **1.** A fat obtained from seeds of kusam, used in hair dressing, cooking, and illumination. **2.** Any of several fatty oils or oily preparations that have similar properties and are used in hair preparations.

macaw [VERT ZOO] The common name for large South and Central American parrots of the genus *Ara* and related genera; individuals are brilliantly colored with a long tail, a hooked bill, and a naked area around the eyes.

Macbeth illuminometer [OPTICS] A type of portable visual photometer in which the light to be measured is balanced by a Lummer-Brodhun sight box against a comparison lamp, whose apparent brightness can be varied by moving it along a tube; a control box supplies a calibrated current to the comparison lamp, and calibrated optical filters can be placed in the light paths to correct for color differences in the comparison and measured sources and to extend the range of the instrument.

MacCullagh's formula [PHYS] A formula for the potential due to a distribution of mass or charge at an external point: the potential V at a point P resulting from a distribution of mass or positive charge centered about a point O is $V = kM/r + (k/2r^3) \cdot (A + B + C - 3I) + O(1/r^4)$, where r is the distance from O to P, k is the gravitational or electrostatic constant, M is the total mass or charge, A, B, and C are the principal moments about O, I is the moment about OP, and $O(1/r^4)$ is a quantity that falls off at least as rapidly as $1/r^4$.

MacDonald functions *See* modified Hankel functions.

mace [FOOD ENG] Spice made from the covering of the nutmeg.

macedonite [MINERAL] $PbTiO_3$ A mineral composed of an oxide of lead and titanium. [PETR] A basaltic rock that contains orthoclase, sodic plagioclase, biotite, olivine, and rare pyriboles.

mace oil [MATER] An essential oil obtained by distillation from mace and containing pinene and dipentene; used in flavoring.

maceral [GEOL] The microscopic organic constituents found in coal.

macgovernite [MINERAL] $Mn_5(AsO_3)SiO_3(OH)_2$ A mineral composed of basic manganese arsenite and silicate. Also spelled mcgovernite.

Machaeridea [INV ZOO] A class of homolozoan echinoderms in older systems of classification.

Mach angle [FL MECH] The vertex half angle of the Mach cone generated by a body in supersonic flight.

Mach cone [FL MECH] **1.** The cone-shaped shock wave theoretically emanating from an infinitesimally small particle moving at supersonic speed through a fluid medium; it is the locus of the Mach lines. **2.** The cone-shaped shock wave generated by a sharp-pointed body, as at the nose of a high-speed aircraft.

machete [DES ENG] A knife with a broad blade 2 to 3 feet (60 to 90 centimeters) long.

Mach front *See* Mach stem.

Machilidae [INV ZOO] A family of insects belonging to the Thysanura having large compound eyes and ocelli and a monocondylous mandible of the scraping type.

machinability [MET] **1.** The ability of a metal to be machined. **2.** The difficulty or ease with which a metal can be machined.

machinability index [MET] A numerical value that designates the degree of difficulty or ease with which a particular material can be machined; originally based on turning B1112 steel at 180 feet per minute (0.9144 meter per second) with a high-speed tool for an index of 100%; with replacement of high-speed steels with carbides in turning operations, it has been found that the machinability index of a given material changes with the type of operation and the tool material.

machinable *See* machine-sensible.

machinable carbide [MET] Titanium carbide in a matrix of Ferro-Tic C tool steel.

Mach indicator *See* Machmeter.

machine [COMPUT SCI] **1.** A mechanical, electric, or electronic device, such as a computer, tabulator, sorter, or collator. **2.** A simplified, abstract model of an internally programmed computer, such as a Turing machine. [MECH ENG] A combination of rigid or resistant bodies having definite motions and capable of performing useful work.

machine address [COMPUT SCI] The actual and unique internal designation of the location at which an instruction or datum is to be stored or from which it is to be retrieved.

machine attention time [IND ENG] Time during which a machine operator must observe the machine's functioning and be available for immediate servicing, while not actually operating or servicing the machine.

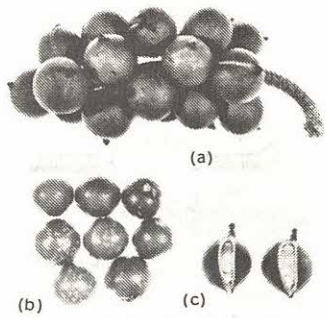
machine available time [COMPUT SCI] The time during which a computer has its power turned on, is not undergoing maintenance, and is thought to be operating properly.

machine bolt [DES ENG] A heavy-weight bolt with a square, hexagonal, or flat head used in the automotive, aircraft, and machinery fields.

machine check [COMPUT SCI] A check that tests whether the parts of equipment are functioning properly. Also known as hardware check.

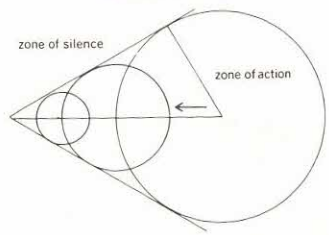
machine-check indicator [COMPUT SCI] A protective device which turns on when certain conditions arise within the

MACADAMIA NUT



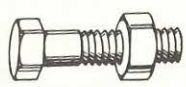
Macadamia integrifolia. (a) Mature nuts. *(b)* Nuts without husks. *(c)* Nuts in husk showing method of dehiscence. *(From R. A. Jaynes, ed., Handbook of North American Nut Trees, Humphrey Press, 1969)*

MACH CONE



Generation of Mach cone (def. 1) by particle moving through fluid at supersonic speed. Arrow indicates direction of particle's motion. Cone is tangent to spherical surfaces of disturbances generated by particle at successive times, and separates zones of action and silence.

MACHINE BOLT



A hexagon-head machine bolt with nut. *(Reynolds Metals Co.)*

computer; the computer can be programmed to stop or to run a separate correction routine or to ignore the condition.

machine code [COMPUT SCI] **1.** A computer representation of a character, digit, or action command in internal form. **2.** A computer instruction in internal format, or that part of the instruction which identifies the action to be performed. **3.** The set of all instruction types that a particular computer can execute.

machine conditions [COMPUT SCI] A component of a task descriptor that specifies the contents of all programmable registers in the processor, such as arithmetic and index registers.

machine controlled time [IND ENG] The time necessary for a machine to complete the automatic portion of a work cycle. Also known as independent machine time; machine element; machine time.

machine cut [MIN ENG] A groove or slot made horizontally or vertically in a coal seam by a coal cutter, as a step to shot firing.

machine cycle [COMPUT SCI] **1.** The shortest period of time at the end of which a series of events in the operation of a computer is repeated. **2.** The series of events itself.

machine design [DES ENG] Application of science and invention to the development, specification, and construction of machines.

machine drill [MECH ENG] Any mechanically driven diamond, rotary, or percussive drill.

machine element [DES ENG] Any of the elementary mechanical parts, such as gears, bearings, fasteners, screws, pipes, springs, and bolts used as essentially standardized components for most devices, apparatus, and machinery. [IND ENG] *See* machine controlled time.

machine error [COMPUT SCI] A deviation from correctness in computer-processed data, caused by equipment failure.

machine file [DES ENG] A file that can be clamped in the chuck of a power-driven machine.

machine forging [MET] Forging operations performed in and by certain machines.

machine gun [ORD] **1.** A weapon that automatically fires small-arms ammunition, caliber .60 or 15.24 millimeters or under, and is capable of sustained rapid fire. **2.** To riddle a target with machine gun fire.

machine-gun microphone *See* line microphone.

machine-hour [IND ENG] A unit representing the operation of one machine for 1 hour; used in the determination of costs and economics.

machine idle time [IND ENG] Time during a work cycle when a machine is idle, awaiting completion of manual work.

machine-independent [COMPUT SCI] Referring to programs and procedures which function in essentially the same manner regardless of the machine on which they are carried out.

machine instruction [COMPUT SCI] A set of digits, binary bits, or characters that a computer can recognize and act upon, and that, when interpreted or decoded, indicates the action to be performed and which operand is to be involved in the action.

machine instruction statement [COMPUT SCI] A statement consisting usually of a tag, an operating code, and one or more addresses.

machine interruption [COMPUT SCI] A halt in computer operations followed by the beginning of a diagnosis procedure, as a result of an error detection.

machine key [DES ENG] A piece inserted between a shaft and a hub to prevent relative rotation. Also known as key.

machine language [COMPUT SCI] The set of instructions available to a particular digital computer, and by extension the format of a computer program in its final form, capable of being executed by a computer.

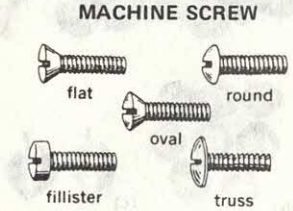
machine language code [COMPUT SCI] A set of instructions appearing as combinations of binary digits.

machine learning [COMPUT SCI] The process or technique by which a device modifies its own behavior as the result of its past experience and performance.

machine loading [IND ENG] **1.** Feeding work into a machine. **2.** Planning the amount of use of a unit of equipment during a given time period.

machine logic [COMPUT SCI] The structure of a computer, the operation it performs, and the type and form of data used internally.

machine mining [MIN ENG] The use of power machines and equipment in the excavation and extraction of ore or coal.



Types of machine screws. *(Reynolds Metals Co.)*

machine oil [MATER] Medium-density lubricating oil used for machine parts.

machine operator [COMPUT SCI] The person who manipulates the computer controls, brings up and closes down the computer, and can override a number of computer decisions.

machine-oriented programming system [COMPUT SCI] A system written in assembly language (or macro code) directly oriented toward the computer's internal language.

machine-paced operation [IND ENG] The proportion of an operation cycle during which the machine controls the speed of work progress.

machine pistol [ORD] A pistol capable of fully automatic fire.

machine processible form [COMPUT SCI] Any input medium such as a punch card, paper tape, or magnetic tape.

machine-readable *See* machine-sensible.

machine-recognizable *See* machine-sensible.

machine ringing [COMMUN] In a telephone system, ringing which is started either mechanically or by an operator, after which it continues automatically until the call is answered or abandoned.

machine run *See* run.

machinery [MECH ENG] A group of parts or machines arranged to perform a useful function.

machine screw [DES ENG] A blunt-ended screw with a standardized thread and a head that may be flat, round, fillister, or oval, and may be slotted, or constructed for wrenching; used to fasten machine parts together.

machine script [COMPUT SCI] Any data written in a form that can immediately be used by a computer.

machine-sensible [COMPUT SCI] Capable of being read or sensed by a device, usually by one designed and built specifically for this task. Also known as machinable; machine-readable; machine-recognizable; mechanized.

machine-sensible information [COMPUT SCI] Information in a form which can be read by a specified machine.

machine setting *See* mechanical setting.

machine shop [ENG] A workshop in which work, metal or other material, is machined to specified size and assembled.

machine shot capacity [ENG] In injection molding, the maximum weight of a given thermoplastic resin which can be displaced by a single stroke of the injection ram.

machine-spoiled time [COMPUT SCI] Computer time wasted on production runs that cannot be completed or whose results are made worthless by a computer malfunction, plus extensions of running time on runs that are hampered by a malfunction.

machine steel [MET] Plain carbon steel with a 0.2–0.3% carbon content.

machine switching system *See* automatic exchange.

machine taper [MECH ENG] A taper that provides a connection between a tool, arbor, or center and its mating part to ensure and maintain accurate alignment between the parts; permits easy separation of parts.

machine time *See* machine controlled time.

machine tool [MECH ENG] A stationary power-driven machine for the shaping, cutting, turning, boring, drilling, grinding, or polishing of solid parts, especially metals.

machine-tool control [COMPUT SCI] The computer control of a machine tool for a specific job by means of a special programming language.

machine translation *See* mechanical translation.

machine welding [MET] Welding with a machine under the control and observation of an operator; may be loaded and unloaded either manually or mechanically.

machine word [COMPUT SCI] The fundamental unit of information in a word-organized digital computer, consisting of a fixed number of binary bits, decimal digits, characters, or bytes.

machining [MET] Performing various cutting or grinding operations on a piece of work.

machining stress [MET] Residual stress in the work caused by machining.

machinist's file [DES ENG] A type of double-cut file that removes metal fast and is used for rough metal filing.

Mach line [FL MECH] **1.** A line representing a Mach wave. **2.** *See* Mach wave.

Machmeter [ENG] An instrument that measures and indicates speed relative to the speed of sound, that is, indicates the Mach number. Also known as Mach indicator.

Mach number [FL MECH] The ratio of the speed of a body or

of a point on a body with respect to the surrounding air or other fluid, or the ratio of the speed of a fluid, to the speed of sound in the medium. Symbolized N_{Ma}. Also known as relative Mach number.

machopolyp *See* machozooid.

machozooid [INV ZOO] A defensive polyp equipped with stinging organs in certain hydroid colonies. Also known as machopolyp.

Mach principle [RELAT] The principle that the motion of a particle is only meaningful when referred to the rest of the matter in the universe; this motion is thus determined by the distribution of this matter and is not an intrinsic property of an absolute space.

Mach reflection [FL MECH] The reflection of a shock wave from a rigid wall in which the shock strength of the reflected wave and the angle of reflection both have the smaller of the two values which are theoretically possible.

Mach refractometer *See* Mach-Zehnder interferometer.

Mach stem [FL MECH] A shock wave or front formed above the surface of the earth by the fusion of direct and reflected shock waves resulting from an airburst bomb. Also known as Mach front.

Mach wave [FL MECH] Also known as Mach line. **1.** A shock wave theoretically occurring along a common line of intersection of all the pressure disturbances emanating from an infinitesimally small particle moving at supersonic speed through a fluid medium, with such a wave considered to exert no changes in the condition of the fluid passing through it. **2.** A very weak shock wave appearing, for example, at the nose of a very sharp body, where the fluid undergoes no substantial change in direction.

Mach-Zehnder interferometer [OPTICS] A variation of the Michelson interferometer used mainly in measuring the spatial variation of the index of refraction of a gas; the device has two semitransparent mirrors and two wholly reflecting mirrors at alternate corners of a rectangle, and half the beam travels along each side of the rectangle. Also known as Mach refractometer.

M acid [ORG CHEM] $NH_2C_{10}H_5(OH)SO_3H$ A sulfonic acid formed by alkaline fusion of a disulfonic acid of α-naphthylamine; used as a dye intermediate. Also known as 5-amino-1-naphthol-3-sulfonic acid.

mackayite [MINERAL] $FeTe_2O_5(OH)$ A green mineral composed of basic iron tellurite.

mackerel [VERT ZOO] The common name for perciform fishes composing the subfamily Scombroidei of the family Scombridae, characterized by a long slender body, pointed head, and large mouth.

mackerel shark [VERT ZOO] The common name for isurid galeoid elasmobranchs making up the family Isuridae; heavy-bodied fish with sharp-edged, awllike teeth and a nearly symmetrical tail.

mackerel sky [METEOROL] A sky with considerable cirrocumulus or small-element altocumulus clouds, resembling the scales on a mackerel.

mackinawite [MINERAL] (Fe,Ni)S A tetragonal mineral occurring as a corrosion product in iron pipes. Also known as kansite.

Mack's cement [MATER] Cement made of dehydrated gypsum with a small amount of calcined sodium sulfate and potassium sulfate.

Macky effect [METEOROL] The reduction of the effective dielectric strength of air when waterdrops are present.

Mac-Lane system [MIN ENG] A means of conveying dirt to the top of a heap; an inclined rail track goes from the loading station at the bottom of the heap to an extending frame at the top; the rope that hauls the tubs with dirt up the rail track passes around a return sheave in the extending frame; a tub is tipped over at the top by a gear and the dirt discharged.

Maclaurin-Cauchy test *See* Cauchy's test for convergence.

Maclaurin expansion [MATH] The power series representation of a function arising from Maclaurin's theorem.

Maclaurin series [MATH] The power series in the Maclaurin expansion.

Maclaurin's theorem [MATH] The theorem giving conditions when a function, which is infinitely differentiable, may be represented in a neighborhood of the origin as an infinite series with nth term $(1/n!)\cdot f^{(n)}(0)\cdot x^n$, where $f^{(n)}$ denotes the nth derivative.

macle [CRYSTAL] A twinned crystal. [LAP] A twin structure in a diamond. [MINERAL] **1.** A dark or discolored spot in a mineral specimen. **2.** *See* chiastolite.

Macleod equation [FL MECH] An equation which states that the fourth root of the surface tension of a liquid is proportional to the difference between the densities of the liquid and of its vapor.

MacMichael degree [FL MECH] An arbitrary unit used in measuring viscosity with a type of Couette viscometer; its size depends on the stiffness of the suspension of the inner cylinder of the viscometer.

Macquer's salt *See* potassium arsenate.

macrandrous [BOT] Having both antheridia and oogonia on the same plant; used especially for certain green algae.

Macraucheniidae [PALEON] A family of extinçt herbivorous mammals in the order Litopterna; members were proportioned much as camels are, and eventually lost the vertebral arterial canal of the cervical vertebrae.

macrencephaly [MED] The condition of having an abnormally large brain.

Macristiidae [VERT ZOO] A family of oceanic teleostean fishes assigned by some zoologists to the order Ctenothrissiformes.

macro- [SCI TECH] Prefix meaning large.

macroanalysis [ANALY CHEM] Qualitative or quantitative analysis of chemicals that are in quantities of the order of grams.

macroanalytical balance [ENG] A relatively large type of analytical balance that can weigh loads of up to 200 grams to the nearest 0.1 milligram.

macroassembler [COMPUT SCI] A program made up of one or more sequences of assembly language statements, each sequence represented by a symbolic name.

macroassembly program [COMPUT SCI] A set of assembly languages for the IBM 7090 and 7040 series of computers, and the assemblers for these languages; the assemblers operate under the IBSYS systems and prepare relocatable or absolute binary output in computer language. Abbreviated MAP.

macroblast of Naegeli *See* pronormoblast.

macroblepharia [MED] The condition of having abnormally large eyelids.

macrobrachia [MED] The condition of having excessive arm development.

macrocephalus [MED] An individual with an abnormally large head.

macrocephaly [MED] The condition of having an abnormally large head.

macrocheiria [MED] The condition of having abnormal hand enlargement.

macroclastic [PETR] Rock that is composed of fragments that are visible without magnification.

macroclimate [CLIMATOL] The climate of a large geographic region.

macrocode [COMPUT SCI] A coding and programming language that assembles groups of computer instructions into single instructions.

macroconsumer [ECOL] A large consumer which ingests other organisms or particulate organic matter. Also known as biophage.

macrocrania [MED] The condition of having abnormally large skull size compared with face size.

macrocrystalline [PETR] **1.** Pertaining to the texture of holocrystalline rock in which the constituents are visible without magnification. **2.** Pertaining to the texture of a rock with grains or crystals greater than 0.75 millimeter in diameter in recrystallized sediment.

macrocyclic [MYCOL] Of a rust fungus, having binuclear spores as well as teliospores and sporidia, or having a life cycle that is long or complex. [ORG CHEM] An organic molecule with a large ring structure usually containing over 15 atoms.

Macrocypracea [INV ZOO] A superfamily of marine ostracods in the suborder Podocopa having all thoracic legs different from each other, greatly reduced furcae, and long, thin Zenker's organs.

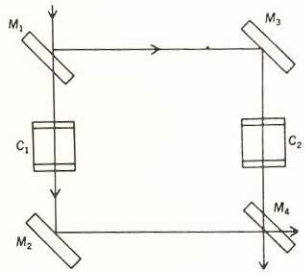
macrocyst [MED] A large cyst, visible to the naked eye.

macrocyte [HISTOL] An erythrocyte whose diameter or mean corpuscular volume exceed that of the mean normal by more than two standard deviations. Also known as macronormocyte.

macrocytic anemia [MED] A form of anemia characterized by the presence of macrocytes in the blood.

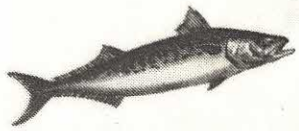
macrocytosis [MED] Presence of macrocytes in the blood.

MACH-ZEHNDER INTERFEROMETER



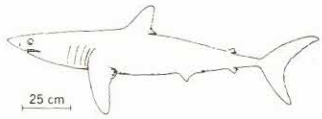
Mach-Zehnder interferometer. M_1, M_4 are semitransparent mirrors; M_2, M_3 are reflecting mirrors; C_1, C_2 are cells containing substances whose index of refraction is to be measured.

MACKEREL



Common mackerel *(Scomber scombrus)*, an economically important food fish.

MACKEREL SHARK



Mackerel shark *(Isurus)*, one of the most dangerous fishes. *(From H. B. Bigelow and W. C. Schroeder, Fishes of the Western North Atlantic, pt. 1, 1948)*

MACRAUCHENIIDAE

Skull and jaw of *Theosodon garrettorum*, an early Miocene macraucheniid litoptern, Santa Cruz Formation, Patagonia, Argentina. *(After W. Scott, 1910)*

macrodactyly [MED] The condition of having abnormally large fingers or toes.

Macrodasyoidea [INV ZOO] An order of wormlike invertebrates of the class Gastrotricha characterized by distinctive, cylindrical adhesive tubes in the cuticle which are moved by delicate muscle strands.

macrodefinition [COMPUT SCI] A statement that defines a macroinstruction and the set of ordinary instructions which it replaces.

macrodome [CRYSTAL] Dome of a crystal in which planes are parallel to the longer lateral axis.

macrodontia [MED] The condition of having abnormally large teeth.

macroetching *See* deep-etching.

macroevolution [EVOL] The larger course of evolution by which the categories of animal and plant classification above the species level have been evolved from each other and have differentiated into the forms within each.

macrofacies [GEOL] A collection of sedimentary facies that are related genetically.

macrofauna [ECOL] **1.** Widely distributed fauna. **2.** Fauna of a macrohabitat. [ZOO] Animals visible to the naked eye.

macroflora [BOT] Plants which are visible to the naked eye. [ECOL] **1.** Widely distributed flora. **2.** Flora of a macrohabitat.

macro flow chart [COMPUT SCI] A graphical representation of the overall logic of a computer program in which entire segments or subroutines of the program are represented by single blocks and no attempt is made to specify the detailed operation of the program.

macrofollicular adenoma [MED] **1.** A benign tumor of the thyroid with enlarged follicles. **2.** A type of malignant lymphoma.

macrofossil [PALEON] A fossil large enough to be observed with the naked eye.

macrogamete [BIOL] The larger, usually female gamete produced by a heterogamous organism.

macrogeneration [COMPUT SCI] The creation of many machine instructions from one macroword.

macrogenerator *See* macroprocessor.

macroglia [HISTOL] That portion of the neuroglia composed of astrocytes.

macroglobulin [BIOCHEM] Any gamma globulin with a sedimentation constant of 195.

macroglobulinemia [MED] **1.** Abnormal increase in macroglobulins in the blood. **2.** A disease characterized by proliferation of lymphocytes and plasmocytes and abnormally high macroglobulin blood levels.

macroglossia [MED] Enlargement of the tongue.

macrograph [GRAPHICS] A photograph or representation of an object that may be about 10 times natural size, as large as the natural object, or slightly smaller.

macrogyria [MED] The condition of having congenitally enlarged brain convolutions.

macrohabitat [ECOL] An extensive habitat presenting considerable variation of the environment, containing a variety of ecological niches, and supporting a large number and variety of complex flora and fauna.

macroinstruction [COMPUT SCI] An instruction in a higher-level language which is equivalent to a specific set of one or more ordinary instructions in the same language.

macrolanguage [COMPUT SCI] A computer language that manipulates stored strings in which particular sites of the string are marked so that other strings can be inserted in these sites when the stored string is brought forth.

Macrolepidoptera [INV ZOO] A former division of Lepidoptera that included the larger moths and butterflies.

macrolibrary [COMPUT SCI] A collection of prewritten specialized but unparticularized routines (or sets of statements) which reside in mass storage.

macrolide [ORG CHEM] A large ring molecule with many functional groups bonded to it.

macrolide antibiotic [MICROBIO] A basic antibiotic characterized by a macrocyclic ring structure.

macrolymphocyte [HISTOL] A large lymphocyte.

macromastia [MED] The condition of having abnormally enlarged breasts.

macromechanics *See* composite macromechanics.

macromelia [MED] The condition of having abnormally large arms or legs.

macromere [EMBRYO] Any of the large blastomeres composing the vegetative hemisphere of telolecithal morulas and blastulas.

macrometeorology [METEOROL] The study of the largest-scale aspects of the atmosphere, such as the general circulation, and weather types.

macrometer [OPTICS] Instrument that has two mirrors and a focusing telescope with which the ranges of distant objects can be found.

macromolecular [ORG CHEM] Composed of or characterized by large molecules.

macromolecule [ORG CHEM] A large molecule in which there is a large number of one or several relatively simple structural units, each consisting of several atoms bonded together.

Macromonas [MICROBIO] A genus of gram-negative, chemolithotrophic bacteria; large, motile, cylindrical to bean-shaped cells containing sulfur granules and calcium carbonate inclusions.

macronormocyte *See* macrocyte.

macronucleus [INV ZOO] A large, densely staining nucleus of most ciliated protozoans, believed to influence nutritional activities of the cell.

macronutrient [BIOCHEM] An element, such as potassium and nitrogen, essential in large quantities for plant growth.

macroparameter [COMPUT SCI] The character in a macro operand which will complete an open subroutine created by the macroinstruction.

macrophage [HISTOL] A large phagocyte of the reticuloendothelial system. Also known as a histiocyte.

macrophagy [BIOL] Feeding on large particulate matter.

macrophotography [GRAPHICS] The photography of a subject so that the final image is either unmagnified or magnified to no more than 10 times the object.

macrophreate [INV ZOO] A comatulid with a large, deep cavity in the calyx.

macrophyllous [BOT] Having large or long leaves.

macrophyte [ECOL] A macroscopic plant, especially one in an aquatic habitat.

macropinacoid *See* front pinacoid.

macropinocytosis [CYTOL] A mechanism of endocytosis in which large droplets of fluid are trapped underneath extensions (ruffles) of the cell surface.

Macropodidae [VERT ZOO] The kangaroos, a family of Australian herbivorous mammals in the order Marsupialia.

macropodous [BOT] **1.** Having a large or long hypocotyl. **2.** Having a long stem or stalk.

macropore [GEOL] A pore in soil of a large enough size so that water is not held in it by capillary attraction.

macroporous resin [ORG CHEM] A member of a class of very small, highly cross-linked polymer particles penetrated by channels through which solutions can flow; used as ion exchanger. Also known as macroreticular resin.

macroprocessor [COMPUT SCI] A piece of software which replaces each macroinstruction in a computer program by the set of ordinary instructions which it stands for. Also known as macrogenerator.

macroprogramming [COMPUT SCI] The process of writing machine procedure statements in terms of macroinstructions.

macroprosopus [MED] An individual with an abnormally large face.

macropsia [MED] A disturbance of vision in which objects seem larger than they are. Also known as megalopia.

macropterous [ZOO] Having large or long wings or fins.

macroreticular resin *See* macroporous resin.

macrorheology [MECH] A branch of rheology in which materials are treated as homogeneous or quasi-homogeneous, and processes are treated as isothermal.

Macroscelidea [VERT ZOO] A monofamilial order of mammals containing the elephant shrews and their allies.

Macroscelididae [VERT ZOO] The single, African family of the mammalian order Macroscelidea.

macroscopic [SCI TECH] Large enough to be observed by the naked eye.

macroscopic anisotropy [ENG] Phenomenon in electrical downhole logging wherein electric current flows more easily along sedimentary strata beds than perpendicular to them.

macroscopic property [NUCLEO] A nuclear reactor property that can be treated independently of other factors. [THERMO] *See* thermodynamic property.

macroscopic state [STAT MECH] Any state of a system as described by actual or hypothetical observations of its macroscopic statistical properties. Also known as macrostate.

macroscopic stress [MET] Residual stress in a metal in a distance comparable to the gage length of strain measurement specimens and therefore detectable by x-ray or dissection techniques. Also known as macrostress.

macroscopic theory [PHYS] A theory concerning only phenomena observable with the naked eye or with an ordinary light microscope, and not with the behavior of atoms, molecules, or their constituents which may underlie these phenomena.

macroscopy [SCI TECH] The study or observation of objects visible to the unaided eye.

macroseptum [INV ZOO] A primary septum in certain anthozoans.

macroskeleton [COMPUT SCI] A definition of a macroinstruction in a precise but content-free way, which can be particularized by a processor as directed by macroinstruction parameters. Also known as model.

macrosonics [ACOUS] The technology of sound at signal amplitudes so large that linear approximations are not valid, as in the use of ultrasonics for cleaning or drilling.

macrosporangium [BOT] A spore case in which macrospores are produced. Also known as megasporangium.

macrospore [BOT] The larger of two spore types produced by heterosporous plants; the female gamete. Also known as megaspore. [INV ZOO] The larger gamete produced by certain radiolarians; the female gamete.

macrostate *See* macroscopic state.

Macrostomida [INV ZOO] An order of rhabdocoels having a simple pharynx, paired protonephridia, and a single pair of longitudinal nerves.

Macrostomidae [INV ZOO] A family of rhabdocoels in the order Macrostomida; members are broad and flattened in shape and have paired sex organs.

macrostress *See* macroscopic stress.

macrostructure [MET] Structure of an etched metal visible to the naked eye or at magnifications up to 10 diameters.

macrostylous [BOT] **1.** Having long styles. **2.** Having long styles and short stamens.

macrosystem [COMPUT SCI] A language in which words represent a number of machine instructions.

Macrotermitinae [INV ZOO] A subfamily of termites in the family Termitidae.

macrothermophyte *See* megathermophyte.

macrotome [ENG] A device for making large anatomical sections.

Macrouridae [VERT ZOO] The grenadiers, a family of actinopterygian fishes in the order Gadiformes in which the body tapers to a point, and the dorsal, caudal, and anal fins are continuous.

Macroveliidae [INV ZOO] A family of hemipteran insects in the subdivision Amphibicorisae.

Macrura [INV ZOO] A group of decapod crustaceans in the suborder Reptantia including eryonids, spiny lobsters, and true lobsters; the abdomen is extended and bears a well-developed tail fan.

macrurous [ZOO] Having a long tail.

macula [ANAT] Any anatomical structure having the form of a spot or stain.

macula densa [MED] A thickening of the epithelium of the ascending limb of the loop of Henle.

macula lutea [ANAT] A yellow spot on the retina; the area of maximum visual acuity, being made up almost entirely of retinal cones.

maculate [BOT] Marked with speckles or spots.

maculopapule [MED] A small, circumscribed, discolored elevation of the skin; a macule and papule combined.

maculose [GEOL] Of a group of contact-metamorphosed rocks or their structures, having spotted or knotted character.

MAD *See* magnetic anomaly detector.

madarosis [MED] Loss of the eyelashes or eyebrows.

madder [MATER] The root of the madder plant (*Rubia tinctorium*), pulverized and used as source of glucosides to produce alizarin by fermentation. Also known as gamene.

madder lake [MATER] Bluish-red, transparent pigment produced from alizarin red; used to make stains and inks, and as a component of artists' oil colors.

Madelung constant [SOLID STATE] A dimensionless constant which determines the electrostatic energy of a three-dimensional periodic crystal lattice consisting of a large number of positive and negative point charges when the number and magnitude of the charges and the nearest-neighbor distance between them is specified.

madia oil [MATER] An oil that is made by crushing the seeds of the melosa plant; used as a substitute for olive oil.

madistor [ELECTR] A cryogenic semiconductor device in which injection plasma can be steered or controlled by transverse magnetic fields, to give the action of a switch.

Madreporaria [INV ZOO] The equivalent name for Scleractinia.

madreporite [INV ZOO] A delicately perforated sieve plate at the distal end of the stone canal in echinoderms.

Madsen impedance meter [ENG] An instrument for measuring the acoustic impedance of normal and deaf ears, based on the principle of the Wheatstone bridge.

MADT *See* microalloy diffused transistor.

madura foot *See* mycetoma.

maduromycosis *See* mycetoma.

maelstrom [OCEANOGR] A powerful and often destructive water current caused by the combined effects of high, wind-generated waves and a strong, opposing tidal current.

Maerz and Paul color system [ANALY CHEM] A dictionary of 7056 different colors in the form of two-impression screen-plate printing on semiglossy paper.

Maestrichtian [GEOL] A European stage of geologic time: Upper Cretaceous (above Menevian, below Fastiniogian).

maestro [METEOROL] A northwesterly wind with fine weather which blows, especially in summer, in the Adriatic, most frequently on the western shore; it is also found on the coasts of Corsica and Sardinia.

mafenide *See para*-(aminomethyl)benzenesulfonamide.

mafic mineral [MINERAL] **1.** A mineral that is composed predominantly of the ferromagnesian rock-forming silicates. **2.** In general, any dark mineral.

mafura tallow [MATER] A bitter-tasting, heavy vegetable fat obtained from the nuts of the mafura tree (*Trichilia emetica*); used for soaps, candles, and ointments.

MAG *See* maximum available gain.

magamp *See* magnetic amplifier.

magazine [COMPUT SCI] **1.** A holder of microfilm or magnetic recording media strips. **2.** *See* input magazine. [ENG] **1.** A storage area for explosives. **2.** A building, compartment, or structure constructed and located for the storage of explosives or ammunition. [ORD] That part of a gun or firearm that holds ammunition ready for chambering.

magazine filler [ORD] An item which attaches to the rear top portion of a rifle magazine to retain and position a cartridge clip to facilitate loading.

magazine safety [ORD] A mechanism for an automatic pistol, to make firing impossible unless the weapon contains the magazine.

Magellanic Clouds [ASTRON] Two irregular clouds of stars that are the nearest galaxies to the galactic system; both the Large and Small Magellanic Clouds are identified as Irregular in the classification of E.P. Hubble. Also known as Nubeculae.

Magelonidae [INV ZOO] A monogeneric family of spioniform annelid worms belonging to Sedentaria.

magenstrasse [ANAT] Gastric canal.

magenta *See* fuchsin.

Maggi-Righi-Leduc effect [PHYS] A phenomenon in which the thermal conductivity of a conductor changes when it is placed in a magnetic field.

maggot [INV ZOO] Larva of a dipterous insect.

maggot therapy [MED] Implantation of sterile cultivated maggots of the bluebottle fly into wounds in the treatment of chronic soft tissue infections and chronic osteomyelitis.

maghemite [MINERAL] γ-Fe_2O_3 A mineral form of iron oxide that is strongly magnetic and a member of the magnetite series.

magic acid [ORG CHEM] A superacid consisting of equal molar quantities of fluorosulfonic acid (FSO_2OH) and antimony pentafluoride (SbF_5).

magic eye *See* cathode-ray tuning indicator.

magic numbers [NUC PHYS] The integers 8, 20, 28, 50, 82, 126; nuclei in which the number of protons, neutrons, or both is magic have a stability and binding energy which is greater than average, and have other special properties.

magic square [MATH] A square array of integers where the

MAGELONIDAE

Anterior end of a species of *Magelona* in dorsal view.

sum of the entries of each row, each column, and each diagonal is the same.

magic tee *See* hybrid tee.

magister of sulfur [CHEM] Amorphous sulfur produced by acid precipitation from solutions of hyposulfites or polysulfides.

magma [GEOL] The molten rock material from which igneous rocks are formed.

magma chamber [GEOL] A larger reservoir in the crust of the earth that is occupied by a body of magma.

magma geothermal system [GEOL] A geothermal system in which the dominant source of heat is a large reservoir of igneous magma within an intrusive chamber or lava pool; an example is the Yellowstone Park area of Wyoming.

magma province *See* petrographic province.

magmatic differentiation [PETR] **1.** The process by which the different types of igneous rocks are derived from a single parent magma. **2.** The process by which ores are formed by solidification from magma. Also known as magmatic segregation.

magmatic rock [PETR] A rock derived from magma.

magmatic segregation *See* magmatic differentiation.

magmatic stoping [GEOL] A process of igneous intrusion in which magma gradually works its way upward by breaking off and engulfing blocks of the country rock.

magmatic water [HYD] Water derived from or existing in molten igneous rock or magma. Also known as juvenile water.

magmatism [PETR] The formation of igneous rock from magma.

magmosphere *See* pyrosphere.

magn [ELECTROMAG] A unit of absolute permeability equal to 1 henry per meter; it has been proposed by the Soviet Union but has not won general acceptance.

magnafacies [GEOL] A major, continuous belt of deposits that is homogeneous in lithologic and paleontologic characteristics and that extends obliquely across time planes or through several time-stratigraphic units.

magnesia [INORG CHEM] Magnesium oxide that is processed for a particular purpose.

magnesia brick [MATER] A type of refractory brick composed of magnesium oxide with about 15% of other oxides. Also known as magnesite brick.

magnesia cement *See* magnesium oxychloride cement.

magnesia magma *See* milk of magnesia.

magnesia mica *See* biotite.

magnesia mixture [ANALY CHEM] Reagent used to analyze for phosphorus; consists of the filtered liquor from an aqueous mixture of ammonium chloride, magnesium sulfate, and ammonia.

magnesian calcite [MINERAL] $(Ca,Mg)CO_3$ A variety of calcite consisting of randomly substituted magnesium carbonate in a disordered calcite lattice. Also known as magnesium calcite.

magnesian limestone [PETR] Limestone with at least 90% calcite, a maximum of 10% dolomite, an approximate magnesium oxide equivalent of 1.1–2.1%, and an approximate magnesium carbonate equivalent of 2.3–4.4%.

magnesian marble [PETR] A type of magnesian limestone that has been metamorphosed; contains some dolomite. Also known as dolomitic marble.

magnesia refractory [MATER] Heat- and corrosion-resistant material made of magnesium oxide; used in cement or brick form to line high-temperature process vessels or furnaces.

Magnesil [MET] A magnetic alloy used in making cores for magnetic amplifiers, similar to Hypersod and Selectron.

magnesiochromite [MINERAL] $MgCr_2O_4$ A mineral of the spinel group composed of magnesium chromium oxide; it is isomorphous with chromite. Also known as magnochromite.

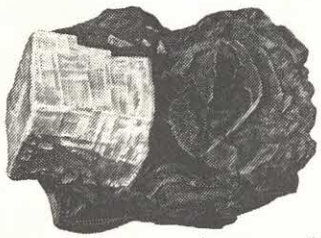
magnesiocopiapite [MINERAL] $MgFe_4(SO_4)_6(OH)_2 \cdot 20H_2O$ A mineral of the copiapite group composed of hydrous basic magnesium and iron sulfate; it is isomorphous with copiapite and cuprocopiapite.

magnesioferrite [MINERAL] $(Mg,Fe)Fe_2O_4$ A black, strongly magnetic mineral of the magnetite series in the spinel group. Also known as magnoferrite.

magnesite [MINERAL] $MgCO_3$ The mineral form of magnesium carbonate, usually massive and white, with hexagonal symmetry; specific gravity is 3, and hardness is 4 on Mohs scale. Also known as giobertite.

magnesite brick *See* magnesia brick.

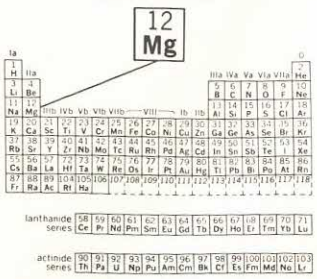
MAGNESITE



2.5 cm

Magnesite crystal in chlorite schist; the sample is from Tyrol, Austria. *(Specimen from Department of Geology, Bryn Mawr College)*

MAGNESIUM



Periodic table of the chemical elements showing the position of the element magnesium.

magnesite wheel [ENG] A grinding wheel made with magnesium oxychloride as the bonding agent.

magnesium [CHEM] A metallic element, symbol Mg, atomic number 12, atomic weight 24.312. [MET] A silvery-white, lightweight, malleable, ductile metal, used in metallurgical and chemical processes, photography, pyrotechny, and light alloys.

magnesium acetate [ORG CHEM] $Mg(OOCCH_3)_2 \cdot 4H_2O$ or $Mg(OOCCH_3)_2$ A compound forming colorless crystals that are soluble in water and melt at 80°C; used in textile printing, in medicine as an antiseptic, and as a deodorant.

magnesium anode [ELEC] Bar of magnesium buried in the earth, connected to an underground cable to prevent cable corrosion due to electrolysis.

magnesium arsenate [INORG CHEM] $Mg_3(AsO_4)_2 \cdot xH_2O$ A white, poisonous, water-insoluble powder used as an insecticide.

magnesium benzoate [ORG CHEM] $Mg(C_7H_5O_2)_2 \cdot 3H_2O$ A crystalline white powder melting at 200°C; soluble in alcohol and hot water; used in medicine.

magnesium bomb [ORD] **1.** An incendiary bomb in which the burning agent is magnesium. **2.** A magnesium flare for use from aircraft.

magnesium borate [INORG CHEM] $3MgO \cdot B_2O_3$ Crystals that are white or colorless and transparent; soluble in alcohol and acids, slightly soluble in water; used as a fungicide, antiseptic, and preservative.

magnesium bromate [INORG CHEM] $Mg(BrO_3)_2 \cdot 6H_2O$ A white crystalline compound, insoluble in alcohol, soluble in water; a fire hazard; used as an analytical reagent.

magnesium bromide [INORG CHEM] $MgBr_2 \cdot 6H_2O$ Deliquescent, colorless, bitter-tasting crystals, melting at 172°C; soluble in water, slightly soluble in alcohol; used in medicine and in the synthesis of organic chemicals.

magnesium calcite *See* magnesian calcite.

magnesium carbonate [INORG CHEM] $MgCO_3$ A water-insoluble, white powder, decomposing at about 350°C; used as a refractory material.

magnesium cell [ELEC] A primary cell in which the negative electrode is made of magnesium or one of its alloys.

magnesium chlorate [INORG CHEM] $Mg(ClO_3)_2 \cdot 6H_2O$ A white powder, bitter-tasting and hygroscopic; slightly soluble in alcohols, soluble in water; used in medicine.

magnesium chloride [INORG CHEM] $MgCl_2 \cdot 6H_2O$ Deliquescent white crystals; soluble in water and alcohol; used in disinfectants and fire extinguishers, and in ceramics, textiles, and paper manufacture.

magnesium–copper sulfide rectifier [ELECTR] Dry-disk rectifier consisting of magnesium in contact with copper sulfide.

magnesium dust [MET] Magnesium metal powder; flammable; used in photographic flash lights and pyrotechnics.

magnesium flare [ORD] A flare using magnesium as the illuminating agent.

magnesium fluoride [INORG CHEM] MgF_2 White, fluorescent crystals; insoluble in water and alcohol, soluble in nitric acid; melts at 1263°C; used in ceramics and glass. Also known as magnesium flux.

magnesium fluosilicate [INORG CHEM] $MgSiF_6 \cdot 6H_2O$ Water-soluble, efflorescent white crystals; used in ceramics, in mothproofing and waterproofing, and as a concrete hardener. Also known as magnesium silicofluoride.

magnesium flux *See* magnesium fluoride.

magnesium formate [ORG CHEM] $Mg(CHO_2)_2 \cdot 2H_2O$ Colorless, water-soluble crystals; insoluble in alcohol and ether; used in analytical chemistry and medicine.

magnesium gluconate [ORG CHEM] $Mg(C_6H_{11}O_7)_2 \cdot 2H_2O$ An odorless, tasteless, water-soluble powder; used in medicine.

magnesium halide [INORG CHEM] A compound formed from the metal magnesium and any of the halide elements; an example is magnesium bromide.

magnesium hydrate *See* magnesium hydroxide.

magnesium hydride [INORG CHEM] MgH_2 A hydride compound formed from the metal magnesium; it decomposes violently in water, and in a vacuum at about 280°C.

magnesium hydroxide [INORG CHEM] $Mg(OH)_2$ A white powder, very slightly soluble in water, decomposing at 350°C; used as an intermediate in extraction of magnesium metal, and as a reagent in the sulfite wood pulp process. Also known as magnesium hydrate.

magnesium hyposulfite *See* magnesium thiosulfate.

magnesium iodide [INORG CHEM] $MgI_2 \cdot 8H_2O$ Crystalline powder, white and deliquescent, discoloring in air; soluble in water, alcohol, and ether; used in medicine.

magnesium-iron mica *See* biotite.

magnesium lactate [ORG CHEM] $Mg(C_3H_5O_3)_2 \cdot 3H_2O$ Bitter-tasting, water-soluble white crystals; slightly soluble in alcohol; used in medicine.

magnesium lime [MATER] Lime containing more than 20% magnesium oxide; slakes more slowly, evolves less heat, expands less, sets more rapidly, and produces higher-strength mortars than does high-calcium quicklime.

magnesium–manganese dioxide cell [ELEC] Type of electrochemical (dry) cell battery in which the active elements are magnesium and manganese dioxide.

magnesium methoxide [ORG CHEM] $(CH_3O)_2Mg$ Colorless crystals that decompose when heated; used as a catalyst, dielectric coating, and cross-linking agent, and to form gels. Also known as magnesium methylate.

magnesium methylate *See* magnesium methoxide.

magnesium nitrate [INORG CHEM] $Mg(NO_3)_2 \cdot 6H_2O$ Deliquescent white crystals; soluble in alcohol and water; a fire hazard; used as an oxidizing material in pyrotechnics.

magnesium oleate [ORG CHEM] $Mg(C_{18}H_{33}O_2)_2$ Water-insoluble, yellowish mass; soluble in hydrocarbons, alcohol, and ether; used as a plasticizer lubricant and emulsifying agent, and in varnish driers and dry-cleaning solutions.

magnesium oxide [INORG CHEM] MgO A white powder that (depending on the method of preparation) may be light and fluffy, or dense; melting point 2800°C; insoluble in acids, slightly soluble in water; used in making refractories, and in cosmetics, pharmaceuticals, insulation, and medicine.

magnesium oxychloride cement [MATER] Cement made by adding a magnesium chloride solution to magnesia; used for interior flooring. Also known as magnesia cement.

magnesium perchlorate [INORG CHEM] $Mg(ClO_4)_2 \cdot 6H_2O$ White, deliquescent crystals; soluble in water and alcohol; explosive when in contact with reducing materials; used as a drying agent for gases.

magnesium peroxide [INORG CHEM] MgO_2 A tasteless, odorless white powder; soluble in dilute acids, insoluble in water; a fire hazard; used as a bleaching and oxidizing agent, and in medicine.

magnesium phosphate [INORG CHEM] A compound with three forms: monobasic, $MgH_4(PO_4)_2 \cdot 2H_2O$, used in medicine and wood fireproofing; dibasic, $MgHPO_4 \cdot 3H_2O$, used in medicine and as a plastics stabilizer; tribasic, $Mg_3(PO_4)_2 \cdot 8H_2O$, used in dentifrices, as an adsorbent, and in pharmaceuticals.

magnesium salicylate [ORG CHEM] $Mg(C_7H_5O)_3 \cdot 4H_2O$ Efflorescent colorless crystals; soluble in water and alcohol; used in medicine.

magnesium silicate [INORG CHEM] $3MgSiO_3 \cdot 5H_2O$ White, water-insoluble powder, containing variable proportions of water of hydration; used as a filler for rubber and in medicine.

magnesium silicofluoride *See* magnesium fluosilicate.

magnesium–silver chloride cell [ELEC] A reserve primary cell that is activated by adding water; active elements are magnesium and silver chloride.

magnesium stearate [ORG CHEM] $Mg(C_{18}H_{35}O_2)_2$ Tasteless, odorless white powder; soluble in hot alcohol, insoluble in water; melts at 89°C; used in paints and medicine, and as a plastics stabilizer and lubricant. Also known as dolomol.

magnesium sulfate [INORG CHEM] $MgSO_4$ Colorless crystals with a bitter, saline taste; soluble in glycerol; used in fireproofing, textile processes, ceramics, cosmetics, and fertilizers.

magnesium sulfite [INORG CHEM] $MgSO_3 \cdot 6H_2O$ A white, crystalline powder; insoluble in alcohol, slightly soluble in water; used in medicine and paper pulp.

magnesium thiosulfate [INORG CHEM] $MgS_2O_3 \cdot 6H_2O$ Colorless crystals that lose water at 170°C; used in medicine. Also known as magnesium hyposulfite.

magnesium trisilicate [INORG CHEM] $Mg_2Si_3O_8 \cdot 5H_2O$ A white, odorless, tasteless powder; insoluble in water and alcohol; used as an industrial odor absorbent and in medicine.

magnesium tungstate [INORG CHEM] $MgWoO_4$ White crystals, insoluble in alcohol and water, soluble in acid; used in luminescent paint and for fluorescent x-ray screens.

magneson [ORG CHEM] $C_{12}H_9N_3O_4$ A brownish-red powder, soluble in dilute aqueous sodium hydroxide; used in the detection of magnesium and molybdenum. Also known as 2,4-dihydroxy-4′-nitroazobenzene.

magnesyn [ELEC] A portion of a repeater unit; a two-pole permanently magnetized rotor within a three-phase two-pole delta-connected stator which carries the indicating pointer and is free to rotate in any direction.

magnet [ELECTROMAG] A piece of ferromagnetic or ferrimagnetic material whose domains are sufficiently aligned so that it produces a net magnetic field outside itself and can experience a net torque when placed in an external magnetic field.

magnet alloy [MET] An alloy such as Alnico or Alcomax having strong magnetic properties; used in making permanent magnets.

magnet coil *See* iron-core coil.

magnet grate [MIN ENG] A series of magnetized bars used to trap and remove tramp iron from a flow of pulverized or granulated dry solids passing over the grate; used to protect crushing or grinding equipment.

magnetic [ELECTROMAG] Pertaining to magnetism or a magnet.

magnetically hard alloy [MET] A ferromagnetic alloy that can be permanently magnetized after the removal of an externally applied magnetic field.

magnetically soft alloy [MET] A ferromagnetic alloy which is capable of being magnetized upon application of an external magnetic field, but which returns to a nonmagnetic condition when the field is removed.

magnetic amplifier [ELECTR] A device that employs saturable reactors to modulate the flow of alternating-current electric power to a load in response to a lower-energy-level direct-current input signal. Abbreviated magamp. Also known as transductor.

magnetic amplitude [NAV] Angular distance of a celestial body north or south of the prime vertical circle and relative to magnetic east or west.

magnetic analysis inspection [MET] A nondestructive inspection method to determine the presence of variations in magnetic flux in ferromagnetic materials of constant cross section caused by defects, variations in hardness, discontinuities, or other irregularities.

magnetic anisotropy [ELECTROMAG] The dependence of the magnetic properties of some materials on direction.

magnetic annealing [MET] Annealing and cooling in a strong magnetic field.

magnetic annual change [GEOPHYS] The amount of secular change in the earth's magnetic field which occurs in 1 year. Also known as annual magnetic change.

magnetic annual variation [GEOPHYS] The small, systematic temporal variation in the earth's magnetic field which occurs after the trend for secular change has been removed from the average monthly values. Also known as annual magnetic variation.

magnetic anomaly detector [ELECTROMAG] A sensitive magnetometer carried at the end of a boom projecting from the tail of a patrol plane which can detect very small changes in the earth's magnetic field caused by a ferrous object, such as a submerged submarine; used to pinpoint a submarine's location, for effective deployment of suitable weapons. Abbreviated MAD.

magnetic azimuth [NAV] Azimuth relative to magnetic north.

magnetic bay [GEOPHYS] A small magnetic disturbance whose magnetograph resembles an indentation of a coastline; on earth, magnetic bays occur mainly in the polar regions and have a duration of a few hours.

magnetic bearing [NAV] Bearing relative to magnetic north, with the compass bearing corrected for deviation.

magnetic bias [ELECTROMAG] A steady magnetic field applied to the magnetic circuit of a relay or other magnetic device.

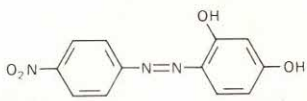
magnetic blowout [ELECTROMAG] **1.** A permanent magnet or electromagnet used to produce a magnetic field that lengthens the arc between opening contacts of a switch or circuit breaker, thereby helping to extinguish the arc. **2.** *See* blowout.

magnetic bottle [PL PHYS] A magnetic field used to confine or contain a plasma in controlled fusion experiments.

magnetic brake [MECH ENG] A friction brake under the control of an electromagnet.

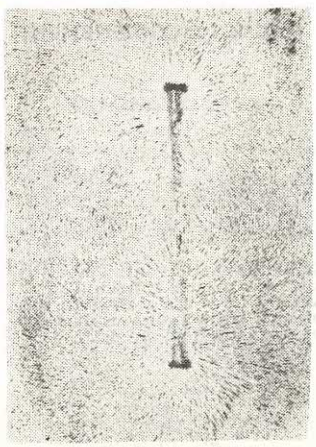
magnetic bubble [SOLID STATE] A cylindrical stable (nonvolatile) region of magnetization produced in a thin-film mag-

MAGNESON



Structural formula.

MAGNET



Photograph of the iron-filing map of the magnetic field of a permanent bar magnet. Note that the magnetic flux lines can be traced by the lines of iron filings, which act like tiny compass needles.

netic material by an external magnetic field; direction of magnetization is perpendicular to the plane of the material. Also known as bubble.

magnetic bubble memory *See* bubble memory.

magnetic card [COMPUT SCI] A card with a magnetic surface on which data can be stored by selective magnetization.

magnetic card file [COMPUT SCI] A direct-access storage device in which units of data are stored on magnetic cards contained in one or more magazines from which they are withdrawn, when addressed, to be carried at high speed past a read/write head.

magnetic cell [ELECTR] One unit of a magnetic memory, capable of storing one bit of information as a zero state or a one state.

magnetic character [COMPUT SCI] A character printed with magnetic ink, as on bank checks, for reading by machines as well as by humans.

magnetic character figure *See* C index.

magnetic character reader [COMPUT SCI] A character reader that reads special type fonts printed in magnetic ink, such as those used on bank checks, and feeds the character data directly to a computer for processing.

magnetic character sorter [COMPUT SCI] A device that reads documents printed with magnetic ink; all data read are stored, and records are sorted on any required field. Also known as magnetic document sorter-reader.

magnetic charge *See* magnetic grenade.

magnetic chart [NAV] A chart showing the distribution of one of the magnetic elements, as by isogonic lines, or of its secular change.

magnetic chuck [MECH ENG] A chuck in which the workpiece is held by magnetic force.

magnetic circuit [ELECTROMAG] A group of magnetic flux lines each forming a closed path, especially when this circuit is regarded as analogous to an electric circuit because of the similarity of its magnetic field equations to direct-current circuit equations.

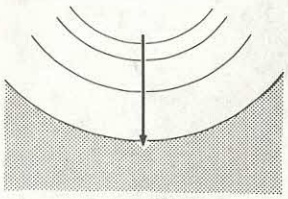
magnetic clutch *See* magnetic fluid clutch; magnetic friction clutch.

magnetic coercive force *See* coercive force.

magnetic compass [NAV] A compass depending for its directive force upon the attraction of the horizontal component of the earth's magnetic field for a magnetized needle or sensing element free to turn with a minimum of friction in any horizontal direction.

magnetic compass table *See* deviation table.

MAGNETIC CONFINEMENT



Stable magnetic confinement by a convex magnetic field. The lines of force are convex to the plasma; arrow indicates decrease of magnetic field strength.

magnetic confinement [PL PHYS] The containment of a plasma within a region of space by the forces of magnetic fields on the charged particles in the gas.

magnetic constant [ELECTROMAG] The absolute permeability of empty space, equal to 1 electromagnetic unit in the centimeter-gram-second system, and to $4\pi \times 10^{-7}$ henry per meter or, numerically, to 1.25664×10^{-6} henry per meter in International System units. Symbolized μ_0.

magnetic cooling *See* adiabatic demagnetization.

magnetic core Also known as core. [ELECTR] A configuration of magnetic material, usually a mixture of iron oxide or ferrite particles mixed with a binding agent and formed into a tiny doughnutlike shape, that is placed in a spatial relationship to current-carrying conductors, and is used to maintain a magnetic polarization for the purpose of storing data, or for its nonlinear properties as a logic element. Also known as memory core. [ELECTROMAG] A quantity of ferrous material placed in a coil or transformer to provide a better path than air for magnetic flux, thereby increasing the inductance of the coil and increasing the coupling between the windings of a transformer.

magnetic core multiplexer [COMPUT SCI] A device which channels many bit inputs into a single output.

magnetic core storage [COMPUT SCI] A computer storage system in which each of thousands of magnetic cores stores one bit of information; current pulses are sent through wires threading through the cores to record or read out data. Also known as core memory; core storage.

magnetic coupling [ELECTROMAG] For a pair of particles or systems, the effect of the magnetic field created by one system on the magnetic moment or angular momentum of the other.

magnetic course [NAV] Course relative to magnetic north, with the compass course corrected for deviation.

magnetic crack detection *See* magnetic-particle test.

magnetic Curie temperature [SOLID STATE] The temperature below which a magnetic material exhibits ferromagnetism, and above which ferromagnetism is destroyed and the material is paramagnetic.

magnetic cutter [ENG ACOUS] A cutter in which the mechanical displacements of the recording stylus are produced by the action of magnetic fields.

magnetic daily variation *See* magnetic diurnal variation.

magnetic damping [ELECTROMAG] Damping of a mechanical motion by means of the reaction between a magnetic field and the current generated by the motion of a coil through the magnetic field.

magnetic declination *See* declination.

magnetic deflection [ELECTR] Deflection of an electron beam by the action of a magnetic field, as in a television picture tube.

magnetic delay line [ELECTR] Delay line, used for the storage of data in a computer, consisting essentially of a metallic medium along which the velocity of the propagation of magnetic energy is small compared to the speed of light; storage is accomplished by the recirculation of wave patterns containing information, usually in binary form.

magnetic deviation [NAV] The angle between the magnetic meridian and the axis of a compass card, expressed in degrees east or west to indicate in which direction the end of the compass card is offset from magnetic north.

magnetic diffusivity [ELECTROMAG] A measure of the tendency of a magnetic field to diffuse through a conducting medium at rest; it is equal to the partial derivative of the magnetic field strength with respect to time divided by the Laplacian of the magnetic field, or to the reciprocal of $4\pi\mu\sigma$, where μ is the magnetic permeability and σ is the conductivity in electromagnetic units.

magnetic dip *See* inclination.

magnetic dipole [ELECTROMAG] An object, such as a permanent magnet, current loop, or particle with angular momentum, which experiences a torque in a magnetic field, and itself gives rise to a magnetic field, as if it consisted of two magnetic poles of opposite sign separated by a small distance.

magnetic dipole antenna [ELECTROMAG] Simple loop antenna capable of radiating an electromagnetic wave in response to a circulation of electric current in the loop.

magnetic dipole density *See* magnetization.

magnetic dipole moment [ELECTROMAG] A vector associated with a magnet, current loop, particle, or such, whose cross product with the magnetic induction (or alternatively, the magnetic field strength) of a magnetic field is equal to the torque exerted on the system by the field. Also known as dipole moment; magnetic moment.

magnetic direction [GEOD] Horizontal direction expressed as angular distance from magnetic north.

magnetic disk *See* disk.

magnetic displacement *See* magnetic induction.

magnetic diurnal variation [GEOPHYS] Oscillations of the earth's magnetic field which have a periodicity of about a day and which depend to a close approximation only on local time and geographic latitude. Also known as magnetic daily variation.

magnetic document sorter-reader *See* magnetic character sorter.

magnetic domain *See* ferromagnetic domain.

magnetic-domain memory *See* domain-tip memory.

magnetic double refraction [OPTICS] The double refraction of light passing through certain substances when the substance is placed in a transverse magnetic field.

magnetic drag dynamometer *See* eddy-current brake.

magnetic drum *See* drum.

magnetic drum receiving equipment [ELECTR] Radar developed for detection of targets beyond line of sight using ionospheric reflection and very low power.

magnetic drum storage *See* drum.

magnetic earphone [ENG ACOUS] An earphone in which variations in electric current produce variations in a magnetic field, causing motion of a diaphragm.

magnetic element [ENG] That part of an instrument producing or influenced by magnetism. [GEOPHYS] Magnetic declination, dip, or intensity at any location on the surface of the earth.

magnetic energy [ELECTROMAG] The energy required to set up a magnetic field.

magnetic equator [GEOPHYS] That line on the surface of the

earth connecting all points at which the magnetic dip is zero. Also known as aclinic line.

magnetic ferroelectric [SOLID STATE] A substance which possesses both magnetic ordering and spontaneous electric polarization.

magnetic field [ELECTROMAG] **1.** One of the elementary fields in nature; it is found in the vicinity of a magnetic body or current-carrying medium and, along with electric field, in a light wave; charges moving through a magnetic field experience the Lorentz force. **2.** *See* magnetic field strength.

magnetic field intensity *See* magnetic field strength.

magnetic field strength [ELECTROMAG] An auxiliary vector field, used in describing magnetic phenomena, whose curl, in the case of static charges and currents, equals (in meter-kilogram-second units) the free current density vector, independent of the magnetic permeability of the material. Also known as magnetic field; magnetic field intensity; magnetic force; magnetic intensity; magnetizing force.

magnetic film *See* magnetic thin film.

magnetic filter [CHEM ENG] Filtration device in which the filter screen is magnetized to trap and remove fine iron from liquids or liquid suspensions being filtered.

magnetic firing circuit [ELECTR] A type of firing circuit in which the capacitor is discharged through the igniter by saturating a reactor, which is connected in series with the capacitor; often used in ignitron rectifiers to obtain longer life and greater reliability than is possible with thyratron firing tubes.

magnetic flaw detector [ELECTROMAG] A flaw detector in which a ferrous object is magnetized with an electromagnet or permanent magnet and sprayed with magnetic particles or a solution containing fine suspended magnetic particles which outline surface or near-surface flaws.

magnetic fluid [MATER] A mixture of iron particles in oil or other liquid; viscosity increases sharply in a strong magnetic field.

magnetic fluid clutch [MECH ENG] A friction clutch that is engaged by magnetizing a liquid suspension of powdered iron located between pole pieces mounted on the input and output shafts. Also known as magnetic clutch.

magnetic flux [ELECTROMAG] **1.** The integral over a specified surface of the component of magnetic induction perpendicular to the surface. **2.** *See* magnetic lines of force.

magnetic flux density *See* magnetic induction.

magnetic focusing [ELECTROMAG] Focusing a beam of electrons or other charged particles by using the action of a magnetic field.

magnetic force *See* magnetic field strength.

magnetic force parameter [PL PHYS] A dimensionless number used in magnetofluid dynamics, equal to the product of the square of the magnetic permeability, the square of the magnetic field strength, the electrical conductivity, and a characteristic length, divided by the product of the mass density and the fluid velocity. Symbolized N.

magnetic-force welding [MET] A welding process in which the mechanical force is exerted by a magnetic field.

magnetic forming [MET] The forming of metal into desired shapes by using strong magnetic fields, produced by charging a large capacitor bank and then discharging it into an induction coil in less than 10^{-6} second, to push the metal against a forming die.

magnetic friction clutch [MECH ENG] A friction clutch in which the pressure between the friction surfaces is produced by magnetic attraction. Also known as magnetic clutch.

magnetic gap [ELECTROMAG] The space between a magnet's pole faces.

magnetic grenade [ORD] Small explosive charge with attached magnets, designed to be thrown or placed against tanks; the magnets hold the explosive in place until detonated by a time fuse. Also known as magnetic charge.

magnetic groups *See* Shubnikov groups.

magnetic hardness comparator [ENG] A device for checking the hardness of steel parts by placing a unit of known proper hardness within an induction coil; the unit to be tested is then placed within a similar induction coil, and the behavior of the induction coils compared; if the standard and test units have the same magnetic properties, the hardness of the two units is considered to be the same.

magnetic head [ELECTR] The electromagnet used for reading, recording, or erasing signals on a magnetic disk, drum, or tape. Also known as magnetic read/write head.

magnetic heading [NAV] Heading relative to magnetic north, with the compass heading corrected for deviation.

magnetic hysteresis [ELECTROMAG] Lagging of changes in the magnetization of a substance behind changes in the magnetic field as the magnetic field is varied. Also known as hysteresis.

magnetic induction [ELECTROMAG] A vector quantity that is used as a quantitative measure of magnetic field; the force on a charged particle moving in the field is equal to the particle's charge times the cross product of the particle's velocity with the magnetic induction (mks units). Also known as magnetic displacement; magnetic flux density; magnetic vector.

magnetic induction gyroscope [ENG] A gyroscope without moving parts, in which alternating- and direct-current magnetic fields act on water doped with salts which exhibit nuclear paramagnetism.

magnetic ink [MATER] Ink containing magnetic particles to permit reading of printed characters by a magnetic character reader as well as by humans.

magnetic-ink character recognition [COMPUT SCI] That branch of character recognition which involves the sensing of magnetic-ink characters for the purpose of determining the character's most probable identity. Abbreviated MICR.

magnetic inspection oil [MET] A light petroleum oil, such as kerosine or naphtha, to which has been added fine ferromagnetic particles (usually colored black or red for contrast) to form an inspection penetrant; when the penetrant is applied to a metal surface being inspected, the ferrous particles accumulate in any surface cracks by magnetic attraction, thereby permitting the cracks to be discernible.

magnetic inspection paste [MET] A paste containing ferromagnetic particles designed to be added to a light distilled petroleum oil, such as kerosine or naphtha, to form an inspection penetrant; when the inspection penetrant is applied to a metal, the ferrous particles accumulate in any surface cracks by magnetic attraction, thereby permitting the cracks to be discerned.

magnetic inspection powder [MET] A dry powder containing ferromagnetic particles colored gray, black, or red for contrast, designed to be dusted on metal parts being inspected by a magnetic inspection machine; the ferrous powder accumulates in any surface cracks (flaws) by magnetic attraction, thereby permitting the cracks to be readily discerned; if the ferrous particles are fluorescent, surface cracks will be brilliantly illuminated under black light.

magnetic intensity *See* magnetic field strength.

magnetic iron ore *See* magnetite.

magnetic latitude [GEOPHYS] Angular distance north or south of the magnetic equator.

magnetic leakage [ELECTROMAG] Passage of magnetic flux outside the path along which it can do useful work.

magnetic lens [ELECTROMAG] A magnetic field with axial symmetry, capable of converging beams of charged particles of uniform velocity and of forming images of objects placed in the path of such beams; the field may be produced by solenoids, electromagnets, or permanent magnets. Also known as lens.

magnetic lines of flux *See* magnetic lines of force.

magnetic lines of force [ELECTROMAG] Lines used to represent the magnetic induction in a magnetic field, selected so that they are parallel to the magnetic induction at each point, and so that the number of lines per unit area of a surface perpendicular to the induction is equal to the induction. Also known as magnetic flux; magnetic lines of flux.

magnetic local anomaly [GEOPHYS] A localized departure of the geomagnetic field from its average over the surrounding area.

magnetic loudspeaker [ENG ACOUS] Loudspeaker in which acoustic waves are produced by mechanical forces resulting from magnetic reactions. Also known as magnetic speaker.

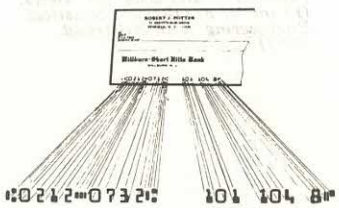
magnetic Mach number [PL PHYS] A dimensionless number equal to the ratio of the velocity of a fluid to the velocity of Alfvén waves in the fluid. Symbolized M_{Ma}.

magnetic material [ELECTROMAG] A material exhibiting ferromagnetism.

magnetic memory *See* magnetic storage.

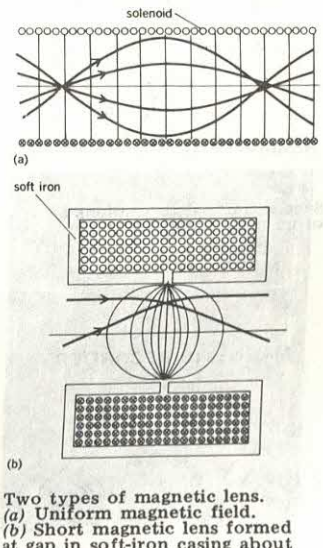
magnetic-memory plate [ELECTR] Magnetic memory consisting of a ferrite plate having a grid of small holes through which the read-in and read-out wires are threaded; printed wiring may be applied directly to the plate in place of con-

MAGNETIC-INK CHARACTER RECOGNITION



E-13B font in magnetic ink on the bottom of a typical bank check to permit electronic processing.

MAGNETIC LENS



Two types of magnetic lens. *(a)* Uniform magnetic field. *(b)* Short magnetic lens formed at gap in soft-iron casing about coil. Arrows show direction of movement of a beam of charged particles. *(From E. G. Ramberg and G. A. Morton, J. Appl. Phys., vol. 10, 1939, and J. Hillier and E. G. Ramberg, J. Appl. Phys., vol. 18, 1947)*

ventionally threaded wires, permitting mass production of plates having a high storage capacity.

magnetic merging *See* field line reconnection.

magnetic meridian [GEOPHYS] A line which is at any point in the direction of horizontal magnetic force of the earth; a compass needle without deviation lies in the magnetic meridian.

magnetic microphone [ENG ACOUS] A microphone consisting of a diaphragm acted upon by sound waves and connected to an armature which varies the reluctance in a magnetic field surrounded by a coil. Also known as reluctance microphone; variable-reluctance microphone.

magnetic mine [ORD] An underwater mine intended to be detonated when the hull of a passing vessel causes a change in the magnetic field at the mine.

magnetic mine detector [ORD] An electrical device for the detection and indication of metallic mines buried in the earth or on the surface of land or water.

magnetic mirror [PL PHYS] A magnetic field used in controlled-fusion experiments to reflect charged particles into the central region of a magnetic bottle; reflection occurs in the region where the magnetic field increases abruptly in strength.

magnetic modulator [ELECTR] A modulator in which a magnetic amplifier serves as the modulating element for impressing an intelligence signal on a carrier.

magnetic moment *See* magnetic dipole moment.

magnetic monopole [ELECTROMAG] A hypothetical particle carrying magnetic charge; it would be a source for magnetic field in the same way that a charged particle is a source for electric field. Also known as monopole.

magnetic multipole [ELECTROMAG] One of a series of types of static or oscillating distributions of magnetization, which is a magnetic multipole of order 2; the electric and magnetic fields produced by a magnetic multipole of order 2^n are equivalent to those of two magnetic multipoles of order 2^{n-1} of equal strength but opposite sign, separated from each other by a short distance.

magnetic multipole field [ELECTROMAG] The electric and magnetic fields generated by a static or oscillating magnetic multipole.

magnetic needle [ELECTROMAG] **1.** A bar magnet or collection of bar magnets which is hung so as to show the direction of the magnetic field. **2.** In particular, a slender bar magnet, pointed at both ends, that is pivoted or freely suspended in a magnetic compass.

magnetic north [GEOPHYS] At any point on the earth's surface, the horizontal direction of the earth's magnetic lines of force (direction of a magnetic meridian) toward the north magnetic pole; a particular direction indicated by the needle of a magnetic compass.

magnetic nuclear resonance *See* nuclear magnetic resonance.

magnetic number [PL PHYS] A dimensionless number used in magnetofluid dynamics, equal to the square root of the magnetic force parameter. Symbolized R_M.

magnetic observatory [GEOPHYS] A geophysical measuring station employing some form of magnetometer to measure the intensity of the earth's magnetic field.

magnetic octupole moment [ELECTROMAG] A quantity characterizing a distribution of magnetization; obtained by integrating the product of the divergence of the magnetization, the third power of the distance from the origin, and a spherical harmonic Y^*_{3m} over the magnetization distribution.

magnetic oscillograph [ELECTROMAG] An instrument that records a trace measuring one component of the earth's magnetic field.

magnetic Oseen number [PL PHYS] A dimensionless number used in magnetofluid dynamics, equal to $\frac{1}{2}(1 - N_{AL}^2)R_M$, where N_{AL} is the Alfvén number, and R_M is the magnetic number. Symbolized k.

magnetic-particle test [MET] A nondestructive test to determine the existence and extent of macrodefects such as cracks in ferromagnetic materials; discontinuities in the material create variations of magnetic field which are outlined by fine magnetic particles. Also known as magnetic crack detection.

magnetic pendulum [ELECTROMAG] A bar magnet which is hung by a thread or balanced on a pivot so that it oscillates in a horizontal plane when disturbed and released in a magnetic field having a horizontal component.

magnetic permeability *See* permeability.

magnetic pickup *See* variable-reluctance pickup.

magnetic pinch *See* pinch effect.

magnetic polarization *See* intrinsic induction.

magnetic pole [ELECTROMAG] **1.** One of two regions located at the ends of a magnet that generate and respond to magnetic fields in much the same way that electric charges generate and respond to electric fields. **2.** A particle which generates and responds to magnetic fields in exactly the same way that electric charges generate and respond to electric fields; the particle probably does not have physical reality, but it is often convenient to imagine that a magnetic dipole consists of two magnetic poles of opposite sign, separated by a small distance. [GEOPHYS] In geomagnetism, either of the two points on the earth's surface where the magnetic meridians converge, that is, where the magnetic field is vertical. Also known as dip pole.

magnetic pole strength [ELECTROMAG] The magnitude of a (fictional) magnetic pole, equal to the force exerted on the pole divided by the magnetic induction (or, alternatively, by the magnetic field strength). Also known as pole strength.

magnetic potential *See* magnetic scalar potential.

magnetic potentiometer [ENG] Instrument that measures magnetic potential differences.

magnetic pressure [PL PHYS] A function, proportional to the square of the magnetic induction, such that the force exerted by a magnetic field on an electrically conducting fluid (excluding the force associated with curvature of magnetic flux lines) is the same as the force that would be exerted by a hydrostatic pressure equal to this function.

magnetic pressure transducer [ENG] A type of pressure transducer in which a change of pressure is converted into a change of magnetic reluctance or inductance when one part of a magnetic circuit is moved by a pressure-sensitive element, such as a bourdon tube, bellows, or diaphragm.

magnetic prime vertical [GEOPHYS] The vertical circle through the magnetic east and west points of the horizon.

magnetic printing [ELECTR] The permanent and usually undesired transfer of a recorded signal from one section of a magnetic recording medium to another when these sections are brought together, as on a reel of tape. Also known as crosstalk; magnetic transfer.

magnetic probe [ELECTROMAG] A small coil inserted in a magnetic field to measure changes in field strength.

magnetic profile [GEOPHYS] A profile of a geologic structure showing magnetic anomalies.

magnetic prospecting [ENG] Carrying out airborne or ground surveys of variations in the earth's magnetic field, using a magnetometer or other equipment, to locate magnetic deposits of iron, nickel, or titanium, or nonmagnetic deposits which either contain magnetic gangue minerals or are associated with magnetic structures.

magnetic pulley [ENG] Magnetized pulley device for a conveyor belt; removes tramp iron from dry products being moved by the belt.

magnetic pumping [ELECTROMAG] A method of moving a conducting liquid by applying a magnetic field which varies with time. [PL PHYS] A method of heating a plasma to a high ion temperature by applying an oscillating electromagnetic field.

magnetic quadrupole lens [ELECTROMAG] A magnetic field generated by four magnetic poles of alternating sign arranged in a circle; used to focus beams of charged particles in devices such as electron microscopes and particle accelerators.

magnetic quantum number [ATOM PHYS] The eigenvalue of the component of an angular momentum operator in a specified direction, such as that of an applied magnetic field, in units of Planck's constant divided by 2π.

magnetic read/write head *See* magnetic head.

magnetic recorder [ELECTR] An instrument that records information, generally in the form of audio-frequency or digital signals, on magnetic tape or magnetic wire as magnetic variations in the medium.

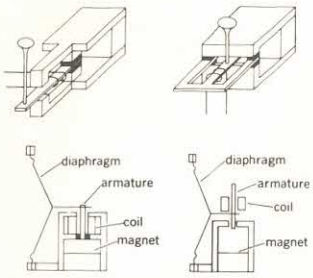
magnetic recording [ELECTR] Recording by means of a signal-controlled magnetic field.

magnetic recording paper [MATER] A particle-oriented paper in which both machine-readable and visible traces can be produced by a magnetic recording head; reusable because the trace can be erased by a combination of alternating-current and direct-current magnetic fields.

magnetic reed switch *See* reed switch.

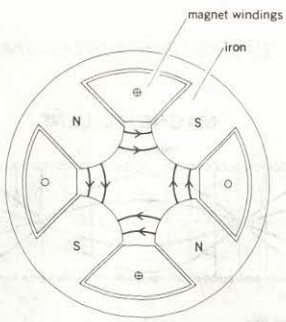
magnetic refrigerator [CRYO] A device for keeping substances cooled to about 0.2K, in which a working substance consisting of a paramagnetic salt undergoes a cycle of processes

MAGNETIC MICROPHONE



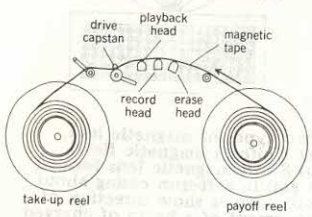
Two magnetic microphones of the balanced-armature type, perspective and sectional views. *(From H. F. Olson, Acoustical Engineering, Van Nostrand, 1957)*

MAGNETIC QUADRUPOLE LENS



Section normal to the lens axis of magnetic quadrupole lens.

MAGNETIC RECORDER



Elements of a typical magnetic tape recording and reproducing system. *(After H. F. Olson, Acoustical Engineering, Van Nostrand, 1957)*

which approximates a Carnot cycle between a high-temperature reservoir consisting of a liquid-helium bath at 1.2K and a low-temperature reservoir consisting of the substance to be cooled, and isentropic cooling of the working substance is accomplished by demagnetization.

magnetic relaxation [PHYS] The approach of a magnetic system to an equilibrium or steady-state condition, over a period of time.

magnetic reluctance *See* reluctance.

magnetic reluctivity *See* reluctivity.

magnetic reproducer [ELECTR] An instrument which moves a magnetic recording medium, such as a tape, wire, or disk, past an electromagnetic transducer that converts magnetic signals on the medium into electric signals.

magnetic reproducing [ELECTR] The conversion of information on magnetic tape or magnetic wire, which was originally produced by electric signals, back into electric signals.

magnetic resonance [PHYS] A phenomenon exhibited by the magnetic spin systems of certain atoms whereby the spin systems absorb energy at specific (resonant) frequencies when subjected to magnetic fields alternating at frequencies which are in synchronism with natural frequencies of the system. Also known as spin resonance.

magnetic reversal [GEOPHYS] A reversal of the polarity of the earth's magnetic field that has occurred at irregular intervals on the order of 1,000,000 years.

magnetic Reynolds number [PL PHYS] A dimensionless number used to compare the transport of magnetic lines of force in a conducting fluid to the leakage of such lines from the fluid, equal to a characteristic length of the fluid times the fluid velocity, divided by the magnetic diffusivity. Symbolized R_M.

magnetic rigidity [ELECTROMAG] A measure of the momentum of a particle moving perpendicular to a magnetic field, equal to the magnetic induction times the particle's radius of curvature. [PL PHYS] The existence of restoring forces which resist displacements of a conducting fluid when a magnetic field is present.

magnetic rotation *See* Faraday effect.

magnetic rubber [MATER] Synthetic rubber to which magnetic metal powder is added; produced in sheets or strips.

magnetics [ELECTROMAG] The study of magnetic phenomena, comprising magnetostatics and electromagnetism.

magnetic saturation [ELECTROMAG] The condition in which, after a magnetic field strength becomes sufficiently large, further increase in the magnetic field strength produces no additional magnetization in a magnetic material. Also known as saturation.

magnetic scalar potential [ELECTROMAG] The work which must be done against a magnetic field to bring a magnetic pole of unit strength from a reference point (usually at infinity) to the point in question. Also known as magnetic potential.

magnetic scanning [SPECT] The magnetic field sorting of ions into their respective spectrums for analysis by mass spectroscopy; accomplished by varying the magnetic field strength while the electrostatic field is held constant.

magnetic scattering [PHYS] Scattering of neutrons as a result of the interaction of the magnetic moment of the neutron with the magnetic moments of atoms or other particles.

magnetic secular change [GEOPHYS] The gradual variation in the value of a magnetic element which occurs over a period of years.

magnetic separator [ENG] A machine for separating magnetic from less magnetic or nonmagnetic materials by using strong magnetic fields; used for example, in tramp iron removal, or concentration and purification.

magnetic shell [ELECTROMAG] Two layers of magnetic charge of opposite sign, separated by an infinitesimal distance.

magnetic shielding *See* magnetostatic shielding.

magnetic shift register [COMPUT SCI] A shift register in which the pattern of settings of a row of magnetic cores is shifted one step along the row by each new input pulse; diodes in the coupling loops between cores prevent backward flow of information.

magnetic shunt [ELECTROMAG] Piece of iron, usually adjustable as to position, used to divert a portion of the magnetic lines of force passing through an air gap in a device.

magnetic sound track [ENG ACOUS] A magnetic tape, attached to a motion picture film, on which a sound recording is made.

magnetic spark chamber [NUCLEO] A spark chamber in a magnetic field up to 20,000 gauss, in which the sign of the charge and the momentum of charged particles can be measured by measuring the curvature of their trajectories.

magnetic speaker *See* magnetic loudspeaker.

magnetic spectrograph [NUCLEO] A magnetic spectrometer that provides a permanent record of the distribution of intensity versus momentum of a beam of charged particles.

magnetic spectrometer [NUCLEO] A device for measuring the momentum of charged particles, or their distribution of intensity versus momentum, by passing the particles through a magnetic field which bends their paths in proportion to their momentum.

magnetic station [GEOPHYS] A facility equipped with instruments for measuring local variations in the earth's magnetic field.

magnetic stepping motor *See* stepper motor.

magnetic storage [COMPUT SCI] A device utilizing magnetic properties of materials to store data; may be roughly divided into two categories, moving (drum, disk, tape) and static (core, thin film). Also known as magnetic memory.

magnetic storm [GEOPHYS] A worldwide disturbance of the earth's magnetic field; frequently characterized by a sudden onset, in which the magnetic field undergoes marked changes in the course of an hour or less, followed by a very gradual return to normalcy, which may take several days.

magnetic strain energy [SOLID STATE] The potential energy of a magnetic domain, subject to both a tensile stress and a magnetic field, associated with the domain's magnetostriction expansion.

magnetic stratigraphy *See* paleomagnetic stratigraphy.

magnetic stress [PL PHYS] The force which acts across a surface in a conducting fluid because of curving or stretching of magnetic flux lines.

magnetic stress tensor [PL PHYS] A second-rank tensor, proportional to the dyad product of the magnetic induction with itself, whose divergence gives that part of the force of a magnetic field on a unit volume of conducting fluid which is due to curvature or stretching of magnetic flux lines.

magnetic striped ledger [COMPUT SCI] A ledger sheet used on a special typing device which stores the coded data on a magnetic strip on the sheet while typing out the data on the sheet; the magnetic strip can be read directly by a special reader linked to a computer.

magnetic survey [GEOPHYS] **1.** Magnetometer map of variations in the earth's total magnetic field; used in petroleum exploration to determine basement-rock depths and geologic anomalies. **2.** Measurement of a component of the geomagnetic field at different locations.

magnetic susceptibility [ELECTROMAG] The ratio of the magnetization of a material to the magnetic field strength; it is a tensor when these two quantities are not parallel; otherwise it is a simple number. Also known as susceptibility.

magnetic tape [ELECTR] A plastic, paper, or metal tape that is coated or impregnated with magnetizable iron oxide particles; used in magnetic recording.

magnetic-tape core [ELECTR] Toroidal core formed by winding a strip of thin magnetic-core material around a form.

magnetic tape file operation [COMPUT SCI] All the jobs related to creating, sorting, inputting, and maintenance of magnetic tapes in a magnetic tape environment.

magnetic tape group [COMPUT SCI] A cabinet containing two or more magnetic tape units, each of which can operate independently, but which sometimes share one or more channels with which they communicate with a central processor. Also known as tape cluster; tape group.

magnetic tape librarian [COMPUT SCI] Routine which provides a computer the means to automatically run a sequence of programs.

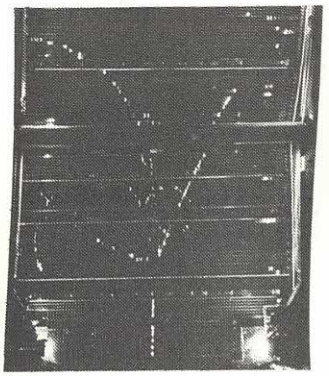
magnetic tape master file [COMPUT SCI] A magnetic tape consisting of a set of related elements such as is found in a payroll, an inventory, or an accounts receivable; a master file is, as a rule, periodically updated.

magnetic tape parity [COMPUT SCI] A check performed on the data bits on a tape; usually an odd (or even) condition is expected and the occurrence of the wrong parity indicates the presence of an error.

magnetic tape reader [ELECTR] A computer device that is capable of reading information recorded on magnetic tape by transforming this information into electric pulses.

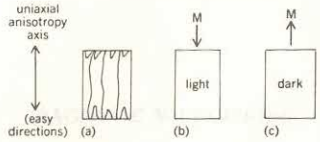
magnetic tape station [COMPUT SCI] On-line device that

MAGNETIC SPARK CHAMBER



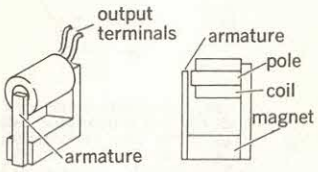
A photograph taken through a pair of cylindrical field lenses of an event in a narrow-gap spark-chamber system in a magnetic field. *(From A. Roberts, Spark chambers, Encyclopaedic Dictionary of Physics, Pergamon Press, 1962–1964)*

MAGNETIC THIN FILM



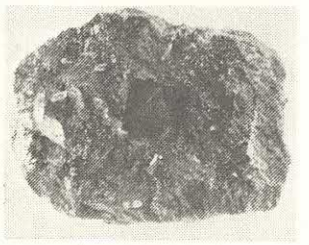
Typical domain patterns in a thin film viewed by use of the Kerr magnetooptic technique. *(a)* Magnetic film demagnetized. *(b)* Magnetization pointing downward. *(c)* Magnetization pointing upward.

MAGNETIC TRANSDUCER



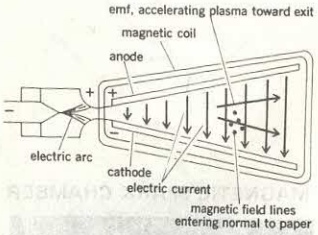
Perspective and sectional view of a single-pole and armature magnetic transducer.

MAGNETITE



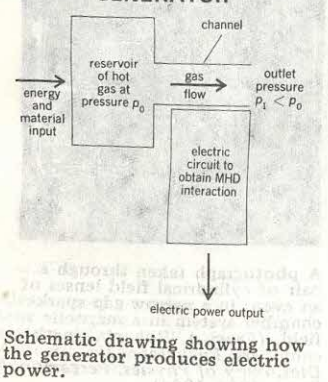
Magnetite crystal on a block of mica schist with small quartz crystals on left. *(American Museum of Natural History Specimen)*

MAGNETOHYDRODYNAMIC ARCJET



Sectional view through a magnetohydrodynamic arc engine showing the various components.

MAGNETOHYDRODYNAMIC GENERATOR



Schematic drawing showing how the generator produces electric power.

provides write, read, and erase data on magnetic tape to permit high-speed storage of data.

magnetic tape storage [COMPUT SCI] Storage of binary information on magnetic tape, generally on 5 to 10 tracks, with up to several thousand bits per inch (more than a thousand bits per centimeter) on each track.

magnetic tape switching unit [COMPUT SCI] A device which permits the computer operator to bring into play any number of tape drives as required by the system.

magnetic tape terminal [COMPUT SCI] Device which converts pulses in series to pulses in parallel while checking for bit parity prior to the entry in buffer storage.

magnetic tape unit [COMPUT SCI] A computer unit that usually consists of a tape transport, reading and recording heads, and associated electric and electronic equipment.

magnetic temporal variation [GEOPHYS] Any change in the earth's magnetic field which is a function of time.

magnetic test coil *See* exploring coil.

magnetic thermometer [SOLID STATE] A sample of a paramagnetic salt whose magnetic susceptibility is measured and whose temperature is then calculated from the inverse relationship between the two quantities; useful at temperatures below about 1 K.

magnetic thin film [SOLID STATE] A sheet or cylinder of magnetic material less than 5 micrometers thick, usually possessing uniaxial magnetic anisotropy; used mainly in computer storage and logic elements. Also known as ferromagnetic film; magnetic film.

magnetic track [NAV] The direction of the track relative to magnetic north.

magnetic transducer [ELECTROMAG] A device for transforming mechanical into electrical energy, which consists of a magnetic field including a variable-reluctance path and a coil surrounding all or a part of this path, so that variation in reluctance leads to a variation in the magnetic flux through the coil and a corresponding induced emf (electromotive force).

magnetic transfer *See* magnetic printing.

magnetic variation [GEOPHYS] Small changes in the earth's magnetic field in time and space.

magnetic vector *See* magnetic induction.

magnetic vector potential *See* vector potential.

magnetic viscosity [PL PHYS] The effect, possessed by a magnetic field in the absence of sizable mechanical forces or electric fields, of damping motions of a conducting fluid perpendicular to the field similar to ordinary viscosity.

magnetic wave [SOLID STATE] The spread of magnetization from a small portion of a substance where an abrupt change in the magnetic field has taken place.

magnetic-wave device [ELECTROMAG] A device that depends on magnetoelastic or magnetostatic wave propagation through or on the surface of a magnetic or dielectric material.

magnetic well [PL PHYS] A configuration of magnetic fields used to contain a plasma in controlled fusion experiments, in which the plasma is confined in a central region surrounded by fields which keep it from escaping in any direction.

magnetic wind direction [METEOROL] The direction, with respect to magnetic north, from which the wind is blowing; distinguished from true wind direction.

magnetic wire [MATER] A wire made from magnetic material suitable for magnetic recording.

magnetism [PHYS] Phenomena involving magnetic fields and their effects upon materials.

magnetite [MINERAL] An opaque iron-black and streak-black isometric mineral and member of the spinel structure type, usually occurring in octahedrals or in granular to massive form; hardness is 6 on Mohs scale, and specific gravity is 5.20. Also known as magnetic iron ore; octahedral iron ore.

magnetization [ELECTROMAG] **1.** The property and in particular, the extent of being magnetized; quantitatively, the magnetic moment per unit volume of a substance. Also known as magnetic dipole density; magnetization intensity. **2.** The process of magnetizing a magnetic material.

magnetization curve *See* B-H curve; normal magnetization curve.

magnetization intensity *See* magnetization.

magnetizing current [ELEC] The current that flows through the primary winding of a power transformer when no loads are connected to the secondary winding; this current established the magnetic field in the core and furnished energy for the no-load power losses in the core. Also known as exciting current.

magnetizing force *See* magnetic field strength.

magnet keeper *See* keeper.

magneto [ELEC] An alternating-current generator that uses one or more permanent magnets to produce its magnetic field; frequently used as a source of ignition energy on tractor, marine, industrial, and aviation engines. Also known as magnetoelectric generator.

magnetoacoustics [PHYS] The study of the effects of magnetic fields on acoustical phenomena, such as various oscillations in the attenuation of ultrasonic sound waves by a crystal placed in a magnetic field at a very low temperature, as the magnetic field strength or sound frequency is varied.

magnetoaerodynamics [PL PHYS] Study of the properties and characteristics of, and the forces exerted by, highly ionized air and other gases; applied principally to study of reentering ballistic missiles and spacecraft.

magneto anemometer [ENG] A cup anemometer with its shaft mechanically coupled to a magnet; both the frequency and amplitude of the voltage generated are proportional to the wind speed, and may be indicated or recorded by suitable electrical instruments.

magnetocaloric effect [THERMO] The reversible change of temperature accompanying the change of magnetization of a ferromagnetic material.

magnetocardiograph [MED] An instrument that records the intensity of the magnetic field of the heart as produced by currents sent through the body by measuring the voltages associated with each heart beat. Abbreviated MCG.

magnetochemistry [PHYS CHEM] A branch of chemistry which studies the interrelationship between the bulk magnetic properties of a substance and its atomic and molecular structure.

magnetoelastic coupling [SOLID STATE] The interaction between the magnetization and the strain of a magnetic material.

magnetoelasticity [SOLID STATE] Phenomenon in which an elastic strain alters the magnetization of a ferromagnetic material.

magnetoelectric effect [SOLID STATE] A linear coupling between magnetization and polarization found in certain magnetic ferroelectrics, such as $BaMnF_4$ at low temperatures.

magnetoelectric generator *See* magneto.

magnetoelectricity [ELECTROMAG] Magnetic techniques for generating voltages, such as in an ordinary generator. [SOLID STATE] The appearance of an electric field in certain substances, such as chromic oxide (Cr_2O_3), when they are subjected to a static magnetic field.

magnetoencephalography [MED] A method to detect the brain's electrical activity with a superconducting magnet.

magnetofluid [PHYS CHEM] A Newtonian or shear-thinning fluid whose flow properties become viscoplastic when it is modulated by a magnetic field.

magnetofluid dynamics [PHYS] **1.** The study of the motion of an electrically conducting metal, such as mercury, in the presence of electric and magnetic fields. **2.** *See* magnetohydrodynamics.

magnetogalvanic effect *See* galvanomagnetic effect.

magnetogas dynamics [PL PHYS] The science of motion in a plasma under the influence of mechanical, electric, and magnetic forces.

magnetograph [ELECTROMAG] A set of three variometers attached to a suitable recording unit, which records the components of the magnetic field vector in each of three perpendicular directions.

magnetohydrodynamic arcjet [AERO ENG] An electromagnetic propulsion system utilizing a plasma that is heated in an electric arc and then adiabatically expanded through a nozzle and further accelerated by a crossed electric and magnetic field.

magnetohydrodynamic generator [ELEC] A system for generating electric power in which the kinetic energy of a flowing conducting fluid is converted to electric energy by a magnetohydrodynamic interaction. Abbreviated MHD generator.

magnetohydrodynamic instability [PL PHYS] An instability of a plasma in which the plasma expands while moving into a region of weaker magnetic field, until it is expelled from the field. Also known as hydromagnetic instability.

magnetohydrodynamics [PHYS] The study of the dynamics or motion of an electrically conducting fluid, such as an ionized gas or liquid metal, interacting with a magnetic field. Abbreviated MHD. Also known as hydromagnetics; magnetofluid dynamics.

magnetohydrodynamic stability [PL PHYS] The condition of a plasma in which fluctuations in density, pressure, velocity, or the distribution of particles in phase space, die out rather than increase. Also known as hydromagnetic stability.

magnetohydrodynamic turbulence [PL PHYS] Motion of a plasma in which velocities and pressures fluctuate irregularly.

magnetohydrodynamic wave [PHYS] Wave motion in an electrically conducting fluid, such as plasma or liquid metal, in a strong magnetic field at a frequency much less than that of the ion cyclotron frequency. Also known as hydromagnetic wave.

magneto ignition system [ELECTROMAG] An ignition system in which the voltage required to cause a flow of current in the primary winding of the ignition coil is generated by a set of permanent magnets, instead of being supplied by a battery.

magnetoionic duct [GEOPHYS] Duct along the geomagnetic lines of force which exhibits waveguide characteristics for radio-wave propagation between conjugate points on the earth's surface.

magnetoionic theory [GEOPHYS] The theory of the combined effect of the earth's magnetic field and atmospheric ionization on the propagation of electromagnetic waves.

magnetoionic wave component [GEOPHYS] Either of the two elliptically polarized wave components into which a linearly polarized wave incident on the ionosphere is separated because of the earth's magnetic field.

magnetomechanical factor [PHYS] The gyromagnetic ratio of an atom or substance (magnetic dipole moment divided by angular momentum) divided by the quantity $e/2mc$, where e and m are the charge (in esu, or electrostatic units) and mass of the electron respectively, and c is the speed of light. Also known as g factor.

magnetomechanics [PHYS] The study of the effects which the magnetization of a material and its strain have on each other.

magnetometer [ENG] An instrument for measuring the magnitude and sometimes also the direction of a magnetic field, such as the earth's magnetic field.

magnetomotive force [ELECTROMAG] The work that would be required to carry a magnetic pole of unit strength once around a magnetic circuit. Abbreviated mmf.

magneton [PHYS] A unit of magnetic moment used for atomic, molecular, or nuclear magnets, such as the Bohr magneton, Weiss magneton, or nuclear magneton.

magneton number [PHYS] The ratio of the magnetic moment per atom, ion, or molecule of a paramagnetic or ferromagnetic material to the Bohr magneton.

magnetooptical modulator [ELECTROMAG] An arrangement for modulating a beam of light by passing it through a single crystal of yttrium iron garnet, which provides intensity modulation by using a magnetic field to produce optical rotation.

magnetooptical shutter [OPTICS] A device in which light passes through crossed Nicol prisms and a glass cell containing a liquid displaying the Faraday effect between the prisms; light can pass through the system only when a magnetic field is applied to the cell at an angle of 45° to the polarization planes of both prisms.

magnetooptical switch [COMPUT SCI] A thin-film modulator which acts on a laser beam by polarization, causing the beam to emerge from the output prism at a different angle.

magnetooptic Kerr effect [OPTICS] Changes produced in the optical properties of a reflecting surface of a ferromagnetic substance when the substance is magnetized; this applies especially to the elliptical polarization of reflected light, when the ordinary rules of metallic reflection would give only plane polarized light. Also known as Kerr magnetooptical effect.

magnetooptic material [OPTICS] A material whose optical properties are changed by an applied magnetic field.

magnetooptics [OPTICS] The study of the effect of a magnetic field on light passing through a substance in the field.

magnetopause [GEOPHYS] A boundary that marks the transition from the earth's magnetosphere to the interplanetary medium.

magnetoplasmadynamics [ELECTROMAG] The generation of electric current by shooting a beam of ionized gas through a magnetic field, to give the same effect as moving copper bars near a magnet.

magnetoplumbite [MINERAL] $(PbMn)_2Fe_6O_{11}$ Black mineral consisting of a ferric oxide of plumbite and manganese, and occurring in acute metallic hexagonal crystals.

magnetoresistance [ELECTROMAG] The change in electrical resistance produced in a current-carrying conductor or semiconductor on application of a magnetic field.

magnetoresistivity [ELECTROMAG] The change in resistivity produced in a current-carrying conductor or semiconductor on application of a magnetic field.

magnetoresistor [ELECTR] Magnetic field–controlled variable resistor.

magnetosheath [GEOPHYS] The relatively thin region between the earth's magnetopause and the shock front in the solar wind.

magnetosphere [GEOPHYS] The region of the earth in which the geomagnetic field plays a dominant part in controlling the physical processes that take place; it is usually considered to begin at an altitude of about 100 kilometers and to extend outward to a distant boundary that marks the beginning of interplanetary space.

magnetospheric plasma [GEOPHYS] A low-energy plasma with particle energies less than a few electron volts that permeates the entire region of the earth's magnetosphere.

magnetospheric ring current [GEOPHYS] A belt of charged particles moving around the earth, in the magnetosphere, whose perturbations are associated with ionospheric storms.

magnetospheric substorm [GEOPHYS] A disturbance of particles and magnetic fields in the magnetosphere; occurs intermittently, lasts 1 to 3 hours, and is accompanied by various phenomena sensible from the earth's surface, such as intense auroral displays and magnetic disturbances, particularly in the nightside polar regions.

magnetostatic [ELECTROMAG] Pertaining to magnetic properties not dependent on the motion of magnetic fields.

magnetostatic mode [SOLID STATE] A spin wave in a magnetic material whose wavelength is greater than about one-tenth the size of the sample.

magnetostatics [ELECTROMAG] The study of magnetic fields that remain constant with time. Also known as static magnetism.

magnetostatic shielding [ELECTROMAG] The use of an enclosure made of a high-permeability magnetic material to prevent a static magnetic field outside the enclosure from reaching objects inside it, or to confine a magnetic field within the enclosure. Also known as magnetic shielding.

magnetostriction [ELECTROMAG] The dependence of the state of strain (dimensions) of a ferromagnetic sample on the direction and extent of its magnetization.

magnetostriction transducer [ELECTROMAG] A transducer used with sonar equipment to change an alternating current to sound energy at the same frequency and to form the sound energy into a beam; its operation depends on the interaction between the magnetization and the deformation of a material having magnetostrictive properties.

magnetostrictive delay line [ELECTROMAG] A delay line made of nickel or other magnetostrictive material, in which the amount of delay is determined by a shock wave traveling through the length of the line at the speed of sound.

magnetostrictive filter [ELECTR] Filter network which uses the magnetostrictive phenomena to form high-pass, low-pass, band-pass, or band-elimination filters; the impedance characteristic is the inverse of that of a crystal.

magnetostrictive loudspeaker [ENG ACOUS] Loudspeaker in which the mechanical forces result from the deformation of a material having magnetostrictive properties.

magnetostrictive microphone [ENG ACOUS] Microphone which depends for its operation on the generation of an electromotive force by the deformation of a material having magnetostrictive properties.

magnetostrictive oscillator [ELECTR] An oscillator whose frequency is controlled by a magnetostrictive element.

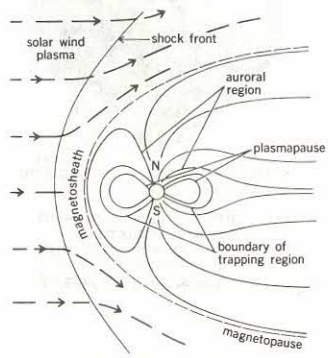
magnetostrictive resonator [SOLID STATE] Ferromagnetic rod so designed that it can be excited magnetically into resonant vibration at one or more definite and known frequencies.

magnetostrictor [ELECTROMAG] A device for converting electric oscillations to mechanical oscillations by employing the property of magnetostriction.

magnetoswitchboard exchange [COMMUN] A manual exchange at which the subscribers and operators call and clear by means of magnetoelectric generators.

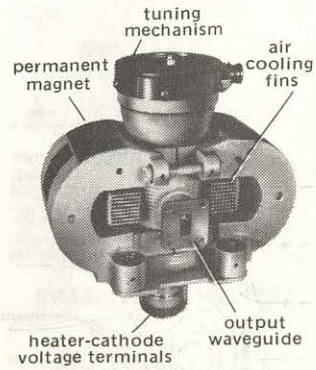
magnetotail [GEOPHYS] The portion of the magnetosphere extending from earth in the direction away from the sun for a variable distance of the order of 1000 earth radii.

MAGNETOSHEATH



Configuration of the magnetosphere in the plane containing the sun-earth line and the geomagnetic axis; position of magnetosheath is shown.

MAGNETRON

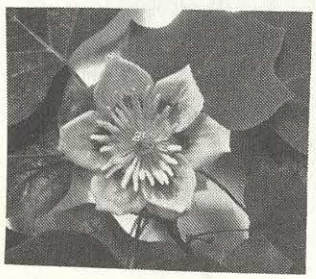


Coaxial cavity magnetron with horseshoe-shaped magnets. *(From J. W. Gewartowski and H. A. Watson, Principles of Electron Tubes, Van Nostrand, 1965)*

MAGNOLIA

Leaf and twig of the cucumber tree, *Magnolia acuminata.*

MAGNOLIACEAE



Flower of the tulip tree *(Liriodendron tulipifera)*, a characteristic eastern American species of the family of Magnoliaceae, order Magnoliales. *(Photograph by F. W. Westlake, from National Audubon Society)*

magneto telephone set [ELEC] Local battery telephone set in which current for signaling by the telephone station is supplied from a local hand generator, usually a magneto.

magnet power [ELECTROMAG] The electric power supplied to the coils of an electromagnet.

magnetron [ELECTR] One of a family of crossed-field microwave tubes, wherein electrons, generated from a heated cathode, move under the combined force of a radial electric field and an axial magnetic field in such a way as to produce microwave radiation in the frequency range 1–40 gigahertz; a pulsed microwave radiation source for radar, and continuous source for microwave cooking.

magnetron oscillator [ELECTR] Oscillator circuit employing a magnetron tube.

magnetron pulling [ELECTR] Frequency shift of a magnetron caused by factors which vary the standing waves or the standing-wave ratio on the radio-frequency lines.

magnetron pushing [ELECTR] Frequency shift of a magnetron caused by faulty operation of the modulator.

magnetron vacuum gage [ELECTR] A vacuum gage that is essentially a magnetron operated beyond cutoff in the vacuum being measured.

magnet wire [ELEC] The insulated copper or aluminum wire used in the coils of all types of electromagnetic machines and devices.

magnification [OPTICS] **1.** A measure of the effectiveness of an optical system in enlarging or reducing an image; the magnification may be lateral, longitudinal, or angular. **2.** *See* lateral magnification.

magnifier *See* simple microscope.

magnifying glass [OPTICS] **1.** Any device that uses a simple lens which enlarges the object being viewed. **2.** *See* simple microscope.

magnifying power [OPTICS] The ratio of the tangent of the angle subtended at the eye by an image formed by an optical system, to the tangent of the angle subtended at the eye by the corresponding object at a distance for convenient viewing.

magnistor [ELECTR] A device that utilizes the effects of magnetic fields on injection plasmas in semiconductors such as indium antimonide.

magnitude [ASTRON] The relative luminance of a celestial body; the smaller (algebraically) the number indicating magnitude, the more luminous the body. Also known as stellar magnitude. [GEOPHYS] A measure of the amount of energy released by an earthquake.

magnitude method [ORD] Method of adjusting gunfire for range when the amount and direction of the deviation are known.

magnitude of a complex number *See* absolute value of a complex number.

magnitude of a real number *See* absolute value of a real number.

magnitude of a vector *See* absolute value of a vector.

magnitude ratio [ASTRON] The ratio (2.512) of relative brightness of two celestial bodies differing in magnitude by 1.0.

magnitude system [ASTRON] A system for designating the relative brightness of stars when photography is used; emulsions of different color sensitivities, used with color filters, permit measurements of starlight of different wavelengths with corresponding determination of magnitude at these wavelengths.

magno [MET] An alloy of 95.5% nickel and 4.5% manganese, used in the manufacture of incandescent lamps and radio tubes.

magnocellular [CYTOL] Having large cell bodies; said of various nuclei of the central nervous system.

magnochromite *See* magnesiochromite.

magnoferrite *See* magnesioferrite.

Magnolia [BOT] A genus of trees, the type genus of the Magnoliaceae, with large, chiefly white, yellow, or pinkish flowers, and simple, entire, usually large evergreen or deciduous alternate leaves.

Magnoliaceae [BOT] A family of dicotyledonous plants of the order Magnoliales characterized by hypogynous flowers with few to numerous stamens, stipulate leaves, and uniaperturate pollen.

Magnoliales [BOT] The type order of the subclass Magnoliidae; members are woody plants distinguished by the presence of spherical ethereal oil cells and by a well-developed perianth of separate tepals.

Magnoliatae *See* Magnoliopsida.

Magnoliidae [BOT] A primitive subclass of flowering plants in the class Magnoliopsida generally having a well-developed perianth, numerous centripetal stamens, and bitegmic, crassinucellate ovules.

Magnoliophyta [BOT] The angiosperms, a division of vascular seed plants having the ovules enclosed in an ovary and well-developed vessels in the xylem.

Magnoliopsida [BOT] The dicotyledons, a class of flowering plants in the division Magnoliophyta generally characterized by having two cotyledons and net-veined leaves, with vascular bundles borne in a ring enclosing a pith.

magnon [SOLID STATE] A quasi-particle which is introduced to describe small departures from complete ordering of electronic spins in ferro-, ferri-, antiferro-, and helimagnetic arrays. Also known as quantized spin wave.

magnophorite [MINERAL] $NaKCaMg_5Si_8O_{23}OH$ A monoclinic mineral composed of a basic silicate of sodium, potassium, calcium, and magnesium; member of the amphibole group.

magnum [ANAT] Large, as in foramen magnum.

Magnus effect [FL MECH] A force on a rotating cylinder in a fluid flowing perpendicular to the axis of the cylinder; the force is perpendicular to both flow direction and cylinder axis. Also known as Magnus force.

Magnus force *See* Magnus effect.

Magnus moment [FL MECH] A torque associated with the Magnus effect, such as moments about the pitch and yaw axes of a missile or aircraft due to rotation about the roll axis.

mag-slip *See* synchro.

maguey [MATER] A fiber obtained from the agave (*Agave cantala*); maguey fibers are white, stiff, brilliant, and light in weight, and are used chiefly for binder twine.

mahlstick [GRAPHICS] A stick held in the palette hand of a painter and used as a support for his painting hand; it is a light rod of wood often with a leather-covered ball at one end. Also known as maulstick; rest stick.

mahogany [BOT] Any of several tropical trees in the family Meliaceae of the Geraniales. [MATER] The hard wood of these trees, especially the red or yellow-brown wood of the West Indies mahogany tree (*Swietenia mahagoni*).

mahogany acid [MATER] A dark-colored mixture of sulfonic acid derived from petroleum; the salts are used as emulsifying agents and in lubricants.

mahogany soap [MATER] The sodium salt of crude or refined petroleum sulfonic acids, used as flotation agents and to increase the oil absorption of mineral pigments in paint.

mahubarana fat [MATER] A pale-yellow solid oil, melting point 40–44°C, obtained from seeds of trees of the genus *Boldoa;* used for soaps and candles.

maidenhead *See* hymen.

maieusiophobia [PSYCH] An abnormal fear of childbirth.

Maillard reaction [BIOCHEM] A reaction in which the amino group in an amino acid tends to form condensation products with aldehydes; believed to cause the Browning reaction when an amino acid and a sugar coexist, evolving a characteristic flavor useful in food preparations.

main [CIV ENG] A duct or pipe that supplies or drains ancillary branches. [ELEC] **1.** One of the conductors extending from the service switch, generator bus, or converter bus to the main distribution center in interior wiring. **2.** *See* power transmission line.

main-and-tail haulage [MIN ENG] A single-track haulage system that is operated by a haulage engine with two drums, each with a separate rope.

main-and-transfer bus [ELEC] A substation switching arrangement similar to a single bus but with an additional transfer bus provided.

main bang [ELECTR] Transmitted pulse, within a radar system.

main clock *See* master clock.

main crosscut [MIN ENG] A crosscut that traverses the entire mining field and penetrates all deposits.

main deck [NAV ARCH] **1.** The uppermost complete deck of a naval vessel extending over its entire length and width. **2.** The uppermost deck of a merchant ship for which it is possible to close all openings securely.

main distributing frame [ELEC] Frame which terminates the permanent outside lines entering the central office building on one side and the subscriber-line multiple cabling, trunk multiple cabling, and so on, used for associating an outside line

with any desired terminal on the other side; it usually carries the control-office protective devices, and functions as a test point between line and office. Also known as main frame.

Maindroniidae [INV ZOO] A family of wingless insects belonging to the Thysanura proper.

main entry [MIN ENG] The principal entry or set of entries driven through the coalbed from which cross entries, room entries, or rooms are turned.

main exciter [ELEC] Exciter which supplies energy for the field excitation of a principal electric machine.

main fans [MIN ENG] Fans that produce the general ventilating current of the mine, being of large capacity and permanently installed.

main firing [ENG] The firing of a round of shots by means of current supplied by a transformer fed from a main power supply.

main frame *See* central processing unit; main distributing frame.

main haulage [MIN ENG] The section of the haulage system which moves the coal from the secondary or intermediate haulage system to the shaft or mine opening.

main haulage conveyor [MIN ENG] A conveyor used to transport material in the main haulage section of the mine, between the intermediate haulage conveyor and a car-loading point or the outside.

main instruction buffer [COMPUT SCI] A section of storage in the instruction unit, 16 bytes in length, used to hold prefetched instructions.

main joint *See* master joint.

main-line locomotive [MIN ENG] A large, high-powered locomotive which hauls trains of cars over the main haulage system.

main lobe *See* major lobe.

mainmast [NAV ARCH] The principal mast of a sailing ship.

main memory *See* main storage.

main path [COMPUT SCI] The principal branch of a routine followed by a computer in the process of carrying out the routine.

main program [COMPUT SCI] **1.** The central part of a computer program, from which control may be transferred to various subroutines and to which control is eventually returned. Also known as main routine. **2.** *See* executive routine.

main return [MIN ENG] The main return airway of a mine.

main rope *See* pull rope.

main-rope haulage system [MIN ENG] A system of haulage for hauling loaded trains of tubs or cars up, or lowering them down, a comparatively steep gradient which is not steep enough, in the latter case, for a self-acting incline.

main routine *See* executive routine; main program.

mainsail [NAV ARCH] The principal sail of a sailing vessel, carried on the mainmast.

main sequence [ASTRON] The band in the spectrum luminosity diagram which has the great majority of stars; their energy derives from core burning of hydrogen into helium.

main sequence star [ASTRON] **1.** Any of those stars in the smooth curve termed the main sequence in a Hertzsprung-Russell diagram. **2.** *See* dwarf star.

main shaft [MECH ENG] The line of shafting receiving its power from the engine or motor and transmitting power to other parts.

main station [COMMUN] Telephone station with a distinct call number designation, directly connected to a central office.

main storage [COMPUT SCI] A digital computer's principal working storage, from which instructions can be executed or operands fetched for data manipulation. Also known as main memory.

main stream [HYD] The principal or largest stream of a given area or drainage system. Also known as master stream; trunk stream.

main stroke *See* return streamer.

main sweep [ELECTR] On certain fire-control radar, the longest range scale available.

maintainability [ENG] **1.** The ability of equipment to meet operational objectives with a minimum expenditure of maintenance effort under operational environmental conditions in which scheduled and unscheduled maintenance is performed. **2.** Quantitatively, the probability that an item will be restored to specified conditions within a given period of time when maintenance action is performed in accordance with prescribed procedures and resources.

maintenance [IND ENG] The upkeep of industrial facilities and equipment.

maintenance engineering [IND ENG] The function of providing policy guidance for maintenance activities, and of exercising technical and management review of maintenance programs.

maintenance kit [ENG] A collection of items not all having the same basic name, which are of a supplementary nature to a major component or equipment; the items within the collection may provide replacement parts and facilitate such functions as inspection, test repair, or preventive types of maintenance, for the specific purpose of restoring and improving the operational status of a component or equipment comparable to its original capacity and efficiency.

maintenance routine [COMPUT SCI] A computer program designed to detect conditions which may give rise to a computer malfunction in order to assist a service engineer in performing routine preventive maintenance.

maintenance vehicle [ENG] Vehicle used for carrying parts, equipment, and personnel for maintenance or evacuation of vehicles.

main thermocline [OCEANOGR] A thermocline that is deep enough in the ocean to be unaffected by seasonal temperature changes in the atmosphere. Also known as permanent thermocline.

maize [BOT] *Zea mays*. Indian corn, a tall cereal grass characterized by large ears.

Majac mill [MIN ENG] A mill for dry-grinding mica by means of fluid energy; consists of a chamber which contains two horizontal, directly opposing jets and into which mica is fed continuously from a screw conveyor.

Majidae [INV ZOO] The spider, or decorator, crabs, a family of decapod crustaceans included in the Brachyura; members are slow-moving animals that often conceal themselves by attaching seaweed and sessile animals to their carapace.

Majorana force [NUC PHYS] A force between two nucleons postulated to explain various phenomena, which can be derived from a potential containing an operator which exchanges the nucleons' positions but not their spins.

Majorana neutrino [PARTIC PHYS] A particle described by a wave function that satisfies the Dirac equation with mass equal to zero, and that is self–charge-conjugate.

major arc [MATH] The longer of the two arcs produced by a secant of a circle.

major assembly [ENG] A self-contained unit of individual identity; a completed assembly of component parts ready for operation, but utilized as a portion of, and intended for further installation in, an end item or major item.

major axis [MATH] The longer of the two axes with respect to which an ellipse is symmetric.

major combination [ORD] A single composite unit of mechanical equipment inherently complete for independent use and consisting of one or more major items; as issued, it is complete in respect to both equipment and spare parts, including items furnished by services other than the issuing service; for example, a tank, complete with armament, equipment, and spare parts.

major cycle [COMPUT SCI] The time interval between successive appearances of a given storage position in a serial-access computer storage.

major defect [IND ENG] Defect which causes serious malfunctioning of a product.

major diameter [DES ENG] The largest diameter of a screw thread, measured at the crest for an external (male) thread and at the root for an internal (female) thread.

major diatonic scale [ACOUS] A diatonic scale in which the relative sizes of the sequence of intervals are approximately 2,2,1,2,2,2,1.

major fog signal [NAV] A sound signal which has a normal range of reception in excess of 2 miles (3.2 kilometers), to aid watercraft in avoiding obstacles.

major fold [GEOL] A large-scale fold with which minor folds are usually associated.

major hysteria [PSYCH] A conversion reaction manifested in movements that suggest a generalized convulsion.

major item [ORD] An end item, a group of end items individually classified by the responsible technical service, or an assembled group of items as procured or issued for a specific tactical role, excluding combinations required to complete the assigned tactical mission.

MAIN THERMOCLINE

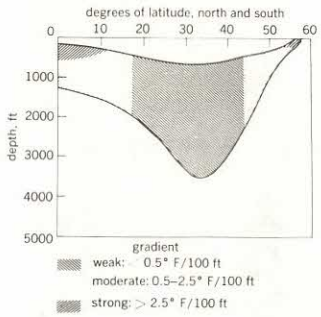


Diagram showing variations with latitude in average depth, thickness and temperature gradient of the main thermocline.

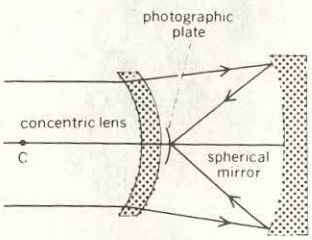
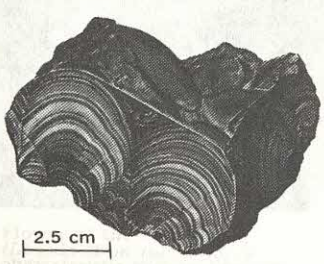
majority [MATH] A logic operator having the property that if P, Q, R are statements, then the function (P, Q, R, ...) is true if more than half the statements are true, or false if half or less are true.
majority carrier [ELECTR] The type of carrier, that is, electron or hole, that constitutes more than half the carriers in a semiconductor.
majority element *See* majority gate.
majority emitter [ELECTR] Of a transistor, an electrode from which a flow of minority carriers enters the interelectrode region.
majority gate [COMPUT SCI] A logic circuit which has one output and several inputs, and whose output is energized only if a majority of its inputs are energized. Also known as majority element; majority logic.
majority logic *See* majority gate.
major joint *See* master joint.
major light [NAV] A light of high candlepower and reliability exhibited from a fixed structure ashore or on a marine site (except range lights).
major lobe [ELECTROMAG] Antenna lobe indicating the direction of maximum radiation or reception. Also known as main lobe.
major node [ELEC] A point in an electrical network at which three or more elements are connected together. Also known as junction.
major operation [MED] An extensive, difficult, and potentially dangerous surgical procedure, usually requiring general anesthesia.
major planet [ASTRON] Any of the four planets that are larger than earth: Jupiter, Saturn, Neptune, and Uranus.
major relay station [ELECTR] Tape relay station which has two or more trunk circuits connected thereto to provide an alternate route or to meet command requirements.
major repair [ENG] Repair work on items of material or equipment that need complete overhaul or substantial replacement of parts, or that require special tools.
major trough [METEOROL] A long-wave trough in the large-scale pressure pattern of the upper troposphere.
major wave *See* long wave.
make [ELEC] Closing of relay, key, or other contact.
make-break operation [COMMUN] A circuit operation in which there is a cessation of current flow as a pulse transmission occurs.
make contact [ELEC] Contact of a device which closes a circuit upon the operation of the device (normally open).
makeready [GRAPHICS] The careful leveling of relief printing plates on the bed of the press so that they yield the best possible impression.
make the land [NAV] To sight and approach or reach land from seaward.
makeup [GRAPHICS] The arrangement of lines of type and art into pages or sections of suitable length.
makeup water [CHEM ENG] Water feed needed to replace that which is lost by evaporation or leakage in a closed-circuit, recycle operation.
make way [NAV] To progress through the water.
making current [ELEC] The peak value attained by the current during the first cycle after a switch, circuit breaker, or similar apparatus is closed.
making hole [PETRO ENG] During a drilling operation, deepening the well bore, with reference to progress at a given time.
makroskelic [ANTHRO] Being long-legged relative to the trunk length, with a skelic index of 95–100.
Maksutov-Schmidt telescope *See* meniscus-Schmidt telescope.
Maksutov system [OPTICS] A catadioptric telescope optical system capable of covering a large field (60° and more); used to survey large areas of the sky.
mal- [SCI TECH] A combining form meaning bad, wrong, irregular, abnormal, inadequate.
Malachiidae [INV ZOO] An equivalent name for Malyridae.
malachite [MINERAL] $Cu_2(OH)_2(CO_3)$ A bright-green monoclinic mineral consisting of a basic carbonate of copper and usually occurring in massive forms or in bundles of radiating fibers; specific gravity is 4.05, and hardness is 3.5–4 on Mohs scale.
malacia [MED] Abnormal softening of tissues of an organ or other body structure.
Malacobothridia [INV ZOO] A subclass of worms in the class Trematoda; members typically have one or two soft, flexible suckers and are endoparasitic in vertebrates and invertebrates.
Malacocotylea [INV ZOO] The equivalent name for Digenea.
malacolite *See* diopside.
malacology [INV ZOO] The study of mollusks.
malacoplakia [MED] The accumulation of modified histiocytes (malacoplakia cells) to produce soft, pale, elevated plaques, usually in the urinary bladder of middle-aged women.
malacoplakia cell [PATH] A large histiocyte, occasionally multinucleate and containing Michaelis-Gutmann calcospherules in the cytoplasm; seen in malacoplakia.
Malacopoda [INV ZOO] A subphylum of invertebrates in the phylum Oncopoda.
Malacopterygii [VERT ZOO] An equivalent name for Clupeiformes in older classifications.
Malacostraca [INV ZOO] A large, diversified subclass of Crustacea including shrimps, lobsters, crabs, sow bugs, and their allies; generally characterized by having a maximum of 19 pairs of appendages and trunk limbs which are sharply differentiated into thoracic and abdominal series.
maladie du sommeil *See* African sleeping sickness.
maladjustment [PSYCH] Failure to conform or inadequate conformity due to the inability or a lack of motivation to change one's feelings or attitudes to adjust to the demands of the environment.
malady [MED] A disorder, disease, or illness.
malaise [MED] A general state of ill-being or the feeling of poor health.
Malapteruridae [VERT ZOO] A family of African catfishes in the suborder Siluroidei.
malar [ANAT] Of or pertaining to the cheek or to the zygomatic bone.
malar bone *See* zygomatic bone.
malaria [MED] A group of human febrile diseases with a chronic relapsing course caused by hemosporidian blood parasites of the genus *Plasmodium*, transmitted by the bite of the *Anopheles* mosquito.
malaria pigment [PATH] Dark-brown, amorphous, microcrystalline and birefringent pigment found in parasitized erythrocytes, especially with malarial parasites, and in littoral phagocytes of spleen, liver, and bone marrow.
malar stripe [VERT ZOO] **1.** The area extending from the corner of the mouth backward and down in birds. **2.** Area on side of throat below the base of the lower mandible.
malassimilation [MED] Faulty or inadequate assimilation.
malate dehydrogenase *See* malic enzyme.
malathion [ORG CHEM] $C_{10}H_{19}O_6PS_2$ A yellow liquid, slightly soluble in water; malathion is the generic name for *S*-[1,2-bis(ethoxycarbonyl)ethyl] *O*,*O*-dimethylphosphorodithioate; used as an insecticide.
Malayan filariasis [MED] Filariasis of humans caused by *Brugia malayi*, transmitted by *Mansonia* and *Anopheles* mosquitoes.
malchite [PETR] A fine-grained lamprophyre with small, rare phenocrysts or hornblende, labradorite, and sometimes biotite embedded in a matrix of hornblende, andesine, and some quartz.
Malcidae [INV ZOO] A small family of Ethiopian and Oriental hemipternan insects in the superfamily Pentatomorpha.
Malcodermata [INV ZOO] The equivalent name for Cantharoidea.
Maldanidae [INV ZOO] The bamboo worms, a family of mud-swallowing annelids belonging to the Sedentaria.
Maldaninae [INV ZOO] A subfamily of the Maldanidae distinguished by cephalic and anal plaques with the anal aperture located dorsally.
mal de pinto *See* pinta.
maldonite [MINERAL] Au_2Bi A pinkish silver-white mineral consisting of gold and bismuth; occurs in massive granular form.
male [BOT] A flower lacking pistils. [ZOO] **1.** Of or pertaining to the sex that produces spermatozoa. **2.** An individual of this sex.
maleate [ORG CHEM] An ester or salt of maleic acid.
male climacteric [PHYSIO] A condition presumably due to loss of testicular function, associated with an elevated urinary excretion of gonadotropins and symptoms of loss of sexual desire and potency, hot flashes, and vasomotor instability.

MAKSUTOV SYSTEM



Optics of Maksutov system; *C* is the center of curvature of the mirror.

MALACHITE



Rounded masses of malachite crystals. *(Specimen from Department of Geology, Bryn Mawr College)*

male heterogamety [GEN] Having paired sex chromosomes of unequal sizes in the male.

male homogamety [GEN] Having the paired sex chromosomes of equal size in the male.

maleic acid [ORG CHEM] HOOCCH:CHCOOH A colorless, crystalline dibasic acid; soluble in water, acetone, and alcohol; melting point 130–131°C; used in textile processing, and as an oil and fat preservative.

maleic anhydride [ORG CHEM] $C_4H_2O_3$ Colorless crystals, soluble in acetone, hydrolyzing in water; used to form polyester resins. Also known as 2,5-furandione.

maleic hydrazide [ORG CHEM] $C_4N_2H_4O_2$ Solid material, decomposing at 260°C; slightly soluble in alcohol and water; used as a weed killer and growth inhibitor.

malenclave [HYD] A body of contaminated groundwater surrounded by uncontaminated water.

male pseudohermaphroditism *See* androgyny.

male sterility [PHYSIO] The condition in which male gametes are absent, deficient in number, or nonfunctional.

male Turner's syndrome *See* Ullrich-Turner syndrome.

malezal swamp [ECOL] A swamp resulting from drainage of water over an extensive plain with a slight, almost imperceptible slope.

malformation [MED] A deformity of a part of the body resulting from abnormal development.

malfunction [SCI TECH] Failure to function normally.

malfunction routine [COMPUT SCI] A program used in troubleshooting.

malic acid [BIOCHEM] $COOH \cdot CH_2 \cdot CHOH \cdot COOH$ Hydroxysuccinic acid: a dibasic hydroxy acid existing in two optically active isomers and a racemic form; found in apples and many other fruits.

malic dehydrogenase [BIOCHEM] An enzyme in the Krebs cycle that catalyzes the conversion of L-malic acid to oxaloacetic acid.

malic enzyme [BIOCHEM] An enzyme which utilizes nicotinamide-adenine dinucleotide phosphate (NADP) to catalyze the oxidative decarboxylation of malic acid to pyruvic acid and carbon dioxide. Also known as malate dehydrogenase.

malignant [MED] **1.** Endangering the life or health of an individual. **2.** Of or pertaining to the growth and proliferation of certain neoplasms which terminate in death if not checked by treatment.

malignant adenoma [MED] A neoplasm which resembles an adenoma cytologically and gives rise to metastases.

malignant catarrh [VET MED] A catarrhal fever of cattle caused by a virus and characterized by acute inflammation and edema of the respiratory and digestive systems.

malignant disease [MED] Any disease that endangers the life of an individual over a short period of time, especially cancer.

malignant edema [VET MED] Inflammatory edema associated with certain infections, especially an acute wound infection in wild and domestic animals.

malignant embolus [MED] A blood-borne mass of malignant cells which have become dislodged from the parent neoplasm.

malignant glaucoma [MED] A form of glaucoma associated with severe pain and rapidly leading to blindness.

malignant hypertension [MED] A severe form of hypertension with a rapid course leading to progressive cardiac and renal vascular disease. Also known as accelerated hypertension.

malignant malaria *See* falciparum malaria.

malignant pustule [MED] The commonest form of anthrax in man, resulting from contamination of the skin; characterized by a necrotic pustule surrounded by an area of edema and vesicles containing yellow fluid. Also known as cutaneous anthrax.

malignant rhabdomyoma *See* rhabdomyosarcoma.

malines [TEXT] **1.** Bobbin lace which has a design outlined by a lustrous thread on a fine six-sided mesh ground. **2.** A sheer, hexagonal-mesh fabric. Also known as tulle.

malinger [MED] To pretend or exaggerate illness in order to avoid responsibilities.

malladrite [MINERAL] Na_2SiF_6 A hexagonal mineral composed of sodium fluosilicate, occurring as small crystals in volcanic holes in Vesuvius.

mallardite [MINERAL] $MnSO_4 \cdot 7H_2O$ A pale-rose, monoclinic mineral composed of hydrous manganese sulfate.

malleable [MET] Capable of undergoing plastic deformation without rupture; a property characteristic of metals.

malleable brass *See* Muntz metal.

malleable iron [MET] White cast iron which has been rendered malleable by heat treatment.

malleableize [MET] To render a material malleable, such as by heat-treating white cast iron.

malleable pig iron [MET] A grade of pig iron suitable for production of white cast iron from which malleable iron is made.

malleate trophus [INV ZOO] A type of crushing masticatory apparatus in rotifers that are incidentally predatory, such as brachionids.

mallee *See* tropical scrub.

malleolus [ANAT] A projection on the distal end of the tibia and fibula at the ankle.

malleoramate trophus [INV ZOO] An intermediate type of rotiferan masticatory apparatus having a looped manubrium and teeth on the incus (comprising the fulcrum and rami); developed for grinding.

mallet [DES ENG] An implement with a barrel-shaped head made of wood, rubber, or other soft material; used for driving another tool, such as a chisel, or for striking a surface without causing damage.

malleus [ANAT] The outermost, hammer-shaped ossicle of the middle ear; attaches to the tympanic membrane and articulates with the incus.

Mallophaga [INV ZOO] Biting lice, a comparatively small order of wingless insects characterized by five-segmented antennae, distinctly developed mandibles, one or two terminal claws on each leg, and a prothorax developed as a distinct segment.

Mallory bodies [PATH] Oval acidophilic hyalin inclusion bodies seen in the cytoplasm of hepatic cells in Laennec's cirrhosis.

Mallory-Weiss syndrome [MED] Painless vomiting of blood secondary to lacerations of the distal esophagus and esophagogastric junction, usually a result of prolonged violent vomiting, coughing, or hiccuping.

malloseismic [GEOPHYS] Referring to an area that is likely to experience destructive earthquakes several times in a century.

Malm [GEOL] The Upper Jurassic geologic series, above Dogger and below Cretaceous.

malmstone [MATER] A name applied to chert when it is used in building and paving.

malnutrition [MED] Defective nutrition due to inadequate intake of nutrients or to their faulty digestion, assimilation, or metabolism.

malocclusion [MED] Faulty occlusion of the teeth.

malodorant *See* odorant.

malonamide nitrile *See* cyanoacetamide.

malonic acid [ORG CHEM] $CH_2(COOH)_2$ A white, crystalline dicarboxylic acid, melting at 132–134°C; used to manufacture pharmaceuticals. Also known as methanedicarbonic acid; methanedicarboxylic acid.

malonic ester *See* ethyl malonate.

malonic methyl ester nitrile *See* methyl cyanoacetate.

malonic mononitrile *See* cyanacetic acid.

malonyl [ORG CHEM] $CH_2(CO)_2$ A bivalent radical formed from malonic acid.

malonyl urea *See* barbituric acid.

Malotte's metal [MET] A fusible alloy composed of 46% bismuth, 20% lead, and 34% tin; melts at 96–123°C.

Malpighiaceae [BOT] A family of dicotyledonous plants in the order Polygalales distinguished by having three carpels, several fertile stamens, five petals that are commonly fringed or toothed, and indehiscent fruit.

Malpighian corpuscle [ANAT] **1.** A lymph nodule of the spleen. **2.** *See* renal corpuscle.

Malpighian layer [HISTOL] The germinative layer of the epidermis.

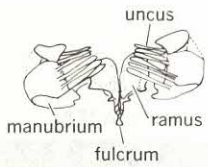
Malpighian pyramid *See* renal pyramid.

Malpighian tubule [INV ZOO] Any of the blind tubes that open into the posterior portion of the gut in most insects and certain other arthropods and excrete matter or secrete substances such as silk.

malposition [MED] Abnormal position of an organ or other body structure, or of the fetus.

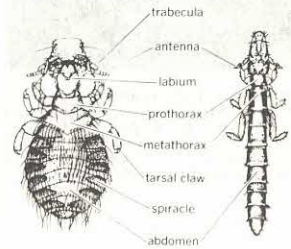
malpractice [MED] Improper or injurious medical or surgical treatment, through carelessness, ignorance, or intent.

MALLEORAMATE TROPHUS



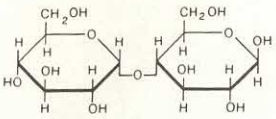
Malleoramate trophus of a bdelloid rotifier, ventral view.

MALLOPHAGA



Morphology of two typical mallophagans. *(After V. L. Kellogg, Smithsonian Institution)*

MALTOSE

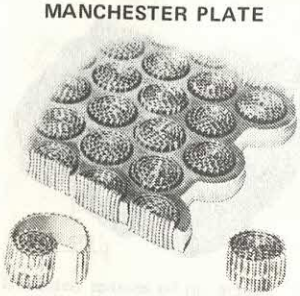


Formula for maltose.

MALVACEAE

The swamp rose mallow (*Hibiscus moscheutos*), a common eastern American species, family Malvaceae, order Malvales. *(Courtesy of A. W. Ambler, from National Audubon Society)*

MANCHESTER PLATE



Section of Manchester plate with detail of lead button. *(ESB Inc.)*

malpresentation [MED] Abnormal position of the child at birth, making normal delivery difficult or impossible.

malt [FOOD ENG] A nutrient material made from grain, commonly barley, which has been soaked, allowed to germinate, and dried.

Malta fever *See* brucellosis.

maltase [BIOCHEM] An enzyme that catalyzes the conversion of maltose to dextrose.

malt beverage [FOOD ENG] Any of various fermented alcoholic beverages, including beer, ale, stout, and porter; barley malt is the principal ingredient.

Malter effect [SOLID STATE] A phenomenon in which a metal with a nonconducting surface film has a large coefficient of secondary electron emission; this is particularly notable in aluminum whose surface has been oxidized and then coated with cesium oxide.

Malthusianism [BIOL] The theory that population increases more rapidly than the food supply unless held in check by epidemics, wars, or similar phenomena.

malting [FOOD ENG] Converting the starches of a distillery mash to fermentable sugar by the enzymes of the malt.

maltobiose *See* maltose.

maltol [ORG CHEM] $C_6H_6O_3$ Crystalline substance with a melting point of 161–162°C and a fragrant caramellike odor; used as a flavoring agent in bread and cakes. Also known as 3-hydroxy-2-methyl-γ-pyrone; larixinic acid.

maltose [BIOCHEM] $C_{12}H_{22}O_{11}$ A crystalline disaccharide that is a product of the enzymatic hydrolysis of starch, dextrin, and glycogen; does not appear to exist free in nature. Also known as maltobiose; malt sugar.

maltose phosphorylase [BIOCHEM] An enzyme which reacts maltose with inorganic phosphate to yield glucose and glucose-1-phosphate.

maltosuria [MED] Presence of maltose in the urine.

malt sugar *See* maltose.

malt whiskey [FOOD ENG] Whiskey produced in a pot still from malted barley.

malunion [MED] Faulty union of the pieces of a fractured bone.

Malus *See* Pyxis.

Malus cosine-squared law [OPTICS] The law that if a beam of plane polarized light passes through a Nicol prism, the intensity of light emerging from the prism is proportional to the square of the cosine between the plane of polarization of the incident light and the plane of polarization of the prism.

Malus' law of rays [OPTICS] The law that an orthotomic system of rays is still orthotomic after the rays have been reflected and refracted any number of times.

Malvaceae [BOT] A family of herbaceous dicotyledons in the order Malvales characterized by imbricate or contorted petals, mostly unilocular anthers, and minutely spiny, multiporate pollen.

Malvales [BOT] An order of flowering plants in the subclass Dilleniidae having hypogynous flowers with valvate calyx, mostly separate petals, numerous centrifugal stamens, and a syncarpous pistil.

malysite [MINERAL] $FeCl_3$ A halogen mineral deposited by sublimation; found most commonly at Mount Vesuvius, Italy.

mamarron oil [MATER] A cream-colored fat high in lauric acid and similar to coconut oil in characteristics and odor; obtained from a species of *Attalea* palm.

mamelon [BIOL] Any dome-shaped protrusion or elevation. [GEOL] A small, rounded volcano which forms over a vent as a result of the slow extrusion of viscous, silicic lava.

mamm-, mammo- [ANAT] A combining form meaning breast.

mamma [ANAT] A milk-secreting organ characterizing all mammals.

mamma aberrans [MED] A supernumerary breast.

mammal [VERT ZOO] A member of Mammalia.

Mammalia [VERT ZOO] A large class of warm-blooded vertebrates containing animals characterized by mammary glands, a body covering of hair, three ossicles in the middle ear, a muscular diaphragm separating the thoracic and abdominal cavities, red blood cells without nuclei, and embryonic development in the allantois and amnion.

mammary [ANAT] Of or pertaining to the mamma, or breast.

mammary gland [PHYSIO] A highly modified sebaceous gland that secretes milk; a unique anatomical feature of mammals.

mammary lymphatic plexus [ANAT] A network of anastomosing lymphatic vessels in the walls of the ducts and between the lobules of the mamma; also functions to drain skin, areola, and nipple.

mammary region [ANAT] The space on the anterior surface of the chest between a line drawn through the lower border of the third rib and one drawn through the upper border of the xiphoid cartilage.

mammary ridge [EMBRYO] An ectodermal thickening forming a longitudinal elevation on the chest between the limbs from which the mammary glands develop.

mammary-stimulating hormone [BIOCHEM] **1.** Estrogen and progesterone considered together as the hormones which induce proliferation of the mammary ductile and acinous elements respectively. **2.** *See* prolactin.

mammectomy *See* mastectomy.

mammillary [ANAT] **1.** Of or pertaining to the nipple. **2.** Breast- or nipple-shaped. [MINERAL] Of or pertaining to an aggregate of crystals in the form of a rounded mass.

mammillary body [ANAT] Either of two small, spherical masses of gray matter at the base of the brain in the space between the hypophysis and oculomotor nerve, which receive and relay olfactory impulses.

mammillary line [ANAT] A vertical line passing through the center of the nipple.

mammillary process [ANAT] One of the tubercles on the posterior part of the superior articular processes of the lumbar vertebrae.

mammillary structure *See* pillow structure.

mammillitis [MED] Inflammation of the nipple.

mammogen *See* prolactin.

mammogenic hormone [BIOCHEM] **1.** Any hormone that stimulates or induces development of the mammary gland. **2.** *See* prolactin.

mammography [MED] Radiographic examination of the breast, performed with or without injection of the glandular ducts with a contrast medium.

mammoplasia [PHYSIO] Development of breast tissue.

mammoplasty [MED] Plastic surgery performed to alter the shape of the breast.

mammoth [PALEON] Any of various large Pleistocene elephants having long, upcurved tusks and a heavy coat of hair.

mammotropin *See* prolactin.

Mammutinae [PALEON] A subfamily of extinct proboscidean mammals in the family Mastodontidae.

man [ANTHRO] **1.** *Homo sapiens*. A member of the human race. **2.** An adult human male.

management engineering *See* industrial engineering.

management game [IND ENG] A training exercise in which prospective decision makers act out managerial decision-making roles in a simulated environment. Also known as business game; operational game.

management information system [COMMUN] A communication system in which data are recorded and processed to form the basis for decisions by top management of an organization.

manandonite [MINERAL] $Li_4Al_{14}B_4Si_6O_29(OH)_{24}$ A white mineral composed of basic borosilicate of lithium and aluminum.

manasseite [MINERAL] $MgAl_2(OH)_{16}(CO_3)\cdot 4H_2O$ A hexagonal mineral composed of basic hydrous magnesium and aluminum carbonate; it is dimorphous with hydrotalcite.

man cage [MIN ENG] A special cage for raising and lowering workers in a mine shaft.

man car [MIN ENG] A kind of car for transporting miners up and down the steeply inclined shafts of some mines.

Manchester plate [ELEC] A storage battery consisting of a heavy alloy grid with circular openings into which are pressed pure lead buttons that are made from lead tape by crimping and rolling to develop a large surface area and are coated with lead peroxide, PbO_2.

mandarin [BOT] A large and variable group of citrus fruits in the species *Citrus reticulata* and some of its hybrids; many varieties of the trees are compact with willowy twigs and small, narrow, pointed leaves; includes tangerines, King oranges, Temple oranges, and tangelos.

mandarin oil [MATER] Golden-yellow or olive-green essential oil with refreshing aroma, obtained from the peel of man-

darin oranges; chief constituents are limonene and esters; used in medicine and as flavoring. Also known as tangerine oil.

mandatory layer [METEOROL] A layer of the atmosphere between two consecutive (or any two) specified mandatory levels.

mandatory level [METEOROL] One of several constant-pressure levels in the atmosphere for which a complete evaluation of data from upper-air observations is required. Also known as mandatory surface.

mandatory surface *See* mandatory level.

mandelic acid [ORG CHEM] $C_6H_5CHOHCOOH$ A white, crystalline compound, melting at 117–119°C, darkening upon exposure to light; used in organic synthesis. Also known as amygdalic acid; benzoglycolic acid; phenylglycolic acid; α-phenylhydroxyacetic acid.

mandelic acid nitrile *See* mandelonitrile.

mandelonitrile [ORG CHEM] $C_6H_5CH(OH)CN$ A liquid used to prepare bitter almond water. Also known as benzaldehyde cyanohydrin; mandelic acid nitrile.

Mandelstam plane [PARTIC PHYS] A method of plotting energy versus scattering angle of three reactions, each having two particles both before and after scattering, which can be derived from each other by the crossing principle; the three reactions are on an equal footing, and poles in the scattering amplitude representing exchanged particles lie along straight lines.

Mandelstam representation [PARTIC PHYS] For a reaction in which there are two particles both before and after scattering: an expression, containing several integrals, for a function related to the scattering amplitude; the arguments of the function are the center-of-mass energy and scattering angle, extended to complex values; the function is conjectured to be analytic in these variables except for certain cuts and to have values along these cuts which give the scattering amplitude of the reaction, and of the two reactions derivable from it by the crossing principle.

mandible [ANAT] **1.** The bone of the lower jaw. **2.** The lower jaw. [INV ZOO] Any of various mouthparts in many invertebrates designed to hold or bite into food.

mandibular arch [EMBRYO] The first visceral arch in vertebrates.

mandibular cartilage [EMBRYO] The bar of cartilage supporting the mandibular arch.

mandibular fossa [ANAT] The depression in the temporal bone that articulates with the mandibular condyle.

mandibular gland *See* submandibular gland.

mandibular nerve [ANAT] A mixed nerve branch of the trigeminal nerve; innervates various structures of the lower jaw and face.

Mandibulata [INV ZOO] A subphylum of Arthropoda; members possess a pair of mandibles which characterize the group.

mandrel [MECH ENG] A shaft inserted through a hole in a component to support the work during machining. [MET] A metal bar serving as a core around which other metals are cast, forged, or extruded, forming a true central hole.

mandrel hanger [PETRO ENG] A device used to provide a liquid- or gas-tight seal (blowout preventer) between oil-well tubing and the tubing head.

mandrel press [MECH ENG] A press for driving mandrels into holes.

mandrill [VERT ZOO] *Mandrillus sphinx*. An Old World cercopithecoid monkey found in West-central Africa and characterized by large red callosities near the ischium and by blue ridges on each side of the nose in males.

maneb [ORG CHEM] $Mn[SSCH(CH_2)_2NHCSS]$ A generic term for manganese ethylene-1,2-bisdithiocarbamate; irritating to eyes, nose, skin, and throat; used as a fungicide.

maneuverability [NAV] The rate at which the orientation of a craft can be changed.

maneuvering board [NAV] A polar coordinate plotting sheet devised to facilitate solution of problems involving relative movement of naval vessels.

maneuvering craft [NAV] A craft whose movements are defined relative to a given craft called the reference craft; it may be a maneuvering ship, maneuvering aircraft, or maneuvering vehicle.

manganate [INORG CHEM] **1.** Salts that have manganese in the anion. **2.** In particular, a salt of manganic acid formed by fusion of manganese dioxide with an alkali.

manganese [CHEM] A metallic element, symbol Mn, atomic weight 54.938, atomic number 25; a transition element whose properties fall between those of chromium and iron. [MET] A hard, brittle, grayish-white metal used chiefly in making steel.

manganese acetate [ORG CHEM] $Mn(C_2H_3O_2)_2 \cdot 4H_2O$ A pale-red crystalline compound melting at 80°C; soluble in water and alcohol; used in textile dyeing, as a catalyst, and for leather tanning.

manganese-aluminum [MET] A hardener alloy employed for making additions of manganese to aluminum alloys such as Duralumin; typical composition is 25% manganese, 75% aluminum.

manganese binoxide *See* manganese dioxide.

manganese black *See* manganese dioxide.

manganese borate [INORG CHEM] MnB_4O_7 Water-insoluble, reddish-white powder; used as a varnish and oil drier.

manganese-boron [MET] Manganese alloyed with boron; used as an ingredient for hardening and deoxidizing bronze.

manganese brass [MET] A brass containing about 70% copper, 29% zinc, and 1.3% manganese.

manganese bromide *See* manganous bromide.

manganese bronze [MET] A type of brass or bronze containing about 59% copper, 39% zinc, 1.5% iron, 1% tin, and 0.1% manganese; another composition by the same name contains about 66% copper, 23% zinc, 3% iron, 4.5% aluminum, and 3.7% manganese.

manganese carbonate [INORG CHEM] $MnCO_3$ Rose-colored crystals found in nature as rhodocrosite; soluble in dilute acids, insoluble in water; used in medicine, in fertilizer, and as a paint pigment.

manganese citrate [ORG CHEM] $Mn_3(C_6H_5O_7)_2$ A white powder, water-insoluble in the presence of sodium citrate; used in medicine.

manganese dioxide [INORG CHEM] MnO_2 A black, crystalline, water-insoluble compound, decomposing to manganese sesquioxide, Mn_2O_3, and oxygen when heated to 535°C; used as a depolarizer in certain dry-cell batteries, as a catalyst, and in dyeing of textiles. Also known as battery manganese; manganese binoxide; manganese black; manganese peroxide.

manganese epidote *See* piemontite.

manganese fluoride *See* manganous fluoride.

manganese gluconate [ORG CHEM] $Mn(C_6H_{11}O_7)_2 \cdot 2H_2O$ A pinkish powder, insoluble in benzene and alcohol, soluble in water; used in medicine, in vitamin tablets, and as a feed additive and dietary supplement.

manganese green *See* barium manganate.

manganese halide [INORG CHEM] Compound of manganese with a halide, such as chlorine, bromine, fluorine, or iodine.

manganese heptoxide [INORG CHEM] Mn_2O_7 A compound formed as an explosive dark-green oil by the action of concentrated sulfuric acid on permanganate compounds.

manganese hydrogen phosphate *See* acid manganous phosphate.

manganese hydroxide *See* manganous hydroxide.

manganese hypophosphite [INORG CHEM] $Mn(H_2PO_2)_2 \cdot H_2O$ Odorless, tasteless pink crystals which explode if heated with oxidants; used in medicine.

manganese iodide *See* manganous iodide.

manganese lactate [ORG CHEM] $Mn(C_3H_5O_3)_2 \cdot 3H_2O$ Pale-red crystals; insoluble in water and alcohol; used in medicine.

manganese linoleate [ORG CHEM] $Mn(C_{18}H_{31}O_2)_2$ A dark-brown mass, soluble in linseed oil; used in pharmaceutical preparations and as a varnish and paint drier.

manganese monoxide *See* manganese oxide.

manganese naphthenate [ORG CHEM] Hard brown resinous mass, soluble in mineral spirits; melts at 135°C; contains 6% manganese in commercial solutions; used as a paint and varnish drier.

manganese nodule [GEOL] Small, irregular black to brown concretions consisting chiefly of manganese salts and manganese oxide minerals; formed in oceans as a result of pelagic sedimentation or precipitation.

manganese oleate [ORG CHEM] $Mn(C_{18}H_{33}O_2)_2$ Granular brown mass, soluble in oleic acid and ether, insoluble in water; used in medicine and as a varnish drier.

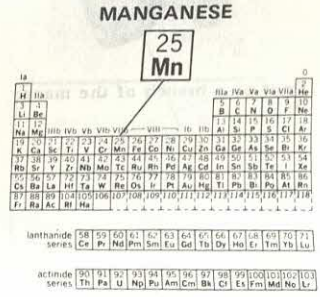
manganese oxalate [ORG CHEM] $MnC_2O_4 \cdot 2H_2O$ A white crystalline compound, soluble in dilute acids, only slightly soluble in water; used as a paint and varnish drier.

manganese oxide [INORG CHEM] MnO Green powder,

MANDRILL

The mandrill *(Mandrillus sphinx)*.

MANGANESE



Periodic table of the chemical elements showing the position of manganese.

soluble in acids, insoluble in water; melts at 1650°C; used in medicine, in textile printing, as a catalyst, in ceramics, and in dry batteries. Also known as manganese monoxide; manganous oxide.

manganese peroxide *See* manganese dioxide.

manganese resinate [ORG CHEM] $Mn(C_{20}H_{29}O_2)_2$ Water-insoluble mass, flesh-colored or brownish black; used as a varnish and oil drier.

manganese silicate *See* manganous silicate.

manganese-silicon [MET] An alloy that contains 73–78% silicon, 20–25% manganese, a maximum of 1.5% iron, and a maximum of 0.25% carbon; used for adding manganese and silicon to metals.

manganese steel *See* Hadfield manganese steel.

manganese sulfate *See* manganous sulfate.

manganese sulfide *See* manganous sulfide.

manganese-titanium [MET] An alloy usually composed of 38% manganese, 29% titanium, 8% aluminum, 3% silicon, 22% iron, and no carbon; used as a deoxidizer for high-grade steels and for nonferrous alloys.

manganic fluoride [INORG CHEM] MnF_3 Poisonous red crystals, decomposed by heat and water; used as a fluorinating agent.

manganic hydroxide [INORG CHEM] $Mn(OH)_3$ A brown powder that rapidly loses water to form MnO(OH); used in ceramics and as a fabric pigment. Also known as hydrated manganic hydroxide.

manganic oxide [INORG CHEM] Mn_2O_3 Hard black powder, insoluble in water, soluble in cold hydrochloric acid, hot nitric acid, and sulfuric acid; occurs in nature as manganite. Also known as manganese sesquioxide.

manganite [MINERAL] MnO(OH) A brilliant steel-gray or black polymorphous mineral; crystallizes in the orthorhombic system. Also known as gray manganese ore.

manganolangbeinite [MINERAL] $K_2Mn_2(SO_4)_3$ A rose-red, isometric mineral composed of potassium manganese sulfate; occurs in lava on Vesuvius.

manganosite [MINERAL] MnO An emerald-green isometric mineral occurring in small octahedrons that blacken on exposure; hardness is 5–6 on Mohs scale, and specific gravity is 5.18.

manganous bromide [INORG CHEM] $MnBr_2 \cdot 4H_2O$ Water-soluble, deliquescent red crystals. Also known as manganese bromide.

manganous chloride [INORG CHEM] $MnCl_2 \cdot 4H_2O$ Water-soluble, deliquescent rose-colored crystals melting at 88°C; used as a catalyst and in paints, dyeing, and pharmaceutical preparations.

manganous fluoride [INORG CHEM] MnF_2 Reddish powder, insoluble in water, soluble in acid. Also known as manganese fluoride.

manganous hydroxide [INORG CHEM] $Mn(OH)_2$ Heat-decomposable white-pink crystals; insoluble in water and alkali, soluble in acids; occurs in nature as pyrochroite. Also known as manganese hydroxide.

manganous iodide [INORG CHEM] $MnI_2 \cdot 4H_2O$ Water-soluble, deliquescent yellowish-brown crystals. Also known as manganese iodide.

manganous silicate [INORG CHEM] $MnSiO_3$ Water-insoluble red crystals or yellowish-red powder; occurs in nature as rhodonite. Also known as manganese silicate.

manganous sulfate [INORG CHEM] $MnSO_4 \cdot 4H_2O$ Water-soluble, translucent, efflorescent rose-red prisms; melts at 30°C; used in medicine, textile printing, and ceramics, as a fungicide and fertilizer, and in paint manufacture. Also known as manganese sulfate.

manganous sulfide [INORG CHEM] MnS An almost water-insoluble powder that decomposes on heating; used as a pigment and as an additive in making steel. Also known as manganese sulfide.

manganous sulfite [INORG CHEM] $MnSO_3$ Grayish-black or brownish-red powder, soluble in sulfur dioxide, insoluble in water.

mange [VET MED] Infestation of the skin of mammals by certain mites (Sarcoptoidea) which burrow into the epidermis; characterized by multiple lesions accompanied by severe itching.

Manger *See* Praesepe.

Mangin mirror [OPTICS] A negative meniscus lens whose shallower surface is silvered to act as a spherical mirror while the other surface corrects for spherical aberration of the reflecting surface; used in searchlights and aircraft gunsights.

mangle gearing [MECH ENG] Gearing for producing reciprocating motion; a pinion rotating in a single direction drives a rack with teeth at the ends and on both sides.

mango [BOT] *Mangifera indica*. A large evergreen tree of the sumac family (Anacardiaceae), native to southeastern Asia, but now cultivated in Africa, tropical America, Florida, and California for its edible fruit, a thick-skinned, yellowish-red, fleshy drupe.

mangrove [BOT] A tropical tree or shrub of the genus *Rhizophora* characterized by an extensive, impenetrable system of prop roots which contribute to land building. [MATER] Liquid derived from the mangrove tree *Rhizophora mucronata* and used in the leather tanning industry.

mangrove swamp [ECOL] A tropical or subtropical marine swamp distinguished by the abundance of low to tall trees, especially mangrove trees.

Manhattan Project [ENG] A United States project lasting from August 1942 to August 1946, which developed the atomic energy program, with special reference to the atomic bomb.

manhead *See* manhole.

manhole [ENG] An access hole to a tank or boiler, to underground passages, or in a deck or bulkhead of a ship; usually covered with a cast iron or steel plate. Also known as manhead.

manhole coaming [NAV ARCH] The raised framework or stiffening around the edge of a manhole in the deck of a ship to strengthen the opening and provide a support for the cover.

man-hour [IND ENG] A unit of measure representing one person working for one hour.

mania [PSYCH] Excessive enthusiasm or excitement; a violent desire or passion; manifestation of a psychotic disorder.

-mania [PSYCH] A combining form denoting obsession, abnormal preoccupation, or compulsion.

manic-depressive psychosis [PSYCH] A severe disturbance of affect characterized by extreme and pathological elation alternating with severe dejection, both of which may last for months or years.

Manidae [VERT ZOO] The pangolins, a family of mammals comprising the order Pholidota.

manifest content [PSYCH] Any idea, feeling, or action considered to be the conscious expression of repressed motives or desires, particularly the remembered content of a dream or fantasy which conceals and distorts the unconscious meaning.

manifest covariance [RELAT] Property of an expression composed of Lorentz invariant numbers and operators, four-vectors, and tensors in such a way that its Lorentz covariance is immediately obvious.

manifest stimulus [PSYCH] The obvious or external basis for anxiety, fear, or dread, such as the immediate or apparent cause for a phobic reaction.

manifold [ENG] The branch pipe arrangement which connects the valve parts of a multicylinder engine to a single carburetor or to a muffler. [MATH] A topological space which is locally euclidean; there are four types: topological, piecewise linear, differentiable, and complex, depending on whether the local coordinate systems are obtained from continuous, piecewise linear, differentiable, or complex analytic functions of those in euclidean space; intuitively, a surface.

manifolding [ENG] The gathering of multiple-line fluid inputs into a single intake chamber (intake manifold), or the division of a single fluid supply into several outlet streams (distribution manifold).

manifold of states [ATOM PHYS] A set of states sufficient to form a representation of an operator or a Lie group of operators.

manifold paper [MATER] An extremely thin paper used for making duplicate copies, such as onionskin paper.

manifold pressure [MECH ENG] The pressure in the intake manifold of an internal combustion engine.

manihot *See* cassava.

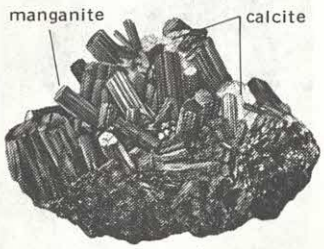
manikin [ENG] A correctly proportioned doll-like figure that is jointed and will assume any human position and hold it; useful in art to draw a human figure in action, or in medicine to show the relations of organs by means of movable parts. [MED] **1.** A model of a term fetus; used in the teaching of obstetrics. **2.** A model of an adult human used to teach first aid and basic nursing skills.

Manila copal *See* Manila resin.

Manila hemp *See* abaca.

Manila maguey *See* cantala.

MANGANITE



Crystals of manganite with calcite from Ilfeld, Harz, Germany. *(Specimen from Department of Geology, Bryn Mawr College)*

MANGO

Fruit on a branch of the mango tree.

Manila paper [MATER] Yellowish paper or Bristol board; the term originally referred to paper manufactured from Manila hemp.

Manila resin [MATER] A type of resin extracted from trees of the genus *Agathis* in the Philippines that is soluble in ethyl and methyl alcohol, insoluble in water; used in printing ink, varnishes, paints, and linoleum. Also known as Manila copal.

manioc *See* cassava.

manipulated variable [COMPUT SCI] Variable whose value is being altered to bring a change in some condition.

manipulation [MED] Skillful use of the hands in moving body parts, as reducing a dislocation, or changing the position of a fetus.

manipulators [ENG] Mechanical devices used for safe handling of dangerous materials of any kind, especially radioactive materials; frequently, they are remotely operated from behind a protective shield.

manjak [MATER] A variety of grahamite, manjak is the blackest of the asphalts; used for insulation and varnishes.

mankato stone [PETR] A variety of limestone containing more than 49% calcium carbonate, with about 4.5% alumina and some silica.

manketti oil [MATER] A light-yellow, viscous varnish oil, obtained from the nuts of the African tree *Ricinodendron rautonemii*.

man-machine chart [IND ENG] A two-column, multiple-activity process chart listing the steps performed by an operator and the operations performed by a machine and showing the corresponding idle times for each.

man-machine system [ENG] A system in which the functions of the worker and the machine are interrelated and necessary for the operation of the system.

man-made fiber [TEXT] A textile fiber or filament manufactured from chemical substances of natural, inorganic, or synthetic origin.

man-made interference [COMMUN] Any electromagnetic interference due to the operation of electrical or electronic equipment, but particularly harmonic or spurious signals from radio-frequency devices, as opposed to noise.

man-made noise [COMMUN] Noise in communications channels produced by sources which are not extraterrestrial or associated with atmospheric disturbances, such as electric motors, electric switching gear, motorcar ignition, high-tension-line leakage, diathermy, and industrial-heating generators.

manna [MATER] The concrete, yellowish, saccharine exudation of the flowering ash (*Fraxinus ornus*); contains mannitol, sugar, mucilage, and resin and has been used as a mild laxative.

mannan [BIOCHEM] Any of a group of polysaccharides composed chiefly or entirely of D-mannose units.

manna sugar *See* mannitol.

manned orbiting laboratory [AERO ENG] An earth-orbiting satellite containing instrumentation and personnel for continuous measurement and surveillance of the earth, its atmosphere, and space. Abbreviated MOL.

manned spacecraft [AERO ENG] A vehicle capable of sustaining a person above the terrestrial atmosphere.

Mannesmann mill [MET] A mill consisting of two rolls mounted with their axes slightly inclined.

Mannesmann process [MET] A process for making seamless tubing by forcing a billet between the rolls of a Mannesmann mill so as to pierce the center, and then forcing the metal over a mandrel to form the central bore.

Mannich condensation reaction *See* Mannich reaction.

Mannich reaction [ORG CHEM] Condensation of a primary or secondary amine or ammonia (usually as the hydrochloride) with formaldehyde and a compound containing at least one reactive hydrogen atom, for example, acetophenone. Also known as Mannich condensation reaction.

Manning equation [FL MECH] An equation used to compute the velocity of uniform flow in an open channel.

mannite *See* mannitol.

mannitol [ORG CHEM] $C_6H_8(OH)_6$ A straight-chain alcohol with six hydroxyl groups; a white, water-soluble, crystalline powder; used in medicine and as a dietary supplement. Also known as manna sugar; mannite.

mannitol hexanitrate [ORG CHEM] $C_6H_8(ONO_2)_6$ Explosive colorless crystals; soluble in alcohol, acetone, and ether, insoluble in water; melts at 112°C; used in explosives and medicine. Also known as hexanitromannite (HNM); nitromannite; nitromannitol.

mannose [BIOCHEM] $C_6H_{12}O_6$ A fermentable monosaccharide obtained from manna.

Mann-Whitney test [STAT] A modification of the Wilcoxon two-sample test.

manocryometer [THERMO] An instrument for measuring the change of a substance's melting point with change in pressure; the height of a mercury column in a U-shaped capillary supported by an equilibrium between liquid and solid in an adjoining bulb is measured, and the whole apparatus is in a thermostat.

manometer [ENG] A double-leg liquid-column gage used to measure the difference between two fluid pressures.

manometry [ENG] The use of manometers to measure gas and vapor pressures.

manostat [ENG] Fluid-filled, upside-down manometer-type device used to control pressures within an enclosure, as for laboratory analytical distillation systems.

man process chart [IND ENG] A graphic representation of the activities performed or to be performed by a worker. Abbreviated MPC.

mansard roof [ARCH] A roof with two slopes on all sides, the lower slope being steeper than the upper one.

M-A-N scavenging system [MECH ENG] A system for removing used oil and waste gases from a cylinder of an internal combustion engine in which the exhaust ports are located above the intake ports on the same side of the cylinder, so that gases circulate in a loop, leaving a dead spot in the center of the loop.

mansfieldite [MINERAL] $Al(AsO_4)\cdot 2H_2O$ A white to pale-gray orthorhombic mineral composed of hydrous aluminum arsenate; it is isomorphous with scorodite.

mansonelliasis [MED] A parasitic infection of humans by the filarioid nematode *Mansonella ozzardi*.

Mantidae [INV ZOO] A family of predacious orthopteran insects characterized by a long, slender prothorax bearing a pair of large, grasping legs, and a freely moving head with large eyes.

mantis [INV ZOO] The common name for insects composing the family Mantidae.

mantissa [COMPUT SCI] A fixed point number composed of the most significant digits of a given floating point number. Also known as fixed-point part; floating-point coefficient. [MATH] The positive decimal part of a common logarithm.

mantle [ANAT] Collectively, the convolutions, corpus callosum, and fornix of the brain. [BIOL] An enveloping layer, as the external body wall lining the shell of many invertebrates, or the external meristematic layers in a stem apex. [ENG] A lacelike hood or envelope (sack) of refractory material which, when positioned over a flame and heated to incandescence, gives light. [GEOL] The intermediate shell zone of the earth below the crust and above the core (to a depth of 3480 kilometers). [MET] That part of the outer wall and casing of a blast furnace located above the hearth. [VERT ZOO] The back and wing plumage of a bird if distinguished from the rest of the plumage by a uniform color.

mantle cavity [INV ZOO] The space between mantle and body proper in bivalve mollusks.

mantled gneiss dome [GEOL] A dome in metamorphic terrains that has a remobilized core of gneiss surrounded by a concordant sheath of the basal part of the overlying metamorphic sequence.

mantle lobe [INV ZOO] Either of the flaps on the dorsal and ventral sides of the mantle in bivalve mollusks.

mantle rock *See* regolith.

mantlet [ORD] Protective shield or armor, as in front of a gun, or attached to the front of a tank.

manto [GEOL] A sedimentary or igneous ore body occurring in flat-lying depositional layers.

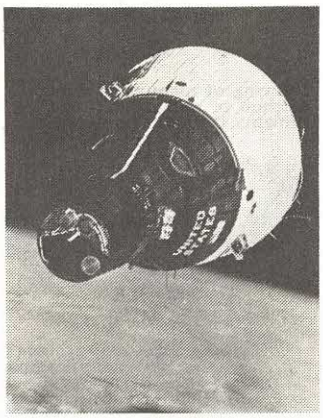
Mantodea [INV ZOO] An order equivalent to the family Mantidae in some systems of classification.

Mantoux test [IMMUNOL] An intradermal test for tuberculin sensitivity, that is, for past or present infection with tubercle bacilli.

man trip [MIN ENG] A trip made by mine cars and locomotives to take workers, rather than coal, to and from the working places.

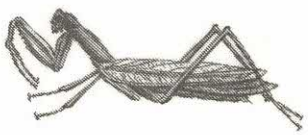
manual casing hanger [PETRO ENG] A device in the bowl of the lowermost (or intermediate) casing head to suspend the next smaller casing string and to provide a seal between the suspended casing and the casing-head bowl.

MANNED SPACECRAFT



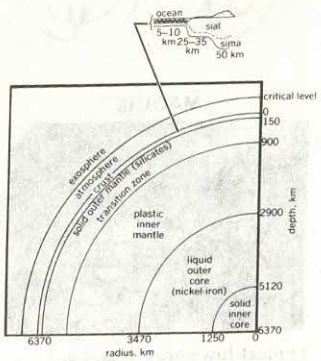
The Gemini manned spacecraft. *(NASA)*

MANTIS



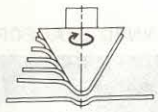
The praying mantis *(Stagomantis carolina). (Illinois Natural History Survey)*

MANTLE



The principal layers of the earth.

MANUAL SPINNING



Drawing of manual-spinning method of sheet-metal forming, showing the rotating mandrel.

MAPLE

Twig, leaf, and terminal and axillary buds of the sugar maple (*Acer saccharum*).

MAQUIS

Typical low-shrub maquis, Turkey.

manual central office [COMMUN] Central office of a manual telephone system.
manual direction finder *See* manual radio direction finder.
manual element [IND ENG] An element completed by hand.
manual exchange [COMMUN] Any exchange where calls are completed by an operator.
manual input [COMPUT SCI] The entry of data by hand into a device at the time of processing.
manually controlled work *See* effort-controlled cycle.
manual number generator *See* manual word generator.
manual operation [COMPUT SCI] Any processing operation performed by hand.
manual radio direction finder [NAV] A radio direction finder which requires manual rotation of an antenna or goniometer, in contrast with an automatic radio direction finder, which indicates automatically and continuously the great-circle direction of the transmitter to which it is tuned. Also known as manual direction finder.
manual rate-aided tracking [ELECTR] Radar circuit which tracks individual targets by computing the velocity from position fixes inserted manually into the circuitry.
manual ringing [COMMUN] Ringing which is started by the manual operation of a key and continues only while the key is held in operation.
manual spinning [MET] A sheet-metal forming process that forms the material over a rotating mandrel with little or no change in the thickness of the original blank. Also known as conventional spinning.
manual switchboard [ELEC] Telephone switchboard in which the connections are made manually, by plugs and jacks, or by keys.
manual switching [ELECTR] Method by which manual connection is made between two or more teletypewriter circuits.
manual system [COMPUT SCI] A system involving data processing which does not make use of stored-program computing equipment; by this somewhat arbitrary definition, systems using other types of tabulating equipment, such as the card-programmed calculator, are considered to be manual.
manual telephone set [ELECTR] Telephone set not equipped with a dial.
manual telephone system [COMMUN] A telephone system in which connections between customers are ordinarily established manually by telephone operators in accordance with orders given verbally by calling parties.
manual time *See* hand time.
manual tracking [ENG] System of tracking a target in which all the power required is supplied manually through the tracking handwheels.
manual welding [MET] A welding method in which the operator manually guides an electrode, clamped in a hand-held electrode holder.
manual word generator [COMPUT SCI] A device into which an operator can enter a computer word by hand, either for direct insertion into memory or to be held until it is read during the execution of a program. Also known as manual number generator.
manubrium [ANAT] **1.** The triangular cephalic portion of the sternum in humans and certain other mammals. **2.** The median anterior portion of the sternum in birds. **3.** The process of the malleus. [BOT] A cylindrical cell that projects inward from the middle of each shield composing the antheridium in stoneworts. [INV ZOO] The elevation bearing the mouth in hydrozoan polyps.
manufactured gas [MATER] A gaseous fuel that is manufactured from soft coal or from various petroleum products; the gas mixture is composed of producer gas or carbureted water gas.
manufacturer's part number [IND ENG] Identification number of symbol assigned by the manufacturer to a part, subassembly, or assembly.
manure [MATER] Animal excreta collected from stables and barnyards with or without litter; used to enrich the soil.
manure salts [INORG CHEM] Potash salts that have a high proportion of chloride and 20–30% potash; used in fertilizers.
manus [ANAT] The hand of a human or the forefoot of a quadruped. [INV ZOO] The proximal enlargement of the propodus of the chela of arthropods.
manus valga [MED] Clubhand with deviation of the ulna.
manway *See* ladderway.
many-body force [PHYS] A force exerted on a particle, in the presence of two or more other particles, which differs from the vector sum of the forces which would be exerted on it if each of the other particles were present alone.
many-body problem [MECH] The problem of predicting the motions of three or more objects obeying Newton's laws of motion and attracting each other according to Newton's law of gravitation. Also known as *n*-body problem.
many-body theory [PHYS] A scheme for calculating physical quantities for systems with large numbers of particles, without finding details of each particle's motion, often at temperatures close to absolute zero.
manyplies *See* omasum.
map [COMPUT SCI] **1.** An output produced by an assembler, compiler, linkage editor, or relocatable loader which indicates the (absolute or relocatable) locations of such elements as programs, subroutines, variables, or arrays. **2.** By extension, an index of the storage allocation on a magnetic disk or drum. [GRAPHICS] A representation, usually on a plane surface, of all or part of the surface of the earth, celestial sphere, or other area; shows relative size and position, according to a given projection, of the physical features represented and such other information as may be applicable to the purpose intended. [MATH] *See* mapping.
MAP *See* macroassembly program.
map chart [MAP] A representation of a land-sea area, using the characteristics of a map to represent the land area and the characteristics of a chart to represent the sea area, with such special characteristics as to make the map chart most useful in military operations, particularly amphibious operations.
maphenide *See para*-(aminomethyl)benzenesulfonamide.
maple [BOT] Any of various broad-leaved, deciduous trees of the genus *Acer* in the order Sapindales characterized by simple, opposite, usually palmately lobed leaves and a fruit consisting of two long-winged samaras. [MATER] The hard, light-colored, close-grained wood, especially from sugar maple (*A. saccharum*).
maple sugar [FOOD ENG] Sugar obtained from boiled maple syrup.
maple syrup [FOOD ENG] Syrup made from the sap of certain maple trees, particularly the sugar maple.
maple syrup urine disease [MED] A hereditary metabolic disorder caused by deficiency of branched-chain keto acid decarboxylase; characterized by the maple-syrup-like odor of urine. Also known as branched-chain ketoaciduria.
map parallel *See* axis of homology.
mapping [GRAPHICS] Preparation of a map or engaging in a mapping operation. [MATH] **1.** Any function or multiple-valued relation. Also known as map. **2.** In topology, a continuous function.
mapping radar [NAV] Radar carried on an aircraft as an aid to navigation, which displays on a cathode-ray tube imagery of the ground in the vicinity of the aircraft.
map plotting [METEOROL] The process of transcribing weather information onto maps, diagrams, and so on; it usually refers specifically to decoding synoptic reports and entering those data in conventional station-model form on synoptic charts. Also known as map spotting.
map projection *See* projection.
map range [ORD] The range from an artillery piece to any point as scaled or computed from a map.
map reading [MAP] Interpretation of the symbols, lines, abbreviations, and terms appearing on maps. [NAV] The determination of position by identification of landmarks with their representations on a map or chart.
map scale [MAP] The ratio between a distance on a map and the corresponding distance on the earth, often represented as 1:80,000 (natural scale) or 30 miles (48.27 kilometers) to an inch.
map spotting *See* map plotting.
map symbol [MAP] A character, letter, or similar graphic representation used on a map to indicate some object, characteristic, and so on.
map vertical *See* geographic vertical.
maquis [ECOL] A type of vegetation composed of shrubs, or scrub, usually not exceeding 3 meters in height, the majority having small, hard, leathery, often spiny or needlelike drought-resistant leaves and occurring in areas with a Mediterranean climate.
maraging steel [MET] High-strength, low-carbon iron-nickel alloy in which a martensitic structure is formed on cooling; contains 7–6% nickel, 0–11% cobalt, 0–5% molybdenum,

and small percentages of titanium, aluminum, and columbium; hardening is accomplished by heating the quenched alloy at 400–500°C.

Marangoni effect [CHEM ENG] The effect that a disturbance of the liquid-liquid interface (due to interfacial tension) has on mass transfer in a liquid-liquid extraction system.

Marantaceae [BOT] A family of monocotyledonous plants in the order Zingiberales characterized by one functional stamen with a single functional pollen sac, solitary ovules in each locule, and mostly arillate seeds.

marantic [MED] **1.** Of or pertaining to marasmus. **2.** Of or pertaining to slowed circulation.

marantic endocarditis [MED] Nonbacterial thrombic endocarditis, usually associated with neoplasm or other debilitating disease.

marasmus [MED] Chronic severe wasting of the tissues of the body, particularly in children, due to malnutrition.

Marattiaceae [BOT] A family of ferns coextensive with the order Marattiales.

Marattiales [BOT] An ancient order of ferns having massive eusporangiate sporangia in sori on the lower side of the circinate leaves.

marble [PETR] **1.** Metamorphic rock composed of recrystallized calcite or dolomite. **2.** Commercially, any limestone or dolomite taking polish.

marble bone disease *See* osteopetrosis.

marble dust *See* marble flour.

marble flour [MATER] Finely divided marble chips; used as a filler or abrasive in hand soaps and for casting. Also known as marble dust.

marble paper [GRAPHICS] A decorated paper, with a coloration that resembles marble, used as end leaves in blank books and often in printed books.

marble shot [PETRO ENG] An explosive shot in open-hole well completions in which glass marbles are packed around the explosive in the wellbore; the marbles become projectiles that help break up the formation.

marbling [ENG] The use of antiquing techniques to achieve the appearance of marble in a paint film.

Marburg virus [VIROL] A large virus transmitted to humans by the grivet monkey (*Cercopithecus aethiops*).

marcasite [MINERAL] FeS_2 A pale bronze-yellow to nearly white mineral, crystallizing in the orthorhombic system; hardness is 6–6.5 on Mohs scale, and specific gravity is 4.89.

marcescent [BOT] Withering without falling off.

Marcgraviaceae [BOT] A family of dicotyledonous shrubs or vines in the order Theales having exstipulate leaves with scanty or no endosperm, two integuments, and highly modified bracts.

march [METEOROL] The variation of any meteorological element throughout a specific unit of time, such as a day, month, or year; as the daily march of temperature, the complete cycle of temperature during 24 hours.

Marchantiales [BOT] The thallose liverworts, an order of the class Marchantiopsida having a flat body composed of several distinct tissue layers, smooth-walled and tuberculate-walled rhizoids, and male and female sex organs borne on stalks on separate plants.

Marchantiatae *See* Marchantiopsida.

Marchantiopsida [BOT] The liverworts, a class of lower green plants; the plant body is usually a thin, prostrate thallus with rhizoids on the lower surface.

March equinox *See* vernal equinox.

Marconaflo slurry transport [MIN ENG] A system which recovers solids from ore or tailings piles and mixes them with water to produce a transportable slurry in pipelines.

Marconi antenna [ELECTROMAG] Antenna system of which the ground is an essential part, as distinguished from a Hertz antenna.

Marcq-St.-Hilaire method [NAV] A mathematical process of deriving from an observation the information needed for establishing a line of position.

Marcy mill [MIN ENG] A ball mill with a vertical grate diaphragm placed near the discharge end; screens for sizing the material are located between the diaphragm and the end of the tube.

mare [ASTRON] **1.** One of the large, dark, flat areas on the lunar surface. **2.** One of the less well-defined areas on Mars. [VERT ZOO] A mature female horse or other equine.

marebase *See* lunabase.

marekanite [GEOL] Rounded to subangular obsidian bodies that occur in masses of perlite.

mare's tail *See* precipitation trajectory.

Marfan's syndrome [MED] A hereditary connective-tissue disorder transmitted as an autosomal dominant; manifested by skeletal and ocular changes and by congenital heart disease.

margaric acid *See n*-heptadecanoic acid.

margarine [FOOD ENG] A plastic food fat product composed of processed vegetable oils or animal fats or both, cultured milk, salt, and emulsifiers.

margarine oil [FOOD ENG] Edible vegetable oil used to make oleomargarine.

margarite [GEOL] A string of beadlike globulites; commonly found in glassy igneous rocks. [MINERAL] $CaAl_2(Al_2Si_2)O_{10}(OH)_2$ A pink, reddish, or yellow, brittle mica mineral.

Margaritiferidae [INV ZOO] A family of gastropod mollusks with nacreous shells that provide an important source of commercial pearls.

Margarodinae [INV ZOO] A subfamily of homopteran insects in the superfamily Coccoidea in which abdominal spiracles are present in all stages of development.

margarosanite [MINERAL] $PbCa_2(SiO_3)_3$ A colorless or snow-white triclinic mineral composed of lead calcium silicate, occurring in lamellar masses.

margin [GEOGR] The boundary around a body of water. [GRAPHICS] The blank area at the vertical and horizontal edges of a printed page. [SCI TECH] An outside limit.

marginal blight [PL PATH] A bacterial disease of lettuce caused by *Pseudomonas marginalis*, characterized by brownish marginal discoloration of the foliage.

marginal checking [ELECTR] A preventive-maintenance procedure in which certain operating conditions, such as supply voltage or frequency, are varied about their normal values in order to detect and locate incipient defective units.

marginal chlorosis [PL PATH] A virus disease characterized by yellowing or blanching of leaf margins; common disease of peanut plants.

marginal cost [IND ENG] The extra cost incurred for an extra unit of output.

marginal dimensionality [STAT MECH] The largest number of spatial dimensions for which nonlinear effects are important in calculating the behavior of a substance near a critical point.

marginal escarpment [GEOL] A seaward slope of a marginal plateau with a gradient of 1:10 or more.

marginal fissure [GEOL] A magma-filled fracture bordering an igneous intrusion.

marginal moraine *See* terminal moraine.

marginal placentation [BOT] Arrangement of ovules near the margins of carpels.

marginal plain *See* outwash plain.

marginal plateau [GEOL] A relatively flat shelf adjacent to a continent and similar topographically to, but deeper than, a continental shelf.

marginal probability [STAT] Probability expressed by the two conditional probability distributions which arise from the joint distribution of two random variables.

marginal product [IND ENG] The extra unit of output obtained by one extra unit of some factor, all other factors being held constant.

marginal relay [ELEC] Relay with a small margin between its nonoperative current value (maximum current applicable without operation) and its operative value (minimum current that operates the relay).

marginal revenue [IND ENG] The extra revenue achieved by selling an extra unit of output.

marginal salt pan [GEOL] A natural, coastal salt pan.

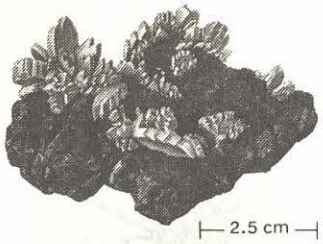
marginal sea [GEOGR] A semiclosed sea adjacent to a continent and connected with the ocean at the water surface.

marginal sinus [ANAT] **1.** One of the small, bilateral sinuses of the dura mater which skirt the edge of the foramen magnum, usually uniting posteriorly to form the occipital sinus. **2.** *See* terminal sinus. [EMBRYO] An enlarged venous sinus incompletely encircling the margin of the placenta.

marginal test [ELECTR] A test of electronic equipment in which conditions are varied until failures occur or faults can be detected, allowing measurement of permissible operating margins.

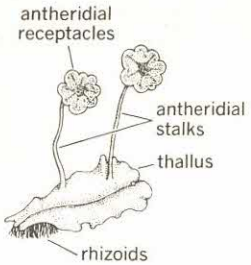
marginal thrust [GEOL] One of a series of faults bordering

MARCASITE



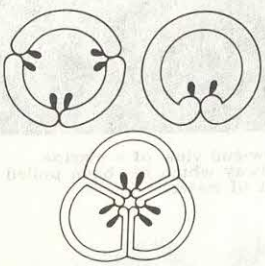
Typical cockscomb groups of marcasite crystals found in galena-sphalerite ore, Carterville, Missouri. *(Specimen from Department of Geology, Bryn Mawr College)*

MARCHANTIALES



Marchantia, a genus in Marchantiales; example of male gametophyte (antheridial plant). *(From H. J. Fuller and O. Tippo, College Botany, Holt, 1949)*

MARGINAL PLACENTATION

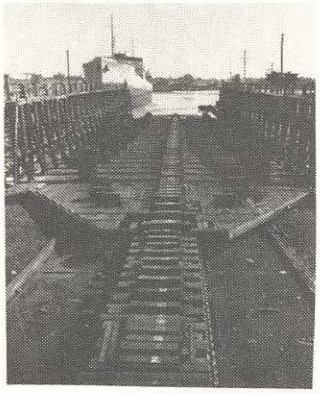


Types of marginal placentation; ovules in black.

MARIJUANA

Branch of the marijuana (*Cannabis sativa*) plant.

MARINE RAILWAY



Bow-end view of a marine railway which has been pulled out of water.

an igneous intrusion and crossing both the intrusion and the wall rock. Also known as marginal upthrust.

marginal ulcer [MED] A peptic ulcer of the jejunum on the efferent margin of a gastrojejunostomy.

marginal upthrust *See* marginal thrust.

marginate [BOT] Having a distinct margin or border.

margin line [NAV ARCH] A line drawn parallel to the bulkhead deck of a ship at the side and 76 millimeters (3 inches) below the upper surface of that deck.

margin-notched card *See* edge-notched card.

margin of safety [DES ENG] A design criterion, usually the ratio between the load that would cause failure of a member or structure and the load that is imposed upon it in service.

margin plate [NAV ARCH] The plate forming the sides of the inner bottom tank of a ship.

margin-punched card [COMPUT SCI] A card which is punched only along the edges, the remaining area being used for printed or written data.

margosa oil *See* neem oil.

Margoulis number *See* Stanton number.

Margules equation *See* Witte-Margules equation.

marialite [MINERAL] $3NaAlSi_3O_8 \cdot NaCl$ A scapolite mineral that is isomorphous with meronite.

marial rocks *See* lunabase.

maricolous [ECOL] Living in the sea.

mariculture [AGR] The cultivation of marine organisms, plant and animal, for purposes of human consumption.

Marie's ataxia [MED] A hereditary ataxia combining features of cerebellar, posterior column, and pyramidal tract lesions, with onset after age 20, normal or exaggerated deep tendon reflexes, and frequently optic atrophy and oculomotor palsies, but no clubfeet or scoliosis.

Marie's disease [MED] Rheumatic spondylitis involving the spine only, or invading the shoulders and hips.

Marie-Strümpell disease *See* rheumatoid spondylitis.

Marietta miner [MIN ENG] Trade name for a continuous miner mounted on caterpillar treads; has two cutter arms and two cutter chains at the working face, and a conveyor system to carry the broken coal to be loaded onto cars.

marigram [OCEANOGR] A graphic record of the rising and falling movements of the tide expressed as a curve.

marigraph [ENG] A self-registering gage that records the heights of the tides.

marihuana *See* marijuana.

marijuana [BOT] The Spanish name for the dried leaves and flowering tops of the hemp plant (*Cannabis sativa*), which have narcotic ingredients and are smoked in cigarettes. Also spelled marihuana.

marina [CIV ENG] A harbor facility for small boats, yachts, and so on, where supplies, repairs, and various services are available.

marine [OCEANOGR] Pertaining to the sea.

marine abrasion [GEOL] Erosion of the ocean floor by sediment moved by ocean waves. Also known as wave erosion.

marine alidade [NAV] An instrument used aboard ship in conjunction with, but not including, a pair of binoculars to indicate the relative bearing of a target or object; it is usually fastened to a solid mounting with the zero degree position parallel to the centerline of the ship.

marine arch *See* sea arch.

marine biocycle [ECOL] A major division of the biosphere composed of all biochores of the sea.

marine biology [BIOL] A branch of biology that deals with those living organisms which inhabit the sea.

marine boiler [NAV ARCH] A steam boiler designed to meet requirements of ship operation in propulsion, running of auxiliary machinery, generation of electricity, and heating.

marine bridge *See* sea arch.

marine cave *See* sea cave.

marine chart *See* nautical chart.

marine climate [CLIMATOL] A regional climate which is under the predominant influence of the sea, that is, a climate characterized by oceanity; the antithesis of a continental climate. Also known as maritime climate; oceanic climate.

marine-cut terrace [GEOL] A terrace or platform cut by wave erosion of marine origin. Also known as wave-cut terrace.

marine distiller [NAV ARCH] A machine that distills fresh water from sea water on a ship; evaporation must be carried out at temperatures below 60°C to prevent the sea water from forming a hard, insoluble scale, and the boiling liquid must therefore be kept below atmospheric pressure. Also known as marine evaporator.

marine engine [NAV ARCH] An engine that propels a waterborne vessel.

marine engineering [ENG] The design, construction, installation, operation, and maintenance of main power plants, as well as the associated auxiliary machinery and equipment, for the propulsion of ships.

marine evaporator *See* marine distiller.

marine forecast [METEOROL] A forecast, for a specified oceanic or coastal area, of weather elements of particular interest to maritime transportation, including wind, visibility, the general state of the weather, and storm warnings.

marine geology *See* geological oceanography.

marine glue [MATER] An adhesive that is insoluble in water; usually made of rubber and shellac, sometimes with resins.

marine light [NAV] A luminous or lighted aid to navigation intended primarily for marine navigation.

marine littoral faunal region [ECOL] A geographically determined division of that portion of the zoosphere composed of marine animals.

marine marsh [ECOL] A flat, savannalike land expanse at the edge of a sea; usually covered by water during high tide.

marine meteorology [METEOROL] That part of meteorology which deals mainly with the study of oceanic areas, including island and coastal regions; in particular, it serves the practical needs of surface and air navigation over the oceans.

marine microbiology [MICROBIO] The study of the microorganisms living in the sea.

marine navigation [NAV] The process of directing the movements of watercraft from one point to another; the process, always present in some form when a vessel is under way and not drifting, varies with the type of craft, its mission, and its area of operation.

marine propeller [NAV ARCH] A component of a ship-propulsion power plant which converts engine torque force into propulsive force or thrust, thus overcoming the hull resistance of a moving ship by creating a sternward accelerated column of water.

marine radio beacon [NAV] A radio-beacon station which produces service primarily for the guidance of ships.

marine railway [CIV ENG] A type of dry dock consisting of a cradle of wood or steel with rollers on which the ship may be hauled out of the water along a fixed inclined track leading up the bank of a waterway.

marine rainbow [OPTICS] A rainbow seen in ocean spray. Also known as sea rainbow.

Mariner program [AERO ENG] A United States program, begun in 1962, to send a series of uncrewed, solar-powered spacecraft to the vicinity of Venus and Mars, to carry out observations of cosmic rays and solar wind in interplanetary space, to investigate interactions of the solar wind with planets, and to make atmospheric and surface measurements of planets, including photographic scanning of the surface of Mars.

marine salina [GEOGR] A body of salt water found along an arid coast and separated from the sea by a sand or gravel barrier.

Marinesco-Sjögren-Garland syndrome [MED] A hereditary, congenital form of cerebral ataxia transmitted as an autosomal recessive; characterized by mental retardation, cataracts, minor skeletal anomalies, and hypertension.

marine sextant [NAV] A sextant designed primarily for ship navigation.

Marinesian *See* Bartonian.

marine snow [OCEANOGR] A concentration of living and dead organic material and inorganic debris of the sea suspended at density boundaries such as the thermocline.

marine stack *See* stack.

marine swamp [GEOGR] An area of low, salty, or brackish water found along the shore and characterized by abundant grasses, mangrove trees, and similar vegetation. Also known as paralic swamp.

marine terminal [CIV ENG] That part of a port or harbor with facilities for docking, cargo-handling, and storage.

marine terrace [GEOL] A seacoast terrace formed by the merging of a wave-built terrace and a wave-cut platform. Also known as sea terrace; shore terrace.

marine traffic [NAV] Traffic on the waterways.

marine transgression *See* transgression.

marine weather observation [METEOROL] The weather as

observed from a ship at sea, usually taken in accordance with procedures specified by the World Meteorological Organization.

Mariotte's law *See* Boyle's law.

MARISAT [AERO ENG] A geostationary communication satellite equipped with a repeater operating at microwave frequencies, for ship-to-shore communication by satellite. Derived from maritime satellite.

marita [INV ZOO] An adult trematode.

maritime air [METEOROL] A type of air whose characteristics are developed over an extensive water surface and which, therefore, has the basic maritime quality of high moisture content in at least its lower levels.

maritime climate *See* marine climate.

maritime frequency bands [COMMUN] In the United States, a collection of radio frequencies allocated for communication between coast stations and ships or between ships.

maritime law [NAV] Law that concerns navigation and commerce on the oceans and other navigable bodies of water.

maritime mobile service [COMMUN] A mobile service between coast stations and ship stations, or between ship stations, in which survival craft stations may also participate.

maritime polar air [METEOROL] Polar air initially possessing similar properties to those of continental polar air, but in passing over warmer water it becomes unstable with a higher moisture content.

maritime position [NAV] The location of a seaport or other point along a coast.

maritime satellite *See* MARISAT.

maritime tropical air [METEOROL] The principal type of tropical air, produced over the tropical and subtropical seas; it is very warm and humid, and is frequently carried poleward on the western flanks of the subtropical highs.

marjoram [BOT] Any of several perennial plants of the genera *Origanum* and *Majorana* in the mint family, Labiatae; the leaves are used as a food seasoning.

marjoram oil [MATER] A colorless essential liquid whose chief components are terpenes, obtained from marjoram plants of the genus *Origanum*; used as a perfume in soaps, and in flavorings.

mark [COMMUN] The closed-circuit condition in telegraphic communication, during which the signal actuates the printer; the opposite of space. [COMPUT SCI] A distinguishing feature used to signal some particular location or condition. [NAV] **1.** A charted conspicuous object, structure, or light serving as an indicator for guidance or warning to craft; a beacon; it may be a day-beacon or sea-mark depending upon its location, or a day-mark or lighted beacon depending upon its period of usefulness. **2.** Fathoms marked on a lead line. [ORD] A designation followed by a serial number, used to identify models of military equipment.

mark detection [COMPUT SCI] That class of character recognition systems which employs coded documents, in the form of boxes or windows, in order to convey intended information by means of pencil or ink marks made in specific boxes.

marker [ORD] A sign or signal for marking a location on land or water; frequently contains pyrotechnics.

marker beacon [NAV] A low-power radio beacon transmitting a signal to designate a small area, as an aid to navigation.

marker bed [GEOL] **1.** A stratified unit with distinctive characteristics making it an easily recognized geologic horizon. **2.** A rock layer which accounts for a characteristic portion of a seismic refraction time-distance curve. **3.** *See* key bed.

marker buoy [NAV] **1.** A temporary buoy used in surveying to mark a location of particular interest, such as a shoal or reef. **2.** *See* station buoy.

marker pulse [COMMUN] A pulse used for synchronization between transmitter and receiver in a time-division multiplex system.

market analysis [IND ENG] The collection and evaluation of data concerned with the past, present, or future attributes of potential consumers for a product or service.

mark-hold [COMMUN] The transmission of a steady mark to indicate that there is no traffic over a telegraph channel; the upper marking frequency of a duplex channel (2225 hertz) is used to disable echo suppressors which may interfere with data communications.

Mark-Houwink equation [PHYS CHEM] The relationship between intrinsic viscosity and molecular weight for homogeneous linear polymers.

marking and spacing intervals [COMMUN] Intervals of closed and open conditions in transmission circuits.

marking bias [COMMUN] Bias distortion that lengthens the marking impulse.

marking current [ELEC] Magnitude and polarity of current in the line when the receiving mechanism is in the operating position.

marking-end distortion [COMMUN] End distortion that lengthens the marking impulse.

marking pulse [ELEC] In a teletypewriter, the signal interval during which time the teletypewriter selector unit is operated.

marking wave [ELEC] In telegraphic communications, that portion of the emission during which the active portions of the code character are being transmitted. Also known as keying wave.

Markov chain [MATH] A Markov process whose state space is finite or countably infinite.

Markov inequality [STAT] If x is a random variable with probability P and expectation E, then $P(|x| \geq a) \leq E(|x|^n/a^n)$.

Markovnikoff's rule [ORG CHEM] In an addition reaction, the additive molecule RH adds as H and R, with the R going to the carbon atom with the lesser number of hydrogen atoms bonded to it.

Markov process [MATH] A stochastic process which assumes that in a series of random events the probability of an occurrence of each event depends only on the immediately preceding outcome.

mark reading [COMPUT SCI] In character recognition, that form of mark detection which employs a photoelectric device to locate and convey intended information; the information appears as special marks on sites (windows) within the document coding area.

mark sensing [COMPUT SCI] In character recognition, that form of mark detection which depends on the conductivity of graphite pencil marks to locate and convey intended information; the information appears as special marks on sites (windows) within the document coding area.

mark-space multiplier [ELECTR] A multiplier used in analog computers in which one input controls the mark-to-space ratio of a square wave while the other input controls the amplitude of the wave, and the output, obtained by a smoothing operation, is proportional to the average value of the signal. Also known as time-division multiplier.

mark-space ratio *See* mark-to-space ratio.

mark-to-space ratio [ELECTR] The ratio of the duration of the positive-amplitude part of a square wave to that of the negative-amplitude part. Also known as mark-space ratio.

mark-to-space transition [COMMUN] The process of switching from a mark to a space.

marl [GEOL] A deposit of crumbling earthy material composed principally of clay with magnesium and calcium carbonate; used as a fertilizer for lime-deficient soils. [TEXT] Two yarns of different colors or kinds twisted around each other.

marline [NAV ARCH] A tarred two-stranded, left-handed hemp about ⅛ inch (3 millimeters) in diameter; used for neat seizings.

marline spike [NAV ARCH] A tapered metal tool used to separate the strands of rope in splicing, and as a lever in marling and seizing.

marlite *See* marlstone.

marlstone [PETR] **1.** A consolidated rock that has about the same composition as marl; considered to be an earthy or impure argillaceous limestone. Also known as marlite. **2.** A hard ferruginous rock of the Middle Lias in England.

marly [GEOL] Pertaining to, containing, or resembling marl.

marmatite [MINERAL] A dark-brown to black mineral composed of iron-bearing sphalerite. Also known as christophite.

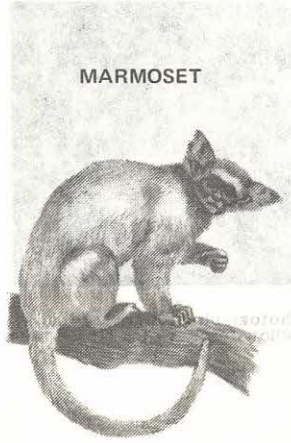
marmolite [MINERAL] A pale-green serpentine mineral, occurring in thin laminations; a variety of chrysotile.

Marmor [GEOL] A North American stage of Middle Ordovician geologic time, forming the lower subdivision of Chazyan, above Whiterock and below Ashby.

marmoset [VERT ZOO] Any of 10 species of South American primates belonging to the family Callithricidae; individuals are primitive in that they have claws rather than nails and a nonprehensile tail.

marmot [VERT ZOO] Any of several species of stout-bodied, short-legged burrowing rodents of the genus *Marmota* in the squirrel family Sciuridae.

marocain crepe [TEXT] A heavy crepe produced from hard-



MARMOSET

The common marmoset, about 9 inches (23 centimeters) long with a 12-inch (30-centimeter) tail, an inhabitant of the mouth of the Amazon River.

MARMOT

Though short-legged and heavy, the marmot runs, jumps, and climbs with speed and agility.

MARS

Photograph of Mars through yellow filter at Lick Observatory.

twisted wool, silk, or manufactured fibers with coarse filling giving a cross-ribbed effect.

marrite [MINERAL] $PbAgAsS_3$ A monoclinic mineral, occurring as small crystals in Valais, Switzerland.

marrubium [BOT] *Marrubium vulgari*. An aromatic plant of the mint family, Labiatae; leaves have a bitter taste and are used as a tonic and anthelmintic. Also known as hoarhound; horehound.

Mars [ASTRON] The planet fourth in distance from the sun; it is visible to the naked eye as a bright red star, except for short periods when it is near its conjunction with the sun; its diameter is about 6700 kilometers.

Marsden chart [METEOROL] A system for showing the distribution of meteorological data on a chart, especially over the oceans; using a Mercator map projection, the world between 80°N and 70°S latitudes is divided into Marsden "squares," each of 10° latitude by 10° longitude and systematically numbered to indicate position; each square may be divided into quarter squares, or into 100 one-degree subsquares numbered from 00 to 99 to give the position to the nearest degree.

Marseilles fever *See* fièvre boutonneuse.

Marseilles soap [MATER] A castile soap to which is added olive oil and soda.

marsh [ECOL] A transitional land-water area, covered at least part of the time by estuarine or coastal waters, and characterized by aquatic and grasslike vegetation, especially without peatlike accumulation.

Marsh-Berzelius test *See* Marsh test.

marsh gas [GEOCHEM] Combustible gas, consisting chiefly of methane, produced as a result of decay of vegetation in stagnant water.

marshite [MINERAL] CuI A reddish, oil-brown isometric mineral composed of cuprous iodide and occurring as crystals; hardness is 2.5 on Mohs scale, and specific gravity is 5.6.

marsh ore *See* bog iron ore.

Marsh test [ANALY CHEM] A test for the presence of arsenic in a compound; the substance to be tested is mixed with granular zinc, and dilute hydrochloric acid is added to the mixture; gaseous arsine forms, which decomposes to a black deposit of arsenic, when the gas is passed through a heated glass tube. Also known as Marsh-Berzelius test.

Marsileales [BOT] A small monofamilial order of heterosporous, leptosporangiate ferns (Polypodiophyta); leaves arise on long stalks from the rhizome, and sporangia are enclosed in modified folded leaves or leaf segments called sporocarps.

Marsipobranchii [VERT ZOO] An equivalent name for Cyclostomata.

Mars pigments [INORG CHEM] A group of five pigments produced when milk of lime is added to a ferrous sulfate solution, and the precipitate is calcined; color is controlled by calcination temperature to give yellow, orange, brown, red, or violet.

Mars probe [AERO ENG] A United States unmanned spacecraft intended to be sent to the vicinity of the planet Mars, such as in the Mariner or Viking programs.

marsupial [VERT ZOO] **1.** A member of the Marsupialia. **2.** Having a marsupium. **3.** Of, pertaining to, or constituting a marsupium.

marsupial anteater [VERT ZOO] *Myrmecobius fasciatus*. An anteater belonging to the Marsupialia. Also known as banded anteater.

marsupial frog [VERT ZOO] Any of various South American tree frogs which carry the eggs in a pouch on the back.

Marsupialia [VERT ZOO] The single order of the mammalian infraclass Metatheria, characterized by the presence of a marsupium in the female.

marsupialization [MED] Surgical evacuation of pancreatic, hydatid, and other cysts when complete removal and closure are not possible.

marsupial mole [VERT ZOO] *Notoryctes typhlops*. A marsupial of Australia that resembles the euterian mole.

Marsupicarnivora [VERT ZOO] An order proposed to include the polydactylous and polyprotodont carnivorous superfamilies of Marsupialia.

marsupium [VERT ZOO] A fold of skin that forms a pouch enclosing the mammary glands on the abdomen of most marsupials.

martempering [MET] Quenching austenitized steel to a temperature just above, or in the upper part of, the martensite range, holding it at this point until the temperature is equalized throughout, and then cooling in air to room temperature.

MARTEN

Though scarce, the American marten is important as predator on mice and other injurious rodents.

marten [VERT ZOO] Any of seven species of carnivores of the genus *Martes* in the family Mustelidae which resemble the weasel but are larger and of a semiarboreal habit.

martensite [MET] A metastable transitional structure formed by a shear process during a phase transformation, characterized by an acicular or needlelike pattern; in carbon steel it is a hard, supersaturated solid solution of carbon in a body-centered tetragonal lattice of iron.

martensite range [MET] The temperature interval between the temperature (M_s) at which formation of martensite initiates and the temperature (M_f) at which the formation is complete.

martensitic stainless steel [MET] A hard, quenched magnetic martensitic steel containing principally 11–18% chromium and 0.1–1.2% carbon.

martensitic steel [MET] Quenched carbon steel composed chiefly of martensite.

martensitic structure [MET] Of, pertaining to, or having the structure of martensite, that is, an interstitial, supersaturated solid solution of carbon in iron having a body-centered tetragonal lattice; the microstructure is characterized by an acicular or needlelike pattern.

martensitic transformation [MET] A phase transformation which occurs in some metals, resulting in the formation of martensite. Also known as shear transformation.

Martens wedge [OPTICS] A wedge-shaped piece of quartz used to rotate the plane of polarization of linearly polarized light.

martingale [STAT] A sequence of random variables $x_1, x_2, \ldots$, where the conditional expected value of x_{n+1} given $x_1, x_2, \ldots, x_n$, equals x_n.

Martin's cement [MATER] A gypsum cement made with potassium carbonate instead of alum.

martite [MINERAL] Hematite occurring in iron-black octahedral crystals pseudomorphous after magnetite.

martonite [MATER] A poison gas composed of 20% chloroacetone and 80% bromoacetone; acts as a powerful lacrimator.

Marvin sunshine recorder [ENG] A sunshine recorder in which the time scale is supplied by a chronograph, and consisting of two bulbs (one of which is blackened) that communicate through a glass tube of small diameter, which is partially filled with mercury and contains two electrical contacts; when the instrument is exposed to sunshine, the air in the blackened bulb is warmed more than that in the clear bulb; the warmed air expands and forces the mercury through the connecting tube to a point where the electrical contacts are shorted by the mercury; this completes the electrical circuit to the pen on the chronograph.

Marx circuit [ELEC] An electric circuit used in an impulse generator in which capacitors are charged in parallel through charging resistors, and then connected in series and discharged through the test piece by the simultaneous sparkover of spark gaps.

Marx effect [SOLID STATE] The effect wherein the energy of photoelectrons emitted from an illuminated surface is decreased when the surface is simultaneously illuminated by light of lower frequency than that causing the emission.

mA s *See* milliampere-second.

mascagnite [MINERAL] $(NH_4)_2SO_4$ A yellowish-gray mineral found in guano, near burning coal beds, or as lava incrustation; specific gravity is 1.77; hardness is 2–2.5 on Mohs scale.

mascaret *See* bore.

mascon [GEOL] A large, high-density mass concentration below a ringed mare on the surface of the moon.

masculine [BIOL] Having an appearance or qualities distinctive for a male.

masculine pelvis [ANAT] A female pelvis similar to the normal male pelvis in having a deeper cavity and more conical shape. Also known as android pelvis.

masculine protest [PSYCH] The struggle to dominate, exhibited primarily by women but to some extent also by men, with the desire to escape identification with the feminine role.

masculinize [PHYSIO] To cause a female or a sexually immature animal to take on male secondary sex characteristics.

masculinoma [MED] Adrenocorticoid adenoma of the ovary.

maser [PHYS] A device for coherent amplification or generation of electromagnetic waves in which an ensemble of atoms or

molecules, raised to an unstable energy state, is stimulated by an electromagnetic wave to radiate excess energy at the same frequency and phase as the stimulating wave. Derived from microwave amplification by stimulated emission of radiation. Also known as paramagnetic amplifier.

maser amplifier [ELECTR] A maser which is used to increase the power produced by another maser.

mash [FOOD ENG] **1.** Mixture of grain and other ingredients fermented to produce whiskey. **2.** Malted barley or other grain mixed with water to prepare wort for brewing operations.

mash seam weld [MET] A seam weld at a lap joint in which the overall lap thickness is reduced plastically to the approximate thickness of one of the lapped parts.

mask [COMPUT SCI] A pattern of characters used to control the retention or elimination of portions of another pattern of characters. Also known as extractor. [DES ENG] A frame used in front of a television picture tube to conceal the rounded edges of the screen. [ELECTR] A thin sheet of metal or other material containing an open pattern, used to shield selected portions of a semiconductor or other surface during a deposition process. [GRAPHICS] **1.** In color separation photography, an intermediate negative or positive that is used to correct color. **2.** In offset lithography, opaque material that protectively covers open or selected areas of a printing plate during the exposure process. [MET] A protective device in thermal spraying against blasting or coating effects which are reflected from the substrate surface.

mask face [MED] An expressionless face seen in certain degenerative and inflammatory diseases of the basal ganglia and the extrapyramidal system; voluntary movements are near normal while involuntary movements are infrequent.

masking [ACOUS] The amount by which the threshold of audibility of a sound is raised by the presence of another sound; the unit customarily used is the decibel. Also known as audio masking; aural masking. [COMPUT SCI] **1.** Replacing specific characters in one register by corresponding characters in another register. **2.** Extracting certain characters from a string of characters. [ELECTR] **1.** Using a covering or coating on a semiconductor surface to provide a masked area for selective deposition or etching. **2.** A programmed procedure for eliminating radar coverage in areas where such transmissions may be of use to the enemy for navigation purposes, by weakening the beam in appropriate directions or by use of additional transmitters on the same frequency at suitable sites to interfere with homing; also used to suppress the beam in areas where it would interfere with television reception. [ENG] Preventing entrance of a tracer gas into a vessel by covering the leaks.

mask matching [COMPUT SCI] In character recognition, a method employed in character property detection in which a correlation or match is attempted between a specimen character and each of a set of masks representing the characters to be recognized.

mask register [COMPUT SCI] Filter which determines the parts of a word which are to be tested.

mask word [COMPUT SCI] A word modifier used in a logical AND operation.

masochism [PSYCH] Pleasure derived from experiencing physical or psychological pain.

masonry [CIV ENG] A construction of stone or similar materials such as concrete or brick.

masonry cement [MATER] A blended cement, made by combining either natural or portland cements with fattening materials such as hydrated lime and, sometimes, with air-entraining mixtures; used in the mortar of brick and block masonry.

masonry dam [CIV ENG] A dam constructed of stone or concrete blocks set in mortar.

masonry drill [DES ENG] A drill tipped with cemented carbide for drilling in concrete or masonry.

masonry nail [DES ENG] Spiral-fluted nail designed to be driven into mortar joints in masonry.

mason's hydrated lime [MATER] Any hydrated lime suitable for use in mortars, base-coat plasters, and concrete.

Mason's theorem [CONT SYS] A formula for the overall transmittance of a signal flow graph in terms of transmittances of various paths in the graph.

mass [MECH] A quantitative measure of a body's resistance to being accelerated; equal to the inverse of the ratio of the body's acceleration to the acceleration of a standard mass under otherwise identical conditions.

mass absorption coefficient [PHYS] The linear absorption coefficient divided by the density of the medium.

mass action law [PHYS CHEM] The law that the rate of a chemical reaction for a uniform system at constant temperature is proportional to the concentrations of the substances reacting. Also known as Guldberg and Waage law.

massage [MED] The act of rubbing, kneading, or stroking the superficial parts of the body with the hand or with an instrument, for therapeutic purposes.

mass-analyzed ion kinetic energy spectrometry [SPECT] A type of ion kinetic energy spectrometry in which the ionic products undergo mass analysis followed by energy analysis. Abbreviated MIKES.

mass attraction vertical [GEOPHYS] The vertical which is a function only of the distribution of mass and is unaffected by forces resulting from the motions of the earth.

mass burning rate [ORD] Rate of consumption of propellant charge, usually expressed in pounds per second.

mass communication [COMMUN] Communication which is directed to or reaches an appreciable fraction of the population.

mass concrete [CIV ENG] Concrete set without structural reinforcement.

mass-data multiprocessing [COMPUT SCI] The basic concept of time sharing, with many inquiry stations to a central location capable of on-line data retrieval.

mass defect [NUC PHYS] The difference between the mass of an atom and the sum of the masses of its individual components in the free (unbound) state.

mass-distance [ENG] The mass carried by a vehicle multiplied by the distance it travels.

mass divergence [FL MECH] The divergence of the momentum field, a measure of the rate of net flux of mass out of a unit volume of a system; in symbols, $\nabla \cdot \rho \mathbf{V}$, where ρ is the fluid density, $\mathbf{V}$ the velocity vector, and ∇ the del operator.

massecuite [FOOD ENG] Sugar industry term for sugar-molasses mixture prior to the removal of the molasses.

mass-energy conservation [RELAT] The principle that energy cannot be created or destroyed; however, one form of energy is that which a particle has because of its rest mass, equal to this mass times the square of the speed of light.

mass-energy relation [RELAT] The relation whereby the total energy content of a body is equal to its inertial mass times the square of the speed of light.

Massenfilter *See* quadrupole spectrometer.

mass erosion [GEOL] A process in which the direct application of gravitational body stresses causes earth and rocks to fall and be carried downslope. Also known as gravity erosion.

masseter [ANAT] The masticatory muscle, arising from the zygomatic arch and inserted into the lower jaw.

mass extinction *See* faunal extinction.

Massey formula [ATOM PHYS] A formula for the probability that an excited atom approaching the surface of a metal will emit secondary electrons.

mass flow [FL MECH] The mass of a fluid in motion which crosses a given area in a unit time.

mass-flow bin [ENG] A bin whose hopper walls are sufficiently steep and smooth to cause flow of all the solid, without stagnant regions, whenever any solid is withdrawn.

mass flowmeter [ENG] An instrument that measures the mass of fluid that flows through a pipe, duct, or open channel in a unit time.

mass formula [NUC PHYS] An equation giving the atomic mass of a nuclide as a function of its atomic number and mass number.

mass-haul curve [CIV ENG] A curve showing the quantity of excavation in a cutting which is available for fill.

mass heaving [GEOL] A comprehensive expansion of the ground due to freezing.

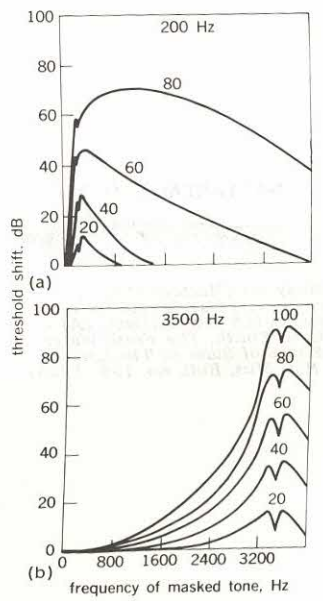
massicot [MINERAL] PbO A yellow, orthorhombic mineral consisting of lead monoxide; found in the western and southern United States. Also known as lead ocher.

Massieu function [THERMO] The negative of the Helmholtz free energy divided by the temperature.

massif [GEOL] A massive block of rock within an erogenic belt, generally more rigid than the surrounding rocks, and commonly composed of crystalline basement or younger plutons.

massive [GEOL] Of a mineral deposit, having a large concentration of ore in one place. [MINERAL] Of a mineral,

MASKING



Masking of pure tones by pure tones at masking frequencies of *(a)* 200 hertz, *(b)* 3500 hertz. The number above each curve is the level in decibels above the threshold of audibility of each masking tone. *(From H. Fletcher, Speech and Hearing in Communication, 2d ed., Van Nostrand, 1953)*

lacking an internal structure. [PALEON] Of corallum, composed of closely packed corallites. [PETR] **1.** Of a competent rock, being homogeneous, isotropic, and elastically perfect. **2.** Of a metamorphic rock, having constituents which do not show parallel orientation and are not arranged in layers. **3.** Of igneous rocks, being homogeneous over wide areas and lacking layering, foliation, cleavage, or similar features.

mass law of sound insulation [CIV ENG] The rule stating that sound insulation for a single wall is determined almost wholly by its weight per unit area; doubling the weight of the partition increases the insulation by 5 decibels.

mass-luminosity relation [ASTROPHYS] A relation between stellar magnitudes and mass of the stars; when the absolute magnitudes of stars are plotted versus the logarithms of their masses, the points fall closely along a smooth curve.

mass-memory unit [COMPUT SCI] Drum or disk memory that provides rapid access bulk storage for messages that are awaiting availability of outgoing channels.

mass movement [GEOL] Movement of a portion of the land surface as a unit.

mass number [NUC PHYS] The sum of the numbers of protons and neutrons in the nucleus of an atom or nuclide. Also known as nuclear number; nucleon number.

mass operator [QUANT MECH] An operator which is added to the Lagrangian in a quantized field theory in order to eliminate certain infinite quantities, and whose sum with the mechanical mass gives the observed mass.

mass ratio [AERO ENG] The ratio of the mass of the propellant charge of the rocket to the total mass of the rocket when charged with the propellant.

mass reactance *See* acoustic mass reactance.

mass reflex [PHYSIO] A spread of reflexes suggesting lack of control by higher cortical centers; seen in normal newborns, in persons under the influence of drugs or in severe emotional states, and in encephalopathy or high spinal cord transections.

mass renormalization [QUANT MECH] The mathematical operation of adding the mass which a particle possesses because of its self interaction, to its mechanical mass in order to obtain its measured mass.

mass resistivity [ELEC] The product of the electrical resistance of a conductor and its mass, divided by the square of its length; the product of the electrical resistivity and the density.

mass shift [NUC PHYS] The portion of the isotope shift which results from the difference between the nuclear masses of different isotopes.

mass spectrograph [ENG] A mass spectroscope in which the ions fall on a photographic plate which after development shows the distribution of particle masses.

mass spectrometer [ENG] A mass spectroscope in which a slit moves across the paths of particles with various masses, and an electrical detector behind it records the intensity distribution of masses.

mass spectrometry [ANALY CHEM] An analytical technique for identification of chemical structures, determination of mixtures, and quantitative elemental analysis, based on application of the mass spectrometer.

mass spectroscope [ENG] An instrument used for determining the masses of atoms or molecules, in which a beam of ions is sent through a combination of electric and magnetic fields so arranged that the ions are deflected according to their masses.

mass spectrum [PARTIC PHYS] A plot of masses of elementary particles, including unstable states. Also known as particle spectrum. [PHYS] A display, record, or plot of the distribution in mass, or in mass-to-charge ratio, of ionized atoms, molecules, or molecular fragments.

mass stopping power [NUCLEO] The decrease, per unit surface density traversed, in kinetic energy of an ionizing particle passing through matter; equal to the linear energy transfer (energy loss per unit path length) divided by the density of the material.

mass storage [COMPUT SCI] A computer storage with large capacity, especially one whose contents are directly accessible to a computer's central processing unit.

mass-storage executive capability [COMPUT SCI] The ability of the executive to relieve operators from handling cards, tapes, and the like and achieve a more efficient operation.

mass-storage system [COMPUT SCI] A computer system containing a large number of storage devices, with one of these devices containing the master file of the operating system, routines, and library routines.

mass susceptibility [PHYS CHEM] Magnetic susceptibility of a compound per gram. Also known as specific susceptibility.

mass-to-charge ratio [ANALY CHEM] In analysis by mass spectroscopy, the measurement of the sample mass as a ratio to its ionic charge.

mass-transfer rate [PHYS] The measurement of the movement of matter as a function of time.

mass transport [FL MECH] **1.** Carrying of loose materials in a moving medium such as water or air. **2.** The movement of fluid, especially water, from one place to another.

mass units [MECH] Units of measurement having to do with masses of materials, such as pounds or grams.

mass velocity [FL MECH] The weight flow rate of a fluid divided by the cross-sectional area of the enclosing chamber or conduit; for example, lb/hr ft^2.

mass wasting [GEOL] Dislodgement and downslope transport of loose rock and soil material under the direct influence of gravitational body stresses.

mast [ENG] **1.** A vertical metal pole serving as an antenna or antenna support. **2.** A slender vertical pole which must be held in position by guy lines. **3.** A drill, derrick, or tripod mounted on a drill unit, which can be raised to operating position by mechanical means. **4.** A single pole, used as a drill derrick, supported in its upright or operating position by guys. [NAV ARCH] A long wooden or metal pole or spar, usually vertical, on the deck or keel of a ship, to support other spars which in turn support or are attached to sails, as well as derricks.

mast-, masto- [ANAT] A combining form denoting breast; denoting mastoid.

Mastacembeloidei [VERT ZOO] The spiny eels, a suborder of perciform fishes that are eellike in shape and have the pectoral girdle suspended from the vertebral column.

mastalgia [MED] Pain in the breast.

mastatrophy [MED] Atrophy of the breast.

mastax [INV ZOO] The muscular pharynx in rotifers.

mast cell [HISTOL] A connective-tissue cell with numerous large, basophilic, metachromatic granules in the cytoplasm.

mast-cell disease *See* mastocytosis.

mastectomy [MED] Surgical removal of the breast. Also known as mammectomy.

master [ENG] **1.** A device which controls subsidiary devices. **2.** A precise workpiece through which duplicates are made. [ENG ACOUS] *See* master phonograph record. [NAV] *See* master station.

master alloy [MET] An alloy of selected elements that can be added to a charge of molten metal to provide a desired composition or texture or to deoxidize the material. Also known as foundry alloy.

masterbatch [MATER] A plastic, rubber, or elastomer mixture in which there is a high additives concentration, such as rubber with carbon black, or plastic with color pigment; used to proportion additives accurately into large bulks of plastic, rubber, or elastomer.

master bushing *See* liner bushing.

master card [COMPUT SCI] A computer card that contains information about a group of computer cards, and is usually the first card of this group.

master clock [COMPUT SCI] The electronic or electric source of standard timing signals, often called clock pulses, required for sequencing the operation of a computer. Also known as main clock; master synchronizer; master timer.

master compass [NAV] That part of a remote-indicating compass system which determines direction for transmission to various repeaters.

master control [COMMUN] The control console that contains the main program controls for a radio or television transmitter or network. [COMPUT SCI] A computer program, oriented toward applications, which carries out the highest level of control in a hierarchy of programs, routines, and subroutines.

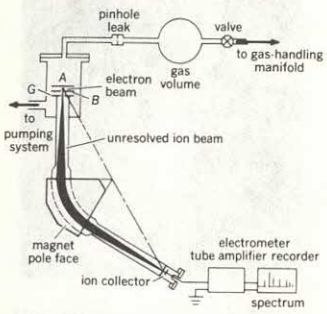
master control interrupt [COMPUT SCI] A signal which causes the master control program to take over control of a computer system.

master cylinder [MECH ENG] The container for the fluid and the piston, forming part of a device such as a hydraulic brake or clutch.

master data [COMPUT SCI] A set of data which are rarely changed, or changed in a known and constant manner.

master equation [ATOM PHYS] An equation which deter-

MASS SPECTROMETER



Schematic diagram of mass spectrometer tube. Electric field caused by potential difference of several volts between plates *A* and *B* draws ions through slit in *B*. Ions are further accelerated by potential difference of hundreds or thousands of volts between *B* and *G*.

MASTACEMBELOIDEI

Spiny eel (*Mastacembelus circumcinctus*); length to 7 inches (18 centimeters). (*After H. M. Smith, The Fresh-Water Fishes of Siam or Thailand, U.S. Nat. Mus. Bull. no. 188, 1945*)

mines the rate of change of the population of an energy level in terms of the populations of other levels and transition probabilities.

master file [COMPUT SCI] **1.** A computer file containing relatively permanent information, usually updated periodically, such as subscriber records or payroll data other than time worked. **2.** A computer file that is used as an authoritative source of data in carrying out a particular job on the computer.

master frequency meter *See* integrating frequency meter.

master gage [DES ENG] A locating device with fixed hole locations or part positions; locates in three dimensions and generally occupies the same space as the part it represents.

master gain [ELECTR] Control of overall gain of an amplifying system as opposed to varying the gain of several individual inputs.

master group [COMMUN] In carrier telephony, ten supergroups (600 voice channels) multiplexed together and treated as a unit.

master gyro compass [NAV] A gyro compass for controlling one or more remote indicators, called gyro repeaters.

master instruction tape [COMPUT SCI] A computer magnetic tape on which all programs for a system of runs are recorded.

master joint [GEOL] A persistent joint plane of greater than average extent, generally constituting the dominant jointing of an area. Also known as main joint; major joint.

master layout [DES ENG] A permanent template record laid out in reference planes and used as a standard of reference in the development and coordination of other templates.

master mechanic [ENG] The supervisor, as at the mine, in charge of the maintenance and installation of equipment.

master mode [COMPUT SCI] The mode of operation of a computer system exercised by the operating system or executive system, in which a privileged class of instructions, which user programs cannot execute, is permitted. Also known as monitor mode; privileged mode.

master multivibrator [ELECTR] Master oscillator using a multivibrator unit.

master oscillator [ELECTR] An oscillator that establishes the carrier frequency of the output of an amplifier or transmitter.

master-oscillator power amplifier [ELECTR] Transmitter using an oscillator followed by one or more stages of radio-frequency amplification.

master phonograph record [ENG ACOUS] The negative metal counterpart of a disk recording, produced by electroforming as one step in the production of phonograph records. Also known as master.

master plan position indicator [ELECTR] In a radar system, a plan position indicator which controls remote indicators or repeaters.

master program file [COMPUT SCI] The tape record of all programs for a system of runs.

master record [COMPUT SCI] The basic updated record which will be used for the next run.

master routine *See* executive routine.

master/slave manipulator [ENG] A mechanical, electromechanical, or hydromechanical device which reproduces the hand or arm motions of an operator, enabling the operator to perform manual motions while separated from the site of the work.

master/slave mode [COMPUT SCI] The feature ensuring the protection of each program when more than one program resides in memory.

master/slave system [COMPUT SCI] A system of interlinked computers under the control of one computer (master computer).

master station [NAV] In a radio navigation system such as loran, the controlling station of two or more synchronized transmitting stations. Also known as master.

master stream *See* main stream.

Master's two-step test *See* two-step test.

master switch [ELEC] **1.** Switch that dominates the operation contactors, relays, or other magnetically operated devices. **2.** Switch electrically ahead of a number of individual switches.

master synchronization pulse [COMMUN] In telemetry, a pulse distinguished from other telemetering pulses by amplitude and duration, used to indicate the end of a sequence of pulses.

master synchronizer *See* master clock.

master system tape [COMPUT SCI] A monitor program centralizing the control of program operation by loading and executing any program on a system tape.

master tape [COMPUT SCI] A magnetic tape that contains data which must not be overwritten, such as an executive routine or master file; updating a master tape means generating a new master tape onto which supplementary data have been added.

master timer *See* master clock.

masthead bombing [ORD] Very low bombing, for example, against shipping.

mastic [MATER] **1.** A glasslike, brittle, yellow to greenish yellow resinous exudation of the mastic tree (*Pistacia lentiscus*); used in medicine, condiments, adhesive, incense, and lacquer. Also known as mastiche; mastix; pistachia galls. **2.** Mixture of finely powdered rock and asphaltic material used for highway construction.

mastic asphalt *See* asphalt mastic.

masticate [CHEM ENG] To process rubber on a machine to make it softer and more pliable before mixing with other substances. [PHYSIO] To chew.

masticatory [PHARM] A medicine to be chewed but not swallowed.

mastiche *See* mastic.

mastic oil [MATER] Colorless essential oil with balsamic odor; the chief constituents are pinenes; used in medicine.

Mastigamoebidae [INV ZOO] A family of ameboid protozoans possessing one or two flagella, belonging to the order Rhizomastigida.

Mastigophora [INV ZOO] A superclass of the Protozoa characterized by possession of flagella.

mastitis [MED] Inflammation of the breast.

mastix *See* mastic.

mastocytoma [VET MED] A local proliferation of mast cells forming a tumorous nodule; seen most frequently in dogs, but occasionally noted in humans.

mastocytosis [MED] Excessive mast cell proliferation. Also known as mast-cell disease.

mastodon [PALEON] A member of the Mastodontidae, especially the genus *Mammut*.

Mastodontidae [PALEON] An extinct family of elephantoid proboscideans that had low-crowned teeth with simple ridges and without cement.

mastodynia [MED] A type of cystic hyperplasia of the breast marked by an increase of connective tissue in the breast, without a proportionate increase in glandular epithelium.

mastoid [ANAT] **1.** Breast-shaped. **2.** The portion of the temporal bone where the mastoid process is located.

mastoid air cell *See* mastoid cell.

mastoid antrum [ANAT] An air-filled space between the upper portion of the middle ear and the mastoid cells.

mastoid canaliculus [ANAT] A small canal opening just above the stylomastoid foramen; gives passage to the auricular branch of the vagus nerve.

mastoid cell [ANAT] One of the compartments in the mastoid portion of the temporal bone, connected with the mastoid antrum and lined with a mucous membrane. Also known as mastoid air cell; mastoid sinus.

mastoid foramen [ANAT] A small opening behind the mastoid process.

mastoid fossa [ANAT] The depression behind the suprameatal spine on the lateral surface of the temporal bone.

mastoiditis [MED] Inflammation of the mastoid cells.

mastoid process [ANAT] A nipple-shaped, inferior projection of the mastoid portion of the temporal bone.

mastoid sinus *See* mastoid cell.

mastopathy [MED] Any disease or pain of the mammary gland. Also known as mazopathy.

mastopexy [MED] Surgical fixation of a pendulous breast. Also known as mazopexy.

mastoplasia [MED] Hypertrophy of breast tissue. Also known as mastoplastia.

mastoplastia *See* mastoplasia.

mastoplasty [MED] Plastic surgery on the breast.

mastorrhagia [MED] Hemorrhage from the breast.

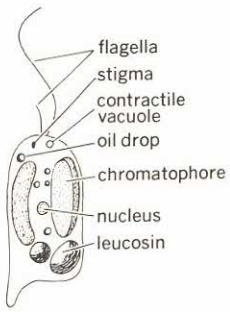
mastoscirrhus [MED] Hardening of breast tissue, usually indicative of cancer.

Mastotermitidae [INV ZOO] A family of lower termites in the order Isoptera with a single living species, in Australia.

mastotomy [MED] Incision of the breast.

mast step [NAV ARCH] A wooden or steel foundation supporting a mast.

MASTIGOPHORA



Ochromonas ludibunda, a holophytic and holozoic mastigophoran.

mat [CIV ENG] **1.** A steel or concrete footing under a post. **2.** Mesh reinforcement in a concrete slab. **3.** A heavy steel-mesh blanket used to suppress rock fragments during blasting. [MATER] Randomly distributed felt or glass fibers used in reinforced-plastics lay-up molding. [MIN ENG] An accumulation of broken mine timbers, rock, earth, and other debris coincident with the caving system of mining.

Matador [ORD] Name applied to a U.S. Air Force surface-to-surface tactical missile, controlled electronically from the ground; powered by a jet engine, rocket-boosted, and attaining subsonic speed; it has a range of several hundred miles, can carry a conventional or atomic warhead, and has a combination radar and inertial guidance system; it is transported to the launching site on a transport trailer.

matamorphic differentiation [PETR] Processes by which different mineral assemblages develop in some sequence from an initially uniform parent rock.

Matanuska wind [METEOROL] A strong, gusty, northeast wind which occasionally occurs during the winter in the vicinity of Palmer, Alaska.

match [COMPUT SCI] A data-processing operation similar to a merge, except that instead of producing a sequence of items made up from the input sequences, the sequences are matched against each other on the basis of some key. [ENG] **1.** A charge of gunpowder put in a paper several inches long and used for igniting explosives. **2.** A short flammable piece of wood, paper, or other material tipped with a combustible mixture that bursts into flame through friction. [IMMUNOL] To select blood donors whose erythrocytes are compatible with those of the recipient.

matched edges [ENG] Die face edges machined at right angles to each other to provide for alignment of the dies in machining equipment.

matched filter [COMPUT SCI] In character recognition, a method employed in character property detection in which a vertical projection of the input character produces an analog waveform which is then compared to a set of stored waveforms for the purpose of determining the character's identity. [ELECTR] A filter with the property that, when the input consists of noise in addition to a specified desired signal, the signal-to-noise ratio is the maximum which can be obtained in any linear filter.

matched impedance [ELEC] An impedance of a load which is equal to the impedance of a generator, so that maximum power is delivered to the load.

matched load [ELECTR] A load having the impedance value that results in maximum absorption of energy from the signal source.

matched-metal molding [ENG] Forming of reinforced-plastic articles between two close-fitting metal molds mounted in a hydraulic press.

matched pairs [STAT] The design of an experiment for paired comparison in which the assignment of subjects to treatment or control is not completely at random, but the randomization is restricted to occur separately within each pair.

matched pulse intercepting [COMMUN] System for intercepting calls on party lines in a terminal-per-line office; operates on a ground pulse which is matched in time with the intercepted station's particular ringing frequency.

matched terrace *See* paired terrace.

matched transmission line [ELEC] Transmission line terminated with a load equivalent to its characteristic impedance.

match gate *See* equivalence gate.

matching [COMPUT SCI] A computer problem-solving method in which the current situation is represented as a schema to be mapped into the desired situation by putting the two in correspondence. [ELEC] Connecting two circuits or parts together with a coupling device in such a way that the maximum transfer of energy occurs between the two circuits, and the impedance of either circuit will be terminated in its image. [NAV] The bringing of two or more signals or indications into suitable position or condition preliminary to making a measurement, as on a loran indicator or a sky compass.

matching diaphragm [ELECTROMAG] Diaphragm consisting of a slit in a thin sheet of metal, placed transversely across a waveguide for matching purposes; the orientation of the slit with respect to the long dimension of the waveguide determines whether the diaphragm acts as a capacitive or inductive reactance.

matching distribution [STAT] The distribution of number of matches obtained if N tickets labeled 1 to N are drawn at random one at a time and laid in a row, and a match is counted when a ticket's label matches its position.

matching impedance [ELEC] Impedance value that must be connected to the terminals of a signal-voltage source for proper matching.

matching section [ELECTROMAG] A section of transmission line, a quarter or half wavelength long, inserted between a transmission line and a load to obtain impedance matching.

matching stub [ELECTROMAG] Device placed on a radio-frequency transmission line which varies the impedance of the line; the impedance of the line can be adjusted in this manner.

match plate [MET] A plate on which metal-casting patterns are mounted or formed as an integral part, to facilitate the molding operation.

mate [BIOL] **1.** To pair for breeding. **2.** To copulate.

material balance [CHEM ENG] A calculation to inventory material inputs versus outputs in a process system.

material particle [MECH] An object which has rest-mass and an observable position in space, but has no geometrical extension, being confined to a single point. Also known as particle.

materials control [IND ENG] Inventory control of materials involved in manufacturing or assembly.

materials handling [ENG] The loading, moving, and unloading of materials.

materials science [ENG] The study of the nature, behavior, and use of materials applied to science and technology.

materials testing reactor [NUCLEO] A nuclear reactor designed mainly for studying the behavior of materials and equipment subjected to large fluxes of neutrons and other radiation.

material well [CHEM ENG] In a plastics process, the space provided in a compression or transfer mold to allow for the bulk factor.

materia medica [PHARM] **1.** The science that treats of the sources, properties, and preparation of medicinal substances. **2.** The materials from which medicinal substances are prepared. **3.** A treatise on the subject.

materiel [ORD] **1.** Things of all kinds required for the equipment, maintenance, operation, and support of military activities, both combat and noncombat. **2.** In a restricted sense, those things used in combat or logistic support operations, such as weapons, motor vehicles, or special-purpose clothing, as distinguished from items of ordinary use, such as uniforms, food, or medicine.

maternal [BIOL] Of, pertaining to, or related to a mother.

maternal effect [GEN] Determination of characters of the progeny by the maternal parent; mediated by the genetic constitution of the mother.

maternal impressions [PSYCH] The congenital developmental effects formerly thought to be produced upon the fetus in the uterus by mental impressions of a vivid character received by the mother during pregnancy.

maternal inheritance [GEN] The acquisition of characters transmitted through the cytoplasm of the egg.

maternal mortality rate [MED] The number of deaths reported as due to puerperal causes in a calendar year per 100 live births reported in the same year and place.

maternal placenta [EMBRYO] The outer placental layer, developed from the decidua basalis.

maternity [BIOL] **1.** Motherhood. **2.** The state of being pregnant.

mat foundation [CIV ENG] A large, thick, usually reinforced concrete mat which transfers loads from a number of columns, or columns and walls, to the underlying rock or soil. Also known as raft foundation.

mathematical analysis *See* analysis.

mathematical biology [BIOL] A discipline that encompasses all applications of mathematics, computer technology, and quantitative theorizing to biological systems, and the underlying processes within the systems.

mathematical biophysics [BIOL] A discipline which attempts to utilize mathematics to explain biophysical processes.

mathematical check [COMPUT SCI] A programmed computer check of a sequence of operations, using the mathematical properties of that sequence.

mathematical climate [CLIMATOL] An elementary generalization of the earth's climatic pattern, based entirely on the annual cycle of the sun's inclination; this early climatic classification recognized three basic latitudinal zones (the summer-

less, intermediate, and winterless), which are now known as the Frigid, Temperate, and Torrid Zones, and which are bounded by the Arctic and Antarctic Circles and the Tropics of Cancer and Capricorn.

mathematical forecasting *See* numerical forecasting.

mathematical function program [COMPUT SCI] A set of routinely used mathematical functions, such as square root, which are efficiently coded and called for by special symbols.

mathematical geography [GEOGR] The branch of geography that deals with the features and processes of the earth, and their representations on maps and charts.

mathematical geology [GEOL] The branch of geology concerned with the study of probability distributions of values of random variables involved in geologic processes.

mathematical induction [MATH] A general method of proving statements concerning a positive integral variable: if a statement is proven true for $x = 1$, and if it is proven that, if the statement is true for $x = 1, \ldots, n$, then it is true for $x = n + 1$, it follows that the statement is true for any integer. Also known as complete induction.

mathematical logic [MATH] The study of mathematical theories from the viewpoint of model theory, recursive function theory, proof theory, and set theory.

mathematical model [MATH] **1.** A mathematical representation of a process, device, or concept by means of a number of variables which are defined to represent the inputs, outputs, and internal states of the device or process, and a set of equations and inequalities describing the interaction of these variables. **2.** A mathematical theory or system together with its axioms.

mathematical physics [PHYS] The study of the mathematical systems which represent physical phenomena; particular areas are, for example, quantum and statistical mechanics and field theory.

mathematical probability [MATH] The ratio of the number of mutually exclusive, equally likely outcomes of interest to the total number of such outcomes when the total is exhaustive. Also known as a priori probability.

mathematical programming *See* optimization theory.

mathematical software [COMPUT SCI] The set of algorithms used in a computer system to solve general mathematical problems.

mathematical subroutine [COMPUT SCI] A computer subroutine in which a well-defined mathematical function, such as exponential, logarithm, or sine, relates the output to the input.

mathematical table [MATH] A listing of the values of a function of one or several variables at a series of values of the arguments, usually equally spaced.

mathematics [SCI TECH] The deductive study of shape, quantity, and dependence; the two main areas are applied mathematics and pure mathematics, the former arising from the study of physical phenomena, the latter the intrinsic study of mathematical structures.

Matheson joint [DES ENG] A wrought-pipe joint made by enlarging the end of one pipe length to receive the male end of the next length.

Mathieu equation [MATH] A differential equation of the form $y'' + (a + b \cos 2x)y = 0$, whose solution depends on periodic functions.

Mathieu functions [MATH] Any solution of the Mathieu equation which is periodic and an even or odd function.

matico [BOT] *Piper angustifolium*. An aromatic wild pepper found in tropical America whose leaves are rich in volatile oil, gums, and tannins; leaves were used medicinally as a stimulant and hemostatic.

matico oil [MATER] An alcohol-soluble, yellowish-brown volatile oil distilled from the leaves or flowers of matico; chief constituents are asarone and methyl eugenol.

matildite [MINERAL] $AgBiS_2$ An iron black to gray, orthorhombic mineral consisting of silver bismuth sulfide; occurrence is massive or granular.

matinal [METEOROL] The morning winds, that is, an east wind.

mating [BIOL] The meeting of individuals for sexual reproduction.

matlockite [MINERAL] PbFCl A mineral consisting of lead chloride and fluoride.

m-atm *See* meter-atmosphere.

mat packs [MIN ENG] Timbers laid side by side into a solid mass 2 by 2½ feet (61 by 76 centimeters) square and 4–6 inches (10–15 centimeters) thick, kept together by wires through holes drilled through the edges of the mass, carried into a mine and built up to make effective roof supports.

Matricaria [BOT] A genus of weedy herbs having a strong odor and white and yellow disk flowers; chamomile oil is obtained from certain species.

matric forces [GEOL] Forces acting on soil water that are independent of gravity but exist due to the attraction of solid surfaces for water, the attraction of water molecules for each other, and a force in the air-water interface due to the polar nature of water.

matrix [COMPUT SCI] A latticework of input and output leads with logic elements connected at some of their intersections. [ELECTR] **1.** The section of a color television transmitter that transforms the red, green, and blue camera signals into color-difference signals and combines them with the chrominance subcarrier. Also known as color coder; color encoder; encoder. **2.** The section of a color television receiver that transforms the color-difference signals into the red, green, and blue signals needed to drive the color picture tube. Also known as color decoder; decoder. [ENG] A recessed mold in which something is formed or cast. [GRAPHICS] **1.** In a type-casting machine, the portion of the mold that forms the letter face. **2.** A heavy, unsized, unfinished paper that is used for molds for stereotype plates. [HISTOL] **1.** The intercellular substance of a tissue. Also known as ground substance. **2.** The epithelial tissue from which a toenail or fingernail develops. [MATER] A binding agent used to make an agglomerate mass. [MATH] A rectangular array of numbers or scalars from a vector space. [MET] **1.** The principal component of an alloy. **2.** The precisely shaped form used as the cathode in electroforming. [MYCOL] The substrate on or in which fungus grows. [PETR] The continuous, fine-grained material in which large grains of a sediment or sedimentary rock are embedded. Also known as groundmass.

matrix algebra [MATH] An algebra whose elements are matrices and whose operations are addition and multiplication of matrices.

matrix algebra tableau [COMPUT SCI] The current matrix at the end of an iteration while running a linear program.

matrix calculus [MATH] The treatment of matrices whose entries are functions as functions in their own right with a corresponding theory of differentiation; this has application to the study of multidimensional derivatives of functions of several variables.

matrix effects [ANALY CHEM] The enhancement or suppression of minor element spectral lines from metallic oxides during emission spectroscopy by the matrix element (such as graphite) used to hold the sample.

matrix element [MATH] One of the set of numbers which form a matrix. [QUANT MECH] The scalar product of a member of a complete, orthogonal set of vectors, representing states, with a vector which results from applying a specified operator to another member of this set.

matrix fiber *See* biconstituent fiber.

matrix game [MATH] A game involving two persons, which gives rise to a matrix representing the amount received by the two players. Also known as rectangular game.

matrix isolation [SPECT] A spectroscopic technique in which reactive species can be characterized by maintaining them in a very cold, inert environment while they are examined by an absorption, electron-spin resonance, or laser excitation spectroscope.

matrix mechanics [QUANT MECH] The theory of quantum mechanics developed by using the Heisenberg picture and representing operators by their matrix elements between eigenfunctions of the Hamiltonian operator; Heisenberg's original formulation of quantum mechanics.

matrix of a linear transformation [MATH] A unique matrix A, such that for a specified linear transformation L from one vector space to another, and for specified finite bases in each space, L applied to a vector is equal to A times that vector.

matrix porosity [GEOL] Core-sample porosity determined from a small sample of the core, in contrast to total porosity, where the whole core is used.

matrix printing [COMPUT SCI] High-speed printing in which characterlike configurations of dots are printed through the proper selection of wire ends from a matrix of wire ends. Also known as stylus printing; wire printing.

matrix rock *See* land pebble phosphate.

matrix sound system [ENG ACOUS] A quadraphonic sound

system in which the four input channels are combined into two channels by a coding process for recording or for stereo frequency-modulation broadcasting and decoded back into four channels for playback of recordings or for quadraphonic stereo reception.

matrix spectrophotometry [SPECT] Spectrophotometric analysis in which the specimen is irradiated in sequence at more than one wavelength, with the visible spectrum evaluated for the energy leaving for each wavelength of irradiation.

matrix storage [COMPUT SCI] A computer storage in which coordinates are used to address the locations or circuit elements. Also known as coordinate storage.

matrix theory [MATH] The algebraic study of matrices and their use in evaluating linear processes.

matrix velocity [GEOPHYS] The velocity of sound through a formation's rock matrix during an acoustic-velocity log.

matromycin *See* oleandomycin.

matte [MATER] Dull, as applied to appearance of a surface. [MET] An impure metallic sulfide mixture produced by smelting the sulfide ores of such metals as copper, lead, or nickel.

matte dip [MET] An etching solution which reacts with the surface of a metal, giving a dull finish.

matter [PHYS] The substance composing bodies that are perceptible to the senses; includes any entity possessing mass when at rest.

matter era [ASTRON] The period in the evolution of the universe, beginning roughly 10^5 years after the big bang, when the universe had cooled to the point at which electrons and protons were able to form neutral hydrogen atoms, and continuing to the present time, during which matter, in the form of atoms, is dominant over radiation.

matter wave *See* de Broglie wave.

matte smelting [MET] Smelting of copper-bearing materials in a reverberatory furnace.

Matteuci effect [PHYS] A phenomenon in which an electric potential difference appears between the ends of a ferromagnet that is twisted in a magnetic field.

Matthias' rules [SOLID STATE] Several empirical rules giving the dependence of the transition temperatures of superconducting metals and alloys on the position of the metals in the periodic table and in the composition of the alloys.

Matthiessen's rule [SOLID STATE] An empirical rule which states that the total resistivity of a crystalline metallic specimen is the sum of the resistivity due to thermal agitation of the metal ions of the lattice and the resistivity due to imperfections in the crystal.

mattock [DES ENG] A tool with the combined features of an adz, an ax, and a pick.

mattress array *See* billboard array.

maturation [BIOL] **1.** The process of coming to full development. **2.** The final series of changes in the growth and formation of germ cells.

mature [BIOL] **1.** Being fully grown and developed. **2.** Ripe. [FOOD ENG] Having attained the final state of processing, as certain wines. [GEOL] **1.** Pertaining to a topography or region, and to its landforms, having undergone maximum development and accentuation of form. **2.** Pertaining to the third stage of textural maturity of a clastic sediment. [PSYCH] Having the emotional qualities of a well-adjusted adult.

matureland [GEOL] The land surface which is characteristic of the mature stage in the erosion cycle.

mature soil *See* zonal soil.

maturity [GEOL] **1.** The second stage of the erosion cycle in the topographic development of a landscape or region characterized by numerous and closely spaced mature streams, reduction of level surfaces to slopes, large well-defined drainage systems, and the absence of swamps or lakes on the uplands. Also known as topographic maturity. **2.** A stage in the development of a shore or coast that begins with the attainment of a profile of equilibrium. **3.** The extent to which the texture and composition of a clastic sediment approach the ultimate end product. **4.** The stage of stream development at which maximum vigor and efficiency has been reached.

maturity index [GEOL] A measure of the progress of a clastic sediment in the direction of chemical or mineralogic stability; for example, a high ratio of quartz + cherts/feldspar + rock fragments indicates a highly mature sediment.

maturity-onset diabetes [MED] A type of diabetes mellitus which develops later in life; characterized by more gradual development and less severe symptoms than juvenile-onset diabetes.

maucherite [MINERAL] $Ni_{11}As_8$ A reddish silver-white mineral composed of nickel arsenide.

Mauler [ORD] Name given to a U.S. Army developed surface-to-air, lightweight, highly mobile, air defense missile for use in forward areas; it has infrared guidance.

maulstick *See* mahlstick.

maunder minimum [ASTRON] A period of time from about 1650 to 1710 when the sun did not appear to have sunspots.

Maunoir's hydrocele [MED] A congenital lymphatic cyst of the neck.

Maupertius' principle [MECH] The principle of least action is sufficient to determine the motion of a mechanical system.

Mauriac syndrome [MED] A complex of symptoms associated with diabetes mellitus in children including retarded growth, obesity, and enlargement of the liver, probably related to inadequate control of the condition.

Mauritius hemp [BOT] A hard fiber obtained from the leaves of the cabuya, grown on the island of Mauritius; not a true hemp.

mavar *See* parametric amplifier.

max *See* maximum.

max-flow min-cut theorem [IND ENG] In the analysis of networks, the concept that for any network with a single source and sink, the maximum feasible flow from source to sink is equal to the minimum cut value for any of the cuts of the network.

maxilla [ANAT] **1.** The upper jawbone. **2.** The upper jaw. [INV ZOO] Either of the first two pairs of mouthparts posterior to the mandibles in certain arthropods.

maxillary air sinus *See* maxillary sinus.

maxillary antrum *See* maxillary sinus.

maxillary arch *See* palatomaxillary arch.

maxillary artery [ANAT] A branch of the external carotid artery which supplies the deep structures of the face (internal maxillary) and the side of the face and nose (external maxillary).

maxillary hiatus [ANAT] An opening in the maxilla connecting the nasal cavity with the maxillary sinus.

maxillary nerve [ANAT] A somatic sensory branch of the trigeminal nerve; innervates the meninges, the skin of the upper portion of the face, upper teeth, and mucosa of the nose, palate, and cheeks.

maxillary process of the embryo [EMBRYO] An outgrowth of the dorsal part of the mandibular arch that forms the lateral part of the upper lip, the upper cheek region, and the upper jaw except the premaxilla.

maxillary sinus [ANAT] A paranasal air cavity in the body of the maxilla. Also known as maxillary air sinus; maxillary antrum.

maxilliped [INV ZOO] One of the three pairs of crustacean appendages immediately posterior to the maxillae.

maxillo-alveolar index [ANTHRO] Ratio of the breadth to the length of the alveolar arch, multiplied by 100.

maximal breathing capacity [PHYSIO] The greatest respiratory minute volume which an individual can produce during a given period of extremely forceful breathing.

maximal element *See* maximal member.

maximal flow [IND ENG] Maximum total flow from the source to the sink in a connected network.

maximal member [MATH] In a partially ordered set a maximal member is one for which no other element follows it in the ordering. Also known as maximal element.

maximal planar graph [MATH] A planar graph to which no new arcs can be added without forcing crossings and hence violating planarity.

maximax criterion [MATH] In decision theory, one of several possible prescriptions for making a decision under conditions of uncertainty; it prescribes the strategy which will maximize the maximum possible profit.

maxim criterion [MATH] One of several prescriptions for making a decision under conditions of uncertainty; it prescribes the strategy which will maximize the minimum profit. Also known as maximin criterion.

maximin criterion *See* maxim criterion.

maximizing a function [MATH] Finding the largest value assumed by a function.

maximum [MATH] The maximum of a real-valued function is the greatest value it assumes. Abbreviated max.

maximum allowable working pressure [MECH ENG] The maximum gage pressure in a pressure vessel at a designated

temperature, used for the determination of the set pressure for relief valves.

maximum angle of inclination [MECH ENG] The maximum angle at which a conveyor may be inclined and still deliver an amount of bulk material within a given time.

maximum available gain [ELECTR] The theoretical maximum power gain available in a transistor stage; it is seldom achieved in practical circuits because it can be approached only when feedback is negligible. Abbreviated MAG.

maximum average power output [ELECTR] In television, the maximum of radio-frequency output power that can occur under any combination of signals transmitted, averaged over the longest repetitive modulation cycle.

maximum belt slope [MECH ENG] A slope beyond which the material on the belt of a conveyor tends to roll downhill.

maximum belt tension [MECH ENG] The total of the starting and operating tensions in a conveyor.

maximum breathing capacity [PHYSIO] The greatest volume of air an individual can breathe voluntarily in 10–30 seconds; expressed as liters per minute. Abbreviated MBC.

maximum continuous load [MECH ENG] The maximum load that a boiler can maintain for a designated length of time.

maximum credible accident [NUCLEO] The most serious nuclear reactor accident that can be hypothesized from an adverse combination of equipment malfunction, operating errors, and other reasonable foreseen causes.

maximum demand [ELEC] The greatest average value of the power, apparent power, or current consumed by a customer of an electric power system, the averages being taken over successive time periods, usually 15 or 30 minutes in length.

maximum depression [ORD] The maximum vertical angle below the horizontal plane at which a piece of artillery can be laid and still deliver effective fire.

maximum ebb [OCEANOGR] The greatest speed of an ebb current.

maximum effective range [ORD] The greatest distance at which a weapon may be expected to fire accurately to inflict casualties or damage.

maximum elevation [ORD] The greatest vertical angle at which a gun or launcher can be laid; usually limited by the mechanical structure of the piece.

maximum flood [OCEANOGR] The greatest speed of a flood current.

maximum gradability [MECH ENG] Steepest slope a vehicle can negotiate in low gear; usually expressed in precentage of slope, namely, the ratio between the vertical rise and the horizontal distance traveled; sometimes expressed by the angle between the slope and the horizontal.

maximum keying frequency [ELECTR] In facsimile, the frequency in hertz that is numerically equal to the spot speed divided by twice the horizontal dimension of the spot.

maximum likelihood method [STAT] A technique in statistics where the likelihood distribution is so maximized as to produce an estimate to the random variables involved.

maximum-minimum principle *See* min-max theorem.

maximum modulating frequency [ELECTR] Highest picture frequency required for a facsimile transmission system; the maximum modulating frequency and the maximum keying frequency are not necessarily equal.

maximum-modulus theorem [MATH] For a complex analytic function in a closed bounded simply connected region its modulus assumes its maximum value on the boundary of the region.

maximum operating frequency [COMPUT SCI] The highest rate at which the modules perform iteratively and reliably.

maximum ordinate [MECH] Difference in altitude between the origin and highest point of the trajectory of a projectile.

maximum permissible concentration [MED] The maximum quantity/unit volume of radioactive material in air, water, and foodstuffs that is not considered an undue risk to human health.

maximum permissible dose [MED] The dose of ionizing radiation that a person may receive in his lifetime without appreciable bodily injury.

maximum producible oil index [PETRO ENG] An approximation of the maximum amount of oil per bulk formation volume that is producible with water drive.

maximum production life [MECH ENG] The length of time that a cutting tool performs at cutting conditions of maximum tool efficiency.

maximum retention time [ELECTR] Maximum time between writing into and reading an acceptable output from a storage element of a charge storage tube.

maximum signal level [ELECTR] In an amplitude-modulated facsimile system, the level corresponding to copy black or copy white, whichever has the highest amplitude.

maximum sound pressure [ACOUS] For any given cycle of a periodic wave, the maximum absolute value of the instantaneous sound pressure occurring during that cycle.

maximum subsidence [GEOL] The maximum amount of subsidence in a basin.

maximum thermometer [ENG] A thermometer that registers the maximum temperature attained during an interval of time.

maximum thrust [ORD] The highest thrust recorded on the thrust-time trace in missile testing.

maximum unambiguous range [ELECTROMAG] The range beyond which the echo from a pulsed radar signal returns after generation of the next pulse, and can thus be mistaken as a short-range echo of the next cycle.

maximum undistorted power output [ELECTR] Of a transducer, the maximum power delivered under specified conditions with a total harmonic output not exceeding a specified percentage.

maximum usable frequency [COMMUN] The upper limit of the frequencies that can be used at a specified time for point-to-point radio transmission involving propagation by reflection from the regular ionized layers of the ionosphere. Abbreviated MUF.

maximum-wind and shear chart [METEOROL] A synoptic chart on which are plotted the altitudes of the maximum wind speed, the maximum wind velocity (wind direction optional), plus the velocity of the wind at mandatory levels both above and below the level of maximum wind. Also known as max-wind and shear chart.

maximum-wind level [METEOROL] The height at which the maximum wind speed occurs, determined in a winds-aloft observation. Also known as max-wind level.

maximum-wind topography [METEOROL] The topography of the surface of maximum wind speed. Also known as max-wind topography.

maximum working area [IND ENG] That portion of the working area that is readily accessible to the hands of a worker when in his normal operating position.

maximum zonal westerlies [METEOROL] The average west-to-east component of wind over the continuous 20° belt of latitude in which this average is a maximum; it is usually found, in the winter season, in the vicinity of 40–60° north latitude.

maxoplasia [MED] Degenerative disease of the breast.

maxwell [ELECTROMAG] A centimeter-gram-second electromagnetic unit of magnetic flux, equal to the magnetic flux which produces an electromotive force of 1 abvolt in a circuit of one turn linking the flux, as the flux is reduced to zero in 1 second at a uniform rate. Abbreviated Mx. Also known as abweber (abWb); line of magnetic induction.

Maxwell body *See* Maxwell liquid.

Maxwell-Boltzmann density function *See* Maxwell-Boltzmann distribution.

Maxwell-Boltzmann distribution [STAT MECH] Any function giving the probability (or some function proportional to it) that a molecule of a gas in thermal equilibrium will have values of certain variables within given infinitesimal ranges, assuming that the gas molecules obey classical mechanics, and possibly making other assumptions; examples are the Maxwell distribution and the Boltzmann distribution. Also known as Maxwell-Boltzmann density function.

Maxwell-Boltzmann equation *See* Boltzmann transport equation.

Maxwell-Boltzmann statistics [STAT MECH] The classical statistics of identical particles, as opposed to the Bose-Einstein or Fermi-Dirac statistics. Also known as Boltzmann statistics.

Maxwell bridge [ELEC] A four-arm alternating-current bridge used to measure inductance (or capacitance) in terms of resistance and capacitance (or inductance); bridge balance is independent of frequency. Also known as Maxwell-Wien bridge; Wien-Maxwell bridge.

Maxwell distribution [STAT MECH] A function giving the number of molecules of a gas in thermal equilibrium whose velocities lie within a given, infinitesimal range of values,

assuming that the molecules obey classical mechanics, and do not interact. Also known as Maxwellian distribution.

Maxwell effect [OPTICS] Double refraction of a viscous liquid having anisotropic molecules, which results from components of the velocity gradient perpendicular to the fluid velocity itself.

Maxwell equal area rule [THERMO] At temperatures for which the theoretical isothermal of a substance, on a graph of pressure against volume, has a portion with positive slope (as occurs in a substance with liquid and gas phases obeying the Van der Waals equation), a horizontal line drawn at the equilibrium vapor pressure and connecting two parts of the isothermal with negative slope has the property that the area between the horizontal and the part of the isothermal above it is equal to the area between the horizontal and the part of the isothermal below it.

Maxwell equations *See* Maxwell field equations.

Maxwell field equations [ELECTROMAG] Four differential equations which relate the electric and magnetic fields to electric charges and currents, and form the basis of the theory of electromagnetic waves. Also known as electromagnetic field equations; Maxwell equations.

Maxwellian distribution *See* Maxwell distribution.

Maxwellian distribution law [STAT MECH] Equation relating the statistical distribution of speeds and energies of molecules of a pure gas at a uniform temperature where there are no convection currents.

Maxwellian equilibrium [STAT MECH] Thermal equilibrium of a gas, or of some group of particles, in which the velocity distribution of the particles is the Maxwell distribution corresponding to the temperature of the object with which they are in equilibrium.

Maxwellian gas [STAT MECH] A gas whose molecules have the Maxwell distribution of velocities.

Maxwellian view [OPTICS] A method of using an optical instrument in which a real image of a light source is focused on the pupil of the eye, instead of using an eyepiece.

Maxwell liquid [FL MECH] A liquid whose rate of deformation is the sum of a term proportional to the shearing stress acting on it and a term proportional to the rate of change of this stress. Also known as Maxwell body.

Maxwell primaries [OPTICS] The primary colors in a system of colorimetry devised by J.C. Maxwell; they are cyan, green, and magenta.

Maxwell relation [ELECTROMAG] According to Maxwell's electromagnetic theory, that relation wherein the dielectric constant of a substance equals the square of its index of refraction. [THERMO] One of four equations for a system in thermal equilibrium, each of which equates two partial derivatives, involving the pressure, volume, temperature, and entropy of the system.

Maxwell's coefficient of diffusion [FL MECH] A number in an equation for the difference between mean velocities of two gases which are allowed to mix, which determines the contribution to this quantity of the concentration gradient.

Maxwell's cyclic currents *See* mesh currents.

Maxwell's demon *See* demon of Maxwell.

Maxwell's displacement current *See* displacement current.

Maxwell's electromagnetic theory [ELECTROMAG] A mathematical theory of electric and magnetic fields which predicts the propagation of electromagnetic radiation, and is valid for electromagnetic phenomena where effects on an atomic scale can be neglected.

Maxwell's law [ELECTROMAG] A movable portion of a circuit will always move in such a direction as to give maximum magnetic flux linkages through the circuit.

Maxwell's stress functions [MECH] Three functions of position, ϕ_1, ϕ_2, and ϕ_3, in terms of which the elements of the stress tensor σ of a body may be expressed, if the body is in equilibrium and is not subjected to body forces; the elements of the stress tensor are given by $\sigma_{11} = \partial^2\phi_2/\partial x_3^2 + \partial^2\phi_3/\partial x_2^2$, $\sigma_{23} = -\partial^2\phi_1/\partial x_2\partial x_3$, and cyclic permutations of these equations.

Maxwell's stress tensor [ELECTROMAG] A second-rank tensor whose product with a unit vector normal to a surface gives the force per unit area transmitted across the surface by an electromagnetic field.

Maxwell's theorem [MECH] If a load applied at one point A of an elastic structure results in a given deflection at another point B, then the same load applied at B will result in the same deflection at A.

Maxwell's theory of light [OPTICS] An application of Maxwell's electromagnetic theory in which light is treated as a propagating electromagnetic wave.

Maxwell triangle [OPTICS] Color-matching chromaticity values plotted on an x,y diagram. Also known as x,y chromaticity diagram.

maxwell-turn [ELECTROMAG] A centimeter-gram-second electromagnetic unit of flux linkage, equal to the flux linkage of a coil consisting of one complete loop of wire through which passes a magnetic flux of one maxwell. Also known as line-turn.

Maxwell-Wagner mechanism [ELEC] A capacitor consisting of two parallel metal plates with two layers of material between them, one with vanishing conductivity, the other with finite conductivity and vanishing electric susceptibility.

Maxwell-Wien bridge *See* Maxwell bridge.

max-wind and shear chart *See* maximum-wind and shear chart.

max-wind level *See* maximum-wind level.

max-wind topography *See* maximum wind topography.

mayer [THERMO] A unit of heat capacity equal to the heat capacity of a substance whose temperature is raised 1° centigrade by 1 joule.

Mayer condensation theory [STAT MECH] A theory of the condensation and critical state of a system of chemically saturated molecules, in which the system is assumed to consist of independent clusters of molecules.

mayfly [INV ZOO] The common name for insects composing the order Ephemeroptera.

May-Grünwald stain [MATER] A saturated solution of methylene blue eosinate in methyl alcohol; used to stain blood. Also known as Jenner's stain.

mayonnaise [FOOD ENG] A semisolid emulsion prepared by whipping a mixture of raw eggs or egg yolks, vegetable oil, vinegar or lemon juice, salt, and condiments; used as a dressing.

maz-, mazo- [EMBRYO] A combining form denoting placenta.

mazaedium [BOT] The fruiting body of certain lichens, with the spores lying in a powdery mass in the capitulum. [MYCOL] A slimy layer on the hymenial surface of some ascomycetous fungi.

maze [PSYCH] A network of paths, blind alleys, and compartments; used in intelligence tests and in experimental psychology for developing learning curves.

mazopathy [MED] **1.** Disease of the placenta. **2.** *See* mastopathy.

mazopexy *See* mastopexy.

Mazzoni's corpuscle [ANAT] A specialized encapsulated sensory nerve end organ on a tendon in series with muscle fibers.

mb *See* millibar; millibarn.

MBC *See* maximum breathing capacity.

MBE *See* molecular beam epitaxy.

MBT *See* mercaptobenzothiazole.

mc *See* millihertz.

Mc *See* megahertz.

McArdle's syndrome [MED] A hereditary metabolic disorder caused by deficiency of muscle phosphorylase, with abnormal glycogen deposition in skeletal muscle leading to muscle fiber destruction. Also known as myophosphorylase deficiency glycogenosis.

M-C asphalt *See* medium-curing asphalt.

McBurney's incision [MED] A short diagonal incision in the lower right quadrant in which the muscle fibers are separated rather than cut; used for appendectomy.

McBurney's point [ANAT] A point halfway between the umbilicus and the anterior superior iliac spine; a point of extreme tenderness in appendicitis.

McCaa breathing device [MIN ENG] A self-contained, compressed-oxygen breathing apparatus designed by the U.S. Bureau of Mines for mine rescue work; it is carried on the back in a protective aluminum cover.

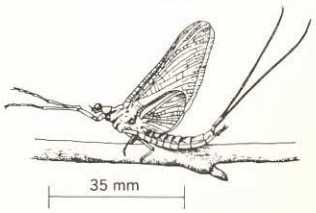
McCabe-Thiele diagram [CHEM ENG] Graphical method for calculation of the number of theoretical plates or contacting stages required for a given binary distillation operation.

mcd *See* millicurie-destroyed.

M center [SOLID STATE] A color center consisting of an F center combined with two ion vacancies.

MCG *See* magnetocardiograph.

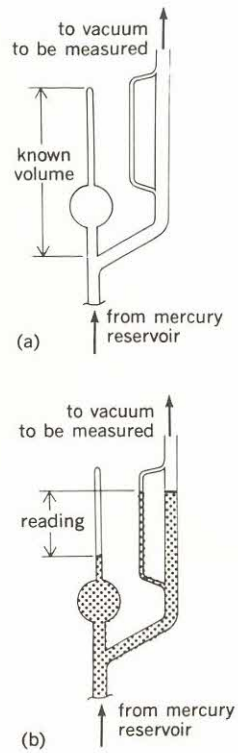
MAYFLY



Mayfly, adult male, *Hexagenia* species, in usual resting position. *(From A. H. Morgan, Field Book of Ponds and Streams, copyright 1930 by G. P. Putnam's Sons)*

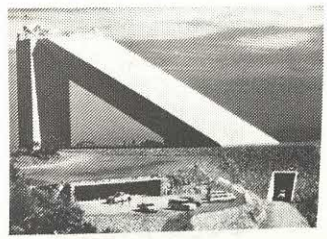
McGinty [MIN ENG] Three sheaves over which a rope is passed so as to take a course somewhat like that of the letter M.
mcgovernite *See* macgovernite.
McLeod gage [FL MECH] A type of instrument used to measure vacuum by measuring the height of a column of mercury supported by the gas whose pressure is to be measured, when this gas is trapped and compressed into a capillary tube.
McLuckie gas detector [MIN ENG] A portable nonautomatic means of analyzing air that can be used underground or aboveground if the air sample is brought out of the mine in small rubber bladders.
McMath telescope [OPTICS] A unique 60-inch (1.778-meter) solar telescope at Kitt Peak, Arizona, that has an unconventional configuration; the sun's light is reflected from an 80-inch (2.032-meter) mirror into a long, fixed tube.
McNally-Carpenter centrifuge [MIN ENG] A machine that removes water from fine coal; it has a cone-shaped rotating vertical element, into the top of which the wet feed is put by gravity; a distributing disk forces the material onto the screen or basket lining the cone; as the material approaches the cone bottom, the drying action increases until the dry coal is discharged from the bottom.
McNally-Norton jig [MIN ENG] A device used to clean raw coal by carrying it to a wash box and using water whose level rises and falls as a result of air pulsations; the incoming coal is suspended by the pulsating water while the heavier refuse sinks to the bottom; the coal then spills over into the next wash box where the process is repeated, and the clean coal is discharged by the dewatering screens.
McNally tube [ELECTR] Reflex klystron tube, the frequency of which may be electrically controlled over a wide range; used as a local oscillator.
McNally-Vissac dryer [MIN ENG] A coal dryer that operates on the convection from the heavy forced draft from a coal-fired furnace; it consists of an inclined reciprocating screen over which coal moves; moisture is removed by the hot air from the furnace passing down through the bed of coal.
M-component hypergammaglobulinemia [MED] A form of hypergammaglobulinemia characterized by a single, prominent, more or less narrow band occurring from the slow gamma to the fast alpha-1 region of the electrophoretic strip.
M contour [CONT SYS] A line on a Nyquist diagram connecting points having the same magnitude of the primary feedback ratio.
McQuaid-Ehn test [MET] A test for determining the grain-size characteristics of a steel in which a sample is carburized for 8 hours at 1700°F (927°C) and cooled slowly; the high-carbon case on slow cooling will reject cementite at the austenite grain boundaries and, by polishing and etching, the grains will clearly be seen under a microscope.
md *See* millidarcy.
Md *See* mendelevium.
M damage [ORD] Damage causing immobilization of a combat vehicle.
M-derived filter [ELECTR] A filter consisting of a series of T or pi sections whose impedances are matched at all frequencies, even though the sections may have different resonant frequencies.
M-design bit [DES ENG] A long-shank, box-threaded core bit made to fit M-design core barrels.
M-design core barrel [DES ENG] A double-tube core barrel in which a 2½°-taper core lifter is carried inside a short tubular sleeve coupled to the bottom end of the inner tube, and the sleeve extends downward inside the bit shank to within a very short distance behind the face of the core bit.
MDF bearing indicator [NAV] A manual direction finder (MDF) indicator operated manually and used with a radio direction finder to indicate the relative, magnetic, or true bearing (or reciprocal) of a transmitter.
M display [ELECTR] A modified radarscope A display in which target distance is determined by moving an adjustable pedestal signal along the baseline until it coincides with the horizontal position of the target deflection.
MEA *See* 2-aminoethanethiol; minimum enroute instrument altitude.
meaconing [ELECTROMAG] A system for receiving electromagnetic signals and rebroadcasting them with the same frequency so as, for instance, to confuse navigation; a confusion reflector, such as chaff, is an example.
meadow [ECOL] A vegetation zone which is a low grassland, dense and continuous, variously interspersed with forbs but few if any shrubs. Also known as pelouse; Wiesen. [ENG] Range of air-fuel ratio within which smooth combustion may be had.
meadow ore *See* bog iron ore.
mealybug [INV ZOO] Any of various scale insects of the family Pseudococcidae which have a powdery substance covering the dorsal surface; all are serious plant pests.
Mealy machine [COMPUT SCI] A sequential machine in which the output depends on both the current state of the machine and the input.
mean [MATH] A single number that typifies a set of numbers, such as the arithmetic mean, the geometric mean, or the expected value. Also known as mean value.
mean-average boiling point [CHEM ENG] Pseudo boiling point for a hydrocarbon mixture; calculated from the ASTM distillation curve's volumetric average boiling point.
mean British thermal unit *See* British thermal unit.
mean calorie [THERMO] One-hundredth of the heat needed to raise 1 gram of water from 0 to 100°C.
mean camber line [AERO ENG] A line on a cross section of a wing of an aircraft which is equidistant from the upper and lower surfaces of the wing.
mean carrier frequency [ELECTR] Average carrier frequency of a transmitter corresponding to the resting frequency in a frequency-modulated system.
mean chart [METEOROL] Any chart on which isopleths of the mean value of a given meteorological element are drawn. Also known as mean map.
mean chord [AERO ENG] That chord of an airfoil that is equal to the sum of all the airfoil's chord lengths divided by the number of chord lengths; equivalently, that chord whose length is equal to the area of the airfoil section divided by the span.
mean depth [HYD] Average water depth in a stream channel or conduit computed by dividing the cross-sectional area by the surface width.
meander [HYD] A sharp, sinuous loop or curve in a stream, usually part of a series. [OCEANOGR] A deviation of the flow pattern of a current.
meander bar *See* point bar.
meander belt [GEOL] The zone along the floor of a valley across which a meandering stream periodically shifts its channel.
meander core [GEOL] A hill encircled by a stream meander. Also known as rock island.
meandering stream [HYD] A stream having a pattern of successive meanders. Also known as snaking stream.
meander niche [GEOL] A conical or crescentic opening in the wall of a cave formed by downward and lateral stream erosion.
meander plain [GEOL] A plain built by the meandering process, or a plain of lateral accretion.
meander scar [GEOL] A crescentic, concave mark on the face of a bluff or valley wall formed by a meandering stream.
meander spur [GEOL] An undercut projection of high land that extends into the concave part of, and is enclosed by, a meander.
mean deviation *See* average deviation.
mean difference [STAT] The average of the absolute values of the $n(n-1)/2$ differences between pairs of elements in a statistical distribution that has n elements.
mean diurnal high-water inequality [OCEANOGR] Half the average difference between the heights of the two high waters of each tidal day over a 19-year period; it is obtained by substracting the mean of all high waters from the mean of the higher high waters.
mean diurnal low-water inequality [OCEANOGR] Half the average difference between the heights of the two low waters of each tidal day over a 19-year period; it is obtained by subtracting the mean of all lower low waters from the mean of the low waters.
mean draft [NAV ARCH] The mean of the drafts at the bow and the stern; for a vessel with a straight keel, the draft at the midpoint of the waterline length.
mean effective pressure [MECH ENG] A term commonly used in the evaluation for positive displacement machinery performance which expresses the average net pressure difference in pounds per square inch on the two sides of the piston in engines, pumps, and compressors. Abbreviated mep; mp. Also known as mean pressure.

McLEOD GAGE



McLeod gage in *(a)* filling (charging) position, and *(b)* measuring position.

McMATH TELESCOPE



McMath 60-inch (1.524-meter) solar telescope, Kitt Peak, Arizona.

mean free path [ACOUS] For sound waves in an enclosure, the average distance sound travels between successive reflections in the enclosure. [PHYS] The average distance traveled between two similar events, such as elastic collisions of molecules in a gas, of electrons or phonons in a crystal, or of neutrons in a moderator.

mean height of burst [ORD] Average of the heights of bursts of a group of shots fired with the same firing data.

mean higher high water [OCEANOGR] The average height of higher high waters at a place over a 19-year period.

mean high water [OCEANOGR] The average height of all high waters recorded at a given place over a 19-year period.

mean high-water lunitidal interval [OCEANOGR] The average interval of time between the transit (upper or lower) of the moon and the next high water at a place. Also known as corrected establishment.

mean high-water neaps [OCEANOGR] The average height of the high waters of neap tides. Also known as neap high water.

mean high-water springs [OCEANOGR] The average height of the high waters of spring tides. Also known as high-water springs; spring high water.

mean latitude [GEOD] Half the arithmetical sum of the latitudes of two places on the same side of the equator; mean latitude is labeled N or S to indicate whether it is north or south of the equator.

mean life [PHYS] The average time during which a system, such as an atom, nucleus, or elementary particle, exists in a specified form; for a radionuclide or an excited state of an atom or nucleus, it is the reciprocal of the decay constant. Also known as average life; lifetime.

mean lower low water [OCEANOGR] The average height of the lower low waters at a place over a 19-year period.

mean lower low-water springs [OCEANOGR] The average height of lower low-water springs at a place.

mean low water [OCEANOGR] The average height of all low waters recorded at a given place over a 19-year period.

mean low-water lunitidal interval [OCEANOGR] The average interval of time between the transit (upper or lower) of the moon and the next low water at a place.

mean low-water neaps [OCEANOGR] The average height of the low water at neap tides. Also known as low-water neaps; neap low water.

mean low-water springs [OCEANOGR] The average height of the low waters of spring tides; this level is used as a tidal datum in some areas. Also known as low-water springs; spring low water.

mean map *See* mean chart.

mean motion [ASTRON] The speed which a planet or its satellite would have if it were moving in a circular orbit with radius equal to its distance from the sun or a central planet with a period equal to its actual period.

mean neap range *See* neap range.

mean neap rise [OCEANOGR] The height of mean high-water neaps above the chart datum.

mean noon [ASTRON] Twelve o'clock mean time, or the instant the mean sun is over the upper branch of the meridian; it may be either local or Greenwich, depending upon the reference meridian.

mean normal stress [MECH] In a system stressed multiaxially, the algebraic mean of the three principal stresses.

mean place [ASTRON] The position of a star on the celestial sphere as it would be observed from the center of the sun, referred to the mean celestial equator and celestial equinox for the beginning of the year of observation.

mean point of impact [ORD] The point which is at the geometrical center of all the points of impact of the several shots of a salvo, excluding wild shots; when firing time-fused projectiles, the point of detonation of such a projectile is considered to be the point of impact.

mean point of impact error [ORD] Distance between the mean point of impact and the target.

mean power of a radio transmitter [ELECTR] Power supplied to the antenna transmission line by a transmitter during normal operation, averaged over a time sufficiently long compared with the period of the lowest frequency encountered in the modulation; a time of $\frac{1}{10}$ second during which the mean power is greatest will be selected normally.

mean pressure *See* mean effective pressure.

mean proportional [MATH] For two numbers a and b, a number x, such that $x/a = b/x$.

mean range [OCEANOGR] The difference in the height between mean high water and mean low water. [ORD] Average distance reached by a group of shots fired with the same firing data. [SCI TECH] The average difference in the extreme values of a variable quantity.

mean rank method [STAT] A method of handling data which has the same observed frequency occurring at two or more consecutive ranks; it consists of assigning the average of the ranks as the rank for the common frequency.

mean rise interval [OCEANOGR] The average interval of time between the transit (upper or lower) of the moon and the middle of the period of rise of the tide at a place; it may be either local or Greenwich, depending on the transit to which it is referred, but the local interval is assumed unless otherwise specified.

mean rise of tide [OCEANOGR] The height of mean high water above the chart datum.

mean river level [HYD] The average height of the surface of a river at any point for all stages of the tide over a 19-year period.

mean sea level [OCEANOGR] The average sea surface level for all stages of the tide over a 19-year period, usually determined from hourly height readings from a fixed reference level.

means-ends analysis [COMPUT SCI] A method of problem solving in which the difference between the form of the data in the present and desired situations is determined, and an operator is then found to transform from one into the other, or, if this is not possible, objects between the present and desired objects are created, and the same procedure is then repeated on each of the gaps between them.

mean sidereal time [ASTRON] Sidereal time adjusted for nutation, to eliminate slight irregularities in the rate.

mean solar day [ASTRON] The duration of one rotation of the earth on its axis, with respect to the mean sun; the length of the mean solar day is 24 hours of mean solar time or $24^h\ 03^m\ 56.555^s$ of mean sidereal time.

mean solar second [ASTRON] A unit equal to 1/86,400 of a mean solar day.

mean solar time [ASTRON] Time that has the mean solar second as its unit, and is based on the mean sun's motion.

mean specific heat [THERMO] The average over a specified range of temperature of the specific heat of a substance.

mean spherical intensity [OPTICS] The luminous intensity of a light source averaged over all directions.

mean spring range *See* spring range.

mean spring rise [OCEANOGR] The height of mean high-water springs above the chart datum.

mean square deviation [STAT] A measure of the extent to which a collection $v_1, v_2, \ldots, v_n$ of numbers is unequal; it is given by the expression $(1/n)[(v_1 - \bar{v})^2 + \ldots + (v_n - \bar{v})^2]$, where $\bar{v}$ is the mean of the numbers.

mean-square-error criterion [CONT SYS] Evaluation of the performance of a control system by calculating the square root of the average over time of the square of the difference between the actual output and the output that is desired.

mean stress [MECH] **1.** The algebraic mean of the maximum and minimum values of a periodically varying stress. **2.** *See* octahedral normal stress.

mean sun [ASTRON] A fictitious sun conceived to move eastward along the celestial equator at a rate that provides a uniform measure of time equal to the average apparent time; used as a reference for reckoning time, such as mean time or zone time.

mean temperature [METEOROL] The average temperature of the air as indicated by a properly exposed thermometer during a given time period, usually a day, month, or year.

mean temperature difference [CHEM ENG] In heat exchange calculations, a pseudo average temperature difference between the warmer and colder fluids at inlet and outlet conditions.

Meantes [VERT ZOO] The mud eels, a small suborder of the Urodela including three species of aquatic eellike salamanders with only anterior limbs.

mean tide *See* half tide.

mean tide level [OCEANOGR] The tide level halfway between mean high water and mean low water.

mean time [ASTRON] Time based on the rotation of the earth relative to the mean sun.

mean time between failures [COMPUT SCI] A measure of the reliability of a computer system, equal to average operating time of equipment between failures, as calculated on a statistical

basis from the known failure rates of various components of the system. Abbreviated MTBF.

meantime screw [HOROL] A screw in a watch balance, used to regulate precisely the speed of oscillation.

mean time to failure [ENG] A measure of reliability of a piece of equipment, giving the average time before the first failure.

mean time to repair [ENG] A measure of reliability of a piece of repairable equipment, giving the average time between repairs.

mean trajectory [MECH] The trajectory of a missile that passes through the center of impact or center of burst.

mean value [MATH] **1.** For a function $f(x)$ defined on an interval (a,b), the integral from a to b of $f(x)\,dx$ divided by $b - a$. **2.** *See* mean.

mean value theorem *See* first law of the mean.

mean velocity [PHYS] The average value of the velocities of a group of particles, such as the molecules of a gas.

mean water level [OCEANOGR] The average surface level of a body of water.

measles [MED] An acute, highly infectious viral disease with cough, fever, and maculopapular rash; the appearance of Koplik spots on the oral mucous membranes marks the onset. Also known as rubeola.

measles encephalitis [MED] Acute disseminated encephalitis following measles.

measles immune globulin [IMMUNOL] Sterile human globulin used to provide passive immunization against measles.

measles virus vaccine [IMMUNOL] A suspension of live attenuated or inactivated measles virus used for active immunization against measles.

measly [FOOD ENG] Of meat, containing larval tapeworms. [MED] Infected with measles.

measurable function [MATH] **1.** A real valued function f defined on a measurable space X, where for every real number a all those points x in X for which $f(x) \geq a$ form a measurable set. **2.** A function on a measurable space to a measurable space such that the inverse image of a measurable set is a measurable set.

measurable set [MATH] A member of the sigma-algebra of subsets of a measurable space.

measurable space [MATH] A set together with a sigma-algebra of subsets of this set.

measurand transmitter [COMMUN] A telemetry transmitter that transmits a signal modulated according to the values of the quantity being measured.

measure [MATH] A nonnegative real valued function m defined on a sigma-algebra of subsets of a set S whose value is zero on the empty set, and whose value on a countable union of disjoint sets is the sum of its values on each set.

measured daywork [IND ENG] Work done for an hourly wage on which specific productivity levels have been determined but which provides no incentive pay.

measured drilling depth [ENG] The apparent depth of a borehole as measured along its longitudinal axis.

measured mile [CIV ENG] The distance of 1 mile (1609.344 meters), the units of which have been accurately measured and marked. [NAV] A length of 1 nautical mile (1852 meters), the limits of which have been accurately measured and are indicated by ranges ashore; used by vessels to calibrate logs, engine revolution counters, and such, and to determine speed.

measured ore *See* developed reserves.

measured relieving capacity [DES ENG] The measured amounts of fluid which can be exhausted through a relief device at its rated operating pressure.

measured service [COMMUN] Telephone service for which charge is made according to the measured amount of usage.

measurement [SCI TECH] The process of determining the value of some quantity in terms of a standard unit.

measurement ton *See* ton.

measure space [MATH] A set together with a sigma-algebra of subsets of the set and a measure defined on this sigma-algebra.

measure zero [MATH] **1.** A set has measure zero if it is measurable and the measure of it is zero. **2.** A subset of euclidean n-dimensional space which has the property that for any positive number ϵ there is a covering of the set by n-dimensional rectangles such that the sum of the volumes of the rectangles is less than ϵ.

measuring chute [MIN ENG] An ore bin or coal bin installed adjacent to the shaft bottom in skip winding and having a capacity equal to that of the skip used; ensures rapid, correct loading of skips without spillage. Also known as measuring pocket.

measuring day [MIN ENG] The day when work is measured and recorded for assessing the wages.

measuring machine [ENG] A device in which an astronomical photographic plate is viewed through a fixed low-power microscope with cross-hairs and which is mounted on a carriage that is moved by micrometer screws equipped with scales, in order to measure the relative positions of images on the plate.

measuring pocket *See* measuring chute.

meatal plate [EMBRYO] A mass of ectodermal cells on the bottom of the branchial groove in a 2-month embryo.

meatotomy [MED] Incision into and enlargement of a meatus.

meatus [ANAT] A natural opening or passage in the body.

mecarbam [ORG CHEM] $C_{10}H_{20}O_5PS_2$ An oily liquid, used as an insecticide and miticide for pests of rice, cabbage, and onions. Also known as *S*-(*N*-ethoxycarbonyl-*N*-methylcarbamoylmethyl)-*O*,*O*-diethylphosphorodithioate.

mecarphon [ORG CHEM] $C_7H_{14}O_4PS_2$ A solid with a melting point of 36°C; insoluble in water; used as an insecticide and miticide for soil insects and for mite and aphid control. Also known as *S*-(*N*-methoxycarbonyl-*N*-methylcarbamoylmethyl)-methyl-*O*-methyl phosphorodithioate.

mechanical [ENG] Of, pertaining to, or concerned with machinery or tools. [GRAPHICS] A finished copy that usually contains hand lettering, type proofs, and art especially positioned and mounted so that a photochemical reproduction can be made on a letterpress, offset, or other printing plate. Also known as keyline layout; paste-up.

mechanical advantage [MECH ENG] The ratio of the force produced by a machine such as a lever or pulley to the force applied to it.

mechanical analog computer [COMPUT SCI] A machine aid to computation in which variables are represented as continuously variable displacements or motions of mechanical elements, such as gears and shafts.

mechanical analysis [MECH ENG] Mechanical separation of soil, sediment, or rock by sieving, screening, or other means to determine particle-size distribution.

mechanical area [BUILD] The areas in a building that include equipment rooms, shafts, stacks, tunnels, and closets used for heating, ventilating, air conditioning, piping, communication, hoisting, conveying, and electrical services.

mechanical bearing cursor *See* bearing cursor.

mechanical birefringence [OPTICS] A change in the double refraction of a solid material when it is subjected to stress. Also known as stress birefringence.

mechanical classification [MECH ENG] A sorting operation in which mixtures of particles of mixed sizes, and often of different specific gravities, are separated into fractions by the action of a stream of fluid, usually water.

mechanical classifier [MECH ENG] Any of various machines that are commonly used to classify mixtures of particles of different sizes, and sometimes of different specific gravities; the Dorr classifier is an example.

mechanical comparator [ENG] A contact comparator in which movement is amplified usually by a rack, pinion, and pointer or by a parallelogram arrangement.

mechanical computer [COMPUT SCI] A machine such as a Charles Babbage's analytical engine.

mechanical damping [ENG ACOUS] Mechanical resistance which is generally associated with the moving parts of an electromechanically transducer such as a cutter or a reproducer.

mechanical dewaxing [PETRO ENG] A dewaxing procedure in which cooled oil is forced through wax presses, separating the solid wax particles from the oil.

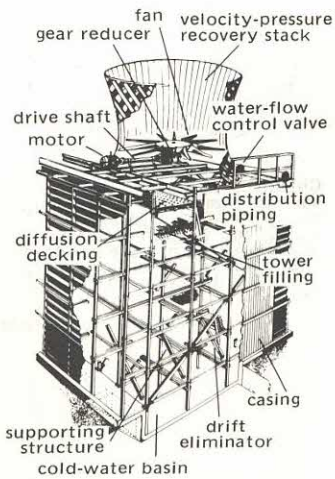
mechanical dialer *See* automatic dialer.

mechanical differential analyzer [COMPUT SCI] An analog computer using interconnected surfaces to solve differential equations, such as the device developed by Vannevar Bush at Massachusetts Institute of Technology.

mechanical draft [MECH ENG] A draft that depends upon the use of fans or other mechanical devices; may be induced or forced.

mechanical-draft cooling tower [MECH ENG] Cooling tower that depends upon fans for introduction and circulation of its air supply.

MECHANICAL-DRAFT COOLING TOWER

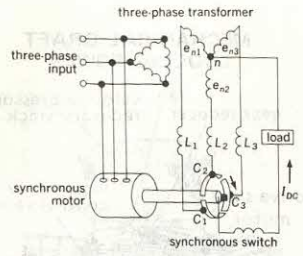


An induced-draft cross-flow cooling tower showing component parts. *(N. P. Green and Associates)*

MECHANICAL LIFT DOCK

An electromechanical platform-lift dry dock, capacity 4800 tons (4350 metric tons). A submarine is on the multiwheel cradle. A tow-unit is moving into position to pull the vessel ashore. *(Pearlson Engineering Co.)*

MECHANICAL RECTIFIER



Circuit of mechanical rectifier used on three-phase system; e_{n_1}, e_{n_2}, and e_{n_3} are transformers. L_1, L_2, and L_3 are nonlinear reactors which provide good commutation at contacts C_1, C_2, and C_3, and limit short circuit current.

mechanical drawing [GRAPHICS] Drawing with the aid of instruments.

mechanical dysmenorrhea [MED] Painful menstruation due to mechanical obstruction of the discharge of menstrual fluids. Also known as obstructive dysmenorrhea.

mechanical efficiency [MECH ENG] In an engine, the ratio of brake horsepower to indicated horsepower.

mechanical engineering [ENG] The branch of engineering that deals with the generation, transmission, and utilization of heat and mechanical power and with the production of tools, machines, and their products.

mechanical equation of state [MET] An equation that expresses the relation of stress, strain, strain rate, and temperature for a metal.

mechanical equivalent of heat [THERMO] The amount of mechanical energy equivalent to a unit of heat.

mechanical equivalent of light [OPTICS] The ratio of the radiant power emitted by a monochromatic light source whose wavelength is that at which the sensitivity of phototopic vision is greatest (about 555 nanometers), to its luminous flux measured in lumens.

mechanical erosion *See* corrasion.

mechanical expression *See* expression.

mechanical filter [ELECTR] Filter, used in intermediate-frequency amplifiers of highly selective superheterodyne receivers, consisting of shaped metal rods that act as coupled mechanical resonators when used with piezoelectric input and output transducers. Also known as mechanical wave filter. [PETRO ENG] Granule-packed steel shell used to filter suspended floc or undissolved solids out of treated waterflood water; granules can be graded sand and gravel, anthracite coal, graphitic ore, or aluminum-oxide plates with granular filter medium.

mechanical flotation cell [MIN ENG] A device that separates minerals from ore water pulp; it consists of a cell in which the pulp is kept mixed and moving by an impeller at the bottom of the cell; the impeller pulls air down the standpipe and disperses it as bubbles through the pulp; the floatable minerals concentrate in the froth above, and the pulp is removed by a scraper.

mechanical hygrometer [ENG] A hygrometer in which an organic material, most commonly a bundle of human hair, which expands and contracts with changes in the moisture in the surrounding air or gas is held under slight tension by a spring, and a mechanical linkage actuates a pointer.

mechanical hysteresis [MECH] The dependence of the strain of a material not only on the instantaneous value of the stress but also on the previous history of the stress; for example, the elongation is less at a given value of tension when the tension is increasing than when it is decreasing.

mechanical impedance [MECH] The complex ratio of a phasor representing a sinusoidally varying force applied to a system to a phasor representing the velocity of a point in the system.

mechanical instability *See* absolute instability.

mechanical integrator [COMPUT SCI] A mechanical device which draws the graph of the integral of a function when a tracing point is passed over a graph of the function.

mechanical jamming *See* passive jamming.

mechanical lift dock [CIV ENG] A type of dry dock or marine elevator in which a vessel, after being placed on the keel and bilge blocks in the dock, is bodily lifted clear of the water so that work may be performed on the underwater body.

mechanical linkage [MECH ENG] A set of rigid bodies, called links, joined together at pivots by means of pins or equivalent devices.

mechanical loader [MECH ENG] A power machine for loading mineral, coal, or dirt.

mechanically foamed plastic [MATER] A foamed plastic having its cellular structure produced by gases that are physically incorporated.

mechanical mass [QUANT MECH] The part of a particle's mass which is supposed to exist in the absence of any interaction of the particle with itself through a field.

mechanical metallurgy [MET] The science and technology of the behavior of metals relating to mechanical forces imposed on them; includes rolling, extruding, deep drawing, bending, and other processes.

mechanical modulator [ELEC] A device that varies a carrier wave by moving some part of a circuit element.

mechanical mucking [ENG] Loading of dirt or stone in tunnels or mines by machines.

mechanical mule [ORD] Popular name for a lightweight, low-silhouette United States infantry light weapons carrier, powered by an opposed-cylinder engine.

mechanical ohm [MECH] A unit of mechanical resistance, reactance, and impedance, equal to a force of 1 dyne divided by a velocity of 1 centimeter per second.

mechanical oil valve [PETRO ENG] A float-operated liquid-level control valve used to control liquid flow out of oil-lease gas-oil separator tank systems.

mechanical oscillograph *See* direct-writing recorder.

mechanical patent [ENG] A patent granted for an inventive improvement in a process, manufacture, or machine.

mechanical plating [MET] Deposition of one metal on another by a cold-peening process, such as tumbling.

mechanical plotting board *See* coordinate plotter.

mechanical press [MECH ENG] A press whose slide is operated by mechanical means.

mechanical property [MECH] A property that involves a relationship between stress and strain or a reaction to an applied force.

mechanical puddling *See* vibration puddling.

mechanical pulp [MATER] Wood pulp produced by grinding and soaking the wood fibers. Also known as groundwood pulp.

mechanical pulping [MECH ENG] Mechanical, rather than chemical, recovery of cellulose fibers from wood; unpurified, finely ground wood is made into newsprint, cheap Manila papers, and tissues.

mechanical pump [MECH ENG] A pump through which fluid is conveyed by direct contact with a moving part of the pumping machinery.

mechanical reactance [MECH] The imaginary part of mechanical impedance.

mechanical rectifier [ELEC] A rectifier in which rectification is accomplished by mechanical action, as in a synchronous vibrator.

mechanical refrigeration [MECH ENG] The removal of heat by utilizing a refrigerant subjected to cycles of refrigerating thermodynamics and employing a mechanical compressor.

mechanical replacement [COMPUT SCI] The replacement of one piece of hardware by another piece of hardware at the instigation of the manufacturer.

mechanical resistance *See* resistance.

mechanical rotational impedance *See* rotational impedance.

mechanical rotational reactance *See* rotational reactance.

mechanical rotational resistance *See* rotational resistance.

mechanical scale [ENG] A weighing device that incorporates a number of levers with precisely located fulcrums to permit heavy objects to be balanced with counterweights or counterpoises.

mechanical scanner [COMPUT SCI] In optical character recognition, a device that projects an input character into a rotating disk, on the periphery of which is a series of small, uniformly spaced apertures; as the disk rotates, a photocell collects the light passing through the apertures.

mechanical seal [MECH ENG] Mechanical assembly that forms a leakproof seal between flat, rotating surfaces to prevent high-pressure leakage.

mechanical sediment *See* clastic sediment.

mechanical separation [MECH ENG] A group of industrial operations by means of which particles of solid or drops of liquid are removed from a gas or liquid, or are separated into individual fractions, or both, by gravity separation (settling), centrifugal action, and filtration.

mechanical setting [MECH ENG] Producing bits by setting diamonds in a bit mold into which a cast or powder metal is placed, thus embedding the diamonds and forming the bit crown; opposed to hand setting. Also known as cast setting; machine setting; sinter setting.

mechanical shovel [MECH ENG] A loader limited to level or slightly graded drivages; when full, the shovel is swung over the machine, and the load is discharged into containers or vehicles behind.

mechanical splice [ENG] A splice made to terminate wire rope by pressing one or more metal sleeves over the rope junction.

mechanical spring *See* spring.

mechanical stage [ENG] A stage on a microscope provided

with a mechanical device for positioning or changing the position of a slide.

mechanical stepping motor [ELEC] A device in which a voltage pulse through a solenoid coil causes reciprocating motion by a solenoid plunger, and this is transformed into rotary motion through a definite angle by ratchet-and-pawl mechanisms or other mechanical linkages.

mechanical stoker *See* automatic stoker.

mechanical telemetry [COMMUN] Telemetry by mechanical linkages through shafts and gear trains over distances of a few feet, or by propagation of pressure or acoustic waves through fluid media over distances of several hundred feet.

mechanical tilt [ELECTR] **1.** Vertical tilt of the mechanical axis of a radar antenna. **2.** The angle indicated by the tilt indicator dial.

mechanical torque converter [MECH ENG] A torque converter, such as a pair of gears, that transmits power with only incidental losses.

mechanical translation [COMPUT SCI] Automatic translation of one language into another by means of a computer or other machine that contains a dictionary look-up in its memory, along with the programs needed to make logical choices from synonyms, supply missing words, and rearrange word order as required for the new language. Also known as machine translation.

mechanical twin [MET] A twin formed in a metal crystal by plastic deformation, involving shear of the lattice.

mechanical units [MECH] Units of length, time, and mass, and of physical quantities derivable from them.

mechanical vibration [MECH] A motion, usually unintentional and often undesirable, of parts of machines and structures.

mechanical wave filter *See* mechanical filter.

mechanical weathering [GEOL] The process of weathering by which physical forces break down or reduce a rock to smaller and smaller fragments, involving no chemical change. Also known as physical weathering.

mechanical working [MET] Formation of a desired shape and physical properties of a metal by subjecting it to pressure by rolls, presses, or hammers.

mechanical yielding prop [MIN ENG] A steel prop in which yield is controlled by friction between two sliding surfaces or telescopic tubes. Also known as friction yielding prop.

mechanics [PHYS] **1.** In the original sense, the study of the behavior of physical systems under the action of forces. **2.** More broadly, the branch of physics which seeks to formulate general rules for predicting the behavior of a physical system under the influence of any type of interaction with its environment.

mechanism [MECH ENG] That part of a machine which contains two or more pieces so arranged that the motion of one compels the motion of the others.

mechanize [MECH ENG] **1.** To substitute machinery for human or animal labor. **2.** To produce or reproduce by machine. [ORD] To equip a military force with armed and armored vehicles.

mechanized *See* machine-sensible.

mechanized dew-point meter *See* dew-point recorder.

mechanized gun [ORD] Gun mounted on, and fired from, a motor vehicle; usually an artillery gun mounted on an armored, wheeled or track-laying vehicle.

mechanocaloric effect [CRYO] An effect resulting from the fact that a temperature gradient in helium II is invariably accompanied by a pressure gradient, and conversely; examples are the fountain effect, and the heating of liquid helium left behind in a container when part of it leaks out through a small orifice.

mechanochemical effect [PHYS CHEM] Changes in the dimensions of certain polymers, particularly photoelectrolytic gels and crystalline polymers, in response to changes in their chemical environment.

mechanochemistry [PHYS CHEM] The study of the conversion of mechanical energy into chemical energy in polymers.

mechanomotive force [MECH] The root-mean-square value of a periodically varying force.

mechanooptical vibrometer [ENG] A vibrometer in which the motion given to a probe by a surface whose vibration amplitude is to be measured is used to rock a mirror; a light beam reflected from the mirror and focused onto a scale provides an indication of the vibration amplitude.

mechanophotochemistry [PHYS CHEM] The study of changes in the dimensions of certain photoresponsive polymers upon exposure to light.

mechanoreceptor [PHYSIO] A receptor that provides the organism with information about such mechanical changes in the environment as movement, tension, and pressure.

Meckel's cartilage [EMBRYO] The cartilaginous axis of the mandibular arch in the embryo and fetus.

Meckel's diverticulum [EMBRYO] The persistent blind end of the yolk stalk forming a tube connected with the lower ileum.

meconin [ORG CHEM] $C_{10}H_{10}O_4$ A neutral principle of opium; white crystals, soluble in hot water and alcohol and melting at 102–103°C. Also known as opianyl.

meconium [EMBRYO] A greenish mass of mucous, desquamated epithelial cells, lanugo, and vernix caseosa that collects in the fetal intestine, becoming the first fecal discharge of the newborn.

meconium ileus [MED] Intestinal obstruction in the newborn with cystic fibrosis due to trypsin deficiency.

mecoprop [ORG CHEM] $C_{10}H_{11}ClO_3$ A colorless, crystalline compound with a melting point of 94–95°C; slightly soluble in water; used as an herbicide to control broadleaf weeds in cereals, turf, and lawns. Also known as 2-[(4-chloro-*ortho*-tolyl)oxy]propionic acid.

Mecoptera [INV ZOO] The scorpion flies, a small order of insects; adults are distinguished by the peculiar prolongation of the head into a beak, which bears chewing mouthparts.

mecystasis [PHYSIO] Increase in muscle length with maintenance of the original degree of tension.

media [HISTOL] The middle, muscular layer in the wall of a vein, artery, or lymph vessel.

media conversion [COMPUT SCI] The transfer of data from one storage type (such as punched cards) to another storage type (such as magnetic tape).

media conversion buffer [COMPUT SCI] Large storage area, such as a drum, on which data may be stored at low speed during nonexecution time, to be later transferred at high speed into core memory during execution time.

mediad [ANAT] Toward the median line or plane of the body or of a part of the body.

medial [ANAT] **1.** Being internal as opposed to external (lateral). **2.** Toward the midline of the body. [SCI TECH] Located in the middle.

medial arteriosclerosis [MED] Calcification of the tunica media of small and medium-sized muscular arteries. Also known as medial calcinosis; Mönckeberg's arteriosclerosis.

medial calcinosis *See* medial arteriosclerosis.

medial lemniscus [ANAT] A lemniscus arising in the nucleus gracilis and nucleus cuneatus of the brain, crossing immediately as internal arcuate fibers, and terminating in the posterolateral ventral nucleus of the thalamus.

medial moraine [GEOL] **1.** An elongate moraine carried in or upon the middle of a glacier and parallel to its sides. **2.** A moraine formed by glacial abrasion of a rocky protuberance near the middle of a glacier.

medial necrosis [MED] Death of cells in the tunica media of arteries. Also known as medionecrosis.

media migration [CHEM ENG] Carryover of fibers or other filter material by liquid effluent from a filter unit.

median [MATH] Any line in a triangle which joins a vertex to the midpoint of the opposite side. [SCI TECH] Located in the middle. [STAT] An average of a series of quantities or values; specifically, the quantity or value of that item which is so positioned in the series, when arranged in order of numerical quantity or value, that there are an equal number of items of greater magnitude and lesser magnitude.

median effective dose *See* effective dose 50.

median infective dose *See* infective dose 50.

median lethal dose *See* lethal dose 50.

median lethal time [MICROBIO] The period of time required for 50% of a large group of organisms to die following a specific dose of an injurious agent, such as a drug or radiation.

median mass [GEOL] A less disturbed structural block in the middle of an orogenic belt, bordered on both sides by orogenic structure, thrust away from it. Also known as betwixt mountains; Zwischengebirge.

median maxillary cyst [MED] Cystic dilation of embryonal inclusions in the incisive fossa or between the roots of the central incisors. Also known as nasopalatine cyst.

median nasal process [EMBRYO] The region below the frontonasal sulcus between the olfactory sacs; forms the bridge

MECHANOOPTICAL VIBROMETER

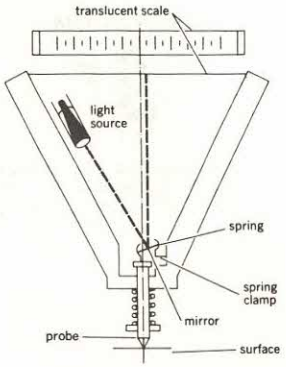


Diagram of mechanooptical vibrometer. *(General Electric Co.)*

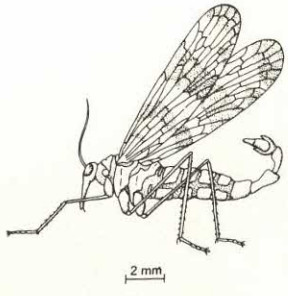
MECOPTERA



Male scorpion fly *(Panorpa)*.

and mobile septum of the nose and various parts of the upper jaw and lip.

median nerve test [MED] A test for loss of function of the median nerve by having the patient abduct the thumb at right angles to the palm with fingertips in contact and forming a pyramid.

median particle diameter [GEOL] The middlemost particle diameter of a rock or sediment, larger than 50% of the diameter in the distribution and smaller than the other 50%.

median strip [CIV ENG] A paved or planted section dividing a highway into lanes according to direction of travel.

mediastinitis [MED] Inflammation of the mediastinum.

mediastinum [ANAT] **1.** A partition separating adjacent parts. **2.** The space in the middle of the chest between the two pleurae.

medical bacteriology [MED] A branch of medical microbiology that deals with the study of bacteria which affect human health, especially those which produce disease.

medical climatology [MED] The study of the relation between climate and disease.

medical electronics [ELECTR] A branch of electronics in which electronic instruments and equipment are used for such medical applications as diagnosis, therapy, research, anesthesia control, cardiac control, and surgery.

medical entomology [MED] The study of insects that are vectors for diseases and parasitic infestations in humans and domestic animals.

medical ethics [MED] Principles and moral values of proper medical conduct.

medical examiner [MED] A professionally qualified physician duly authorized and charged by a governmental unit to determine facts concerning causes of death, particularly deaths not occurring under natural circumstances, and to testify thereto in courts of law.

medical frequency bands [COMMUN] A collection of radio frequency bands allocated to medical equipment in the United States.

medical geography [MED] The study of the relation between geographic factors and disease.

medical history [MED] An account of a patient's past and present state of health obtained from the patient or relatives.

medical microbiology [MED] The study of microorganisms which affect human health.

medical mycology [MED] A branch of medical microbiology that deals with fungi that are pathogenic to humans.

medical parasitology [MED] A branch of medical microbiology which deals with the relationship between humans and those animals which live in or on them.

medical protozoology [MED] A branch of medical microbiology that deals with the study of Protozoa which are parasites of humans.

medical radiography [MED] The use of x-rays to produce photographic images for visualizing internal anatomy as an aid in diagnosis.

medication [MED] **1.** A medicinal substance. **2.** Treatment by or administration of a medicine.

medicinal [MED] Of, pertaining to, or having the nature of medicine.

medicinal oil [MATER] A highly refined, colorless, tasteless and odorless petroleum oil used medicinally as an internal lubricant and for the manufacture of salves and ointments. Also known as mineral oil.

medicine [MED] **1.** Any agent administered for the treatment of disease. **2.** The science and art of treating and healing.

medina quartzite [MINERAL] A variety of quartz containing 97.8% silica; melting point is about 1700°C.

medinoterb acetate [ORG CHEM] $C_{13}H_{16}N_2O_6$ A yellow, crystalline compound with a melting point of 86–87°C; used as a preemergence herbicide for broadleaf weeds in cotton, sugarbeets, and leguminous crops, and as a postemergence herbicide for cereal crops. Also known as 2-*tert*-butyl-5-methyl-4,6-dinitrophenyl acetate.

medionecrosis [MED] Necrosis occurring in the tunica media of an artery.

mediterranean *See* mesogeosyncline.

Mediterranean anemia *See* thalassemia.

Mediterranean climate [CLIMATOL] A type of climate characterized by hot, dry, sunny summers and a winter rainy season; basically, this is the opposite of a monsoon climate. Also known as etesian climate.

Mediterranean faunal region [ECOL] A marine littoral faunal region including that offshore portion of the Atlantic Ocean from northern France to near the Equator.

Mediterranean fever *See* brucellosis.

mediterranean sea [GEOGR] A deep epicontinental sea that is connected with the ocean by a narrow channel.

Mediterranean Sea [GEOGR] A sea that lies between Europe, Asia Minor, and Africa and is completely landlocked except for the Strait of Gibraltar, the Bosporus, and the Suez Canal; total water area is 2,501,000 square kilometers.

medium [CHEM ENG] **1.** The carrier in which a chemical reaction takes place. **2.** Material of controlled pore size used to remove foreign particles or liquid droplets from fluid carriers. [COMPUT SCI] The material, or configuration thereof, on which data are recorded; usually not applied to disk, drum, or core, but to storable, removable media, such as paper tape, cards, and magnetic tape. [PHYS] That entity in which objects exist and phenomena take place; examples are free space and various fluids and solids.

medium-altitude bombing [ORD] Horizontal bombing with the height of release at an altitude between 8000 and 15,000 feet (2400 and 4600 meters).

medium antiaircraft artillery [ORD] Conventional antiaircraft artillery pieces, 90 millimeters or larger, the weight of which in a trailed mount, excluding on-carriage fire control, does not exceed 40,000 pounds (18,000 kilograms).

medium artillery [ORD] Artillery which includes guns of caliber greater than 105 millimeters but less than 155 mm, and howitzers of caliber greater than 105 mm but not greater than 155 mm.

medium boiler [MATER] A solvent, intermediate in volatility between high and low boilers, which is added to lacquer thinner and influences flow and freedom from an orange peel condition during drying; boiling point is 115–145°C.

medium carbon steel [MET] Steel containing 0.15–0.30% carbon.

medium-curing asphalt [MATER] Liquid product composed of asphalt cement and a kerosine-type diluent. Also known as M-C asphalt.

medium frequency [COMMUN] A Federal Communications Commission designation for the band from 300 to 3000 kilohertz in the radio spectrum. Abbreviated mf.

medium-frequency propagation [COMMUN] Radio propagation at broadcast frequencies where skip is not an important factor.

medium-frequency tube [ELECTR] An electron tube operated at frequencies between 300 and 3000 kilohertz, at which the transit time of an electron between electrodes is much smaller than the period of oscillation of the voltage.

medium howitzer [ORD] A complete projectile-firing weapon, with a medium muzzle velocity and a curved trajectory; the bore diameter is from 126 through 200 millimeters.

medium-range forecast [METEOROL] A forecast of weather conditions for a period of 48 hours to a week in advance. Also known as extended-range forecast.

medium-scale integration [ELECTR] Solid-state integrated circuits having more than about 12 gate-equivalent circuits. Abbreviated MSI.

medium-volatile bituminous coal [GEOL] Bituminous coal consisting of 23–31% volatile matter.

medius [ANAT] The middle finger.

medulla [ANAT] **1.** The central part of certain organs and structures such as the adrenal glands and hair. **2.** Marrow, as of bone or the spinal cord. **3.** *See* medulla oblongata. [BOT] **1.** Pith. **2.** The central spongy portion of some fungi.

medulla oblongata [ANAT] The somewhat pyramidal, caudal portion of the vertebrate brain extending from the pons to the spinal cord. Also known as medulla.

medullary carcinoma [MED] A form of poorly differentiated adenocarcinoma, usually of the breast, grossly well circumscribed, gray-pink, and firm. Also known as encephaloid carcinoma.

medullary cord [ANAT] Dense lymphatic tissue separated by sinuses in the medulla of a lymph node. [EMBRYO] A primary invagination of the germinal epithelium of the embryonic gonad that differentiates into rete testis and seminiferous tubules or into rete ovarii.

medulloblastoma [MED] A malignant neoplasm of the brain with a tendency to metastasize in the meninges.

medulloepithelioma [MED] **1.** A locally invasive tumor of

the eye arising from the ciliary epithelium of the iris. **2.** *See* ependymoma.

Medullosaceae [PALEOBOT] A family of seed ferns; these extinct plants all have large spirally arranged petioles with numerous vascular bundles.

medusa *See* jellyfish.

meerschaum *See* sepiolite.

mega- [SCI TECH] A prefix representing 10^6, or one million. Abbreviated M.

megabit [COMPUT SCI] One million binary bits.

megacanthopore [INV ZOO] A large prominent tube, commonly projecting as a spine in a mature region of a bryozoan colony.

Megachilidae [INV ZOO] The leaf-cutting bees, a family of hymenopteran insects in the superfamily Apoidea.

Megachiroptera [VERT ZOO] The fruit bats, a group of Chiroptera restricted to the Old World; most species lack a tail, but when present it is free of the interfemoral membrane.

megacine [MICROBIO] The bacteriocidin produced by *Bacillus megaterium*.

megacolon [MED] Hypertrophy and dilation of the colon associated with prolonged constipation.

megacryst [PETR] Any crystal or grain in an igneous or metamorphic rock that is significantly larger than the surrounding matrix.

megacycle *See* megahertz.

megacyclothem [GEOL] A cycle of or combination of related cyclothems.

Megadermatidae [VERT ZOO] The false vampires, a family of tailless bats with large ears and a nose leaf; found in Africa, Australia, and the Malay Archipelago.

megaelectronvolt [PHYS] A unit of energy commonly used in nuclear and particle physics, equal to the energy acquired by an electron in falling through a potential of 10^6 volts. Abbreviated MeV.

megaelectronvolt-curie [NUCLEO] A unit of radioactive power, equal to the power generated by 1 curie emitting an average energy of 10^6 electron volts per disintegration; equal to approximately 5.92777×10^{-3} watt. Abbreviated MeV Ci.

megagauss [ELECTROMAG] A unit of magnetic induction equal to 10^6 gauss or 100 tesla.

megagauss physics [PHYS] The production, measurement, and application of megagauss fields, as produced by discharge of capacitor banks or explosive flux-compression techniques.

megahertz [PHYS] Unit of frequency, equal to 1,000,000 hertz. Abbreviated MHz. Also known as megacycle (Mc).

megakaryocyte [HISTOL] A giant bone-marrow cell characterized by a large, irregularly lobulated nucleus; precursor to blood platelets.

megakaryocytopenia *See* megakaryophthisis.

megakaryophthisis [MED] A scarcity of megakaryocytes in the bone marrow. Also known as megakaryocytopenia.

megaloblast [PATH] A large nucleated erythroblast appearing in bone marrow in vitamin B_{12} or folic acid deficiency.

megaloblastic anemia [MED] Anemia characterized by the occurrence of megaloblasts in the bone marrow and blood.

megaloblast of Sabin *See* pronormoblast.

megalocardia [MED] Abnormal enlargement of the heart.

megalocephaly [MED] The condition of having a head whose maximum fronto-occipital circumference is greater than two standard deviations above the mean for age and sex.

Megalodontoidea [INV ZOO] A superfamily of hymenopteran insects in the suborder Symphyta.

megalomania [PSYCH] The delusion of greatness and omnipotence characterizing certain psychotic reactions.

Megalomycteroidei [VERT ZOO] The mosaic-scaled fishes, a monofamilial suborder of the Cetomimiformes; members are rare species of small, elongate deep-sea fishes with degenerate eyes and irregularly disposed scales.

megalopia *See* macropsia.

megalops larva [INV ZOO] A preimago stage of certain crabs having prominent eyes and chelae.

Megaloptera [INV ZOO] A suborder included in the order Neuroptera by some authorities.

Megalopygidae [INV ZOO] The flannel moths, a small family of lepidopteran insects in the suborder Heteroneura.

megalosphere [INV ZOO] The initial, large-chambered shell of sexual individuals of certain dimorphic species of Foraminifera.

megaloureter [MED] Abnormal enlargement of a ureter.

-megaly [MED] A combining form denoting abnormal enlargement.

Megamerinidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

megaparsec [ASTRON] A unit equal to 1,000,000 parsecs.

megaphone [ACOUS] A conical or rectangular horn used to amplify or direct the sound of a speaker's voice.

megaphyllous [BOT] Having large leaves or leaflike extensions.

Megapodiidae [VERT ZOO] The mound birds and brush turkeys, a family of birds in the order Galliformes; distinguished by their method of incubating eggs in mounds of dirt or in decomposing vegetation.

megarectum [MED] Abnormal enlargement of the rectum.

megaripple [GEOL] A large sand wave.

megasclere [INV ZOO] A large sclerite.

megasecond [MECH] A unit of time, equal to 1,000,000 seconds. Abbreviated Msec.

Megasphaera [MICROBIO] A genus of bacteria in the family Veillonellaceae; relatively large cells occurring in pairs arranged in chains.

megasporangium *See* macrosporangium.

megaspore *See* macrospore.

megasporophyll [BOT] A leaf bearing megasporangia.

megatectonics [GEOL] The tectonics of the very large structural features of the earth.

megathermophyte [ECOL] A plant that requires great heat and abundant moisture for normal growth. Also known as macrothermophyte.

Megathymiinae [INV ZOO] The giant skippers, a subfamily of lepidopteran insects in the family Hesperiidae.

megaton [PHYS] The energy released by 1,000,000 metric tons of chemical high explosive calculated at a rate of 1000 calories per gram, or a total of 4.18×10^{15} joules; used principally in expressing the energy released by a nuclear bomb. Abbreviated MT.

megaton weapon [ORD] A nuclear fission or fusion bomb capable of exploding with megaton energy.

megatron *See* disk-seal tube.

megavolt [ELEC] A unit of potential difference or emf (electromotive force), equal to 1,000,000 volts. Abbreviated MV.

megawatt [MECH] A unit of power, equal to 1,000,000 watts. Abbreviated MW.

megawatt-day per ton [NUCLEO] A unit used for expressing the burnup of fuel in a reactor; specifically, the number of megawatt-days of heat output per metric ton of fuel in the reactor.

megawatt electric [NUCLEO] Unit of the electric power of a nuclear reactor, as opposed to thermal power. Abbreviated MW(E).

megawatt thermal [NUCLEO] Unit of the thermal power of a nuclear reactor, as opposed to electric power. Abbreviated MW(Th).

megawatt year of electricity [ELEC] A unit of electric energy, equal to the energy from a power of 1,000,000 watts over a period of 1 tropical year, or to 3.1557×10^{13} joules. Abbreviated MWYE.

meglumine *See N*-methyl glucamine.

megohm [ELEC] A unit of resistance, equal to 1,000,000 ohms.

megohmmeter [ELEC] An instrument which is used for measuring the high resistance of electrical materials of the order of 20,000 megohms at 1000 volts; one direct-reading type employs a permanent magnet and a moving coil.

Mehlis' gland [INV ZOO] One of the large unicellular glands around the ootype of flatworms.

Meibomian cyst *See* chalazion.

Meibomian gland *See* tarsal gland.

meibomianitis [MED] Inflammation of the tarsal glands.

Meig's syndrome [MED] A complex of symptoms associated with ovarian fibroma including abnormal accumulation of serous fluid in the pleural and peritoneal cavities.

Meijer transform [MATH] The Meijer transform of a function $f(x)$ is the function $F(y)$ defined as the integral from 0 to ∞ of $\sqrt{xy}\,K_v(xy)\,f(x)dx$, where K_v is a modified Bessel function.

Meinertellidae [INV ZOO] A family of wingless insects belonging to the Microcoryphia.

Meinzer unit *See* permeability coefficient.

meiocyte [CYTOL] A cell undergoing meiotic division.

MEGACHILIDAE

Drawing of a leaf-cutting bee. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

meionite [MINERAL] $3CaAl_2Si_2O_8 \cdot CaCO_3$ A scapolite mineral composed of calcium aluminosilicate and calcium carbonate; it is isomorphous with marialite.

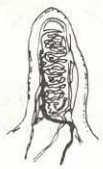
meiosis [CYTOL] A type of cell division occurring in diploid or polyploid tissues that results in a reduction in chromosome number, usually by half.

Meissner effect [SOLID STATE] The expulsion of magnetic flux from the interior of a piece of superconducting material as the material undergoes the transition to the superconducting phase. Also known as flux jumping; Meissner-Ochsenfeld effect.

Meissner-Ochsenfeld effect *See* Meissner effect.

Meissner oscillator [ELECTR] Electron-tube oscillator in which the grid and plate circuits are inductively coupled through an independent tank circuit which determines the frequency.

MEISSNER'S CORPUSCLE



Drawing of Meissner's corpuscle. *(From F. A. Geldard, Human Senses, 2d ed., copyright © 1972 by John Wiley & Sons, Inc.; reprinted by permission)*

Meissner's corpuscle [ANAT] An ovoid, encapsulated cutaneous sense organ presumed to function in touch sensation in hairless portions of the skin.

Meissner's plexus *See* submucous plexus.

MEK *See* methyl ethyl ketone.

mel [ACOUS] A unit of pitch, equal to one-thousandth of the pitch of a simple tone whose frequency is 1000 hertz and whose loudness is 40 decibels above a listener's threshold.

mel-, melo- [SCI TECH] A combining form denoting dark or black; denoting or pertaining to melanin.

melamine [ORG CHEM] $C_3H_6N_4$ A white crystalline compound that is slightly soluble in water, melts at 354°C and is a cyclic trimer of cyanamide; used to make melamine resins and in tanning of leather. Also known as cyanurtriamide; 2,4,6-triamino-*s*-triazine.

melamine resin [MATER] An amino resin made from formaldehyde and melamine; it is used as a molding compound with fillers added to it; it may also be used for laminating.

Melamphaidae [VERT ZOO] A family of bathypelagic fishes in the order Beryciformes.

Melampsoraceae [MYCOL] A family of parasitic fungi in the order Uredinales in which the teleutospores are laterally united to form crusts or columns.

melampyrit *See* dulcitol.

melancholia [PSYCH] A disordered mental condition of psychotic proportion characterized by severe depression.

Melanconiaceae [MYCOL] The single family of the order Melanconiales.

Melanconiales [MYCOL] An order of the class Fungi Imperfecti including many plant pathogens commonly causing anthracnose; characterized by densely aggregated cnidophores on an acervulus.

Melandryidae [INV ZOO] The false darkling beetles, a family of coleopteran insects in the superfamily Tenebrionoidea.

Melanesia [GEOGR] A group of islands in the Pacific Ocean northeast of Australia.

mélange [GEOL] A heterogeneous medley or mixture of rock materials; specifically, a mappable body of deformed rocks consisting of a pervasively sheared, fine-grained, commonly pelitic matrix, thoroughly mixed with angular and poorly sorted inclusions of native and exotic tectonic fragments, blocks, or slabs, of diverse origins and geologic ages, that may be as much as several kilometers in length. Also known as block clay.

melangeur [FOOD ENG] A machine used in chocolate manufacture for mixing chocolate liquor with sugar and cocoa butter. Also known as paste mixer.

melanic *See* melanocratic.

melaniline *See* diphenylguanidine.

melanin [BIOCHEM] Any of a group of brown or black pigments occurring in plants and animals.

melanoblast [HISTOL] **1.** Precursor cell of melanocytes and melanophores. **2.** An immature pigment cell in certain vertebrates. **3.** A mature cell that elaborates melanin.

melanoblastoma [MED] A malignant tumor composed principally of melanoblasts.

melanocarcinoma [MED] A malignant melanoma derived from epithelial tissue.

melanocerite [MINERAL] $(Ca,Ce,Y)_8(BO_3)(SiO_4)_4(F,OH)_4$ A brown or black rhombohedral mineral composed of complex silicate, borate, fluoride, tantalate, or other anion of cerium, yttrium, calcium, and other metals; occurs as crystals.

melanocratic [GEOL] Dark-colored, referring to igneous rock containing at least 50–60% mafic minerals. Also known as chromocratic; melanic.

melanocyte [HISTOL] A cell containing dark pigments.

melanocyte-stimulating hormone [BIOCHEM] A protein substance secreted by the intermediate lobe of the pituitary of man which causes dispersion of pigment granules in the skin; similar to intermedins in other vertebrates. Abbreviated MSH. Also known as melanophore-dilating principle; melanophore hormone.

melanocytoma [MED] A benign tumor composed principally of melanocytes.

melanocytosis [MED] An excessive number of melanocytes.

melanoderma [MED] Abnormal darkening of the skin.

melanogen [BIOCHEM] A colorless precursor of melanin.

melanogenesis [BIOCHEM] The formation of melanin.

melanoglosia [MED] Any blackening of the tongue associated with certain disorders and diseases in animal and man.

melanoid [MED] Dark-colored; resembling melanin.

melanoma [MED] **1.** A malignant tumor composed of anaplastic melanocytes. **2.** A benign or malignant tumor composed of melanocytes.

melanomatosis [MED] **1.** Widespread distribution of melanoma. **2.** Diffuse melanotic pigmentation of the meninges.

melanophage [HISTOL] A phagocytic cell which engulfs and contains melanin.

melanophlogite [MINERAL] A mineral composed chiefly of silicon dioxide and containing some carbon and sulfur.

melanophore [HISTOL] A type of chromatophore containing melanin.

melanophore-dilating principle *See* melanocyte-stimulating hormone.

melanophore hormone *See* melanocyte-stimulating hormone.

melanoprotein [BIOCHEM] A conjugated protein in which melanin is the associated chromagen.

melanosarcoma [MED] A malignant melanoma.

melanose [PL PATH] **1.** A fungus disease of grapevine caused by *Septoria ampelina*; leaves are infected and fall off. **2.** A fungus disease of citrus trees and fruits caused by *Diaporthe citri*, characterized by hard, brown, usually gummy elevations on the rind, twigs, and leaves.

melanosis coli [PATH] Melanotic pigmentation of the mucosa of the colon in large numbers of minute foci.

melanosis iridis [PATH] Abnormal melanotic pigmentation of the iris.

melanosome [CYTOL] An organelle which contains melanin and in which tyrosinase activity is not demonstrable.

melanostibian [MINERAL] $Mn(Sb,Fe)O_3$ A black mineral consisting of iron and manganese antimonite; occurs as foliated masses and as striated crystals.

melanotekite [MINERAL] $Pb_2Fe_2Si_2O_9$ A black or dark-gray mineral composed of lead iron silicate.

melanotic cancer [MED] A neoplasm producing excessive quantities of melanin.

melanotic freckle [MED] An unevenly pigmented macule that sometimes develops on the skin, usually on the face, of an individual beyond middle life and enlarges progressively. Also known as Hutchinson's freckle.

melanovanadite [MINERAL] $Ca_2V_{10}O_{25}$ A black mineral composed of a complex oxide of calcium and vanadium.

melanterite [MINERAL] $FeSO_4 \cdot 7H_2O$ A green mineral occurring mainly in fibrous or concretionary masses, or in short, monoclinic, prismatic crystals; hardness is 2 on Mohs scale, and specific gravity is 1.90.

melanuria [MED] The presence of black pigment in the urine.

melaphyre [PETR] Altered basalt, especially of Carboniferous and Permian age.

Melasidae [INV ZOO] The equivalent name for Eucnemidae.

Melastomataceae [BOT] A large family of dicotyledonous plants in the order Myrtales characterized by an inferior ovary, axile placentation, up to twice as many stamens as petals (or sepals), anthers opening by terminal pores, and leaves with prominent, subparallel longitudinal ribs.

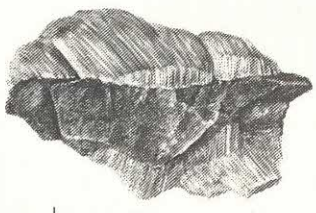
Meleagrididae [VERT ZOO] The turkeys, a family of birds in the order Galliformes characterized by a bare head and neck.

M electron [ATOM PHYS] An electron whose principal quantum number is 3.

melena [MED] The discharge of stools colored black by altered blood.

Meliaceae [BOT] A family of dicotyledonous plants in the order Sapindales characterized by mostly exstipulate, alternate

MELANTERITE



2.5 cm

Fibrous crust of melanterite in a sample from Kremnitz, Hungary. *(Specimen from Department of Geology, Bryn Mawr College)*

leaves, stamens mostly connate by their filaments, and syncarpous flowers.

melilite [MINERAL] A sorosilicate mineral group of complex composition $[(Na, Ca)_2(Mg, Al)(Si, Al)_2O_7]$ crystallizing in the tetragonal system; luster is vitreous to resinous, and color is white, yellow, greenish, reddish, or brown; hardness is 5 on Mohs scale, and specific gravity varies from 2.95 to 3.04.

melilitite [PETR] An extrusive rock that is generally olivine-free and composed of more than 90% mafic mineral such as melilite and augite, with minor amounts of feldspathoids and sometimes plagioclase.

Melinae [VERT ZOO] The badgers, a subfamily of carnivorous mammals in the family Mustelidae.

Melinninae [INV ZOO] A subfamily of sedentary annelids belonging to the Ampharetidae which have a conspicuous dorsal membrane, with or without dorsal spines.

melioidosis [VET MED] An endemic bacterial disease, primarily of rodents but occasionally communicable to humans, caused by *Pseudomonas pseudomallei* and characterized by infectious granulomas.

Meliolaceae [MYCOL] The sooty molds, a family of ascomycetous fungi in the order Erysiphales, with dark mycelia and conidia.

meliphane *See* meliphanite.

meliphanite [MINERAL] $(Ca,Na)_2Be(Si,Al)_2(O,OH,F)_7$ A yellow, red, or black mineral composed of sodium calcium beryllium fluosilicate. Also known as meliphane.

melissic acid [ORG CHEM] $CH_3(CH_2)_{29}COOH$ Fatty acid found in beeswax; soluble in benzene and hot alcohol; melts at 90°C; used in biochemical research.

melissophobia [PSYCH] An abnormal fear of bees.

melitose *See* raffinose.

melitriose *See* raffinose.

Melittangium [MICROBIO] A genus of bacteria in the family Cystobacteraceae; vegetative cells are tapered, and sporangia are borne singly on an unbranched stalk.

Melittidae [INV ZOO] A family of hymenopteran insects in the superfamily Apoidea.

melituria [MED] The presence of sugar in the urine.

Mellin transform [MATH] The transform $F(s)$ of a function $f(t)$ defined as the integral over t from 0 to ∞ of $f(t)t^{s-1}$.

mellitate [ORG CHEM] An ester or salt of mellitic acid.

mellite [MINERAL] $Al_2[C_6(COO)_6]\cdot 18H_2O$ A honey-colored mineral with resinous luster composed of the hydrous aluminum salt of mellitic acid, occurring as nodules in brown coal; it is in part a product of vegetable decomposition.

mellitic acid [ORG CHEM] $C_6(COOH)_6$ A water-soluble compound forming colorless needles that melt at 287°C.

melodeon [ELECTR] Broadband panoramic receiver used for countermeasures reception; all types of received electromagnetic radiation are presented as vertical pips on a frequency-calibrated cathode-ray indicator screen.

Meloidae [INV ZOO] The blister beetles, a large cosmopolitan family of coleopteran insects in the superfamily Meloidea; characterized by soft, flexible elytra and the strongly vesicant properties of the body fluids.

Meloidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

melon [BOT] Either of two soft-fleshed edible fruits, muskmelon or watermelon, or varieties of these.

melonite [MINERAL] $NiTe_2$ A reddish-white mineral composed of nickel telluride.

melt [CHEM] **1.** To change a solid to a liquid by the application of heat. **2.** A melted material. [MET] A charge of molten metal.

meltback transistor [ELECTR] A junction transistor in which the junction is made by melting a properly doped semiconductor and allowing it to solidify again.

melter [ENG] A chamber used for melting.

melt extraction [MET] A rapid quenching process in which the molten metal is brought into contact with the periphery of a rotating heat-extracting disk; quench rates exceed 1,000,000 K per second.

melt extractor [ENG] A device used to feed an injection mold, separating molten feed material from partially molten pellets.

melt-fabricable [MATER] Referring to a plastic material that can be shaped as a melt without decomposing, and is capable of being extruded.

melt fracture [MECH] Melt flow instability through a die during plastics molding, leading to helicular, rippled surface irregularities on the finished product.

melt index [ENG] Number of grams of thermoplastic resin at 190°C that can be forced through a 0.0825-inch (2.0955-millimeter) orifice in 10 minutes by a 2160-gram force.

melting *See* fusion.

melting furnace [ENG] A furnace in which the frit for glass is melted.

melting level [METEOROL] The altitude at which ice crystals and snowflakes melt as they descend through the atmosphere.

melting loss [MET] Weight loss due to volatilization or oxidation during metal melting in a foundry.

melting point [THERMO] **1.** The temperature at which a solid of a pure substance changes to a liquid. Abbreviated mp. **2.** For a solution of two or more components, the temperature at which the first trace of liquid appears as the solution is heated.

melting rate [MET] In electric arc welding, the weight or length of electrode melted in a specified unit of time. Also known as burn-off rate; melt-off rate.

melting ratio [MET] The ratio of metal weight to fuel weight in a melting process.

melt instability [MECH] Instability of the plastic melt flow through a die.

melt loading [ORD] Process of melting solid explosive by heat and pouring into bombs, projectiles, and the like to solidify. Also known as cast loading.

melt-off rate *See* melting rate.

melton [TEXT] A fabric with all-wool or cotton warp and woolen weft; the face is napped carefully to raise the nap straight up, showing the weave clearly. Also known as beaver cloth; kersey.

melt spinning [TEXT] A process by which nylon, polyester, or glass is melted to allow it to be extruded into fibers through a spinneret.

melt strength [MECH] Strength of a molten plastic.

meltwater [HYD] Water derived from melting ice or snow, especially glacier ice.

Melusinidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Nematocera.

Melyridae [INV ZOO] The soft-winged flower beetles, a large family of cosmopolitan coleopteran insects in the superfamily Cleroidea.

member [CIV ENG] A structural unit such as a wall, column, beam, or tie, or a combination of any of these. [GEOL] A rock stratigraphic unit of subordinate rank comprising a specially developed part of a varied formation. [MATH] An element of a set.

Membracidae [INV ZOO] The treehoppers, a family of homopteran insects included in the series Auchenorrhyncha having a pronotum that extends backward over the abdomen, and a vertical upper portion of the head.

membrane [BUILD] In built-up roofing, a weather-resistant (flexible or semiflexible) covering consisting of alternate layers of felt and bitumen, fabricated in a continuous covering and surfaced with aggregate or asphaltic material. [CHEM ENG] **1.** The medium through which the fluid stream is passed for purposes of filtration. **2.** The ion-exchange medium used in dialysis, diffusion, osmosis and reverse osmosis, and electrophoresis. [HISTOL] A thin layer of tissue surrounding a part of the body, separating adjacent cavities, lining cavities, or connecting adjacent structures.

membrane bone *See* dermal bone.

membrane curing *See* membrane waterproofing.

membrane potential [PHYSIO] A potential difference across a living cell membrane.

membrane stress [MECH] Stress which is equivalent to the average stress across the cross section involved and normal to the reference plane.

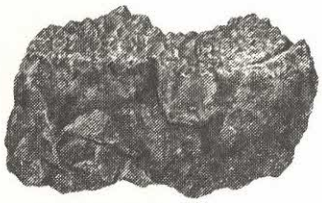
membrane waterproofing [CIV ENG] Curing concrete, especially in pavements, by spraying a liquid material over the surface to form a solid, impervious layer which holds the mixing water in the concrete. Also known as membrane curing.

membranous glomerulonephritis [MED] A type of glomerulonephritis characterized by thickening of the basement membrane due to deposition of electron-dense material.

membranous labyrinth [ANAT] The membranous portion of the inner ear of vertebrates.

membranous pregnancy [MED] Gestation in which there has been a rupture of the amniotic sac and the fetus is in direct contact with the wall of the uterus.

MELILITE



|— 2.5 cm —|

Melilite crystals from Vesuvius, Italy. *(Specimen from Department of Geology, Bryn Mawr College)*

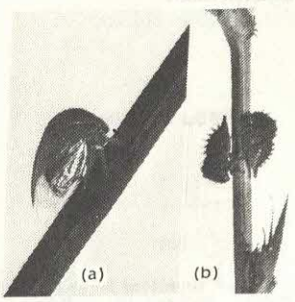
MELINAE

The American badger *(Taxidea taxus).*

MELOIDAE

Blister beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

MEMBRACIDAE



Membracids on stems. *(a)* Adult. *(b)* Nymphs. *(Courtesy of C. H. Hanson)*

membranous urethra [ANAT] The part of the urethra between the two facial layers of the urogenital diaphragm.

MEMC *See* methoxyethylmercury chloride.

memex [COMPUT SCI] A hypothetical machine described by Vannevar Bush, which would store written records so that they would be available almost instantly by merely pushing the right button for the information desired.

memistor [ELEC] Nonmagnetic memory device consisting of a resistive substrate in an electrolyte; when used in an adaptive system, a direct-current signal removes copper from an anode and deposits it on the substrate, thus lowering the resistance of the substrate; reversal of the current reverses the process, raising the resistance of the substrate.

memomotion study [IND ENG] A technique of work measurement and methods analysis using a motion picture camera operated at less than normal camera speed. Also known as camera study.

memory [COMPUT SCI] Any apparatus in which data may be stored and from which the same data may be retrieved; especially, the internal, high-speed, large-capacity working storage of a computer, as opposed to external devices. Also known as computer memory. [PSYCH] The recollection of past events or sensations, or the performance of previously learned skills without practice.

memory address register [COMPUT SCI] A special register containing the address of a word currently required.

memory bank [COMPUT SCI] A physical section of a computer memory, which may be designed to handle information transfers independently of other such transfers in other such sections.

memory buffer register [COMPUT SCI] A special register in which a word is stored as it is read from memory or just prior to being written into memory.

memory capacity *See* storage capacity.

memory cell [COMPUT SCI] A single storage element of a memory, together with associated circuits for storing and reading out one bit of information.

memory contention [COMPUT SCI] A situation in which two different programs, or two parts of a program, try to read items in the same block of memory at the same time.

memory core *See* magnetic core.

memory cycle *See* cycle time.

memory dump *See* storage dump.

memory dump routine [COMPUT SCI] A debugging routine which produces a listing of a consecutive section of memory, either numbers or instructions, at selected points in a program.

memory element [COMPUT SCI] Any component part of core memory.

memory fill *See* storage fill.

memory gap [COMPUT SCI] A gulf in access time, capacity, and cost of computer storage technologies between fast, expensive, main-storage devices and slow, high-capacity, inexpensive secondary-storage devices. Also known as access gap.

memory guard [COMPUT SCI] Built-in safety devices which prevent a program or a programmer from accessing certain memory areas reserved for the central processor. Also known as memory protect.

memory hierarchy [COMPUT SCI] A ranking of computer memory devices, with devices having the fastest access time at the top of the hierarchy, and devices with slower access times but larger capacity and lower cost at lower levels.

memory lockout register [COMPUT SCI] A special register containing the limiting addresses of an area in memory which may not be accessed by the program.

memory management [COMPUT SCI] **1.** The allocation of computer storage in a multiprogramming system so as to maximize processing efficiency. **2.** The collection of routines for placing, fetching, and removing pages or segments into or out of the main memory of a computer system.

memory map [COMPUT SCI] The list of variables, constants, identifiers, and their memory locations when a FORTRAN program is being run. Also known as memory map list.

memory map list *See* memory map.

memory overlay [COMPUT SCI] The efficient use of memory space by allowing for repeated use of the same areas of internal storage during the different stages of a program; for instance, when a subroutine is no longer required, another routine can replace all or part of it.

memory port [COMPUT SCI] A logical connection through which data are transferred in or out of main memory under control of the central processing unit.

memory power [COMPUT SCI] A relative characteristic pertaining to differences in access time speeds in different parts of memory; for instance, access time from the buffer may be a tenth of the access time from core.

memory print *See* storage dump.

memory printout [COMPUT SCI] A listing of the contents of memory.

memory protect *See* memory guard.

memory protection *See* storage protection.

memory-reference instruction [COMPUT SCI] A type of instruction usually requiring two machine cycles, one to fetch the instruction, the other to fetch the data at an address (part of the instruction itself) and to execute the instruction.

memory register *See* storage register.

memory search routine [COMPUT SCI] A debugging routine which has as an essential feature the scanning of memory in order to locate specified instructions.

memory-segmentation control [COMPUT SCI] Address-computing logic to address words in memory with dynamic allocation and protection of memory segments assigned to different users.

memory storage [COMPUT SCI] The sum total of the computer's storage facilities, that is, core, drum, disk, cards, and paper tape.

memory switch *See* ovonic memory switch.

memory trace [PHYSIO] *See* engram. [PSYCH] An experience intentionally forgotten but not fully repressed, which may result in the development of a neurotic conflict.

memory tube *See* storage tube.

memory twist *See* false twist.

memotron [ELECTR] An electrical-visual storage tube which is capable of bistable visual-signal display, controllable in duration from a few milliseconds to infinity, and which is suited to specialized oscillography.

men-, meno- [PHYSIO] A combining form denoting menses.

menacme [PHYSIO] The period of a woman's life during which menstruation persists.

menadione [ORG CHEM] $C_{11}H_8O_2$ Yellow crystals, soluble in alcohol, benzene, and vegetable oils, insoluble in water; affected by sunlight; used in medicine and fungicides.

menarche [PHYSIO] The onset of menstruation.

menazon [ORG CHEM] $C_6H_8N_5O_2PS_2$ A colorless, crystalline compound that decomposes at 160–162°C; slightly soluble in water; used as an insecticide for the control of aphids. Also known as *S*-(4,6-diamino-*S*-triazin-2-ylmethyl) *O,O*-dimethylphosphorodithioate.

mendelevium [CHEM] Synthetic radioactive element, symbol Md, with atomic number 101; made by bombarding lighter elements with light nuclei accelerated in cyclotrons.

Mendelian genetics [GEN] Scientific study of heredity as related to or in accordance with Mendel's laws.

Mendelian population [GEN] A group of individuals who interbreed according to a certain system of mating; the total genic content of the individuals of the group is called gene pool.

Mendelian ratio [GEN] The ratio of occurrence of various phenotypes in any cross involving Mendelian characters.

Mendelism [GEN] The basic laws of inheritance as formulated by Mendel.

Mendel's laws [GEN] Two basic principles of genetics formulated by Mendel: the law of segregation and law of independent assortment.

mendip [GEOL] **1.** A buried hill that is exposed as an inlier. **2.** A coastal-plain hill that was originally an offshore island.

mendipite [MINERAL] $Pb_3Cl_2O_2$ A white orthorhombic mineral consisting of an oxide and chloride of lead.

mendozite [MINERAL] $NaAl(SO_4)_2 \cdot 11H_2O$ A monoclinic mineral of the alum group composed of hydrous sodium aluminum sulfate.

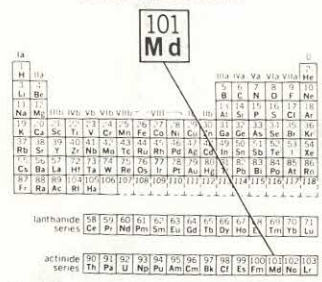
meneghinite [MINERAL] $CuPb_{13}Sb_7S_{24}$ A blackish lead gray mineral consisting of lead antimony sulfide.

Menelaus' theorem [MATH] If ABC is a triangle and PQR is a straight line that cuts AB, CA, and the extension of BC at P, Q, and R respectively, then $(AP/PB)(CQ/QA)(BR/CR) = 1$.

Menetrier's disease [MED] Benign, diffuse hypertrophic gastritis; symptoms include vomiting, diarrhea, weight loss, and excessive secretion of mucus.

Menger's theorem [MATH] A theorem in graph theory which states that if G is a connected graph and A and B are

MENDELEVIUM



Periodic table of the chemical elements showing the position of mendelevium.

disjoint sets of points of G, then the minimum number of points whose deletion separates A and B is equal to the maximum number of disjoint paths between A and B.

menhaden oil [MATER] A combustible drying oil that is soluble in benzene or ether, and is derived by cooking or pressing the menhaden fish.

Ménière's syndrome [MED] A disease of the inner ear characterized by deafness, vertigo, and tinnitus; possibly an allergic process. Also known as labyrinthine syndrome.

meninges [ANAT] The membranes that cover the brain and spinal cord; there are three in mammals and one or two in submammalian forms.

meninginococcemia [MED] **1.** The presence of meningococci in the blood. **2.** A clinical disorder consisting of fever, skin hemorrhages, varying degrees of shock, and meningococci in the blood.

meningioma [MED] A localized tumor composed of meningeal cells, involving the meninges and other central nervous system structures. Also known as meningothelioma.

meningism [MED] A condition in which signs and symptoms suggest meningitis, but clinical evidence for the disease is absent. Also known as meningismus.

meningismus *See* meningism.

meningitis [MED] Inflam mation of the meninges of the brain and spinal cord, caused by viral, bacterial, and protozoan agents.

meningitophobia [PSYCH] An abnormal fear of meningitis.

meningocele [MED] Hernia of the meninges through a defect in the skull or vertebral column, forming a cyst filled with cerebrospinal fluid.

meningococcal meningitis [MED] Inflammation of the meninges caused by the bacterium *Neisseria meningitidis* (meningococcus).

meningococcus [MICROBIO] Common name for *Neisseria meningitidis*.

meningoencephalitis [MED] Inflammation of the brain and its meninges.

meningoencephalocele [MED] A protrusion of the brain and its membranes through a defect in the skull.

meningoencephalomyelitis [MED] Combined inflammation of the meninges, brain, and spinal cord.

meningoencephalopathy [MED] Disease of the brain and its meninges.

meningomyelitis [MED] Inflammation of the spinal cord and its membranes.

meningomyocele [MED] Hernia of the spinal cord and its meninges through a defect in the vertebral column.

meningothelioma *See* meningioma.

meningothelium [HISTOL] Epithelium of the arachnoid which envelops the brain.

meningovascular [MED] Involving both the meninges and the cerebral blood vessels.

meningovascular syphilis [MED] Syphilis of the central nervous system involving the formation of gummas of the leptomeninges and endarteritis of cerebral vessels.

meninx [ANAT] Any one of the three membranes covering the brain and spinal cord.

meninx primitiva [VERT ZOO] The single membrane covering the brain and spinal cord of certain submammalian vertebrates.

menisc-, menisco- [SCI TECH] A combining form denoting crescentic, sickle-shaped, semilunar; denoting meniscus, semilunar cartilage.

meniscectomy [MED] Surgical removal of a meniscus or semilunar cartilage.

meniscitis [MED] Inflammation of the semilunar cartilages.

Meniscotheriidae [PALEON] A family of extinct mammals of the order Condylarthra possessing selenodont teeth and molarized premolars.

meniscus [ANAT] A crescent-shaped body, especially an interarticular cartilage. [FL MECH] The free surface of a liquid which is near the walls of a vessel and which is curved because of surface tension. [MET] In reference to a solder joint, the minimum angle at which the solder tapers from the joint to the flat area.

meniscus lens [OPTICS] A lens with one convex surface and one concave surface.

meniscus-Schmidt telescope [OPTICS] A variant of the Schmidt system in which the corrector plate is replaced by a weaker corrector plate followed by a meniscus lens. Also known as Maksutov-Schmidt telescope; Schmidt-Maksutov telescope.

Menispermaceae [BOT] A family of dicotyledonous woody vines in the order Ranunculales distinguished by mostly alternate, simple leaves, unisexual flowers, and a dioecious habit.

menometrorrhagia [MED] Excessive uterine bleeding during menstruation, plus irregular uterine bleeding at other times.

menopause [PHYSIO] The natural physiologic cessation of menstruation, usually occurring in the last half of the fourth decade. Also known as climacteric.

menoplania [MED] Bleeding during menstruation from a part of the body other than the uterus.

Menoponidae [INV ZOO] A family of biting lice (Mallophaga) adapted to life only upon domestic and sea birds.

menorrhagia [MED] Excessive bleeding during menstruation. Also known as hypermenorrhea.

menorrhalgia [MED] Pelvic pain occurring at the menstrual period.

menorrhea [PHYSIO] The normal flow of the menses. [MED] Excessive menstruation.

menostasis [MED] Suppression of the menstrual flow.

menostaxis [MED] Prolonged menstruation.

menses *See* menstruation.

menstrual age [EMBRYO] The age of an embryo or fetus calculated from the first day of the mother's last normal menstruation preceding pregnancy.

menstrual cycle [PHYSIO] The periodic series of changes associated with menstruation and the intermenstrual cycle; menstrual bleeding indicates onset of the cycle.

menstrual period [PHYSIO] The time of menstruation.

menstruate [PHYSIO] To discharge the products of menstruation.

menstruation [PHYSIO] The periodic discharge of sanguineous fluid and sloughing of the uterine lining in women from puberty to the menopause. Also known as menses.

menstruum [MATER] A solvent, commonly one that extracts certain principles from entire plant or animal tissues.

mensuration [MATH] The measurement of geometric quantities; for example, length, area, and volume. [SCI TECH] The act or process of measuring.

mental [ANAT] Pertaining to the chin. Also known as genial. [PSYCH] **1.** Pertaining to the mind, psyche, or inner self. **2.** Pertaining to the intellectual or cognitive functions. **3.** Imaginary or unreal, as when a pain is said to be purely mental.

mental aberration [PSYCH] A departure from normal mental function.

mental adjustment [PSYCH] The act or process by which an individual adapts his attitudes, traits, or feelings to the social environment.

mental age [PSYCH] The degree of mental development of an individual in terms of the chronological age of the average individual of equivalent mental ability; specifically, a score derived from intelligence tests.

mental deficiency [PSYCH] A condition characterized by intellectual retardation, social inadequacy, and persistent dependency.

mental health [PSYCH] A relatively enduring state of being in which an individual has effected an integration of his instinctual drives in a way that is reasonably satisfying to himself as reflected in his zest for living and his feeling of self-realization.

mental hygiene [PSYCH] That branch of hygiene dealing with the preservation of mental and emotional health.

mental illness [PSYCH] Any form of mental aberration; usually refers to a chronic or prolonged disorder in which there are wide deviations from the normal.

mental retardation [PSYCH] An abnormal slowness of mental function and behavior patterns relative to age and development.

mental telepathy [PSYCH] A form of extrasensory perception in which one person is aware of an external event through direct sensory perception, and another person, not in the same place, also becomes aware of the event but not through direct sensory perception.

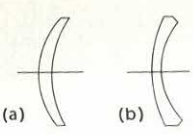
mentation [PSYCH] Mental activity.

menthacamphor *See* menthol.

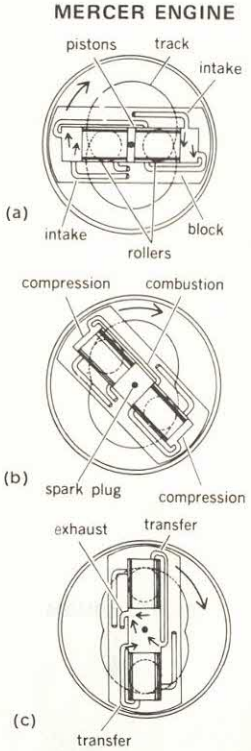
Menthaceae [BOT] An equivalent name for Labiatae.

menthane [ORG CHEM] $C_{10}H_{20}$ A colorless, water-insoluble liquid hydrocarbon; used in organic synthesis. Also known

MENISCUS LENS



Two types of meniscus lens. *(a)* Positive. *(b)* Negative. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*



Mercer engine. *(a)* Pistons are closest together and intake ports are open admitting fresh charge. *(b)* Pistons separate as combustion takes place, compressing gases behind pistons, forcing roller to move outward, and rotating the entire engine block at the same time. *(c)* Pistons are farthest apart, exhaust ports are opened, gases are purged, and compressed fresh charge is transferred to region between pistons.

as hexahydrocymene; 4-isopropyl-1-methylcyclohexane; menthonaphthene; terpane.

***para*-menthan-3-ol** *See* menthol.

menthene [ORG CHEM] $C_{10}H_{18}$ A colorless, water-insoluble, liquid hydrocarbon; used in organic synthesis.

menthol [ORG CHEM] $CH_3C_6H_9(C_3H_7)OH$ An alcohol-soluble, white crystalline compound that may exist in levo form or a mixture of dextro and levo isomers; used in medicines and perfumes, and as a flavoring agent. Also known as hexahydrothymol; 3-hydroxymenthane; menthacamphor; *para*-menthan-3-ol; methylhydroxyisopropylcyclohexane; peppermint camphor.

menthonaphthene *See* menthane.

menthone [ORG CHEM] $C_{10}H_{18}O$ Oily, colorless ketonic liquid with slight peppermint odor; slightly soluble in water, soluble in organic solvents.

menthyl [ORG CHEM] $C_{10}H_{19}$ A univalent radical that is derived from menthol by removal of the hydroxyl group.

menton-philtrum [ANTHRO] A measure of the distance from the midpoint of the lower edge of the chin to the midpoint of the philtrum or vertical groove of the upper lip.

menton-supramentale [ANTHRO] The measurement of the distance taken from the midpoint of the lower edge of the chin to the supramentale, or the angle between the chin and the lower lip.

mentum [ANAT] The chin. [BOT] A projection formed by union of the sepals at the base of the column in some orchids. [INV ZOO] **1.** A projection between the mouth and foot in certain gastropods. **2.** The median or basal portion of the labium in insects.

menu [COMPUT SCI] A list of computer functions appearing on a video display terminal which indicates the possible operations that a computer can perform next, only one of which can be selected by the operator.

Menurae [VERT ZOO] A small suborder of suboscine perching birds restricted to Australia, including the lyrebirds and scrubbirds.

Menuridae [VERT ZOO] The lyrebirds, a family of birds in the suborder Menurae notable for their vocal mimicry.

mep *See* mean effective pressure.

meperidine hydrochloride [ORG CHEM] $C_{15}H_{21}O_2N \cdot HCl$ A white, odorless crystalline compound, melting at 186–189°C; soluble in water and alcohol; used in medicine.

mephenesin [PHARM] $C_{10}H_{14}O_3$ The compound 3-*o*-(tolyloxy)-1,2-propanediol, used as a skeletal muscle relaxant.

mephentermine sulfate [ORG CHEM] $(C_{11}H_{17}N)_2 \cdot H_2SO_4 \cdot 2H_2O$ White odorless crystals; slightly soluble in alcohol, soluble in water; used in medicine.

mephosfolan [ORG CHEM] $C_8H_{16}O_3PNS_2$ A yellow to amber liquid, used as an insecticide and miticide for agricultural crops.

mepivacaine [PHARM] $C_{15}H_{22}N_2O$ The compound *dl*-1-methyl-2′6,′-pipecoloxylidide, a local anesthetic; used as the hydrochloride salt.

méplat [ORD] The flat nose formed by truncation of the ogival portion of a projectile or point fuse.

meprobromate [PHARM] $C_9H_{18}N_2O_4$ The compound 2-methyl-2-*n*-propyl-1,3-propanediol dicarbamate, a tranquilizer with anticonvulsant, muscle relaxant, and sedative actions.

mepyrapone *See* metyrapone.

mer-, mero- [SCI TECH] A combining form meaning part or partial.

-mer [ORG CHEM] A combining form denoting the repeating structure unit of any high polymer.

meralluride [PHARM] $C_9H_{16}HgN_2O_6$ A diuretic consisting of succinamic acid and theophylline, in approximately molecular proportions, administered as the sodium derivative.

Meramecian [GEOL] A North American provincial series of geologic time: Upper Mississippian (above Osagian, below Chesterian).

meraspis [PALEON] Advanced larva of a trilobite; stage in which the pygidium begins to form.

merbromin [ORG CHEM] $C_{20}H_8O_6Na_2Br_2Hg$ A green crystalline powder that gives a deep-red solution in water; used as an antiseptic. [PHARM] The disodium salt of 2′,7′-dibromo-4′-(hydroxymercuri)-fluorescein, an organomercurial antibacterial agent applied topically.

Mercalli scale [GEOPHYS] A 12-point scale for classifying the magnitude of an earthquake.

mercallite [MINERAL] $KHSO_4$ A colorless or sky blue, orthorhombic mineral consisting of potassium acid sulfate; occurs as stalactites composed of minute crystals.

mercamine *See* 2-aminoethanethiol.

mercapt-, mercapto- [CHEM] A combining form denoting the presence of the thiol (SH) group.

mercaptal [ORG CHEM] A group of organosulfur compounds that contain the group $=C(SR)_2$.

mercaptamine *See* 2-aminoethanethiol.

mercaptan [ORG CHEM] A group of organosulfur compounds that are derivatives of hydrogen sulfide in the same way that alcohols are derivatives of water; have a characteristically disagreeable odor, and are found with other sulfur compounds in crude petroleum; an example is methyl mercaptan. Also known as thiol.

mercaptide [ORG CHEM] A compound consisting of a metal and a mercaptan.

mercaptoacetic acid *See* thioglycollic acid.

2-mercaptobenzoic acid *See* thiosalicylic acid.

mercaptobenzothiazole [ORG CHEM] C_7H_5NS A yellow powder, melting at 164–174°C; used in rubber as a vulcanization accelerator with stearic acid. Also known as MBT.

mercapto compound *See* sulfhydryl compound.

mercaptodimethur [ORG CHEM] $C_{11}H_{15}NO_2S$ A white, crystalline compound with a melting point of 121°C; insoluble in water; used as an insecticide, molluscide, and bird repellent for vegetable, fruit crops, and ornamentals. Also known as 4-(methylthio)-3,5-xylylmethylcarbamate.

mercaptoethanol [ORG CHEM] $HSCH_2CH_2OH$ Mobile liquid, water-white; soluble in water, benzene, ether, and most organic solvents; boils at 157°C; used as a solvent, chemical intermediate, and reducing agent.

β-mercaptoethylamine *See* 2-aminoethanethiol.

mercaptol [ORG CHEM] A compound formed by combining a mercaptal and a ketone.

***N*-(mercaptomethyl)-phthalimide *S*-(*O,O*-dimethylphosphorodithioate)** *See* phosmet.

2-mercaptoproprionic acid *See* thiolactic acid.

mercaptosuccinic acid *See* thiomalic acid.

β-mercaptovaline *See* penicillamine.

Mercator bearing *See* rhumb bearing.

Mercator chart [MAP] A chart on the Mercator projection, commonly used for marine navigation. Also known as equatorial cylindrical orthomorphic chart.

Mercator course *See* rhumb-line course.

Mercator direction [NAV] Horizontal direction of a rhumb line, expressed as angular distance from a reference direction. Also known as rhumb direction.

Mercator projection [MAP] A conformal cylindrical map projection in which the surface of a sphere or spheroid, such as the earth, is conceived as developed on a cylinder tangent along the Equator; meridians appear as equally spaced vertical lines, and parallels as horizontal lines drawn farther apart as the latitude increases, such that the correct relationship between latitude and longitude scales at any point is maintained.

Mercator sailing [NAV] A method of solving the various problems involving course, distance, difference of latitude, difference of longitude, and departure by considering them in the relation in which they are plotted on a Mercator chart.

Mercer engine [MECH ENG] A revolving-block engine in which two opposing pistons operate in a single cylinder with two rollers attached to each piston; intake ports are uncovered when the pistons are closest together, and exhaust ports are uncovered when they are farthest apart.

mercerization [TEXT] A technique used to increase luster, dye absorptivity, and strength in cotton and linen goods; the cloth is put into a heated solution of caustic soda at a controlled temperature, then washed, neutralized, and rinsed.

mercerizing assistant [MATER] A wetting agent, such as cresylic acid and derivatives or oils, used to increase the penetration of textile mercerization baths.

merchant mill [MET] A mill, consisting of a group of stands of three rolls each, used to roll rounds, flats, or squares of smaller dimensions than could be rolled on a bar mill.

merchant ship [NAV ARCH] A power-driven ship employed in commercial transport on the oceans and large inland bodies of water such as the Great Lakes.

merchlorethamine hydrochloride [PHARM] $(ClCH_2CH_2)_2NCH_3 \cdot HCl$ Crystalline leaflets, used as an antineoplastic drug.

mercurial horn ore *See* calomel.

mercurialism [MED] Chronic type of mercury poisoning. Also known as hydrargyrism.

mercurial nephrosis [MED] Nephrosis caused by poisoning with mercury bichloride.

mercurial tremor [MED] A fine muscular tremor observed in persons with mercurialism or poisoning by other heavy metals.

mercuric [INORG CHEM] The mercury ion with a 2+ oxidation state, for example $Hg(NO_3)_2$.

mercuric acetate [ORG CHEM] $Hg(C_2H_3O_2)_2$ Poisonous, light-sensitive white crystals; soluble in alcohol and water; used in medicine and as a catalyst in organic synthesis. Also known as mercury acetate.

mercuric arsenate [INORG CHEM] $HgHAsO_4$ A poisonous yellow powder; soluble in hydrochloric acid, insoluble in water; used in antifouling and waterproof paints and in medicine. Also known as mercury arsenate; mercury arseniate.

mercuric barium iodide [INORG CHEM] $HgI_2 \cdot BaI_2 \cdot 5H_2O$ Crystals that are yellow or reddish and deliquescent; soluble in alcohol and water; used in aqueous solution as Rohrbach's solution for mineral separation on the basis of density. Also known as barium mercury iodide; mercury barium iodide.

mercuric benzoate [ORG CHEM] $Hg(C_7H_5O_2)_2 \cdot H_2O$ Poisonous white crystals, sensitive to light, melting at 165°C; slightly soluble in alcohol and water; used in medicine. Also known as mercury benzoate.

mercuric bromide [INORG CHEM] $HgBr_2$ Poisonous white crystals, sensitive to light, melting at 235°C; soluble in alcohol and ether; used in medicine. Also known as mercury bromide.

mercuric chloride [INORG CHEM] $HgCl_2$ An extremely toxic compound that forms white, rhombic crystals which sublime at 300°C and are soluble in alcohol or benzene; used for the manufacture of other mercuric compounds, as a fungicide, and in medicine and photography. Also known as bichloride of mercury; corrosive sublimate.

mercuric cyanate *See* mercury fulminate.

mercuric cyanide [INORG CHEM] $Hg(CN)_2$ Poisonous, colorless, transparent crystals that darken in light, decompose when heated; soluble in water and alcohol; used in photography, medicine, and germicidal soaps. Also known as mercury cyanide.

mercuric fluoride [INORG CHEM] HgF_2 Poisonous, transparent crystals that decompose when heated; moderately soluble in alcohol and water; used to synthesize organic fluorides.

mercuric iodide [INORG CHEM] HgI_2 Poisonous red crystals that turn yellow when heated to 150°C; soluble in boiling alcohol; used in medicine and in Nessler's and Mayer's reagents.

mercuric lactate [ORG CHEM] $Hg(C_3H_5O_3)_2$ A poisonous white powder that decomposes when heated; soluble in water; used in medicine.

mercuric nitrate [INORG CHEM] $Hg(NO_3)_2 \cdot H_2O$ Poisonous, colorless crystals that decompose when heated; soluble in water and nitric acid, insoluble in alcohol; a fire hazard; used in medicine, in nitrating organic aromatics, and in felt manufacture. Also known as mercury nitrate; mercury pernitrate.

mercuric oleate [ORG CHEM] $Hg(C_{18}H_{33}O_2)_2$ A poisonous yellowish-to-red liquid or solid mass; insoluble in water; used in medicine and antifouling paints, and as an antiseptic. Also known as mercury oleate.

mercuric oxide [INORG CHEM] HgO A compound of mercury that exists in two forms, red mercuric oxide and yellow mercuric oxide; the red form decomposes upon heating, is insoluble in water, and is used in pigments and paints, and in ceramics; the yellow form is insoluble in water, decomposes upon heating, and is used in medicine. Also known as mercury oxide; red precipitate; yellow precipitate.

mercuric phosphate [INORG CHEM] $Hg_3(PO_4)_2$ Poisonous yellowish or white powder; insoluble in alcohol and water, soluble in acids; used in medicine. Also known as mercury phosphate; neutral, normal, or tertiary mercuric phosphate; trimercuric orthophosphate.

mercuric salicylate [ORG CHEM] $Hg(C_7H_5O_3)_2$ Poisonous, white powder; odorless and tasteless; almost insoluble in water and alcohol; variable composition; used in medicine. Also known as salicylated mercury.

mercuric stearate [ORG CHEM] $Hg(C_{17}H_{35}CO_2)_2$ Poisonous yellow powder; soluble in fatty acids, slightly soluble in alcohol; used as a germicide and in medicine. Also known as mercury stearate.

mercuric sulfate [INORG CHEM] $HgSO_4$ A toxic, white, crystalline powder, soluble in acids; used in medicine, as a catalyst, and for galvanic batteries. Also known as mercury persulfate; mercury sulfate.

mercuric sulfide [INORG CHEM] HgS **1.** The black variety is a poisonous powder; insoluble in water, alcohol, and nitric acid, soluble in sodium sulfide solution; sublimes at 583°C; used as a pigment. Also known as black mercury sulfide; ethiops mineral. **2.** The red variety is a poisonous powder; insoluble in water and alcohol; sublimes at 446°C; used as a medicine and pigment. Also known as Chinese vermilion; quicksilver vermilion; red mercury sulfide; vermilion.

mercuric sulfocyanate *See* mercuric thiocyanate.

mercuric thiocyanate [INORG CHEM] $Hg(SCN)_2$ Poisonous white powder; soluble in alcohol, slightly soluble in water; decomposes when heated; used in photography. Also known as mercuric sulfocyanide; mercury sulfocyanate; mercury thiocyanate.

mercurous [INORG CHEM] Referring to mercury with a 1+ valence; for example, mercurous chloride, Hg_2Cl_2, where the mercury is covalently bonded, as Cl—Hg—Hg—Cl.

mercurous acetate [ORG CHEM] $HgC_2H_3O_2$ Poisonous colorless plates or scales; decomposed by boiling water and by light; soluble in dilute nitric acids, slightly soluble in water. Also known as mercury acetate; mercury protoacetate.

mercurous bromide [INORG CHEM] HgBr Poisonous white powder, crystals, or fibrous mass; odorless and tasteless; darkens in light; soluble in hot sulfuric acid and fuming nitric acid, insoluble in alcohol and ether; used in medicine. Also known as mercury bromide.

mercurous chlorate [INORG CHEM] $Hg_2(ClO_3)_2$ Poisonous white crystals that decompose at 250°C; soluble in alcohol and water; explodes in contact with combustible substances. Also known as mercury chlorate.

mercurous chloride [INORG CHEM] Hg_2Cl_2 Odorless, nonpoisonous white crystals that darken in light; insoluble in water, alcohol, and ether; melts at 302°C; used in medicine and pyrotechnics. Also known as mercury monochloride; mercury protochloride; mild mercury chloride.

mercurous chromate [INORG CHEM] Hg_2CrO_4 Red powder with variable composition; decomposes when heated; soluble in nitric acid, insoluble in water and alcohol; used to color ceramics green. Also known as mercury chromate.

mercurous iodide [INORG CHEM] Hg_2I_2 Odorless, tasteless, poisonous yellow powder; darkens when heated; insoluble in water, alcohol, and ether; sublimes at 140°C; used as external medicine. Also known as mercury protoiodide.

mercurous oxide [INORG CHEM] Hg_2O A poisonous black powder; insoluble in water, soluble in acids; decomposes at 100°C.

mercurous phosphate [INORG CHEM] Hg_3PO_4 Light-sensitive white powder with variable composition; insoluble in alcohol and water, soluble in nitric acids; used in medicine. Also known as mercury phosphate; neutral, normal, or tertiary mercurous phosphate; trimercurous orthophosphate.

mercurous sulfate [INORG CHEM] Hg_2SO_4 Poisonous yellow-to-white powder; soluble in hot sulfuric acid or dilute nitric acid, insoluble in water; used as a catalyst and in laboratory batteries.

mercury [CHEM] A metallic element, symbol Hg, atomic number 80, atomic weight 200.59, existing at room temperature as a silvery, heavy liquid. Also known as quicksilver.

Mercury [ASTRON] The planet nearest to the sun; it is visible to the naked eye shortly after sunset or before sunrise when it is nearest to its greatest angular distance from the sun.

mercury acetate *See* mercuric acetate; mercurous acetate.

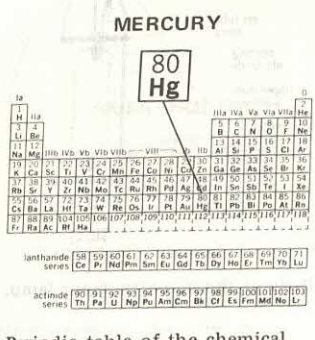
mercury arc [ELECTR] An electric discharge through ionized mercury vapor, giving off a brilliant bluish-green light containing strong ultraviolet radiation.

mercury-arc rectifier [ELECTR] A gas-filled rectifier tube in which the gas is mercury vapor; small sizes use a heated cathode, while larger sizes rated up to 8000 kilowatts and higher use a mercury-pool cathode. Also known as mercury rectifier; mercury-vapor rectifier.

mercury arsenate *See* mercuric arsenate.

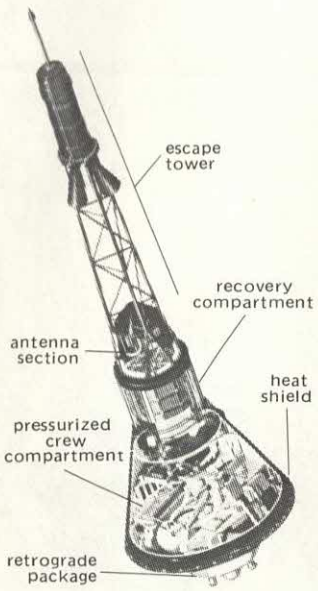
mercury arseniate *See* mercuric arsenate.

mercury ballistic [NAV] A system of reservoirs and connecting tubes containing mercury used with a type of nonpen-



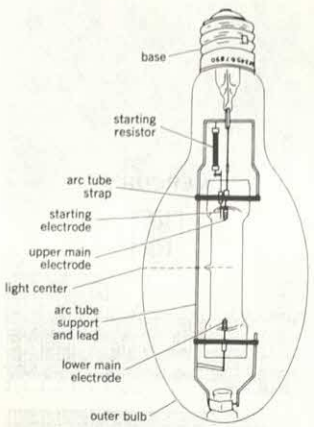
Periodic table of the chemical elements showing the position of mercury.

MERCURY PROGRAM



Cutaway view of a Mercury spacecraft. *(NASA)*

MERCURY-VAPOR LAMP



Parts of the mercury-vapor lamp.

dulous gyro compass; the action of gravity on this system provides the torques and resultant precessions required to convert the gyroscope into a compass.

mercury barium iodide *See* mercuric barium iodide.

mercury barometer [ENG] An instrument which determines atmospheric pressure by measuring the height of a column of mercury which the atmosphere will support; the mercury is in a glass tube closed at one end and placed, open end down, in a well of mercury. Also known as Torricellian barometer.

mercury benzoate *See* mercuric benzoate.

mercury bromide *See* mercuric bromide; mercurous bromide.

mercury-cathode cell [CHEM ENG] Electrolytic cell used to manufacture chlorine and caustic soda from sodium chloride brine; includes Castner and DeNora cells.

mercury cell [ELEC] A primary dry cell that delivers an essentially constant output voltage throughout its useful life by means of a chemical reaction between zinc and mercury oxide; widely used in hearing aids. Also known as mercury oxide cell.

mercury chlorate *See* mercurous chlorate.

mercury chromate *See* mercurous chromate.

mercury cosmetic *See* ammoniated mercury.

mercury cyanide *See* mercuric cyanide.

mercury delay line [ELECTR] An acoustic delay line in which mercury is the medium for sound transmission. Also known as mercury memory; mercury storage.

mercury fulminate [ORG CHEM] $Hg(CNO)_2$ A gray, crystalline powder; explodes at the melting point; soluble in alcohol, ammonium hydroxide, and hot water; used for explosive caps and detonators. Also known as mercuric cyanate.

mercury lamp *See* mercury-vapor lamp.

mercury manometer [ENG] A manometer in which the instrument fluid is mercury; used to record or control difference of pressure or fluid flow.

mercury memory *See* mercury delay line.

mercury monochloride *See* mercurous chloride.

mercury naphthenate [ORG CHEM] Poisonous dark-amber liquid; soluble in mineral oils; used in gasoline antiknock compounds and as a paint antimildew promoter.

mercury nitrate *See* mercuric nitrate.

mercury oleate *See* mercuric oleate.

mercury oxide *See* mercuric oxide.

mercury oxide cell *See* mercury cell.

mercury pernitrate *See* mercuric nitrate.

mercury persulfate *See* mercuric sulfate.

mercury phosphate *See* mercuric phosphate; mercurous phosphate.

mercury-pool cathode [ELECTR] A cathode of a gas tube consisting of a pool of mercury; an arc spot on the pool emits electrons.

mercury-pool rectifier *See* pool-cathode mercury arc rectifier.

Mercury program [AERO ENG] First United States program to use manned spacecraft, carried out in 1961–1963; the craft carried one man.

mercury protoacetate *See* mercurous acetate.

mercury protochloride *See* mercurous chloride.

mercury protoiodide *See* mercurous iodide.

mercury stearate *See* mercuric stearate.

mercury storage *See* mercury delay line.

mercury switch [ELEC] A switch that is closed by making a large globule of mercury move up to the contacts and bridge them; the mercury is usually moved by tilting the entire switch.

mercury sulfate *See* mercuric sulfate.

mercury tank [ELECTR] A container of mercury, with pairs of transducers at opposite ends, used in a mercury delay line.

mercury thermometer [ENG] A liquid-in-glass thermometer or a liquid-in-metal thermometer using mercury as the liquid.

mercury thiocyanate *See* mercuric thiocyanate.

mercury tube *See* mercury-vapor tube; pool tube.

mercury-vapor lamp [ELECTR] A lamp in which light is produced by an electric arc between two electrodes in an ionized mercury-vapor atmosphere; it gives off a bluish-green light rich in ultraviolet radiation. Also known as mercury lamp.

mercury-vapor rectifier *See* mercury-arc rectifier.

mercury-vapor tube [ELECTR] A gas tube in which the active gas is mercury vapor. Also known as mercury tube.

mercury-wetted reed switch [ELEC] A reed switch containing a pool of mercury at one end and normally operated vertically; the contacts on the reeds are covered with a mercury film by capillary action; each operation of the switch renews this mercury film contact, thereby increasing the operating life of the switch many times.

merganser [VERT ZOO] Any of several species of diving water fowl composing a distinct subfamily of Anatidae and characterized by a serrate bill adapted for catching fish.

merge [COMPUT SCI] To create an ordered set of data by combining properly the contents of two or more sets of data, each originally ordered in the same manner as the output data set. Also known as mesh.

merged-transistor logic *See* integrated injection logic.

merge search [COMPUT SCI] A procedure for searching a table in which both the table and file records must first be ordered in the same sequence on the key involved, and the table is searched sequentially until a table-record key equal to or greater than the file-record key is found, upon which the file record is processed if its key is equal, and the process is repeated with the next file record, starting at the table position where the previous search terminated.

merge sort [COMPUT SCI] To produce a single sequence of items ordered according to some rule, from two or more previously ordered or unordered sequences, without changing the items in size, structure, or total number; although more than one pass may be required for a complete sort, items are selected during each pass on the basis of the entire key.

merging routine [COMPUT SCI] A program that creates a single sequence of items, ordered according to some rule, out of two or more sequences of items, each sequence ordered according to the same rule.

Merian's formula [OCEANOGR] A formula for the period of a seiche, $T = (1/n)\,(2L/\sqrt{gd})$, where n is the number of nodes, L is the horizontal dimension of the basin measured in the direction of wave motion, g is the acceleration of gravity, and d is the depth of the water.

mericarp [BOT] An individual, one-seeded carpel of a schizocarp.

meridian [ASTRON] **1.** A great circle passing through the poles of the axis of rotation of a planet or satellite. **2.** See celestial meridian. [GEOD] A north-south reference line, particularly a great circle through the geographical poles of the earth.

meridian altitude [ASTRON] The altitude of a celestial body when it is on the celestial meridian of the observer, bearing 000° or 180° true.

meridian angle [ASTRON] Angular distance east or west of the local celestial meridian; the arc of the celestial equator, or the angle at the celestial pole, between the upper branch of the local celestial meridian and the hour circle of a celestial body, measured eastward or westward from the local celestial meridian through 180°, and labeled E or W to indicate the direction of measurement.

meridian angle difference [ASTRON] The difference between two meridian angles, particularly between the meridian angle of a celestial body and the value used as an argument for entering into a table. Also called hour angle difference.

meridian circle *See* transit circle.

meridian observation [ASTRON] Measurement of the altitude of a celestial body on the celestial meridian of the observer or the altitude so measured.

meridian passage [ASTRON] The passage of a celestial body across an observer's meridian.

meridian photometer [ASTRON] An instrument in which mirrors are used to bring the light from two stars which are at or near the celestial meridian simultaneously, but at different altitudes, to a common focus, to compare their brightness.

meridian sailing [NAV] Following a true course of 000° or 180°, or sailing along a meridian; under these conditions the dead-reckoning latitude is assumed to change 1 minute for each mile run, and the dead-reckoning longitude is assumed to remain unchanged.

meridian telescope [OPTICS] Any telescope used to make observations in the plane of the meridian, such as a transit telescope or zenith telescope.

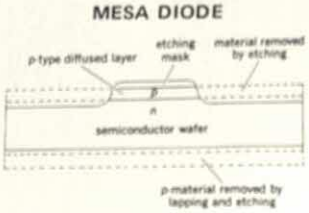
meridian transit *See* transit; transit circle.

meridional [GEOL] Pertaining to longitudinal movements or directions, that is, northerly or southerly.

meridional cell [GEOPHYS] A very large-scale convective circulation in the atmosphere or ocean which takes place in a meridional plane, with northward and southward currents in opposite branches of the cell, and upward and downward motion in the equatorward and poleward ends of the cell.

meridional circulation [METEOROL] An atmospheric circulation in a vertical plane oriented along a meridian; it consists, therefore, of the vertical and the meridional (north or south) components of motion only. [OCEANOGR] The exchange of water masses between northern and southern oceanic regions.
meridional difference [MAP] The difference between the meridional parts of any two given parallels of latitude; this difference is found by subtraction if the two parallels are on the same side of the equator, and by addition if on opposite sides. Also known as difference of meridional parts.
meridional flow [METEOROL] A type of atmospheric circulation pattern in which the meridional (north and south) component of motion is unusually pronounced; the accompanying zonal component is usually weaker than normal. [OCEANOGR] Current moving along a meridian.
meridional focus *See* primary focus.
meridional front [METEOROL] A front in the South Pacific separating successive migratory subtropical anticyclones; such fronts are essentially in the form of great arcs with meridians of longitudes as chords; they have the character of cold fronts.
meridional index [METEOROL] A measure of the component of air motion along meridians, averaged, without regard to sign, around a given latitude circle.
meridional parts [MAP] The length of the arc of a meridian between the equator and a given parallel on a mercator chart, expressed in units of 1 minute of longitude at the equator.
meridional ray [OPTICS] A ray that lies within a plane which also contains the axis of an optical system.
meridional wind [METEOROL] The wind or wind component along the local meridian, as distinguished from the zonal wind.
Meridosternata [INV ZOO] A suborder of echinoderms including various deep-sea forms of sea urchins.
merino [TEXT] A fine, soft fabric made of wool from the Merino sheep. Also known as botany.
merinthophobia [PSYCH] An abnormal fear of being tied up.
merismite [PETR] A type of chorismite in which penetration of the diverse units is irregular.
meristem [BOT] Formative plant tissue composed of undifferentiated cells capable of dividing and giving rise to other meristematic cells as well as to specialized cell types; found in growth areas.
meristic [BIOL] Pertaining to a change in number or in geometric relation of parts of an organism. [ZOO] Of, pertaining to, or divided into segments.
merit [ELECTR] A performance rating that governs the choice of a device for a particular application; it must be qualified to indicate type of rating, as in gain-bandwidth merit or signal-to-noise merit.
merit pay plan [IND ENG] Work performed for a set hourly wage that varies from one pay period to another as a function of the worker's productivity, but never declines below a guaranteed minimum wage.
Merkel's corpuscles [ANAT] Touch receptors consisting of flattened platelets at the tips of certain cutaneous nerves.
Mermithidae [INV ZOO] A family of filiform nematodes in the superfamily Mermithoidea; only juveniles are parasitic.
Mermithoidea [INV ZOO] A superfamily of nematodes composed of two families, both of which are invertebrate parasites.
merobiastic [EMBRYO] Of or pertaining to an ovum that undergoes incomplete cleavage due to large amounts of yolk.
merocrine [PHYSIO] Pertaining to glands in which the secretory cells undergo cytological changes without loss of cytoplasm during secretion.
merocrystalline *See* hypocrystalline.
merogony [EMBRYO] The normal or abnormal development of a part of an egg following cutting, shaking, or centrifugation of the egg before or after fertilization.
merohedral [CRYSTAL] Of a crystal class in a system, having a general form with only one-half, one-fourth, or one-eighth the number of equivalent faces of the corresponding form in the holohedral class of the same system. Also known as merosymmetric.
meromictic [HYD] Of or pertaining to a lake whose water is permanently stratified and therefore does not circulate completely throughout the basin at any time during the year.
meromorphic function [MATH] A function of complex variables which is analytic in its domain of definition save at a finite number of points which are poles.
meromyarian [INV ZOO] Having few muscle cells in each quadrant as seen in cross section; applied especially to nematodes.
meromyosin [BIOCHEM] Protein fragments of a myosin molecule, produced by limited proteolysis.
Meropidae [VERT ZOO] The bee-eaters, a family of brightly colored Old World birds in the order Coraciiformes.
meroplankton [BIOL] Plankton composed of floating developmental stages (that is, eggs and larvae) of the benthos and nekton organisms. Also known as temporary plankton.
Merostomata [INV ZOO] A class of primitive arthropods of the subphylum Chelicerata distinguished by their aquatic mode of life and the possession of abdominal appendages which bear respiratory organs; only three living species are known.
merosymmetric *See* merohedral.
-merous [BIOL] Combining form that denotes having such parts or so many parts.
Merozoa [INV ZOO] The equivalent name for Cestoda.
merozoite [INV ZOO] An ameboid trophozoite in some sporozoans produced from a schizont by schizogony.
Merrick Weightometer [MECH ENG] An instrument which measures the weight of material being carried by a belt conveyor, in which the weight of the load on a portion of the conveyor is balanced, using a system of levers, by the buoyancy of a cylindrical steel float partly immersed in a bath of mercury.
merrihueite [MINERAL] $(K,Na)_2(Fe,Mg)_5Si_{12}O_{30}$ A silicate mineral found only in meteorites.
Merrill-Crowe process [MET] Removal of gold from cyanide solution by deoxygenation followed by precipitation on zinc dust, the work being completed by filtration to give the resultant auriferous gold slimes.
merrillite [MINERAL] $Ca_3(PO_4)_2$ Colorless phosphate mineral found only in meteorites.
Mersenne's law [MECH] The fundamental frequency of a vibrating string is proportional to the square root of the tension and inversely proportional both to the length and the square root of the mass per unit length.
Mersey yellow coal *See* tasmanite.
Merton grating [OPTICS] A type of diffraction grating which is produced by a process in which a helical thread is cut on a cylinder, and errors are smoothed by cutting a second thread further along the same cylinder with a Merton nut.
Merton nut [DES ENG] A nut whose threads are made of an elastic material such as cork, and are formed by compressing the material into a screw.
merwinite [MINERAL] $Ca_3MgSi_2O_8$ A rare colorless or pale-green neosilicate mineral crystallizing in the monoclinic system; occurs in granular aggregates showing polysynthetic twinning; hardness is 6 on Mohs scale, and specific gravity is 3.15.
merycism *See* rumination.
Merycoidodontidae [PALEON] A family of extinct tylopod ruminants in the superfamily Merycoidodontoidea.
Merycoidodontoidea [PALEON] A superfamily of extinct ruminant mammals in the infraorder Tylopoda which were exceptionally successful in North America.
merzlota *See* frozen ground.
mes-, meso- [SCI TECH] A combining form denoting mid-, middle, medial; medium, moderate, intermediate; mesentery; mesodermal.
mesa [GEOGR] A broad, isolated, flat-topped hill bounded by a steep cliff or slope on at least one side; represents an erosion remnant.
mesa-butte [GEOGR] A butte formed as the result of erosion and reduction of a mesa.
Mesacanthidae [PALEON] An extinct family of primitive acanthodian fishes in the order Acanthodiformes distinguished by a pair of small intermediate spines, large scales, superficially placed fin spines, and a short branchial region.
mesaconic acid [ORG CHEM] $C_5H_6O_4$ An unsaturated dibasic acid, an isomer of citraconic acid, that melts at 202°C. Also known as methyl fumaric acid.
mesa device [ELECTR] Any device produced by diffusing the surface of a germanium or silicon wafer and then etching down all but selected areas, which then appear as physical plateaus or mesas.
mesa diode [ELECTR] A diode produced by diffusing the entire surface of a large germanium or silicon wafer and then delineating the individual diode areas by a photoresist-con-

MESA DIODE



Mesa structure of a high-speed diffused silicon diode.

trolled etch that removes the entire diffused area except the island or mesa at each junction site.

mesa plain [GEOGR] A flat-topped summit of a hilly mountain.

mesappendix [ANAT] The mesentery of the vermiform appendix.

mesarch [BOT] Having metaxylem on both sides of the protoxylem in a siphonostele. [ECOL] Originating in a mesic environment.

mesarteritis [MED] Inflammation of the tunica media of an artery.

mesa transistor [ELECTR] A transistor in which a germanium or silicon wafer is etched down in steps so the base and emitter regions appear as physical plateaus above the collector region.

mescal buttons [BOT] The dried tops from the cactus *Lophophora williamsii*; capable of producing inebriation and hallucinations.

mescaline [ORG CHEM] $C_{11}H_{17}NO_3$ The alkaloid 3,4,5-trimethoxyphenethylamine, found in mescal buttons; produces unusual psychic effects and visual hallucinations.

mesectoderm [EMBRYO] The portion of the mesenchyme arising from ectoderm.

mesencephalon [EMBRYO] The middle portion of the embryonic vertebrate brain; gives rise to the cerebral peduncles and the tectum. Also known as midbrain.

mesenchymal cell [HISTOL] An undifferentiated cell found in mesenchyme and capable of differentiating into various specialized connective tissues.

mesenchymal epithelium [HISTOL] A layer of squamous epithelial cells lining subdural, subarachnoid, and perilymphatic spaces, and the chambers of the eyeball.

mesenchymal hyalin [PATH] A form of hyalin which results from degeneration or necrosis of nonepithelial tissue, usually of muscle, as in Zenker's hyaline necrosis, or of blood vessels.

mesenchymal tissue [EMBRYO] Undifferentiated tissue composed of branching cells embedded in a coagulable fluid matrix.

mesenchyme [EMBRYO] That part of the mesoderm from which all connective tissues, blood vessels, blood, lymphatic system proper, and the heart are derived.

mesenchymoma [MED] A tumor composed of cells resembling those of embryonic mesenchyme, or of mesenchyme with its derivatives.

mesendoderm [EMBRYO] Embryonic tissue which differentiates into mesoderm and endoderm.

mesenteric [ANAT] Of or pertaining to the mesentery.

mesenteric artery [ANAT] Either of two main arterial branches arising from the abdominal aorta: the inferior, supplying the descending colon and the rectum, and the superior, supplying the small intestine, the cecum, and the ascending and transverse colon.

mesenteric lymphadenitis [MED] Inflammation of the lymph nodes in the mesentery.

mesenteron [EMBRYO] *See* midgut. [INV ZOO] Central gastric cavity in an actinozoan.

mesentery [ANAT] A fold of the peritoneum that connects the intestine with the posterior abdominal wall.

mesentoderm [EMBRYO] **1.** The entodermal portion of the mesoderm. **2.** Undifferentiated tissue from which entoderm and mesoderm are derived. **3.** That part of the mesoderm which gives rise to certain structures of the digestive tract.

mesethmoid [ANAT] A bone or cartilage in the center of the ethmoid region of the vertebrate skull; usually constitutes the greater portion of the nasal septum.

MESFET *See* metal semiconductor field-effect transistor.

mesh [COMPUT SCI] *See* merge. [DES ENG] A size of screen or of particles passed by it in terms of the number of openings occurring per linear inch. Also known as mesh size. [ELEC] A set of branches forming a closed path in a network so that if any one branch is omitted from the set, the remaining branches of the set do not form a closed path. Also known as loop. [MECH ENG] Engagement or working contact of teeth of gears or of a gear and a rack. [MIN ENG] **1.** A closed path traversed through the network in ventilation surveys. **2.** The size of diamonds as determined by sieves. [TEXT] Any fabric, knitted or woven, with an open, fine or coarse texture.

mesh analysis [ELEC] A method of electrical circuit analysis in which the mesh currents are taken as independent variables and the potential differences around a mesh are equated to 0.

mesh connection *See* delta connection.

mesh currents [ELEC] The currents which are considered to circulate around the meshes of an electric network, so that the current in any branch of the network is the algebraic sum of the mesh currents of the meshes to which that branch belongs. Also known as cyclic currents; Maxwell's cyclic currents.

mesh impedance [ELEC] The ratio of the voltage to the current in a mesh when all other meshes are open. Also known as self-impedance.

mesh size *See* mesh.

mesh texture *See* reticulate.

mesh weld [MET] A seam weld in which the finished weld is only slightly thicker than the sheets, and the lap disappears.

mesic [ECOL] **1.** Of or pertaining to a habitat characterized by a moderate amount of water. **2.** Of or pertaining to a mesophyte.

mesic atom [PARTIC PHYS] An atom in which one of the electrons is replaced by a negative muon or meson orbiting close to or within the nucleus. Also known as mesonic atom.

mesic molecule [PARTIC PHYS] A molecule in which one of the electrons is replaced by a negative muon or meson orbiting close to or within one of the nuclei. Also known as mesonic molecule.

mesityl oxide [ORG CHEM] $(CH_3)_2C{=}CHCOCH_3$ A colorless, oily liquid with a honeylike odor; solidifies at −41.5°C; used as a solvent for resins, particularly vinyl resins, many gums, and nitrocellulose; also used in lacquers, paints, and varnishes. Also known as isopropylideneacetone.

mesmerism [PSYCH] Hypnotism induced by animal magnetism, a supposed force passing from operator to subject.

meso- [CHEM] A prefix meaning intermediate or middle, as in denoting inactive optical isomers, the form of intermediate inorganic acid, the middle position in cyclic organic compounds, or a ring system with middle ring positions.

mesoappendix [ANAT] The mesentery of the vermiform appendix.

mesobenthos [OCEANOGR] Of or pertaining to the sea bottom at depths of 180–900 meters (100-500 fathoms).

mesobilirubin [BIOCHEM] $C_{33}H_{40}O_6N_4$ Yellow, crystalline by-product of bilirubin reduction.

mesobilirubinogen [BIOCHEM] $C_{33}H_{44}O_6N_4$ Colorless, crystalline by-product of bilirubin reduction; may be converted to urobilin, stercobilinogen, or stercobilin.

mesobiliverdin [BIOCHEM] $C_{28}H_{38}O_6N_4$ A structural isomer of phycoerythrin and phycocyanobilin released by certain biliprotein by treatment with alkali.

mesoblast [EMBRYO] Undifferentiated mesoderm of the middle layer of the embryo.

mesoblastema *See* mesoderm.

mesocardium [ANAT] Epicardium covering the blood vessels which enter and leave the heart. [EMBRYO] The mesentery supporting the embryonic heart.

mesocarp [BOT] The middle layer of the pericarp.

mesocercaria [INV ZOO] The developmental stage in the second intermediate host of *Alaria*, a digenetic trematode.

mesoclimate [CLIMATOL] **1.** The climate of small areas of the earth's surface which may not be representative of the general climate of the district. **2.** A climate characterized by moderate temperatures, that is, in the range 20–30°C. Also known as mesothermal climate.

mesoclimatology [CLIMATOL] The study of mesoclimates.

mesocolon [ANAT] The part of the mesentery that is attached to the colon.

mesoconch [ANTHRO] Having moderately rounded orbits with an orbital index of 83 to 89.

mesocranial [ANTHRO] Having a medium-sized skull with a cranial index of 75–80.

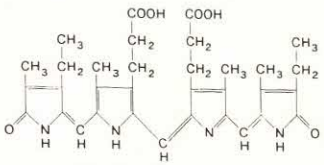
mesocratic [PETR] Of igneous rock, being intermediate in color between leucocratic and melanocratic due to equal amounts of light and dark constituents.

mesocrystalline [PETR] Of a crystalline rock, containing crystals whose diameters are intermediate between microcrystalline and macrocrystalline rock.

mesocyclone [METEOROL] A cyclonic circulation interior to a convective storm.

mesoderm [EMBRYO] The third germ layer, lying between the ectoderm and endoderm; gives rise to the connective tissues,

MESOBILIVERDIN



Structural formula for mesobiliverdin.

muscles, urogenital system, vascular system, and the epithelial lining of the coelom. Also known as mesoblastema.

mesodermal tumor [MED] A tumor composed of cells normally derived from the mesoderm.

mesogaster [ANAT] The mesentery of the stomach.

Mesogastropoda [INV ZOO] The equivalent name for Pectinibranchia.

mesogeosyncline [GEOL] A geosyncline between two continents. Also known as mediterranean.

mesoglea [INV ZOO] The gelatinous layer between the ectoderm and endoderm in coelenterates and certain sponges.

mesognathic [ANTHRO] Designating a condition of the upper jaw in which it has a mild degree of anterior projection with respect to the profile of the facial skeleton, when the skull is oriented on the Frankfort horizontal plane; having a gnathic index of 98.0 to 102.9.

Mesohippus [PALEON] An early ancestor of the modern horse; occurred during the Oligocene.

mesoinositol *See* myoinositol.

mesolamella [INV ZOO] A thin gelatinous membrane between the epidermis and gastrodermis in hydrozoans.

mesolite [MINERAL] $Na_2Ca_2Al_6Si_9O_{30}\cdot 8H_2O$ Zeolite mineral composed of hydrous sodium calcium aluminosilicate, usually found in white or colorless tufts of acicular crystals; used as cation exchangers or molecular sieves.

mesomere [EMBRYO] The muscle-plate region between the epimere and hypomere in vertebrates.

mesometeorology [METEOROL] That portion of the science of meteorology concerned with the study of atmospheric phenomena on a scale larger than that of micrometeorology, but smaller than the cyclonic scale.

mesometrium [ANAT] The part of the broad ligament attached directly to the uterus.

mesomorph [PSYCH] A somatotype characterized by an athletic physique.

mesomorphism [PHYS CHEM] A state of matter intermediate between a crystalline solid and a normal isotropic liquid, in which long rod-shaped organic molecules contain dipolar and polarizable groups.

meson [PARTIC PHYS] Any elementary (noncomposite) particle with strong nuclear interactions and baryon number equal to zero.

meson capture [PARTIC PHYS] Process in which an atomic nucleus acquires a negative muon or meson which circles it in a tightly bound orbit until it decays.

mesonephric duct [EMBRYO] The efferent duct of the mesonephros. Also known as Wolffian duct.

mesonephric fold *See* mesonephric ridge.

mesonephric ridge [EMBRYO] A fold of the dorsal wall of the coelom lateral to the mesentery formed by development of the mesonephros. Also known as mesonephric fold.

mesonephroma [MED] Any of several benign or malignant tumors of the genital tract thought to be derived from mesonephros. Also known as teratoid adenocystoma.

mesonephroma ovarii [MED] A malignant ovarian mesonephroma.

mesonephros [EMBRYO] One of the middle of three pairs of embryonic renal structures in vertebrates; persists in adult fish and is replaced by the metanephros in higher forms.

mesonic atom *See* mesic atom.

mesonic molecule *See* mesic molecule.

mesonic x-ray [PARTIC PHYS] An x-ray emitted by a mesic atom when the muon or meson makes a transition from one bound state to another.

meson resonance [PARTIC PHYS] Any elementary particle with a baryon number of zero which decays through strong interactions, and therefore has an extremely short lifetime on the order of 10^{-23} second.

Mesonychidae [PALEON] A family of extinct mammals of the order Condylarthra.

mesopause [METEOROL] The top of the mesosphere; corresponds to the level of minimum temperature at 80 to 95 kilometers.

mesopeak [METEOROL] The temperature maximum at about 50 kilometers in the mesosphere.

mesophile [BIOL] An organism, as certain bacteria, that grows at moderate temperature.

mesophily [ECOL] Physiological response of organisms living in environments with moderate temperatures and a fairly high, constant amount of moisture.

mesophyll [BOT] Parenchymatous tissue between the upper and lower epidermal layers in foliage leaves.

mesophyte [ECOL] A plant requiring moderate amounts of moisture for optimum growth.

mesopore [PALEON] A tube paralleling the autopore or chamber in fossil bryozoans.

mesopterygium [VERT ZOO] The middle one of three basal cartilages in the pectoral fin of sharks and rays.

mesoptic vision [PHYSIO] Vision in which the human eye's spectral sensitivity is changing from the photoptic state to the scotoptic state.

mesorchium [EMBRYO] The mesentery that supports the embryonic testis in vertebrates.

mesorrhine [ANTHRO] Having a nose of moderate size: nasal index is 47–51 on the skull and 70–85 on the living person.

mesosalpinx [ANAT] The portion of the broad ligament forming the mesentery of the uterine tube.

Mesosauria [PALEON] An order of extinct aquatic reptiles which is known from a single genus, *Mesosaurus*, characterized by a long snout, numerous slender teeth, small forelimbs, and webbed hindfeet.

mesoscale eddies *See* mode eddies.

mesosere [ECOL] A sere originating in a mesic habitat and characterized by mesophytes.

mesosiderite [GEOL] A stony-iron meteorite containing about equal amounts of silicates and nickel-iron, with considerable troilite. Also known as grahamite.

mesosoma [INV ZOO] **1.** The anterior portion of the abdomen in certain arthropods. **2.** The middle of the body of some invertebrates, especially when the phylogenetic segmentation pattern cannot be determined.

mesosome [MICROBIO] An extension of the cell membrane within a bacterial cell; possibly involved in cross-wall formation, cell division, and the attachment of daughter chromosomes following deoxyribonucleic acid replication.

mesosphere [GEOL] *See* lower mantle. [METEOROL] The atmospheric shell between about 45–55 kilometers and 80–95 kilometers, extending from the top of the stratosphere to the mesopause; characterized by a temperature that generally decreases with altitude.

mesostasis [GEOL] The last-formed interstitial material, either glassy or aphanitic, of an igneous rock.

mesosternum [ANAT] The middle portion of the sternum in vertebrates. Also known as gladiolus. [INV ZOO] The ventral portion of the mesothorax in insects.

Mesostigmata [INV ZOO] The mites, a suborder of the Acarina characterized by a single pair of breathing pores (stigmata) located laterally in the middle of the idiosoma between the second and third, or third and fourth, legs.

Mesosuchia [PALEON] A suborder of extinct crocodiles of the Late Jurassic and Early Cretaceous.

Mesotaeniaceae [BOT] The saccoderm desmids, a family of fresh-water algae in the order Conjugales; cells are oval, cylindrical, or rectangular and have simple, undecorated walls in one piece.

Mesotardigrada [INV ZOO] An order of tardigrades which combines certain echiniscoidean features with eutardigradan characters.

mesotheca [INV ZOO] The middle lamina of bifoliate bryozoan colonies.

mesothelioma [MED] A primary benign or malignant tumor composed of cells resembling the mesothelium.

mesothelium [ANAT] The simple squamous-cell epithelium lining the pleural, pericardial, peritoneal, and scrotal cavities. [EMBRYO] The lining of the wall of the primitive body cavity situated between the somatopleure and splanchnopleure.

mesotherm [ECOL] A plant that grows successfully at moderate temperatures.

mesothermal [MINERAL] Of a hydrothermal mineral deposit, formed at great depth at temperatures of 200–300°C.

mesothermal climate *See* mesoclimate.

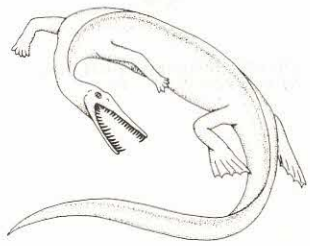
mesothorax [INV ZOO] The middle of three somites composing the thorax in insects.

mesotil [GEOL] A semiplastic or semifriable derivative of chemically weathered till; forms beneath a partially drained area.

mesovarium [ANAT] A fold of the peritoneum that connects the ovary with the broad ligament.

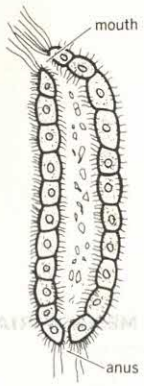
Mesoveliidae [INV ZOO] The water treaders, a small family

MESOSAURIA



Restoration of *Mesosaurus*. *(After McGregor)*

MESOZOA



Salinella, in longitudinal section. *(After Frenzel, 1892)*

of hemipteran insects in the subdivision Amphibicorisae having well-developed ocelli.

mesoxyalyurea *See* alloxan.

Mesozoa [INV ZOO] A division of the animal kingdom sometimes ranked intermediate between the Protozoa and the Metazoa; composed of two orders of small parasitic, wormlike organisms.

Mesozoic [GEOL] A geologic era from the end of the Paleozoic to the beginning of the Cenozoic; commonly referred to as the Age of Reptiles.

mesozone [PETR] The intermediate depth zone of metamorphism in metamorphic rock characterized by moderate temperatures (300–500°C), hydrostatic pressure, and shearing stress.

mesozooid [INV ZOO] A type of bryozoan heterozooid that produces slender tubes (mesozooecia or mesopores), internally subdivided by many closely spaced diaphragms, that open as tiny polygonal apertures.

mesquite [BOT] Any plant of the genus *Prosopis*, especially *P. juliflora*, a spiny tree or shrub bearing sugar-rich pods; an important livestock feed.

message [COMMUN] A series of words or symbols, transmitted with the intention of conveying information. [COMPUT SCI] An arbitrary amount of information with beginning and end defined or implied: usually, it originates in one place and is intended to be transmitted to another place.

message accounting [COMMUN] Use of equipment to make records of telephone calls for billing purposes.

message authentication [COMMUN] Security measure designed to establish the authenticity of a message by means of an authenticator within the transmission derived from certain predetermined elements of the message itself.

message authentication code [COMPUT SCI] The encrypted personal identification code appended to the message transmitted to a computer; the message is accepted only if the decrypted code is recognized as valid by the computer. Abbreviated MAC.

message buffer [COMPUT SCI] One of a number of sections of computer memory, which contains a message that can be transmitted between tasks in the computer system to request service and receive replies from tasks, and which is stored in a system buffer area, outside the address spaces of tasks.

message center [COMMUN] A communications agency charged with the responsibility for acceptance, preparation for transmission, transmission, receipt and delivery of messages.

message display console [COMPUT SCI] A cathode-ray tube on which is displayed information requested by the user.

message exchange [COMPUT SCI] A device which acts as a buffer between a communication line and a computer and carries out communication functions.

message indicator [COMMUN] Element placed within a message to serve as a guide to the selection or derivation and application of the correct key to facilitate the prompt decryption of the message.

message interpolation [COMMUN] Data message insertion during intersyllable periods or speech pauses on a busy voice channel without breaking down the voice connection or noticeably affecting the voice transmission.

message keying element [COMMUN] That part of the key which changes with every message.

message-oriented applications [COMMUN] Applications of data communications that involve medium-size data transfers in the range of hundreds to a few thousand bytes or characters, and are usually unidirectional information flows from source to destination.

message queuing [COMPUT SCI] The stacking of messages according to some priority rule as the messages await processing.

message reference block [COMMUN] A set of signals denoting the beginning or end of a message.

message registration [COMMUN] A method for counting the number of completed charged calls which originate from a particular telephone line, making one scoring for each local call and more than one scoring for calls between zones.

message routing [COMMUN] Selection of the communication path over which a message is sent.

message switching [COMMUN] A system in which data transmitted between stations on different circuits within a network are routed through central points.

messenger [ENG] A small, cylindrical metal weight that is attached around an oceanographic wire and sent down to activate the tripping mechanism on various oceanographic devices. [NAV ARCH] A light line used to haul in a larger line or hawser.

messenger cable [COMMUN] A cable made of stranded steel which supports aerial cables between poles.

messenger ribonucleic acid [BIOCHEM] A linear sequence of nucleotides which is transcribed from and complementary to a single strand of deoxyribonucleic acid and which carries the information for protein synthesis to the ribosomes. Abbreviated m-RNA.

Messier number [ASTRON] A number by which star clusters and nebulae are listed in Messier's catalog; for example, the Andromeda Galaxy is M 31.

Messier's catalog [ASTRON] A listing of 103 star clusters and nebulae compiled in 1784.

meta- [ORG CHEM] A prefix for benzene-ring compounds when two side chains are connected to carbon atoms with an unsubstituted carbon atom between them.

metaanthracite [GEOL] Anthracite coal containing at least 98% fixed carbon.

metabentonite [GEOL] Altered bentonite, formed by compaction or metamorphism; it swells very little and lacks the usual high colloidal properties of bentonite.

metabiosis [ECOL] An ecological association in which one organism precedes and prepares a suitable environment for a second organism.

metabolic [PHYSIO] Of or pertaining to metabolism.

metabolic disorder [MED] Any disorder that involves an alteration in the normal metabolism of carbohydrates, lipids, proteins, water, and nucleic acids; evidenced by various syndromes and diseases.

metabolism [PHYSIO] The physical and chemical processes by which foodstuffs are synthesized into complex elements (assimilation, anabolism), complex substances are transformed into simple ones (disassimilation, catabolism), and energy is made available for use by an organism.

metabolite [BIOCHEM] A product of intermediary metabolism.

metabolize [PHYSIO] To transform by metabolism; to subject to metabolism.

metacarpus [ANAT] The portion of a hand or forefoot between the carpus and the phalanges.

metacenter [FL MECH] The intersection of a vertical line through the center of buoyancy of a floating body, slightly displaced from its equilibrium position, with a line connecting the center of gravity and the equilibrium center of buoyancy; the floating body is stable if the metacenter lies above the center of gravity.

metacentric [CYTOL] Having the centromere near the middle of the chromosome.

metacentric diagram [NAV ARCH] A curve indicating the height of metacenter (generally above base) for all drafts to which the vessel may be loaded.

metacentric height [NAV ARCH] The vertical distance between a ship's center of gravity and its metacenter, for transverse or longitudinal inclinations, as specified.

metacercaria [INV ZOO] Encysted cercaria of digenetic trematodes; the infective form.

metacestode [INV ZOO] Encysted larva of a tapeworm; occurs in the intermediate host.

meta character [COMPUT SCI] A character in a computer programming language system that has some controlling role with respect to other characters with which it may be associated.

Metachlamydeae [BOT] An artificial group of flowering plants, division Magnoliophyta, recognized in the Englerian system of classification; consists of families of dicotyledons in which petals are characteristically fused, forming a sympetalous corolla.

metachromasia [CHEM] **1.** The property exhibited by certain pure dyestuffs, chiefly basic dyes, of coloring certain tissue elements in a different color, usually of a shorter wavelength absorption maximum, than most other tissue elements. **2.** The assumption of different colors or shades by different substances when stained by the same dye. Also known as metachromatism.

metachromatic granules [CYTOL] Granules which assume a color different from that of the dye used to stain them.

metachromatic leukodystrophy [MED] A hereditary degenerative disease transmitted as an autosomal recessive, due to sulfatase A deficiency, with excess accumulation of sulfated

lipids responsible for metachromasia in various tissues. Abbreviated MLD. Also known as sulfatide lipidosis.

metachromatic stain [MATER] A stain which changes apparent color when absorbed by certain cell constituents.

metachromatism *See* metachromasia.

metachrosis [VERT ZOO] The ability of some animals to change color by the expansion and contraction of chromatophores.

metacinnabar [MINERAL] HgS A black isometric mineral that represents an ore of mercury. Also known as metacinnabarite.

metacinnabarite *See* metacinnabar.

metacneme [INV ZOO] A secondary mesentery in many zoantharians.

metacone [VERT ZOO] **1.** The posterior of three cusps of primitive upper molars. **2.** The posteroexternal cusp of an upper molar in higher vertebrates, especially mammals.

metaconid [VERT ZOO] The posteroexternal cusp of a lower molar in mammals; corresponds with the metacone.

Metacopina [PALEON] An extinct suborder of ostracods in the order Podocopida.

metacryst [PETR] A large crystal, such as garnet, formed in metamorphic rock by recrystallization. Also known as metacrystal.

metacrystal *See* metacryst.

metadyne [ELECTR] A type of rotating magnetic amplifier having more than one brush per pole, used for voltage regulation or transformation.

metaformaldehyde *See sym*-trioxane.

metagalaxy [ASTRON] The total assemblage of recognized galaxies; essentially this represents the entire material universe.

metagenesis [BIOL] The phenomenon in which one generation of certain plants and animals reproduces asexually, followed by a sexually reproducing generation. Also known as alternation of generations.

metagranulocyte *See* metamyelocyte.

metahalloysite [GEOL] A term used in Europe for the less hydrous form of halloysite. Also known as halloysite in the United States.

metaharmosis *See* metharmosis.

metahewettite [MINERAL] $CaV_6O_{16}\cdot 9H_2O$ A deep red, probably orthorhombic mineral consisting of hydrated calcium vanadate; occurs as pulverulent masses.

metahohmannite [MINERAL] $Fe_2(SO_4)_2(OH)_2\cdot 3H_2O$ An orange mineral consisting of a hydrated basic iron sulfate; occurs as pulverulent masses.

metahydrate sodium carbonate [INORG CHEM] $Na_2CO_3\cdot H_2O$ Water-soluble, white crystals with an alkaline taste, loses water at 109°C, melts at 851°C; used in medicine, photography, and water pH control, and as a food additive. Also known as crystal carbonate; soda crystals.

metaigneous [PETROL] Pertaining to metamorphic rock formed from igneous rock.

metakaryocyte *See* normoblast.

metal [MATER] An opaque crystalline material usually of high strength with good electrical and thermal conductivities, ductility, and reflectivity; properties are related to the structure, in which the positively charged ions are bonded through a field of free electrons which surrounds them forming a close-packed structure.

metal ague *See* metal fume fever.

metal-air battery *See* air depolarized battery.

metal alkyl [ORG CHEM] One of the family of organometallic compounds, a combination of an alkyl organic radical with a metal atom or atoms.

metalanguage [COMPUT SCI] A set of symbols and words that syntactically describes another programming language (in which these words and symbols do not appear).

metal antenna [ELECTROMAG] An antenna which has a relatively small metal surface, in contrast to a slot antenna.

metal arc cutting [MET] Cutting metal with the heat of an arc between a metal electrode and the base metal.

metal arc welding [MET] Arc welding using covered metal electrodes.

metal ceramic *See* cermet.

metal-clad substation [ELEC] An electric power substation housed in a metal cabinet, either indoors or outdoors.

metal cluster compound [CHEM] A compound in which two or more metal atoms aggregate so as to be within bonding distance of one another and each metal atom is bonded to at least two other metal atoms; some nonmetal atoms may be associated with the cluster.

metal coating [MET] A thin film of metal bonded to a base material in order to add specific surface properties, such as corrosion or oxidation resistance, color, wear resistance, or optical characteristics.

metaldehyde [ORG CHEM] $(CH_3CHO)_n$ White acetaldehyde-polymer prisms; soluble in organic solvents, insoluble in water; used as a pesticide or fuel.

metal detector [ELECTR] An electronic device for detecting concealed metal objects, such as guns, knives, or buried pipelines, generally by radiating a high-frequency electromagnetic field and detecting the change produced in that field by the ferrous or nonferrous metal object being sought. Also known as electronic locator; metal locator; radio metal locator.

metal distribution ratio [MET] In plating operations, the ratio of the thickness of metal deposited on a near portion of a cathode to that deposited on a far portion of the cathode.

metal dye [MATER] Any of the special dyes, such as alizarin cyanin RR or alizarin green S, used to color oxided surfaces of aluminum or steel.

metal-film resistor [ELEC] A resistor in which the resistive element is a thin film of metal or alloy, deposited on an insulating substrate of an integrated circuit.

metal-foil paper [MATER] Paper backed with metal foils, manufactured in a number of vivid colors.

metal forming [MET] Any manufacturing process by which parts of components are fabricated by shaping or molding a piece of metal stock.

metal fouling [ORD] Deposits of metal that collect in the bore of a gun, coming from the jackets or rotating bands of projectiles.

metal fume fever [MED] A febrile influenzalike occupational disorder following the inhalation of finely divided particles and fumes of metallic oxides. Also known as brass chills; brass founder's ague; galvo; Monday fever; metal ague; polymer fume fever; spelter shakes; teflon shakes; zinc chills.

metal halide lamp [ELECTR] A discharge lamp in which metal halide salts are added to the contents of a discharge tube in which there is a high-pressure arc in mercury vapor; the added metals generate different wavelengths, to give substantially white light at an efficiency approximating that of high-pressure sodium lamps.

metaliding [MET] A process of depositing a metal as an alloy on a substrate from a fused complex metal salt.

metalimnion *See* thermocline.

metal-insulator semiconductor [SOLID STATE] Semiconductor construction in which an insulating layer, generally a fraction of a micrometer thick, is deposited on the semiconducting substrate before the pattern of metal contacts is applied. Abbreviated MIS.

metal-insulator transition [SOLID STATE] The change of certain low-dimensional conductors from metals to insulators as the temperature is lowered through a certain value, due to the lattice distortion and band gap accompanying the onset of a charge-density wave.

metallaophobia [PSYCH] An abnormal fear of metal or metallic objects.

metal lath [ENG] A mesh of metal used to provide a base for plaster.

metal leaf [MET] Metal sheet, thinner than foil, formed by beating.

metallic [OPTICS] Having a brilliant mineral luster characteristic of metals. [SCI TECH] Pertaining to metals.

metallic bond [PHYS CHEM] The type of chemical bond that is present in all metals, and may be thought of as resulting from a sea of valence electrons which are free to move throughout the metal lattice.

metallic circuit [ELEC] Wire circuit of which the ground or earth forms no part.

metallic corrosion [MET] Destruction of a metal by dissolution, oxidation, or other chemical reaction of the metal with its environment.

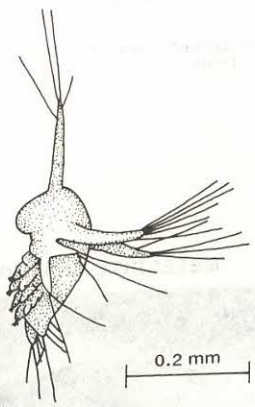
metallic-disk rectifier *See* metallic rectifier.

metallic electrode arc lamp [ELEC] A type of arc lamp in which light is produced by luminescent vapor introduced into the arc by evaporation from the cathode; the anode is solid copper, and the cathode is formed of magnetic iron oxide with titanium as the light-producing element and other chemicals to control steadiness and vaporization.

metallic element [CHEM] An element generally distinguished (from a nonmetallic one) by its luster, electrical conductivity, malleability, and ability to form positive ions.
metallic glass *See* glassy alloy.
metallic insulator [ELECTROMAG] Section of transmission line used as a mechanical support device; the section is an odd number of quarter-wavelengths long at the frequency of interest, and the input impedance becomes high enough so that the section effectively acts as an insulator.
metallic mortar [MATER] Mortar made with ceramic oxide binders and containing a high percentage of lead powder; mixed with water to form plasters or for casting sections and blocks; used for x-ray and nuclear installation shielding.
metallic nuclear fuel [NUCLEO] A fissionable isotope of a metallic element, or an alloy containing such an isotope, used as the energy source for a nuclear reactor.
metallic paint [MATER] **1.** Paint used for covering metal surfaces; the pigment is commonly iron oxide. **2.** Paint with a metal pigment.
metallic paper [MATER] **1.** A paper coated with zinc white, or with clay and other materials; the surface can be marked on with metal points (of silver, aluminum, or gold, for example), but it cannot be erased. **2.** Paper coated with finely flaked metal.
metallic pigment [MATER] Thin, opaque aluminum or copper alloy flakes that are incorporated into plastic masses to produce metallike effects.
metallic rectifier [ELECTR] A rectifier consisting of one or more disks of metal under pressure-contact with semiconductor coatings or layers, such as a copper oxide, selenium, or silicon rectifier. Also known as contact rectifier; dry-disk rectifier; dry-plate rectifier; metallic-disk rectifier; semiconductor rectifier.
metallic soap [ORG CHEM] A salt of stearic, oleic, palmitic, lauric, or erucic acid with a heavy metal such as cobalt or copper; used as a drier in paints and inks, in fungicides, decolorizing varnish, and waterproofing.
metalliferous [MINERAL] Pertaining to mineral deposits from which metals can be extracted.
metallize [ENG] To coat or impregnate a metal or nonmetal surface with a metal, as by metal spraying or by vacuum evaporation.
metallized capacitor [ELEC] A capacitor in which a film of metal is deposited directly on the dielectric to serve in place of a separate foil strip; has self-healing characteristics.
metallized-paper capacitor [ELEC] A modification of a paper capacitor in which metal foils are replaced by extremely thin films of metal deposited on the paper; if a breakdown occurs, these films burn away in the area of the breakdown.
metallized resistor [ELEC] A resistor made by depositing a thin film of high-resistance metal on the surface of a glass or ceramic rod or tube.
metallized slurry blasting [ENG] The breaking of rocks by using slurried explosive medium containing a powdered metal, such as powdered aluminum.
metallized wood [MATER] Wood impregnated with molten metal, filling the cells in the wood to increase hardness, compressive strength, and flexural strength; the wood becomes an electrical conductor lengthwise of the grain.
metal locator *See* metal detector.
metallocene [ORG CHEM] Organometallic coordination compound which is obtained as a cyclopentadienyl derivative of a transition metal or a metal halide.
metallocycle [ORG CHEM] A compound whose structure consists of a cyclic array of atoms of which one is a metal atom; frequently the ring contains three or four carbon atoms and one transition-metal atom.
metallogenic province [GEOL] A region characterized by a particular mineral assemblage, or by one or more specific types of mineralization. Also known as metallographic province.
Metallogenium [MICROBIO] A genus of bacteria of uncertain affiliation; coccoid cells that attach to substrate; they germinate directly or form groups of elementary bodies by budding, and filaments form from these bodies.
metallograph [OPTICS] An optical microscope equipped with a camera for both visual observation and photography of the structure and constitution of a metal or alloy.
metallographic province *See* metallogenic province.
metallographic tests [MET] Tests to determine the structural composition of a metal as shown at low and high magnification and by x-ray diffraction methods; tests include macroexamination, microexamination, and x-ray diffraction studies.
metallography [MET] The study of the structure of metals and alloys by various methods, especially by the optical and the electron microscope, and by x-ray diffraction.
metalloid [CHEM] A nonmetallic element, such as carbon or nitrogen, which can combine with a metal to form an alloy.
metalloporphyrin [BIOCHEM] A compound, such as heme, consisting of a porphyrin combined with a metal such as iron, copper, silver, zinc, or magnesium.
metalloprotein [BIOCHEM] A protein enzyme containing a metallic atom as an inherent portion of its molecule.
metallothionein [BIOCHEM] A group of vertebrate and invertebrate proteins that bind heavy metals; it may be involved in zinc homeostasis and resistance to heavy-metal toxicity.
metallurgical balance sheet [MET] Material balance of a metallurgical process.
metallurgical coke [MATER] Coke resulting from high-temperature retorting of suitable coal; a dense, crush-resistant fuel for use in shaft furnaces.
metallurgical dust [MET] A mixture of particles of elements and nonmetallic and metallic compounds.
metallurgical engineer [ENG] A person who specializes in metallurgical engineering.
metallurgical engineering [ENG] Application of the principles of metallurgy to the engineering sciences.
metallurgical fume [MET] A mixture of fine particles of elements and metallic and nonmetallic compounds either sublimed or condensed from the vapor state.
metallurgical microscope [ENG] A microscope used in the study of metals, usually optical.
metallurgy [SCI TECH] The science and technology of metals and alloys.
metal mining [MIN ENG] The industry that supplies the various metals and associated products.
metal-nitride-oxide semiconductor [SOLID STATE] A semiconductor structure that has a double insulating layer; typically, a layer of silicon dioxide (SiO_2) is nearest the silicon substrate, with a layer of silicon nitride (Si_3N_4) over it. Abbreviated MNOS.
metal oxide resistor [ELEC] A metal-film resistor in which an oxide of a metal such as tin is deposited as a film onto an insulating substrate.
metal oxide semiconductor [SOLID STATE] A metal insulator semiconductor structure in which the insulating layer is an oxide of the substrate material; for a silicon substrate, the insulating layer is silicon dioxide (SiO_2). Abbreviated MOS.
metal oxide semiconductor integrated circuit [ELECTR] An integrated circuit using metal oxide semiconductor transistors; it can have a higher density of equivalent parts than a bipolar integrated circuit.
metal oxide semiconductor field-effect transistor [ELECTR] A field-effect transistor having a gate that is insulated from the semiconductor substrate by a thin layer of silicon dioxide. Abbreviated MOSFET; MOST; MOS transistor. Formerly known as insulated-gate field-effect transistor.
metal plating *See* plating.
metal pointing *See* pointing.
metal powder [MET] A finely divided metal or alloy.
metal replacement *See* immersion plating.
metal rolling *See* rolling.
metal semiconductor field-effect transistor [ELECTR] A field-effect transistor that uses a thin film of gallium arsenide, with a Schottky barrier gate formed by depositing a layer of metal directly onto the surface of the film. Abbreviated MESFET.
metal-slitting saw [MECH ENG] A milling cutter similar to a circular saw blade but sometimes with side teeth as well as teeth around the circumference; used for deep slotting and sinking in cuts.
metal spinning *See* spinning.
metal spraying [ENG] Coating a surface with droplets of molten metal or alloy by using a compressed gas stream.
metal-to-metal tap [COMMUN] A tapping procedure in which actual contact is made with the target pair.
metal vapor laser [OPTICS] An ion laser based on vaporization of a solid or liquid metal, such as cadmium, calcium, copper, lead, manganese, selenium, strontium, and tin, vaporized with a buffer gas such as helium.

metamathematics [MATH] The study of the principles of deductive logic as they are used in mathematical logic.
metamer [ORG CHEM] One of two or more chemical compounds that exhibits isomerism with the others.
metamere [ZOO] One of the linearly arranged similar segments of the body of metameric animals. Also known as somite.
metamerism [ZOO] The condition of an animal body characterized by the repetition of similar segments (metameres), exhibited especially by arthropods, annelids, and vertebrates in early embryonic stages and in certain specialized adult structures. Also known as segmentation.
metamict [MINERAL] Of a radioactive mineral, exhibiting lattice disruption due to radiation damage while the original external morphology is retained.
metamorphic aureole *See* aureole.
metamorphic breccia [PETR] Breccia formed by metamorphism.
metamorphic facies [PETR] All rocks of any composition that have reached chemical equilibrium with respect to certain ranges of pressure and temperature during metamorphism, characterized by the stability of specific index minerals. Also known as densofacies.
metamorphic facies series [PETR] A group of metamorphic facies characteristic of an individual area, represented in a pressure-temperature diagram by a curve or group of curves illustrating the range of the different types of metamorphism and metamorphic facies.
metamorphic overprint *See* overprint.
metamorphic rock [PETR] A rock formed from preexisting solid rocks by mineralogical, structural, and chemical changes, in response to extreme changes in temperature, pressure, and shearing stress.
metamorphic rock reservoir [GEOL] Uncommon type of formation for oil reservoir; developed when secondary porosity results from fracturing or weathering.
metamorphic zone *See* aureole.
metamorphism [PETR] The mineralogical and structural changes of solid rock in response to environmental conditions at depth in the earth's crust.
metamorphosis [BIOL] **1.** A structural transformation. **2.** A marked structural change in an animal during postembryonic development. [MED] A degenerative change in tissue or organ structure.
metamyelocyte [HISTOL] A granulocytic cell intermediate in development between the myelocyte and granular leukocyte; characterized by a full complement of cytoplasmic granules and a bean-shaped nucleus. Also known as juvenile cell; metagranulocyte.
metanauplius [INV ZOO] A primitive larval stage of certain decapod crustaceans characterized by seven pairs of appendages; follows the nauplius stage.
metanephridium [INV ZOO] A type of nephridium consisting of a tubular structure lined with cilia which opens into the coelomic cavity.
metanephrine [BIOCHEM] An inactive metabolite of epinephrine (3-*O*-methylepinephrine) that is excreted in the urine; it is recovered and measured as a test for pheochromocytoma.
metanephros [EMBRYO] One of the posterior of three pairs of vertebrate renal structures; persists as the definitive or permanent kidney in adult reptiles, birds, and mammals.
metanilic acid [ORG CHEM] $C_6H_4(NH_2)SO_3H$ A water-soluble, crystalline compound, isomeric with sulfanilic acid; used in medicines and dyes. Also known as *meta*-aminobenzenesulfonic acid; *meta*-sulfanilic acid.
metanitricyte *See* normoblast.
metaphase [CYTOL] **1.** The phase of mitosis during which centromeres are arranged on the equator of the spindle. **2.** The phase of the first meiotic division when centromeric regions of homologous chromosomes come to lie equidistant on either side of the equator.
metaphyseal aclasis *See* multiple hereditary exostoses.
metaphysis *See* epiphyseal plate.
Metaphyta [BIOL] A kingdom set up to include mosses, ferns, and other plants in some systems of classification.
metaplasia [PATH] Transformation of one form of tissue to another.
metaplasm [CYTOL] The ergastic substance of protoplasm.
metapodium [ANAT] **1.** The metatarsus in bipeds. **2.** The metatarsus and metacarpus in quadrupeds. [INV ZOO] Posterior portion of the foot of a mollusk.
metapodosoma [INV ZOO] Portion of the body bearing the third and fourth pairs of legs in Acarina.
metapterygium [VERT ZOO] The posterior one of three basal cartilages in the pectoral fin of sharks and rays.
metaquartzite [MINERAL] A quartzite formed by metamorphic recrystallization.
metarheology [MECH] A branch of rheology whose approach is intermediate between those of macrorheology and microrheology; certain processes that are not isothermal are taken into consideration, such as kinetic elasticity, surface tension, and rate processes.
metaripple [GEOL] An asymmetrical sand ripple.
metarossite [MINERAL] $CaV_2O_6 \cdot 2H_2O$ A light yellow mineral consisting of hydrated calcium vanadate; occurs as masses and veinlets.
metarubricyte *See* normoblast.
metascope [ELECTR] An infrared receiver used for converting pulsed invisible infrared rays into visible signals for communication purposes; also used with an infrared source for reading maps in darkness.
metascutellum [INV ZOO] The scutellum of the metathorax in insects.
metasediment [GEOL] A sediment or sedimentary rock which shows evidence of metamorphism. [PETR] Metamorphic rock formed from sedimentary rock.
metasicula [INV ZOO] The succeeding part of the sicula or colonial tube of graptolites.
metasideronatrite [MINERAL] $Na_4Fe_2(SO_4)_4(OH)_2 \cdot 3H_2O$ A yellow mineral composed of basic hydrous iron sodium sulfate.
metasilicate [MINERAL] A salt of the hypothetical metasilicic acid H_2SiO_3. Also known as bisilicate.
metasoma [INV ZOO] The posterior region of the body of certain invertebrates, a term used especially when the phylogenetic segmentation pattern cannot be identified.
metasomatic [PETR] Pertaining to the process or the result of metasomatism.
metasomatism [PETR] A variety of metamorphism in which one mineral or a mineral assemblage is replaced by another of different composition without melting.
metastable *See* labile.
metastable equilibrium [PHYS] A condition in which a system returns to equilibrium after small (but not large) displacements; it may be represented by a ball resting in a small depression on top of a hill. [PHYS CHEM] A state of pseudo-equilibrium having higher free energy than the true equilibrium state.
metastable ion [ANALY CHEM] In mass spectroscopy, an ion formed by a secondary dissociation process in the analyzer tube (formed after the parent or initial ion has passed through the accelerating field).
metastable phase [PHYS CHEM] Existence of a substance as either a liquid, solid, or vapor under conditions in which it is normally unstable in that state.
metastable state [QUANT MECH] An excited stationary energy state whose lifetime is unusually long.
metastasis [MED] Transfer of the causal agent (cell or microorganism) of a disease from a primary focus to a distant one through the blood or lymphatic vessels. [PHYS] A transition of an electron or nucleon from one bound state to another in an atom or molecule, or the capture of an electron by a nucleus.
metastasize [MED] To be transferred by metastasis.
metastatic anemia *See* myelophthisic anemia.
metasternum [INV ZOO] The ventral portion of the metathorax in insects.
metastoma [INV ZOO] Median plate posterior to the mouth in certain crustaceans and related arthropods.
Metastrongylidae [INV ZOO] A family of roundworms belonging to the Strongyloidea; species are parasitic in sheep, cattle, horses, dogs, and other domestic animals.
metatarsal [ANAT] Of or pertaining to the metatarsus.
metatarsalgia [MED] Tenderness and burning pain in the metatarsal region.
metatarsus [ANAT] The part of a foot or hindfoot between the tarsus and the phalanges.
Metatheria [VERT ZOO] An infraclass of therian mammals including a single order, the Marsupialia; distinguished by a small braincase, a total of 50 teeth, the inflected angular process

METANAUPLIUS

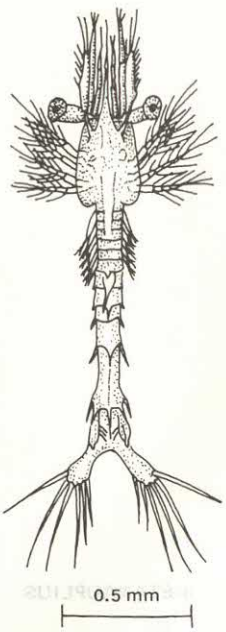


Lateral view of metanauplius larva of penaeid shrimp. *(Smithsonian Institution)*

METATROCH

Metatroch of planktonic sabellarian larva, showing early segmentation and long swimming setae. *(From O. Hartman, Polychaetous annelids, Paraonidae, Magelonidae, Longosomidae, Ctenodrilidae and Sabellariidae, Allan Hancock Pacific Expedition, 10(3):311–389, 1944)*

METAZOEA



Metazoea larva of a penaeid shrimp.

METEORITE CRATER

Canyon Diablo, Arizona, meteorite crater. The rocks immediately surrounding this impact crater are turned upward. Meteorites from the crater were found on the plains around the depression.

of the mandible, and a pair of marsupial bones articulating with the pelvis.

metathesis [CHEM] A reaction involving the exchange of elements or groups as in the general equation $AX + BY \rightarrow AY + BX$.

metathetical salts [CHEM] Salts that form a four-component, ternary equilibrium system in which there are four possible binary systems, resulting in two quadruple points.

metathorax [INV ZOO] Posterior segment of the thorax in insects.

metatitanic acid *See* titanic acid.

metatorbernite [MINERAL] $Cu(UO_2)_2(PO_4)_2 \cdot 8H_2O$ A green secondary mineral composed of hydrous copper uranium phosphate; similar to torbernite, but with less water content.

metatroch [INV ZOO] A segmented larval form following the trochophore in annelids.

metavariable [COMPUT SCI] One of the elements of a formal language, corresponding to the parts of speech of a natural language. Also known as component name; phrase name.

metavariscite [MINERAL] $AlPO_6 \cdot 2H_2O$ A green monoclinic mineral composed of hydrous aluminum phosphate; it is isomorphous with phosphosiderite.

metavauxite [MINERAL] $FeAl_2(PO_4)_2(OH)_2 \cdot 8H_2O$ A colorless mineral composed of hydrous basic phosphate of iron and aluminum; similar to vauxite, but with more water.

metavoltine [MINERAL] A yellowish-brown or orange-brown to greenish-brown, hexagonal mineral consisting of a hydrated basic sulfate of iron and potassium; occurs in tabular form or as aggregates.

metaxylem [BOT] Primary xylem differentiated after and distinguished from protoxylem by thicker tracheids and vessels with pitted or reticulated walls.

metazeunerite [MINERAL] $Cu(UO_2)_2(AsO_4)_2 \cdot 8H_2O$ A grass to emerald green, tetragonal mineral consisting of a hydrated arsenate of copper and uranium; occurs in tabular form.

Metazoa [ZOO] The multicellular animals that make up the major portion of the animal kingdom; cells are organized in layers or groups as specialized tissues or organ systems.

metazoea [INV ZOO] The last zoea of certain decapod crustaceans; metamorphoses into a megalopa.

metencephalon [EMBRYO] The cephalic portion of the rhombencephalon; gives rise to the cerebellum and pons.

meteor [ASTRON] The phenomena which accompany a body from space (a meteoroid) in its passage through the atmosphere, including the flash and streak of light and the ionized trail.

Meteoriaceae [BOT] A family of mosses in the order Isobryales in which the calyptra is frequently hairy.

meteoric ionization [ASTROPHYS] Ionization resulting from collisional interactions of a meteoroid and its vaporization products with the air.

meteoric scatter [COMMUN] A form of scatter propagation in which meteor trails serve to scatter radio waves back to earth.

meteoric stone *See* stony meteorite.

meteoric theory *See* impact theory.

meteoric water [HYD] Groundwater which originates in the atmosphere and reaches the zone of saturation by infiltration and percolation.

meteorism [MED] Presence of abdominal gas causing severe distention.

meteorite [GEOL] Any meteoroid that has fallen to the earth's surface.

meteorite crater [GEOL] An impact crater on the surface of the earth or of a celestial body caused by a meteorite; a characteristic feature on the earth is the upturned rim, which formed as the rocks rebounded following the impact.

meteoritic theory *See* impact theory.

meteorogram [ENG] A record obtained from a meteorograph. [METEOROL] A chart in which meteorological variables are plotted against time.

meteorograph [ENG] An instrument that measures and records meteorological data such as air pressure, temperature, and humidity.

meteoroid [ASTRON] Any solid object moving in interplanetary space that is smaller than a planet or asteroid but larger than a molecule.

meteorolite *See* stony meteorite.

meteorological [METEOROL] Of or pertaining to meteorology or weather.

meteorological balloon [ENG] A balloon, usually of high-quality neoprene, polyethylene, or Mylar, used to lift radiosondes to high altitudes.

meteorological chart [METEOROL] A weather map showing the spatial distribution, at an instant of time, of atmospheric highs and lows, rain clouds, and other phenomena.

meteorological check point in gunnery [ORD] Arbitrarily selected point for which meteorological corrections are determined as a time-saving expedient; these corrections are applied to any target located within transfer limits of the meteorological check point.

meteorological correction [ORD] Adjustment made in the firing data of a gun or other weapon to allow for the effect of wind, air pressure, and so forth, on the flight of a projectile.

meteorological data [METEOROL] Facts pertaining to the atmosphere, especially wind, temperature, and air density.

meteorological datum plane [ORD] Reference plane assumed as a basis or starting point for atmospheric data furnished to artillery; its altitude is that of the meteorological station.

meteorological equator [METEOROL] **1.** The parallel of latitude 5° north, so called because it is the annual mean latitude of the equatorial trough. **2.** *See* equatorial trough; intertropical convergence zone.

meteorological frequency bands [COMMUN] A collection of radio and microwave frequency bands allocated for use by radiosondes and ground-based radars used in weather forecasting in the United States.

meteorological instrumentation [ENG] Apparatus and equipment used to obtain quantitative information about the weather.

meteorological minima [METEOROL] Minimum values of meteorological elements prescribed for specific types of flight operation.

meteorological optics [OPTICS] A branch of atmospheric physics or physical meteorology in which optical phenomena occurring in the atmosphere are described and explained. Also known as atmospheric optics.

meteorological radar [ENG] Radar which is used to study the scattering of radar waves by various types of atmospheric phenomena, for making weather observations and forecasts.

meteorological range [METEOROL] An empirically consistent measure of the visual range of a target; a concept developed to eliminate from consideration the threshold contrast and adaptation luminance, both of which vary from observer to observer. Also known as standard visibility; standard visual range.

meteorological rocket [ENG] Small rocket system used to extend observation of atmospheric character above feasible limits for balloon-borne observing and telemetering instruments. Also known as rocketsonde.

meteorological satellite [AERO ENG] Earth-orbiting spacecraft carrying a variety of instruments for measuring visible and invisible radiations from the earth and its atmosphere.

meteorological solenoid [METEOROL] A hypothetical tube formed in space by the intersection of a set of surfaces of constant pressure and a set of surfaces of constant specific volume of air. Also known as solenoid.

meteorological tide [OCEANOGR] A change in water level caused by local meteorological conditions, in contrast to an astronomical tide, caused by the attractions of the sun and moon.

meteorology [SCI TECH] The science concerned with the atmosphere and its phenomena; the meteorologist observes the atmosphere's temperature, density, winds, clouds, precipitation, and other characteristics and aims to account for its observed structure and evolution (weather, in part) in terms of external influence and the basic laws of physics.

meteor shower [ASTRON] A number of meteors with approximately parallel trajectories.

meteor stream [ASTRON] A group of meteoric bodies with nearly identical orbits.

meteor trail *See* ion column.

meter [MECH] The international standard unit of length, equal to 1,650,763.73 times the wavelength of the orange light emitted when a gas consisting of the pure krypton isotope of mass number 86 is excited in an electrical discharge. Abbreviated m. [ENG] A device for measuring the value of a quantity under observation; the term is usually applied to an indicating instrument alone.

meter-ampere [COMMUN] Measure of the strength of a radio transmitting station.

meter-atmosphere [PHYS] The depth of an equivalent atmosphere of a given gas, in meter-atmospheres, is equal to the depth in meters that the atmosphere would have if it were composed entirely of the gas in question and in the same amount as exists in the actual atmosphere, and had a uniform temperature and pressure of 0°C and 1 standard atmosphere. Abbreviated m-atm. Also known as atmo-meter.

meter bar [ENG] A metal bar for mounting a gas meter, having fittings at the ends for the inlet and outlet connections of the meter.

meter-candle *See* lux.

meter factor [ENG] A factor used with a meter to correct for ambient conditions, for example, the factor for a fluid-flow meter to compensate for such conditions as liquid temperature change and pressure shrinkage.

metering installation [PETR ENG] Oil-production receiving system that includes with the tank battery a metering separator, metering treater, or other type of meter used in conjunction with test separators or emulsion treaters.

metering pin *See* metering rod.

metering pump [CHEM ENG] Plunger-type pump designed to control accurately small-scale fluid-flow rates; used to inject small quantities of materials into continuous-flow liquid streams. Also known as proportioning pump.

metering rod [ENG] A device consisting of a long metallic pin of graduated diameters fitted to the main nozzle of a carburetor (on an internal combustion engine) or passage leading thereto in such a way that it measures or meters the amount of gasoline permitted to flow by it at various speeds. Also known as metering pin.

metering screw [MECH ENG] An extrusion-type screw feeder or conveyor section used to feed pulverized or doughy material at a constant rate.

metering separator [PETRO ENG] Oil-field process vessel that performs the dual functions of gas-oil separation and liquids metering.

meter-kilogram [MECH] **1.** A unit of energy or work in a meter-kilogram-second gravitational system, equal to the work done by a kilogram-force when the point at which the force is applied is displaced 1 meter in the direction of the force; equal to 9.80665 joules. Abbreviated m-kgf. Also known as meter kilogram-force. **2.** A unit of torque, equal to the torque produced by a kilogram-force acting at a perpendicular distance of 1 meter from the axis of rotation. Also known as kilogram-meter (kgf-m).

meter kilogram-force *See* meter-kilogram.

meter-kilogram-second-ampere system [PHYS] A system of electrical and mechanical units in which length, mass, time, and electric current are the fundamental quantities, and the units of these quantities are the meter, the kilogram, the second, and the ampere respectively. Abbreviated mksa system. Also known as Giorgi system; practical system.

meter-kilogram-second system [MECH] A metric system of units in which length, mass, and time are fundamental quantities, and the units of these quantities are the meter, the kilogram, and the second respectively. Abbreviated mks system.

meter oil [MATER] High-purity grade of oil used to lubricate the moving elements of meters.

meter prover [ENG] A device that determines the accuracy of a gas meter; a quantity of air is collected over water or oil in a calibrated cylindrical bell, and then the bell is allowed to sink into the liquid, forcing the air through the meter; the calibrated measurement is then compared with the reading on the meter dial.

meter-proving tank *See* calibrating tank.

meter run [ENG] The length of straight, unobstructed fluid-flow conduit preceding an orifice or venturi meter.

meter sensitivity [ENG] The accuracy with which a meter can measure a voltage, current, resistance, or other quantity.

meter sizing factor [FL MECH] A dimensionless number used in calculating the rate of flow of fluid through a pipe from the readings of a flowmeter that measures the drop in pressure when the fluid is forced to flow through a circular orifice; it is equal to $K(d/D)^2$, where K is the flow coefficient, d is the orifice bore diameter, and D is the internal diameter of the pipe.

meter-ton-second system [MECH] A modification of the meter-kilogram-second system in which the metric ton (1000 kilograms) replaces the kilogram as the unit of mass.

meter-type relay [ELEC] A relay that uses a meter movement having a contact-bearing pointer which moves toward or away from a fixed contact mounted on the meter scale.

meter wheel [ENG] A special block used to support the oceanographic wire paid out over the side of a ship; attached directly or connected by means of a speedometer cable to a gearbox which measures the length of wire.

metestrus [PHYSIO] The beginning of the luteal phase following estrus.

methabenzthiazuron [ORG CHEM] $C_{10}H_{11}N_3OS$ A white, crystalline compound with a melting point of 119–120°C; used to control weeds in wheat, peas, garlic, broad beans, and onions. Also known as 1,3-dimethyl-3-(2-benzothiazolyl)-urea.

methacetin [ORG CHEM] $CH_3OC_6H_4NHCOCH_3$ A water-insoluble, white powder, melting at 127.1°C. Also known as acetanisidine; *para*-methoxyacetanilide.

methacholine chloride [PHARM] $C_8H_{18}ClNO_2$ Hygroscopic crystals with a melting point of 170–173°C; freely soluble in water, alcohol, and chloroform; used as a cholinergic drug. Also known as (2-acetoxypropyl)trimethylammonium chloride; acetyl-β-methylcholine chloride; *O*-acetyl-β-methylcholine chloride; (2-hydroxypropyl)trimethylammonium chloride acetate; trimethyl-β-acetoxypropyl-ammonium chloride.

methacrolein [ORG CHEM] $CH_2C(CH_3)CHO$ Liquid with 68°C boiling point; slightly soluble in water; used to make resins and copolymers.

methacrylate ester [ORG CHEM] $CH_2{:}C(CH_3)COOR$ Methacrylic acid ester in which R can be methyl, ethyl, isobutyl, or 50-50 *n*-butyl-isobutyl groups; used to make thermoplastic polymers or copolymers.

methacrylic acid [ORG CHEM] $CH_2C(CH_3)COOH$ Easily polymerized, colorless liquid melting at 15–16°C; soluble in water and most organic solvents; used to make water-soluble polymers and as a chemical intermediate.

methacrylonitrile [ORG CHEM] $CH_2{:}C(CH_3)CN$ Clear, colorless liquid boiling at 90°C; used to make solvent-resistant thermoplastic polymers and copolymers.

methadone [PHARM] $C_{21}H_{27}NO$ The compound 6-(dimethylamino)-4,4-diphenyl-3-heptanone, a narcotic analgesic, administered in the hydrochloride form for maintenance treatment of heroin addiction.

methallyl alcohol [ORG CHEM] $H_2C{:}C(CH_3)CH_2OH$ Flammable, toxic, water-soluble, colorless liquid boiling at 115°C; has pungent aroma; soluble in most organic solvents; used as a chemical intermediate. Also spelled methyl allyl alcohol.

methamidophos *See* acephatemet.

methanamide *See* formamide.

methane [ORG CHEM] CH_4 A colorless, odorless, and tasteless gas, lighter than air and reacting violently with chlorine and bromine in sunlight, a chief component of natural gas; used as a source of methanol, acetylene, and carbon monoxide. Also known as methyl hydride.

methanearsonic acid [ORG CHEM] $CH_3AsO(OH)_2$ A white solid with a melting point of 161°C; very soluble in water; used as an herbicide for cotton crops and for noncrop areas. Abbreviated MAA.

methanedicarbonic acid *See* malonic acid.

methanedicarboxylic acid *See* malonic acid.

methane-disulfonic acid *See* methionic acid.

methane drainage *See* firedamp drainage.

methane indicator [MIN ENG] A portable analytical instrument that can determine the methane content in the mine air at the place where the sample is taken; air is brought into the instrument through an aspirator bulb and passed through a cartridge filter to remove moisture.

methane monitoring system [MIN ENG] A system that samples methane content in mine air continuously and feeds this information into an electrical device that cuts off power in each mining machine when the methane content rises above a predetermined level.

methane-oxidizing bacteria [MICROBIO] Bacteria that derive energy from oxidation of methane.

methanesulfonic acid [ORG CHEM] CH_3SO_2OH A solid with a melting point of 20°C; used as a catalyst in polymerization, esterification, and alkylation reactions, and as a solvent. Also known as methysulfonic acid.

methanesulfonic acid tetramethylene ester *See* busulfan.

methanethiomethane *See* methyl sulfide.

Methanobacteriaceae [MICROBIO] The single family of methane-producing bacteria; anaerobes which obtain energy via formation of methane.

Methanobacterium [MICROBIO] A genus of rod-shaped or filamentous coccoid bacteria in the family Methanobacteriaceae; they reduce carbon dioxide to methane for energy.

Methanococcus [MICROBIO] A genus of coccoid bacteria in the family Methanobacteriaceae; cells occur singly, in pairs, or in masses; obtain energy by formation of methane from hydrogen, carbon monoxide, formate, acetate, or butyrate.

methanogen [BIOL] An organism carrying out methanogenesis, requiring completely anaerobic conditions for growth; considered by some authorities to be distinct from bacteria.

methanogenesis [BIOCHEM] The biosynthesis of the hydrocarbon methane; common in certain bacteria. Also known as bacterial methanogenesis.

methanoic acid *See* formic acid.

methanol *See* methyl alcohol.

Methanomonadaceae [MICROBIO] Formerly a family of bacteria in the suborder Pseudomonadineae; members identified as gram-negative rods are able to use carbon monoxide (*Carboxydomonas*), methane (*Methanomonas*), and hydrogen (*Hydrogenomonas*) as their sole source of energy for growth.

Methanosarcina [MICROBIO] A genus of large coccoid bacteria in the family Methanobacteriaceae; cells generally occur in packets; obtain energy by formation of methane principally from acetate and sometimes from methanol or butyrate.

metharmosis [GEOL] Changes that occur in a buried sediment after uplift or consolidation but before the onset of weathering. Also spelled metaharmosis.

methazole [ORG CHEM] $C_9H_6Cl_2N_2O_3$ A tan solid with a melting point of 123–124°C; slight solubility in water; used as an herbicide for pre- and postemergence control of weeds in crops. Also known as 2-(3,4-dichlorophenyl)-4-methyl-1,2,4-oxadiazolidine-3,5-dione.

methbipyranone *See* metyrapone.

methemoglobin *See* ferrihemoglobin.

methemoglobinemia [MED] The presence of methemoglobin in the blood.

methemoglobinuria [MED] The presence of methemoglobin in the urine.

methenyl *See* methine group.

methetharimide *See* bemegride.

methidathion [ORG CHEM] $C_4H_{11}O_4N_2PS_3$ A colorless, crystalline compound with a melting point of 39–40°C; used as an insecticide and miticide for pests on alfalfa, citrus, and cotton.

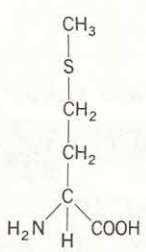
methide [ORG CHEM] A binary compound consisting of methyl and, most commonly, a metal, such as sodium (sodium methide, $NaCH_3$).

methine group [ORG CHEM] HC≡ A radical consisting of a single carbon and a single hydrogen. Also known as methenyl; methylidyne.

methionic acid [ORG CHEM] $CH_2(SO_3H)_2$ An acid that exists as hygroscopic crystals; used in organic synthesis. Also known as methane-disulfonic acid.

methionine [BIOCHEM] $C_5H_{11}O_2NS$ An essential amino acid; furnishes both labile methyl groups and sulfur necessary for normal metabolism.

METHIONINE



Structural formula of methionine.

method of bisectors [NAV] As applied to celestial lines of position, the movement of each of three or four intersecting lines of position in equal amounts, in the same direction, toward or away from the celestial bodies, so as to bring them as nearly as possible to a common intersection; when there are more than four lines of position, the lines of position in the same general direction are combined to reduce the data to not more than four lines of position.

method of images [PETRO ENG] Method of calculating the interference between reservoirs by assuming a mirror image of one reservoir on the far side of a geologic fault.

method of joints [ENG] Determination of stresses for joints at which there are not more than two unknown forces by the methods of the stress polygon, resolution, or moments.

method of mixtures [THERMO] A method of determining the heat of fusion of a substance whose specific heat is known, in which a known amount of the solid is combined with a known amount of the liquid in a calorimeter, and the decrease in the liquid temperature during melting of the solid is measured.

methods design [IND ENG] Design for a new, more efficient method of job performance.

methods engineering [IND ENG] A technique used by management to improve working methods and reduce labor costs in all areas where human effort is required.

methods study [IND ENG] An analysis of the methods in use, of the means and potentials for their improvement, and of reducing costs.

methomyl [ORG CHEM] $C_5H_{10}N_2O_2S$ A white, crystalline compound with a melting point of 78–79°C; limited solubility in water; used as an insecticide, nematicide, and fumigant on crops. Also known as *S*-methyl-*N*-[(methylcarbamoyl)-oxy]-thioacetimidate.

methone *See* 5,5-dimethyl-1,3-cyclohexanedione.

methopyrapone *See* metyrapone.

methotrexate *See* amethopterin.

methoxide [ORG CHEM] A compound formed from a metal and the methoxy radical; an example is sodium methoxide. Also known as methylate.

methoxy- [ORG CHEM] OCH_3— A combining form indicating the oxygen-containing methane radical, found in many organic solvents, insecticides, and plasticizer intermediates.

***para*-methoxyacetanilide** *See* methacetin.

4-methoxybenzaldehyde *See* anisaldehyde.

***para*-methoxybenzaldehyde** *See* anisaldehyde.

methoxybenzene *See* anisole.

2-methoxy-4*H*-1,3,2-benzodioxaphosphorin-2-sulfide [ORG CHEM] $C_8H_9O_3PS$ A light yellow, crystalline compound with a melting point of 52–55°C; used to control pests of fruits, rice, and vegetable and fiber crops.

***para*-methoxybenzoic acid** *See* anisic acid.

***para*-methoxybenzyl alcohol** *See* anisic alcohol.

2-(methoxycarbonylamino)-benzimidazole [ORG CHEM] $C_9H_9N_3O_2$ A gray powder that decomposes at 307–312°C; used as a fungicide for cereals, vegetables, fruits, cotton, and ornamental flowers. Also known as carbendazim.

***S*-(*N*-methoxycarbonyl-*N*-methylcarbamoylmethyl)methyl-*O*-methyl phosphorodithioate** *See* mecarphon.

methoxychlor [ORG CHEM] $Cl_3CCH(C_6H_4OCH_3)_2$ White, water-insoluble crystals melting at 89°C; used as an insecticide. Also known as DMDT; methoxy DDT.

methoxy DDT *See* methoxychlor.

2-methoxyethanol [ORG CHEM] $CH_3OCH_2CH_2OH$ A poisonous liquid, used as a solvent for low-viscosity cellulose acetate, natural and some synthetic resins, and alcohol-soluble dyes, and also used in dyeing leather. Also known as ethylene glycol monomethyl ether.

methoxyethylmercury chloride [ORG CHEM] $CH_3OCH_2CH_2HgCl$ A white, crystalline compound with a melting point of 65°C; used as a fungicide in diseases of sugarcane, pineapples, seed potatoes, and flower bulbs, and as seed dressings for cereals, legumes, and root crops. Abbreviated MEMC.

4-methoxy-2-hydroxybenzophenone *See* oxybenzone.

methoxyl [ORG CHEM] CH_3O— A radical which is univalent.

2-methoxynaphthalene *See* β-naphthyl methyl ether.

4-methoxyphenol *See* hydroquinone monomethyl ether.

4-(*para*-methoxyphenyl)-2-butanone [ORG CHEM] $C_{11}H_{14}O_2$ A yellow liquid with a melting point of 8°C; used as an insect attractant. Also known as anisylacetone.

1-methoxy-4-propenyl benzene *See* anethole.

***para*-methoxypropenylbenzene** *See* anethole.

6-methoxy-α-tetralone [ORG CHEM] $C_{11}H_{12}O_2$ A crystalline substance with a melting point of 80°C; used in the synthesis of derivatives of estrane and 19-norsteroids.

methyl [ORG CHEM] The alkyl group derived from methane and usually written CH_3—. Also known as carbinyl.

methyl abietate [ORG CHEM] $C_{19}H_{29}COOCH_3$ Colorless to yellow liquid boiling at 365°C; miscible with most organic solvents; used as a solvent and plasticizer for lacquers, varnishes, and coatings.

methyl acetate [ORG CHEM] $CH_3CO_2CH_3I$ Flammable, colorless liquid with fragrant odor; boils at 54°C; partially soluble in water, miscible with hydrocarbon solvents; used as a solvent and extractant.

methylacetic acid *See* propionic acid.

methyl acetoacetate [ORG CHEM] $CH_3COCH_2CO_2CH_3$ Alcohol-soluble, colorless liquid boiling at 172°C; used as a chemical intermediate and as a solvent for cellulosics.

methyl acetone [MATER] Flammable, water-white liquid, a

mixture of acetone, methanol, and methyl acetate in various proportions; miscible with water, oils, and hydrocarbons; used as a solvent.

methyl acetophenone [ORG CHEM] $CH_3C_6H_4COCH_3$ Fragrant (coumarin aroma), colorless or pale-yellow liquid, soluble in alcohol; used in perfumery. Also known as methyl toly ketone.

methylacetopyranone *See* dehydroacetic acid.

methyl acetylene *See* allylene.

methyl acid phosphate *See* methylphosphoric acid.

methyl acrylate [ORG CHEM] $CH_2{:}CHCOOCH_3$ A readily polymerized, volatile, colorless liquid boiling at 80°C; slightly soluble in water; used as a chemical intermediate and in making polymers.

methylal [ORG CHEM] $CH_3OCH_2OCH_3$ Flammable, volatile, colorless liquid boiling at 42°C; soluble in ether, hydrocarbons, and alcohol, partially soluble in water; used as a solvent and chemical intermediate, and in perfumes, adhesives, coatings. Also known as dimethoxymethane; formal.

methyl alcohol [ORG CHEM] CH_3OH A colorless, toxic, flammable liquid, boiling at 64.5°C, miscible with water, ether, alcohol; used in manufacture of formaldehyde, chemical synthesis, antifreeze for autos, and as a solvent. Also known as methanol; wood alcohol.

methyl allyl alcohol *See* methallyl alcohol.

methyl allyl chloride [ORG CHEM] $CH_2{:}C(CH_3)CH_2Cl$ Volatile, flammable, colorless liquid boiling at 72°C; has disagreeable odor; used as an insecticide and fumigant, and for chemical synthesis.

methylamine [ORG CHEM] CH_3NH_2 A colorless gas that is highly toxic and flammable; used to prepare dyes, and as a chemical intermediate. Also known as aminomethane; monomethylamine.

methyl aminoacetic acid *See* sarcosine.

methyl-4-aminobenzene sulfonyl-carbamate [ORG CHEM] $H_2NC_6H_4SO_2NHCO_2CH_3$ White crystals with a melting point of 143–145°C; used as a pre- and postemergence herbicide. Also known as asulam.

methyl *ortho*-aminobenzoate *See* methyl anthranilate.

***N*-methyl-*para*-aminophenol** [ORG CHEM] $CH_3NHC_6H_4OH$ Colorless, combustible needles with a melting point of 87°C; soluble in water, alcohol, and ether; used as a photographic developer.

methyl amyl acetate [ORG CHEM] $CH_3COOCH(CH_3)CH_2CH(CH_3)_2$ Toxic, flammable, colorless liquid with mild, agreeable odor; boils at 146°C; used as nitrocellulose lacquer solvent. Also known as methyl isobutyl carbinol acetate.

methyl amyl alcohol [ORG CHEM] $(CH_3)_2CHCH_2CHOHCH_3$ Toxic, flammable, colorless liquid; boils at 132°C; miscible with water and most organic solvents; used as a solvent and as a chemical intermediate. Also known as methyl isobutyl carbinol (MIBC).

methyl amyl carbinol [ORG CHEM] $CH_3(CH_2)_4CHOHCH_3$ Colorless liquid with mild aroma; boils at 160°C; miscible with most organic liquids; used as an ore-flotation frothing agent and as a synthetic-resin solvent. Also known as 2-heptanol; heptyl alcohol.

methyl-*n*-amyl ketone [ORG CHEM] $CH_3(CH_2)_4COCH_3$ Stable, water-white liquid; miscible with organic lacquer solvents, slightly soluble in water; used as an inert reaction medium and as a solvent for nitrocellulose lacquers. Also known as 2-heptanone.

***N*-methylaniline** [ORG CHEM] $C_6H_5NH(CH_3)$ Oily liquid, colorless to reddish-brown; soluble in water and organic solvents; boils at 190°C; used as an acid acceptor, solvent, and chemical intermediate.

α-methylanisalacetone [ORG CHEM] $CH_3OC_6H_4CH{:}CHCOCH_2CH_3$ A white to pale yellow, combustible solid with a melting point of 60°C; used as a flavoring.

methyl anisole *See* methyl *para*-cresol.

methyl anthranilate [ORG CHEM] $H_2NC_6H_4CO_2CH_3$ A yellowish to colorless liquid, slightly soluble in water; used in flavoring and in perfumery. Also known as artificial neroli oil; methyl *ortho*-aminobenzoate.

2-methyl anthraquinone *See* tectoquinone.

methyl arachidate [ORG CHEM] $CH_3(CH_2)_{18}COOCH_3$ A waxlike solid with a melting point of 45.8°C; soluble in alcohol and ether; used in medical research and as a reference standard for gas chromatography. Also known as methyl eicosanoate.

methylarsinic sulfide [ORG CHEM] CH_3AsS A colorless compound whose flakes melt at 110°C; insoluble in water; used as a fungicide in treating cotton seeds. Also known as rhizoctol.

methylate *See* methoxide.

2-methylaziridine *See* propyleneimine.

methyl behenate [ORG CHEM] $CH_3(CH_2)_{20}COOCH_3$ A combustible, waxlike solid with a melting point of 53.2°C; soluble in alcohol and ether; used in medical and biochemical research and as a reference standard for gas chromatography. Also known as methyl docosanoate.

methylbenzene *See* toluene.

methylbenzethonium chloride [ORG CHEM] $C_{27}H_{44}O_2Cl{\cdot}H_2O$ Colorless crystals with a melting point of 161–163°C; soluble in alcohol, hot benzene, chloroform, and water; used as a bactericide.

methyl benzoate [ORG CHEM] $C_6H2_5CO_2CH_3$ Colorless, fragrant liquid boiling at 199°C; slightly soluble in alcohol and water, soluble in ether; used in perfumery and as a solvent. Also known as niobe oil.

2-methylbenzoic acid *See ortho*-toluic acid.

3-methylbenzoic acid *See meta*-toluic acid.

4-methylbenzoic acid *See para*-toluic acid.

2-methylbenzophenone *See ortho*-phenyl tolyl ketone.

1-methyl-3-(2-benzothiazolyl)-urea *See* benzthiazuron.

methyl *ortho*-benzoylbenzoate [ORG CHEM] $C_6H_5CO{-}C_6H_4COOCH_3$ A colorless, combustible liquid with a boiling point of 351°C; slightly soluble in water; used as a plasticizer.

methylbenzoylecgonine *See* cocaine.

α-methylbenzyl acetate [ORG CHEM] $C_6H_5CH(CH_3){-}OOCCH_3$ A colorless, combustible liquid with a strong floral odor; soluble in glycerin, mineral oil, and 70% alcohol; used in perfumes and as a flavoring. Also known as methylphenylcarbinyl acetate; phenylmethylcarbinyl acetate; styralyl acetate.

α-methylbenzyl alcohol [ORG CHEM] $C_6H_5CH(CH_3)OH$ A colorless, combustible liquid with a mild floral odor and a boiling point of 204°C; soluble in water; used in perfumes and dyes and as a flavoring agent. Also known as methylphenylcarbinol; *sec*-phenethyl alcohol; phenylmethylcarbinol; styralyl alcohol.

α-methylbenzylamine [ORG CHEM] $C_6H_5CH(CH_3)NH_2$ A colorless, combustible liquid with a boiling point of 188.5°C; soluble in most organic solvents; used as an emulsifying agent.

***meta*-methylbenzyl bromide** *See* α-bromo-*meta*-xylene.

α-methylbenzyl ether [ORG CHEM] $C_6H_5CH(CH_3)OCH(CH_3)C_6H_5$ A straw-colored, combustible liquid with a boiling point of 286.3°C; at 760 mmHg (101,325 newtons per square meter); slightly soluble in water; used as a solvent and as a synthetic rubber softener.

α-methyl bivinyl *See* pentadiene.

methyl blue [ORG CHEM] Dark-blue powder or dye; sodium triphenyl *para*-rosaniline sulfonate; used as a biological and bacteriological stain and as an antiseptic.

methyl borate *See* trimethyl borate.

methyl bromide [ORG CHEM] CH_3Br A toxic, colorless gas that forms a crystalline hydrate with cold water; used in synthesis of organic compounds, and as a fumigant. Also known as bromomethane.

2-methyl-1,3-butadiene *See* isoprene.

2-methylbutanal *See* 2-methylbutyraldehyde.

2-methylbutane *See* isopentane.

2-methyl-1-butanol [ORG CHEM] $C_5H_{12}O$ A liquid with a boiling point of 128°C, miscible with alcohol and with ether, slightly soluble in water; used as a solvent, in organic synthesis, and as an additive in oils and paints. Also known as active amyl alcohol.

3-methyl-1-butanol *See* isobutyl carbinol.

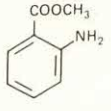
methyl butene [ORG CHEM] C_5H_{10} Either of two colorless, flammable, volatile liquid isomers; soluble in alcohol, insoluble in water: 3-methyl-1-butene boils at 20°C, is used as a chemical intermediate and in the manufacture of high-octane fuel, and is also known as isopropylethylene; 3-methyl-2-butene boils at 38°C, is used as an anesthetic and high-octane fuel and as a chemical intermediate, and is also known as trimethylethylene.

2-methyl-2-butene *See* amylene.

methyl butyl ketone [ORG CHEM] $CH_3COC_4H_9$ A liquid boiling at 127°C; soluble in water, alcohol, and ether; used as a solvent. Also known as propylacetone.

methylbutynol [ORG CHEM] $HC{:}CCOH(CH_3)_2$ Water-miscible, colorless liquid boiling at 104°C; soluble in most

METHYL ANTHRANILATE



Structural formula.

organic solvents; used as a stabilizer for chlorinated organic compounds, as a solvent, and as a chemical intermediate.

2-methylbutyraldehyde [ORG CHEM] $CH_3CH_2CH(CH_3)CHO$ A combustible liquid with a boiling point of 92.93°C; soluble in alcohol and ether; used as a brightener in electroplating. Also known as 2-methylbutanal.

3-methylbutyraldehyde *See* isovaleraldehyde.

methyl butyrate [ORG CHEM] $CH_3CH_2CH_2COOCH_3$ Liquid boiling at 102°C; used as a solvent for cellulosic materials.

methyl caprate [ORG CHEM] $CH_3(CH_2)_8COOCH_3$ A colorless, combustible liquid with a boiling point of 244°C; soluble in alcohol and ether; used in the manufacture of detergents, stabilizers, plasticizers, textiles, and lubricants. Also known as methyl decanoate.

methyl caproate [ORG CHEM] $CH_3(CH_2)_4COOCH_3$ Colorless liquid boiling at 150°C; soluble in alcohol and ether, insoluble in water; used as an intermediate to make caproic acid. Also known as methyl hexanoate.

methyl caprylate [ORG CHEM] $CH_3(CH_2)_6COOCH_3$ Colorless liquid boiling at 193°C; soluble in ether and alcohol, insoluble in water; used as an intermediate to make caprylic acid.

***meta*-methylcarbanilate** *See* phenmedipham.

2-methyl-β-carboline *See* harman.

3-methyl-4-carboline *See* harman.

methyl carbonate [ORG CHEM] $CO(OCH_3)_2$ Water-insoluble, colorless liquid boiling at 91°C; has pleasant odor; miscible with acids and alkalies; used as a chemical intermediate.

methylcellulose [ORG CHEM] A grayish-white powder derived from cellulose; swells in water to a colloidal solution; soluble in glacial acetic acid; used in water-based paints and ceramic glazes, for leather tanning, and as a thickening and sizing agent, adhesive, and food additive. Also known as cellulose methyl ether.

β-methylchalcone *See* dipnone.

methyl chavicol *See* estragole.

methyl chloride *See* chloromethane.

methyl chloroacetate [ORG CHEM] $ClHC_2COOCH_3$ Colorless liquid boiling at 131°C; miscible with ether and alcohol, slightly soluble in water; used as a solvent.

methyl chlorocarbonate *See* methyl chloroformate.

methyl chloroform *See* trichloroethane.

methyl chloroformate [ORG CHEM] $ClCOOCH_3$ A toxic, corrosive, colorless liquid with a boiling point of 71.4°C; soluble in benzene, ether, and methanol; used as a lacrimator in military poison gas and for insecticides. Also known as methyl chlorocarbonate.

methyl-2-chloro-9-hydroxyfluorene-9-carboxylate *See* chloflurecol methyl ester.

2-methyl-4-chlorophenoxyacetic acid *See* bromate.

methyl cinnamate [ORG CHEM] $C_6H_5CH{:}CHCO_2CH_3$ A white crystalline compound with strawberry aroma; soluble in ether and alcohol, insoluble in water; boils at 260°C; used to flavor confectioneries and in perfumes.

methyl *para*-cresol [ORG CHEM] $CH_3C_6H_4OCH_3$ Colorless liquid with floral aroma; used in perfumery. Also known as *para*-cresyl methyl ether; methyl anisole.

methyl cyanide *See* acetonitrile.

methyl cyanoacetate [ORG CHEM] $CNCH_2COOCH_3$ A toxic, combustible, colorless liquid with a boiling point of 203°C; soluble in water, ether, and alcohol; used in pharmaceuticals and dyes. Also known as malonic methyl ester nitrile.

methyl cyclohexane [ORG CHEM] C_7H_{14} Colorless liquid boiling at 101°C; used as a cellulosic solvent and as a chemical intermediate. Also known as hexahydrotoluene.

methyl cyclohexanol [ORG CHEM] $CH_3C_6H_{10}OH$ A toxic, colorless liquid with menthol aroma; a mixture of three isomers; used as a solvent for lacquer and cellulosics, as a lubricant antioxidant, and in detergents and textile soaps. Also known as hexahydrocresol; hexahydromethyl phenol.

methyl cyclohexanone [ORG CHEM] $CH_3C_5H_9CO$ A toxic, clear to pale-yellow liquid with acetonelike aroma; a mixture of cyclic ketones; used as a solvent and in lacquers.

1-(2-methylcyclohexyl)-3-phenylurea *See* siduron.

methyl-1,3-cyclopentadiene *See* methylcyclopentadiene dimer.

methylcyclopentadiene dimer [ORG CHEM] $C_{12}H_{16}$ A flammable, colorless liquid with a boiling range of 78–183°C; soluble in alcohol, benzene, and ether; used in high-energy fuels, plasticizers, dyes, and pharmaceuticals. Also known as methyl-1,3-cyclopentadiene.

methyl cyclopentane [ORG CHEM] $C_5H_9CH_3$ Flammable, colorless liquid boiling at 72°C; used as a chemical intermediate.

methyl decanoate *See* methyl caprate.

methyl 5-(2′,4′-dichlorophenoxy)-2-nitrobenzoate *See* bifenox.

methyl-*N*-(3,4-dichlorophenyl)carbamate *See* swep.

methyl diethanolamine [ORG CHEM] $CH_3N(C_2H_4OH)_2$ A colorless liquid miscible with water and benzene; has amine aroma; boils at 247°C; used as a chemical intermediate and as an acid-gas absorbent.

6-methyldihydromorphinone hydrochloride *See* metopon hydrochloride.

2-methyl-5,6-dihydro-4-*H*-pyran-3-carboxylic acid anilide *See* pyracarbolid.

methyl *N*′,*N*′-dimethyl *N*[(methylcarbamoyl)oxy]-1-thiooxamimidate *See* oxamyl.

methyl dioxolane [ORG CHEM] $C_4H_7O_2$ Water-soluble, clear liquid boiling at 81°C; used as a solvent and extractant. Also known as 2-methyl-1,3-dioxolane.

2-methyl-1,3-dioxolane *See* methyl dioxolane.

methyl dipropylmethane *See* methyl heptane.

methyl docosanoate *See* methyl behenate.

methyl eicosanoate *See* methyl arachidate.

methylene [ORG CHEM] $—CH_2—$ A radical that contains a bivalent carbon.

methylene blue [ORG CHEM] Dark green crystals or powder; soluble in water (deep blue solution), alcohol, and chloroform; $C_{16}H_{18}N_3SCl\cdot 3H_2O$ used in medicine; $(C_{16}H_{18}N_3SCl)_2\cdot ZnCl_2\cdot H_2O$ used as a textile dye, biological stain, and indicator. Also known as methylthionine chloride.

methylene bromide [ORG CHEM] CH_2Br_2. Colorless, clear liquid boiling at 97°C; miscible with organic solvents, slightly soluble in water; used as a solvent and chemical intermediate. Also known as dibromomethane.

methylene chloride [ORG CHEM] CH_2Cl_2 A colorless liquid, practically nonflammable and nonexplosive; used as a refrigerant in centrifugal compressors, a solvent for organic materials, and a component in nonflammable paint-remover mixtures. Also known as carrene; dichloromethane.

methylenecyclopentadiene *See* fulvene.

3,4-methylenedioxy-1-allyl benzene *See* safrole.

3,4-methylenedioxybenzaldehyde *See* piperonal.

1,2-methylenedioxy-4-propenylbenzene *See* isosafrole.

methylene iodide [ORG CHEM] CH_2I_2 Yellow liquid boiling at 180°C; soluble in ether and alcohol, insoluble in water; used as a chemical intermediate and to separate mineral mixtures. Also known as diiodomethane.

methylene oxide *See* formaldehyde.

methylene succinic acid *See* itaconic acid.

methyl ester [ORG CHEM] An ester that forms methanol when hydrolyzed.

methyl ether *See* dimethyl ether.

methylethylcellulose [ORG CHEM] A combustible, white to cream-colored, fibrous solid or powder; disperses in cold water, forming solutions which undergo reversible transformation from sol to gel; used as an emulsifier and foaming agent.

methyl ethyl diketone *See* acetyl propionyl.

methyl ethylene *See* propylene.

methyl ethylene glycol *See* propylene glycol.

β,β-methylethylglutarimide *See* bemegride.

methyl ethyl glyoxal *See* acetyl propionyl.

methyl ethyl ketone [ORG CHEM] $CH_3COC_2H_5$ A water-soluble, colorless liquid that is miscible in oil; used as a solvent in vinyl films and nitrocellulose coatings, and as a reagent in organic synthesis. Also known as 2-butanone; ethyl methyl ketone; MEK.

methyleugenol [ORG CHEM] $C_{11}H_{14}O_2$ A crystalline compound, soluble in water; melting point is −4°C; used as an attractant for the oriental fruit fly. Also known as 1-allyl-3,4-dimethoxybenzene.

methyl formate [ORG CHEM] $HCOOCH_3$ A flammable, colorless liquid with a boiling point of 31.8°C; soluble in ether, water, and alcohol; used in military poison gases and larvicides, and as a fumigant.

methyl fumaric acid *See* mesaconic acid.

2-methylfuran [ORG CHEM] $C_4H_3OCH_3$ A colorless liquid

with ether aroma; boils at 64°C; used as a chemical intermediate.

methyl furoate [ORG CHEM] $C_4H_3OCO_2CH_3$ Colorless liquid that turns yellow in light; soluble in ether and alcohol, insoluble in water; used as a solvent and chemical intermediate.

methyl GAG *See* methylglyoxal bis(guanylhydrazone).

***N*-methyl glucamine** [PHARM] $C_7H_{17}NO_5$ A crystalline compound with a melting point of 128–129°C; used in medicine as a drug for leishmaniasis. Also known as meglumine.

methyl glucoside [ORG CHEM] $C_7H_{14}O_6$ Odorless, water-soluble white crystals; used to make resins, drying oils, plasticizers, and surfactants.

methyl glycocoll *See* sarcosine.

methyl glycol *See* propylene glycol.

methylglyoxal bis(guanylhydrazone) [PHARM] $C_5H_{12}N_8$ A crystalline compound, used in medicine as an antineoplastic agent. Also known as methyl GAG; pyruvaldehyde bis(aminohydrazone).

methyl heptane [ORG CHEM] C_8H_{18} Either of two colorless, water-insoluble liquids, soluble in alcohol and ether, used as chemical intermediates: 2-methylheptane boils at 118°C, is flammable, and is also known as isooctane; 4-methylheptane boils at 122°C and is known as methyl dipropylmethane.

methylheptenone [ORG CHEM] $(CH_3)_2C{:}CH(CH_2)_2COCH_3$ A combustible, colorless liquid with a boiling point of 173–174°C; a constituent of many essential oils; used in perfumes and for flavoring. Also known as 6-methyl-5-hepten-2-one.

6-methyl-5-hepten-2-one *See* methylheptenone.

2-(1-methylheptyl)-4,6-dinitrophenyl crotonate [ORG CHEM] $C_{18}H_{24}O_6N_2$ A brown liquid, insoluble in water; used as a fungicide and miticide for fruit and vegetable crops.

methyl hexadecanoate *See* methyl palmitate.

2-methylhexane [ORG CHEM] C_7H_{16} Colorless liquid boiling at 90°C; insoluble in alcohol and water; used as a chemical intermediate. Also known as ethyl isobutylmethane.

methyl hexanoate *See* methyl caproate.

methyl hexyl ketone [ORG CHEM] $CH_3COC_6H_{13}$ A combustible, colorless liquid with a boiling point of 173.5°C; soluble in alcohol, hydrocarbons, ether, and esters; used in perfumes and as a flavoring and odorant. Also known as 2-octanone.

methyl hydride *See* methane.

methylhydroxyisopropylcyclohexane *See* menthol.

α-methyl-3-(*para*-hydroxyphenyl)alanine *See* α-methyl-*para*-tyrosine.

methyl hydroxystearate [ORG CHEM] $C_{19}H_{38}O_3$ A white, waxy material; slightly soluble in organic solvents, insoluble in water; used in cosmetics, inks, and adhesives.

methylidyne *See* methine group.

3-methylindole *See* skatole.

methyl iodide [ORG CHEM] CH_3I Flammable colorless liquid that turns brown in light; boils at 42°C; soluble in ether and alcohol, insoluble in water; used as a chemical intermediate, in medicine, and in analytical chemistry. Also known as iodomethane.

methyl isobutyl carbinol *See* methyl amyl alcohol.

methyl isobutyl carbinol acetate *See* methyl amyl acetate.

methyl isobutyl ketone [ORG CHEM] $(CH_3)_2CHCH_2COCH_3$ Flammable colorless liquid with pleasant aroma; boils at 116°C, miscible with most organic solvents; used as a solvent, extractant, and chemical intermediate. Also known as hexone.

methylisopropylphenanthrene *See* retene.

2-methyl-5-isopropyl phenol *See* carvacrol.

methylisothiocyanate [ORG CHEM] C_2H_3NS A crystalline compound, with a melting point of 35–36°C; soluble in alcohol and ether; used as a pesticide and in amino acid sequence analysis. Also known as methyl mustard oil.

methyl lactate [ORG CHEM] $CH_3CHCHCOOCH_3$ Liquid boiling at 145°C; miscible with water and most organic liquids; used as a solvent for lacquers, stains, and cellulosic materials.

methyl laurate [ORG CHEM] $CH_3(CH_2)_{10}COOCH_3$ Water-insoluble, clear, colorless liquid boiling at 262°C; used as a chemical intermediate to make rust removers, and for leather treatment.

methyl linoleate [ORG CHEM] $C_{19}H_{34}O_2$ A combustible, colorless liquid with a boiling point of 212°C; soluble in alcohol and ether; used in the manufacture of detergents, emulsifiers, lubricants, and textiles, and in medical research.

methyl maleic acid *See* citraconic acid.

methyl mercaptan [ORG CHEM] CH_3SH Colorless, toxic, flammable gas with unpleasant odor; boils at 6.2°C; insoluble in water, soluble in organic solvents; used as a chemical intermediate.

2-methylmercapto-4-methylamino-6-isopropylamino-*S*-triazine *See* desmetryn.

methylmercury cyanide *See* methylmercury nitrile.

methylmercury nitrile [ORG CHEM] CH_3HgCN A crystalline solid with a melting point of 95°C; soluble in water; used as a fungicide to treat seeds of cereals, flax, and cotton. Also known as methylmercury cyanide.

methyl methacrylate [ORG CHEM] $CH_2C(CH_3)COOCH_3$ A flammable, colorless liquid, soluble in most organic solvents but insoluble in water; used as a monomer for polymethacrylate resins.

***S*-methyl-*N*-[(methylcarbamoyl)-oxy]thioacetimidate** *See* methomyl.

2-methyl-6-methylene-2,7-octadiene *See* β-myrcene.

2-methyl-2-(methylthio)propionaldehyde-*O*-(methylcarbamoyl)oxime *See* aldicarb.

methyl mustard oil *See* methylisothiocyanate.

methyl myristate [ORG CHEM] $CH_3(CH_2)_{12}COOCH_3$ A colorless liquid with a boiling point of 186.8°C; used in the manufacture of detergents, plasticizers, resins, textiles, and animal feeds, and as a flavoring. Also known as methyl tetradecanoate.

methylnaphthalene [ORG CHEM] $C_{10}H_7CH_3$ A solid melting at 34°C; used in insecticides and organic synthesis.

methyl naphthyl ether *See* β-naphthyl methyl ether.

methyl nitrate [ORG CHEM] CH_3NO_3 Explosive liquid boiling at 60°C; slightly soluble in water, soluble in ether and alcohol; used as a rocket propellant.

***meta*-methylnitrobenzene** *See meta*-nitrotoluene.

***ortho*-methylnitrobenzene** *See ortho*-nitrotoluene.

***para*-methylnitrobenzene** *See para*-nitrotoluene.

3-methyl-4-nitro-1-(*para*-nitrophenyl)-2-pyrazoline-5-one *See* picolinic acid.

***N*-methyl-*N*-nitroso-*para*-toluenesulfonamide** *See para*-tolylsulfonylmethylnitrosamide.

methyl nonanoate [ORG CHEM] $CH_3(CH_2)_7COOCH_3$ A colorless liquid with a fruity odor and a boiling point of 213.5°C; soluble in alcohol and ether; used in perfumes and flavors, and for medical research. Also known as methyl pelargonate.

methyl nonyl ketone [ORG CHEM] $CH_3COC_9H_{19}$ An oily liquid with a boiling point of 225°C; soluble in two parts of 70% alcohol; used in perfumes and flavoring. Also known as 2-undecanone.

Methylococcus [MICROBIO] A genus of bacteria in the family Methylomonadaceae; nonmotile cocci, usually found in pairs.

methyl oleate [ORG CHEM] $C_{17}H_{33}COOCH_3$ Amber liquid with faint fatty odor; soluble in organic liquids, mineral spirits, and vegetable oil, insoluble in water; used as a plasticizer and softener.

methylol riboflavin [ORG CHEM] An orange to yellow powder, soluble in water; used as a nutrient and in medicine.

methylolsulfonic acid sodium salt *See* formaldehyde sodium bisulfite.

methylol urea [ORG CHEM] $H_2NCONHCH_2OH$ Water-soluble, colorless crystals melting at 111°C; used to treat textiles and wood, and in the manufacture of resins and adhesives.

Methylomonadaceae [MICROBIO] A family of gram-negative, aerobic bacteria which utilize only one-carbon compounds as a source of carbon.

Methylomonas [MICROBIO] A genus of bacteria in the family Methylomonadaceae; motile, straight, curved, or branched rods that occur singly.

methyl orthophosphoric acid *See* methylphosphoric acid.

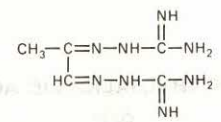
methyl palmitate [ORG CHEM] $CH_3(CH_2)_{14}COOCH_3$ A colorless liquid with a boiling point of 211.5°C; soluble in alcohol and ether; used in the manufacture of detergents, resins, plasticizers, lubricants, and animal feed. Also known as methyl hexadecanoate.

methyl parathion [ORG CHEM] $C_8H_{10}NO_5PS$ An amber to dark brown liquid with slight solubility in water; used as an insecticide to control boll weevils, leafhoppers, cutworms, and rice bugs. Also known as *O,O*-dimethyl-*ortho*-*para*-nitrophenyl phosphorothioate.

methyl pelargonate *See* methyl nonanoate.

3-methylpentane [ORG CHEM] C_6H_{14} Flammable, colorless liquid; insoluble in water, soluble in alcohol; boils at 64°C;

METHYLGLYOXAL BIS-(GUANYLHYDRAZONE)



Structural formula.

used as a chemical intermediate. Also known as diethylmethylmethane.

2-methylpentanoic acid [ORG CHEM] $(CH_3)_2CH(CH_2)_2COOH$ A colorless liquid with a boiling point of 197°C; soluble in alcohol, benzene, and acetone; used for plasticizers, vinyl stabilizers, and metallic salts.

methylpentene polymer [ORG CHEM] Thermoplastic material based on 4-methylpentene-1; has low gravity, excellent electrical properties, and 90% optical transmission.

methyl pentose [ORG CHEM] **1.** Any compound that is a methyl derivative of a five carbon sugar. **2.** In particular, the compound $CH_3(CHOH)_4CHO$.

methyl phenyl acetate [ORG CHEM] $C_6H_5CH_2COOCH_3$ A colorless liquid with honey odor; used to flavor tobacco and in perfumery.

methylphenylcarbinol *See* α-methylbenzyl alcohol.

methylphenylcarbinyl acetate *See* α-methylbenzyl acetate.

methylphenyl ether *See* anisole.

methylphosphoric acid [ORG CHEM] $CH_3H_2PO_4$ A straw-colored liquid used for textile- and paper-processing compounds, as a rust remover, and in soldering flux. Also known as methyl acid phosphate; methyl orthophosphoric acid.

2-methyl-3-phytyl-1,4-napthoquinone *See* phytonadione.

methylpicrylnitramine *See* tetryl.

***N*-methylpiperazinyl-*N'*-propylphenothiazine** *See* perazine.

3-(2-methylpiperidino)propyl 3,4-dichlorobenzoate *See* piperalin.

3-(2-methyl-1-piperidyl)propyl benzoate hydrochloride *See* piperocaine hydrochloride.

2-methyl propane *See* isobutane.

2-methylpropene *See* isobutylene.

methyl propionate [ORG CHEM] $CH_3CH_2COOCH_3$ A flammable, colorless liquid with a boiling range of 78.0–79.5°C; soluble in most organic solvents; used as a solvent for cellulose nitrate, in lacquers, varnishes, and paints, and for flavoring.

methyl propyl carbinol [ORG CHEM] $CH_3CHOHC_3H_7$ Colorless liquid boiling at 119°C; miscible with ether and alcohol, slightly soluble in water; used as a pharmaceuticals intermediate and as a paint and lacquer solvent. Also known as *sec-n*-amyl alcohol; 2-pentanol.

methyl propyl ketone *See* pentanone.

methylpyrocatechin *See* guaiacol.

***N*-methyl-2-pyrrolidone** [ORG CHEM] C_5H_9NO A liquid boiling at 202°C; miscible with water, castor oil, and organic solvents; used as a chemical intermediate and as a solvent for petroleum and resins, and in PVC spinning.

3-(1-methyl-2-pyrrolidyl)pyridine *See* nicotine.

α-methylquinoline *See* quinaldine.

γ-methylquinoline *See* lepidine.

6-methyl-2,3-quinoxalinedithiol cyclic-*S*,*S*-dithiocarbonate *See* oxythioquinox.

methyl red [ORG CHEM] $(CH_3)_2NC_6H_4NNC_6H_4COOH$ A dark red powder or violet crystals with a melting point of 180°C; soluble in alcohol, ether, and glacial acetic acid; used as an acid-base indicator (pH 4.2–6.2).

methyl red test [MICROBIO] A cultural test for the ability of bacteria to ferment carbohydrate to form acid; uses methyl red as the indicator.

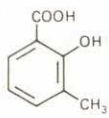
methyl ricinoleate [ORG CHEM] $C_{19}H_{36}O_3$ Clear, low-viscosity fluid used as a wetting agent, cutting oil additive, lubricant, and plasticizer.

methylrosaniline chloride *See* methyl violet.

methyl salicylate [ORG CHEM] $C_6H_4OHCOOCH_3$ A colorless, yellow, or reddish liquid, slightly soluble in water, boiling at 222.2°C, with an odor of wintergreen; used in medicine and perfumery, and as a solvent for cellulose derivatives. Also known as betula oil; gaultheria oil; wintergreen oil.

3-methylsalicylic acid [ORG CHEM] $C_8H_8O_3$ A white to reddish, crystalline compound with a melting point of 165–166°C; soluble in chloroform, alcohol, ether, and alkali hydroxides; used to make dyes. Also known as *ortho*-cresotic acid; *ortho*-cresotinic acid; *ortho*-homosalicylic acid; 2-hydroxy-*meta*-toluic acid.

3-METHYLSALICYLIC ACID

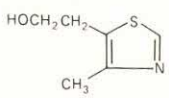


Structural formula.

methyl silicone [ORG CHEM] $[(CH_3)_2SiO]_x$, $[C(CH_3)_2Si_2O_3]_y$, etc. The common varieties of silicones with properties of oil, resin, or rubber, depending on molecular size and arrangement.

methyl stearate [ORG CHEM] $C_{17}H_{35}COOCH_3$ Colorless crystals melting at 39°C; soluble in alcohol and ether, insoluble in water; used as an intermediate for stearic acid manufacture.

4-METHYL-5-THIAZOLE-ETHANOL



Structural formula.

methyl styrene *See* vinyltoluene.

α-methyl styrene [ORG CHEM] $C_6H_5C(CH_3):CH_2$ Colorless, toxic, polymerizable liquid boiling at 165°C; used to produce polystyrene resins.

methyl styryl ketone *See* benzylideneacetone.

methyl sulfate *See* dimethyl sulfate.

methyl sulfide [ORG CHEM] $(CH_3)_2S$ Flammable, colorless liquid with disagreeable aroma; soluble in ether and alcohol, insoluble in water; boils at 38°C; used as a chemical intermediate. Also known as dimethyl sulfide; methane thiomethane.

methylsulfonic acid *See* methanesulfonic acid.

4-(methylsulfonyl)-2,6-dinitro-*N*,*N*-dipropylaniline *See* nitralin.

methyl tetradecanoate *See* methyl myristate.

methyl-1,2,5,6-tetrahydro-1-methylnicotinate *See* arecoline.

***N*-methyl-*N*,2,4,6-tetranitroaniline** *See* tetryl.

4-methyl-5-thiazoleethanol [ORG CHEM] C_6H_9NOS A viscous, oily liquid; soluble in alcohol, ether, benzene, chloroform, and water; used as an intermediate in the synthesis of vitamin B_1 and as a sedative and hypnotic.

methylthionine chloride *See* methylene blue.

methylthiouracil [PHARM] $C_5H_6N_2OS$ A crystalline compound; used as a medicine for overactivity of the thyroid. Also known as 6-methyl-2-thiouracil.

6-methyl-2-thiouracil *See* methylthiouracil.

4-(methylthio)-3,5-xylylmethylcarbamate *See* mercaptodimethur.

methyl tolyl ketone *See* methyl acetophenone.

methyl transferase [BIOCHEM] Any of a group of enzymes which catalyze the reaction of *S*-adenosyl methionine with a suitable acceptor to yield the methylated acceptor molecule and *S*-adenosyl homocysteine.

methyltrimethylolmethane *See* trimethylolethane.

methyltrinitrobenzene *See* 2,4,6-trinitrotoluene.

α-methyl-*para*-tyrosine [ORG CHEM] $C_{10}H_{13}NO_3$ A crystalline compound which acts as the inhibitor of the first and rate-limiting reaction in the biosynthesis of catecholamine; used as an inhibitor of tyrosine hydroxylase. Also known as α-methyl-3-(*para*-hydroxyphenyl)alanine.

β-methylumbelliferone *See* hymecromone.

methyl violet [ORG CHEM] A derivative of pararosaniline, used as an antiallergen and bactericide, acid-base indicator, biological stain, and textile dye. Also known as crystal violet; gentian violet; methylrosaniline chloride.

metobromuron [ORG CHEM] $C_9H_{11}BrN_2O_2$ A colorless, crystalline compound with a melting point of 95.5–96°C; limited solubility in water; used as a preemergence herbicide to control weeds in potatoes. Also known as 3-(*para*-bromophenyl)-1-methoxy-1-methylurea.

metonic cycle [ASTRON] A time period of 235 lunar months, or 19 years 11 days; after this period the phases of the moon occur on the same days of the month.

metopan hydrochloride [PHARM] $C_{18}H_{21}O_3N{\cdot}HCl$ A morphine derivative; a white, crystalline powder soluble in water; used as a sedative. Also known as 6-methyldihydromorphinone hydrochloride.

metopyrone *See* metyrapone.

metraterm [INV ZOO] The distal portion of the uterus in trematodes.

metria [MED] **1.** Any pathologic condition of the uterus. **2.** Any uterine inflammation occurring within the 6 weeks following childbirth.

metribuzin [ORG CHEM] $C_8H_{14}N_4OS$ A white, crystalline solid with a melting point of 125–126.5°C; used as a preemergence herbicide for soybeans and pre- and postemergence treatment for potatoes. Also known as 4-amino-6-*tert*-butyl-3-(methylthio)-1,2,4-triazin-5-(4*H*)-one.

metric [MATH] A real valued "distance" function on a topological space X satisfying four rules: for x, y, and z in X, the distance from x to itself is zero; the distance from x to y is positive if x and y are different; the distance from x to y is the same as the distance from y to x; and the distance from x to y is less than or equal to the distance from x to z plus the distance from z to y (triangle inequality).

metricate [SCI TECH] To use the metric system in expressing all physical quantities.

metric carat *See* carat.

metric centner [MECH] **1.** A unit of mass equal to 50 kilo-

grams. **2.** A unit of mass equal to 100 kilograms. Also known as quintal.

metric grain [MECH] A unit of mass, equal to 50 milligrams; used in commercial transactions in precious stones.

metric horsepower [PHYS] A unit of power, equal to 75 meter kilogram-force per second; equal to 753.49875 watts.

metric line *See* millimeter.

metric ounce *See* mounce.

metric slug *See* metric-technical unit of mass.

metric space [MATH] Any topological space which has a metric defined on it.

metric system [MECH] A system of units used in scientific work throughout the world and employed in general commercial transactions and engineering applications; its units of length, time, and mass are the meter, second, and kilogram respectively, or decimal multiples and submultiples thereof.

metric-technical unit of mass [MECH] A unit of mass, equal to the mass which is accelerated by 1 meter per second per second by a force of 1 kilogram-force; it is equal to 9.80665 kilograms. Abbreviated TME. Also known as hyl; metric slug.

metric tensor [MATH] A second rank tensor of a Riemannian space whose components are functions which help define magnitude and direction of vectors about a point. Also known as fundamental tensor.

metric thread gearing [DES ENG] Gears that may be interchanged in change-gear systems to provide feeds suitable for cutting metric and module threads.

metric ton *See* tonne.

metric waves [ELECTROMAG] Radio waves having wavelengths between 1 and 10 meters, corresponding to frequencies between 30 and 300 megahertz (the very-high-frequency band).

Metridiidae [INV ZOO] A family of zoantharian coelenterates in the order Actiniaria.

metriocranic [ANTHRO] Having a skull that is moderately high compared with its width, with a breadth-height index of 92 to 98.

metritis [MED] Inflammation of the uterus, usually involving both the endometrium and myometrium.

metrizable space [MATH] A topological space on which can be defined a metric whose topological structure is equivalent to the original one.

metrology [PHYS] The science of measurement.

metrorrhagia [MED] Uterine bleeding during the intermenstrual cycle. Also known as intermenstrual flow; polymenorrhea.

metrorrhea [MED] Any pathologic discharge from the uterus.

metrorrhexis [MED] Rupture of the uterine wall.

metrosalpingitis [MED] Inflammation of the uterus and oviducts.

metrostaxis [MED] Slight, chronic bleeding from the uterus.

metyrapone [PHARM] $C_{14}H_{14}N_2O$ A crystalline compound with a melting point of 50–51°C; used in medicine in the test of pituitary function. Also known as mepyrapone; methbipyranone; methopyrapone; metopyrone.

Meusnier's theorem [MATH] A theorem stating that the curvature of a surface curve equals the curvature of the normal section through the tangent to the curve divided by the cosine of the angle between the plane of this normal section and the osculating plane of the curve.

MeV *See* megaelectronvolt.

mevalonic acid [ORG CHEM] $HO_2C_5H_9COOH$ A dihydroxy acid used in organic synthesis. Also known as 3,5-dihydroxy-3-methyl valeric acid.

MeV Ci *See* megaelectronvolt-curie.

mexacarbate [ORG CHEM] $C_{12}H_{18}N_2O_2$ A tan solid with a melting point of 85°C; used to control insect pests of trees, flowers, and shrubs. Also known as 4-dimethylamino 3,5-xylyl-*N*-methylcarbamate.

Mexican linaloe oil *See* linaloe wood oil.

Mexican onyx *See* onyx marble.

Meyer atomic volume curve [ATOM PHYS] A graph of the atomic volumes of the elements versus their atomic numbers; it reveals a periodicity, with peaks at the alkali elements and valleys at the transition elements.

meyerhofferite [MINERAL] $Ca_2B_6O_{11}\cdot 7H_2O$ A colorless, hydrated borate mineral that crystallizes in the triclinic system.

Meyliidae [INV ZOO] A family of free-living nematodes in the superfamily Desmoscolecoidea.

Meziridae [INV ZOO] A family of hemipteran insects in the superfamily Aradoidea.

mezzograph [GRAPHICS] A halftone that has a grained surface rather than crossline screen dots.

mezzotint [GRAPHICS] An engraving process in which a copper or steel plate is first entirely roughened by rubbing Carborundum between it and another plate and by using a steel chisel with an edge set with minute teeth which rock into the plate at various angles; the rough-grain plate is burnished with a steel instrument to produce appropriate white areas of the design.

M_f [MET] In a carbon steel, the temperature at which martensite formation finishes during cooling of austenite.

mf *See* medium frequency.

mF *See* millifarad.

mg *See* milligram.

mG *See* milligauss.

Mg *See* magnesium.

mGal *See* milligal.

M82 galaxy [ASTRON] An active, variable spiral galaxy that exhibits strong emission from its center in the radio band, 10^4 to 10^6 times greater than that of normal spirals, and ejection of gases at speeds up to 1000 kilometers per second.

mg h *See* milligram-hour.

mH *See* millihenry.

MHD *See* magnetohydrodynamics.

MHD generator *See* magnetohydrodynamic generator.

mho *See* siemens.

MHz *See* megahertz.

mHz *See* millihertz.

mi *See* mile.

Miacidae [PALEON] The single, extinct family of the carnivoran superfamily Miacoidea.

Miacoidea [PALEON] A monofamilial superfamily of extinct carnivoran mammals; a stem group thought to represent the progenitors of the earliest member of modern carnivoran families.

miagite *See* corsite.

miargyrite [MINERAL] $AgSbS_2$ An iron-black to steel-gray mineral that crystallizes in the monoclinic system.

miarolithite [PETR] A chorismite type of igneous rock having miarolitic cavities or vestiges therof.

miarolitic [PETR] Of igneous rock, characterized by small irregular cavities into which well-formed crystals of the rock-forming mineral protrude.

MIBC *See* methyl amyl alcohol.

MIC *See* microwave integrated circuit.

mica [MINERAL] A group of phyllosilicate minerals (with sheetlike structures) of general formula $(K,Na,Ca)(Mg,Fe,Li,Al)_{2-3}(Al,Si)_4O_{10}(OH,F)_2$ characterized by low hardness (2–2½) and perfect basal cleavage.

mica book [MINERAL] A crystal of mica, usually large and irregular, whose cleavage plates resemble the leaves of a book. Also known as book.

mica capacitor [ELEC] A capacitor whose dielectric consists of thin rectangular sheets of mica and whose electrodes are either thin sheets of metal foil stacked alternately with mica sheets, or thin deposits of silver applied to one surface of each mica sheet.

micaceous [GEOL] Pertaining to or resembling mica.

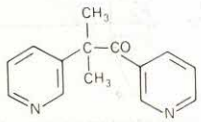
micaceous arkose [PETR] A sandstone containing 25–90% feldspars and feldspathic crystalline rock fragments, 10–50% micas and micaceous metamorphic rock fragments, and 0–65% quartz, chert, and metamorphic quartzite.

mica schist [PETR] A schist which is composed essentially of mica and quartz and whose characteristic foliation is mainly due to the parallel orientation of the mica flakes.

micellar flooding [PETRO ENG] A two-step enhanced oil recovery process in which a surfactant slug is injected into the well followed by a larger slug of water containing a high-molecular-weight polymer which pushes the chemicals through the field and improves mobility and sweep efficiency. Also known as microemulsion flooding; surfactant flooding.

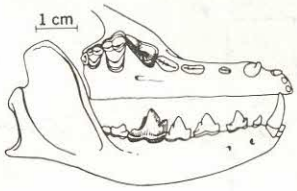
micelle [MOL BIO] A submicroscopic structural unit of protoplasm built up from polymeric molecules. [PHYS CHEM] A colloidal aggregate of a unique number (between 50 and 100) of amphipathic molecules, which occurs at a well-defined concentration known as the critical micelle concentration.

METYRAPONE



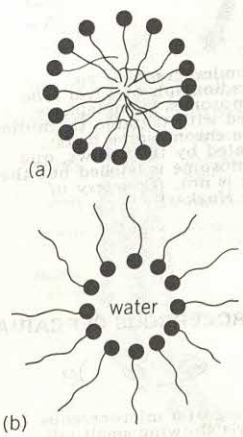
Structural formula.

MIACOIDEA



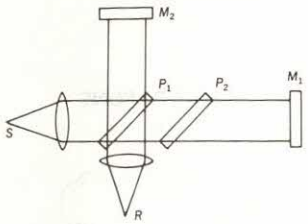
Right side of *Miacis* jaw shown in ventral (upper) and lateral (lower) views.

MICELLE



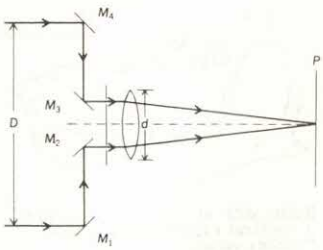
Two forms of micelle: (a) spherical and (b) reversed.

MICHELSON INTERFEROMETER



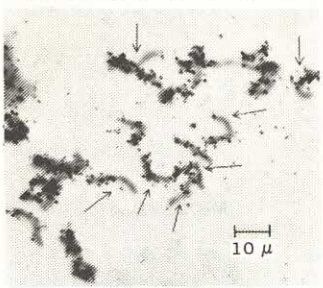
Michelson interferometer, S = narrow angle source; R = receiver; M_1, M_2 = mirrors; P_1 = 50% partially reflecting plate; P_2 = reflector plate which compensates for thickness of P_1. *(From A. C. Hardy and F. H. Perrin, The Principles of Optics, McGraw-Hill, 1932)*

MICHELSON STELLAR INTERFEROMETER



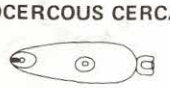
Michelson stellar interferometer, used for measuring the diameters of stars. M_2, M_3 = two fixed mirrors; M_1, M_4 = two mirrors that are movable so as to vary their separation D; d = diameter of lens; P = focal plane of lens.

MICROAUTORADIOGRAPH



Photomicrograph of an autoradiograph of *Vicia faba* chromosomes in metaphase labeled with tritiated thymidine. In the chromosome pairs indicated by the arrows, one chromosome is labeled but the other is not. *(Courtesy of W. L. Hughes)*

MICROCERCOUS CERCARIA



Drawing of a microcercous cercaria showing small tail. *(From R. M. Cable, An Illustrated Laboratory Manual of Parasitology, Burgess, 1958)*

Michaelis constant [BIOCHEM] A constant K_m such that the initial rate of reaction V, produced by an enzyme when the substrate concentration is high enough to saturate the enzyme, is related to the rate of reaction v at a lower substrate concentration c by the formula $V = v\,(1 + K_m/c)$.

Michaelson actinograph [ENG] A pyrheliometer of the bimetallic type used to measure the intensity of direct solar radiation; the radiation is measured in terms of the angular deflection of a blackened bimetallic strip which is exposed to the direct solar beams.

Michel parameter [PARTIC PHYS] A number appearing in an equation for the momentum spectrum of muon decay, which depends on the nature of the weak interactions; the number is equal to 3/4 in any two-component neutrino theory before radiative corrections are taken into account.

Michelson interferometer [OPTICS] An interferometer in which light strikes a partially reflecting plate at an angle of 45°, the light beams reflected and transmitted by the plate are both reflected back to the plate by mirrors, and the beams are recombined at the plate, interfering constructively or destructively depending on the distances from the plate to the two mirrors.

Michelson-Morley experiment [OPTICS] An experiment which uses a Michelson interferometer to determine the difference between the speeds of light in two perpendicular directions.

Michelson stellar interferometer [OPTICS] An instrument for measuring angular diameters of astronomical objects, in which a system of mirrors directs two parallel beams of light into a telescope, and angular diameter is determined from the maximum distance between the beams at which interference fringes are observable.

Michigan cut [MIN ENG] A technique used to break off ore at a heading; a large hole or series of small holes at the center of the heading are drilled parallel to the tunnel direction but not charged with explosive; other holes are drilled in the heading and charged so that upon detonation they break out toward the uncharged holes.

Michigan tripod [MIN ENG] A support for a drilling outfit; consists of three debarked pine or fir timber poles about 25 feet (7.6 meters) long whose butt ends are about 12 inches (30 centimeters) in diameter; a sheave suspended from a clevis at the top of the tripod is aligned over the hoisting drum and the borehole; there is a minimum of 22 feet (6.7 meters) of headroom above the drill floor.

Michler's ketone *See* tetramethyldiaminobenzophenone.

mickey-mouse [COMPUT SCI] To play with something new, such as hardware, software, or a system, until a feel is gotten for it and the proper operating procedure is discovered, understood, and mastered.

MICR *See* magnetic-ink character recognition.

micracanthopore [INV ZOO] Small, minute tubes projecting from the surface of bryozoan colonies.

micrencephaly [MED] The condition of having an abnormally small brain. Also spelled microencephaly.

micril *See* gammil.

micrinite [PETR] An opaque granular variety of inertinite of medium hardness showing no plant-cell structure.

micrite [PETR] A semiopaque crystalline limestone matrix that consists of chemically precipitated calcite mud, whose crystals are generally 1–4 micrometers in diameter.

micro- [MATH] A prefix representing 10^{-6}, or one-millionth. [SCI TECH] **1.** A prefix indicating smallness, as in microwave. **2.** A prefix indicating extreme sensitivity, as in microradiometer and microphone.

microabscess [MED] A small abscess.

microaerophilic [MICROBIO] Pertaining to those microorganisms requiring free oxygen but in very low concentration for optimum growth.

microalloy diffused transistor [ELECTR] A microalloy transistor in which the semiconductor wafer is first subjected to gaseous diffusion to produce a nonuniform base region. Abbreviated MADT.

microalloy transistor [ELECTR] A transistor in which the emitter and collector electrodes are formed by etching depressions, then electroplating and alloying a thin film of the impurity metal to the semiconductor wafer, somewhat as in a surface-barrier transistor.

microammeter [ELEC] An ammeter whose scale is calibrated to indicate current values in microamperes.

microampere [ELEC] A unit of current equal to one-millionth of an ampere. Abbreviated μA.

microanalysis [ANALY CHEM] Identification and chemical analysis of material on a small scale so that specialized instruments such as the microscope are needed; the material analyzed may be on the scale of 1 microgram.

microanatomy [ANAT] Anatomical study of microscopic tissue structures.

microaneurysm [MED] Dilation of the wall of a capillary, characteristic of certain disease entities.

microangstrom [MECH] A unit of length equal to one-millionth of an angstrom, or 10^{-16} meter. Abbreviated μA.

microautoradiograph [GRAPHICS] An image which is produced by placing a specimen containing radioactive material (usually a radioactive tracer) in close contact with a photographic film and optically enlarging the developed image.

Microbacterium [MICROBIO] A genus of small diphtheroid rods in the coryneform group of bacteria; gram-positive, nonmotile cells which ferment carbohydrate to produce lactic acid.

microbalance [ENG] A small, light type of analytical balance that can weigh loads of up to 0.1 gram to the nearest microgram.

microbar *See* barye.

microbarm [GEOPHYS] That portion of the record of a microbarograph between any two or a specified small number of the successive crossings of the average pressure level in the same direction; analogous to microseism.

microbarogram [ENG] The record or trace made by a microbarograph.

microbarograph [METEOROL] A type of aneroid barograph designed to record atmospheric pressure variations of very small magnitude.

microbe [MICROBIO] A microorganism, especially a bacterium of a pathogenic nature.

microbial insecticide [MICROBIO] Species-specific bacteria which are pathogenic for and used against injurious insects.

microbicide [MATER] An agent that kills microbes.

microbiology [BIOL] The science and study of microorganisms, including protozoans, algae, fungi, bacteria, viruses, and rickettsiae.

microbiophobia [PSYCH] An abnormal fear of microbes.

Microbispora [MICROBIO] A genus of bacteria in the family Micromonosporaceae; spores are produced in longitudinal pairs on aerial mycelia only.

microbit [COMPUT SCI] A unit of information equal to one-millionth of a bit.

microbreccia [GEOL] A poorly sorted sandstone containing large, angular sand particles in a fine silty or clayey matrix.

microbridge [CRYO] A Josephson junction formed by configuration of thin superconducting films.

microcaliper log [PETRO ENG] A detailed and accurate record of drill-hole diameter; used to detect caved sections and to verify the presence of mud cake.

microcanonical ensemble [STAT MECH] A collection of systems describing a single isolated system of specified energy; its members are uniformly distributed over a part of phase space whose energies lie within an infinitesimal range.

microcapacitor [ELECTR] Any very small capacitor used in microelectronics, usually consisting of a thin film of dielectric material sandwiched between electrodes.

microcapsule [CHEM ENG] A capsule with a plastic or wax-like coating having a diameter anywhere from well below 1 micrometer to over 2000 micrometers.

microcard [GRAPHICS] A type of microtext, consisting of photographic prints 7.5 by 12.5 centimeters in size prepared from 16- or 35-millimeter film, commonly at a reduction of 20 diameters.

microcentrum [CYTOL] The centrosome, or a group of centrosomes, functioning as the dynamic center of a cell.

microcephalus [MED] An individual with microcephaly.

microcephaly [MED] The condition of having an abnormally small head, with a circumference less than two standard deviations below the mean.

microceratous [INV ZOO] Having short antennae.

microcercous cercaria [INV ZOO] A cercaria with a very short broad tail.

microchannel plate [ELECTR] A plate that consists of extremely small cylinder-shaped electron multipliers mounted side by side, to provide image intensification factors as high as 100,000.

microchemistry [BIOCHEM] The chemistry of individual cells and minute organisms. [CHEM] The study of chemical reactions, using small quantities of materials, frequently less than 1 milligram or 1 milliliter, and often requiring special small apparatus and microscopical observation.

Microchiroptera [VERT ZOO] A suborder of the mammalian order Chiroptera composed of the insectivorous bats.

microchronometer [HOROL] A spring-driven, fast-moving clock capable of indicating time intervals as small as 1/2000 of a minute; used as a timing device in micromotion studies.

microcircuitry [ELECTR] Electronic circuit structures that are orders of magnitude smaller and lighter than circuit structures produced by the most compact combinations of discrete components. Also known as microelectronic circuitry; microminiature circuitry.

microcirculation [PHYSIO] The flow of blood or lymph in the vessels of the microcirculatory system.

microcirculatory system [ANAT] Those vessels of the blood and lymphatic systems which are visible only with a microscope.

microclimate [CLIMATOL] The local, rather uniform climate of a specific place or habitat, compared with the climate of the entire area of which it is a part.

microclimatology [CLIMATOL] The study of a microclimate, including the study of profiles of temperature, moisture and wind in the lowest stratum of air, the effect of the vegetation and of shelterbelts, and the modifying effect of towns and buildings.

microcline [MINERAL] $KAlSi_3O_8$ A triclinic potassium-rich feldspar, usually containing minor amounts of sodium; may be clear, white, pale-yellow, brick-red, or green, and is generally characterized by crosshatch twinning.

microcneme [INV ZOO] Microsepta in certain anemones.

Micrococcaceae [MICROBIO] A family of gram-positive cocci; chemoorganotrophic organisms with respiratory or fermentative metabolism.

Micrococcus [MICROBIO] A genus of bacteria in the family Micrococcaceae; cells may occur singly or in pairs, but usually in irregular masses, tetrads, or cubical packets; metabolism is respiratory.

Micrococcus meningitidis *See* Neisseria meningitidis.

microcode [COMPUT SCI] A code that employs microinstructions; not ordinarily used in programming.

microcomputer [ELECTR] A microprocessor combined with input/output interface devices, some type of external memory, and the other elements required to form a working computer system; it is smaller, lower in cost, and usually slower than a minicomputer. Also known as micro.

microcomputer development system [COMPUT SCI] A complete microcomputer system that is used to test both the software and hardware of other microcomputer-based systems.

microconsumer *See* decomposer.

microcontroller [ELECTR] A microcomputer, microprocessor, or other equipment used for precise process control in data handling, communication, and manufacturing.

microcoquina [PETR] A clastic limestone composed wholly or partially of cemented sand-size particles of shell detritus.

Microcotyloidea [INV ZOO] A superfamily of ectoparasitic trematodes in the subclass Monogenea.

microcoulomb [ELEC] A unit of electric charge equal to one-millionth of a coulomb. Abbreviated μC.

microcrack *See* microfissure.

microcrystalline [CRYSTAL] Composed of or containing crystals that are visible only under the microscope.

microcrystalline wax [MATER] A petroleum wax containing small, indistinct crystals, and having a higher molecular weight, melting point, and viscosity than paraffin wax; used in laminated paper and electrical coil coating.

Microcyclus [MICROBIO] A genus of bacteria of uncertain affiliation; curved, nonmotile rods; prior to cell division, the elongated cell forms a ring.

Microcyprini [VERT ZOO] The equivalent name for Cyprinodontiformes.

microcyst [MED] A very small cyst.

microcyte [MED] A red blood cell whose diameter or mean corpuscular volume or both are more than two standard deviations below the normal mean. Also known as microerythrocyte.

microcythemia [MED] Blood characterized by the presence of small red blood cells.

microcytic anemia [MED] Any form of anemia in which small erythrocytes occur in the blood.

microcytosis [MED] A blood disorder characterized by a preponderance of microcytes.

microdactyly [MED] A condition of abnormal smallness of fingers or toes.

microdensitometer [SPECT] A high-sensitivity densitometer used in spectroscopy to detect spectrum lines too faint on a negative to be seen by the human eye.

microdiagnostic program [COMPUT SCI] A microprogram that tests a specific hardware component, such as a bus or store location, for faults.

microdissection [BIOL] Dissection under a microscope.

Microdomatacea [PALEON] An extinct superfamily of gastropod mollusks in the order Aspidobranchia.

microelectrolysis [PHYS CHEM] Electrolysis of small quantities of material.

microelectronic circuitry *See* microcircuitry.

microelectronics [ELECTR] The technology of constructing circuits and devices in extremely small packages by various techniques. Also known as microminiaturization; microsystem electronics.

microelectrophoresis [ANALY CHEM] Direct microscopic observation and measurement of the velocity of migration of ions or other charged bodies through a solution toward oppositely charged electrodes. Also known as optical cytophorometry.

microelement [ELECTR] Resistor, capacitor, transistor, diode, inductor, transformer, or other electronic element or combination of elements mounted on a ceramic wafer 0.025 centimeter thick and about 0.75 centimeter square; individual microelements are stacked, interconnected, and potted to form micromodules.

Microellobosporia [MICROBIO] A genus of bacteria in the family Streptomycetaceae; hyphae form substrate and aerial mycelia; spores are produced by sporangia that are borne on short sporangiophores on aerial and substrate mycelia.

microemulsion flooding *See* micellar flooding.

microencapsulation [CHEM ENG] Enclosing of materials in capsules from well below 1 micrometer to over 2000 micrometers in diameter.

microencephaly *See* micrencephaly.

microenvironment [ECOL] The specific environmental factors in a microhabitat.

microerythrocyte *See* microcyte.

microevolution [EVOL] **1.** Evolutionary processes resulting from the accumulation of minor changes over a relatively short period of time; evolutionary changes due to gene mutation. **2.** Evolution of species.

microfacies [PETR] The composition, features, or appearance of a rock or mineral in thin section under the microscope.

microfarad [ELEC] A unit of capacitance equal to one-millionth of a farad. Abbreviated μF.

microfibril [MOL BIOL] The submicroscopic unit of a microscopic cellular fiber.

microfiche [GRAPHICS] A microfilm card or sheet used in some information storage systems; consists of a film format about 4 by 6 inches (10 by 15 centimeters) containing microimages of type and other information, with a title heading large enough to be read by the unaided eye.

microfilament [CYTOL] One of the cytoplasmic fibrous structures, about 5 nanometers in diameter, virtually identical to actin; thought to be important in the processes of phagocytosis and pinocytosis.

microfilaria [INV ZOO] Slender, motile prelarval forms of filarial nematodes measuring 150–300 micrometers in length; adult filaria are mammalian parasites.

microfilm [GRAPHICS] Greatly reduced film records of such things as books, newspapers, engineering drawings, reports, and manuscripts; copies are made on fine-grain film of 16, 35, 70, and 105-millimeter size, permitting easy storage and handling.

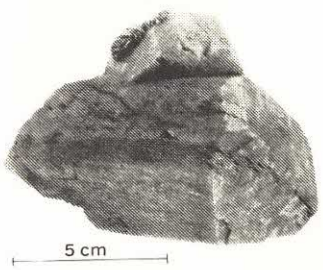
microfilm plotter [GRAPHICS] A device for plotting graphs on microfilm, generally from instructions on a magnetic tape or disk.

microfissure [MET] A crack of microscopic dimensions. Also known as microcrack.

microflora [BOT] Microscopic plants. [ECOL] The flora of a microhabitat.

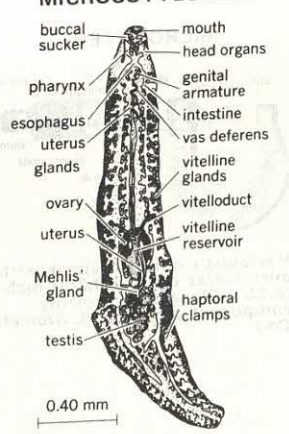
microfluid [FL MECH] A fluid in which the effects of local

MICROCLINE



Microcline, variety amazon stone, from Pikes Peak, Colorado. *(American Museum of Natural History Specimen)*

MICROCOTYLOIDEA



Ventral view of *Heteraxinoides xanthophilis* (Hargis), an ectoparasite of the spot fish *(Leiostomus xanthurus)*.

motion of contained material particles on properties and behavior of the fluid are not disregarded.

microfluoroscope [ENG] A fluoroscope in which a very fine-grained fluorescent screen is optically enlarged.

microforge [ENG] In micromanipulation techniques, an optical-mechanical device for controlling the position of needles or pipets in the field of a low-power microscope by a simple micromanipulator.

microform [GRAPHICS] A miniature replica of data, such as microfiche or microfilm.

microfossil [PALEON] A small fossil which is studied and identified by means of the microscope.

microgamete [BIOL] The smaller, or male gamete produced by heterogametic species.

microgametocyte [BIOL] A cell that gives rise to microgametes.

microgammil *See* gammil.

microgamy [BIOL] Sexual reproduction by fusion of the small male and female gametes in certain protozoans and algae.

microgastria [MED] A condition of abnormal smallness of the stomach.

microgenesis [BIOL] Abnormally small development of a part.

microgenitalism [MED] Having abnormally small genitalia.

microglia [HISTOL] Small neuroglia cells of the central nervous system having long processes and exhibiting ameboid and phagocytic activity under certain pathologic conditions.

microglossia [MED] A condition of abnormal smallness of the tongue.

micrognathia [MED] A condition of abnormal smallness of the jaws, particularly the mandible.

microgram [MECH] A unit of mass equal to one-millionth of a gram. Abbreviated μg.

micrograph [ENG] An instrument for making very tiny writing or engraving. [GRAPHICS] A graphic reproduction of the surface of a prepared specimen at a magnification greater than 10 diameters.

micrographic [SCI TECH] Having graphic texture distinguishable only with the aid of a microscope.

microgroove record *See* long-playing record.

microgyria [MED] A condition of abnormal smallness of the gyri of the brain.

microhabitat [ECOL] A small, specialized, and effectively isolated location.

microhardness [MET] Hardness of microscopic areas of a metal or alloy.

microhm [ELEC] A unit of resistance, reactance, and impedance, equal to 10^{-6} ohm.

Microhylidae [VERT ZOO] A family of anuran amphibians in the suborder Diplasiocoela including many heavy-bodied forms with a pointed head and tiny mouth.

microhysteresis effect [SOLID STATE] Hysteresis that results from the motion of domain walls lagging behind an applied magnetic or elastic stress when these walls are held up by dislocations and other imperfections in the material.

microincineration [CHEM] Reduction of small quantities of organic substances to ash by application of heat.

microinfarct [MED] A very small infarct.

microinjection [CYTOL] Injection of cells with solutions by using a micropipet.

microinstruction [COMPUT SCI] The portion of a microprogram that specifies the operation of individual computing elements and such related subunits as the main memory and the input/output interfaces; usually includes a next-address field that eliminates the need for a program counter.

microinterferometer [OPTICS] Functional combination of a microscope with an interferometer; used to study thin films, platings, or transparent coatings.

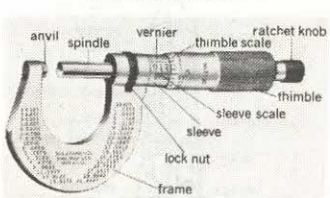
microinvasion [MED] Invasion by tumor, especially a squamous-cell carcinoma of the uterine cervix, a very short distance into the tissues beneath the point of origin.

microlaterolog [PETRO ENG] Modification of the downhole microlog in which extra electrodes focus electric current into a trumpet-shaped area; gives greater resistivity-measurement resolution than does the microlog.

microlayer [OCEANOGR] The thin zone beneath the surface of the ocean or any free water surface within which physical processes are modified by proximity to the air-water boundary.

Microlepidoptera [INV ZOO] A former division of Lepidoptera.

MICROMETER



Machinist's outside caliper with micrometer reading 0.250 inch (6.35 millimeters), showing component parts. *(L. S. Starrett Co.)*

microlite [CRYSTAL] A microscopic crystal which polarizes light. Also known as microlith. [MINERAL] $(Na,Ca)_2(Ta,Nb)_2O_6(O,OH,F)$ A pale-yellow, reddish, brown, or black isometric mineral composed of sodium calcium tantalum oxide with a small amount of fluorine; it is isomorphous with pyrochlore. Also known as djalmaite.

microlith [CRYSTAL] *See* microlite. [MED] A calculus of microscopic size.

microlithiasis [MED] The presence of numerous microliths.

microlithiasis alveolaris pulmonum [MED] A rare form of pulmonary calcification of unidentified etiology in which microliths, and larger osseous nodules, are found.

microlithology [PETR] Microscopic study of the characteristics of rocks.

microlitic [PETR] Of the texture of a porphyritic igneous rock, having a groundmass composed of an aggregate of microlites in a generally glassy base.

microlock [ELECTR] **1.** Satellite telemetry system that uses phase-lock techniques in the ground receiving equipment to achieve extreme sensitivity. **2.** A lock by a tracking station upon a minitrack radio transmitter. **3.** The system by which this lock is effected.

microlog [PETRO ENG] A drill-hole resistivity log recorded with electrodes mounted at short distances from each other in the face of a rubber-padded microresistivity sonde.

micromainframe [COMPUT SCI] A main frame of a computer placed on one or more integrated circuit chips.

Micromalthidae [INV ZOO] A family of coleopteran insects in the superfamily Cantharoidea; the single species is the telephone pole beetle.

micromania [PSYCH] A delusional state in which the patient believes himself diminutive in size and mentally inferior.

micromanipulation [BIOL] The techniques and practice of microdissection, microvivisection, microisolation, and microinjection.

micromanipulator [ENG] A device for holding and moving fine instruments for the manipulation of microscopic specimens under a microscope.

micromanometer [ENG] Any manometer that is designed to measure very small pressure differences.

micromechanics *See* composite micromechanics.

micromere [EMBRYO] A small blastomere of the upper or animal hemisphere in eggs that undergo uneven cleavage.

micrometeorite [ASTRON] A very small meteorite or meteoritic particle with a diameter generally less than a millimeter.

micrometeorite penetration [AERO ENG] Penetration of the thin outer shell (skin) of space vehicles by small particles traveling in space at high velocities.

micrometeoroid [ASTRON] A very small meteoroid with diameter generally less than a millimeter.

micrometeorology [METEOROL] That portion of the science of meteorology that deals with the observation and explanation of the smallest-scale physical and dynamic occurrences within the atmosphere; studies are confined to the surface boundary layer of the atmosphere, that is, from the earth's surface to an altitude where the effects of the immediate underlying surface upon air motion and composition become negligible.

micrometer [ENG] **1.** An instrument attached to a telescope or microscope for measuring small distances or angles. **2.** A caliper for making precise measurements; a spindle is moved by a screw thread so that it touches the object to be measured; the dimension can then be read on a scale. Also known as micrometer caliper. [MECH] A unit of length equal to one-millionth of a meter. Abbreviated μm. Also known as micron (μ).

micrometer caliper *See* micrometer.

micrometer of mercury *See* micron.

micromicro- *See* pico-.

micromicrofarad *See* picofarad.

micromicrosecond *See* picosecond.

micromicrowatt *See* picowatt.

micromini [COMPUT SCI] The central processing unit of a minicomputer placed on one of more integrated circuit chips.

microminiature circuitry *See* microcircuitry.

microminiaturization *See* microelectronics.

micromodule [ELECTR] Cube-shaped, plug-in, miniature circuit composed of potted microelements; each microelement can consist of a resistor, capacitor, transistor, or other element, or a combination of elements.

Micromonospora [MICROBIO] A genus of bacteria in the

family Micromonosporaceae; the mycelium is well developed, branched, and septate; single spores are formed on hyphae.

Micromonosporaceae [MICROBIO] A family of bacteria in the order Actinomycetales; aerial hyphae are formed in all genera except *Micromonospora;* saprophytic soil organisms.

Micromonospora purpurea [MICROBIO] The bacterium that produces the antibiotic gentamycin.

micromotion study [IND ENG] Study of the fundamental elements of an operation by means of a motion picture camera operated at normal or faster than normal speed, and a timing device to measure element motion time.

micron [MECH] **1.** A unit of pressure equal to the pressure exerted by a column of mercury 1 micrometer high, having a density of 13.5951 grams per cubic centimeter, under the standard acceleration of gravity; equal to 0.133322387415 pascal; it differs from the millitorr by less than one part in seven million. Also known as micrometer of mercury. **2.** *See* micrometer.

micronekton [ECOL] Active pelagic crustaceans and other forms intermediate between thrusting nekton and feebler-swimming plankton.

micronized clay [MATER] A pure kaolin pulverized to a fineness of 400 to 800 mesh; used as a filler material in rubber.

micronized mica [MATER] Powdered mica of a fineness of 400 to 1000 mesh; used as a filler.

micronucleus [INV ZOO] The smaller, reproductive nucleus in multinucleate protozoans.

micronutrient [BIOCHEM] Trace elements and compounds required by living systems only in minute amounts.

microoperation [COMPUT SCI] Any clock-timed step of an operation.

microorganism [MICROBIO] A microscopic organism, including bacteria, protozoans, yeast, viruses, and algae.

micropaleontology [PALEON] A branch of paleontology that deals with the study of microfossils.

micropane [GRAPHICS] A microphotograph on glass.

micropegmatite [PETR] Microcrystalline graphic granite.

microperthite [MINERAL] Perthite in which the lamellae are visible only under the microscope.

Micropezidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

microphage [HISTOL] A small phagocyte, especially a neutrophil.

microphagy [BIOL] Feeding on minute organisms or particles.

microphakia [MED] Congenital condition of abnormal smallness of the crystalline lens.

microphone [ENG ACOUS] An electroacoustic device containing a transducer which is actuated by sound waves and delivers essentially equivalent electric waves.

microphone transducer [ENG ACOUS] A device which converts variation in the position or velocity of some body into corresponding variations of some electrical quantity, in a microphone.

microphonics [ELECTR] Noise caused by mechanical vibration of the elements of an electron tube, component, or system. Also known as microphonism.

microphonism *See* microphonics.

microphotograph [GRAPHICS] A microscopically small photograph, requiring magnification to be readable.

microphotometer [ENG] A photometer that provides highly accurate illumination measurements; in one form, the changes in illumination are picked up by a phototube and converted into current variations that are amplified by vacuum tubes.

microphthalmus [MED] A condition characterized by an abnormally small eyeball. Also known as nanophthalmus.

microphyllous [BOT] **1.** Having small leaves. **2.** Having leaves with a single, unbranched vein.

microphyric [PETR] Of the texture of an igneous rock, containing microscopic phenocrysts (longest dimension 0.2 millimeter). Also known as microporphyritic.

Microphysidae [INV ZOO] A palearctic family of hemipteran insects in the subfamily Cimicimorpha.

microphyte [ECOL] **1.** A microscopic plant. **2.** A dwarfed plant due to unfavorable environmental conditions.

micropinocytosis [CYTOL] A mechanism of endocytosis in which fluid droplets are internalized by indentations (caveolae) on the surface membrane which pinch off as tiny internal vesicles (micropinosomes).

micropinosome [CYTOL] A very tiny vesicle that is pinched off from the plasma membrane of a cell during micropinocytosis.

micropipet [ENG] **1.** A pipet with capacity of 0.5 milliliter or less, to measure small volumes of liquids with a high degree of accuracy; types include lambda, straight-bore, and Lang-Levy. **2.** A fine-pointed pipette used for microinjection.

micropoikilitic [PETR] Of the texture of an igneous rock, having poikilitic character visible only under the microscope.

Micropolyspora [MICROBIO] A genus of bacteria in the family Micromonosporaceae; short chains of spores are borne on both aerial and substrate mycelia.

micropore [GEOL] A pore small enough to hold water against the pull of gravity and to retard water flow.

microporosity [MET] Extremely fine porosity, visible only with the aid of a microscope.

microporous barrier [CHEM ENG] A metallic or plastic membrane with micrometer-sized pores used for dialysis and other membrane-separation processes.

microporphyritic *See* microphyric.

microprobe [SPECT] An instrument for chemical microanalysis of a sample, in which a beam of electrons is focused on an area less than a micrometer in diameter, and the characteristic x-rays emitted as a result are dispersed and analyzed in a crystal spectrometer to provide a qualitative and quantitative evaluation of chemical composition.

microprobe spectrometry [SPECT] Microanalysis of a sample, using a microprobe.

microprocessing unit [ELECTR] A microprocessor with its external memory, input/output interface devices, and buffer, clock, and driver circuits. Abbreviated MPU.

microprocessor [ELECTR] A single silicon chip on which the arithmetic and logic functions of a computer are placed.

microprocessor intertie and communication system [COMMUN] A data communications system which provides the communication network with its own dedicated processing resources and reduces in-terminal response time, compensating for the capacity used up by communications terminals. Abbreviated MICS.

microprogram [COMPUT SCI] A computer program that consists only of basic elemental commands which directly control the operation of each functional element in a microprocessor.

microprogrammable instruction [COMPUT SCI] An instruction that does not refer to a core memory address and that can be microprogrammed, thus specifying various commands within one instruction.

microprogramming [COMPUT SCI] Transformation of a computer instruction into a sequence of elementary steps (microinstructions) by which the computer hardware carries out the instruction.

micropsia [MED] A visual disturbance in which objects appear undersized.

Micropterygidae [INV ZOO] The single family of the lepidopteran superfamily Micropterygoidea; members are minute moths possessing toothed, functional mandibles and lacking a proboscis.

Micropterygoidea [INV ZOO] A monofamilial superfamily of lepidopteran insects in the suborder Homoneura.

micropulsation [GEOPHYS] A short-period geomagnetic variation in the range of about 0.2–600 seconds, typically exhibiting an oscillatory waveform.

micropump *See* electroosmotic driver.

micropycnometer [ENG] A small-volume pycnometer with a capacity from 0.25 to 1.6 milliliters; weighing precision is 1 part in 10,000, or better.

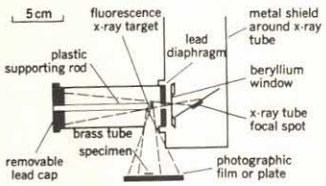
Micropygidae [INV ZOO] A family of echinoderms in the order Diadematoida that includes only one genus, *Micropyga*, which has noncrenulate tubercles and umbrellalike outer tube feet.

micropyle [BOT] A minute opening in the integument at the tip of an ovule through which the pollen tube commonly enters; persists in the seed as an opening or a scar between the hilum and point of radicle.

microradiogram [PHYS] A two-dimensional x-ray image of a sample, produced by one type of x-ray microscope used in microradiography; all levels of the sample object are imaged into essentially a single focal plane for subsequent microphotographic enlargement.

microradiograph [GRAPHICS] An enlarged radiographic image on photographic film produced either by increasing the

MICRORADIOGRAPHY

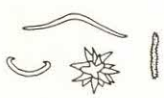


Basic elements of microradiograph used for producing radiographic images on photographic film.

MICROSAURIA

Microbrachis, a microsaur from the Late Pennsylvanian epoch. *(After Steen)*

MICROSCLERE



Shapes of various microscleres.

distance from specimen to photographic plate to secure inherent enlargement of divergent x-ray beams, or by optical enlargement of a developed image.

microradiography [ANALY CHEM] Technique for the study of surfaces of solids by monochromatic-radiation (such as x-ray) contrast effects shown via projection or enlargement of a contact radiograph. [GRAPHICS] The radiography of small objects having details too fine to be seen by the unaided eye, with optical enlargement of the resulting negative.

microradiometer [ELECTR] A radiometer used for measuring weak radiant power, in which a thermopile is supported on and connected directly to the moving coil of a galvanometer. Also known as radiomicrometer.

micro-reciprocal-degree *See* mired.

microrefractometry [OPTICS] The measurement of refractive indices of microscopic objects; this is often done by immersing an object in a series of mediums of graded refractive index until one is found that makes the object invisible in a phase-contrast microscope.

microrelief [GEOGR] Irregularities of the land surface causing variations in elevation amounting to no more than a few feet.

microresistivity survey [PETRO ENG] General term for downhole resistivity surveys of oil-bearing formations; includes microlog and microlaterolog surveys.

microrheology [MECH] A branch of rheology in which the heterogeneous nature of dispersed systems is taken into account.

Microsauria [PALEON] An order of Carboniferous and early Permian lepospondylous amphibians.

microsclere [INV ZOO] A minute sclerite in Porifera.

microscope [OPTICS] An instrument through which minute objects are enlarged by means of a lens or lens system; principal types include optical, electron, and x-ray.

microscope stage [OPTICS] The platform on which specimens are placed for microscopic examination.

microscopic [OPTICS] *See* microscopical. [SCI TECH] Of extremely small size.

microscopical [OPTICS] Also known as microscopic. **1.** Of or pertaining to the microscope. **2.** Visible only under a microscope.

microscopical diagnosis [PATH] Identification of a disease by microscopic examination of specimens taken from the patient.

microscopic anisotropy [PETRO ENG] Phenomenon in electrical downhole logging wherein electric current flows most easily along the water-filled interstices, usually parallel to sedimentary bed strata.

microscopic reversibility [STAT MECH] A principle which requires that in a system at equilibrium any molecular process and its reverse take place at the same average rate. Also known as reversibility principle.

microscopic state [STAT MECH] The state of a system as specified by the actual properties of each individual, elemental component, in the ultimate detail permitted by the uncertainty principle. Also known as microstate.

microscopic stress [MET] Residual stress ranging from compression to tension in a metal within a distance often comparable to the grain size. Also known as microstress.

microscopic theory [PHYS] A theory concerned with the interactions of atoms, molecules, or their constituents, involving distances on the order of 10^{-10} meter or less, which underlie observable phenomena.

microscopist [SCI TECH] An individual skilled in the use of the microscope.

microscopy [OPTICS] The interpretive application of microscope magnification to the study of materials that cannot be properly seen by the unaided eye.

microsecond [MECH] A unit of time equal to one-millionth of a second. Abbreviated μs.

microsegregation [MET] Segregation within a grain, crystal, or particle of microscopic size.

microseism [GEOPHYS] A weak, continuous, oscillatory motion in the earth having a period of 1–9 seconds and caused by a variety of agents, especially atmospheric agents; not related to an earthquake.

microseismic instrument [MIN ENG] An instrument for the study of roof strata and supports; it is inserted in holes, drilled at selected points, for listening to subaudible vibrations that precede rock failure.

microseptum [INV ZOO] An incomplete or imperfect mesentery in zoantharians.

microshrinkage [MET] A casting defect consisting of interdendritic voids, visible only at magnifications over 10 diameters.

microsome [CYTOL] **1.** A fragment of the endoplasmic reticulum. **2.** A minute granule of protoplasm.

microspec function [COMPUT SCI] The set of microinstructions which performs a specific operation in one or more machine cycles.

microspecies [ECOL] A small, localized species population that is clearly differentiated from related forms. Also known as jordanon.

microspectrograph [SPECT] A microspectroscope provided with a photographic camera or other device for recording the spectrum.

microspectrophotometer [SPECT] A split-beam or double-beam spectrophotometer including a microscope for the localization of the object under study, and capable of carrying out spectral analyses within the dimensions of a single cell.

microspectroscope [SPECT] An instrument for analyzing the spectra of microscopic objects, such as living cells, in which light passing through the sample is focused by a compound microscope system, and both this light and the light which has passed through a reference sample are dispersed by a prism spectroscope, so that the spectra of both can be viewed simultaneously.

microspherulitic [PETR] Of the texture of an igneous rock, having spherulitic character visible only under the microscope.

Microsporaceae [BOT] A monogeneric family of green algae in the suborder Ulotrichineae; the chloroplast is a parietal network.

microsporangium [BOT] A sporangium bearing microspores.

microspore [BOT] The smaller spore of heterosporous plants; gives rise to the male gametophyte.

Microsporida [INV ZOO] The single order of the class Microsporidea.

Microsporidae [INV ZOO] The equivalent name for Sphaeriidae.

Microsporidea [INV ZOO] A class of Cnidospora characterized by the production of minute spores with a single intrasporal filament or one or two intracapsular filaments and a single sporoplasm; mainly intracellular parasites of arthropods and fishes.

microsporidiosis [VET MED] Infection with microsporidians.

microsporophyll [BOT] A sporophyll bearing microsporangia.

microstate *See* microscopic state.

microstress *See* microscopic stress.

microstrip [ELECTROMAG] A strip transmission line that consists basically of a thin-film strip in intimate contact with one side of a flat dielectric substrate, with a similar thin-film ground-plane conductor on the other side of the substrate.

microstructure [SCI TECH] The structure of an object, organism, or material as revealed by a microscope of a magnification over 10 times.

microstylolite [PETR] A stylolite in which the surface relief is less than 1 millimeter.

microsurgery [BIOL] Surgery on single cells by micromanipulation.

microsystem electronics *See* microelectronics.

Microtatobiotes [BIOL] An artificial taxonomic category, comprising two unrelated groups of biological entities, the rickettsiae and the viruses.

microtectonics *See* structural petrology.

microtherm [ECOL] A plant requiring a mean annual temperature range of 0–14°C for optimum growth.

microthermal climate [CLIMATOL] A temperature province in both of C.W. Thornthwaite's climatic classifications, generally described as a "cool" or "cold winter" climate.

microthrowing power [PHYS CHEM] Relative ability of an electroplating solution to deposit metal in a small, shallow aperture or crevice not exceeding a few thousandths of an inch in dimensions.

Microtinae [VERT ZOO] A subfamily of rodents in the family Muridae that includes lemmings and muskrats.

microtome [ENG] An instrument for cutting thin sections of tissues or other materials for microscopical examination.

microtomy [BIOL] Cutting of thin sections of specimens with a microtome.

Microtragulidae [PALEON] A group of saltatorial caenolistoid marsupials that appeared late in the Cenozoic and paralleled the small kangaroos of Australia.

microtrichia [INV ZOO] Small hairs on the integument of various insects, especially on the wings.

microtron [NUCLEO] A type of circular particle accelerator for accelerating electrons to energies of several megaelectronvolts, in which the time of successive revolutions of the particles increases by exactly one cycle of the accelerating radio-frequency voltage, so that synchronism is maintained.

microtubule [CYTOL] One of the hollow tubelike filaments found in certain cell components, such as cilia and the mitotic spindle, and composed of repeating subunits of the protein tubulin.

microvillus [CYTOL] One of the filiform processes that form a brush border on the surfaces of certain specialized cells, such as intestinal epithelium.

microvitrain [GEOL] A coal lithotype; fine vitrainlike lenses or laminae in clarain.

microvolt [ELEC] A unit of potential difference equal to one-millionth of a volt. Abbreviated μV.

microvoltmeter [ELECTR] A voltmeter whose scale is calibrated to indicate voltage values in microvolts.

microvolts per meter [ELECTROMAG] Field strength of antenna which is the ratio of the antenna voltage in microvolts to the antenna length in meters, as measured at a given point.

microwatt [MECH] A unit of power equal to one-millionth of a watt. Abbreviated μW.

microwave [ELECTROMAG] An electromagnetic wave which has a wavelength between about 0.3 and 30 centimeters, corresponding to frequencies of 1–100 gigahertz; however, there are no sharp boundaries distinguishing microwaves from infrared and radio waves.

microwave acoustics [ACOUS] The production and study of elastic vibrations in materials at microwave frequencies, on the order of 10^9 to 10^{11} hertz, such as in single-crystal delay lines used in radar systems.

microwave amplification by stimulated emission of radiation *See* maser.

microwave amplifier [ELECTR] A device which increases the power of microwave radiation.

microwave antenna [ELECTROMAG] A combination of an open-end waveguide and a parabolic reflector or horn, used for receiving and transmitting microwave signal beams at microwave repeater stations.

microwave attenuator [ELECTROMAG] A device that causes the field intensity of microwaves in a waveguide to decrease by absorbing part of the incident power; usually consists of a piece of lossy material in the waveguide along the direction of the electric field vector.

microwave background *See* cosmic microwave radiation.

microwave bridge [ELECTROMAG] A microwave circuit equivalent to an ordinary electrical bridge and used to measure impedance; consists of six waveguide sections arranged to form a multiple junction.

microwave cavity *See* cavity resonator.

microwave circuit [ELECTROMAG] Any particular grouping of physical elements, including waveguides, attenuators, phase changers, detectors, wavemeters, and various types of junctions, which are arranged or connected together to produce certain desired effects on the behavior of microwaves.

microwave circulator *See* circulator.

microwave communication [COMMUN] Transmission of messages using highly directional microwave beams, which are generally relayed by a series of microwave repeaters spaced up to 80 kilometers apart.

microwave detector [ELECTR] A device that can demonstrate the presence of a microwave by a specific effect that the wave produces, such as a bolometer, or a semiconductor crystal making a pinpoint contact with a tungsten wire.

microwave device [ELECTR] Any device capable of generating, amplifying, modifying, detecting, or measuring microwaves, or voltages having microwave frequencies.

microwave early warning [ENG] High-power, long-range radar with a number of indicators, giving high resolution, and with a large traffic-handling capacity; used for early warning of missiles.

microwave filter [ELECTROMAG] A device which passes microwaves of certain frequencies in a transmission line or waveguide while rejecting or absorbing other frequencies; consists of resonant cavity sections or other elements.

microwave frequency [PHYS] A frequency on the order of 10^9–10^{11} hertz.

microwave generator *See* microwave oscillator.

microwave gyrator *See* gyrator.

microwave heating [ELECTROMAG] Heating of food by means of electromagnetic energy in or just below the microwave spectrum for cooking, dehydration, sterilization, thawing, and other purposes.

microwave integrated circuit [ELECTR] A microwave circuit that uses integrated-circuit production techniques involving such features as thin or thick films, substrates, dielectrics, conductors, resistors, and microstrip lines, to build passive assemblies on a dielectric. Abbreviated MIC.

microwave landing system [NAV] A system of ground equipment which generates guidance beams at microwave frequencies for guiding aircraft to landings; it is intended to replace the present lower-frequency instrument landing system. Abbreviated MLS.

microwave link *See* microwave repeater.

microwave maser [PHYS] A maser which emits microwave radiation.

microwave network [COMMUN] A series of microwave repeaters, spaced up to 80 kilometers apart, which relay messages over long distances using highly directional microwave beams.

microwave optics [ELECTROMAG] The study of those properties of microwaves which are analogous to the properties of light waves in optics.

microwave oscillator [ELECTR] A type of electron tube or semiconductor device used for generating microwave radiation or voltage waveforms with microwave frequencies. Also known as microwave generator.

microwave oven [ENG] An oven that uses microwave heating for fast cooking of meat and other foods.

microwave position-fixing [NAV] A navigation system using three shore-based unattended transmitters and a ship-based rotary radar-type antenna that scans the signals from the three shore stations; equipment aboard ship permits a three-point-fix type of plot.

microwave radiometer *See* radiometer.

microwave receiver [ELECTR] Complete equipment that is needed to convert modulated microwaves into useful information.

microwave reflectometer [ELECTROMAG] A pair of single-detector couplers on opposite sides of a waveguide, one of which is positioned to monitor transmitted power, and the other to measure power reflected from a single discontinuity in the line.

microwave refractometer [ELECTROMAG] An instrument that measures the index of refraction of the atmosphere by measuring the travel time of microwave signals through each of two precision microwave transmission cavities, one of which is hermetically sealed to serve as a reference.

microwave relay *See* microwave repeater.

microwave repeater [COMMUN] A tower equipped with a receiver and transmitter for picking up, amplifying, and passing on in either direction the signals sent over a microwave network by highly directional microwave beams. Also known as microwave link; microwave relay.

microwave resonance cavity *See* cavity resonator.

microwave solid-state device [ELECTR] A semiconductor device for the generation or amplification of electromagnetic energy at microwave frequencies.

microwave spectrometer [SPECT] An instrument which makes a graphical record of the intensity of microwave radiation emitted or absorbed by a substance as a function of frequency, wavelength, or some related variable.

microwave spectroscope [SPECT] An instrument used to observe the intensity of microwave radiation emitted or absorbed by a substance as a function of frequency, wavelength, or some related variable.

microwave spectroscopy [SPECT] The methods and techniques of observing and the theory for interpreting the selective absorption and emission of microwaves at various frequencies by solids, liquids, and gases.

microwave spectrum [ELECTROMAG] The range of wavelengths or frequencies of electromagnetic radiation that are designated microwaves. [SPECT] A display, photograph, or

MICROTUBULE

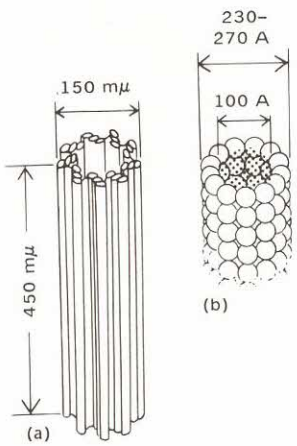


Diagram of mature centriole showing *(a)* arrangement of the microtubules and *(b)* structure of one of the microtubules.

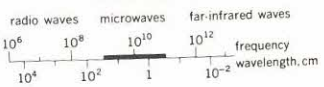
MICROWAVE



A portion of the electromagnetic spectrum showing the part occupied by microwaves.

plot of the intensity of microwave radiation emitted or absorbed by a substance as a function of frequency, wavelength, or some related variable.

microwave transmission line [ELECTROMAG] A material structure forming a continuous path from one place to another and capable of directing the transmission of electromagnetic energy along this path.

microwave tube [ELECTR] A high-vacuum tube designed for operation in the frequency region from approximately 3000 to 300,000 megahertz.

microwave waveguide *See* waveguide.

microwave wavemeter [ELECTROMAG] Any device for measuring the free-space wavelengths (or frequencies) of microwaves; usually made of a cavity resonator whose dimensions can be varied until resonance with the microwaves is achieved.

microzoospermia [MED] A condition of abnormal smallness of sperm in the semen.

micrurgy [SCI TECH] The art and science of using minute tools in a magnified field.

MICS *See* microprocessor intertie and communication system.

mictic [BIOL] **1.** Requiring or produced by sexual reproduction. **2.** Of or pertaining to eggs which without fertilization develop into males and with fertilization develop into amictic females, as occurs in rotifers.

micturition *See* urination.

Midas [AERO ENG] A two-object trajectory-measuring system whereby two complete cotar antenna systems and two sets of receivers at each station, with the multiplexing done after phase comparison, are utilized in tracking more than one object at a time.

mid-Atlantic ridge [GEOL] The mid-oceanic ridge in the Atlantic.

midaxillary line [ANAT] A perpendicular line drawn downward from the apex of the axilla.

midbrain [ANAT] Those portions of the adult brain derived from the embryonic midbrain. [EMBRYO] The middle portion of the embryonic vertebrate brain. Also known as mesencephalon.

midclavicular line [ANAT] A vertical line parallel to and midway between the midsternal line and a vertical line drawn downward through the outer end of the clavicle.

midcourse correction [AERO ENG] A change in the course of a spacecraft some time between the end of the launching phase and some arbitrary point when terminal guidance begins.

middle body [NAV ARCH] That portion of the ship adjacent to the midship section.

Middle Cambrian [GEOL] The geologic epoch occurring between Upper and Lower Cambrian, beginning approximately 540,000,000 years ago.

middle clouds [METEOROL] Types of clouds the mean level of which is between 6500 and 20,000 feet (1980 and 6100 meters); the principal clouds in this group are altocumulus and altostratus.

Middle Cretaceous [GEOL] The geologic epoch between the Upper and Lower Cretaceous, beginning approximately 120,000,000 years ago.

Middle Devonian [GEOL] The geologic epoch occurring between the Upper and Lower Devonian, beginning approximately 385,000,000 years ago.

middle ear [ANAT] The middle portion of the ear in higher vertebrates; in mammals it contains three ossicles and is separated from the external ear by the tympanic membrane and from the inner ear by the oval and round windows.

middle ground [NAV] A shoal with a channel on either side of it in a navigable part of a river, port, or harbor.

middle ground buoy [NAV] In maritime operations, one of the buoys placed at each end of a middle ground, that is, a shoal with channels on both sides.

Middle Jurassic [GEOL] The geologic epoch occurring between the Upper and Lower Jurassic, beginning approximately 170,000,000 years ago.

middle latitude Also known as mid-latitude. [GEOGR] A point of latitude that is midway on a north-and-south line between two parallels. [NAV] The latitude at which the arc length of the parallel separating the meridians passing through two specific points is exactly equal to the departure in proceeding from one point to the other by middle-latitude sailing.

middle-latitude sailing [NAV] A method of converting departure into difference of longitude, or vice versa, when the true course is not 090° or 270° by assuming that such a course is steered at the middle latitude.

middle-latitude westerlies *See* westerlies.

middle lobe syndrome [MED] A complex of symptoms due to enlarged lymph nodes compressing the bronchus of the right middle lobe, causing atelectasis, bronchiectasis, or chronic pneumonitis of the lobe.

middle marker [NAV] That instrument-landing-system marker between the outer and inner markers.

Middle Mississippian [GEOL] The geologic epoch between the Upper and Lower Mississippian.

Middle Ordovician [GEOL] The geologic epoch occurring between the Upper and Lower Ordovician, beginning approximately 460,000,000 years ago.

Middle Pennsylvania [GEOL] The geologic epoch between the Upper and Lower Pennsylvanian.

Middle Permian [GEOL] The geologic epoch occurring between the Upper and Lower Permian, beginning approximately 260,000,000 years ago.

Middle Silurian [GEOL] The geologic epoch between the Upper and Lower Silurian.

middle-third rule [CIV ENG] The rule that no tension is developed in a wall or foundation if the resultant force lies within the middle third of the structure.

middle tones [GRAPHICS] In a black-and-white photograph or reproduction, the range of tones between highlights and shadows.

Middle Triassic [GEOL] The geologic epoch occurring between the Upper and Lower Triassic, beginning approximately 215,000,000 years ago.

middle-ultraviolet lamp [ELECTR] A mercury-vapor lamp designed to produce radiation in the wavelength band from 2800 to 3200 angstrom units (280 to 320 nanometers) such as sunlamps and photochemical lamps.

middling [MIN ENG] An ore product intermediate in mineral content between a concentrate and a tailing.

middlings *See* sharps.

mid-extreme tide [OCEANOGR] A level midway between the extreme high water and extreme low water occurring at a place.

midfan [GEOL] The portion of an alluvial fan between the fanhead and the outer, lower margins.

mid-frequency gain [ELECTR] The maximum gain of an amplifier, when this gain depends on the frequency; for an *RC*-coupled voltage amplifier the gain is essentially equal to this value over a large range of frequencies.

midge [INV ZOO] Any of various dipteran insects, principally of the families Ceratopogonidae, Cecidomyiidae, and Chironomidae; many are biting forms and are vectors of parasites of man and other vertebrates.

midget [MED] An individual who is abnormally small, but otherwise normal.

midget impinger [MIN ENG] A dust-sampling impinger requiring only a 12-inch (30-centimeter) head of water for its operation.

midgut [EMBRYO] The middle portion of the digestive tube in vertebrate embryos. Also known as mesenteron. [INV ZOO] The mesodermal intermediate part of an invertebrate intestine.

mid-latitude *See* middle latitude.

mid-latitude westerlies *See* westerlies.

midnight sun [ASTRON] The sun when it is visible at midnight; occurs during the summer in high latitudes, poleward of the circle at which the latitude is approximately equal to the polar distance of the sun.

mid-ocean canyon *See* deep-sea channel.

mid-oceanic ridge [GEOL] A continuous, median, seismic mountain range on the floor of the ocean, extending through the North and South Atlantic oceans, the Indian Ocean, and the South Pacific Ocean; the topography is rugged, elevation is 1–3 kilometers (km), width is about 1500 km, and length is over 84,000 km. Also known as mid-ocean ridge; mid-ocean rise; oceanic ridge.

mid-ocean ridge *See* mid-oceanic ridge.

mid-ocean rift *See* rift valley.

mid-ocean rise *See* mid-oceanic ridge.

midpoint [MATH] The midpoint of a line segment is the point which separates the segment into two equal parts.

mid-range materiel requirements [ORD] Items required as soon as possible by current operational and organizational con-

cepts, or required by new concepts to be implemented within the next 5 years.

midrib [BOT] The large central vein of a leaf.

midships [NAV ARCH] **1.** Halfway between a boat's or ship's stem and stern, at the design waterline. **2.** Halfway between the side of a boat's or ship's hull.

midship section [NAV ARCH] A drawing of the cross section of a ship halfway between the intersections of its stem and stern with the design waterline.

midship section coefficient [NAV ARCH] The ratio of the area of the midship section below the water plane to the product of its beam and its draft.

mid-square generator [COMPUT SCI] A procedure for generating a sequence of random numbers, in which a member of a sequence is squared and the middle digits of the resulting number form the next member of the sequence.

Mie-Grüneisen equation [THERMO] An equation of state particularly useful at high pressure, which states that the volume of a system times the difference between the pressure and the pressure at absolute zero equals the product of a number which depends only on the volume times the difference between the internal energy and the internal energy at absolute zero.

miersite [MINERAL] (Cu,Ag)I A canary yellow, isometric mineral consisting of copper and silver iodide.

Mie scattering [OPTICS] The scattering of light by a sphere of dielectric material.

migma [GEOL] A mixture of solid rock materials and rock melt with mobility or potential mobility.

migmatite [PETR] A mixed rock exhibiting crystalline textures in which a truly metamorphic component is streaked and mixed with obviously once-molten material of a more or less granitic character.

migmatization [PETR] Formation of migmatite; involves either injection or in-place melting.

migraine [MED] Recurrent paroxysmal vascular headache, commonly having unilateral onset and often associated with nausea and vomiting.

migrant [ZOO] An animal that moves from one habitat to another.

migration [COMPUT SCI] Movement of frequently used data items to more accessible storage locations, and of infrequently used data items to less accessible locations. [GEOL] **1.** Movement of a topographic feature from one place to another, especially movement of a dune by wind action. **2.** Movement of liquid or gaseous hydrocarbons from their source into reservoir rocks. [HYD] Slow, downstream movement of a system of meanders. [MET] The uncontrolled movement of certain metals, particularly silver, from one location to another, usually with associated undesirable effects such as oxidation or corrosion. [SOLID STATE] **1.** The movement of charges through a semiconductor material by diffusion or drift of charge carriers or ionized atoms. **2.** The movement of crystal defects through a semiconductor crystal under the influence of high temperature, strain, or a continuously applied electric field. [VERT ZOO] Periodic movement of animals to new areas or habitats.

migration area [NUCLEO] One-sixth the mean square distance that a neutron travels in a medium from its birth in fission until its absorption.

migration current [PHYS CHEM] Additional current produced by electrostatic attraction of cations to the surface of a dropping electrode; an unpredictable and undesirable effect to be avoided during analytical voltammetry.

migration length [NUCLEO] The square root of the migration area.

migratory [METEOROL] Commonly applied to pressure systems embedded in the westerlies and, therefore, moving in a general west-to-east direction.

migratory dune *See* wandering dune.

MIKES *See* mass-analyzed ion kinetic energy spectrometry.

Mikulicz's disease [MED] Enlargement of salivary and lacrimal glands from any of various causes.

mil [MATH] A unit of angular measure which, due to nonuniformity of usage, may have any one of three values: 0.001 radian or approximately 0.0572958°; 1/6400 of a full revolution or 0.5625°; 1/1000 of a right angle or 0.09°. [MECH] **1.** A unit of length, equal to 0.001 inch, or to 2.54×10^{-5} meter. Also known as milli-inch; thou. **2.** *See* milliliter.

milan lace [TEXT] A bobbin lace of the Belgian type with a ground with designs formed of tape or braid, in scroll or floral motifs.

milarite [MINERAL] $K_2Ca_4Be_4Al_2Si_{24}O_{62} \cdot H_2O$ A colorless to greenish, glassy, hexagonal mineral composed of a hydrous silicate of potassium, calcium, beryllium, and aluminum, occurring in crystals.

mild abrasive [MATER] An abrasive material, such as chalk or talc, having a hardness of 1–2 on Mohs scale; used in silver polishes and window cleaners.

mildew [MYCOL] **1.** A whitish growth on plants, organic matter, and other materials caused by a parasitic fungus. **2.** Any fungus producing such growth.

mild mental retardation [PSYCH] Subnormal general intellectual functioning in which the intelligence quotient is approximately 52–67.

mild mercury chloride *See* mercurous chloride.

mild steel [MET] Carbon steel containing 0.05–0.25% carbon.

mile [MECH] A unit of length in common use in the United States, equal to 5280 feet, or 1609.344 meters. Abbreviated mi. Also known as land mile; statute mile.

mileage chart [MAP] A chart showing distances between various points.

mileage number [NAV] For the Mississippi River system, a number assigned to aids to navigation which gives the distance in sailing miles along the river from a reference point to the aid; the number serves as a light list number for identification purposes.

milepost [CIV ENG] **1.** A post placed a mile away from a similar post. **2.** A post indicating mileage from a given point.

miles of relative movement [NAV] The distance, in miles, traveled relative to a reference point which is usually in motion.

miles on course [NAV] The actual or predicted distance, in miles, traveled on any given course.

mil formula [ORD] Mil relation used in gunnery; expressed by $n = W/R$, where n is the angular measurement in mils between two points, W is the lateral distance in yards between the points, and R is the mean distance to the points in thousands of yards; the mil relation is approximately true for angles less than 400 mils.

miliaria [MED] An acute inflammatory skin disease, the lesions consisting of vesicles and papules, which may be accompanied by a prickling or tingling sensation. Also known as heat rash; prickly heat.

Milichiidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

milieu interieur [PHYSIO] The fundamental concept that the living organism exists in an aqueous internal environment which bathes all tissues and provides a medium for the elementary exchange of nutrients and waste.

milieu therapy [PSYCH] The treatment of mental disorder or maladjustment by making substantial changes in a patient's immediate life circumstances and environment in a way that will enhance the effectiveness of other forms of therapy. Also known as situation therapy.

Miliolacea [INV ZOO] A superfamily of marine or brackish foraminiferans in the suborder Miliolina characterized by an imperforate test wall of tiny, disordered calcite rhombs.

Miliolidae [INV ZOO] A family of foraminiferans in the superfamily Miliolacea.

Miliolina [INV ZOO] A suborder of the Foraminiferida characterized by a porcelaneous, imperforate calcite wall.

military aircraft [AERO ENG] Aircraft that are designed or modified for highly specialized use by the armed services of a nation.

military characteristics [ORD] Those characteristics of equipment found desirable or necessary to the performance of a military mission, either combat or noncombat.

military department [ORD] In the United States, the Department of the Army, the Department of the Navy, or the Department of the Air Force.

military engineering [ENG] Science, art, and practice involved in design and construction of defensive and offensive military works as well as construction and maintenance of transportation systems.

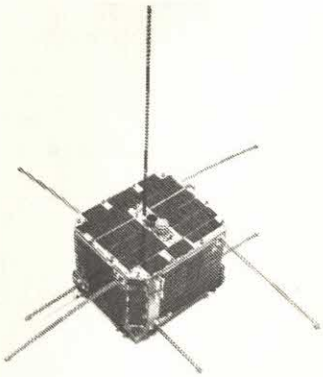
military geology [ENG] The application of the earth sciences to such military concerns as terrain analysis, water supply, foundations, and construction of roads and airfields.

military grid [MAP] Two sets of parallel lines intersecting at right angles and forming squares; superimposed on maps or charts in an accurate and consistent manner to permit identifica-

MILIOLIDAE

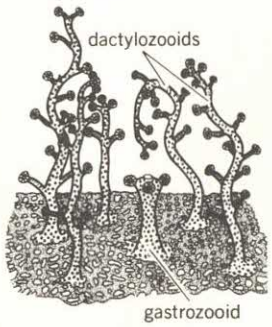
Test representative of Miliolidae. *(From L. H. Hyman, The Invertebrates, vol. 1, McGraw-Hill, 1940)*

MILITARY SATELLITE



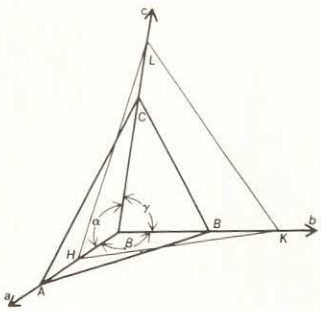
The 45-pound (20-kilogram) SECOR geodetic satellite. *(Cubic Corp.)*

MILLEPORINA



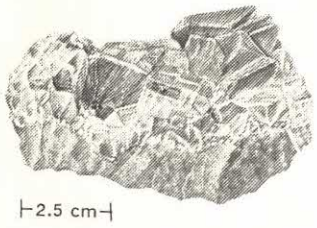
Polyps of Milleporina. *(From L. H. Hyman, The Invertebrates, vol. 1, McGraw-Hill, 1940)*

MILLER INDICES



The reference system used to define Miller indices. a, b and c are chosen as crystallographic axes, and ABC as unit plane, defined by angles α, β and γ, and ratio $OA:OB:OC$. Miller indices of another plane, HKL, are integers proportional to OA/OH, OB/OK and OC/OL.

MILLERITE



Millerite crystals on calcite from Keokuk, Iowa. *(Specimen from Department of Geology, Bryn Mawr College)*

tion of ground locations with respect to other locations and the computation of direction and distance to other points.

military grid reference system [MAP] A system which uses a standard-scaled grid square, based on a point of origin on a map projection of the earth's surface in an accurate and consistent manner to permit either position referencing, or the computation of direction and distance between grid positions.

military map [MAP] A map containing a military grid.

military motor vehicle [ORD] Wheeled or track-laying vehicle or combined wheeled and track-laying vehicle, designed for transporting personnel or cargo for military purposes; it may be either propelled by a self-contained power unit or drawn by a vehicle containing a self-contained power unit.

military requirement [ORD] The statement of a recognized and approved need for a new item, a weapons system, or an assemblage for military use.

military research [ORD] Investigation or experimentation to discover and interpret new facts or to analyze existing facts with the aim of applying new or revised conclusions, theories, or laws to areas of interest to the military services.

military satellite [AERO ENG] An artificial earth satellite used for military purposes; the six mission categories are communication, navigation, geodesy, nuclear test detection, surveillance, and research and technology.

military specification [ORD] A procurement specification promulgated by the military agencies and used for the procurement of military supplies and equipment.

military standard test [ORD] Specifications approved by the United States Department of Defense, to ensure uniformity of test conditions.

military target [ORD] **1.** Any industrial plant, city, or other object, or any person, group of persons, or force marked as a target for destruction, damage, injury, or capture because of its direct or indirect use in the conduct or support of an enemy's military endeavor. **2.** In restricted usage, a military person, force, installation, or area marked as a target because of its use, or potential use, in direct military operations.

military technology [ENG] The technology needed to develop and support the armament used by the military.

military transport vehicle [ORD] Wheeled or tracked vehicle specifically designed for military purposes other than employment as a fighting vehicle, intended for transporting cargo, personnel, and equipment or for towing other vehicles over land and roads in close support of fighting vehicles and troops.

military-type vehicle [ORD] Vehicle designed primarily for military purposes to meet field requirements in connection with combat and tactical operations.

military vessel [NAV ARCH] A ship or boat designed primarily for use in war.

milk [CHEM] A suspension of certain metallic oxides, as milk of magnesia, iron, or bismuth. [PHYSIO] **1.** The whitish fluid secreted by the mammary gland for the nourishment of the young; composed of carbohydrates, proteins, fats, mineral salts, vitamins, and antibodies. **2.** Any whitish fluid in nature resembling milk, as coconut milk.

milk-alkali syndrome [MED] A complex of symptoms associated with prolonged excessive intake of milk and soluble alkali, including hypercalcemia, renal insufficiency, milk alkalosis, conjunctivitis, and calcinosis. Also known as Burnett's syndrome; milk-drinker's syndrome.

milk-drinker's syndrome *See* milk-alkali syndrome.

milk factor [BIOCHEM] A filtrable, noncellular agent in the milk and tissues of certain strains of inbred mice; transmitted from the mother to the offspring by nursing. Also known as Bittner milk factor.

milk fever [MED] A fever occurring during the first six weeks after childbirth, believed to be caused by puerperal infection.

milk glass [MATER] A white, and sometimes colored, opaque glass made by adding calcium fluoride and alumina to soda-lime glass.

milk intolerance [MED] Extreme sensitivity to milk due to allergy to milk protein or lactose deficiency; characterized by diarrhea, abdominal cramps, and vomiting.

milk leg *See* phlegmasia alba dolens.

milk line *See* mammary ridge.

Milkman's syndrome [MED] Decreased tubular reabsorption of phosphate, resulting in osteomalacia which gives a peculiar striped appearance (multiple pseudofractures) to the bones in roentgenograms. Also known as Looser-Milkman syndrome.

milk of magnesia [PHARM] A white suspension of magnesium hydroxide in water; used as a cathartic. Also known as magnesia magma.

milk sugar *See* lactose.

milk teeth *See* deciduous teeth.

milkweed [BOT] Any of several latex-secreting plants of the genus *Asclepias* in the family Asclepiadaceae.

milky disease [INV ZOO] A bacterial disease of Japanese beetle larvae or related grubs caused by *Bacillus papilliae* and *B. lentimorbus* that penetrate the intestine and sporulate in the body cavity; blood of the grub eventually turns milky white.

milky quartz [MINERAL] An opaque, milk-white variety of crystalline quartz, often with a greasy luster; milkiness is due to the presence of air-filled cavities. Also known as greasy quartz.

Milky Way [ASTRON] The faint band of light which encircles the sky and results from the combined light of the many stars near the plane of our galaxy.

Milky Way Galaxy [ASTRON] The large aggregation of stars and interstellar gas and dust of which the sun is a member. Also known as Galaxy.

milky weather *See* whiteout.

mill [FOOD ENG] **1.** A machine for grinding grain into flour. **2.** A building that houses milling machines. [IND ENG] **1.** A machine that manufactures paper, textiles, or other products by the continuous repetition of some simple process or action. **2.** A building that houses machinery for manufacturing processes. [MIN ENG] **1.** An excavation made in the country rock, by a crosscut from the workings on a vein, to obtain waste for filling; it is left without timber so that the roof can fall in and furnish the required rock. **2.** A passage connecting a stope or upper level with a lower level intended to be filled with broken ore that can then be drawn out at the bottom as desired for further transportation.

millboard [MATER] Hard, strong paperboard; used for furniture panels.

mill building [CIV ENG] A steel-frame building in which roof trusses span columns in the outside wall; originally, this type of building housed milling machinery, as for wood or metal, hence the name.

milled soap [MATER] Soap, such as toilet soap, made by adding color and perfume to soap chips and then passing the mixture through milling rollers and pressing in molds.

Milleporina [INV ZOO] An order of the class Hydrozoa known as the stinging corals; they resemble true corals because of a calcareous exoskeleton.

miller *See* milling machine.

Miller-Abbott tube [MED] A double-lumen rubber tube having a balloon at the end, inserted through the nasal passage and passed through the pylorus to locate and treat intestinal obstructions.

Miller bridge [ELECTR] Type of bridge circuit for measuring amplification factors of vacuum tubes.

Miller code [COMPUT SCI] A code used internally in some computers, in which a binary 1 is represented by a transition in the middle of a bit (either up or down), and a binary 0 is represented by no transition following a binary 1; a transition between bits represents successive 0's; in this code, the longest period possible without a transition is two bit times.

Miller effect [ELECTR] The increase in the effective grid-cathode capacitance of a vacuum tube due to the charge induced electrostatically on the grid by the anode through the grid-anode capacitance.

Miller generator *See* bootstrap integrator.

Miller indices [CRYSTAL] Three integers identifying a type of crystal plane; the intercepts of a plane on the three crystallographic axes are expressed as fractions of the crystal parameters; the reciprocals of these fractions, reduced to integral proportions, are the Miller indices. Also known as crystal indices.

Miller integrator [ELECTR] A resistor-capacitor charging network having a high-gain amplifier paralleling the capacitor; used to produce a linear time-base voltage. Also known as Miller time-base.

millerite [MINERAL] NiS A brass to bronze-yellow mineral that crystallizes in the hexagonal system and usually contains trace amounts of cobalt, copper, and iron; hardness is 3–3.5 on Mohs scale, and specific gravity is 5.5; it generally occurs in fine crystals, chiefly as nodules in clay ironstone. Also known as capillary pyrites; hair pyrites; nickel pyrites.

Miller law [AGR] A law administered by the Food and Drug

Administration that regulates the production and use of agricultural fungicides in the United States, and will not allow materials to leave poisonous residues on edible crops. [CRYSTAL] If the edges formed by the intersections of three faces of a crystal are taken as the three reference axes, then the three quantities formed by dividing the intercept of a fourth face with one of these axes by the intercept of a fifth face with the same axis are proportional to small whole numbers, rarely exceeding 6. Also known as law of rational intercepts.

Miller time-base *See* Miller integrator.

millet [BOT] A common name applied to at least five related members of the grass family grown for their edible seeds.

mill finish [MET] The characteristic surface finish on a rolled metal product. [TEXT] The slightly napped finish of a worsted fabric.

mill-head ore *See* run-of-mill.

milli- [MATH] A prefix representing 10^{-3}, or one-thousandth. Abbreviated m.

milliammeter [ELEC] An ammeter whose scale is calibrated to indicate current values in milliamperes.

milliampere [ELEC] A unit of current equal to one-thousandth of an ampere. Abbreviated mA.

milliampere-second [NUCLEO] A unit of radiation dose resulting from exposure to x-rays, equal to the dose produced by an electron beam, carrying a current of 1 milliampere, bombarding the target of an x-ray tube for 1 second. Abbreviated mA s.

millibar [MECH] A unit of pressure equal to one-thousandth of a bar. Abbreviated mb. Also known as vac.

millibarn [NUC PHYS] A unit of cross section equal to one-thousandth of a barn. Abbreviated mb.

millicurie-destroyed [NUCLEO] A unit of radiation dose, equal to the radiation emitted by a sample over a period during which its activity decreases by 1 millicurie; for radon-222 (for which this unit is most often used), it is approximately 133 milligram-hours. Abbreviated mcd.

millicurie-of-intensity-hour *See* sievert.

millicycle *See* millihertz.

millidarcy [PHYS] A unit of fluid permeability equal to one-thousandth of a darcy. Abbreviated md.

milliequivalent [CHEM] One-thousandth of a compound's or an element's equivalent weight.

millier *See* tonne.

millifarad [ELEC] A unit of capacitance equal to one-thousandth of a farad. Abbreviated mF.

milligal [MECH] A unit of acceleration commonly used in geodetic measurements, equal to 10^{-3} galileo, or 10^{-5} meter per second per second. Abbreviated mGal.

milligauss [ELECTROMAG] A unit of magnetic flux density equal to one-thousandth of a gauss. Abbreviated mG.

milligram [MECH] A unit of mass equal to one-thousandth of a gram. Abbreviated mg.

milligram-hour [NUCLEO] A unit of radiation dose, equal to the radiation emitted by a source with an equivalent radium content of 1 milligram for a period of 1 hour. Abbreviated mg h.

millihenry [ELECTROMAG] A unit of inductance equal to one-thousandth of a henry. Abbreviated mH.

millihertz [PHYS] A unit of frequency equal to one-thousandth of a hertz. Abbreviated mHz. Also known as millicycle (mc).

millihg *See* millimeter of mercury.

milli-inch *See* mil.

milli-k [NUCLEO] A unit of reactivity; the reactivity of a reactor in milli-k is equal to 1000 $(k - 1)$, where k is the effective multiplication factor.

Millikan meter [ELECTR] An integrating ionization chamber in which a gold-leaf electroscope is charged a known amount and ionizing events reduce this charge, so that the resulting angle through which the gold leaf is repelled at any given time indicates the number of ionizing events that have occurred.

Millikan oil-drop experiment [ATOM PHYS] A method of determining the charge on an electron, in which one measures the terminal velocities of rise and fall of oil droplets in an electric field after the droplets have picked up charge from ionization in the surrounding gas produced by an x-ray beam.

milliliter [MECH] A unit of volume equal to 10^{-3} liter or 10^{-6} cubic meter. Abbreviated ml. Also known as mil.

milli-mass-unit [PHYS] 1/1000 of an atomic mass unit. Abbreviated mmu.

millimeter [MECH] A unit of length equal to one-thousandth of a meter. Abbreviated mm. Also known as metric line; strich.

millimeter of mercury [MECH] A unit of pressure, equal to the pressure exerted by a column of mercury 1 millimeter high with a density of 13.5951 grams per cubic centimeter under the standard acceleration of gravity; equal to 133.322387415 pascals; it differs from the torr by less than 1 part in 7,000,000. Abbreviated mmHg. Also known as millihg.

millimeter of water [MECH] A unit of pressure, equal to the pressure exerted by a column of water 1 millimeter high with a density of 1 gram per cubic centimeter under the standard acceleration of gravity; equal to 9.80665 pascals. Abbreviated mmH_2O.

millimeter wave [ELECTROMAG] An electromagnetic wave having a wavelength between 1 millimeter and 1 centimeter, corresponding to frequencies between 30 and 300 gigahertz. Also known as millimetric wave.

millimetric wave *See* millimeter wave.

milli-micro- *See* nano-.

millimicron [MECH] A unit of length equal to one-thousandth of a micron (or micrometer) or one-billionth of a meter. Abbreviated mμ.

milling [MECH ENG] Mechanical treatment of materials to produce a powder, to change the size or shape of metal powder particles, or to coat one powder mixture with another. [MIN ENG] A combination of open-cut and underground mining, wherein the ore is mined in open cut and handled underground.

milling cutter [DES ENG] A rotary tool-steel cutting tool with peripheral teeth, used in a milling machine to remove material from the workpiece through the relative motion of workpiece and cutter.

milling machine [MECH ENG] A machine for the removal of metal by feeding a workpiece through the periphery of a rotating circular cutter. Also known as miller.

milling ore *See* second-class ore.

milling planer [MECH ENG] A planer that uses a rotary cutter rather than single-point tools.

milling system *See* chute system.

Millington reverberation formula [ACOUS] A formula that states that the reverberation time of a chamber in seconds is 0.05 times its volume in cubic feet, divided by the sum over the surfaces of the chamber of the product of the surface's area in square feet by the natural logarithm of 1 minus its absorption coefficient.

milling width [MIN ENG] Width of lode designated for treatment in the mill, as calculated with regard to daily tonnage.

million [MATH] The number 10^6.

million electron volts *See* megaelectronvolt.

millipede [INV ZOO] The common name for members of the arthropod class Diplopoda.

millirad [NUCLEO] A unit of absorbed ionizing radiation dose equal to one-thousandth of a rad. Abbreviated mrad.

milliroentgen [NUCLEO] A unit of radioactive dose of electromagnetic radiation equal to one-thousandth of a roentgen. Abbreviated mr.

millisecond [MECH] A unit of time equal to one-thousandth of a second. Abbreviated msec.

millisecond delay cap [ENG] A delay cap with an extremely short (20–500 thousandths of a second) interval between passing of current and explosion. Also known as short-delay detonator.

millisite [MINERAL] $(Na,K)CaAl_6(PO_4)_4(OH)_9 \cdot 3H_2O$ White mineral composed of a basic hydrous phosphate of sodium, potassium, calcium, and aluminum.

millivolt [ELEC] A unit of potential difference or emf equal to one-thousandth of a volt. Abbreviated mV.

millivoltmeter [ELEC] A voltmeter whose scale is calibrated to indicate voltage values in millivolts.

milliwatt [MECH] A unit of power equal to one-thousandth of a watt. Abbreviated mW.

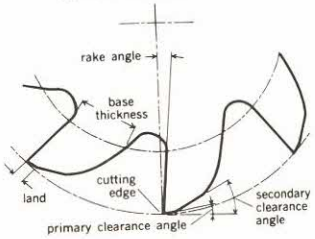
Millon's reagent [CHEM] Reagent used to test for proteins; made by dissolving mercury in nitric acid, diluting, then decanting the liquid from the precipitate.

mill ore [MIN ENG] An ore that must be given some preliminary treatment before a marketable grade or a grade suitable for further treatment can be obtained.

millrace [CIV ENG] A canal filled with water that flows to and from a waterwheel acting as the power supply for a mill.

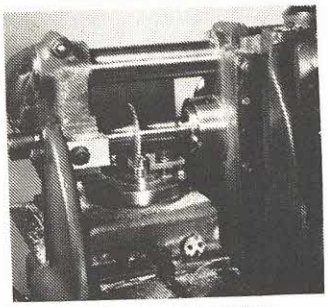
mill run [MIN ENG] **1.** A given quantity of ore tested for its quality by actual milling. **2.** The yield of such a test.

MILLING CUTTER



Typical milling cutter teeth.

MILLING MACHINE



Part of a horizontal milling machine. *(Brown and Sharpe Manufacturing Co.)*

mill scale [MET] A surface layer of ferric oxide (Fe_3O_4) that forms on steel or iron during hot rolling.
Mills-Crowe process [MIN ENG] Method of regeneration of cyanide liquor from the gold leaching process; the barren solution is acidified, liberating hydrocyanic acid which is separated and reabsorbed in alkaline solution.
millsite [MIN ENG] A plot of ground suitable for the erection of a mill, or reduction works, to be used in connection with mining operations.
millstone *See* buhrstone.
millwork [MATER] Ready-made products which are manufactured at a wood-planing mill or woodworking plant, such as moldings, doors, doorframes, window sashes, stairwork, and cabinets.
millwright [ENG] **1.** A person who plans, builds, or sets up the machinery for a mill. **2.** A person who repairs milling machines.
milneb [ORG CHEM] $C_{12}H_{22}N_4S_4$ A white, crystalline compound with a melting point of 140–141°C; slight solubility in water; used as a fungicide for fruit, tobacco, and potato crops. Also known as 3,3′-ethylenebis(tetrahydro-4,6-dimethyl-2*H*-1,3,5-thiadiazine-2-thione; thiadiazin.
Milne method [MATH] A technique which provides numerical solutions to ordinary differential equations.
Milorganite [MATER] Granular form of sewage-plant activated sludge; used as fertilizer.
Milroy's disease [MED] Familial chronic lymphedema of the lower extremities.
Mima mound [GEOGR] A term used in the northwestern United States for any of the numerous low, circular or oval domes composed of loose silt and soil material; probably built by pocket gophers.
Mimas [ASTRON] A satellite of Saturn orbiting at a mean distance of 186,000 kilometers.
mimeograph [GRAPHICS] A duplicating device for making copies by means of a stretched stencil and ink roller.
mimetene *See* mimetite.
mimetesite *See* mimetite.
mimetic [CRYSTAL] Pertaining to a crystal that is twinned or malformed but whose crystal symmetry appears to be of a higher grade than it actually is. [PETR] Of a tectonite, having a deformation fabric, formed by mimetic crystallization, that reflects and is influenced by preexisting anisotropic structure. [ZOO] Pertaining to or exhibiting mimicry.
mimetic crystallization [PETR] Recrystallization or neomineralization in metamorphism which reproduces preexistent structures.
mimetite [MINERAL] $Pb_5(AsO_4)_3Cl$ A yellow to yellowish-brown mineral of the apatite group, commonly containing calcium or phosphate; a minor ore of lead. Also known as mimetene; mimetesite.
mimicry [ZOO] Assumption of color, form, or behavior patterns by one species of another species, for camouflage and protection.
Mimidae [VERT ZOO] The mockingbirds, a family of the Oscines in the order Passeriformes.
Mimosa *See* β Crucis.
mimosine [ORG CHEM] $C_8H_{10}N_2O_4$ A crystalline compound with a melting point of 235–236°C; soluble in dilute acids or bases; used as a depilatory agent. Also known as leucaenine; leucaenol; leucenine; leucenol.
Mimosoideae [BOT] A subfamily of the legume family, Leguminosae; members are largely woody and tropical or subtropical with regular flowers and usually numerous stamens.
min *See* minim.
minable [MIN ENG] Material that can be mined under present-day mining technology and economics.
minasragrite [MINERAL] $(VO)_2H_2(SO_4)_3 \cdot 15H_2O$ A blue, monoclinic mineral consisting of hydrated acid vanadyl sulfate; occurs in efflorescences and as aggregates or masses.
mind [PSYCH] **1.** The sum total of the neural processes which receive, code, and interpret sensations, recall and correlate stored information, and act on it. **2.** The state of consciousness. **3.** The understanding, reasoning, and intellectual faculties and processes considered as a whole. **4.** The psyche, or the conscious, subconscious, and unconscious considered together.
Mindel glaciation [GEOL] The second glacial stage of the Pleistocene in the Alps.
Mindel-Riss interglacial [GEOL] The second interglacial stage of the Pleistocene in the Alps; follows the Mindel glaciation.
M indicator *See* M scope.
mine [MIN ENG] An opening or excavation in the earth for extracting minerals. [ORD] An encased explosive or chemical charge designed to be positioned so that it detonates when the target touches or moves near it or when it is fired by remote control; general types are land mines and underwater mines.
mine captain [MIN ENG] **1.** The director of work in a mine, with or without superior officials or subordinates. **2.** *See* mine superintendent.
mine car [MECH ENG] An industrial car, usually of the four-wheel type, with a low body; the door is at one end, pivoted at the top with a latch at the bottom used for hauling bulk materials.
mine characteristic [MIN ENG] The relation between pressure p and volume Q in the ventilation of a mine of resistance R, expressed as $p = RQ^2$.
mine characteristic curve [MIN ENG] A graph derived by plotting the static or total mine head, or both, against the quantity; used to solve problems in mine ventilation.
mine countermeasures [ORD] All methods for preventing or reducing damage or danger to ships, personnel, aircraft, and vehicles from mines.
mine development [MIN ENG] The operations involved in preparing a mine for ore extraction, including tunneling, sinking, crosscutting, drifting, and raising.
mine dust [MIN ENG] Dust from drilling, blasting, or handling rock.
mined volume [MIN ENG] A statistic used in mine subsidence, computed by multiplying the mined area by the mean thickness of the bed or of that part of the bed which has been dug out.
mine examiner *See* fire boss.
mine fan signal system [MIN ENG] A system which indicates by electric light or electric audible signal, or both, the slowing down or stopping of a mine ventilating fan.
mine field [ORD] An area in which mines have been placed.
mine field gap [ORD] A portion of a mine field in which no mines have been laid, of specified width to enable a friendly force to pass through the mine field in tactical formation; seldom less than 100 yards (91 meters) wide.
mine field lane [ORD] An unmined or demined route through any mine field, normally 8 yards (7.3 meters) wide and suitably marked; however, for lanes through enemy mine fields, the width depends on the method of breaching and the intended purpose.
mine fire truck [MIN ENG] A low-slung railcar designed to fight fires in mines; has a water supply and a pump to supply high pressure to the fire hoses.
mine foreman [MIN ENG] The worker charged with the general supervision of the underground workings of a mine and the persons employed therein.
Mine Gel [MATER] Brand name for a series of semigelatin dynamites.
mine hoist [MIN ENG] A device for raising and lowering ore, rock, or coal in a mine, and men and supplies.
mine inspector [MIN ENG] Generally, the state mine inspector, as contrasted to the Federal mine inspector; inspects mines to find fire and dust hazards and inspects the safety of working areas, electric circuits, and mine equipment.
mine jeep [MIN ENG] An electrically driven car for underground transportation of officials, inspectors, rescue workers, and repair, maintenance, and surveying crews.
minelite [MATER] An explosive made by mixing a chlorate compound with paraffin wax.
mine locomotive [MIN ENG] A low, heavy haulage engine designed for underground operation; usually propelled by electricity, gasoline, or compressed air.
mine-planting equipment [ORD] A group of items for uncrating, fusing, and magazine loading of antitank mines, and the mechanical emplacement of barrier-type mine fields.
mine props [MIN ENG] Sections of wood used for holding up pieces of rock in the roof of mines.
mine radio telephone system [MIN ENG] A communication system between the dispatcher and locomotive operators; radio impulses travel along the trolley wire and down the trolley pole to the radio telephone.
mineragraphy *See* ore microscopy.
mineral [GEOL] A naturally occurring substance with a characteristic chemical composition expressed by a chemical

formula; may occur as individual crystals or may be disseminated in some other mineral or rock; most mineralogists include the requirements of inorganic origin and internal crystalline structure.

mineral additive [MATER] A mineral-derived substance added during grease manufacture, particularly to heavy-duty grease.

mineral black [MATER] Black pigment made from ground slate, shale, coke, coal, or slaty coal; used in inks, plastics, and coatings.

mineral caoutchouc *See* elaterite.

mineral charcoal *See* fusain.

mineral cotton *See* mineral wool.

mineral deposit [GEOL] A mass of naturally occurring mineral material, usually of economic value.

mineral dressing *See* beneficiation.

mineral dye [MATER] A natural dyestuff made from minerals; examples are ochre, chrome yellow, and Prussian blue.

mineral economics [MIN ENG] Study and application of the processes used in management and finance connected with the discovery, exploitation, and marketing of minerals.

mineral engineering *See* mining engineering.

mineral facies [PETR] Rocks of any origin whose components have been formed within certain temperature-pressure limits characterized by the stability of certain index minerals.

mineral fuel [MATER] A carbonaceous fuel mined or stripped from the earth, such as petroleum, coal, peat, shale oil, or tar sands.

mineral green *See* copper carbonate.

mineralization [GEOL] **1.** The process of fossilization whereby inorganic materials replace the organic constituents of an organism. **2.** The introduction of minerals into a rock, resulting in a mineral deposit.

mineralize [GEOL] To convert to, or impregnate with, mineral material; applied to processes of ore vein deposition and of fossilization.

mineralizer [GEOL] A gas or fluid dissolved in a magma that aids in the concentration and crystallization of ore minerals.

mineral jelly [MATER] A viscous, thick material derived from petroleum; used as a stabilizer in explosives.

mineral land [MIN ENG] Land which is worth more for mining than for agriculture or other use.

mineral lard oil [MATER] A mixture of refined mineral oil with lard oil, having a fatty content of 25–30%, and a flash point about 300°F (149°C).

mineral lease *See* mining lease.

mineral monument [MIN ENG] A permanent monument established in a mining district to provide for an accurate description of mining claims and their location.

mineralocorticoid [BIOCHEM] A steroid hormone secreted by the adrenal cortex that regulates mineral metabolism and, secondarily, fluid balance.

mineralogenetic epoch [GEOL] A geologic time period during which mineral deposits formed.

mineralogenetic province [GEOL] Geographic region where conditions were favorable for the concentration of useful minerals.

mineralogical phase rule [MINERAL] Any of several variations of the Gibbs phase rule, taking into account the number of degrees of freedom consumed by the fixing of physical-chemical variables in the natural environment; it assumes that temperature and pressure are fixed externally and that consequently the number of phases (minerals) in a system (rock) will not usually exceed the number of components.

mineralogist [MINERAL] A person who studies the occurrence, description, mode of formation, and uses of minerals.

mineralography *See* ore microscopy.

mineralogy [INORG CHEM] The science which concerns the study of natural inorganic substances called minerals.

mineraloid [MINERAL] A naturally occurring, inorganic material that is amorphous and is therefore not considered to be a mineral. Also known as gel mineral.

mineral oil *See* medicinal oil.

mineral processing [MIN ENG] Procedures, such as dry and wet crushing and grinding of ore or other products containing minerals, to raise the concentration of the substance being mined.

mineral resources [GEOL] Valuable mineral deposits of an area that are presently recoverable and may be so in the future; includes known ore bodies and potential ore.

mineral right *See* mining right.

mineral rubber [MATER] Asphaltine minerals (such as gilsonite and grahamite) and blown asphalts; used in compounding of rubber, coatings, and paints.

minerals beneficiation *See* beneficiation.

mineral seal oil [MATER] A petroleum distillate with a boiling point higher than that of kerosine; used as a solvent oil and illuminant.

mineral sequence *See* paragenesis.

mineral soil [GEOL] Soil composed of mineral or rock derivatives with little organic matter.

mineral spring [HYD] A spring whose water has a definite taste due to a high mineral content.

mineral suite [MINERAL] **1.** A group of associated minerals in one deposit. **2.** A representative group of minerals from a certain locality. **3.** A group of specimens showing variations, as in color or form, in a single mineral species.

mineral tallow *See* hatchettite.

mineral water [HYD] Water containing naturally or artificially supplied minerals or gases.

mineral wax *See* ozocerite.

mineral wool [MATER] A fibrous substance, technically a glass, made from molten slag, rock, glass, or a selected combination of these ingredients; produced by blowing, drawing, or other means of fabricating into fine fibers; used for insulation, fireproofing, and as a filter medium. Also known as mineral cotton; rock wool; silicate cotton; slag wool.

mine rescue apparatus [MIN ENG] Certain types of apparatus worn by workers and permitting them to perform in noxious or irrespirable atmospheres, such as during mine fires or following mine explosions.

mine rescue crew [MIN ENG] A crew consisting usually of five to eight persons who are thoroughly trained in the use of mine rescue apparatus, which they wear in rescue or recovery work in a mine following an explosion or during a fire.

mine rescue lamp [MIN ENG] A particular type of electric safety hand lamp used in rescue operations; equipped with a lens for concentrating or diffusing the light.

mine resistance [MIN ENG] Resistance by a mine to the passage of an air current.

miner's friend [MIN ENG] **1.** The Davy safety lamp. **2.** A steam engine once used to pump water from underground.

miner's hammer [MIN ENG] A hammer used to break ore.

miner's hand lamp [MIN ENG] A self-contained mine lamp with handle for carrying.

miner's helmet [MIN ENG] A hat designed for miners to provide head protection and to hold the cap lamp.

miner's horn [MIN ENG] A metal spoon or horn to collect ore particles in gold washing.

miner's inch [MIN ENG] The quantity of water that will escape from an aperture 1-inch (2.54-centimeter) square through a 2-inch-thick (5.08-centimeter-thick) plank, with a steady flow of water standing 6 inches (15.24 centimeters) above the top of the escape aperture, the quantity so discharged amounting to 2274 cubic feet (64.39 cubic meters) in 24 hours.

miner's lamp [MIN ENG] Any one of a variety of lamps used by a miner to furnish light, such as oil lamps, carbide lamps, flame safety lamps, and cap lamps.

miner's right [MIN ENG] An annual permit from the government to occupy and work mineral land.

miners' rules [MIN ENG] Rules and regulations proclaimed by the miners of any district, relating to the location of, recording of, and the work necessary to hold possession of a mining claim.

miner's self-rescuer [MIN ENG] A pocket gas mask effective against carbon monoxide; air passes through a cannister containing fused calcium chloride before entering the mouth.

mine run [MIN ENG] The unscreened output of a mine. Also known as run-of-mine.

mine sample [MIN ENG] Coal or mineral extracted at underground exposures for analysis.

mine signal system [MIN ENG] Signal lights installed at individual track switches immediately indicating to the motorman whether or not he can safely proceed.

mine skips [MIN ENG] Skips used to bring mined ore to the surface of a shaft.

mine superintendent [MIN ENG] A mine manager or group manager. Also known as mine captain.

mine surveyor [MIN ENG] The official who periodically surveys the mine workings and prepares plans for the manager.

minesweeper [NAV ARCH] A ship specially designed and equipped to remove or destroy underwater mines. [ORD] Heavy road roller pushed in front of a tank, to destroy land mines by exploding them.
minesweeping [ORD] Process of detecting and removing land mines or underwater mines.
mine track devices [MIN ENG] Track devices to provide maximum safety for haulage trains in mines.
mine tractor [MIN ENG] A trackless, self-propelled vehicle used to transport equipment and supplies.
minette [PETR] A syenitic variety of lamprophyre composed principally of biotite phenocrysts in a matrix of orthoclase and biotite.
mine valuation [MIN ENG] Properly weighing the financial considerations to place a present value on mineral reserves.
mine ventilating fan [MIN ENG] A motor-driven disk, propeller, or wheel for blowing or exhausting air to provide ventilation of a mine; large units are used for stationary systems, while small portable types provide fresh air in inaccessible locations, such as dead ends.
mine ventilation system [MIN ENG] A combination of connecting airways with air pressure sources and governing devices that are instrumental in making and controlling airflow.
mine water [MIN ENG] Water pumped from mines.
miniature electron tube [ELECTR] A small electron tube having no base, with tube electrode leads projecting through the glass bottom in positions corresponding to those of pins for either a seven-pin or nine-pin tube base.
miniaturization [ELECTR] Reduction in the size and weight of a system, package, or component by using small parts arranged for maximum utilization of space.
minicartridge [COMPUT SCI] A self-contained package of reel-to-reel magnetic tape that resembles a cassette or cartridge but is slightly different in design and dimensions.
minicomputer [COMPUT SCI] A small computer which in its basic configuration has at least 4096 words of memory, employs words between 8 and 16 bits in length.
minim [MECH] A unit of volume in the apothecaries' measure; equals 1/60 fluidram (approximately 0.061612 cubic centimeter) or about 1 drop (of water). Abbreviated min.
minimal brain dysfunction syndrome [MED] A complex of learning and behavioral disabilities seen primarily in children of near-average or above-average intelligence exhibiting also deviations of function of the central nervous system.
minimal equation [MATH] An algebraic equation whose zeros define a minimal surface.
minimal flight path [NAV] The flight path between two points that provides the shortest possible time enroute; it may be planned to take advantage of winds and pressure systems, and is thus not necessarily the shortest air distance between the two points.
minimal-latency coding *See* minimum-access coding.
minimal polynomial [MATH] The polynomial of least degree which both divides the characteristic polynomial of a matrix and has the same roots.
minimal realization [CONT SYS] In linear system theory, a set of differential equations, of the smallest possible dimension, which have an input/output transfer function matrix equal to a given matrix function $G(s)$.
minimal surface [MATH] A surface whose mean curvature is identically zero.
mini-maxi regret [CONT SYS] In decision theory, a criterion which selects that strategy which has the smallest maximum difference between its payoff and that of the best hindsight choice.
minimax technique *See* min-max technique.
minimization [MATH] The determination of the simplest expression of a Boolean function equivalent to a given one.
minimize [COMMUN] Condition when normal message and telephone traffic is drastically reduced so messages connected with an actual or simulated emergency will not be delayed.
minimum [MATH] The least value that a real valued function assumes.
minimum-access coding [COMPUT SCI] Coding in such a way that a minimum time is required to transfer words to and from storage, for a computer in which this time depends on the location in storage. Also known as minimal-latency coding; minimum-delay coding; minimum-latency coding.
minimum-access programming [COMPUT SCI] The programming of a digital computer in such a way that minimum waiting time is required to obtain information out of the memory. Also known as forced programming; minimum-latency programming.
minimum-access routine *See* minimum-latency routine.
minimum-altitude bombing [ORD] Horizontal or glide bombing with the height of release at an altitude under 900 feet (274 meters); it includes masthead bombing (bombing at masthead level), which is sometimes erroneously referred to as skip bombing.
minimum bend radius [MET] The minimum radius through which a piece of metal can be bent to form a given angle without fracturing.
minimum-delay coding *See* minimum-access coding.
minimum detectable signal *See* threshold signal.
minimum deviation [OPTICS] For a prism, the smallest possible angle between the incident and refracted rays; this angle is realized when refraction is symmetrical.
minimum discernible signal [ELECTR] Receiver input power level that is just sufficient to produce a discernible signal in the receiver output; a receiver sensitivity test.
minimum distance [NAV] The shortest distance at which a navigational instrument or system will function satisfactorily.
minimum-distance code [COMMUN] A binary code in which the signal distance does not fall below a specified minimum value.
minimum ebb [OCEANOGR] The least speed of a current that runs continuously ebb.
minimum elevation [ORD] Lowest elevation of a weapon at which the projectile will safely clear an obstacle between the weapon and the target.
minimum enroute instrument altitude [NAV] In air operations, the altitude which is attained as the result of the height of an artificial or natural object or the limitation in the performance of navigation and communication facilities. Abbreviated MEA.
minimum firing current [ELEC] The limit below which firing will not occur in electric blasting caps.
minimum flight altitude [AERO ENG] The lowest altitude at which aircraft may safely operate.
minimum flood [OCEANOGR] The least speed of a current that runs continuously flood.
minimum frontal diameter [ANTHRO] The smallest distance measured between the temporal crests, with only moderate pressure.
minimum ionizing speed [ATOM PHYS] The smallest speed at which a charged particle passing through a gas can ionize an atom or molecule.
minimum-latency coding *See* minimum-access coding.
minimum-latency programming *See* minimum-access programming.
minimum-latency routine [COMPUT SCI] A computer routine that is constructed so that the latency in serial-access storage is less than the random latency that would be expected if storage locations were chosen without regard for latency. Also known as minimum-access routine.
minimum lethal dose [PHARM] The amount of an injurious agent which is the average of the smallest dose that kills and the largest dose that fails to kill.
minimum-loss attenuator [ELECTR] A section linking two unequal resistive impedances which is designed to introduce the smallest attenuation possible. Also known as minimum-loss pad.
minimum-loss matching [ELECTR] Design of a network linking two resistive impedances so that it introduces a loss which is as small as possible.
minimum-loss pad *See* minimum-loss attenuator.
minimum metal condition [DES ENG] The condition corresponding to the removal of the greatest amount of material permissible in a machined part.
minimum-phase system [CONT SYS] A linear system for which the poles and zeros of the transfer function all have negative or zero real parts.
minimum range [ORD] **1.** Least range setting of a gun at which the projectile will clear an obstacle or friendly troops between the gun and the target. **2.** Shortest distance to which a gun can fire from a given position.
minimum reflux ratio [CHEM ENG] The smallest reflux ratio in a two-component liquid distillation system that will produce the desired overhead and bottom compositions.
minimum rent [MIN ENG] The right to work coal acquired by a mine owner by the payment of an annual rent and a royalty to

the landowner (the coal or mineral owner). Also known as fixed rent.

minimum resolvable temperature difference [THERMO] The change in equivalent blackbody temperature that corresponds to a change in radiance which will produce a just barely resolvable change in the output of an infrared imaging device, taking into account the characteristics of the device, the display, and the observer. Abbreviated MRTD.

minimum safe distance [ORD] In an atomic explosion, the total distance from desired ground zero (DGZ) to friendly positions required to ensure troops safety.

minimum signal level [ELECTR] In facsimile, level corresponding to the copy white or copy black signal, whichever is the lower.

minimum thermometer [ENG] A thermometer that automatically registers the lowest temperature attained during an interval of time.

minimum turning circle [ENG] The diameter of the circle described by the outermost projection of a vehicle when the vehicle is making its shortest possible turn.

minimum wetting rate [CHEM ENG] The smallest liquid-flow rate through a packed column that will thoroughly wet the column packing.

mining [MIN ENG] The technique and business of mineral discovery and exploitation.

mining camp [MIN ENG] A term loosely applied to any mining town.

mining claim [MIN ENG] That portion of the public mineral lands which a miner, for mining purposes, takes and holds in accordance with mining laws. Also known as claim.

mining effect [ORD] Violent upheaval or movement of earth and the destruction or damage resulting therefrom, generally caused by an explosion below the surface of the earth; mining effect may be contrasted with the blast effect produced by an explosion on or above the surface of the earth.

mining engineer [MIN ENG] One qualified by education, training, and experience in mining engineering.

mining engineering [ENG] Engineering concerned with the discovery, development, and exploitation of coal, ores, and minerals, as well as the cleaning, sizing, and dressing of the product. Also known as mineral engineering.

mining geology [MIN ENG] The study of the structure and occurrence of mineral deposits and the geologic aspects of mine planning.

mining ground [MIN ENG] Land from which a mineral substance is extracted by the process of mining.

mining hazard [MIN ENG] Any of the dangers unique to the winning and working of minerals and coal.

mining lease [MIN ENG] A contract to work a mine and extract mineral or other deposits from it under specified conditions. Also known as mineral lease.

mining machine truck [MIN ENG] A truck used to transport shortwall mining machines.

mining on a shoestring *See* grass-roots mining.

mining partnership [MIN ENG] The arrangement whereby two or more persons acquire a mining claim and actually engage in working it.

mining property [MIN ENG] Property valued for its mining possibilities.

mining retreating [MIN ENG] A process of mining by which the ore or coal is untouched until after all the gangways and such are driven, at which time the work of extraction begins at the boundary and progresses toward the shaft.

mining right [MIN ENG] A right to enter upon and occupy a specific piece of ground for the purpose of working it, either by underground excavations or open workings, to obtain the mineral ores which may be deposited therein. Also known as mineral right.

mining shield [MIN ENG] A canopy or cover for the protection of workers and machines at the face of a mechanized coal heading.

mining title [MIN ENG] A claim, exclusive prospecting license, right, concession, or lease.

mining town [MIN ENG] A town that has arisen next to a mine or mines.

mining width [MIN ENG] The minimum width needed to extract ore regardless of the actual width of ore-bearing rock.

miniprinter [GRAPHICS] A printer without a keyboard, driven by an external digital source such as a computer, communication line, or tape handler to print lines of alphameric data on paper; generally applied to printers that have less than 80 characters per line or lower printing speeds than 120 characters per second.

minitrack [AERO ENG] A satellite tracking system consisting of a field of separate antennas and associated receiving equipment interconnected so as to form interferometers which track a transmitting beacon in the payload itself. [ELECTR] A subminiature radio transmitter capable of sending data over 4000 miles (6500 kilometers) on extremely low power.

minium [MINERAL] Pb_3O_4 A scarlet or orange-red mineral consisting of an oxide of lead; found in Wisconsin and the western United States. Also known as red lead.

mink [VERT ZOO] Any of three species of slender-bodied aquatic carnivorous mammals in the genus *Mustela* of the family Mustelidae.

Minkowski electrodynamics [ELECTROMAG] An electromagnetic theory, compatible with the special theory of relativity, which takes into account the presence of matter with electric and magnetic polarization.

Minkowski metric [RELAT] The metric tensor of the Minkowski space-time used in special relativity; it is a 4×4 matrix whose nonzero entries lie on the diagonal, with one entry (corresponding to the time coordinate) equal to 1, and three entries (corresponding to space coordinates) equal to -1; sometimes, the negative of this matrix is used.

Minkowski's inequality [MATH] **1.** An inequality involving powers of sums of sequences of real or complex numbers, a_k and b_k:

$$\left[\sum_{k=1} \left| a_k + b_k \right|^s\right]^{1/s} \leq \left[\sum_{k=1} \left| a_k \right|^s\right]^{1/s} + \left[\sum_{k=1}^{\infty} \left| b_k \right|^s\right]^{1/s}$$

provided $s \geq 1$. **2.** An inequality involving powers of integrals of real or complex functions, f and g, over an interval or region R:

$$\left[\int_R \left| f(x) + g(x) \right|^s dx\right]^{1/s} \leq \left[\int_R \left| f(x) \right|^s dx\right]^{1/s} + \left[\int_R \left| g(x) \right|^s dx\right]^{1/s}$$

provided $s \geq 1$ and the integrals involved exist.

Minkowski space-time [RELAT] The space-time of special relativity; it is completely flat and contains no gravitating matter. Also known as Minkowski universe.

Minkowski universe *See* Minkowski space-time.

min-max technique [MATH] A method of approximation of a function f by a function g from some class where the maximum of the modulus of $f-g$ is minimized over this class. Also known as Chebyshev approximation; minimax technique.

min-max theorem [MATH] The theorem that provides information concerning the nth eigenvalue of a symmetric operator on an inner product space without necessitating knowledge of the other eigenvalues. Also known as maximum-minimum principle.

Minnesota multiphasic personality inventory [PSYCH] An empirical scale of an individual's personality based mainly on the person's yes-or-no responses to a questionnaire of 550 items; included are special validating scales which measure the individual's test-taking attitude and degree of frankness. Abbreviated MMPI. Also known as multiphasic personality inventory (MPI).

Minnesota preschool scale [PSYCH] A verbal and nonverbal test designed to measure the learning ability of children from 18 months to 6 years of age.

minnow [VERT ZOO] The common name for any fresh-water fish composing the family Cyprinidae, order Cypriniformes.

Minofor Alloy [MET] A white alloy containing 68% tin, 18% antimony, 3% copper, and 10% zinc; properties are similar to those of Brittania metal.

minor [MATH] The minor of an entry of a matrix is the determinant of the matrix obtained by removing the row and column containing the entry. Also known as cofactor; complementary minor.

minor arc [MATH] The smaller of the two arcs on a circle produced by a secant.

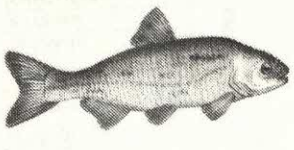
minor axis [MATH] The smaller of the two axes of an ellipse.

minor bend [ELECTROMAG] Rectangular waveguide bent so that throughout the length of a bend a longitudinal axis of the guide lies in one plane which is parallel to the narrow side of the waveguide.

MINK

The American mink *(Mustela vison)*, the largest mink. It is valued for its dark, soft, thick fur.

MINNOW



The common shiner *(Notropis cornutus)* which ranges eastward from the Rocky Mountains.

minor control change [COMPUT SCI] A change of function that is of relatively small magnitude or importance, resulting from a difference in minor control data between one card and the next.

minor control data [COMPUT SCI] Control data which are at the least significant level used, or which are used to sort records into the smallest groups used; for example, if control data are used to specify state, town, and street, then the data specifying street would be minor control data.

minor cycle [COMPUT SCI] The time required for the transmission or transfer of one machine word, including the space between words, in a digital computer using serial transmission. Also known as word time.

minor defect [IND ENG] A defect which reduces the effectiveness of the product, without causing serious malfunctioning.

minor diameter [DES ENG] The diameter of a cylinder bounding the root of an external thread or the crest of an internal thread.

minor diatonic scale [ACOUS] A diatonic scale in which the relative sizes of the sequence of intervals are approximately 2,1,2,2,2,2,1.

minor fog signal [NAV] A sound signal of limited power generally having a normal range of 2 miles (3.2 kilometers) or less.

minority carrier [SOLID STATE] The type of carrier, electron, or hole that constitutes less than half the total number of carriers in a semiconductor.

minority emitter [ELECTR] Of a transistor, an electrode from which a flow of minority carriers enters the interelectrode region.

minor light [NAV] An automatic unwatched light on a fixed structure usually showing low to moderate candlepower.

minor lobe [ELECTROMAG] Any lobe except the major lobe of an antenna radiation pattern. Also known as secondary lobe; side lobe.

minor loop [CONT SYS] A portion of a feedback control system that consists of a continuous network containing both forward elements and feedback elements.

minor planet [ASTRON] **1.** Those planets smaller than the earth, specifically Mercury, Venus, Mars, and Pluto. **2.** *See* asteroid.

minor relay station [ELECTR] A tape relay station which has tape relay responsibility but does not provide an alternate route.

minor surgery [MED] Any superficial surgical procedure involving little hazard to the life of the patient and not requiring general anesthesia.

minor switch [ELEC] Single-motion stepping switch mounted atop the telephone connectors and most commonly used for the party-line selection.

minor trough [METEOROL] A pressure trough of smaller scale than a long-wave trough; it ordinarily moves rapidly and is associated with a migratory cyclonic disturbance in the lower troposphere.

minuano [METEOROL] A cold southwesterly wind of southern Brazil, occurring during the Southern Hemisphere winter (June to September).

minuend [MATH] The quantity from which another quantity is to be subtracted.

minus [MATH] *A* minus *B* means that the quantity *B* is to be subtracted from the quantity *A*.

minus angle *See* angle of depression.

minus-cement porosity [GEOL] The porosity that would characterize a sedimentary material if it contained no chemical cement.

minus sieve [MET] In powder metallurgy, the portion of a powder sample that passes through a specified standard sieve.

minus sight *See* foresight.

minus strand [MOL BIO] A polynucleotide strand that is complementary to, and formed by transcription from, another specific polynucleotide (plus) strand, with which it produces the double-stranded (double-helix) ribonucleic acid.

minus zone [COMPUT SCI] The bit positions in a computer code that represent the algebraic minus sign.

minute [MATH] A unit of measurement of angle that is equal to $\frac{1}{60}$ of a degree. Symbolized $'$. Also known as arcmin. [MECH] A unit of time, equal to 60 seconds.

minute hand [HOROL] The long hand on a timepiece, indicating minutes.

Minuteman intercontinental ballistic missile [ORD] A surface-to-surface missile of the U.S. Air Force, having a range of over 5000 miles (8000 kilometers) and using solid fuel propellant to permit almost instant firing when needed.

minute pressure [PETRO ENG] A measurement of gas well capacity, determined by shutting the gate valve and recording the gage pressure each minute, with the pressure at the end of the first minute providing an estimate of the gas volume.

minutes on leg [NAV] The interval of time, estimated or actual, required for an aircraft to fly a given distance at a given ground speed, usually along a single course line.

minute wheel [HOROL] A wheel in a dial train that is driven by the cannon pinion, and drives the hour wheel by means of a pinion.

minyulite [MINERAL] $KAl_2(PO_4)_2(OH,F)\cdot 4H_2O$ A white mineral composed of hydrous basic potassium aluminum phosphate.

Miocene [GEOL] A geologic epoch of the Tertiary period, extending from the end of the Oligocene to the beginning of the Pliocene.

miocrystalline *See* hypocrystalline.

miogeosyncline [GEOL] The nonvolcanic portion of an orthogeosyncline, located adjacent to the craton.

Miosireninae [PALEON] A subfamily of extinct sirenian mammals in the family Dugongidae.

miosis [PHYSIO] Contraction of the pupil of the eye.

miotic [PHARM] **1.** Causing miosis. **2.** Any agent that causes miosis. [PHYSIO] Of or pertaining to miosis.

MIPC *See O*-isopropylphenyl-methylcarbamate.

Mira [ASTRON] The first star recognized to be a periodic variable; has a period of 333–9 days and its spectrum changes from M5e at maximum to M9e at minimum. It is the prototype of long-period variable stars.

mirabilite [MINERAL] $Na_2SO_4\cdot 10H_2O$ A yellow or white monoclinic mineral consisting of hydrous sodium sulfate, occurring as a deposit from saline lakes, playas, and springs, and as an efflorescence; the pure crystals are known as Glauber's salt.

miracidium [INV ZOO] The ciliated first larva of a digenetic trematode; forms a sporocyst after penetrating intermediate host tissues.

mirage [OPTICS] Any one of a variety of unusual images of distant objects seen as a result of the bending of light rays in the atmosphere during abnormal vertical distribution of air density.

mirage effect [COMMUN] Reception of radio waves at distances far beyond the normally expected range due to abnormal refraction caused by meteorological conditions such as abnormal vertical water-vapor and temperature gradients.

Miranda [ASTRON] A satellite of Uranus orbiting at a mean distance of 124,000 kilometers.

Mirapinnatoidei [VERT ZOO] A suborder of tiny oceanic fishes in the order Cetomimiformes.

Mira variables [ASTRON] A group of over 1300 stars having the same type of variability as the star Mira.

mire [GEOL] Wet spongy earth, as of a marsh, swamp, or bog.

mired [THERMO] A unit used to measure the reciprocal of color temperature, equal to the reciprocal of a color temperature of 10^6 kelvins. Derived from micro-reciprocal-degree.

Miridae [INV ZOO] The largest family of the Hemiptera; included in the Cimicomorpha, it contains herbivorous and predacious plant bugs which lack ocelli and have a cuneus and four-segmented antennae.

Miripinnati [VERT ZOO] The equivalent name for Marapinnatoidei.

mirror [OPTICS] A surface which specularly reflects a large fraction of incident light.

mirror coating [OPTICS] A thin film of highly reflective material spread over a correctly shaped glass surface to produce a mirror; aluminum is usually used in the visible region. Also known as reflective coating.

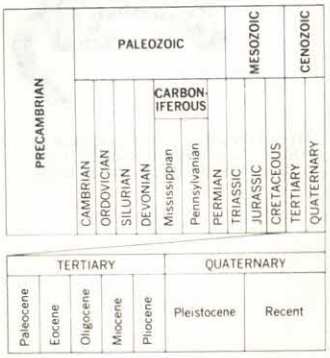
mirror galvanometer [ELEC] A galvanometer having a small mirror attached to the moving element, to permit use of a beam of light as an indicating pointer. Also known as reflecting galvanometer.

mirror glance *See* wehrlite.

mirror interference [OPTICS] Interference occurring between two beams, one or both of which are reflected from a mirror at a small angle.

mirror interferometer [ENG] An interferometer used in radio astronomy, in which the sea surface acts as a mirror to reflect

MIOCENE



Position of the Miocene epoch in relation to other epochs and to the periods and eras of geologic time.

radio waves up to a single antenna, where the reflected waves interfere with the waves arriving directly from the source. [OPTICS] Any interferometer which makes use of mirror interference.

mirror machine [PL PHYS] A device which confines plasma in a tube with magnetic mirrors at each end to prevent it from escaping.

mirror nephoscope [ENG] A nephoscope in which the motion of a cloud is observed by its reflection in a mirror. Also known as cloud mirror; reflecting nephoscope.

mirror nuclei [NUC PHYS] A pair of atomic nuclei, each of which would be transformed into the other by changing all its neutrons into protons, and vice versa.

mirror optics [OPTICS] The science and technology of mirrors which, by means of reflecting rays of light, either revert optical bundles or focus them to form images.

mirror reflection *See* specular reflection.

mirror scale [ENG] A scale with a mirror used to align the eye perpendicular to the scale and pointer when taking a reading; improves accuracy by eliminating parallax.

mirror stone *See* muscovite.

mirror plane of symmetry *See* plane of mirror symmetry.

mirror transit circle [ENG] A development of the conventional transit circle in which light from a star is reflected into fixed horizontal telescopes pointing due north and south by a plane mirror that is mounted on a horizontal east-west axis and attached to a large circle with accurately calibrated markings to determine the mirror's position.

MIRV *See* multiple independently targeted reentry vehicle.

MIS *See* metal-insulator semiconductor.

miscarriage [MED] Expulsion of the fetus before it is viable.

miscegenation [ANTHRO] Intermarriage between different races.

misch metal [MET] An alloy consisting of a crude mixture of cerium, lanthanum, and other rare-earth metals obtained by electrolysis of the mixed chlorides of the metals dissolved in fused sodium chloride; used in making aluminum alloys, in some steels and irons, and in coating the cathodes of glow-type voltage regulator tubes.

miscibility [CHEM] The tendency or capacity of two or more liquids to form a uniform blend, that is, to dissolve in each other; degrees are total miscibility, partial miscibility, and immiscibility.

miscible-phase displacement [PETRO ENG] Method of increasing reservoir oil recovery by displacement with an oil-miscible driving fluid, such as gas or liquefied petroleum gas.

miscible-slug process [PETRO ENG] A miscible-phase displacement in which reservoir oil recovery is increased by displacement with liquefied petroleum gas as the driving fluid.

misenite [MINERAL] $K_8H_6(SO_4)_7$ A white mineral composed of native acid potassium sulfate.

miser [PETRO ENG] A well-boring bit that is tubular with a valve at the bottom, and has a screw for forcing the earth upward. Also spelled mizer.

misfeed [ORD] Failure to supply ammunition properly, especially to a magazine-fed or belt-fed automatic gun.

misfire [CHEM] Failure of fuel or an explosive charge to ignite properly. [ELECTR] Failure to establish an arc between the main anode and the cathode of an ignitron or other mercury-arc rectifier during a scheduled conducting period.

misfit stream [HYD] A stream whose meanders are either too large or too small to have eroded the valley in which it flows.

mismatch [ELEC] The condition in which the impedance of a source does not match or equal the impedance of the connected load or transmission line. [MET] Failure to match forged surfaces formed in opposite dies.

mismatch factor *See* reflection factor.

mismatch loss [ELECTR] Loss of power delivered to a load as a result of failure to make an impedance match of a transmission line with its load or with its source.

mismatch slotted line [ELECTROMAG] A slotted line linking two waveguides which is not properly designed to minimize the power reflected or transmitted by it.

misogamy [PSYCH] A feeling of revulsion and repugnance toward marriage.

misogyny [PSYCH] Hatred of women.

misology [PSYCH] Unreasoning aversion to intellectual or literary matters, or to argument or speaking.

misoneism [PSYCH] Hatred of new circumstances or things, or change.

misopedia [PSYCH] Morbid hatred of all children, but especially of one's own.

mispickel *See* arsenopyrite.

misregistration [COMPUT SCI] In character recognition, the improper state of appearance of a character, line, or document, on site in a character reader, with respect to a real or imaginary horizontal baseline. [GRAPHICS] Improper alignment of register marks in matching overlays on a page or in matching the front of a type page to the back.

misrun [MET] Incompletely formed casting due to premature solidification of metal before the mold is filled.

missed abortion [MED] A condition in which a fetus weighing less than 500 grams dies and remains in the uterus for an extended period of time.

missed hole *See* failed hole.

missed round [ENG] A round in which all or part of the explosive has failed to detonate.

missense codon [GEN] A mutant codon that directs the incorporation of a different amino acid and results in the synthesis of a protein with a sequence in which one amino acid has been replaced by a different one; in some cases the mutant protein may be unstable or less active.

missense mutation [MOL BIO] A mutation that converts a codon coding for one amino acid to a codon coding for another amino acid.

missile [ORD] Any object that is, or is designed to be, thrown, dropped, projected, or propelled, for the purpose of making it strike a target; examples are guided missile and ballistic missile.

missile attitude [MECH] The position of a missile as determined by the inclination of its axes (roll, pitch, and yaw) in relation to another object, as to the earth.

missile checkout [ORD] Performance of procedures to determine whether all parts of the missile are apparently capable of performing their prescribed functions.

missile countermeasure [ORD] Any device or technique intended to impair the effectiveness of an enemy missile.

missile decoy [ORD] A vehicle used to simulate a missile in flight, attracting enemy radar and drawing fire so as to increase the odds for penetration by manned bombers or other weapon systems.

missile destruct system [ORD] That portion of a missile which, upon command or due to a failure, is capable of destroying the missile, generally for safety reasons.

missile guidance central [ORD] A collection of items specifically designed to provide target ranging facilities, and guidance and control equipment for directing the terminal flight phase of a guided missile.

missile impact predictor group [ORD] A group that provides facilities for determining the point of impact of a missile.

missile plume [ELECTROMAG] The region of electromagnetic and other disturbances that follow a missile during reentry and make the missile more readily detectable.

missile position tracking group [ORD] A group that provides facilities for determining the in-flight position of a missile.

missile ship *See* guided-missile ship.

missile site radar [ENG] Phased array radar located at a missile launch area to provide a guidance link with interceptor missiles enroute to their targets.

missile test [ORD] The test that includes missile checkout plus actual firing to determine whether the missile is capable of performing its operational function.

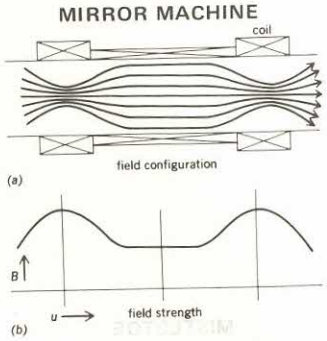
missing error [COMPUT SCI] The result of calling for a subroutine not available in the library.

missing mass [ASTRON] The difference between the observed mass of galaxy clusters, as calculated from luminosity measurements, and the dynamical mass, calculated from measurements of radial velocities within the clusters.

missing mass spectrometer [PARTIC PHYS] An apparatus which measures the momentum of the recoil protons in a reaction such as $\pi^- + p \rightarrow p + (MM)^-$, in order to determine the distribution of masses of the MM system, without any detailed observations on this system.

Mississippian [GEOL] A large division of late Paleozoic geologic time, after the Devonian and before the Pennsylvanian, named for a succession of highly fossiliferous marine strata consisting largely of limestones found along the Mississippi River between southeastern Iowa and southern Illinois;

MIRROR MACHINE



Mirror machine. *(a)* Longitudinal section. Lines represent magnetic lines of force. *(b)* Curve represents magnetic field strength B along path u in the tube. Regions where B has a large value are magnetic mirrors produced by coils and located at constrictions of field lines at each end; they confine plasma to central part.

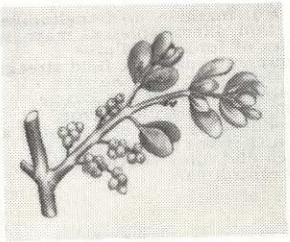
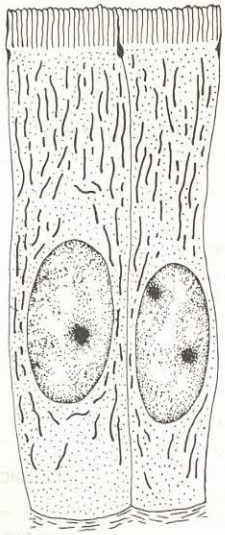
MISTLETOE



Mistletoe (*Phoradendron flavescens*).

MITOCHONDRIA



Drawing of intestinal epithelial cells showing numerous filamentous mitochondria concentrated in the apical cytoplasm.

approximately equivalent to the European Lower Carboniferous.

Mississippi River–type buoy [NAV] A lightweight unlighted buoy of unique design developed for use on rivers, and now used in many inland areas.

Missnay-Schardin effect [ORD] The acceleration of a solid end plate (usually metal) from the face of an explosive charge under detonation, such that the end plate remains a solid and is usable as a missile.

Missourian [GEOL] A North American provincial series of geologic time: lower Upper Pennsylvanian (above Desmoinesian, below Virgilian).

mist [FL MECH] Fine liquid droplets suspended in or falling through a moving or stationary gas atmosphere. [METEOROL] A hydrometeor consisting of an aggregate of microscopic and more or less hygroscopic water droplets suspended in the atmosphere; it produces, generally, a thin, grayish veil over the landscape; it reduces visibility to a lesser extent than fog; the relative humidity with mist is often less than 95%.

mistake [COMPUT SCI] A human action producing an unintended result, in contrast to an error in a computer operation.

mistbow *See* fogbow.

mist droplet [METEOROL] A particle of mist, intermediate between a haze droplet and a fog drop.

mist extractor [ENG] A device that removes liquid mist or droplets from a gas stream via impingement, flow-direction change, velocity change, centrifugal force, filters, or coalescing packs.

mistletoe [BOT] **1.** *Viscum album*. The true, Old World mistletoe having dichotomously branching stems, thick leathery leaves, and waxy-white berries. **2.** Any of several species of green hemiparasitic plants of the family Loranthaceae.

mist projector [MIN ENG] An appliance to form a mist spray to allay dust and fume during blasting operations in a tunnel.

mistral [METEOROL] A north wind which blows down the Rhone Valley south of Valence, France, and into the Gulf of Lions. Strong, squally, cold, and dry, it is the combined result of the basic circulation, a fall wind, and jet-effect wind.

Mitchell's disease *See* erythromelalgia.

mite [INV ZOO] The common name for the acarine arthropods composing the diverse suborders Onychopalpida, Mesostigmata, Trombidiformes, and Sarcoptiformes.

miter bend [DES ENG] A pipe bend made by mitering (angle cutting) and joining pipe ends.

miter box [ENG] A troughlike device of metal or wood with vertical slots set at various angles in the upright sides, for guiding a handsaw in making a miter joint.

miter gate [CIV ENG] Either of a pair of canal lock gates that swing out from the side walls and meet at an angle pointing toward the upper level.

miter gear [DES ENG] A bevel gear whose bevels are in 1:1 ratio.

miter joint [DES ENG] A joint, usually perpendicular, in which the mating ends are beveled.

miter saw [DES ENG] A hollow-ground saw in diameters from 6 to 16 inches (15.24 to 40.64 centimeters), used for cutting off and mitering on light stock such as moldings and cabinet work.

miter valve [DES ENG] A valve in which a disk fits in a seat making a 45° angle with the axis of the valve.

miticide [MATER] An agent that kills mites. Also known as acaricide.

mitochondria [CYTOL] Minute cytoplasmic organelles in the form of spherical granules, short rods, or long filaments found in almost all living cells; submicroscopic structure consists of an external membrane system.

mitogenesis [CYTOL] **1.** Induction of mitosis. **2.** Formation as a result of mitosis.

mitogenetic [CYTOL] Inducing or stimulating mitosis.

mitomycin [MICROBIO] A complex of three antibiotics (mitomycin A, B, and C) produced by *Streptomyces caespitosus*.

mitosis [CYTOL] Nuclear division involving exact duplication and separation of the chromosome threads so that each of the two daughter nuclei carries a chromosome complement identical to that of the parent nucleus.

mitotic index [CYTOL] The number of cells undergoing mitosis per thousand cells.

mitotic inhibitor [CYTOL] A compound that inhibits mitosis.

mitotic poison [CYTOL] A compound that prevents or affects the completion of mitosis.

mitral commissurotomy [MED] Any of several surgical procedures performed to relieve mitral stenosis.

mitral stenosis [MED] Obstruction of the mitral valve, usually due to narrowing of the orifice.

mitral valve [ANAT] The atrioventricular valve on the left side of the heart.

mitriform [BIOL] Shaped like a miter.

mitscherlichite [MINERAL] $K_2CuCl_4 \cdot 2H_2O$ A greenish-blue, tetragonal mineral consisting of potassium copper chloride dihydrate.

Mitscherlich law of isomorphism [CHEM] Substances which have similar chemical properties and crystalline forms usually have similar chemical formulas.

Mittag-Leffler's theorem [MATH] A theorem that enables one to explicitly write down a formula for a meromorphic complex function with given poles; for a function $f(z)$ with poles at $z = z_i$, having order m_i and principal parts

$$\sum_{j=1}^{m_i} a_{ij}(z - z_i)^{-j},$$

the formula is

$$f(z) = \sum_k \left[\sum_{j=1}^{m_i} a_{ij}(z - z_i)^{-j} + p_i(z) \right] + g(z),$$

where the $p_i(z)$ are polynomials, $g(z)$ is an entire function, and the series converges uniformly in every bounded region where $f(z)$ is analytic.

mittelschmerz [MED] Pain or discomfort in the lower abdomen in women occurring midway in the intermenstrual interval, thought to be secondary to the irritation of the pelvic peritoneum by fluid or blood escaping from the point of ovulation in the ovary.

mix crystal *See* mixed crystal.

mixed acid *See* nitrating acid.

mixed aniline point [PHYS CHEM] The minimum temperature at which a mixture of aniline, heptane, and hydrocarbon will form a solution; related to the aromatic character of the hydrocarbon.

mixed aphasia [PSYCH] A combination of two or more forms of aphasia with impairment or loss of language function.

mixed arthritis [MED] A combination of features of rheumatoid arthritis and degenerative joint disease seen in the same patient or the same joint.

mixed-base notation [MATH] A computer number system in which a single base, such as 10 in the decimal system, is replaced by two number bases used alternately, such as 2 and 5.

mixed-base number [MATH] A number in mixed-base notation. Also known as mixed-radix number.

mixed-base oil [MATER] A crude oil that has both paraffin and asphaltum as predominating solid residuals.

mixed cloud [METEOROL] A cloud containing both water drops and ice crystals, hence a cloud whose composition is intermediate between that of a water cloud and that of an ice-crystal cloud.

mixed congruential generator [COMPUT SCI] A congruential generator in which the constant b in the generating formula is not equal to zero.

mixed cryoglobulin [BIOCHEM] A cryoglobulin with a monoclonal component made of immunoglobulin belonging to two different classes, one of which is monoclonal.

mixed crystal [CRYSTAL] A crystal whose lattice sites are occupied at random by different ions or molecules of two different compounds. Also known as mix crystal.

mixed current [OCEANOGR] A type of tidal current characterized by a conspicuous difference in speed between the two flood currents or two ebb currents usually occurring each tidal day.

mixed cycle [MECH ENG] An internal combustion engine cycle which combines the Otto cycle constant-volume combustion and the Diesel cycle constant-pressure combustion in high-speed compression-ignition engines. Also known as combination cycle; commercial Diesel cycle; limited-pressure cycle.

mixed deafness [MED] Combined conductive and sensorineural impairment.

mixed decimal [MATH] Any decimal plus an integer.

mixed-entry decision table [COMPUT SCI] A decision table in which the action entries may be either sequenced or unsequenced.

mixed flow [CHEM ENG] Flow stream existing in two or more phases, such as gas, hydrocarbon, and water. Also known as mixed-phase flow.
mixed-flow fan [MIN ENG] A mine fan in which the flow is both radial and axial.
mixed-flow impeller [MECH ENG] An impeller for a pump or compressor which combines radial- and axial-flow principles.
mixed forest [FOR] A forest consisting of two or more types of trees, with no more than 80% of the most common tree.
mixed gland [PHYSIO] A gland that secretes more than one substance, especially a gland containing both mucous and serous components.
mixed highs [COMMUN] In color television, a method of reproducing very fine picture detail by transmitting high-frequency components as part of luminance signals for achromatic reproduction in color pictures.
mixed indicator [ANALY CHEM] Color-change indicator for acid-base titration end points in which a mixture of two indicator substances is used to give sharper end-point color changes.
mixed laterality [PSYCH] The tendency, when there is a choice, to prefer to use parts of one side of the body for certain tasks and parts of the opposite side for others.
mixed layer [OCEANOGR] The layer of water which is mixed through wave action or thermohaline convection. Also known as surface water.
mixed-layer mineral [MINERAL] A mineral having an interstratified structure consisting of alternating layers of two different clays or of a clay and some other mineral.
mixed-mode expression [COMPUT SCI] An expression involving operands of more than one data type.
mixed nerve [PHYSIO] A nerve containing both sensory and motor components.
mixed nucleus [METEOROL] A condensation nucleus of intermediate efficacy which, as a result of particle coagulation, contains both soluble hygroscopic matter and insoluble but wettable matter.
mixed number [MATH] The sum of an integer and a fraction.
mixed oil *See* nitrating acid.
mixed ore [GEOL] Any ore with both oxidized and unoxidized minerals.
mixed-phase flow *See* mixed flow.
mixed potential [PHYS CHEM] The electrode potential of a material while more than one electrochemical reaction is occurring simultaneously.
mixed radix [MATH] Pertaining to a numeration system using more than one radix, such as the biquinary system.
mixed-radix number *See* mixed-base number.
mixed reflection *See* spread reflection.
mixed salvo [ORD] Series of shots in which some fall short of the target and some beyond it.
mixed tide [OCEANOGR] A tide in which the presence of a diurnal wave is conspicuous by a large inequality in the heights of either the two high tides or the two low tides usually occurring each tidal day.
mixer [ELECTR] **1.** A device having two or more inputs, usually adjustable, and a common output; used to combine separate audio or video signals linearly in desired proportions to produce an output signal. **2.** The stage in a superheterodyne receiver in which the incoming modulated radio-frequency signal is combined with the signal of a local r-f oscillator to produce a modulated intermediate-frequency signal. Also known as first detector; heterodyne modulator; mixer-first detector. [OPTICS] A nonlinear device in which two light beams are combined to form new beams having frequencies equal to the sum or the difference of the input wavelengths.
mixer-first detector *See* mixer.
mixer-settler [CHEM ENG] Solvent-extraction system with alternating or combined arrangement of mixers and settlers; used for chemicals extraction, lubricating-oil refining, and uranium oxide recovery. Also known as mixer-settler extractor.
mixer-settler extractor *See* mixer-settler.
mixer tube [ELECTR] A multigrid electron tube, used in a superheterodyne receiver, in which control voltages of different frequencies are impressed upon different control grids, and the nonlinear properties of the tube cause the generation of new frequencies equal to the sum and difference of the impressed frequencies.
mixing [CHEM ENG] The intermingling of different materials (liquid, gas, solid) to produce a homogeneous mixture. [ELECTR] Combining two or more signals, such as the outputs of several microphones. [SCI TECH] The thorough intermingling of two or more different materials.
mixing chamber [ENG] The space in a welding torch in which the gases are mixed.
mixing length [PHYS] A mean length of travel, characteristic of a particular motion, over which an eddy maintains its identity; it is analogous to the mean free path of a molecule; physically, the idea implies that mixing occurs by discontinuous steps, that fluctuations which arise as eddies with different characteristics wander about, and that the mixing is done almost entirely by the small eddies.
mixing ratio [METEOROL] In a system of moist air, the dimensionless ratio of the mass of water vapor to the mass of dry air; for many purposes, the mixing ratio may be approximated by the specific humidity.
mixing transformation [MATH] A function of a measure space which moves the measurable sets in such a manner that, asymptotically as regards measure, any measurable set is distributed uniformly throughout the space.
mixing valve [ENG] Multi-inlet valve used to mix two or more fluid intakes to give a mixed product of desired composition.
mixite [MINERAL] $Cu_{11}Bi(AsO_4)_5(OH)_{10}\cdot 6H_2O$ A green to whitish mineral composed of a hydrous basic arsenate of copper and bismuth.
Mixodectidae [PALEON] A family of extinct insectivores assigned to the Proteutheria; a superficially rodentlike group confined to the Paleocene of North America.
mixogram [FOOD ENG] A graphic-type record relating flour mixes from various wheats to the qualities of the resulting dough mixes.
mixolimnion [HYD] The upper layer of a meromictic lake, characterized by low density and free circulation; this layer is mixed by the wind.
mixotrophic [BIOL] Obtaining nutrition by combining autotrophic and heterotrophic mechanisms.
mixtite *See* diamictite.
mixture [PHARM] A liquid medicine prepared by adding insoluble substances to a liquid medium, usually with a suspending agent. [SCI TECH] The product of mixing; components are not in a fixed proportion to each other.
mixture ratio [AERO ENG] The ratio of the weight of oxidizer used per unit of time to the weight of fuel used per unit of time.
mizer *See* miser.
mizzenmast [NAV ARCH] The third mast or the mast aft of the mainmast in a sailing ship.
mizzonite [MINERAL] A mineral of the scapolite group, composed of 54 to 57% silica. Also known as dipyre.
m-kgf *See* meter-kilogram.
MKK system *See* MK system.
mksa system *See* meter-kilogram-second-ampere system.
mks system *See* meter-kilogram-second system.
Mk system [ASTRON] A system of classifying stars in which suffixes are added to the designations of the Harvard-Draper sequence to indicate luminosity, ranging from I for supergiants to VI for subdwarfs and white dwarfs. Also known as MKK system; spectral/luminosity classification; Yerkes system.
ml *See* milliliter.
MLD *See* metachromatic leukodystrophy.
MLS *See* microwave landing system.
mm *See* millimeter.
M meter [ENG] A class of instruments which measure the liquid water content of the atmosphere.
mmf *See* magnetomotive force.
mmHg *See* millimeter of mercury.
mmH_2O *See* millimeter of water.
MMPI *See* Minnesota multiphasic personality inventory.
MMSCFD [CHEM ENG] Abbreviation for million standard cubic feet per day; usually refers to gas flow.
MMSCFH [CHEM ENG] Abbreviation for million standard cubic feet per hour; usually refers to gas flow.
MMSCFM [CHEM ENG] Abbreviation for million standard cubic feet per minute; usually refers to gas flow.
mmu *See* milli-mass-unit.
Mn *See* manganese.
mnemonic [PSYCH] **1.** Aiding or pertaining to memory. **2.** A device, such as combinations of letters, pictures, or words, to stimulate recall of the facts they represent.
mnemonic code [COMPUT SCI] A programming code that is

easy to remember because the codes resemble the original words, such as MPY for multiply and ACC for accumulator.

mnemonics [PSYCH] The science of the cultivation of memory functions using systematic methods.

Mnesarchaeidae [INV ZOO] A family of lepidopteran insects in the suborder Homoneura; members are confined to New Zealand.

MNOS *See* metal-nitride-oxide semiconductor.

Mo *See* molybdenum.

moat [GEOL] **1.** A ringlike depression around the base of a seamount. **2.** A valleylike depression around the inner side of a volcanic cone, between the rim and the lava dome. [HYD] **1.** A glacial channel in the form of a deep, wide trench. **2.** *See* oxbow lake.

mobile [GRAPHICS] A decorative three-dimensional art object constructed of metal, glass, wood, plastic, or other materials; it is mounted in a hanging position and is free to move in any of its planes.

mobile artillery [ORD] Artillery weapons designed for movement and ready conversion from traveling position to firing position; wheels or other suspension devices are not ordinarily removed in the firing position.

mobile belt [GEOL] A long, relatively narrow crustal region of tectonic acitivity.

mobile crane [MECH ENG] **1.** A cable-controlled crane mounted on crawlers or rubber-tired carriers. **2.** A hydraulic-powered crane with a telescoping boom mounted on truck-type carriers or as self-propelled models.

mobile digital computer [COMPUT SCI] Large, mobile, fixed-point operation, one-address, parallel-mode type digital computer.

mobile drill [MIN ENG] A drill unit mounted on wheels or crawl-type tracks to facilitate moving.

mobile filling [MIN ENG] Filling which is supplemented only from above, and which sinks, filling the mined-out rooms.

mobile hoist [MECH ENG] A platform hoist mounted on a pair of pneumatic-tired road wheels, so it can be towed from one site to another.

mobile loader [MECH ENG] A self-propelling power machine for loading coal, mineral, or dirt.

mobile mount [ORD] Any weapons mount which is mobile, as contrasted to one which is fixed; as a mount for mobile artillery.

mobile radio [COMMUN] Radio communication in which the transmitter is installed in a vessel, vehicle, or airplane and can be operated while in motion.

mobile-relay station [COMMUN] Base station in which the base receiver automatically tunes on the base station transmitter and which retransmits all signals received by the base station receiver; used to extend the range of mobile units, and requires two frequencies for operation.

mobile station [COMMUN] Station in the mobile service intended to be used while in motion or during halts at unspecified points.

mobile systems equipment [COMPUT SCI] Computers located on planes, ships, or vans.

Mobilina [INV ZOO] A suborder of ciliophoran protozoans in the order Peritrichida.

mobility [PHYS] Freedom of particles to move, either in random motion or under the influence of fields or forces. [SOLID STATE] *See* drift mobility.

mobility ratio [PETRO ENG] The ratio of the mobility of the driving fluid (such as water) to that of the driven fluid (such as gas) in a petroleum reservoir.

mobility tensor [PL PHYS] A second-rank tensor whose product with the electric field vector for a plane wave in a plasma gives a vector equal to the average velocity of electrons or ions; components of both vectors are in phasor notation.

mobilization [GEOL] Any process by which solid rock becomes sufficiently soft and plastic to permit it to flow or to permit geochemical migration of the mobile components.

Möbius band [MATH] The nonorientable surface obtained from a rectangular strip by twisting it once and then gluing the two ends. Also known as Möbius strip.

Möbius function [MATH] The function μ of the positive integers where $\mu(1) = 1$, $\mu(n) = (-1)^r$ if n factors into r distinct primes, and $\mu(n) = 0$ otherwise; also, $\mu(n)$ is the sum of the primitive nth roots of unity.

Möbius resistor [ELEC] A nonreactive resistor made by placing strips of aluminum or other metallic tape on opposite sides of a length of dielectric ribbon, twisting the strip assembly half a turn, joining the ends of the metallic tape, then soldering leads to opposite surfaces of the resulting loop.

Möbius strip *See* Möbius band.

Möbius transformations [MATH] These are the most commonly used conformal mappings of the complex plane; their form is $f(z) = (az + b)/(cz + d)$ where the real numbers a, b, c, and d satisfy $ad - bc \neq 0$. Also known as linear fractional transformations. Also known as bilinear transformations; homographic transformations.

Mobulidae [VERT ZOO] The devil rays, a family of batoids that are surface feeders and live mostly on plankton.

mocaya oil [MATER] Oil from kernels of the Paraguayan palm (*Acrocomia sclerocarpa*), found in South America and the West Indies; used in manufacture of tinplate, soaps, candles, and margarine.

mock fog [METEOROL] A simulation of true fog by atmospheric refraction.

mock lead *See* sphalerite.

mock moon *See* paraselene.

mock ore *See* sphalerite.

mock silver [MET] **1.** An aluminum alloy containing 5% copper and 10% tin, or 5% copper and 5% silver. **2.** A white brass containing 55% zinc and 45% copper.

mock sun *See* paranthelion; parhelion.

mock sun ring *See* parhelic circle.

mockup [ENG] A model, often full-sized, of a piece of equipment, or installation, so devised as to expose its parts for study, training, or testing.

modacrylic [TEXT] Of a synthetic fiber, composed of less than 85% and more than 35% by weight of acrylonitrile units.

mode [COMMUN] Form of the information in a communication such as literal language, digital data, and video. [COMPUT SCI] One of several alternative conditions or methods of operation of a device. [ELECTROMAG] A form of propagation of guided waves that is characterized by a particular field pattern in a plane transverse to the direction of propagation. Also known as transmission mode. [PETR] The mineral composition of a rock, usually expressed as percentages of total weight or volume. [PHYS] A state of an oscillating system that corresponds to a particular field pattern and one of the possible resonant frequencies of the system. [STAT] The most frequently occurring member of a set of numbers.

mode converter *See* mode transducer.

mode eddies [OCEANOGR] Densely packed, irregularly oval high- and low-pressure centers roughly 400 kilometers in diameter in which current intensities are typically tenfold greater than the local means. Also known as mesoscale eddies.

mode filter [ELECTROMAG] A waveguide filter designed to separate waves of the same frequency but of different transmission modes.

mode jump [ELECTR] Change in mode of magnetron operation from one pulse to the next; each mode represents a different frequency and power level.

model [COMPUT SCI] *See* macroskeleton. [SCI TECH] A mathematical or physical system, obeying certain specified conditions, whose behavior is used to understand a physical, biological, or social system to which it is analogous in some way.

model atmosphere [METEOROL] Any theoretical representation of the atmosphere, particularly of vertical temperature distribution.

model basin [ENG] A large basin or tank of water where scale models of ships can be tested. Also known as model tank; towing tank.

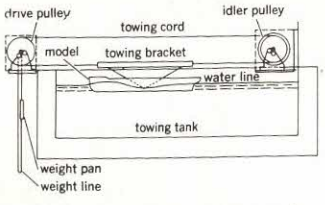
mode-locked laser [OPTICS] A laser designed so that several modes of oscillation with closely spaced wavelengths, in which the laser would normally oscillate, are synchronized so that a pulse of light, lasting for as little as a picosecond, is generated.

model reduction [CONT SYS] The process of discarding certain modes of motion while retaining others in the model used by an active control system, in order that the control system can compute control commands with sufficient rapidity.

model reference system [CONT SYS] An ideal system whose response is agreed to be optimum; computer simulation in which both the model system and the actual system are subjected to the same stimulus is carried out, and parameters of the actual system are adjusted to minimize the difference in the outputs of the model and the actual system.

model symbol [COMPUT SCI] The standard usage of geo-

MODEL BASIN



Model basin with model towed by falling weight.

metrical figures, such as squares, circles, or triangles, to help illustrate the various working parts of a model: each symbol must, nevertheless, be footnoted for complete clarification.

model tank *See* model basin.

model theory [MATH] The general qualitative study of the structure of a mathematical theory.

modem [ELECTR] A combination modulator and demodulator at each end of a telephone line to convert binary digital information to audio tone signals suitable for transmission over the line, and vice versa. Also known as dataset. Derived from modulator-demodulator.

mode number [ELECTR] **1.** The number of complete cycles during which an electron of average speed is in the drift space of a reflex klystron. **2.** The number of radians of phase in the microwave field of a magnetron divided by 2π as one goes once around the anode.

mode of oscillation *See* mode of vibration.

mode of vibration [MECH] A characteristic manner in which a system which does not dissipate energy and whose motions are restricted by boundary conditions can oscillate, having a characteristic pattern of motion and one of a discrete set of frequencies. Also known as mode of oscillation.

moder *See* coder.

moderate breeze [METEOROL] In the Beaufort wind scale, a wind whose speed is from 11 to 16 knots (13 to 18 miles per hour or 20 to 30 kilometers per hour).

moderate gale [METEOROL] In the Beaufort wind scale, a wind whose speed is from 28 to 33 knots (32 to 38 miles per hour or 52 to 61 kilometers per hour).

moderator [NUCLEO] The material used in a nuclear reactor to moderate or slow down neutrons from the high velocities at which they are created in the fission process.

modern algebra [MATH] The study of algebraic systems such as groups, rings, modules, and fields.

mode shift [ELECTR] Change in mode of magnetron operation during a pulse.

mode skip [ELECTR] Failure of a magnetron to fire on each successive pulse.

mode switch [COMPUT SCI] A preset control which affects the normal response of various components of a mechanical desk calculator. [ELECTR] A microwave control device, often consisting of a waveguide section of special cross section, which is used to change the mode of microwave power transmission in the waveguide.

mode transducer [ELECTR] Device for transforming an electromagnetic wave from one mode of propagation to another. Also known as mode converter; mode transformer.

mode transformer *See* mode transducer.

modification [ENG] A major or minor change in the design of an item, effected in order to correct a deficiency, to facilitate production, or to improve operational effectiveness. [MET] Treatment of molten aluminum alloys containing 8–13% silicon with small amounts of a sodium fluoride or sodium chloride mixture; improves mechanical properties. [SCI TECH] Any change brought about by external or internal factors.

modification kit [ENG] A collection of items not all having the same basic name which are employed individually or conjunctively to alter the design of a component or equipment.

modified asphalt [MATER] Asphalt modified by addition of a rosin ester or synthetic resin.

modified Bessel functions [MATH] The functions defined by $I_\nu(x) = \exp(-i\nu\pi/2)\, J_\nu(ix)$, where J_ν is the Bessel function of order ν, and x is real and positive.

modified constant-voltage charge [ELEC] Charging of a storage battery in which the voltage of the charging circuit is held substantially constant, but a fixed resistance is inserted in the battery circuit producing a rising voltage characteristic at the battery terminals as the charge progresses.

modified gunmetal [MET] Gunmetal containing about 2.5% lead; used for gears and bearings.

modified Hankel functions [MATH] The functions defined by $K_\nu(x) = (i\pi/2)\exp(i\nu\pi/2)\, H_\nu^{(1)}(ix)$, where $H_\nu^{(1)}$ is the first Hankel function of order ν, and x is real and positive. Also known as MacDonald functions.

modified index of refraction [METEOROL] An atmospheric index of refraction mathematically modified so that when its gradient is applied to energy propagation over a hypothetical flat earth, it is substantially equivalent to propagation over the true curved earth with the actual index of refraction. Also known as modified refractive index; refractive modulus.

modified Lambert conformal chart [MAP] A chart on the modified Lambert conformal projection. Also known as Ney's chart.

modified Lambert conformal projection [MAP] A modification of the Lambert conformal projection for use in polar regions, one of the standard parallels being at latitude 89°59′58″ and the other at latitude 71° or 74°, and the parallels being expanded slightly to form complete concentric circles. Also known as Ney's projection.

modified Lewis acid [PHYS CHEM] An acid that is a halide ion acceptor.

modified precision approach radar [NAV] A special precision radar approach landing procedure for high performance aircraft; radar guidance is provided to a landing flare point instead of a runway touchdown point.

modified rayon [TEXT] A woollike rayon fiber made with additives in the spinning solution.

modified refractive index *See* modified index of refraction.

modifier [COMPUT SCI] A quantity used to alter the address of an operand in a computer, such as the cycle index. Also known as index word. [MATER] In flotation, any of the chemicals which increase the specific attraction between collector agents and particle surfaces or which increase the wettability of those surfaces.

modifier gene [GEN] A gene that alters the phenotypic expression of a nonallelic gene.

modifier register *See* index register.

modify [COMPUT SCI] **1.** To alter a portion of an instruction so its interpretation and execution will be other than normal; the modification may permanently change the instruction or leave it unchanged and affect only the current execution; the most frequent modification is that of the effective address through the use of index registers. **2.** To alter a subroutine according to a defined parameter.

modillion [ARCH] A horizontal bracket, usually in the form of a scroll with acanthus, supporting the corona under a cornice.

moding [ELECTR] Defect of magnetron oscillation in which it oscillates in one or more undesired modes.

modiolus [ANAT] The central axis of the cochlea.

modular circuit [ELECTR] Any type of circuit assembled to form rectangular or cubical blocks that perform one or more complete circuit functions.

modularity [COMPUT SCI] The property of functional flexibility built into a computer system by assembling discrete units which can be easily joined to or arranged with other parts or units.

modular programming [COMPUT SCI] The construction of a computer program from a collection of modules, each of workable size, whose interactions are rigidly restricted.

modular structure [BUILD] A building that is constructed of preassembled or presized units of standard sizes; uses a 4-inch (10.16-centimeter) cubical module as a reference. [ELECTR] **1.** An assembly involving the use of integral multiples of a given length for the dimensions of electronic components and electronic equipment, as well as for spacings of holes in a chassis or printed wiring board. **2.** An assembly made from modules.

modulate [ELECTR] To vary the amplitude, frequency, or phase of a wave, or vary the velocity of the electrons in an electron beam in some characteristic manner.

modulated amplifier [ELECTR] Amplifier stage in a transmitter in which the modulating signal is introduced and modulates the carrier.

modulated carrier [COMMUN] Radio-frequency carrier wave whose amplitude phase or frequency has been varied according to the intelligence to be conveyed.

modulated continuous wave [COMMUN] Wave in which the carrier is modulated by a constant audio-frequency tone.

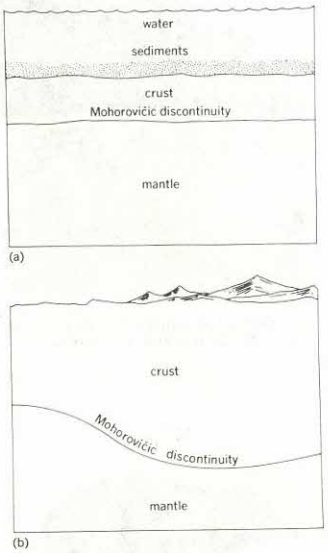
modulated Raman scattering [SPECT] Application of modulation spectroscopy to the study of Raman scattering; in particular, use of external perturbations to lower the symmetry of certain crystals and permit symmetry-forbidden modes, and the use of wavelength modulation to analyze second-order Raman spectra.

modulated stage [ELECTR] Radio-frequency stage to which the modulator is coupled and in which the continuous wave (carrier wave) is modulated according to the system of modulation and the characteristics of the modulating wave.

modulating electrode [ELECTR] Electrode to which a potential is applied to control the magnitude of the beam current.
modulating signal [COMMUN] Signal which causes a variation of some characteristics of a carrier.
modulation [COMMUN] The process or the result of the process by which some parameter of one wave is varied in accordance with some parameter of another wave. [MECH ENG] Regulation of the fuel-air mixture to a burner in response to fluctuations of load on a boiler.
modulation capability [ELECTR] Of an aural transmitter, the maximum percentage modulation that can be obtained without exceeding a given distortion figure.
modulation code [COMMUN] A code used to cause variations in a signal in accordance with a predetermined scheme; normally used to alter or modulate a carrier wave to transmit data.
modulation crest [COMMUN] The peak amplitude of an amplitude-modulated wave.
modulation-doped structure [SOLID STATE] An epitaxially grown crystal structure in which successive semiconductor layers contain different types of electrical dopants.
modulation envelope [COMMUN] A curve drawn through the peaks of a graph showing the waveform of a modulated signal; represents the waveform of the intelligence carried by the signal.
modulation factor [COMMUN] **1.** In general, the ratio of the peak variation in the modulation actually used in a transmitter to the maximum variation for which the transmitter was designed. **2.** In an amplitude-modulated wave, the ratio (usually expressed in percent) of the peak variation of the envelope from its reference value, to the reference value. Also known as index of modulation. **3.** In a frequency-modulated wave, the ratio of the actual frequency swing to the frequency swing required for 100% modulation.
modulation index [COMMUN] The ratio of the frequency deviation to the frequency of the modulating wave in a frequency-modulation system when using a sinusoidal modulating wave. Also known as ratio deviation.
modulation meter [ENG] Instrument for measuring the degree of modulation (modulation factor) of a modulated wave train, usually expressed in percent.
modulation rise [ELECTR] Increase of the modulation percentage caused by nonlinearity of any tuned amplifier, usually the last intermediate-frequency stage of a receiver.
modulation spectroscopy [SPECT] A branch of spectroscopy concerned with the measurement and interpretation of changes in transmission or reflection spectra induced (usually) by externally applied perturbation, such as temperature or pressure change, or an electric or magnetic field.
modulation transformer [ENG ACOUS] An audio-frequency transformer which matches impedances and transmits audio frequencies between one or more plates of an audio output stage and the grid or plate of a modulated amplifier.
modulation with a fixed reference [COMMUN] Phase modulation with a pilot carrier.
modulator [ELECTR] **1.** The transmitter stage that supplies the modulating signal to the modulated amplifier stage or that triggers the modulated amplifier stage to produce pulses at desired instants as in radar. **2.** A device that produces modulation by any means, such as by virtue of a nonlinear characteristic or by controlling some circuit quantity in accordance with the waveform of a modulating signal. **3.** One of the electrodes of a spacistor.
modulator crystal [OPTICS] Crystal which is used to modulate a polarized light beam by the use of the Pockel's effect; useful as a modulator in laser systems.
modulator-demodulator *See* modem.
modulator glow tube [ELECTR] Cold cathode recorder tube that is used for facsimile and sound-on-film recording; provides a modulated high-intensity point source of light.
module [AERO ENG] A self-contained unit which serves as a building block for the overall structure in space technology; usually designated by its primary function, such as command module or lunar landing module. [COMPUT SCI] **1.** A distinct and identifiable unit of computer program for such purposes as compiling, loading, and linkage editing. **2.** One memory bank and associated electronics in a computer. [ELECTR] A packaged assembly of wired components, built in a standardized size and having standardized plug-in or solderable terminations. [ENG] A unit of size used as a basic component for standardizing the design and construction of buildings, building parts, and furniture. [MATH] A vector space in which the scalars are a ring rather than a field.
modulo [MATH] **1.** A group G modulo a subgroup H is the quotient group G/H of cosets of H in G. **2.** A technique of identifying elements in an algebraic structure in such a manner that the resulting collection of identified objects is the same type of structure.
modulo N [MATH] Two integers are said to be congruent modulo N (where N is some integer) if they have the same remainder when divided by N.
modulo N arithmetic [MATH] Calculations in which all integers are replaced by their remainders after division by N (where N is some fixed integer.)
modulo N check [COMPUT SCI] A procedure for verification of the accuracy of a computation by repeating the steps in modulo N arithmetic and comparing the result with the original result (modulo N). Also known as residue check.
modulo-two adder [COMPUT SCI] A logical circuit for adding one-digit binary numbers.
modulus of a complex number *See* absolute value of a complex number.
modulus of a congruence [MATH] A number a, such that two specified numbers b and c give the same remainder when divided by a; b and c are then said to be congruent, modulus a (or congruent, modulo a).
modulus of a logarithm [MATH] The modulus of a logarithm with a given base is the factor by which a logarithm with a second base must be multiplied to give the first logarithm.
modulus of compression *See* bulk modulus of elasticity.
modulus of continuity [MATH] For a real valued continuous function f, this is the function whose value at a real number r is the maximum of the modulus of $f(x) - f(y)$ where the modulus of $x - y$ is less than r; this function is useful in approximation theory.
modulus of deformation [MECH] The modulus of elasticity of a material that deforms other than according to Hooke's law.
modulus of distance [ASTRON] The quantity $m - M$, where M is the absolute magnitude of a given star and m is its apparent magnitude. Also known as distance modulus.
modulus of elasticity [MECH] The ratio of the increment of some specified form of stress to the increment of some specified form of strain, such as Young's modulus, the bulk modulus, or the shear modulus. Also known as coefficient of elasticity; elasticity modulus; elastic modulus.
modulus of elasticity in shear [MECH] A measure of a material's resistance to shearing stress, equal to the shearing stress divided by the resultant angle of deformation expressed in radians. Also known as coefficient of rigidity; modulus of rigidity; shear modulus.
modulus of resilience [MECH] The maximum mechanical energy stored per unit volume of material when it is stressed to its elastic limit.
modulus of rigidity *See* modulus of elasticity in shear.
modulus of rupture in bending [MECH] The maximum stress per unit area that a specimen can withstand without breaking when it is bent, as calculated from the breaking load under the assumption that the specimen is elastic until rupture takes place.
modulus of rupture in torsion [MECH] The maximum stress per unit area that a specimen can withstand without breaking when its ends are twisted, as calculated from the breaking load under the assumption that the specimen is elastic until rupture takes place.
modulus of strain hardening *See* rate of strain hardening.
modulus of torsion *See* torsional modulus.
modulus of volume elasticity *See* bulk modulus of elasticity.
moellen *See* degras.
Moeller-Barlow disease *See* infantile scurvy.
Moeritheriidae [PALEON] The single family of the extinct order Moeritherioidea.
Moeritherioidea [PALEON] A suborder of extinct sirenian mammals considered as primitive proboscideans by some authorities and as a sirenian offshoot by others.
mofette [GEOL] A small opening emitting carbon dioxide in an area of late-stage volcanic activity.
mohair [TEXT] A sleek, lustrous fabric made of angora goat fibers.
Mohaupt effect [ORD] The effect of a metal liner introduced in a shaped charge to increase penetration.

mohavite *See* tincalconite.
Mohawkian [GEOL] A North American stage of middle Ordovician geologic time, above Chazyan and below Edenian.
mohm [MECH] A unit of mechanical mobility, equal to the reciprocal of 1 mechanical ohm.
Mohnian [GEOL] A North American stage of geologic time: Miocene (above Luisian, below Delmontian).
Moho *See* Mohorovičić discontinuity.
Mohole drilling [GEOL] Drilling aimed at penetration of the earth's crust, through the Mohorovičić discontinuity, to sample the mantle.
Mohorovičić discontinuity [GEOPHYS] A seismic discontinuity that separates the earth's crust from the subjacent mantle, inferred from travel time curves indicating that seismic waves undergo a sudden increase in velocity. Also known as Moho.
Mohr cubic centimeter [CHEM ENG] A unit of volume used in saccharimetry, equal to the volume of 1 gram of water at a specified temperature, usually 17.5°C, in which case, it is equal to 1.00238 cubic centimeters.
Mohr liter [MECH] A unit of volume, equal to 1000 Mohr cubic centimeters.
Mohr's circle [MECH] A graphical construction making it possible to determine the stresses in a cross section if the principal stresses are known.
Mohr's salt *See* ferrous ammonium sulfate.
Mohr titration [ANALY CHEM] Titration with silver nitrate to determine the concentration of chlorides in a solution; silver chromate precipitation is the end-point indicator.
mohsite *See* ilmenite.
Mohs scale [MINERAL] An empirical scale consisting of 10 minerals with reference to which the hardness of all other minerals is measured; it includes, from softest (designated 1) to hardest (10): talc, gypsum, calcite, fluorite, apatite, orthoclase, quartz, topaz, corundum, and diamond.
moiety [CHEM] A part or portion of a molecule, generally complex, having a characteristic chemical or pharmacological property.
moil [MIN ENG] A long steel wedge with a rounded point used for breaking up rocks in a mine.
moiré [COMMUN] In television, the spurious pattern in the reproduced picture resulting from interference beats between two sets of periodic structures in the image. [GRAPHICS] Undesirable patterns that occur when a halftone is made from a previously printed halftone or steel engraving; they are caused by the conflict between the dot arrangement produced by the halftone screen and the dots or lines of the original halftone or engraving; careful rotation of the halftone screen by the photographer or engraver may minimize moiré. [TEXT] A fabric finish in which the warp has yarn of harder twist than the filling, with a surface pattern resembling water ripples that is produced by engraved rollers, heat, pressure, steam, and chemicals.
moiré effect [OPTICS] The effect whereby, when one family of curves is superposed on another family of curves so that the curves cross at angles of less than about 45°, a new family of curves appears which pass through intersections of the original curves.
moiré fringes [OPTICS] The bands which appear in the moiré effect.
moissanite [MINERAL] SiC A carbide mineral found in meteorites; identical with artificial carborundum.
moist adiabat *See* saturation adiabat.
moist-adiabatic lapse rate *See* saturation-adiabatic lapse rate.
moist air [METEOROL] **1.** In atmospheric thermodynamics, air that is a mixture of dry air and any amount of water vapor. **2.** Generally, air with a high relative humidity.
moist climate [CLIMATOL] In C.W. Thornthwaite's climatic classification, any type of climate in which the seasonal water surplus counteracts seasonal water deficiency; thus it has a moisture index greater than zero.
moist-heat sterilization [ENG] Sterilization with steam under pressure, as in an autoclave, pressure cooker, or retort; most bacteriological media are sterilized by autoclaving at 121°C, with 15 pounds (103 kilopascals) of pressure, for 20 minutes or more.
moisture [CLIMATOL] The quantity of precipitation or the precipitation effectiveness. [METEOROL] The water vapor content of the atmosphere, or the total water substance (gaseous, liquid, and solid) present in a given volume of air. [PHYS CHEM] Water that is dispersed through a gas in the form of water vapor or small droplets, dispersed through a solid, or condensed on the surface of a solid.
moisture adjustment [METEOROL] The adjustment of observed precipitation in a storm by the ratio of the estimated probable maximum precipitable water over the basin under study to the actual precipitable water calculated for the particular storm.
moisture barrier [MATER] A material that retards the passage of moisture into walls.
moisture content [MECH] The quantity of water in a mass of soil, sewage, sludge, or screenings; expressed in percentage by weight of water in the mass.
moisture factor [METEOROL] One of the simplest measures of precipitation effectiveness: moisture factor $= P/T$, where P is precipitation in centimeters and T is temperature degrees centigrade for the period in question.
moisture film cohesion *See* apparent cohesion.
moisture flux *See* eddy flux.
moisture inversion [METEOROL] An increase with height of the moisture content of the air; specifically, the layer through which this increase occurs, or the altitude at which the increase begins.
moisture loss [MECH ENG] The difference in heat content between the moisture in the boiler exit gases and that of moisture at ambient air temperature.
moisture-vapor transmission [FL MECH] The rate at which water vapor permeates a porous film (such as plastic or paper) or a wall.
Moko disease [PL PATH] Bacterial wilt of banana caused by *Pseudomonas solanacearum*.
mol *See* mole.
MOL *See* manned orbiting laboratory.
molal average boiling point [PHYS CHEM] A pseudo boiling point for a mixture calculated as the summation of individual mole fraction–boiling point (in degrees Rankine) products.
molal heat capacity *See* molar heat capacity.
molality [CHEM] Concentration given as moles per 1000 grams of solvent.
molal quantity [CHEM] The number of moles (gram-molecular weights) present, expressed with weight in pounds, grams, or such units, numerically equal to the molecular weight; for example, pound-mole, gram-mole.
molal solution [CHEM] Concentration of a solution expressed in moles of solute divided by 1000 grams of solvent.
molal specific heat *See* molar specific heat.
molal volume *See* molar volume.
molar [ANAT] **1.** A tooth adapted for grinding. **2.** Any of the three pairs of cheek teeth behind the premolars on each side of the jaws in humans.
molar conductivity [PHYS CHEM] The ratio of the conductivity of an electrolytic solution to the concentration of electrolyte in moles per unit volume.
molar dispersion [OPTICS] In refractometry, the difference in molar refraction (refractive index) of a compound at two different light-beam wavelengths.
molar heat capacity [PHYS CHEM] The amount of heat required to raise 1 mole of a substance 1° in temperature. Also known as molal heat capacity; molecular heat capacity.
molarity [CHEM] Measure of the number of gram-molecular weights of a compound present (dissolved) in 1 liter of solution; it is indicated by M, preceded by a number to show solute concentration.
molar refraction [OPTICS] Equation for the refractive index of a compound modified by the compound's molecular weight and density. Also known as the Lorentz-Lorenz molar refraction.
molar solution [CHEM] Aqueous solution that contains 1 mole (gram-molecular weight) of solute in 1 liter of the solution.
molar specific heat [PHYS CHEM] The ratio of the amount of heat required to raise the temperature of 1 mole of a compound 1°, to the amount of heat required to raise the temperature of 1 mole of a reference substance, such as water, 1° at a specified temperature. Also known as molal specific heat; molecular specific heat.
molar susceptibility [PHYS CHEM] Magnetic susceptibility of a compound per gram-mole of that compound.
molar volume [PHYS CHEM] The volume occupied by one mole of a substance in the form of a solid, liquid, or gas. Also known as molal volume; mole volume.
molasse [GEOL] A paralic sedimentary facies consisting

MOHOROVIČIĆ DISCONTINUITY



Mohorovičić discontinuity. *(a)* At average depths of about 10–12 kilometers beneath ocean basins. *(b)* At average subcontinental depths of 33–35 kilometers.

MOIRÉ EFFECT

Two simple gratings crossed at a small angle.

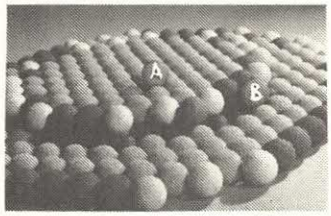
MOLD LOFT

Interior of a mold loft. *(Newport News Shipbuilding photograph)*

MOLE

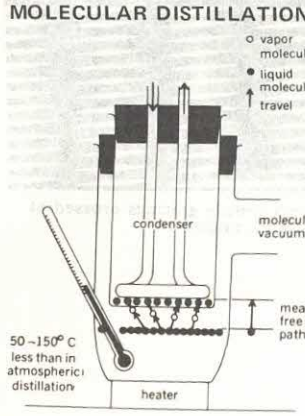
The European common mole, with thick black fur, a reduced tail, and spadelike forelimbs.

MOLECULAR BINDING



A model of a crystal surface showing different types of molecular binding sites. Molecule *A* resting on completed plane of molecules is more weakly bound than molecule *B* at ledge formed by incomplete plane. *(General Electric Co.)*

MOLECULAR DISTILLATION



Schematic diagram illustrating distillation at molecular distillation conditions.

mainly of shale, subgraywacke sandstone, and conglomerate; it is more clastic and less rhythmic than the preceding flysch and is generally postorogenic.

molasses [FOOD ENG] A brown viscid syrup prepared from raw sugar during sugar manufacturing processes.

molasses/A.N. explosive [MATER] An explosive mixture consisting of ammonium nitrate mixed with molasses and water.

mold [ENG] **1.** A pattern or template used as a guide in construction. **2.** A cavity which imparts its form to a fluid or malleable substance. [ENG ACOUS] The metal part derived from the master by electroforming in reproducing disk recordings; has grooves similar to those of the recording. [GEOL] Soft, crumbling friable earth. [GRAPHICS] **1.** To form a plastic substance by placing it in a matrix or form. **2.** The form or matrix for shaping a plastic substance. [MYCOL] Any of various woolly fungus growths. [PALEON] An impression made in rock or earth material by an inner or outer surface of a fossil shell or other organic structure; a complete mold would be the hollow space.

moldability [MATER] The capability of being molded.

moldauite *See* moldavite.

moldavite [GEOL] A translucent, olive- to brownish-green or pale-green tektite from western Czechoslovakia, characterized by surface sculpturing due to solution etching. Also known as moldauite; pseudochrysolite; vitavite. [MINERAL] A variety of ozocerite from Moldavia.

mold base [ENG] The assembly of all parts of an injection mold except the cavity, cores, and pins.

moldboard plow [AGR] A plow equipped with a curved iron plate (moldboard) that lifts and turns the soil. Also known as turnplow.

molded breadth [NAV ARCH] The maximum breadth of a ship measured to the outside of the frame bar usually at the midship section.

molded capacitor [ELEC] Capacitor, usually mica, that has been encased in a molded plastic insulating material.

molded depth [NAV ARCH] The vertical distance from the base line to the molded line of the main deck at side measured at the midship section.

molded-fabric bearing [DES ENG] A bearing composed of laminations of cotton or other fabric impregnated with a phenolic resin and molded under heat and pressure.

molded lines [ENG] Full-size lines of a ship or airplane which are laid out in a mold loft. [NAV ARCH] Line drawings of a ship which represent the shape inside the plating or outside the planking on a wooden vessel.

mold efficiency [ENG] In a multimold blow-molding system, the percentage of the total turn-around time actually required for the forming, cooling, and ejection of the formed objects.

molding [ARCH] A continuous contour surface of rectangular or curved profile, used on a plane surface such as a wall to effect a transition or create a decorative effect by the play of shadow and light on it.

molding cycle [ENG] **1.** The time required for a complete sequence of molding operations. **2.** The combined operations required to produce a set of moldings.

molding machine [MET] A machine that compacts sand around a pattern to form a mold.

molding powder [MATER] Powdered plastic-material ingredients (such as resin, filler, pigments, and plasticizers) ready for compression in molding.

molding press [MET] A press used to form compacts in powder metallurgy.

molding pressure [ENG] Pressure needed to force softened plastic to fill a mold cavity.

molding shrinkage [ENG] Difference in dimensions between the molding and the mold cavity, measured at normal room temperature.

molding time *See* curing time.

mold loft [ENG] A large building with a smooth wooden floor where full-size lines of a ship or airplane are laid down and templates are constructed from them to lay off the steel for cutting.

mold release *See* release agent.

mold shift [MET] The mismatch of mold halves at the parting line, resulting in a casting defect.

mold steel [MET] Steel of tool-steel quality used to make molds for plastics; properties include uniform texture, good machinability with die-sinking tools, and lack of microscopic porosity.

mold wash [MET] An aqueous or alcoholic suspension or emulsion used to coat the surfaces of a mold cavity.

mole [CHEM] An amount of substance of a system which contains as many elementary units as there are atoms of carbon in 0.012 kilogram of the pure nuclide carbon-12; the elementary unit must be specified and may be an atom, molecule, ion, electron, photon, or even a specified group of such units. Symbolized mol. [CIV ENG] A breakwater or berthing facility, extending from shore to deep water, with a core of stone or earth. [MECH ENG] A mechanical tunnel excavator. [MED] **1.** A mass formed in the uterus by the maldevelopment of all or part of the embryo or of the placenta and membranes. **2.** A fleshy, pigmented nevus. [VERT ZOO] Any of 19 species of insectivorous mammals composing the family Talpidae; the body is stout and cylindrical, with a short neck, small or vestigial eyes and ears, a long naked muzzle, and forelimbs adapted for digging.

molectronics *See* molecular electronics.

molecular adhesion [PHYS CHEM] A particular manifestation of intermolecular forces which causes solids or liquids to adhere to each other; usually used with reference to adhesion of two different materials, in contrast to cohesion.

molecular amplitude [ANALY CHEM] The difference between the molecular rotation at the extreme (peak or trough) value caused by the longer light wavelength and the molecular rotation at the extreme value caused by the shorter wavelength.

molecular association [PHYS CHEM] The formation of double molecules or polymolecules from a single species as a result of specific and moderately strong intermolecular forces.

molecular asymmetry *See* asymmetry.

molecular attraction [PHYS CHEM] A force which pulls molecules toward each other.

molecular beam [PHYS] A beam of neutral molecules whose directions of motion lie within a very small solid angle.

molecular-beam apparatus [PHYS] A device in which a molecular beam in a vacuum is subjected to magnetic fields, oscillating fields, or other influences, and a detector measures the resulting intensity of the beam at some location; used primarily in radio-frequency spectroscopy.

molecular beam epitaxy [SOLID STATE] A technique of growing single crystals in which beams of atoms or molecules are made to strike a single-crystalline substrate in a vacuum, giving rise to crystals whose crystallographic orientation is related to that of the substrate. Abbreviated MBE.

molecular binding [SOLID STATE] The force which holds a molecule at some site on the surface of a crystal.

molecular biology [BIOL] That part of biology which attempts to interpret biological events in terms of the physicochemical properties of molecules in a cell.

molecular circuit [ELECTR] A circuit in which the individual components are physically indistinguishable from each other.

molecular conductivity [PHYS CHEM] The conductivity of a volume of electrolyte containing 1 mole of dissolved substance.

molecular crystal [CRYSTAL] A solid consisting of a lattice array of molecules such as hydrogen, methane, or more complex organic compounds, bound by weak van der Waals forces, and therefore retaining much of their individuality.

molecular diamagnetism [PHYS CHEM] Diamagnetism of compounds, especially organic compounds whose susceptibilities can often be calculated from the atoms and chemical bonds of which they are composed.

molecular diameter [PHYS CHEM] The diameter of a molecule, assuming it to be spherical; has a numerical value of 10^{-8} centimeter multiplied by a factor dependent on the compound or element.

molecular diffusion [FL MECH] The transfer of mass between adjacent layers of fluid in laminar flow.

molecular dipole [PHYS CHEM] A molecule having an electric dipole moment, whether it is permanent or produced by an external field.

molecular distillation [CHEM] A process by which substances are distilled in high vacuum at the lowest possible temperature and with least damage to their composition.

molecular drag pump [ENG] A vacuum pump in which pumping is accomplished by imparting a high momentum to the gas molecules by impingement of a body rotating at very high

speeds, as much as 16,000 revolutions per minute; such pumps achieve a vacuum as high as 10^{-6} torr.

molecular effusion [FL MECH] Mass-transfer flow mechanism of free-molecule transfer through pores or orifices.

molecular electronics [ELECTR] The branch of electronics that deals with the production of complex electronic circuits in microminiature form by producing semiconductor devices and circuit elements integrally while growing multizoned crystals in a furnace. Also known as molectronics.

molecular energy level [PHYS CHEM] One of the states of motion of nuclei and electrons in a molecule, having a definite energy, which is allowed by quantum mechanics.

molecular engineering [ELECTR] The use of solid-state techniques to build, in extremely small volumes, the components necessary to provide the functional requirements of overall equipments, which when handled in more conventional ways are vastly bulkier.

molecular exclusion chromatography *See* gel filtration.

molecular field theory *See* Weiss theory.

molecular flow [FL MECH] Gas-flow phenomenon at low pressures or in small channels when the mean free path is of the same order of magnitude as the channel diameter; a gas molecule thus migrates along the channel independent of other gas molecules present.

molecular gas [CHEM] A gas composed of a single species, such as oxygen, chlorine, or neon.

molecular gas laser [OPTICS] Any gas laser in which the gas consists of molecules rather than atoms; such a laser can be operated on a large number of rotational-vibrational lines, and, at a sufficiently high pressure, these lines overlap and a wide gain region is obtained. Also known as molecular laser.

molecular genetics [MOL BIO] The approach which deals with the physics and chemistry of the processes of inheritance.

molecular heat [THERMO] The heat capacity per mole of a substance.

molecular heat capacity *See* molar heat capacity.

molecular heat diffusion [THERMO] Transfer of heat through the motion of molecules.

molecularity [PHYS CHEM] In a chemical reaction, the number of molecules which come together and form the activated complex.

molecular laser *See* molecular gas laser.

molecular magnet [PHYS CHEM] A molecule having a nonvanishing magnetic dipole moment, whether it is permanent or produced by an external field.

molecular optics [OPTICS] The study of the propagation of light and associated phenomena, such as refraction, absorption, and scattering, through collections of molecules in gases, liquids, and solids.

molecular orbital [PHYS CHEM] A wave function describing an electron in a molecule.

molecular paramagnetism [PHYS CHEM] Paramagnetism of molecules, such as oxygen, some other molecules, and a large number of organic compounds.

molecular pathology [PATH] The study of the bases and mechanisms of disease on a molecular or chemical level.

molecular physics [PHYS] The study of the behavior and structure of molecules, including the quantum-mechanical explanation of several kinds of chemical binding between atoms in a molecule, directed valence, the polarizability of molecules, the quantization of vibrational, rotational, and electronic motions of molecules, and the phenomena arising from intermolecular forces.

molecular polarizability [PHYS CHEM] The electric dipole moment induced in a molecule by an external electric field, divided by the magnitude of the field.

molecular pump [MECH ENG] A vacuum pump in which the molecules of the gas to be exhausted are carried away by the friction between them and a rapidly revolving disk or drum.

molecular relaxation [PHYS CHEM] Transition of a molecule from an excited energy level to another excited level of lower energy or to the ground state.

molecular rotation [OPTICS] In a solution of an optically active compound, the specific rotation (angular rotation of polarized light) multiplied by the compound's molecular weight.

molecular sieve chromatography *See* gel filtration.

molecular specific heat *See* molar specific heat.

molecular spectroscopy [SPECT] The production, measurement, and interpretation of molecular spectra.

molecular spectrum [SPECT] The intensity of electromagnetic radiation emitted or absorbed by a collection of molecules as a function of frequency, wave number, or some related quantity.

molecular still [CHEM] An apparatus used to conduct molecular distillation.

molecular stopping power [NUCLEO] For an ionzing particle passing through a compound, the particle's energy loss per molecule within a unit area normal to the particle's path; equal to the linear energy transfer (energy loss per unit path length) divided by the number of molecules per unit volume.

molecular structure [PHYS CHEM] The manner in which electrons and nuclei interact to form a molecule, as elucidated by quantum mechanics and a study of molecular spectra.

molecular theory *See* kinetic theory.

molecular vibration [PHYS CHEM] The theory that all atoms within a molecule are in continuous motion, vibrating at definite frequencies specific to the molecular structure as a whole as well as to groups of atoms within the molecule; the basis of spectroscopic analysis.

molecular volume [CHEM] The volume that is occupied by 1 mole (gram-molecular weight) of an element or compound; equals the molecular weight divided by the density.

molecular weight [CHEM] The sum of the atomic weights of all the atoms in a molecule.

molecular-weight distribution [ORG CHEM] Frequency of occurrence of the different molecular-weight chains in a homologous polymeric system.

molecule [CHEM] A group of atoms held together by chemical forces; the atoms in the molecule may be identical as in H_2, S_2, and S_8, or different as in H_2O and CO_2; a molecule is the smallest unit of matter which can exist by itself and retain all its chemical properties.

mole drain [CIV ENG] A subsurface channel for water drainage; formed by pulling a solid object, usually a solid cylinder having a wedge-shaped point at one end, through the soil at the proper slope and depth.

mole fraction [CHEM] The ratio of the number of moles of a substance in a mixture or solution to the total number of moles of all the components in the mixture or solution.

mole mining [MIN ENG] A method of working coal seams about 30 inches (75 centimeters) thick; a small continuous-miner type of machine is used, which is remote-controlled from the roadway, without associated supports.

mole percent [CHEM] Percentage calculation expressed in terms of moles rather than weight.

moleskin [TEXT] Rugged satin-weave cotton with a soft napped back having a one-warp, two-filling construction.

mole volume *See* molar volume.

Molidae [VERT ZOO] A family of marine fishes, including some species of sunfishes, in the order Perciformes.

molinate [ORG CHEM] $C_9H_{17}NOS$ A light yellow liquid with limited solubility in water; used as an herbicide to control watergrass in rice. Also known as *S*-ethyl hexahydro-1*H*-azepine-1-carbothioate.

Møller scattering [QUANT MECH] Scattering of electrons by electrons.

Mollicutes [MICROBIO] The mycoplasmas, a class of prokaryotic organisms lacking a true cell wall; cells are very small to submicroscopic.

Mollier diagram [THERMO] Graph of enthalpy versus entropy of a vapor on which isobars, isothermals, and lines of equal dryness are plotted.

Mollisol [GEOL] An order of soils having dark or very dark, friable, thick A horizons high in humus and bases such as calcium and magnesium; most have lighter-colored or browner B horizons that are less friable and about as thick as the A horizons; all but a few have paler C horizons, many of which are calcareous.

Moll thermopile [ENG] A thermopile used in some types of radiation instruments; alternate junctions of series-connected manganan-constantan thermocouples are embedded in a shielded nonconducting plate having a large heat capacity; the remaining junctions, which are blackened, are exposed directly to the radiation; the voltage developed by the thermocouple is proportional to the intensity of radiation.

Mollusca [INV ZOO] One of the divisions of phyla of the animal kingdom containing snails, slugs, octopuses, squids, clams, mussels, and oysters; characterized by a shell-secreting organ, the mantle, and a radula, a food-rasping organ located in the forward area of the mouth.

molluscicide [MATER] An agent that kills mollusks.

molluscum contagiosum [MED] A viral disease of the skin, characterized by one or more discrete, waxy, dome-shaped nodules with frequent umbilication.

mollusk [INV ZOO] Any member of the Mollusca.

Molossidae [VERT ZOO] The free-tailed bats, a family of tropical and subtropical insectivorous mammals in the order Chiroptera.

Molpadida [INV ZOO] An order of sea cucumbers belonging to the Apodacea and characterized by a short, plump body bearing a taillike prolongation.

Molpadidae [INV ZOO] The single family of the echinoderm order Molpadida.

molt [PHYSIO] To shed an outer covering as part of a periodic process of growth.

molten-salt reactor [NUCLEO] A nuclear reactor in which the fissile and fertile material, in the form of fluoride salts, is dissolved in the coolant, which is a molten mixture of salts such as lithium fluoride and beryllium fluoride. Abbreviated MSR. Also known as fused-salt reactor.

molting hormone [BIOCHEM] Any of several hormones which activate molting in arthropods.

molybdate [INORG CHEM] A salt derived from a molybdic acid.

molybdate orange [MATER] Pigment that is a solid solution of lead chromate, molybdate, and sulfate; used in paints, inks, and plastics.

molybdenite [MINERAL] MoS_2 A metallic, lead-gray mineral that crystallizes in the hexagonal system and is commonly found in scales or foliated masses; hardness is 1.5 on Mohs scale, and specific gravity is 4.7; it is chief ore of molybdenum.

molybdenum [CHEM] A chemical element, symbol Mo, atomic number 42, and atomic weight 95.95. [MET] A silvery-gray metal used in iron-based alloys.

molybdenum cast iron [MET] Cast iron containing small amounts of molybdenum, added as ferromolybdenum or calcium molybdenum; increases strength, toughness, and wear resistance.

molybdenum dioxide [INORG CHEM] MoO_2 Lead-gray powder; insoluble in hydrochloric and hydrofluoric acids; used in pigment for textiles.

molybdenum disilicide [INORG CHEM] $MoSi_2$ A dark gray, crystalline powder with a melting range of 1870–2030°C; soluble in hydrofluoric and nitric acids; used in electrical resistors and for protective coatings for high-temperature conditions.

molybdenum disulfide [INORG CHEM] MoS_2 A black lustrous powder, melting at 1185°C, insoluble in water, soluble in aqua regia and concentrated sulfuric acid; used as a dry lubricant and an additive for greases and oils. Also known as molybdenum sulfide; molybdic sulfide.

molybdenum pentachloride [INORG CHEM] $MoCl_5$ Hygroscopic gray-black needles melting at 194°C; reacts with water and air; soluble in anhydrous organic solvents; used as a catalyst and as raw material to make molybdenum hexacarbonyl.

molybdenum sesquioxide [INORG CHEM] Mo_2O_3 Water-insoluble, gray-black powder with slight solubility in acids; used as a catalyst and as a coating for metal articles.

molybdenum silicide [MET] A mixture of molybdenum, silicon, and iron in the proportion 60:30:10; used to introduce molybdenum into steel melts.

molybdenum steel [MET] **1.** A carbon steel containing usually less than 0.5% molybdenum to aid hardenability. **2.** A tool steel containing up to 10% molybdenum, up to 1.5% carbon, and varying amounts of chromium, vanadium tungsten, and sometimes cobalt.

molybdenum sulfide *See* molybdenum disulfide.

molybdenum trioxide [INORG CHEM] MoO_3 A white solid at room temperature, with a melting point of 795°C; soluble in concentrated mixtures of nitric and sulfuric acids and nitric and hydrochloric acids; used as a corrosion inhibitor, in enamels and ceramic glazes, in medicine and agriculture, and as a catalyst in the petroleum industry.

molybdic acid [INORG CHEM] Any acid derived from molybdenum trioxide, especially the simplest acid H_2MoO_4, obtained as white crystals.

molybdic ocher *See* molybdite.

molybdic sulfide *See* molybdenum disulfide.

molybdine *See* molybdite.

molybdite [MINERAL] MoO_3 A mineral, much of which is actually ferrimolybdite. Also known as molybdic ocher; molybdine.

molybdophyllite [MINERAL] $(Pb,Mg)_2SiO_4 \cdot H_2O$ A colorless, white, or pale-green mineral composed of a silicate of lead and magnesium.

moly-blacks [MATER] Lustrous, black, molybdenum-containing decorative coatings used to blacken zinc or zinc-base alloys.

molysite [MINERAL] $FeCl_3$ A brownish-red or yellow mineral composed of native ferric chloride, occurring in lava at Vesuvius.

molysmophobia [PSYCH] Abnormal fear of infection or contamination.

moment [MECH] Static moment of some quantity, except in the term "moment of inertia." [STAT] The *n*th moment of a distribution $f(x)$ about a point x_0 is the expected value of $(x-x_0)^n$, that is, the integral of $(x-x_0)^n df(x)$, where $df(x)$ is the probability of some quantity's occurrence; the first moment is the mean of the distribution, while the variance may be found in terms of the first and second moments.

momental ellipsoid *See* inertia ellipsoid.

moment coefficient [AERO ENG] The coefficients used for moment are similar to coefficients of lift, drag, and thrust, and are likewise dimensionless; however, these must include a characteristic length, in addition to the area; the span is used for rolling or yawing moment, and the chord is used for pitching moment.

moment diagram [MECH] A graph of the bending moment at a section of a beam versus the distance of the section along the beam.

moment of force *See* torque.

moment of inertia [MECH] The sum of the products formed by multiplying the mass (or sometimes, the area) of each element of a figure by the square of its distance from a specified line. Also known as rotational inertia.

moment of momentum *See* angular momentum.

momentum [MECH] Also known as linear momentum; vector momentum. **1.** For a single nonrelativistic particle, the product of the mass and the velocity of a particle. **2.** For a single relativistic particle, $m\mathbf{v}/(1-v^2/c^2)^{1/2}$, where m is the rest-mass, $\mathbf{v}$ the velocity, and c the speed of light. **3.** For a system of particles, the vector sum of the momenta (as in the first or second definition) of the particles.

momentum conservation *See* conservation of momentum.

momentum density [PHYS] The momentum per unit volume of any given field.

momentum thrust *See* thrust.

momentum-transport hypothesis [FL MECH] The hypothesis that the principle of conservation of momentum is valid in turbulent eddy transfer.

momentum wave function [QUANT MECH] A function of the momenta of a system of particles and of time which results from taking Fourier transforms, over the coordinates of all the particles, of the Schrödinger wave function; the absolute value squared is proportional to the probability that the particles will have given momenta at a given time.

Momertz-Lentz system [MIN ENG] Placement of two winding engines alongside the top of the mine shaft using the shaft collar as a common foundation; results in practically vertical ropes and less rope oscillation.

Momotidae [VERT ZOO] The motmots, a family of colorful New World birds in the order Coraciiformes.

monactine [INV ZOO] A single-rayed spicule in the sponges.

monadelphous [BOT] Having the filaments of the stamens united into one set.

monadic operation [COMPUT SCI] An operation on one operand, such as a negation.

Monadidae [INV ZOO] A family of flagellated protozoans in the order Kinetoplastida having two flagella of uneven length.

monadnock [GEOL] A remnant hill of resistant rock rising abruptly from the level of a peneplain; commonly represents an outcrop of rock that has withstood erosion. Also known as torso mountain.

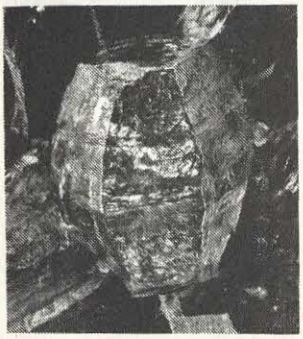
monalbite [MINERAL] A modification of albite with monoclinic symmetry that is stable under equilibrium conditions at temperatures (about 1000°C) near the melting point.

monandrous [BOT] Having one stamen.

monatomic [CHEM] Composed of one atom.

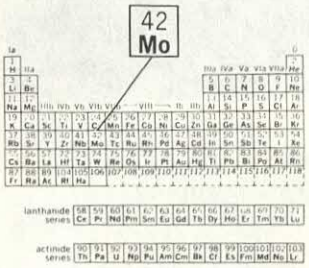
monatomic gas [CHEM] A gas whose molecules have only one atom; the inert gases are examples.

MOLYBDENITE



Molybdenite on biotite mica from Edison, New Jersey. *(American Museum of Natural History Specimens)*

MOLYBDENUM



Periodic table of the chemical elements showing the position of molybdenum.

monaural sound [ENG ACOUS] Sound produced by a system in which one or more microphones are connected to a single transducing channel which is coupled to one or two earphones worn by the listener.

monaxon [INV ZOO] A spicule formed by growth along a single axis.

monazite [MINERAL] A yellow or brown rare-earth phosphate monoclinic mineral with appreciable substitution of thorium for rare-earths and silicon for phosphorus; the principal ore of the rare earths and of thorium. Also known as cryptolite.

monchiquite [PETR] A lamprophyre composed of olivine, pyroxene, and usually mica or amphibole phenocrysts embedded in a glass or analcime groundmass.

Mönckeberg's arteriosclerosis *See* medial arteriosclerosis.

Monday fever *See* metal fume fever.

Mond process [MET] A process for extracting and purifying nickel whereby nickel carbonyl is first formed by reaction of the reduced metal with carbon monoxide, and then the nickel carbonyl is decomposed thermally, resulting in deposition of nickel.

Monera [BIOL] A kingdom that includes the bacteria and blue-green algae in some classification schemes.

monestrous [PHYSIO] Having a single estrous cycle per year.

monetite [MINERAL] $CaHPO_4$ A yellowish-white mineral consisting of an acid calcium hydrogen phosphate, occurring in crystals.

Monge's disease *See* mountain sickness.

Monge's theorem [MATH] For three coplanar circles, and for radii of these circles which are parallel to each other, the three outer centers of similitude of the circles taken in pairs lie on a single straight line, and any two inner centers of similitude lie on a straight line with one of the outer centers.

Mongolian spot [MED] A focal bluish-gray discoloration of the skin of the lower back, also aberrantly on the face, present at birth and fading gradually.

mongolism *See* Down's syndrome.

mongoloid [ANTHRO] Characteristic of a Far Eastern racial stock and often American Indians; features yellow complexion, a broad flat face with small nose and prominent cheekbones, and eyes that have an epicanthal fold. [MED] Having physical characteristics associated with Down's syndrome.

mongoose [VERT ZOO] The common name for 39 species of carnivorous mammals which are members of the family Viveridae; they are plantigrade animals and have a long slender body, short legs, nonretractile claws, and scent glands.

Monhysterida [INV ZOO] An order of aquatic nematodes in the subclass Chromadoria.

Monhysteroidea [INV ZOO] A superfamily of free-living nematodes in the order Monhysterida characterized by single or paired outstretched ovaries, circular to cryptospiral amphids, and a stoma which is usually shallow and unarmed.

Monilia albicans *See* Candida albicans.

Moniliaceae [MYCOL] A family of fungi in the order Moniliales; sporophores are usually lacking, but when present they are aggregated into fascicles, and hyphae and spores are hyaline or brightly colored.

Moniliales [MYCOL] An order of fungi of the Fungi Imperfecti containing many plant pathogens; asexual spores are always formed free on the surface of the material on which the organism is living, and never occur in either pycnidia or acervuli.

monilial vaginitis [MED] Inflammation of the vagina caused by a fungus of the genus *Monilia*.

moniliasis *See* candidiasis.

moniliform [BIOL] Constructed with contractions and expansions at regular alternating intervals, giving the appearance of a string of beads.

monimolimnion [HYD] The dense bottom stratum of a meromictic lake; it is stagnant and does not mix with the water above.

monimolite [MINERAL] $(Pb,Ca)_3Sb_2O_8$ Yellowish to brownish or greenish mineral composed of lead calcium antimony oxide; it may contain ferrous iron.

monitor [COMPUT SCI] To supervise a program, and check that it is operating correctly during its execution, usually by means of a diagnostic routine. [ENG] **1.** An instrument used to measure continuously or at intervals a condition that must be kept within prescribed limits, such as radioactivity at some point in a nuclear reactor, a variable quantity in an automatic process control system, the transmissions in a communication channel or bank, or the position of an aircraft in flight. **2.** To use meters or special techniques to measure such a condition. **3.** A person who watches a monitor. [MIN ENG] *See* hydraulic monitor. [VERT ZOO] Any of 27 carnivorous, voracious species of the reptilian family Varanidae characterized by a long, slender forked tongue and a dorsal covering of small, rounded scales containing pointed granules.

monitor board [COMMUN] A console at which a supervising telephone operator sits and from which she can intercept calls being handled by other operators.

monitor control dump [COMPUT SCI] A memory dump routinely carried out by the system once a program has been run.

monitor display [COMPUT SCI] The facility of stopping the central processing unit and displaying information of main storage and internal registers; after manual intervention, normal instruction execution can be initiated.

monitoring amplifier [ELECTR] A power amplifier used primarily for evaluation and supervision of a program.

monitoring key [ELECTR] Key which, when operated, makes it possible for an attendant or operator to listen on a telephone circuit without appreciably impairing transmission on the circuit.

monitor mode *See* master mode.

monitor operating system [COMPUT SCI] The control of the routines which achieves efficient use of all the hardware components.

monitor printer [COMMUN] A teleprinter used in a technical control facility or communications center for checking incoming teletypewriter signals. [COMPUT SCI] Input-output device, capable of receiving coded signals from the computer, which automatically operates the keyboard to print a hard copy and, when desired, to punch paper tape.

monitor routine *See* executive routine.

monitor system *See* executive system.

monitor system components [COMPUT SCI] The set of programs which form the complete operating system: the control program (task management, job management, and data management routines) and the processing programs.

monkey [MIN ENG] **1.** An appliance for mechanically gripping or releasing the rope in rope haulage. **2.** An airway in an anthracite mine. [VERT ZOO] Any of several species of frugivorous and carnivorous primates which compose the families Cercopithecidae and Cebidae in the suborder Anthropoidea; the face is typically flattened and hairless, all species are pentadactyl, and the mammary glands are always in the pectoral region.

monkey chatter *See* adjacent-channel interference.

monkey drift [MIN ENG] A small drift driven in for prospecting purposes, or a crosscut driven to an airway above the gangway.

monkey heading [MIN ENG] A narrow, low passage in the coal, providing refuge for miners while coal is blasted.

monkey ladder [MIN ENG] A ladder of saplings; the widely separated steps rest in the coal.

monkey winch [MIN ENG] A device for exerting a strong pull; consists of a framework containing a hand-operated drum, around which a steel rope 50 feet (15 meters) long is wound.

monkey wrench [DES ENG] A wrench having one jaw fixed and the other adjustable, both of which are perpendicular to a straight handle.

monk's cloth [TEXT] A heavy cotton fabric with a basket-weave.

monkshood *See* aconite.

mono- [CHEM] A prefix for chemical compounds to show a single radical; for example, monoglyceride, a glycol ester on which a single acid group is attached to the glycerol group.

monoacetate [ORG CHEM] A compound such as a salt or ester that contains one acetate group.

monoacetin *See* acetin.

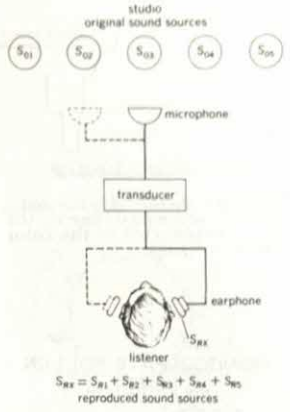
monoacid [CHEM] Compound with a single acid group, such as hydrochloric acid, HCl, or 2-naphthol-7-sulfonic acid, $C_{10}H_6(OH)(SO_3H)$.

monoamine [ORG CHEM] An amine compound that has only one amino group.

monoamine oxidase [BIOCHEM] An enzyme that catalyzes oxidative deamination of monoamines.

monoamine oxidase inhibitor [PHARM] Any drug, such as isocarboxazid and tranylcypromine, that inhibits monoamine oxidase and thereby leads to an accumulation of the amines on which the enzyme normally acts.

MONAURAL SOUND



Monaural sound-reproducing system.

MONAZITE

Monazite crystals from Minas Gerais, Brazil. *(Specimen from Department of Geology, Bryn Mawr College)*

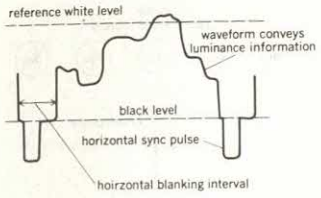
MONGOOSE

The golden-brown mongoose, a stout, weaselike animal which grows to a length of 15–18 inches (34–45 centimeters), excluding the tail.

MONKEY

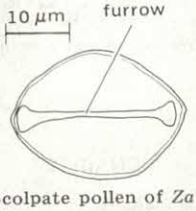
The spider monkey *(Ateles)*, with slender body, long prehensile tail, long muscular limbs, and no thumbs.

MONOCHROME SIGNAL



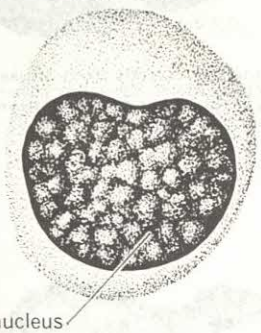
Waveform sketch of a normal monochrome signal, one of the major components of the color television signal.

MONOCOLPATE POLLEN



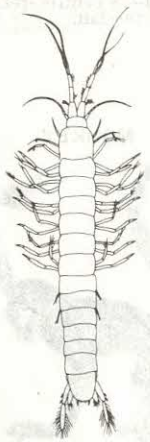
Monocolpate pollen of *Zamia floridana*.

MONOCYTE



Diagrammatic representation of a monocyte.

MONODELLIDAE



Drawing of a male *Monodella halophila* Karaman showing the seven pairs of appendages and the characteristic telson. *(After S. Karaman)*

monoammonium tartrate *See* ammonium bitartrate.

monobasic [CHEM] Pertaining to an acid with one displaceable hydrogen atom, such as hydrochloric acid, HCl.

monobasic calcium phosphate *See* calcium phosphate.

monobasic sodium phosphate [INORG CHEM] NaH_2PO_4 White crystals that are slightly hygroscopic, soluble in water, insoluble in alcohol; used in baking powders and acid cleansers, and as a cattle-food supplement.

monoblast [HISTOL] A motile cell of the spleen and bone marrow from which monocytes are derived.

monoblastic leukemia *See* acute monocytic leukemia.

Monoblepharidales [MYCOL] An order of aquatic fungi in the class Phycomycetes; distinguished by a mostly hyphal thallus and zoospores with one posterior flagellum.

monobloc projectile [ORD] Armor-piercing projectile which consists of one piece of steel, suitably heat-treated; may be provided with a false ogive to decrease air resistance.

Monobothrida [PALEON] An extinct order of monocyclic camerate crinoids.

monobrid circuit [ELECTR] Integrated circuit using a combination of monolithic and multichip techniques by means of which a number of monolithic circuits, or a monolithic device in combination with separate diffused or thin-film components, are interconnected in a single package.

monobromoacetanilide *See para*-bromoacetanilide.

monocable [MECH ENG] An aerial ropeway that uses one rope to both support and haul a load.

monocalcium phosphate *See* calcium phosphate.

monocardiogram *See* vectorcardiogram.

monocarpic [BOT] Bearing fruit once and then dying.

monocarpous [BOT] Having a single ovary.

Monoceros [ASTRON] A constellation, right ascension 7 hours, declination 5° south; it has mostly faint stars.

monocharge electret [ELECTR] A type of foil electret that carries electrical charge of the same sign on both surfaces.

monochlamydous [BOT] Referring to flowers having only one set of floral envelopes, that is, either a calyx or a corolla.

monochloroacetic acid *See* chloroacetic acid.

monochloroacetone *See* chloroacetone.

monochlorodifluoromethane *See* chlorodifluoromethane.

monochloroethane *See* ethyl chloride.

α-monochlorohydrin *See* 3-chloro-1,2-propanediol.

monochlorotrifluoromethane *See* chlorotrifluoromethane.

monochromasia [MED] Complete color blindness in which all colors appear as shades of gray. Also known as monochromatism.

monochromat [MED] An individual who suffers from total color blindness even at high light levels; such persons are typically deficient or lacking in cone receptors, so that their form vision is also poor.

monochromatic [OPTICS] Pertaining to the color of a surface which radiates light having an extremely small range of wavelengths. [PHYS] Consisting of electromagnetic radiation having an extremely small range of wavelengths, or particles having an extremely small range of energies.

monochromatic filter *See* birefringent filter.

monochromatic interference [OPTICS] Interference between beams coming from a source of monochromatic light.

monochromatic light [OPTICS] Light of one color, having wavelengths confined to an extremely narrow range.

monochromatic neutron beam [NUCLEO] A beam of neutrons whose energies are confined to an extremely narrow range of values.

monochromatic radiation [ELECTROMAG] Electromagnetic radiation having wavelengths confined to an extremely narrow range.

monochromatic temperature scale [THERMO] A temperature scale based upon the amount of power radiated from a blackbody at a single wavelength.

monochromatism *See* monochromasia.

monochromator [SPECT] A spectrograph in which a detector is replaced by a second slit, placed in the focal plane, to isolate a particular narrow band of wavelengths for refocusing on a detector or experimental object.

monochrome [OPTICS] Having only one chromaticity.

monochrome channel [ELECTR] In a color television system, any path which is intended to carry the monochrome signal; the monochrome channel may also carry other signals.

monochrome signal [ELECTR] **1.** A signal wave used for controlling luminance values in monochrome television. **2.** The portion of a signal wave that has major control of the luminance values in a color television system, regardless of whether the picture is displayed in color or in monochrome. Also known as M signal.

monochrome television [COMMUN] Television in which the final reproduced picture is monochrome, having only shades of gray between black and white. Also known as black-and-white television.

monoclimax [ECOL] A climax community controlled primarily by one factor, as climate.

monocline [GEOL] A stratigraphic unit that dips from the horizontal in one direction only, not as part of an anticline or syncline.

monoclinic [BOT] Having both stamens and pistils in the same flower.

monoclinic system [CRYSTAL] One of the six crystal systems characterized by a single, two-fold symmetry axis or a single symmetry plane.

monoclonal antibody [IMMUNOL] A highly specific antibody produced by hybridoma cells; the antibody binds with a single antigenic determinant.

monoclonal cryoglobulin [BIOCHEM] A cryoglobulin composed of immunoglobin with only one class or subclass of heavy and light chain.

monocolpate pollen [BOT] Pollen grains having a single furrow.

monocoque [AERO ENG] A type of construction, as of a rocket body, in which all or most of the stresses are carried by the skin.

monocord switchboard [ELEC] Local battery switchboard in which each telephone line terminates in a single jack and plug.

monocotyledon [BOT] Any plant of the class Liliopsida; all have a single cotyledon.

Monocotyledoneae [BOT] The equivalent name for Liliopsida.

monocrepid [INV ZOO] A desma formed by secondary deposits of silica on a monaxon.

monocular vision [MED] Sight with one eye.

Monocyathea [PALEON] A class of extinct parazoans in the phylum Archaeocyatha containing single-walled forms.

monocyte [HISTOL] A large (about 12 micrometers), agranular leukocyte with a relatively small, eccentric, oval or kidney-shaped nucleus.

monocytic angina *See* infectious mononucleosis.

monocytic leukemia [MED] A form of leukemia in which monocytic cells are predominant in the blood. Also known as myelomonocytic leukemia.

monocytoma [MED] A neoplasm composed principally of monocytes, usually anaplastic.

monocytopenia [MED] Reduction in the number of circulating monocytes per unit volume of blood to below the minimum normal levels.

monocytosis [MED] Increase in the number of circulating monocytes per unit volume of blood to above the maximum normal levels.

monodactylous [ZOO] Having a single digit or claw.

Monodellidae [INV ZOO] A monogeneric family of crustaceans in the order Thermosbaenacea distinguished by seven pairs of biramous pereiopods on thoracomeres 2–8, and by not having the telson united to the last pleonite.

monodelphic [VERT ZOO] **1.** Having a single genital tract, in the female. **2.** Having a single uterus.

monodispersity [ORG CHEM] Polymer system that is homogeneous in molecular weight, that is, it does not have a distribution of different molecular-weight chains within the total mass.

monodromy theorem [MATH] If a complex function is analytic at a point of a bounded simply connected domain and can be continued analytically along every curve from the point, then it represents a single-valued analytic function in the domain.

monoecious [BOT] **1.** Having both staminate and pistillate flowers on the same plant. **2.** Having archegonia and antheridia on different branches. [ZOO] Having male and female reproductive organs in the same individual. Also known as hermaphroditic.

Monoedidae [INV ZOO] An equivalent name for Colydiidae.

monoenergetic gamma rays [PHYS] A beam of gamma rays whose energies are confined to an extremely narrow range.

monoester [ORG CHEM] An ester that has only one ester group.

monofier [ELECTR] Complete master oscillator and power amplifier system in a single evacuated tube envelope; electrically, it is equivalent to a stable low-noise oscillator, an isolator, and a two- or three-cavity klystron amplifier.

monofilament [TEXT] A single, large, continuous filament (single-strand thread) of a natural or synthetic fiber.

monofuel propulsion [AERO ENG] Propulsion system which obtains its power from a single fuel; in rocket units, the fuel furnishes both oxygen supply and the hydrocarbon for combustion.

monogamy [ANTHRO] Marriage to only one person at a time.

Monogenea [INV ZOO] A diverse subclass of the Trematoda which are principally ectoparasites of fishes; individuals have enlarged anterior and posterior holdfasts with paired suckers anteriorly and opisthaptors posteriorly.

Monogenoidea [INV ZOO] A class of the Trematoda in some systems of classification; equivalent to the Monogenea of other systems.

monogeosyncline [GEOL] A primary geosyncline that is long, narrow, and deeply subsided; composed of the sediments of shallow water and situated along the inner margin of the borderlands.

monoglyceride [ORG CHEM] Any of the fatty-acid glycerol esters where only one acid group is attached to the glycerol group, for example, $RCOOCH_2CHOHCH_2OH$; examples are glycerol monostearate and monolaurate; used as emulsifiers in cosmetics and lubricants.

Monogonota [INV ZOO] An order of the class Rotifera, characterized by the presence of a single gonad in both males and females.

monogony [BIOL] Asexual reproduction.

monogynous [BOT] Having only one pistil. [VERT ZOO] **1.** Having only one female in a colony. **2.** Consorting with only one female.

monohybrid [GEN] A hybrid individual heterozygous for one gene or a single character.

monoid [MATH] A semigroup which has an identity element.

monoideism [PSYCH] A mental condition marked by the domination of a single idea; persistent and thorough preoccupation with one idea, but seldom an idea that is complete.

monolayer *See* monomolecular film.

monolinuron *See* 3-(4-chlorophenyl)-1-methoxyl-1-methylurea.

monolith [MATER] A large concrete block.

monolithic [CIV ENG] Pertaining to concrete construction which is cast in one jointless piece. [SCI TECH] Constructed from a single crystal or other single piece of material.

monolithic ceramic capacitor [ELECTR] A capacitor that consists of thin dielectric layers interleaved with staggered metal-film electrodes; after leads are connected to alternate projecting ends of the electrodes, the assembly is compressed and sintered to form a solid monolithic block.

monolithic filter [COMMUN] A device used to separate telephone communications sent simultaneously over the transmission line, consisting of a series of electrodes vacuum-deposited on a crystal plate so that the plated sections are resonant with ultrasonic sound waves, and the effect of the device is similar to that of an electric filter.

monolithic integrated circuit [ELECTR] An integrated circuit having elements formed in place on or within a semiconductor substrate, with at least one element being formed within the substrate.

monomer [CHEM] A simple molecule which is capable of combining with a number of like or unlike molecules to form a polymer; it is a repeating structure unit within a polymer.

monomethylamine *See* methylamine.

monomial [MATH] A polynomial of degree one.

monomineralic [PETR] Of a rock, composed entirely or principally of a single mineral.

Monommidae [INV ZOO] A family of coleopteran insects in the superfamily Tenebrionoidea.

monomolecular film [PHYS CHEM] A film one molecule thick. Also known as monolayer.

monomorphic [BIOL] Having or exhibiting only a single form.

mononuclear [CYTOL] Having only one nucleus.

mononucleosis [MED] Any of various conditions marked by an abnormal increase in monocytes in the peripheral blood.

monophagous [ZOO] Subsisting on a single kind of food. Also known as monotrophic.

Monophisthocotylea [INV ZOO] An order of the Monogenea in which the posthaptor is without discrete multiple suckers or clamps.

Monophlebinae [INV ZOO] A subfamily of the homopteran superfamily Coccoidea distinguished by a dorsal anus.

monophonic sound [ENG ACOUS] Sound produced by a system in which one or more microphones feed a single transducing channel which is coupled to one or more loudspeakers.

monophyodont [VERT ZOO] Having only one set of teeth throughout life.

monopinch [ELECTR] Antijam application of the monopulse technique where the error signal is used to provide discrimination against jamming signals.

Monopisthocotylea [INV ZOO] An order of trematode worms in the subclass Pectobothridia.

Monoplacophora [INV ZOO] A group of shell-bearing mollusks represented by few living forms; considered to be a sixth class of mollusks.

monoplegia [MED] Paralysis involving a single limb, muscle, or group of muscles.

monoploid [GEN] **1.** Having only one set of chromosomes. **2.** Having the haploid number of chromosomes.

monopodial [BOT] Stem branching in which there are lateral shoots on a primary axis.

monopodium [BOT] A primary axis that continues to grow while giving off successive lateral branches.

monopole *See* magnetic monopole.

monopole antenna [ELECTROMAG] An antenna, usually in the form of a vertical tube or helical whip, on which the current distribution forms a standing wave, and which acts as one part of a dipole whose other part is formed by its electrical image in the ground or in an effective ground plane. Also known as spike antenna.

monopotassium L-glutamate *See* potassium glutamate.

monopropellant [MATER] A rocket propellant consisting of a single substance, especially a liquid, capable of creating rocket thrust without the addition of a second substance.

monopulse radar [ENG] Radar in which directional information is obtained with high precision by using a receiving antenna system having two or more partially overlapping lobes in the radiation patterns.

Mono pump [MIN ENG] A pump designed and manufactured of special materials to meet mining conditions; consists of a rubber stator shaped like a double internal helix and a single helical rotor which travels in the stator with a slightly eccentric motion.

Monopylina [INV ZOO] A suborder of radiolarian protozoans in the order Oculosida in which pores lie at one pole of a single-layered capsule.

monopyroxene clinoaugite *See* clinopyroxene.

monorail [CIV ENG] A single rail used as a track; usually elevated, with cars straddling or hanging from it.

monorchid [ANAT] **1.** Having one testis. **2.** Having one testis descended into the scrotum.

Monorhina [VERT ZOO] The subclass of Agnatha that includes the jawless vertebrates with a single median nostril.

monorhinal [ANAT] Having only one nostril.

monosaccharide [BIOCHEM] A carbohydrate which cannot be hydrolyzed to a simpler carbohydrate; a polyhedric alcohol having reducing properties associated with an actual or potential aldehyde or ketone group; classified on the basis of the number of carbon atoms, as triose (3C), tetrose (4C), pentose (5C), and so on.

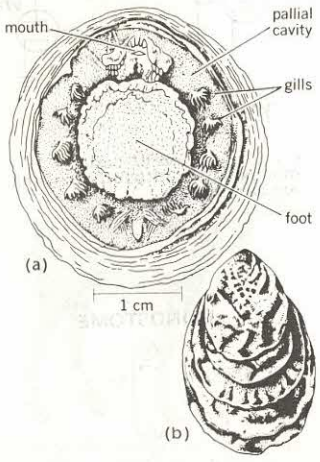
monoscope [ELECTR] A signal-generating electron-beam tube in which a picture signal is produced by scanning an electrode that has a predetermined pattern of secondary-emission response over its surface. Also known as monotron; phasmajector.

Monosigales [BOT] A botanical order equivalent to the Choanoflagellida in some systems of classification.

monosiphonous [BIOL] Having a single central tube, as in the thallus of certain filamentous algae or the hydrocaulus of some hydrozoans.

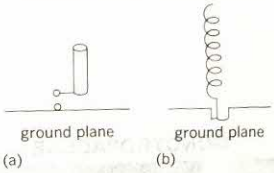
monosodium acid methanearsonate [ORG CHEM] CH_4AsNaO_3 A white, crystalline solid; melting point is 132–139°C; soluble in water; used as an herbicide for grassy

MONOPLACOPHORA



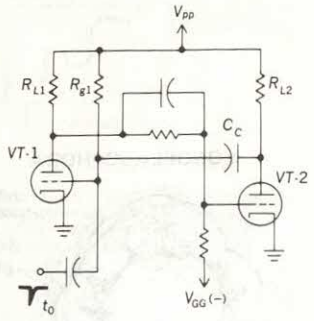
Living and fossil Monoplacophora. *(a) Neopilina galatheae* Lemche. *(b) Tryblidium reticulatum* Lindström. *(Adapted from R. C. Moore, ed., Treatise on Invertebrate Paleontology, pt. 1, 1957)*

MONOPOLE ANTENNA



Types of monopole antenna with horizontal and vertical patterns. *(a)* Vertical tube. *(b)* Helical.

MONOSTABLE MULTIVIBRATOR



Circuit diagram of basic monostable multivibrator using vacuum triodes.

MONOSTOME

Drawing of monostome type of cercaria showing the one sucker. *(From R. M. Cable, An Illustrated Laboratory Manual of Parasitology, Burgess, 1958)*

MONOTROPACEAE

The Indian pipe *(Monotropa uniflora)*, a widespread North American and Eurasian species of the family Monotropaceae in the order Ericales. *(Photograph by Arthur Cronquist)*

weeds on rights-of-way, storage areas, and noncrop areas, and as preplant treatment for cotton, citrus trees, and turf. Abbreviated MSMA.

monosodium glutamate *See* sodium glutamate.

monosodium methanearsonate *See* sodium methanearsonate.

monospermous [BOT] Having or producing one seed.

monosporangium [BOT] A sporangium producing monospores.

monospore [BOT] A simple or undivided nonmotile asexual spore; produced by the diploid generation of some algae.

monostable [ELECTR] Having only one stable state.

monostable blocking oscillator [ELECTR] A blocking oscillator in which the electron tube or other active device carries no current unless positive voltage is applied to the grid. Also known as driven blocking oscillator.

monostable circuit [ELECTR] A circuit having only one stable condition, to which it returns in a predetermined time interval after being triggered.

monostable multivibrator [ELECTR] A multivibrator with one stable state and one unstable state; a trigger signal is required to drive the unit into the unstable state, where it remains for a predetermined time before returning to the stable state. Also known as one-shot multivibrator; single-shot multivibrator; start-stop multivibrator; univibrator.

monostat [ENG] Fluid-filled, upside-down manometer-type device used to control pressures within an enclosure, as for laboratory analytical distillation systems.

monostatic radar [ENG] Conventional radar, in which the transmitter and receiver are at the same location and share the same antenna; in contrast to bistatic radar.

monostome [INV ZOO] A cercaria having only one mouth or sucker.

Monostylifera [INV ZOO] A suborder of the Hoplonemertini characterized by a single stylet.

monoterpene [ORG CHEM] **1.** A class of terpenes with molecular formula $C_{10}H_{16}$; the members of the class contain two isoprene units. **2.** A derivative of a member of such a class.

Monotomidae [INV ZOO] The equivalent name for Rhizophagidae.

monotone [SCI TECH] A quantity which never increases (or which never decreases) as a function of some other quantity. Also known as monotonic.

monotone convergence theorem [MATH] The integral of the limit of a monotone increasing sequence of nonnegative measurable functions is equal to the limit of the integrals of the functions in the sequence.

monotone function [MATH] A function which is either monotone nondecreasing or monotone nonincreasing. Also known as monotonic function.

monotone nondecreasing function [MATH] A function which never decreases, that is, if $x \leq y$ then $f(x) \leq f(y)$. Also known as increasing function; monotonically nondecreasing function.

monotone nonincreasing function [MATH] A function which never increases, that is, if $x \leq y$ then $f(x) \geq f(y)$. Also known as decreasing function; monotonically nonincreasing function.

monotonic *See* monotone.

monotonically nondecreasing function *See* monotone nondecreasing function.

monotonically nonincreasing function *See* monotone nonincreasing function.

monotonic function *See* monotone function.

monotonicity [ELECTR] In an analog-to-digital converter, the condition wherein there is an increasing output for every increasing value of input voltage over the full operating range.

Monotremata [VERT ZOO] The single order of the mammalian subclass Prototheria containing unusual mammallike reptiles, or quasi-mammals.

monotrichous [MICROBIO] Of bacteria, having an individual flagellum at one pole.

monotron [ELECTR] *See* monoscope. [MET] A machine for determining indentation hardness by measuring the load required to dent a specimen to a constant depth with a diamond 5/8 millimeter in diameter.

Monotropaceae [BOT] A family of dicotyledonous herbs or half shrubs in the order Ericales distinguished by a small, scarcely differentiated embryo without cotyledons, lack of chlorophyll, leaves reduced to scales, and anthers opening by longitudinal slits.

monotrophic [CRYSTAL] Of crystal pairs, having one of the pair always metastable with respect to the other. [ZOO] *See* monophagous.

monotropic [PHYS] Pertaining to an element which may exist in two or more forms, but in which one form is the stable modification at all temperatures and pressures.

monotropy coefficient [FL MECH] A coefficient ν related to the ratio of velocity coefficients, A_1/A_1, in an equation developed by P. Raethjen for the velocity profile in a fluid.

monotype [BIOL] A single type of organism that constitutes a species or genus. [GRAPHICS] A printing technique in which a picture is painted on a sheet of glass or metal; the picture is transferred to a sheet of paper by pressure; additional copies require that the subject be repainted on the plate.

monotype metal [MET] A type metal typically composed of 76% lead, 16% antimony, and 8% tin, with good wear resistance and compressive strength.

monotypic [SYST] Pertaining to a taxon that constains only one immediately subordinate taxon.

monovalent [CHEM] A radical or atom whose valency is 1.

monoxide [CHEM] A compound that contains a single oxygen atom, such as carbon monoxide, CO.

monozygotic twins [BIOL] Twins which develop from a single fertilized ovum. Also known as identical twins.

mons [ANAT] An eminence.

monsoon [METEOROL] A large-scale wind system which predominates or strongly influences the climate of large regions, and in which the direction of the wind flow reverses from winter to summer; an example is the wind system over the Asian continent.

monsoon climate [CLIMATOL] The type of climate which is found in regions subject to monsoons.

monsoon current [OCEANOGR] A seasonal wind-driven current occurring in the northern part of the Indian Ocean.

monsoon fog [METEOROL] An advection type of fog occurring along a coast where monsoon winds are blowing, when the air has a high specific humidity and there is a large difference in the temperature of adjacent land and sea.

monsoon low [METEOROL] A seasonal low found over a continent in the summer and over the adjacent sea in the winter.

mons pubis [ANAT] The eminence of the lower anterior abdominal wall above the superior rami of the pubic bones.

monster [MED] A congenitally malformed fetus which is incapable of properly performing the vital functions, or which exhibits marked structural differences from the normal.

Monstrilloida [INV ZOO] A suborder or order of microscopic crustaceans in the subclass Copepoda; adults lack a second antenna and mouthparts, and the digestive tract is vestigial.

mons veneris [ANAT] The mons pubis of the female.

montage [GRAPHICS] In photography, a collection of photos pasted on a common background, or a composite picture made by printing two or more negatives on a single sheet of photographic paper.

montane [ECOL] Of, pertaining to, or being the biogeographic zone composed of moist, cool slopes below the timberline and having evergreen trees as the dominant life-form.

montanite [MINERAL] $Bi_2O_3 \cdot TeO_3 \cdot 2H_2O$ A yellowish mineral consisting of a hydrated tellurate of bismuth; occurs in soft and earthy to compact form.

montan wax [MATER] A hard mineral wax with a melting point of 80–90°C; white after purification and brown in the crude form; soluble in carbon tetrachloride, benzene, and chloroform; used for shoe and furniture polishes, adhesive pastes, roofing paints, and phonograph records. Also known as lignite wax.

montebrasite [MINERAL] $LiAlPO_4(OH)$ A mineral composed of basic lithium aluminum phosphate; it is isomorphous with amblygonite and natromontebrasite.

Monte Carlo method [STAT] A technique which obtains a probabilistic approximation to the solution of a problem by using statistical sampling techniques.

montgomeryite [MINERAL] $Ca_2Al_2(PO_4)_3(OH) \cdot 7H_2O$ A green to colorless mineral composed of hydrous basic calcium aluminum phosphate.

Montgomery's tubercles [ANAT] Elevations in the areola of the nipple due to apocrine sweat glands; most prominent during pregnancy and lactation.

month [ASTRON] **1.** The period of the revolution of the moon around the earth (sidereal month). **2.** The period of the phases of the moon (synodic month). **3.** The month of the calendar (calendar month).

Montian [GEOL] A European stage of geologic time: Paleocene (above Danian, below Thanetian).

Monticellidae [INV ZOO] A family of tapeworms in the order Proteocephaloidea, in which some or all of the organs are in the cortical mesenchyme; catfish parasites.

monticellite [MINERAL] $CaMgSiO_4$ A colorless or gray mineral of the olivine structure type; isomorphous with kirsch steinite.

monticulus [ANAT] The median dorsal portion of the cerebellum.

montmorillonite [MINERAL] **1.** A group name for all clay minerals with an expanding structure, except vermiculite. **2.** The high-alumina end member of the montmorillonite group; it is grayish, pale red, or blue and has some replacement of aluminum ion by magnesium ion. **3.** Any mineral of the montmorillonite group.

montroydite [MINERAL] HgO Natural mercury oxide mineral from Texas.

monument [ENG] A natural or artificial (but permanent) structure that marks the location on the ground of a corner or other survey point.

monuron *See* 3-(*para*-chlorophenyl)-1,1-dimethylurea.

monzonite [PETR] A phaneritic (visibly crystalline) plutonic rock composed chiefly of sodic plagioclase and alkali feldspar, with subordinate amounts of dark-colored minerals, intermediate between syenite and dorite.

Moody formula [MECH ENG] A formula giving the efficiency e' of a field turbine, whose runner has diameter D', in terms of the efficiency e of a model turbine, whose runner has diameter D; $e' = 1 - (1-e)\,(D/D')^{1/5}$.

Moody friction factor [FL MECH] Modification of the friction factor–Reynolds number–fluid flow relationship into which a roughness factor has been incorporated.

moon [ASTRON] **1.** The natural satellite of the earth. **2.** A natural satellite of any planet.

moonbow [OPTICS] A rainbow formed by light from the moon; the colors in a moonbow are usually very difficult to detect. Also known as lunar rainbow.

Mooney unit [CHEM ENG] An arbitrary unit used to measure the plasticity of raw, or unvulcanized rubber; the plasticity in Mooney units is equal to the torque, measured on an arbitrary scale, on a disk in a vessel that contains rubber at a temperature of 100°C and rotates at two revolutions per minute.

moon illusion [OPTICS] An optical illusion whereby the moon appears larger when it is close to the horizon than when it is higher up.

moon pillar [METEOROL] A halo consisting of a vertical shaft of light through the moon.

moonrise [ASTRON] The crossing of the visible horizon by the upper limb of the ascending moon.

moonset [ASTRON] The crossing of the visible horizon by the upper limb of the descending moon.

moon shot [AERO ENG] The launching of a rocket intended to travel to the vicinity of the moon.

moonstone [MINERAL] An alkali feldspar or cryptoperthite that is semitransparent to translucent and exhibits a bluish to milky-white, pearly, or opaline luster; used as a gemstone if flawless. Also known as hecatolite.

moor [ECOL] *See* bog. [ENG] Securing a ship or aircraft by attaching it to a fixed object or a mooring buoy with chains or lines, or with anchors or other devices.

moor coal [GEOL] A friable lignite or brown coal.

Moore code [COMMUN] A binary teleprinter code with seven binary digits for each letter.

moored mine [ORD] An underwater mine with positively buoyant mine case, held at a predetermined depth beneath the surface by a cable or chain mooring attached to an anchor that rests on the bottom.

mooreite [MINERAL] $(Mg,Zn,Mn)_8(SO_4)_4(OH)_{14}\cdot 4H_2O$ A glassy white mineral composed of hydrous basic magnesium zinc manganese sulfate.

Moore machine [COMPUT SCI] A sequential machine in which the output depends uniquely on the current state of the machine, and not on the input.

Moore-Smith convergence [MATH] Convergence of a net.

mooring anchor [NAV ARCH] The second or additional anchor used to hold a ship at the mooring position.

mooring buoy [ENG] A buoy secured to the bottom by permanent moorings and provided with means for mooring a vessel by use of its anchor chain or mooring lines; in its usual form a mooring buoy is equipped with a ring.

mooring line [NAV ARCH] A rope or cable used for securing a ship to a pier or wharf.

mooring mast [AERO ENG] A mast or pole with fittings at the top to secure any lighter-than-air craft, such as a dirigible or blimp.

mooring winch [NAV ARCH] A hydraulic, electric, or steam machine on a ship used to haul in mooring lines when securing the ship to a pier or wharf.

moose [VERT ZOO] An even-toed ungulate of the genus *Alces* in the family Cervidae; characterized by spatulate antlers, long legs, a short tail, and a large head with prominent overhanging snout.

Mo-Permalloy [MET] A magnetic alloy having very high permeability and low saturation, consisting of 79% nickel, 17% iron, and 4% molybdenum.

mor *See* ectohumus.

Moraceae [BOT] A family of dicotyledonous woody plants in the order Urticales characterized by two styles or style branches, anthers inflexed in the bud, and secretion of a milky juice.

mora fat *See* mowrah fat.

morainal apron *See* outwash plain.

morainal delta *See* ice-contact delta.

morainal lake [HYD] A glacial lake filling a depression resulting from irregular deposition of drift in a terminal or ground moraine of a continental glacier.

morainal plain *See* outwash plain.

moraine [GEOL] An accumulation of glacial drift deposited chiefly by direct glacial action and possessing initial constructional form independent of the floor beneath it.

moraine bar [GEOL] A terminal moraine serving as a bar, rising out of deep water at some distance from the shore.

moraine kame [GEOL] One of a group of kames characterized by the same topography, constitution, and position as a terminal moraine.

moraine plateau [GEOL] A relatively flat area within a hummocky moraine, generally at the same elevation as, or a little higher than, the summits of surrounding knobs.

moral idiocy [PSYCH] Inability to understand moral principles and values and to act in accordance with them, apparently without impairment of the reasoning and intellectual faculties.

moral masochism [PSYCH] Masochism in which there is a need for punishment arising from unconscious sexual desires and reactivation of the Oedipus complex, characterized by self-destructive acts or the provocation of punishment from authority figures.

morass ore *See* bog iron ore.

moratronic [TEXT] A patterned fabric, usually polyester doubleknit; made on a German knitting machine which produces larger patterns than can be done on comparable jacquard knitting machines.

moravite [MINERAL] $Fe_2(N,Fe)_4Si_7O_{20}(OH)_4$ A black mineral of the chlorite group, composed of basic iron aluminum silicate, occurring as fine scales.

Morax-Axenfeld bacillus *See* Moraxella lacunata.

Moraxella [MICROBIO] A genus of rod-shaped, strictly aerobic bacteria in the family Neisseriaceae; cells are short and plump, sometimes almost spherical; parasites of mammalian mucous membranes.

Moraxella lacunata [MICROBIO] A short, nonmotile, gram-negative, rod-shaped bacterium that causes conjunctivitis in humans. Also known as Morax-Axenfeld bacillus.

morbid anatomy *See* pathologic anatomy.

morbidity [MED] **1.** The quantity or state of being diseased. **2.** The conditions inducing disease. **3.** The ratio of the number of sick individuals to the total population of a community.

mordant [CHEM] An agent, such as alum, phenol, or aniline, that fixes dyes to tissues, cells, textiles, and other materials by combining with the dye to form an insoluble compound. Also known as dye mordant.

mordant dye [MATER] Textile dye that requires a mordant (third substance) to bind the dye onto the fiber.

mordanting assistant [MATER] A chemical used with textile dye mordants to cause decomposition of the mordant and

MOOSE

The male moose, noted for its "Roman" nose, overhanging upper lip, beard, and spatulate antlers.

uniform deposition on the fibers; examples are sulfuric, oxalic, and lactic acids.

mordant rouge [MATER] Aluminum acetate–acetic acid solution used in dyeing and calico printing. Also known as red acetate; red liquor.

Mordellidae [INV ZOO] The tumbling flower beetles, a family of coleopteran insects in the superfamily Meloidea.

mordenite [MINERAL] $(Ca,Na_2,K_2)_4Al_8Si_{40}O_{96}\cdot 28H_2O$ A zeolite mineral crystallizing in the orthorhombic system and found in minute crystals or fibrous concretions. Also known as arduinite; ashtonite; flokite; ptilolite.

morencite *See* nontronite.

morenosite [MINERAL] $NiSO_4\cdot 7H_2O$ An apple-green or light-green mineral composed of hydrous nickel sulfate, occurring in crystals or fibrous crusts. Also known as nickel vitriol.

Morera's stress functions [MECH] Three functions of position, ψ_1, ψ_2, and ψ_3, in terms of which the elements of the stress tensor σ of a body may be expressed, if the body is in equilibrium and is not subjected to body forces; the elements of the stress tensor are given by $\sigma_{11} = -2\partial^2\psi_1/\partial x_2\partial x_3$, $\sigma_{23} = \partial^2\psi_2/\partial x_1\partial x_2 + \partial^2\psi_3/\partial x_1\partial x_3$, and cyclic permutations of these equations.

Morera's theorem [MATH] If a function of a complex variable is continuous in a simply connected domain D, and if the integral of the function about every simply connected curve in D vanishes, then the function is analytic in D.

mores [ECOL] Groups of organisms preferring the same physical environment and having the same reproductive season.

Morgan equation [THERMO] A modification of the Ramsey-Shields equation, in which the expression for the molar surface energy is set equal to a quadratic function of the temperature rather than to a linear one.

morganite *See* vorobyevite.

morgue [MED] A place where dead bodies are held pending identification and disposition.

moribund [BIOL] **1.** In a dying or deathlike state. **2.** In a state of suspended life functions; dormant.

Moridae [VERT ZOO] A family of actinopterygian fishes in the order Gadiformes.

morin [ORG CHEM] $C_{15}H_{10}O_7\cdot 2H_2O$ Colorless needles soluble in boiling alcohol, slightly soluble in water; used as a mordant dye and analytical reagent.

Morinae [VERT ZOO] The deep-sea cods, a subfamily of the Moridae.

morinite [MINERAL] $Na_2Ca_3Al_3H(PO_4)_4F_6\cdot 8H_2O$ A mineral composed of hydrous acid phosphate of sodium, calcium, and aluminum. Also known as jezekite.

Morisette expansion reamer [MIN ENG] A reaming device with three tapered lugs or cutters designed so that drilling pressure necessary to penetrate rock with a noncoring pilot bit forces the diamond-faced cutters of the reamer to expand outward, thereby enlarging the pilot hole sufficiently to allow the casing to follow the reamer as drilling progresses.

Mormyridae [VERT ZOO] A large family of electrogenic fishes belonging to the Osteoglossiformes; African river and lake fishes characterized by small eyes, a slim caudal peduncle, and approximately equal dorsal and anal fins in most.

Mormyriformes [VERT ZOO] Formerly an order of fishes which are now assigned to the Osteoglossiformes.

morning glory spillway *See* shaft spillway.

morning gun *See* reveille gun.

morning sickness [MED] Morning nausea associated with early pregnancy.

morning star [ASTRON] A misnomer given to a planet visible to the naked eye, when it rises before the sun.

morning twilight [ASTRON] The period of time between darkness and sunrise.

moron [PSYCH] A mentally defective individual with a mental age between 7 and 12 years; a child with an IQ between 50 and 69.

Moro reflex [PHYSIO] The startle reflex observed in normal infants from birth through the first few months, consisting in abduction and extension of all extremities, followed by flexion and abduction of the extremities.

morphallaxis [PHYSIO] Regeneration whereby one part is transformed into another by reorganization of tissue fragments rather than by cell proliferation.

Morphinae [INV ZOO] A subfamily of large tropical butterflies in the family Nymphalidae.

morphine [PHARM] $C_{17}H_{19}NO_3\cdot H_2O$ A white crystalline narcotic powder, melting point 254°C, an alkaloid obtained from opium; used in medicine in the form of a hydrochloride or sulfate salt.

***para*-morphine** *See* thebaine.

morphine benzyl ether hydrochloride *See* peronine.

morphine methyl bromide *See* morphosan.

morphinism [MED] **1.** The condition caused by the habitual use of morphine. **2.** The morphine habit.

morphism [MATH] The class of elements which together with objects form a category; in most cases, morphisms are functions which preserve some structure on a set.

morphogenesis [EMBRYO] The transformation involved in the growth and differentiation of cells and tissue. Also known as topogenesis.

morphogenetic region [GEOL] A region in which, under certain climatic conditions, the predominant geomorphic processes will contribute regional characteristics to the landscape that contrast with those of other regions formed under different climatic conditions.

morphographic map *See* physiographic diagram.

morpholine [ORG CHEM] C_4H_8ONH A hygroscopic liquid, soluble in water; used as a solvent and rubber accelerator. Also known as tetrahydro-1,4-oxazine.

morphological astronomy [ASTRON] A branch of astronomy in which the forms of celestial objects, such as galaxies, are observed, and an attempt is made to draw conclusions.

morphology [BIOL] A branch of biology that deals with structure and form of an organism at any stage of its life history.

morphosan [ORG CHEM] $C_{17}H_{19}NO_3\cdot CH_3Br$ A solid morphine derivative without morphine's disagreeable aftereffects; used in medicine. Also known as morphine methyl bromide.

morphospecies [SYST] A typological species distinguished solely on the basis of morphology.

morphotropism [CRYSTAL] Similarity of structure, axial ratios, and angles between faces of one or more zones in crystalline substances whose formulas can be derived one from another by substitution.

Morquio's syndrome [MED] A hereditary disease transmitted as an autosomal recessive and characterized by large quantities of keratosulfate in urine, dwarfism, and a typical facies with broad mouth, prominent maxilla, short nose, and widely spaced teeth. Also known as Brailsford-Morquio syndrome; familial osteochondrodystrophy; mucopolysaccharidosis IV.

Morse cable code [COMMUN] A code used chiefly in submarine cable telegraphy, in which positive and negative current impulses of equal length represent dots and dashes, and a space is represented by the absence of current. Also known as cable code; International cable code.

Morse code [COMMUN] **1.** A telegraph code for manual operating, consisting of short (dot) and long (dash) signals and various-length spaces; now used only for wire telegraphy on a few land lines in the United States and Canada. Also known as American Morse code. **2.** Collective term for Morse code (American Morse code) and continental code (International Morse code).

Morse equation [PHYS CHEM] An equation according to which the potential energy of a diatomic molecule in a given electronic state is given by a Morse potential.

Morse potential [PHYS CHEM] An approximate potential associated with the distance r between the nuclei of a diatomic molecule in a given electronic state; it is $V(r) = D\{1 - \exp[-a(r-r_e)]\}^2$, where r_e is the equilibrium distance, D is the dissociation energy, and a is a constant.

Morse taper reamer [DES ENG] A machine reamer with a taper shank.

Morse theory [MATH] The study of differentiable mappings of differentiable manifolds, which by examining critical points shows how manifolds can be constructed from one another.

mortality rate [MED] For a given period of time, the ratio of the number of deaths occurring per 1000 population. Also known as death rate.

mortar [MATER] A mixture of cement, lime, and sand used for laying bricks or masonry. [ORD] A complete projectile-firing weapon, with rifled or smooth bore, characterized by a shorter barrel, lower velocity, shorter range, and higher angle of fire than a howitzer or a gun; most present-day mortars are muzzle-loaded and of simple construction for lightness and mobility. [SCI TECH] A bowl-shaped vessel made of hard material in which solids are crushed by hand with a pestle.

mortar structure [PETR] A cataclastic structure produced

Morse code for the alphabet.

by dynamic metamorphism of crystalline rocks and characterized by a mica-free aggregate of finely crushed grains of quartz and feldspar filling the interstices between or forming borders on the edges of larger, rounded relicts. Also known as cataclastic structure; murbruk structure; porphyroclastic structure.

mortise [ENG] A groove or slot in a timber for holding a tenon.

mortise and tenon [DES ENG] A type of joint, principally used for wood, in which a hole, slot, or groove (mortise) in one member is fitted with a projection (tenon) from the second member.

mortise lock [DES ENG] A lock designed to be installed in a mortise rather than applied to a door's surface.

mortising machine [MECH ENG] A machine employing an auger and a chisel to produce a square or rectangular mortise in wood.

mortlake *See* oxbow lake.

morula [EMBRYO] A solid mass of blastomeres formed by cleavage of the eggs of many animals; precedes the blastula or gastrula, depending on the type of egg. [INV ZOO] A cluster of immature male gametes in which differentiation occurs outside the gonad; common in certain annelids.

Moruloidea [INV ZOO] The only class of the phylum Mesozoa; embryonic development in the organisms proceeds as far as the morula or stereoblastula stage.

morvan [GEOL] The area where two peneplains intersect. Also known as skiou.

MOS *See* metal oxide semiconductor.

mosaic [BIOL] An organism or part made up of tissues or cells exhibiting mosaicism. [ELECTR] A light-sensitive surface used in television camera tubes, consisting of a thin mica sheet coated on one side with a large number of tiny photosensitive silver-cesium globules, insulated from each other. [EMBRYO] An egg in which the cytoplasm of early cleavage cells is of the type which determines its later fate. [PETR] **1.** Pertaining to a granoblastic texture in a rock formed by dynamic metamorphism in which the boundaries between individual grains are straight or slightly curved. Also known as cyclopean. **2.** Pertaining to a texture in a crystalline sedimentary rock in which contacts at grain boundaries are more or less regular. [SCI TECH] A surface pattern made by the assembly and arrangement of many small pieces.

mosaic gold *See* stannic sulfide.

mosaicism [GEN] The coexistence in an individual of somatic cells of genetically different types; it is caused by gene or chromosome mutations, especially nondisjunction, after fertilization, by double fertilization, or by fusion of embryos.

mosaic structure [CRYSTAL] In crystals, a substructure in which neighboring regions are oriented slightly differently.

mosandrite [MINERAL] A reddish-brown or yellowish-brown mineral composed of a silicate of sodium, calcium, titanium, zirconium, and cerium. Also known as khibinite; lovchorrite; rinkite; rinkolite.

mosasaur [PALEON] Any reptile of the genus *Mosasaurus*; large, aquatic, fish-eating lizards from the Cretaceous which are related to the monitors but had paddle-shaped limbs.

Moschcowitz's disease *See* thrombotic thrombocytopenic purpura.

moschellandsbergite [MINERAL] Ag_2Hg_3 A silver-white mineral consisting of a silver and mercury compound; occurs in dodecahedral crystals and in massive and granular forms.

moscovite *See* muscovite.

Moseley's law [SPECT] The law that the square-root of the frequency of an x-ray spectral line belonging to a particular series is proportional to the difference between the atomic number and a constant which depends only on the series.

mosesite [MINERAL] $Hg_2N(SO_4,MoO_4)\cdot H_2O$ Mineral composed of a hydrous nitride of mercury and various anions.

MOSFET *See* metal oxide semiconductor field-effect transistor.

Mosotti field *See* Lorentz local field.

mosquito [INV ZOO] Any member of the dipterous subfamily Culicinae; a slender fragile insect, with long legs, a long slender abdomen, and narrow wings.

mosquito boat *See* motor torpedo boat.

moss [BOT] Any plant of the class Bryatae, occurring in nearly all damp habitats except the ocean.

moss agate [MINERAL] A milky or almost transparent chalcedony containing dark inclusions in a dendritic pattern.

Mössbauer effect [NUC PHYS] The emission and absorption of gamma rays by certain nuclei, bound in crystals, without loss of energy through nuclear recoil, with the result that radiation emitted by one such nucleus can be absorbed by another.

Mössbauer spectroscopy [SPECT] The study of Mössbauer spectra, for example, for nuclear hyperfine structure, chemical shifts, and chemical analysis.

Mössbauer spectrum [SPECT] A plot of the absorption, by nuclei bound in a crystal lattice, of gamma rays emitted by similar nuclei in a second crystal, as a function of the relative velocity of the two crystals.

moss forest *See* temperate rainforest.

mossite [MINERAL] $Fe(Nb,Ta)_2O_6$ A mineral composed of an iron tantalum oxide; it is isomorphous with tapiolite.

moss land [ECOL] An area which contains abundant moss but is not wet enough to be a bog.

mossy zinc [MET] Zinc granules made by pouring molten zinc into water.

MOST *See* metal oxide semiconductor field-effect transistor.

most probable position [NAV] **1.** The computed position of an aircraft determined by comparing a dead-reckoning position and a loran position determined for the same period of time, in which relative weights are given to the estimated probable errors of each. **2.** That position of a craft judged to be most accurate when an element of doubt exists as to the true position; it may be a fix, estimated position, dead-reckoning position, no-wind position, or some other position as determined from the squares of the estimated probable errors of each.

MOS transistor *See* metal oxide semiconductor field-effect transistor.

most significant bit [COMPUT SCI] The left-most bit in a word. Abbreviated msb.

most significant character [COMPUT SCI] The character in the leftmost position in a number or word.

Motacillidae [VERT ZOO] The pipits, a family of passeriform birds in the suborder Oscines.

moth [INV ZOO] Any of various nocturnal or crepuscular insects belonging to the lepidopteran suborder Heteroneura; typically they differ from butterflies in having the antennae feathery and rarely clubbed, a stouter body, less brilliant coloration, and proportionately smaller wings.

mothball [ORD] Placing military equipment into a state of long storage.

mother [ENG ACOUS] A mold derived by electroforming from a master; used to produce the stampers from which disk records are molded in large quantities. Also known as metal positive.

motherboard [COMPUT SCI] A common pathway over which information is transmitted between the hardware devices (the central processing unit, memory, and each of the peripheral control units) in a microcomputer.

mother liquor *See* discharge liquor.

mother lode [GEOL] A main unit of mineralized matter that may not have economic value but to which workable veins are related.

mother map *See* base map.

mother-of-emerald *See* prase.

mother-of-pearl [INV ZOO] The pearly iridescent internal layer of the shell of various pearl-bearing bivalve mollusks.

mother-of-pearl clouds *See* nacreous clouds.

mother rock *See* source rock.

motile [BIOL] Being capable of spontaneous movement. [PSYCH] An individual characterized by motor-type mental imagery which takes the form of inner feelings of action.

motion [MECH] A continuous change of position of a body.

motional electromotive force [ELECTROMAG] An electromotive force in a circuit that results from the motion of all or part of the circuit through a magnetic field.

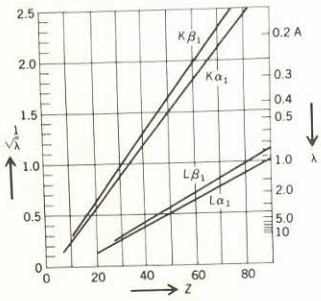
motional impedance [ELECTR] Of a transducer, the complex remainder after the blocked impedance has been subtracted from the loaded impedance. Also known as loaded motional impedance.

motional induction [ELECTROMAG] The production of an electromotive force in a circuit by motion of all or part of the circuit through a magnetic field in such a way that the circuit cuts across the magnetic flux.

motion analysis [IND ENG] Detailed study of the motions used in a work task or at a given work area.

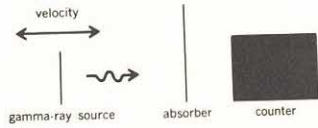
motion-compensated coding scheme [COMMUN] A form of differential pulse-code modulation in which the motions of objects are estimated and comparisons of intensities are

MOSELEY'S LAW



Plot of Moseley's law showing dependence of characteristic x-ray line wavelengths on atomic number. *(Philips Tech. Rev., vol. 17, no. 10, 1956)*

MÖSSBAUER EFFECT



Experiment demonstrating Mössbauer effect. Source is moved toward stationary absorber at various known velocities to Doppler-shift the gamma-ray energy received by absorber and study absorption by absorber of gamma rays as a function of energy.

MOTH

The luna moth *(Tropaea luna)*.

carried out between picture elements in successive frames spatially displaced by an amount equal to the motion of an object.

motion cycle [IND ENG] The complete sequence of motions and activities required to complete one work cycle.

motion economy [IND ENG] Simplification and reduction of body motions to simplify and reduce work content.

motion picture [GRAPHICS] **1.** A sequence of filmed images viewed in rapid succession so that the illusion of continuity and motion is created. **2.** The complete thematically related content of such images. Also known as cinema; movie; moving picture.

motion picture camera [OPTICS] A camera capable of capturing action by taking a series of still pictures at regular brief intervals on a lengthy strip of film.

motion picture pickup [ELECTR] Use of a television camera to pick up scenes directly from motion picture film.

motion picture projector [ENG] An optical and mechanical device capable of flashing pictures taken by a motion picture camera on a viewing screen at the same frequency the action was photographed, thus producing an image that appears to move.

motion register [COMPUT SCI] The register which controls the go/stop, forward/reverse motion of a tape drive.

motion sickness [MED] A complex of symptoms, including nausea, vertigo, and vomiting, occurring as the result of random multidirectional accelerations of a vehicle.

motivated forgetting [PSYCH] Forgetting, such as by repression, activated by the needs of the individual.

motivation [PSYCH] The comparatively spontaneous drive, force, or incentive, which partly determines the direction and strength of the response of a higher organism to a given situation; it arises out of the internal state of the organism.

motive column [MIN ENG] The ventilating pressure in a mine in units of feet of air column; the height of a column of air whose density is the same as the air in the downcast shaft, which exerts a pressure equal to the ventilating pressure.

motoneuron *See* motor neuron.

motor [ELEC] A machine that converts electric energy into mechanical energy by utilizing forces produced by magnetic fields on current-carrying conductors. Also known as electric motor. [PHYSIO] **1.** That which causes action or movement. **2.** Pertaining to efferent nerves which innervate muscles and glands.

motor alexia [MED] Inability to read aloud, while comprehension of the written word is preserved.

motor aphasia [MED] A form of aphasia in which the patient knows what he wishes to say but is unable to get the words out, and is able to perceive and comprehend both spoken and written language but is unable to repeat what he sees or hears; due principally to a brain lesion.

motor apraxia [MED] Inability to carry out, on command, a complex or skilled movement, though the purpose thereof is clear to the patient. Also known as kinesthetic apraxia; limb-kinetic apraxia.

motor area [ANAT] The ascending frontal gyrus containing nerve centers for voluntary movement; characterized by the presence of Betz cells. Also known as Broadman's area 4; motor cortex; pyramidal area.

motor ataxia [MED] Inability to coordinate the muscles, which becomes apparent only on body movement.

motor benzol [MATER] Grade of benzene used in fuels for internal combustion engines.

motorboat [NAV ARCH] A boat propelled by an internal combustion engine or an electric motor. Also known as autoboat.

motorboating [ELECTR] Undesired oscillation in an amplifying system or transducer, usually of a pulse type, occurring at a subaudio or low-audio frequency.

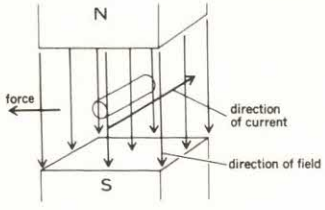
motor branch circuit [ELEC] A branch circuit that terminates at a motor; it must have conductors with current-carrying capacity at least 125% of the motor full-load current rating, and overcurrent protection capable of carrying the starting current of the motor.

motor cell [BOT] *See* bulliform cell. [PHYSIO] An efferent nerve cell in the anterior horn of the spinal cord.

motor control *See* electronic motor control.

motor-converter [ELEC] Induction motor and a synchronous converter with their rotors mounted on the same shaft and with their rotor windings connected in series; such converter operates synchronously at a speed corresponding to the sum of the numbers of poles of the two machines.

MOTOR



Relative directions of field flux, current, and force in an electric motor.

motor cortex *See* motor area.

motorcycle [MECH ENG] An automotive vehicle, essentially a motorized bicycle, with two tandem and sometimes three rubber wheels.

motor effect [ELECTROMAG] The mutually repulsive force exerted by neighboring conductors that carry current in opposite directions.

motor element [ENG ACOUS] That portion of an electroacoustic receiver which receives energy from the electric system and converts it into mechanical energy.

motor end plate [ANAT] A specialized area beneath the sarcolemma where functional contact is made between motor nerve fibers and muscle fibers.

motor-generator set [ELEC] A motor and one or more generators that are coupled mechanically for use in changing one power-source voltage to other desired voltages or frequencies.

motor grader *See* autopatrol.

motor meter [ENG] An integrating meter which has a rotor, one or more stators, a retarding element which makes the speed of the rotor proportional to the quantity (such as power or current) whose integral over time is being measured, and a register which counts the total number of revolutions of the rotor.

motor nerve [PHYSIO] A nerve composed wholly or principally of motor fibers.

motor neuron [PHYSIO] An efferent nerve cell. Also known as motoneuron.

motor noise [ACOUS] The noisy sound made by an electric motor.

motor reducer [MECH ENG] Speed-reduction power transmission equipment in which the reducing gears are integral with drive motors.

motorship [NAV ARCH] A ship propelled by a motor which can travel on the seas; in particular, one propelled by an internal combustion engine such as a diesel engine.

motor speech area [ANAT] The cortical area located in the triangular and opercular portions of the inferior frontal gyrus; in right-handed people it is more developed on the left side.

motor system [PHYSIO] Any portion of the nervous system that regulates and controls the contractile activity of muscle and the secretory activity of glands.

motor torpedo boat [NAV ARCH] A motor boat 60 to 100 feet (18 to 30 meters) long and capable of speeds of about 60 knots (110 kilometers per hour), armed with two to four torpedo tubes, machine and antiaircraft guns, and depth charges. Also known as mosquito boat; PT boat.

motortruck [MECH ENG] An automotive vehicle which is used to transport freight.

motor unit [ANAT] The axon of an anterior horn cell, or the motor fiber of a cranial nerve, together with the striated muscle fibers innervated by its terminal branches.

motor vehicle [MECH ENG] Any automotive vehicle that does not run on rails, and generally having rubber tires.

mottled [GEOL] Of a soil, irregularly marked with spots of different colors. [GRAPHICS] Of a printed area, spotty or uneven in appearance. [PETR] Of a sedimentary rock, marked with spots of various colors.

mottled iron [MET] A cast iron showing gray areas that contain graphite, perlite, and sometimes ferrite, and white areas containing primarily cementite.

mottle-leaf [PL PATH] **1.** A virus disease characterized by chlorotic mottling and wrinkling of leaves. **2.** A zinc-deficiency disease characterized by partial chlorosis of the leaves and stunting of the plant.

mottramite [MINERAL] $(Cu,Zn)Pb(VO_4)(OH)$ A mineral composed of a basic lead copper zinc vanadate; it is isomorphous with descloizite. Also known as cuprodescloizite; psittacinite.

Mott scattering [QUANT MECH] **1.** The scattering of identical particles due to a Coulomb force. **2.** The scattering of a relativistic electron by a Coulomb field.

moulage [GRAPHICS] **1.** The technique of making a mold. **2.** A material used to make molds; it is extremely delicate and can be used on human hair or skin, or on antiques or other objects that are too fragile to be molded in rubber, gelatin, or plaster; it is applied warm with brushes or palette knives and can be reused.

moulin [HYD] A shaft or hole in the ice of a glacier which is roughly cylindrical and nearly vertical, formed by swirling

meltwater pouring down from the surface. Also known as glacial mill; glacier mill; glacier pothole; glacier well; pothole.

moulin pothole *See* giant's kettle.

mounce [MECH] A unit of mass, equal to 25 grams. Also known as metric ounce.

mound [GEOL] **1.** A low, isolated, rounded natural hill, usually of earth. Also known as tuft. **2.** A structure built by fossil colonial organisms.

mount [ELECTROMAG] The flange or other means by which a switching tube, or tube and cavity, is connected to a waveguide. [ENG] **1.** Structure supporting any apparatus, as a gun, searchlight, telescope, or surveying instrument. **2.** To fasten an apparatus in position, such as a gun on its support. [ORD] To equip; to put into operation; to go into operation, as to mount an offensive.

mountain [GEOGR] A feature of the earth's surface that rises high above the base and has generally steep slopes and a relatively small summit area.

mountain and valley winds [METEOROL] A system of diurnal winds along the axis of a valley, blowing uphill and upvalley by day, and downhill and downvalley by night; they prevail mostly in calm, clear weather.

mountain blue [INORG CHEM] $2CuCO_3 \cdot Cu(OH)_2$ Ground azurite used as a paint pigment. Also known as copper blue.

mountain breeze [METEOROL] A breeze that blows down a mountain slope due to the gravitational flow of cooled air.

mountain brown ore [GEOL] Name used in Virginia for limonite or brown iron ore.

mountain butter *See* halotrichite.

mountain chain *See* mountain system.

mountain climate [CLIMATOL] Very generally, the climate of relatively high elevations; mountain climates are distinguished by the departure of their characteristics from those of surrounding lowlands, and the one common basis for this distinction is that of atmospheric rarefaction; aside from this, great variety is introduced by differences in latitude, elevation, and exposure to the sun; thus, there exists no single, clearly defined, mountain climate. Also known as highland climate.

mountain cork [MINERAL] **1.** A white or gray variety of asbestos composed of thick, interwoven fibers and having a corklike weight and texture. Also known as rock cork. **2.** A fibrous clay mineral, such as sepiolite.

mountain crystal *See* rock crystal.

mountain effect [ELECTROMAG] The effect of rough terrain on radio-wave propagation, causing reflections that produce errors in radio direction-finder indications.

mountain-gap wind [METEOROL] A local wind blowing through a gap between mountains.

mountain glacier *See* alpine glacier.

mountain lion *See* puma.

mountain mahogany *See* obsidian.

mountain pediment [GEOL] A plain of combined erosion and transportation at the base of and surrounding a desert mountain range; at a distance it has the appearance of a broad triangular mass.

mountain range [GEOGR] A succession of mountains or narrowly spaced mountain ridges closely related in position, direction, and geologic features.

mountain sickness [MED] A disease occurring in persons living at high altitudes when homeostatic adjustments to the lowered atmospheric oxygen tension fail or develop disproportionately. Also known as high-altitude disease; high-altitude erythremia; Monge's disease; seroche.

mountain slope [GEOGR] The inclined surface that forms a mountainside.

mountain soap *See* saponite.

mountain system [GEOGR] A group of mountain ranges tied together by common geological features. Also known as mountain chain.

mountain tallow *See* hatchettite.

mountain tick fever *See* Colorado tick fever.

mountain wood [GEOL] **1.** A compact, fibrous, gray to brown type of asbestos which has an appearance similar to dry wood. Also known as rock wood. **2.** A fibrous clay mineral; for example, sepiolite or palygorskite.

Mount Rose snow sampler [ENG] A particular pattern of snow sampler having an internal diameter of 1.485 inches (3.7727 centimeters), so that each inch of water in the sample weighs 1 ounce (28.349 grams).

mouse [VERT ZOO] Any of various rodents which are members of the families Muridae, Heteromyidae, Cricetidae, and Zapodidae; characterized by a pointed snout, short ears, and an elongated body with a long, slender, sparsely haired tail.

mousebane *See* aconite.

mouse deer *See* chevrotain.

mouse hole [PETRO ENG] A drill hole under the derrick floor cased with a suspended drill pipe, to be connected later on the drill string.

mouse trap [ENG] A cylindrical fishing tool having the open bottom end fitted with an inward opening valve.

mousse de chêne *See* oakmoss resin.

mousseline [TEXT] Referring to a lightweight crisp sheer fabric; usually used in connection with the name of the fiber.

mouth [ANAT] The oral or buccal cavity and its related structures. [ENG ACOUS] The end of a horn that has the larger cross-sectional area. [GEOGR] **1.** The place where one body of water discharges into another. Also known as influx. **2.** The entrance or exit of a geomorphic feature, such as of a cave or valley. [MIN ENG] **1.** The end of a shaft, adit, drift, entry, or tunnel emerging at the surface. **2.** The collar of a borehole. [SCI TECH] Something resembling a mouth, that is, a place where one thing enters another or an opening at the receiving end of a container or enclosure.

mouth breadth [ANTHRO] The measure of the distance from one to the other corner of the mouth in a natural relaxed position.

mouth-to-mouth resuscitation [MED] A method of artificial respiration in which the rescuer's mouth is placed over the victim's mouth and air is blown forcefully into the victim's lungs every few seconds to inflate them.

movable bridge [CIV ENG] A bridge in which either the horizontal or vertical alignment can be readily changed to permit the passage of traffic beneath it. Often called drawbridge (an anachronism).

movable contact [ELEC] The relay contact that is mechanically displaced to engage or disengage one or more stationary contacts. Also known as armature contact.

movable platen [ENG] The large platen at the back of an injection-molding machine to which the back half of the mold is fastened.

movable-point crossing [CIV ENG] A small-angle rail crossing with two center frogs, each of which consists essentially of a knuckle rail and two opposed movable center points.

movable propeller blade [NAV ARCH] A propeller blade cast separate from the boss or hub and attached to the boss by bolts.

move mode [COMPUT SCI] A method of communicating between an operating program and an input/output control system in which the data records to be read or written are actually moved into and out of program-designated memory areas; in contrast to locate mode.

movie *See* motion picture.

moving area [COMMUN] The portion of a television picture frame in which the intensity has changed since the previous frame.

moving bed [CHEM ENG] Granulated solids in a process vessel that are circulated (moved) either mechanically or by gravity flow; used in catalytic and absorption processes.

moving-bed catalytic cracking [CHEM ENG] Petroleum refining process for cracking (breaking) of long hydrocarbon molecules by use of heat, pressure, and a granular cracking catalyst that is continuously cycled between the reactor vessel and the catalyst regenerator.

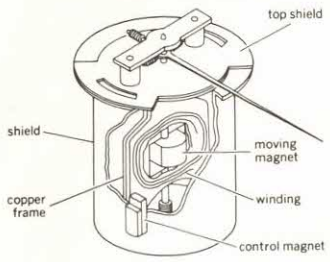
moving-boundary electrophoresis [ANALY CHEM] A U-tube variation of electrophoresis analysis that uses buffered solution so that all ions of a given species move at the same rate to maintain a sharp, moving front (boundary).

moving cluster [ASTRON] **1.** A star cluster with common motions. **2.** An open star cluster near the sun such that measurements may be made of the individual proper motions of the stars.

moving-coil galvanometer [ENG] Any galvanometer, such as the d'Arsonval galvanometer, in which the current to be measured is sent through a coil suspended or pivoted in a fixed magnetic field, and the current is determined by measuring the resulting motion of the coil.

moving-coil instrument [ELEC] Any instrument in which current is sent through one or more coils suspended or pivoted in a magnetic field, and the motion of the coils is used to measure either the current in the coils or the strength of the field.

moving-coil loudspeaker *See* dynamic loudspeaker.



Moving-magnet direct-current voltmeter. *(General Electric Co.)*

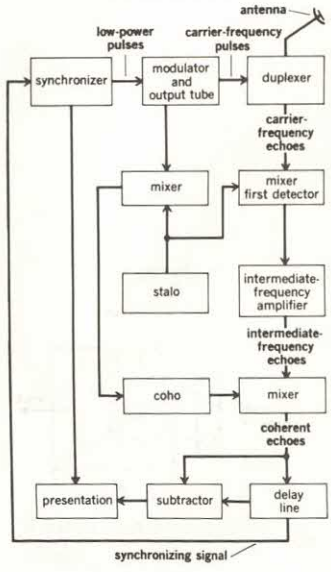


Diagram of a radar system with moving-target indicator capability. Here stalo = stable local oscillator, coho = coherent oscillator.

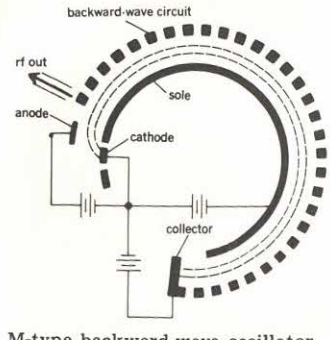


M-type backward-wave oscillator with the beam focused by a static magnetic field directed into the plane of the page. Here rf out = radio frequency energy out.

moving-coil meter [ELEC] A meter in which a pivoted coil is the moving element.

moving-coil microphone *See* dynamic microphone.

moving-coil pickup *See* dynamic pickup.

moving-coil voltmeter [ENG] A voltmeter in which the current, produced when the voltage to be measured is applied across a known resistance, is sent through coils pivoted in the magnetic field of permanent magnets, and the resulting torque on the coils is balanced by control springs so that the deflection of a pointer attached to the coils is proportional to the current.

moving-coil wattmeter *See* electrodynamic wattmeter.

moving-conductor loudspeaker [ENG ACOUS] A loudspeaker in which the mechanical forces result from reactions between a steady magnetic field and the magnetic field produced by current flow through a moving conductor.

moving constraint [MECH] A constraint that changes with time, as in the case of a system on a moving platform.

moving-head disk [COMPUT SCI] A disk-storage device in which one or more read-write heads are attached to a movable arm which allows each head to cover many tracks of information.

moving-iron meter [ENG] A meter that depends on current in one or more fixed coils acting on one or more pieces of soft iron, at least one of which is movable.

moving-iron voltmeter [ENG] A voltmeter in which a field coil is connected to the voltage to be measured through a series resistor; current in the coil causes two vanes, one fixed and one attached to the shaft carrying the pointer, to be similarly magnetized; the resulting torque on the shaft is balanced by control springs.

moving load [MECH] A load that can move, such as vehicles or pedestrians.

moving-magnet voltmeter [ENG] A voltmeter in which a permanent magnet aligns itself with the resultant magnetic field produced by the current in a field coil and another permanent control magnet.

moving map display [NAV] An air navigation device which displays the aircraft's navigational position on moving film of an aeronautical chart; the positional information may be obtained from various systems such as Tacan, Doppler, inertial, and so forth; such display systems may indicate course and distance to destination, track over ground, and so on.

moving picture *See* motion picture.

moving sidewalk [CIV ENG] A sidewalk constructed on the principle of an endless belt, on which pedestrians are moved.

moving submarine haven [NAV] A haven surrounding submarines in transit, extending 50 miles (80 kilometers) ahead, 100 miles (161 kilometers) astern, and 15 miles (24 kilometers) on each side of the estimated position of the submarine along the stated track.

moving surface ship haven [NAV] A haven which will normally be a circle with a specified radius centered on the estimated position of the ship or the guide of a group of ships.

moving-target indicator [ELECTR] A device that limits the display of radar information primarily to moving targets; signals due to reflections from stationary objects are canceled by a memory circuit. Abbreviated MTI.

mowa fat *See* mowrah fat.

mowrah fat [MATER] A vegetable fat extracted from the seeds of *Bassia longifola;* used to make soap. Also known as illepé fat; mora fat; mowa fat.

Mozambique Current [OCEANOGR] The portion of the South Equatorial Current that turns and flows along the coast of Africa in the Mozambique Channel, forming one of the western boundary currents in the Indian Ocean.

mp *See* mean effective pressure; melting point.

MPC *See* man process chart.

MPI *See* Minnesota multiphasic personality inventory.

MPK *See* pentanone.

MPU *See* microprocessing unit.

MQ register [COMPUT SCI] Temporary-storage register whose contents can be transferred to or from, or swapped with, the accumulator.

mr *See* milliroentgen.

mrad *See* millirad.

M region [ASTROPHYS] Any of the areas on the surface of the sun that are theoretically responsible for magnetic disturbances on the earth.

m-RNA *See* messenger ribonucleic acid.

MRTD *See* minimum resolvable temperature difference.

msb *See* most significant bit.

M scan *See* M scope.

MSCFD [CHEM ENG] Abbreviation for thousand standard cubic feet per day; usually refers to gas flow.

MSCFH [CHEM ENG] Abbreviation for thousand standard cubic feet per hour; usually refers to gas flow.

MSCFM [CHEM ENG] Abbreviation for thousand standard cubic feet per minute; usually refers to gas flow.

M scope [ELECTR] A modified form of A scope on which part of the time base is slightly displaced in a vertical direction by insertion of an adjustable step which serves as a range marker. Also known as M indicator; M scan.

msec *See* millisecond.

Msec *See* megasecond.

MSG *See* sodium glutamate.

MSH *See* melanocyte-stimulating hormone.

M shell [ATOM PHYS] The third layer of electrons about the nucleus of an atom, having electrons characterized by the principal quantum number 3.

MSI *See* medium-scale integration.

M signal *See* monochrome signal.

MSMA *See* monosodium acid methanearsonate.

MSR *See* molten salt reactor.

M star [ASTRON] A spectral classification for a star whose spectrum is characterized by the presence of titanium oxide bands; M stars have surface temperatures of 3000 K for giants and 3400 K for dwarfs.

M synchronization [ENG] A linking arrangement between a camera lens and the flashbulb unit to allow a 15-millisecond delay of the shutter so that the bulb burns to its brightest point before the shutter opens.

MT *See* megaton.

MTBF *See* mean time between failures.

MTI *See* moving-target indicator.

MTMC *See meta*-tolyl-*N*-methylcarbamate.

MTTF *See* mean time to failure.

M-type backward-wave oscillator [ELECTR] A backward-wave oscillator in which focusing and interaction are through magnetic fields, as in a magnetron. Also known as M-type carcinotron; type-M carcinotron.

M-type carcinotron *See* M-type backward-wave oscillator.

muc-, muci-, muco- [ZOO] A combining form denoting pertaining to mucus, mucin, mucosa.

Mucedinaceae [MYCOL] The equivalent name for Moniliaceae.

mucic acid [ORG CHEM] $HOOC(CHOH)_4COOH$ A white, crystalline powder with a melting point of 210°C; soluble in water; used as a metal ion sequestrant and to retard concrete hardening. Also known as glactaric acid; saccharolactic acid; tetrahydroxyadipic acid.

mucigen [BIOCHEM] A substance from which mucin is derived; contained in mucus-secreting epithelial cells.

mucilage [MATER] **1.** A sticky material employed as an adhesive. **2.** A gummy material derived from plants.

mucin [BIOCHEM] A glycoprotein constituent of mucus and various other secretions of man and lower animals.

mucinosis [MED] Accumulations of materials containing mucin or mucinous substances in the skin; sometimes accompanied by papule and nodule formation.

mucinous cyst *See* mucous cyst.

muck [CIV ENG] Rock or earth removed during excavation. [GEOL] Dark, finely divided, well-decomposed, organic matter intermixed with a high percentage of mineral matter, usually silt, forming a surface deposit in some poorly drained areas. [MIN ENG] *See* waste rock.

mucker [MIN ENG] A worker who loads broken mineral into trams or pushes them from stope chute to shaft. Also known as groundman.

mucking [ENG] Clearing and loading broken rock and other excavated materials, as in tunnels or mines.

mucocele [MED] **1.** Dilatation, particularly of a cavity, with mucus secretion. **2.** A polypoid lesion consisting of mucus and mucus-secreting tissue.

mucocutaneous [ANAT] Pertaining to a mucous membrane and the skin, and to the line where these join.

mucoid [BIOCHEM] **1.** Any of various glycoproteins, similar to mucins but differing in solubilities and precipitation properties and found in cartilage, in the crystalline lens, and in white of egg. **2.** Resembling mucus. [MICROBIO] Pertaining to

large colonies of bacteria characterized by being moist and sticky.

mucolytic [BIOCHEM] Effecting the dissolution, liquefaction, or dispersion of mucus and mucopolysaccharides.

mucopolysaccharide [BIOCHEM] Any of a group of polysaccharides containing an amino sugar and uronic acid; a constituent of mucoproteins, glycoproteins, and blood-group substances.

mucopolysaccharidosis [MED] Any of several inborn metabolic disorders involving mucopolysaccharides; the six types are MPS I, Hurler's syndrome; MPS II, Hunter's syndrome; MPS III, Sanfillipo's syndrome; MPS IV, Morquio's syndrome; MPS V, Scheil's syndrome; and MPS VI, Maroteaux-Lamy's syndrome.

mucoprotein [BIOCHEM] Any of a group of glycoproteins containing a sugar, usually chondroitinsulfuric or mucoitinsulfuric acid, combined with amino acids or polypeptides.

mucopurulent [MED] Containing mucus and pus.

Mucorales [MYCOL] An order of terrestrial fungi in the class Phycomycetes, characterized by a hyphal thallus and nonmotile sporangiospores, or conidiospores.

mucormycosis [MED] An acute, usually fulminating fungus infection of man caused by several genera of Mucorales, including *Absidia, Rhizopus,* and *Mucor.*

mucosa [HISTOL] A mucous membrane.

mucosanguineous [MED] Containing mucus and blood.

mucous [PHYSIO] Of or pertaining to mucus; secreting mucus.

mucous cell [PHYSIO] A mucus-secreting cell.

mucous colitis *See* irritable colon.

mucous connective tissue [HISTOL] A type of loose connective tissue in which the ground substance is especially prominent and soft; occurs in the umbilical cord.

mucous cyst [MED] A retention cyst of a gland, containing a secretion rich in mucin. Also known as mucinous cyst.

mucous degeneration [MED] Any retrogressive change associated with abnormal production of mucus.

mucous epithelium [EMBRYO] The epidermis of an embryo, excluding the epitrichium. [HISTOL] The germinative layer of a stratified squamous epithelium.

mucous gland [PHYSIO] A gland that secretes mucus.

mucous membrane [HISTOL] The type of membrane lining cavities and canals which have communication with air; it is kept moist by glandular secretions. Also known as tunica mucosa.

mucoviscidosis *See* cystic fibrosis.

mucro [BIOL] An abrupt, sharp terminal tip or process.

mucronate [BIOL] Terminated abruptly by a sharp terminal tip or process.

mucus [PHYSIO] A viscid fluid secreted by mucous glands, consisting of mucin, water, inorganic salts, epithelial cells, and leukocytes, held in suspension.

mud [ENG] *See* slime. [GEOL] An unindurated mixture of clay and silt with water; it is slimy with a consistency varying from that of a semifluid to that of a soft and plastic sediment. [PETR] The silt plus clay portion of a sedimentary rock.

mud auger [DES ENG] A diamond-point bit with the wings of the point twisted in a shallow augerlike spiral. Also known as clay bit; diamond-point bit; mud bit.

mud ball [GEOL] A rounded mass of mud or mudstone up to 20 centimeters in diameter in a sedimentary rock. Also known as chalazoidite; tuff ball.

mud berth [CIV ENG] A berth where a vessel rests on the bottom at low water.

mud bit *See* mud auger.

mud blasting [ENG] The detonation of sticks of explosive stuck on the side of a boulder with a mud covering, so that little of the explosive energy is used in breaking the boulder.

mud cake [ENG] A caked layer of clay adhering to the walls of a well or borehole, formed where the water in the drilling mud filtered into a porous formation during rotary drilling.

mud-cake resistivity [PETRO ENG] Resistivity of drilling mud cake pressed from a sample of the mud; important in mud log interpretation.

mudcap [ENG] A quantity of wet mud, wet earth, or sand used to cover a charge of dynamite or other high explosive fired in contact with the surface of a rock in mud blasting.

mud conditioning [PETRO ENG] In a well drilling operation, the treatment and control of drilling mud to ensure proper gel strength, viscosity, density and so on.

mud cone [GEOL] A cone of sulfurous mud built around the opening of a mud volcano or mud geyser, with slopes as steep as 40° and diameters ranging upward to several hundred yards. Also known as puff cone.

mud crack [GEOL] An irregular fracture formed by shrinkage of clay, silt, or mud under the drying effects of atmospheric conditions at the surface. Also known as desiccation crack; sun crack.

mud crack polygon *See* mud polygon.

mud drilling [MIN ENG] Drilling operations in which a mud-laden circulation fluid is used. Also known as mud flush drilling.

mudfish *See* bowfin.

mud flat [GEOL] A relatively level, sandy or muddy coastal strip along a shore or around an island; may be alternately covered and uncovered by the tide or may be covered by shallow water. Also known as flat.

mudflow [GEOL] A flowing mass of fine-grained earth material having a high degree of fluidity during movement.

mud flush drilling *See* mud drilling.

mud flush test [MIN ENG] A test carried out at the boring site to determine whether the mud solution is of the correct viscosity and density.

mud log [PETRO ENG] A continuous record of changes in oil or gas contents of circulating drilling mud while drilling a well.

mudlump [GEOL] A diapiric sedimentary structure consisting of clay or silt and forming an island in deltaic areas; produced by the loading action of rapidly deposited delta front sands upon lighter-weight prodelta clays.

mud pilot [NAV] A person who pilots a vessel by visually observing changes in the color of the water as the depth of the water increases or decreases.

mud pit *See* slushpit.

mud polygon [GEOL] A nonsorted polygon whose center lacks vegetation but whose peripheral fissures contain peat and plants. Also known as mud crack polygon.

mud pot [GEOL] A type of hot spring which contains boiling mud, typically sulfurous and often multicolored; tends to be associated with geysers and other hot springs in volcanic zones. Also known as sulfur-mud pool.

mud puppy [VERT ZOO] Any of several American salamanders of the genera *Necturus* and *Proteus* making up the family Proteidae; distinguished by having both lungs and gills as an adult.

mud-removal acid [PETRO ENG] Mixture of hydrochloric and hydrofluoric acids with inhibitors, surfactants, and demulsifiers; used to dissolve drilling-mud clays away from the drill-hole face.

mudsill [CIV ENG] The lowest sill of a structure, usually embedded in the earth.

mudslide [GEOL] A slow-moving mudflow in which movement is mainly by sliding upon a discrete boundary shear surface.

mud still [ENG] An instrument used to separate oil, water, and other volatile materials in a mud sample by distillation, permitting determination of the quantities of oil, water, and total solid contents in the original sample.

mudstone [GEOL] An indurated equivalent of mud in the form of a blocky or massive, fine-grained sedimentary rock containing approximately equal proportions of silt and clay; lacks the fine lamination or fissility of shale.

mud sump [CHEM ENG] Upstream area in a process vessel where, because of a velocity drop, entrained solids drop out and are collected in a sump.

mud volcano [GEOL] A conical accumulation of variable admixtures of sand and rock fragments, the whole resulting from eruption of wet mud and impelled upward by fluid or gas pressure. Also known as hervidero; macaluba.

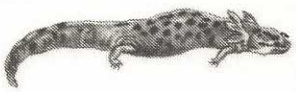
Mueller matrices [OPTICS] Matrix operators in a calculus used to treat polarized light; in this calculus, the light vector is split into four components one of which is the intensity of the light, and unpolarized light can be treated directly.

MUF *See* maximum usable frequency.

mu factor [ELECTR] Ratio of the change in one electrode voltage to the change in another electrode voltage under the conditions that a specified current remains unchanged and that all other electrode voltages are maintained constant; a measure of the relative effect of the voltages on two electrodes upon the current in the circuit of any specified electrode.

muffle furnace [ENG] A furnace with an externally heated

MUD PUPPY



Necturus maculosus, the most common species of mud puppy found in the eastern United State and Canada.

MUD VOLCANO

Mud volcanoes near Douglaston, New York. Photograph taken at low tide, September 12, 1903. *(USGS)*

chamber; the walls of which radiantly heat the contents of the chamber.

muffler [ENG] A device to deaden the noise produced by escaping gases or vapors.

mugearite [PETR] A dark-colored, fine-grained igneous rock in which the chief feldspar is oligoclase, plus orthoclase and olivine with some apatite and opaque oxides; originates by differentiation and volcanic crystallization of the primary magma.

muggy [METEOROL] Colloquially descriptive of warm and especially humid weather.

Mugilidae [VERT ZOO] The mullets, a family of perciform fishes in the suborder Mugiloidei.

Mugiloidei [VERT ZOO] A suborder of fishes in the order Perciformes; individuals are rather elongate, terete fishes with a short spinous dorsal fin that is well separated from the soft dorsal fin.

mulberry [BOT] Any of various trees of the genus *Morus* (family Moraceae), characterized by milky sap and simple, often lobed alternate leaves.

mulch [MATER] A mixture of organic material, such as straw, peat moss, or leaves, that is spread over soil to prevent evaporation, maintain an even soil temperature, prevent erosion, control weeds, and enrich soil.

mule [MIN ENG] *See* barney. [VERT ZOO] The sterile hybrid offspring of the male ass and the mare, or female horse.

mule skinner [MIN ENG] A mule driver.

mull [ENG] To mix thoroughly or grind. [GEOGR] *See* headland. [GEOL] Granular forest humus that is incorporated with mineral matter. [TEXT] A thin, sheer cotton or cotton and polyester fabric.

muller [ENG] A foundry sand-mixing machine.

Müllerian duct *See* paramesonephric duct.

Müllerian duct cyst [MED] A congenital cyst arising from vestiges of the Müllerian ducts.

Müllerian mimicry [ZOO] Mimicry between two aposometic species.

Müller's glass *See* hyalite.

Müller's larva [INV ZOO] The ciliated larva characteristic of various members of the Polycladida; resembles a modified ctenophore.

mulling [ENG] The combining of clay, water, and sand, prior to molding, by compressing with a roller to ensure development of optimum sand properties by the adequate distribution of ingredients.

mullion [BUILD] A vertical bar separating two windows in a multiple window. [GEOL] In folded sedimentary and metamorphic rocks, a columnar structure in which the rock columns seem to intersect.

mullite [MINERAL] $Al_6Si_2O_{13}$ An orthorhombic mineral consisting of an aluminum silicate that is resistant to corrosion and heat; used as a refractory. Also known as porcelainite.

mullock *See* waste rock.

mull technique [SPECT] Method for obtaining infrared spectra of materials in the solid state; material to be scanned is first pulverized, then mulled with mineral oil.

multi- [SCI TECH] A prefix meaning many.

multiaccess computer [COMPUT SCI] A computer system in which computational and data resources are made available simultaneously to a number of users who access the system through terminal devices, normally on an interactive or conversational basis.

multiaddress [COMPUT SCI] Referring to an instruction that has more than one address part.

multianode tube [ELECTR] Electron tube having two or more main anodes and a single cathode.

multiaperture reluctance switch [ELECTR] Two-aperture ferrite storage core which may be used to provide a nondestructive readout computer memory.

multiaspect [COMPUT SCI] Pertaining to searches or systems which permit more than one aspect, or facet, of information to be used in combination, one with the other to effect identifying or selecting operations.

multicavity klystron [ELECTR] A klystron in which there is at least one cavity between the input and output cavities, each of which remodulates the beam so that electrons are more closely bunched.

multicavity magnetron [ELECTR] A magnetron in which the circuit includes a plurality of cavities, generally cut into the solid cylindrical anode so that the mouths of the cavities face the central cathode.

multicellular [BIOL] Consisting of many cells.

multicellular horn [ELECTROMAG] A cluster of horn antennas having mouths that lie in a common surface and that are fed from openings spaced one wavelength apart in one face of a common waveguide. [ENG ACOUS] A combination of individual horn loudspeakers having individual driver units or joined in groups to a common driver unit. Also known as cellular horn.

multichannel analyzer *See* pulse-height analyzer.

multichannel communication [COMMUN] Communication in which there are two or more communication channels over the same path, such as a communication cable, or a radio transmitter which can broadcast on two different frequencies, either individually or simultaneously.

multichannel field-effect transistor [ELECTR] A field-effect transistor in which appropriate voltages are applied to the gate to control the space within the current flow channels.

multichannel loading [COMMUN] Behavior of a multichannel communications system with all channels active.

multichannel telephone system [COMMUN] A telephone system in which two or more communications channels are carried over a single telephone cable or radio link.

multichip microcircuit [ELECTR] Microcircuit in which discrete, miniature, active electronic elements (transistor or diode chips) and thin-film or diffused passive components or component clusters are interconnected by thermocompression bonds, alloying, soldering, welding, chemical deposition, or metallization.

multicipital [BIOL] Having many heads or branches arising from one point.

multicollector electron tube [ELECTR] An electron tube in which electrons travel to more than one electrode.

multicompletion well *See* multiple-completion well.

multicomponent distillation [CHEM ENG] The distillation separation of a single liquid feed stream containing three or more components into a single overhead product and a single bottoms product.

multicomputer system [COMPUT SCI] A system consisting of more than one computer, usually under the supervision of a master computer, in which smaller computers handle input/output and routine jobs while the large computer carries out the more complex computations.

multicoupler [ELECTR] A device for connecting several receivers to one antenna and properly matching the impedances of the receivers to the antenna.

multicycle [GEOL] Pertaining to a landscape or landform produced by more than one cycle of erosion.

multicycle feeding *See* multiread feeding.

multideck cage [MIN ENG] A cage with two or more compartments or platforms to hold the mine cars.

multideck clarifiers [ENG] Extraction units which remove pollutants from recycled plant waste water.

multideck screen [MIN ENG] A screen with two or more superimposed screening surfaces mounted within a common frame.

multideck sinking platform [MIN ENG] A sinking platform of several decks so that various shaft-sinking operations may be performed simultaneously.

multideck table [MIN ENG] A type of shaking table that is double-decked; while each deck is fed and discharged independently, one mechanism vibrates both.

multidimensional derivative [MATH] The generalized derivative of a function of several variables which is usually represented as a matrix involving the various partial derivatives of the function.

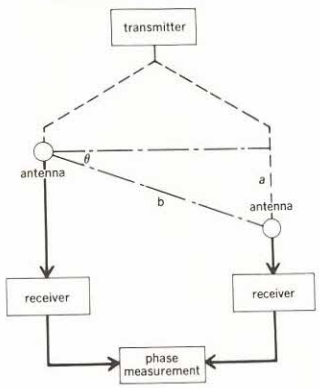
multidimensional Turing machine [COMPUT SCI] A variation of a Turing machine in which tapes are replaced by multidimensional structures.

multidither COAT *See* multidither coherent adaptive optical techniques.

multidither coherent adaptive optical techniques [OPTICS] Adaptive optical techniques for concentrating laser radiation into as small an area as possible, involving an array of laser sources, one of which has fixed phase, while the phase of a second element is controlled by a low-amplitude phase modulation or dither, and adjusted to maximize the reflection from a target glint. Abbreviated multidither COAT.

multidrop line [COMMUN] A telephone pair which terminates at several locations.
multielectrode tube [ELECTR] Electron tube containing more than three electrodes associated with a single electron stream.
multielement array [ELECTROMAG] An antenna array having a large number of antennas.
multielement parasitic array [ELECTROMAG] Antennas consisting of an array of driven dipoles and parasitic elements, arranged to produce a beam of high directivity.
multielement vacuum tube [ELECTR] A vacuum tube which has one or more grids in addition to the cathode and plate electrodes.
multifid [BIOL] Divided into many lobes.
multifilament [TEXT] A yarn made of two or more monofilaments, natural or synthetic.
multifuel burner [ENG] A burner which utilizes more than one fuel simultaneously for combustion.
multifunction array radar [ENG] Electronic scanning radar which will perform target detection and identification, tracking, discrimination, and some interceptor missile tracking on a large number of targets simultaneously and as a single unit.
multifuse igniter [ENG] A black powder cartridge that allows several fuses to be fired at the same time by lighting a single fuse.
multiglandular [ANAT] Of or pertaining to several glands.
multigrid tube [ELECT] An electron tube having two or more grids between cathode and anode, as a tetrode or pentode.
multigroup diffusion [NUCLEO] Diffusion of neutrons in a material as it is regarded in the multigroup model.
multigroup model [NUCLEO] A model for the behavior of neutrons in a material in which they are grouped into several energy ranges, taking into account differences in spatial behavior of neutrons in the various groups, and transfer of neutrons between groups.
multigun tube [ELECTR] A cathode-ray tube having more than one electron gun.
multihead Turing machine [COMPUT SCI] A variation of a Turing machine in which more than one head is allowed per tape.
multijob operation [COMPUT SCI] The concurrent or interleaved execution of job steps from more than one job.
multilayer bit [DES ENG] A bit set with diamonds arranged in successive layers beneath the surface of the crown.
multilevel address *See* indirect address.
multilevel control theory [CONT SYS] An approach to the control of large-scale systems based on decomposition of the complex overall control problem into simpler and more easily managed subproblems, and coordination of the subproblems so that overall system objectives and constraints are satisfied.
multilevel indirect addressing [COMPUT SCI] A programming device whereby the address retrieved in the memory word may itself be an indirect address that points to another memory location, which in turn may be another indirect address, and so forth.
multilevel transmission [COMMUN] Transmission of digital information in which three or more levels of voltage are recognized as meaningful, as 0,1,2 instead of simply 0,1.
multilinear algebra [MATH] The study of functions of several variables which are linear relative to each variable.
multilinear form [MATH] A multilinear form of degree n is a polynomial expression which is linear in each of n variables.
multilist organization [COMPUT SCI] A chained file organization in which each segment is indexed.
Multillidae [INV ZOO] An economically important family of Hymenoptera; includes the cow killer, a parasite of bumblebee pupae.
multilocular [BIOL] Having many small chambers or vesicles.
multimeter *See* volt-ohm-milliammeter.
multinomial [MATH] An algebraic expression which involves the sum of at least two terms.
multinomial distribution [MATH] The joint distribution of the set of random variables which are the number of occurrences of the possible outcomes in a sequence of multinomial trials.
multinomial trials [STAT] Unrelated trials with more than two possible outcomes the probabilities of which do not change from trial to trial.
multipactor [ELECTR] A high-power, high-speed microwave switching device in which a thin electron cloud is driven back and forth between two parallel plane surfaces in a vacuum by a radio-frequency electric field.
multipass sort [COMPUT SCI] Computer program designed to sort more data than can be contained within the internal storage of a computer; intermediate storage, such as disk, tape, or drum, is required.
multipath *See* multipath transmission.
multipath cancellation [COMMUN] Occurrence of essentially complete cancellation of radio signals because of the relative amplitude and phase differences of the components arriving over the separate paths.
multipath system [NAV] An electronic navigation system that measures differences in or otherwise compares transmission times of radio signals.
multipath transmission [ELECTROMAG] The propagation phenomenon that results in signals reaching a radio receiving antenna by two or more paths, causing distortion in radio and ghost images in television. Also known as multipath.
multiphase flow [CHEM ENG] Mixture of two or more distinct phases (such as oil, water, and gas) flowing through a closed conduit.
multiphasic personality inventory *See* Minnesota multiphasic personality inventory.
multiphoton absorption [ATOM PHYS] The excitation of an atom or other microscopic system to a higher quantum state by simultaneous absorption of two or more photons which together provide the necessary energy.
multiphoton ionization [ATOM PHYS] The removal of one or more electrons from an atom or other microscopic system as the result of simultaneous absorption of two or more photons.
multiple [ELEC] **1.** Group of terminals arranged to make a circuit or group of circuits accessible at a number of points at any one of which connection can be made. **2.** To connect in parallel. **3.** *See* parallel. [MET] A piece of stock cut from bar for use in a forging which provides the exact length needed for a single workpiece.
multiple-access computer [COMPUT SCI] A computer system whose facilities can be made available to a number of users at essentially the same time, normally through terminals, which are often physically far removed from the central computer and which typically communicate with it over telephone lines.
multiple accumulating registers [COMPUT SCI] Special registers capable of handling factors larger than one computer word in length.
multiple-activity process chart [IND ENG] A chart showing the coordinated synchronous or simultaneous activities of a work system comprising one or more machines or men; each machine or man is shown in a separate, parallel column indicating its or his activities as related to the other parts of the work system.
multiple-address code [COMPUT SCI] A computer instruction code in which more than one address or storage location is specified; the instruction may give the locations of the operands, the destination of the result, and the location of the next instruction.
multiple-address computer [COMPUT SCI] A computer whose instruction contains more than one address, for example, an operation code and three addresses A, B, C, such that the content of A is multiplied by the content of B and the product stored in location C.
multiple-address instruction [COMPUT SCI] An instruction which has more than one address in a computer; the addresses give locations of other instructions, or of data or instructions that are to be operated upon.
multiple-anomaly syndrome [MED] Any syndrome associated with numerous congenital abnormalities.
multiple appearance [ELEC] Jack arrangement in telephone switchboards whereby a single-line circuit appears before two or more operators.
multiple-arch dam [CIV ENG] A dam composed of a series of arches inclined at about 45° and carried on parallel buttresses or piers.
multiple-beam antenna [ELECTROMAG] An antenna or antenna array which radiates several beams in different directions.
multiple-beam interference [OPTICS] Interference which arises when part of a beam is reflected several times back and forth between a pair of strongly reflecting surfaces before being reflected or transmitted from the pair.
multiple-beam interferometer [OPTICS] An interferometer in which a beam is reflected several times back and forth

MULTIPATH SYSTEM



Multipath system. Transmission paths (dashed lines) are assumed parallel for long distances. Here b = base line between the two antennas. Path from transmitter to one antenna is larger by length a than path to second antenna, causing phase difference $n\theta$ between signals received at two receivers, where n is a positive integer.

between a pair of parallel plane surfaces; examples are the Fizeau interferometer and the Fabry-Perot interferometer.

multiple call transmission [COMMUN] Routing and transmitting to two or more stations are done by the operator switching the message, cross-office, to the multiple address processing unit for routing line segregation.

multiple cancellous exostoses *See* multiple hereditary exostoses.

multiple cartilaginous exostoses *See* multiple hereditary exostoses.

multiple cartridges [CHEM ENG] Filter medium made up of two or more filter cartridges, either fastened end to end or arranged side by side (in series or parallel flow respectively).

multiple colloid goiter *See* adenomatous goiter.

multiple-completion packer [PETRO ENG] A device used to provide a seal between the outside surfaces of the two or more parallel tubing strings in a multiple-completion well, and the inside surface of the common wellbore casing.

multiple-completion well [PETRO ENG] Oil well in which there is production from more than one oil-bearing zone (different depths) with parallel tubing strings within a single wellbore casing string. Also known as multicompletion well.

multiple computer operation [COMPUT SCI] The utilization of any one computer of a group of computers by means of linkages provided by multiplexor channels, all computers being linked through their channels or files.

multiple connector [ENG] A flow chart symbol that indicates the merging of several flow lines into one line or the dispersal of a flow line into several lines.

multiple-contact switch *See* selector switch.

multiple cropping [AGR] A system of growing several food crops on the same field in one year.

multiple-current hypothesis [OCEANOGR] The proposal that the Gulf Stream, instead of being composed of a single tortuous current, actually consists of many quasipermanent currents, countercurrents, and eddies.

multiple decay *See* branching.

multiple discharge *See* composite flash.

multiple disintegration *See* branching.

multiple-effect evaporation [CHEM ENG] Series-operation energy economizer system in which heat from the steam generated (evaporated liquid) in the first stage is used to evaporate additional liquid in the second stage (by reducing system pressure), and so on, up to 10 or more effects; commonly used in the pulp and paper industry.

multiple-entry system [MIN ENG] A system of access or development openings generally in bituminous coal mines involving more than one pair of parallel entries, one for haulage and fresh-air intake and the other for return air.

multiple epidermis [BOT] Epidermis that is several layers thick, occurring in many species of *Ficus*, *Begonia*, and *Peperomia*.

multiple fabric [TEXT] Material made of two or more fabrics bound together as they are woven.

multiple-factor incentive plan [IND ENG] A wage incentive plan based on productivity and other factors such as yield, material usage, and reduction of scrap.

multiple fault *See* step fault.

multiple firing [ENG] Electrically firing with delay blasting caps in a number of holes at one time.

multiple-function chip *See* large-scale integrated circuit.

multiple gun [ORD] Any group of guns mounted in one position and fired as a unit.

multiple hereditary exostoses [MED] An inherited form of exostosis, revealing itself at several sites in childhood or adolescence. Also known as diaphyseal aclasis; hereditary deforming chondrodysplasia; metaphyseal aclasis; multiple cancellous exostoses; multiple cartilaginous exostoses.

multiple hydraulic pump [PETRO ENG] Oil-well pump arrangement by which a single pump can be used in alternating operation to lift oil from two producing zones within a single multiple completion well.

multiple-impulse welding [MET] Spot, upset, or projection welding in which more than one current impulse is generated during a single machine cycle. Also known as pulsation welding.

multiple independently targeted reentry vehicle [ORD] A type of intercontinental ballistics missile which carries several nuclear warheads; before the missile reenters the atmosphere, the warheads separate and follow different trajectories to various targets. Abbreviated MIRV.

multiple integral [MATH] An integral over a subset of n-dimensional space.

multiple jacks [ELEC] Series of jacks with tip, ring, and sleeve, respectively connected in parallel, and appearing in different panels of the face equipment of a telephone exchange.

multiple-keyboard point-of-sale system [COMPUT SCI] A point-of-sale system consisting of a group of electronic machines, without programming capability, placed at all check points and linked either to one central data collector with a magnetic tape or to a minicomputer with disk storage.

multiple lamp holder [ELEC] A device that can be inserted in a lamp holder to act as two or more lamp holders. Also known as current tap.

multiple-length arithmetic [COMPUT SCI] Arithmetic performed by a computer in which two or more machine words are used to represent each number in the calculations, usually to achieve higher precision in the result.

multiple-length number [COMPUT SCI] A number having two or more times as many digits as are ordinarily used in a given computer.

multiple-length working [COMPUT SCI] Any processing of data by a computer in which two or more machine words are used to represent each data item.

multiple-loop system [CONT SYS] A system whose block diagram has at least two closed paths, along each of which all arrows point in the same direction.

multiple modulation [COMMUN] A succession of modulating processes in which the modulated wave from one process becomes the modulating wave for the next. Also known as compound modulation.

multiple module access [COMPUT SCI] Device which establishes priorities in storage access in a multiple computer environment.

multiple myeloma [MED] A primary bone malignancy characterized by diffuse osteoporosis, anemia, hyperglobulinemia, and other clinical features. Also known as Kahler's disease.

multiple neuritis *See* polyneuritis.

multiple neurofibroma *See* neurofibromatosis.

multiple neurofibromatosis *See* neurofibromatosis.

multiple openings [MIN ENG] Any series of underground openings separated by rib pillars or connected at frequent intervals to form a system of rooms and pillars.

multiple-parallel-tubing string [PETRO ENG] Two or more parallel and closely packed oil-well tubing strings used in multiple-completion wells. Also known as multiple-tubing string.

multiple-pass weld [MET] A weld made by depositing filler metal with two or more passes in succession.

multiple personality [PSYCH] A personality capable of dissociation into several or many other personalities at the same time, whereby the delusion is entertained that the one person is many separate persons; a symptom in schizophrenic patients.

multiple piece rate plan [IND ENG] A wage incentive plan wherein increasingly higher unit pay rates are given to the worker as his productivity increases.

multiple precision arithmetic [COMPUT SCI] Method of increasing the precision of a result by increasing the length of the number to encompass two or more computer words in length.

multiple pregnancy [MED] Being pregnant with more than one fetus.

multiple programming [COMPUT SCI] The execution of two or more operations simultaneously.

multiple punching [COMPUT SCI] The punching of two or more holes in a column of a punch card.

multiple-purpose tester *See* volt-ohm-milliammeter.

multiple reflection [GEOPHYS] A seismic wave which has more than one reflection. Also known as repeated reflection; secondary reflection. [OPTICS] Reflection of light back and forth several times between a pair of strongly reflecting surfaces.

multiple reflection echoes [ELECTROMAG] Radar echoes returned from a real target by reflection from some object in the radar beam; such echoes appear at a false bearing and false range.

multiple resonance [ELEC] Two or more resonances at different frequencies in a circuit consisting of two or more coupled circuits which are resonant at slightly different frequencies. [QUANT MECH] Two or more resonances at slightly different

energies, resulting from the splitting of a single resonance by an interaction that is relatively weak.

multiple root [MATH] A polynomial $f(x)$ has c as a multiple root if $(x - c)^n$ is a factor for some $n > 1$. Also known as repeated root.

multiple-row blasting [ENG] The drilling, charging, and firing of rows of vertical boreholes.

multiple sampling [IND ENG] A plan for quality control in which a given number of samples from a group are inspected, and the group is either accepted, resampled, or rejected, depending on the number of failures found in the samples.

multiple scattering [PHYS] Process in which a particle undergoes a large number of collisions, and the total change in its momentum is the sum of the many small changes occurring during individual collisions.

multiple sclerosis [MED] A degenerative disease of the nervous system of unknown cause in which there is demyelination followed by gliosis.

multiple series [ENG] A method of wiring a large group of blasting charges by connecting small groups in series and connecting these series in parallel. Also known as parallel series.

multiple serositis *See* polyserositis.

multiple shooting [ENG] The firing of an entire face at one time by means of connecting shot holes in a single series and shooting all holes at the same instant.

multiple-shot survey [PETRO ENG] The determining and recording of drill-hole direction.

multiple-slide press [MECH ENG] A press with individual adjustable slides built into the main slide or connected independently to the main shaft.

multiple spot welding [MET] Spot welding in which several spots are welded during a single machine cycle.

multiple-stage rocket *See* multistage rocket.

multiple-stage separator [PETRO ENG] Oilwell gas-oil separator in which wellhead pressure is reduced in several stages, with the flashing off of gas at each pressure reduction.

multiple star [ASTRON] A system of three or more stars which appear to the naked eye as a single star.

multiple-strand conveyor [MECH ENG] A conveyor with two or more spaced strands of chain, belts, or cords as the supporting or propelling medium.

multiple switchboard [ELEC] Manual telephone switchboard in which each subscriber line is attached to two or more jacks, to be within reach of several operators.

multiplet [QUANT MECH] A collection of relatively closely spaced energy levels which result from the splitting of a single energy level by an interaction which is relatively weak; examples are spin-orbit multiplets and isospin multiplets. [SPECT] A collection of relatively closely spaced spectral lines resulting from transitions to or from the members of a multiplet (as in the quantum-mechanics definition).

multiple target generator [ELECTR] An electronic countermeasures device that produces several false responses in a hostile radar set.

multiplet intensity rules [SPECT] Rules for the relative intensities of spectral lines in a spin-orbit multiplet, stating that the sum of the intensities of all lines which start from a common initial level, or end on a common final level, is proportional to $2J+1$, where J is the total angular momentum of the initial level or final level respectively.

multiple tropopause [GEOPHYS] A frequent condition in which the tropopause appears not as a continuous single "surface" of discontinuity between the troposphere and the stratosphere, but as a series of quasi-horizontal "leaves," which are partly overlapping in steplike arrangement.

multiple-tubing string *See* multiple-parallel-tubing string.

multiple-tuned antenna [ELECTROMAG] Low-frequency antenna having a horizontal section with a multiplicity of tuned vertical sections.

multiple twin quad [ELEC] Quad cable in which the four conductors are arranged in two twisted pairs, and the two pairs twisted together.

multiple-unit semiconductor device [ELECTR] Semiconductor device having two or more seats of electrodes associated with independent carrier streams.

multiple-unit steerable antenna *See* musa.

multiple-unit tube *See* multiunit tube.

multiple-valued [MATH] A relation between sets is multiplevalued if it associates to an element of one more than one element from the other; sometimes functions are allowed to be multiple-valued.

multiple-valued logic [MATH] A form of logic in which statements can have values other than the two values "true" and "false."

multiplex [ENG] Stereoscopic device to project aerial photographs onto surfaces so that the images may be viewed in three dimensions by using anaglyphic spectacles; used to prepare topographic maps.

multiplexer [ELECTR] A device for combining two or more signals, as for multiplex, or for creating the composite color video signal from its components in color television. Also spelled multiplexor.

multiplex holography [OPTICS] A technique in which a rotating cylindrical hologram is illuminated by a tungsten-filament light bulb on the axis of the cylinder; as the cylinder rotates, or as the viewer moves around, three-dimensional images are seen inside the cylinder.

multiplex mode [COMPUT SCI] The utilization of differences in operating speeds between a computer and transmission lines; the multiplexor channel scans each line in sequence, and any transmitted pulse on a line is assembled in an area reserved for this line; consequently, a number of users can be handled by the computer simultaneously. Also known as multiplexor channel operation.

multiplex operation [COMMUN] Simultaneous transmission of two or more messages in either or both directions over a carrier channel.

multiplexor *See* multiplexer.

multiplexor channel operation *See* multiplex mode.

multiplexor terminal unit [COMPUT SCI] Device which permits a large number of data transmission lines to access a single computer.

multiplex transmission [COMMUN] The simultaneous transmission of two or more programs or signals over a single radio-frequency channel, such as by time division, frequency division, or phase division.

multiple x-y recorder [ENG] Recorder that plots a number of independent charts simultaneously, each showing the relation of two variables, neither of which is time.

multiple zone [PETRO ENG] Two or more discrete oil or gas reservoirs in the same geographic area, but at different depths.

multiplicand [MATH] If a number x is to be multiplied by a number y, then x is called the multiplicand.

multiplication [ELECTR] An increase in current flow through a semiconductor because of increased carrier activity. [MATH] Any algebraic operation analogous to multiplication of real numbers. [NUCLEO] The ratio of neutron flux in a subcritical reactor to that supplied by a neutron source; it is the factor by which, in effect, the reactor multiplies the source strength.

multiplication constant *See* multiplication factor.

multiplication factor [NUCLEO] The ratio of the number of neutrons present in a reactor in any one neutron generation to that in the immediately preceding generation. Also known as multiplication constant; neutron multiplication factor.

multiplication table [COMPUT SCI] In certain computers, a part of memory holding a table of numbers in which the computer looks up values in order to perform the multiplication operation.

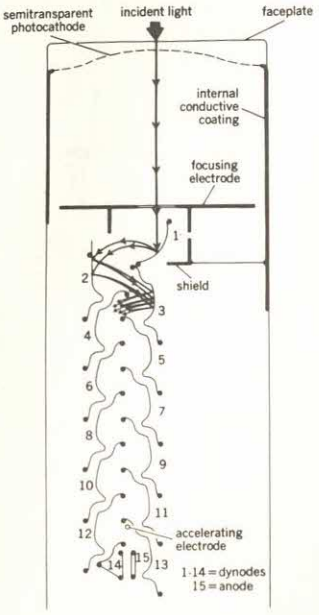
multiplication time [COMPUT SCI] The time required for a computer to perform a multiplication; for a binary number it will be equal to the total of all the addition times and all the shift times involved in the multiplication.

multiplicative congruential generator [COMPUT SCI] A congruential generator in which the constant b in the generating formula is equal to zero.

multiplicity [MATH] A root of a polynomial $f(x)$ has multiplicity n if $(x-a)^n$ is a factor of $f(x)$ and n is the largest possible integer for which this is true. [PHYS] In a system having Russell-Saunders coupling, the quantity $2S+1$, where S is the total spin quantum number.

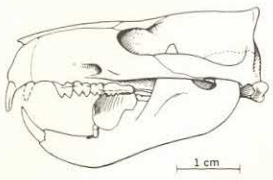
multiplier [ELEC] A resistor used in series with a voltmeter to increase the voltage range. Also known as multiplier resistor. [ELECTR] **1.** A device that has two or more inputs and an output that is a representation of the product of the quantities represented by the input signals; voltages are the quantities commonly multiplied. **2.** *See* electron multiplier. **3.** *See* frequency multiplier. [MATH] If a number x is to be multiplied by a number y, then y is called the multiplier.

MULTIPLIER PHOTOTUBE



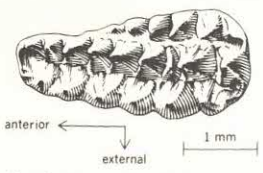
Typical multiplier phototube construction.

MULTITUBERCULATA



Skull and jaw of *Ptilodus*, an early Tertiary multituberculate. *(After G. G. Simpson, 1937)*

MULTITUBERCULATE



Occlusal view of a first upper molar of a multituberculate mammal.

multiplier field [COMPUT SCI] The area reserved for a multiplication, equal to the length of multiplier plus multiplicand plus one character.

multiplier phototube [ELECTR] A phototube with one or more dynodes between its photocathode and the output electrode; the electron stream from the photocathode is reflected off each dynode in turn, with secondary emission adding electrons to the stream at each reflection. Also known as electron-multiplier phototube; photoelectric electron-multiplier tube; photomultiplier; photomultiplier tube.

multiplier-quotient register [COMPUT SCI] A register equal to two words in length in which the quotient is developed and in which the multiplier is entered for multiplication.

multiplier resistor *See* multiplier.

multiplier traveling-wave photodiode [ELECTR] Photodiode in which the construction of a traveling-wave tube is combined with that of a multiplier phototube to give increased sensitivity.

multiplier tube [ELECTR] Vacuum tube using secondary emission from a number of electrodes in sequence to obtain increased output current; the electron stream is reflected, in turn, from one electrode of the multiplier to the next.

multipling [COMMUN] Use of multidrop lines to provide for changes in telephone service patterns or requirements; unused terminals afford convenient access to wiretappers.

multiply connected region [MATH] An open set in the plane which has holes in it.

multiply defined symbol [COMPUT SCI] Common assembler or compiler error printout indicating that a label has been used more than once.

multipoint line [COMMUN] A line which is shared by two or more different tributary stations.

multipolar [ELECTROMAG] Having more than one pair of magnetic poles.

multipolar machine [ELECTROMAG] An electric machine that has a field magnet with more than one pair of poles.

multipole [ELECTROMAG] One of a series of types of static or oscillating distributions of charge or magnetization; namely, an electric multipole or a magnetic multipole.

multipole fields [ELECTROMAG] The electric and magnetic fields generated by static or oscillating electric or magnetic multipoles.

multipole radiation [PHYS] **1.** Electromagnetic radiation which has characteristics equivalent to those of radiation generated by an oscillating electric or magnetic multipole, and is made up of photons of well-defined angular momentum and parity. **2.** Internal conversion electrons, or positron-electron pairs having similar characteristics, emitted from an atom when the nucleus makes a transition between two energy states.

multipole transition [PHYS] A transition between two energy states of an atom or nucleus in which a quantum of multipole radiation is emitted or absorbed.

multiport burner [ENG] A burner having several nozzles which discharge fuel and air.

multiport memory [COMPUT SCI] A memory shared by many processors to communicate among themselves.

multiprecision arithmetic [COMPUT SCI] A form of arithmetic similar to double precision arithmetic except that two or more words may be used to represent each number.

multiprocessing [COMPUT SCI] Carrying out of two or more sequences of instructions at the same time in a computer.

multiprocessing system *See* multiprocessor.

multiprocessor [COMPUT SCI] A data-processing system that can carry out more than one program, or more than one arithmetic operation, at the same time. Also known as multiprocessing system.

multiprocessor interleaving [COMPUT SCI] Technique used to speed up processing time; by splitting banks of memory each with x microseconds access time and accessing each one in sequence $1/n$-th of a cycle later, a reference to memory can be had every x/n microseconds; this speed is achieved at the cost of hardware complexity.

multiprogramming [COMPUT SCI] The interleaved execution of two or more programs by a computer, in which the central processing unit executes a few instructions from each program in succession.

multiprogramming executive control [COMPUT SCI] Control program structure required to handle multiprogramming with either a fixed or a variable number of tasks.

multipurpose projectile [ORD] A projectile designed so that the type of payload can be changed; this is accomplished by using prepared loads in canister form and providing a removable base plug to permit change of canister; thus a canister containing colored smoke mixture can be replaced by, for instance, one containing leaflets.

multiread feeding [COMPUT SCI] A system of reading punched cards in which the card passes a sensing station several times and successive fields of the card are read on consecutive machine cycles, enabling several lines to be printed from a single card. Also known as multicycle feeding.

multiring structure [ASTRON] A formation on the moon's surface consisting of two or more craters within a larger crater.

multirope friction winder [MECH ENG] A winding system in which the drive to the winding ropes is the frictional resistance between the ropes and the driving sheaves.

multisegment magnetron [ELECTR] Magnetron with an anode divided into more than two segments, usually by slots parallel to its axis.

multistable circuit [ELECTR] A circuit having two or more stable operating conditions.

multistage [ENG] Functioning or occurring in separate steps.

multistage amplifier *See* cascade amplifier.

multistage compressor [MECH ENG] A machine for compressing a gaseous fluid in a sequence of stages, with or without intercooling between stages.

multistage pump [MECH ENG] A pump in which the head is developed by multiple impellers operating in series.

multistage queuing [IND ENG] A situation involving two or more sequential stages in a process, each of which involves waiting in line.

multistage rocket [AERO ENG] A vehicle having two or more rocket units, each unit firing after the one in back of it has exhausted its propellant; normally, each unit, or stage, is jettisoned after completing its firing. Also known as multiple-stage rocket; step rocket.

multistatic radar [ENG] Radar in which successive antenna lobes are sequentially engaged to provide a tracking capability without physical movement of the antenna.

multistation [COMMUN] Pertaining to a network in which each station can communicate with each of the other stations.

multistator watt-hour meter [ELEC] An induction type of watt-hour meter in which several stators exert a torque on the rotor.

multistrip coupler [ELECTR] A series of parallel metallic strips placed on a surface acoustic wave filter between identical apodized interdigital transducers; it converts the spatially nonuniform surface acoustic wave generated by one transducer into a spatially uniform wave received at the other transducer, and helps to reject spurious bulk acoustic modes.

multitape Turing maching [COMPUT SCI] A variation of a Turing machine in which more than one tape is permitted, each tape having its own read-write head.

multitask operation [COMPUT SCI] A sophisticated form of multijob operation in a computer which allows a single copy of a program module to be used for more than one task.

multitrack operation [COMPUT SCI] The selection of the next read/write head in a cylinder, usually indicated by bit zero of the operation code in the channel command word.

multitrack recording system [ENG] Recording system which provides two or more recording paths on a medium, which may carry either related or unrelated recordings in common time relationship.

Multituberculata [PALEON] The single order of the nominally mammalian suborder Allotheria; multituberculates had enlarged incisors, the coracoid bones were fused to the scapula, and the lower jaw consisted of the dentary bone alone.

multituberculate [VERT ZOO] Of teeth, having several or many simple conical cusps.

multiturn potentiometer [ELEC] A precision wire-wound potentiometer in which the resistance element is formed into a helix, generally having from 2 to 10 turns.

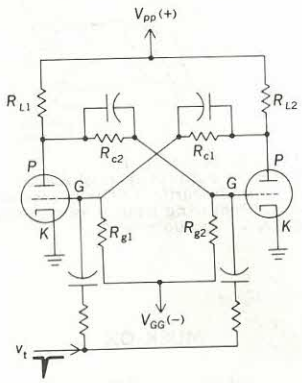
multiunit tube [ELECTR] Electron tube containing within one glass or metal envelope, two or more groups of electrodes, each associated with separate electron streams. Also known as multiple-unit tube.

multiuser system [COMPUT SCI] A computer system with multiple terminals, enabling several users, each at their own terminal, to use the computer.

multivalent *See* polyvalent.

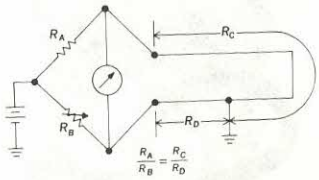
multivariable system [CONT SYS] A dynamical system in which the number of either inputs or outputs is greater than 1.
multivariate analysis [STAT] The study of random variables which are multidimensional.
multivator [ELEC] A type of dc-to-dc up-converter.
[ELECTR] An automatic device for analyzing a number of dust samples that might be collected by spacecraft on the moon, Mars, and other planets, to detect the presence of microscopic organisms with a multiplier phototube that measures the fluorescence given off.
multivibrator [ELECTR] A relaxation oscillator using two tubes, transistors, or other electron devices, with the output of each coupled to the input of the other through resistance-capacitance elements or other elements to obtain in-phase feedback voltage.
multivolume file [COMPUT SCI] A file that consists of more than one physical unit of storage medium.
multiway merge [COMPUT SCI] A computer operation in which three or more lists are merged into a single list.
multiwell gas-lift system [PETRO ENG] An installation to allow gas-lift production from the various tubing strings involved in a multiple completion well.
mu meson *See* muon.
Mumetal [MET] An alloy of high magnetic permeability, containing 14% iron, 5% copper, 1.5% chromium, and the balance nickel.
mummification [MED] **1.** Drying of a part of the body into a hard mass. **2.** Dry gangrene.
mumps [MED] An acute contagious viral disease characterized chiefly by painful enlargement of a parotid gland.
mumps orchitis [MED] Inflammation of the testis due to the mumps virus.
Munchausen syndrome [PSYCH] A personality disorder in which the patient describes dramatic but false symptoms or simulates acute illness, happily undergoing examinations, hospitalization, and diagnostic and therapeutic manipulations, and upon discovery of the real nature of his case often leaves without notice and moves on to another hospital.
mundic *See* pyrite.
municipal engineering [CIV ENG] Branch of engineering dealing with the form and functions of urban areas.
munition [ORD] **1.** In a broad sense, any and all supplies and equipment required to conduct offensive or defensive war, including war machines, ammunition, transport, fuel, food, and clothing, but excluding personnel and excluding supplies and equipment for purposes other than for direct military operations. **2.** In a restricted sense, ordnance.
Munsell chroma *See* chroma.
Munsell color system [OPTICS] A system for designating colors which employs three perceptually uniform scales (Munsell hue, Munsell value, Munsell chroma) defined in terms of daylight reflectance.
Munsell hue [OPTICS] The dimension of the Munsell system of color that determines whether a color is blue, green, yellow, red, purple, or the like, without regard to its lightness or saturation.
Munsell value [OPTICS] The dimension, in the Munsell system of object-color specificiation, that indicates the apparent luminous transmittance or reflectance of the object on a scale having approximately equal perceptual steps under the usual conditions of observation.
muntins *See* sash bars.
Muntz metal [MET] A 60/40 type of brass composed of 58–61% copper, up to 1% lead, and remainder zinc. Also known as malleable brass.
muon [PARTIC PHYS] Collective name for two semistable elementary particles with positive and negative charge, designated μ^+ and μ^- respectively, which are leptons and have a spin of ½ and a mass of approximately 105.7 MeV. Also known as mu meson.
muonic atom [PARTIC PHYS] An atom in which an electron is replaced by a negatively charged muon orbiting close to or within the nucleus.
muonium [PARTIC PHYS] An atom consisting of an electron bound to a positively charged muon by their mutual Coulomb attraction, just as an electron is bound to a proton in the hydrogen atom.
mural thrombus [MED] A thrombus attached to the wall of a blood vessel or mural endocardium. Also known as lateral thrombus.
muramic acid [BIOCHEM] An organic acid found in the mucopeptide (murein) in the cell walls of bacteria and blue-green algae.
muramidase [BIOCHEM] Lysozyme when acting as an enzyme on the hydrolysis of the muramic acid-containing mucopeptide in the cell walls of some bacteria.
murbruk structure *See* mortar structure.
Murchisoniacea [PALEON] An extinct superfamily of gastropod mollusks in the order Prosobranchia.
murein [BIOCHEM] The peptidoglycan of bacterial cell walls.
muriatic acid *See* hydrochloric acid.
muriatic ether *See* ethyl chloride.
Muricacea [INV ZOO] A superfamily of gastropod mollusks in the order Prosobranchia.
muricate [ZOO] Covered with sharp, hard points.
Muricidae [INV ZOO] A family of predatory gastropod mollusks in the order Neogastropoda; contains the rock snails.
Muridae [VERT ZOO] A large diverse family of relatively small cosmopolitan rodents; distinguished from closely related forms by the absence of cheek pouches.
muriform [BIOL] **1.** Resembling the arrangement of courses in a brick wall, especially having both horizontal and vertical septa. **2.** Pertaining to or resembling a rat or mouse.
Murinae [VERT ZOO] A subfamily of the Muridae which contains such forms as the striped mouse, house mouse, harvest mouse, and field mouse.
murine plague [VET MED] Infection of the rat by the bacterium *Pasteurella pestis;* transmitted from rat to rat and from rat to man by a flea.
murine typhus [MED] A relatively mild, acute, febrile illness of worldwide distribution caused by *Rickettsia mooseri*, transmitted from rats to man by the flea and characterized by headache, macular rash, and myalgia. Also known as endemic typhus; flea-borne typhus; rat typhus; shop typhus; urban typhus.
murmur [MED] A blowing or roaring heart sound heard through the wall of the chest; caused by blood flow through a defective valve.
muromontite [MINERAL] $Be_2FeY_2(SiO_4)_3$ A mineral composed of yttrium iron beryllium silicate.
Murphree efficiency [CHEM ENG] In a plate-distillation column, the ratio of the actual change in vapor composition when the vapor passes through the liquid on a tray (plate) to the composition change of the vapor if it were in vapor-liquid equilibrium with the tray liquid.
Murray code [COMMUN] A binary code with five binary digits per letter which was developed to be used with a typewriterlike device which would punch holes in paper tape, and is now the basis of the widely used CCIT 2 code.
Murray loop test [ELEC] A method of localizing a fault in a cable by replacing two arms of a Wheatstone bridge with a loop formed by the cable under test and a good cable connected to the far end of the defective cable.
Murray Valley encephalitis [MED] An acute inflammation of the brain and spinal cord caused by a virus; confined to Australia and New Guinea. Also known as Australian X disease.
murumuru oil [MATER] An oil obtained from nuts of the palm *Attalea orbignya*, containing 40% lauric acid, 35% myristic acid, and some palmitic, stearic, linoleic, and oleic acids.
musa [ELECTROMAG] An electrically steerable receiving antenna whose directional pattern can be rotated by varying the phases of the contributions of the individual units. Derived from multiple-unit steerable antenna.
Musaceae [BOT] A family of monocotyledonous plants in the order Zingiberales characterized by five functional stamens, unisexual flowers, spirally arranged leaves and bracts, and fleshy, indehiscent fruit.
Musca [ASTRON] A southern constellation, right ascension 12 hours, declination 70°S. Also known as Fly.
muscarine [ORG CHEM] $C_8H_{19}NO_3$ A quaternary ammonium compound, the toxic ingredient of certain mushrooms, as *Amanita muscaria*. Also known as hydroxycholine.
muscarinism [MED] Poisoning due to ingestion of certain mushrooms.
Muschelkalk [GEOL] A European stage of geologic time equivalent to the Middle Triassic, above Bunter and below Keuper.
Musci *See* Bryopsida.

MULTIVIBRATOR



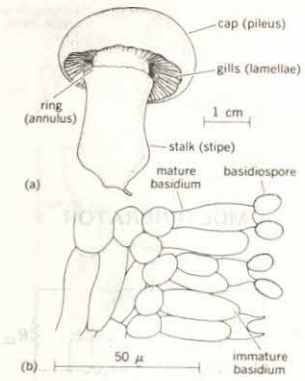
Circuit diagram of a bistable multivibrator.

MURRAY LOOP TEST



Circuit diagram for a Murray loop for location of ground fault.

MUSHROOM



Agaricus bisporus, the common cultivated mushroom. *(a)* Basidiocarp. *(b)* Cross section of gill, showing basidia in various stages of development.

MUSK-OX

The musk-ox *(Ovibos moschatus)*; flattened horns, implanted low in the skull, are used defensively.

MUSKRAT

The muskrat *(Ondatra zibethica)*.

MUTILLIDAE

Drawing of a velvet ant. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

Muscicapidae [VERT ZOO] A family of passeriform birds assigned to the Oscines; includes the Old World flycatchers or fantails.

Muscidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Calypteratae; includes the houseflies, stable flies, and allies.

muscle [ANAT] A contractile organ composed of muscle tissue that changes in length and effects movement when stimulated. [HISTOL] A tissue composed of cells containing contractile fibers; three types are smooth, cardiac, and skeletal.

muscle fiber [HISTOL] The contractile cell or unit of which muscle is composed.

muscle hemoglobin *See* myoglobin.

muscovite [MINERAL] $KAl_2(AlSi_3)O_{10}(OH)_2$ One of the mica group of minerals, occurring in some granites and abundant in pegmatities; it is colorless, whitish, or pale brown, and the crystals are tabular sheets with prominent base and hexagonal or rhomboid outline; hardness is 2–2.5 on Mohs scale, and specific gravity is 2.7–3.1. Also known as common mica; mirror stone; moscovite; Muscovy glass; potash mica; white mica.

Muscovy glass *See* muscovite.

muscul-, musculo- [ZOO] A combining form denoting muscle, muscular.

muscular atrophy [MED] Degenerative reduction of muscle size, especially skeletal muscles, due to a lesion involving either the cell body or axon of the lower motor neuron.

muscular dystrophy [MED] A group of diseases characterized by degeneration of or injury to individual muscle cells, not primarily involving the nerve supply; the most common form is Duchenne-Greisinger disease.

muscularis externa [HISTOL] The layer of the digestive tube consisting of smooth muscles.

muscularis mucosae [HISTOL] Thin, deep layer of smooth muscle in some mucous membranes, as in the digestive tract.

muscular system [ANAT] The muscle cells, tissues, and organs that effect movement in all vertebrates.

musculoaponeurotic [HISTOL] Composed of muscle and of fibrous connective tissue in the form of a membrane.

musculocutaneous [ANAT] Of or pertaining to muscles and skin.

musculocutaneous nerve [ANAT] A branch of the brachial plexus with both motor and somatic sensory components; innervates flexor muscles of the upper arm, and skin of the lateral aspect of the forearm.

musculoskeletal system [ANAT] The muscular and skeletal elements of vertebrates, considered as a functional unit.

mushroom [MYCOL] **1.** A fungus belonging to the basidiomycetous order Agaricales. **2.** The fruiting body (basidiocarp) of such a fungus.

mushroom anchor [NAV ARCH] A large anchor having the approximate shape of a mushroom, capable of grasping the ground whichever way it falls; used mainly where the bottom is sandy or muddy for permanent moorings of light ships and moorings of modern submarines.

musical acoustics [ACOUS] That part of acoustics which is relevant to the composition, performance, and appreciation of music, including the physical characteristics of sounds that may be heard as music, laws governing the action, design, and construction of musical instruments, and the effects of musical sounds upon listeners.

musical quality *See* timbre.

music wire [MET] High-quality, high-carbon steel wire used for making mechanical springs.

Musidoridae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Brachycera distinguished by spear-shaped wings.

musk [PHYSIO] Any of various strong-smelling substances obtained from the musk glands of musk deer or similar animals; used in the form of a tincture as a fixative for perfume.

musk ambrette [ORG CHEM] $C_{12}H_{16}N_2O_5$ White to yellow powder with heavy musky aroma; soluble in various oils and phthalates, insoluble in water; congeals at 83°C; used as a perfume fixative. Also known as 2,6-dinitro-3-methoxy-4-tert-butyltoluene.

Muskat equation [PETRO ENG] Equation used to calculate oil reservoir permeability from the pressure buildup curve recorded when a producing well is shut in after a flow test.

musk bag *See* musk gland.

muskeg [ECOL] A peat bog or tussock meadow, with variably woody vegetation.

musk gland [VERT ZOO] A large preputial scent gland of the musk deer and various other animals, including skunk and musk-ox. Also known as musk bag.

Muskhelishvili's method [MECH] A method of solving problems concerning the elastic deformation of a planar body that involves using methods from the theory of functions of a complex variable to calculate analytic functions which determine the plane strain of the body.

musk ketone [ORG CHEM] $C_{14}H_{18}N_2O_5$ White to yellow crystals with sweet musk aroma; soluble in various oils and phthalates, insoluble in water; used as a perfume fixative. Also known as 3,5-dinitro-2,6-dimethyl-4-tert-butylacetophenone.

muskmelon [BOT] *Cucumis melo*. The edible, fleshy, globular to long-tapered fruit of a trailing annual plant of the order Violales; surface is uniform to broadly sutured to wrinkled, and smooth to heavily netted, and flesh is pale green to orange; varieties include cantaloupe, Honey Dew, Casaba, and Persian melons.

musk-ox [VERT ZOO] *Ovibos moschatus*. An even-toed ungulate which is a member of the mammalian family Bovidae; a heavy-set animal with a shag pilage, splayed feet, and flattened horns set low on the head.

muskrat [VERT ZOO] *Ondatra zibethica*. The largest member of the rodent subfamily Microtinae; essentially a water rat with a laterally flattened, long, naked tail, a broad blunt head with short ears, and short limbs.

musk xylene *See* musk xylol.

musk xylol [ORG CHEM] $(NO_2)_3C_6(CH_3)_2C(CH_3)_3$ White to yellow crystals with powerful musk aroma; soluble in various oils and phthalates, insoluble in water; congeals at 105°C; used as a perfume fixative. Also known as musk xylene; 2,4,6-trinitro-1,3-dimethyl-5-tert-butylbenzene.

muslin [TEXT] A thin to coarse-textured plain-weave cotton.

Musophagidae [VERT ZOO] The turacos, an African family of birds of uncertain affinities usually included in the order Cuculiformes; resemble the cuckoos anatomically but have two unique pigments, turacin and turacoverdin.

mustard [BOT] Any of several annual crucifers belonging to the genus *Brassica* of the order Capparales; leaves are lyrately lobed, flowers are yellow, and pods have linear beaks; the mustards are cultivated for their pungent seed and edible foliage, and the seeds of *B. niger* are used as a condiment, prepared as a powder, paste, or oil.

mustard gas [ORG CHEM] $HS(CH_2ClCH_2)_2S$ An oil, density 1.28, boiling point 215°C; used in chemical warfare. Also known as dichlorodiethylsulfide.

mustard oil *See* allyl isothiocyanate.

mustard-seed coal [GEOL] Anthracite that will pass through circular holes in a screen which measure 3/64 inch (1.2 millimeter) in diameter.

Mustilidae [VERT ZOO] A large, diverse family of low-slung, long-bodied carnivorous mammals including minks, weasels, and badgers; distinguished by having only one molar in each upper jaw, and two at the most in the lower jaw.

mutagen [GEN] An agent that raises the frequency of mutation above the spontaneous rate.

mutant [GEN] An individual bearing an allele that has undergone mutation and is expressed in the phenotype.

mutarotation [CHEM] A change in the optical rotation of light that takes place in the solutions of freshly prepared sugars.

mutase [BIOCHEM] An enzyme able to catalyze a dismutation or a molecular rearrangement.

mutation [GEN] An abrupt change in the genotype of an organism, not resulting from recombination; genetic material may undergo qualitative or quantitative alteration, or rearrangement.

muthmannite [MINERAL] (Ag,Au)Te A bright brass yellow mineral consisting of silver-gold telluride; occurs as tabular crystals.

Mutillidae [INV ZOO] The velvet ants, a family of hymenopteran insects in the superfamily Scolioidea.

muting circuit [ELECTR] **1.** Circuit which cuts off the output of a receiver when no radio-frequency carrier greater than a predetermined intensity is reaching the first detector. **2.** Circuit for making a receiver insensitive during operation of its associated transmitter.

muting switch [ELEC] **1.** A switch used in connection with automatic tuning systems to silence the receiver while tuning from one station to another. **2.** A switch used to ground the

output of a phonograph pickup automatically while a record changer is in its change cycle.

mutism [MED] Inability or refusal to speak.

muton [MOL BIO] The smallest unit of genetic material capable of undergoing mutation.

mutual admittance [ELEC] For two meshes of a network carrying alternating current, the ratio of the complex current in one mesh to the complex voltage in the other, when the voltage in all meshes besides these two is 0.

mutual branch *See* common branch.

mutual capacitance [ELEC] The accumulation of charge on the surfaces of conductors of each of two circuits per unit of potential difference between the circuits.

mutual conductance *See* transconductance.

mutual deadlock [COMPUT SCI] A condition in which deadlocked tasks are awaiting resource assignments, and each task on a list awaits release of a resource held by the following task, with the last task awaiting release of a resource held by the first task. Also known as circular wait.

mutual exclusion rule [PHYS CHEM] The rule that if a molecule has a center of symmetry, then no transition is allowed in both its Raman scattering and infrared emission (and absorption), but only in one or the other.

mutual impedance [ELEC] For two meshes of a network carrying alternating current, the ratio of the complex voltage in one mesh to the complex current in the other, when all meshes besides the latter one carry no current.

mutual inductance [ELECTROMAG] Property of two neighboring circuits, equal to the ratio of the electromotive force induced in one circuit to the rate of change of current in the other circuit.

mutual induction [ELECTROMAG] The generation of a voltage in one circuit by a varying current in another.

mutual interference [COMMUN] Man-made interference from two or more electrical or electronic systems which affects these systems on a reciprocal basis.

mutualism [ECOL] Mutual interactions between two species that are beneficial to both species.

mutuality of phases [CHEM] The rule that if two phases, with respect to a reaction, are in equilibrium with a third phase at a certain temperature, then they are in equilibrium with respect to each other at that temperature.

muzzle [ORD] The end of the barrel of a gun from which the bullet or projectile emerges. [VERT ZOO] The snout of an animal, as a dog or horse.

muzzle energy [ORD] Kinetic energy of the projectile as it emerges from the muzzle; it is a measure of the power of the weapon.

mV *See* millivolt.

MV *See* megavolt.

mW *See* milliwatt.

MW *See* megawatt.

MW(E) *See* megawatt electric.

MW(Th) *See* megawatt thermal.

MWYE *See* megawatt year of electricity.

Mx *See* maxwell.

myalgia [MED] Pain in the muscles.

myasthenia [MED] Muscular weakness.

myasthenia gravis [MED] A muscle disorder of unknown etiology characterized by varying degrees of weakness and excessive fatigability of voluntary muscle.

myasthenia reaction [MED] The electromyographic reaction observed in myasthenia gravis in which there is a gradual loss of intensity and duration for the tetanic contraction, and a gradual diminution in amplitude and frequency of motor unit discharges until the muscle is fatigued.

myasthenic crisis [MED] Profound myasthenia and respiratory paralysis associated with myasthenia gravis.

myatonia [MED] Lack of muscle tone.

Mycelia Sterilia [MYCOL] An order of fungi of the class Fungi Imperfecti distinguished by the lack of spores; certain members are plant pathogens.

mycelium [BIO] A mass of filaments, or hyphae, composing the vegetative body of many fungi and some bacteria.

Mycetaeidae [INV ZOO] The equivalent name for Endomychidae.

mycetocyte [INV ZOO] **1.** One of the cells clustered together to form a mycetome. **2.** An individual cell functioning like a mycetome.

mycetoma [MED] A chronic fungus or bacterial infection, usually of the feet, resulting in swelling. Also known as madura foot; maduromycosis.

mycetome [INV ZOO] One of the specialized structures in the body of certain insects for holding endosymbionts.

Mycetophagidae [INV ZOO] The hairy fungus beetles, a cosmopolitan family of coleopteran insects in the superfamily Cucujoidea.

Mycetozoa [BIOL] A zoological designation for organisms that exhibit both plant and animal characters during their life history (Myxomycetes); equivalent to the botanical Myxomycophyta.

Mycetozoia [INV ZOO] A subclass of the protozoan class Rhizopodea.

Mycobacteriaceae [MICROBIO] A family of bacteria in the order Actinomycetales; acid-fast, aerobic rods form a filamentous or myceliumlike growth.

mycobacterial disease [MED] Any disease caused by species of *Mycobacterium*.

Mycobacterium [MICROBIO] The single genus of the family Mycobacteriaceae; species cause tuberculosis, leprosy, and other chronic granulomas.

Mycobacterium leprae [MICROBIO] Bacterium that causes leprosy. Also known as Hansen's bacillus.

Mycobacterium tuberculosis [MICROBIO] Bacterium that causes tuberculosis; a slow-growing, drug-sensitive species. Also known as tubercle bacillus.

mycobactin [BIOCHEM] Any compound produced by some strains, and required for growth by other strains, of *Mycobacteria*.

mycoin C_3 *See* patulin.

mycology [BOT] The branch of botany that deals with the study of fungi.

mycomycin [MICROBIO] $C_{13}H_{10}O_2$ An antibiotic produced by *Nocardia acidophilus* and a species of *Actinomyces*; characterized as a highly unsaturated aliphatic acid that shows strong activity against *Mycobacterium tuberculosis*.

mycophagous [ZOO] Feeding on fungi.

Mycophiformes [VERT ZOO] An equivalent name for Salmoniformes.

Mycoplasma [MICROBIO] The single genus of the family Mycoplasmataceae.

Mycoplasma pneumoniae [MICROBIO] A bacterial agent of pneumonia; formerly it was thought to be a virus and was known as Eaton agent.

Mycoplasmataceae [MICROBIO] A family of the order Mycoplasmatales; distinguished by sterol requirement for growth.

Mycoplasmatales [MICROBIO] The single order of the class Mollicutes; organisms are gram-negative, generally nonmotile, nonsporing bacteria which lack a true cell wall.

mycorrhiza [BOT] A mutual association in which the mycelium of a fungus invades the roots of a seed plant.

mycosis [MED] An infection with or a disease caused by a fungus.

Mycota [MYCOL] An equivalent name for Eumycetes.

mycotic stomatitis *See* thrush.

Myctophidae [VERT ZOO] The lantern fishes, a family of deep-sea forms of the suborder Myctophoidei.

Myctophoidei [VERT ZOO] A large suborder of marine salmoniform fishes characterized by having the upper jaw bordered only by premaxillae, and lacking a mesocoracoid arch in the pectoral girdle.

Mydaidae [INV ZOO] The mydas flies, a family of orthorrhaphous dipteran insects in the series Brachycera.

mydriasis [MED] Prolonged dilation of the pupil of the eye.

mydriatic [PHARM] An agent which produces dilation of the pupil, such as eucatropine hydrochloride.

myel-, myelo- [ANAT] A combining form for bone marrow, spinal cord.

myelencephalon [EMBRYO] The caudal portion of the hindbrain; gives rise to the medulla oblongata.

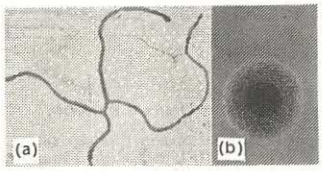
myelin [BIOCHEM] A soft, white fatty substance that forms a sheath around certain nerve fibers.

myelin sheath [HISTOL] An investing cover of myelin around the axis cylinder of certain nerve fibers.

myelitis [MED] **1.** Inflammation of the spinal cord. **2.** Inflammation of the bone marrow.

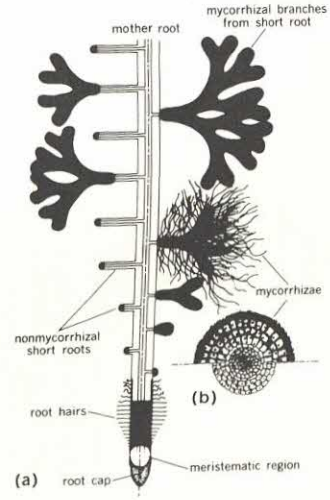
myeloblast [HISTOL] The youngest precursor cell for blood granulocytes, having a nucleus with finely granular chromatin and nucleoli and intensely basophilic cytoplasm.

MYCOPLASMA



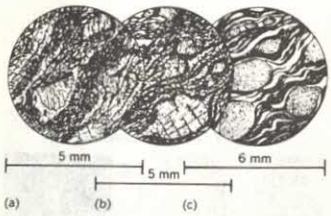
Mycoplasma. *(a)* Electron micrograph of *M. mycoides* var. *mycoides* from a 24-hour broth culture. *(b) M. hominis* colony on solid nutrient medium, 5 days old.

MYCORRHIZA



Development of mycorrhizae on a pine root. Solid areas indicate absorbing surfaces. *(a)* The main axis, a mother root. *(b)* Cross section, representing a mycorrhizal root. *(From P. J. Kramer, Plant and Soil Water Relationships, McGraw-Hill, 1949)*

MYLONITE



Mylonite types:
(a) porphyroclasts mylonite;
(b) granite mylonite;
(c) mylonite augen gneiss.
(From H. Williams, F. J. Turner, and C. M. Gilbert, Petrography: An Introduction to the Study of Rocks in Thin Sections; copyright 1954 by W. H. Freeman and Co.)

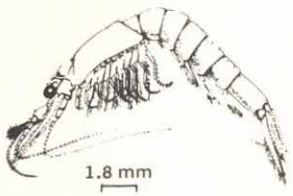
myeloblastemia [MED] The presence of myeloblasts in the peripheral circulation.
myeloblastic [HISTOL] Of, pertaining to, or characterized by the presence of myeloblasts.
myeloblastic leukemia *See* acute granulocytic leukemia.
myeloblastoma [MED] A malignant tumor composed of myeloblasts.
myeloblastosis [MED] Diffuse proliferation of myeloblasts, with involvement of blood, bone marrow, and other tissues and organs.
myelocele [ANAT] The canal of the spinal cord. [MED] Spina bifida, with protrusion of the spinal cord.
myelocyte [HISTOL] A motile precursor cell of blood granulocytes found in bone marrow.
myelocytoma [MED] A malignant plasmacytoma.
myelocytosis [MED] The presence of myelocytes in the blood.
myelodysplasia [MED] Abnormal spinal cord development, especially the lumbosacral portion.
myeloencephalitis [MED] Inflammation of the brain and spinal cord.
myelofibrosis [PATH] Growth of white, fibrous connective tissue in the bone marrow.
myelogenous leukemia *See* granulocytic leukemia.
myelogram [MED] Roentgenogram of the spinal cord, made by myelography. [PATH] Differential cell study of material extracted from bone marrow.
myelography [MED] Roentgenographic visualization of the subarachnoid space, after the injection of air or an opaque medium.
myeloid [ANAT] **1.** Of or pertaining to bone marrow. **2.** Of or pertaining to the spinal cord.
myeloid leukemia *See* granulocytic leukemia.
myeloid metaplasia [MED] The occurrence of hemopoietic tissue in abnormal places in the body.
myeloid myeloma [MED] A malignant plasmacytoma.
myeloid reaction [MED] Increased numbers of granulocytes in the bone marrow and peripheral circulation, often with the appearance of immature granulocytes in the blood.
myeloid tissue [HISTOL] Red bone marrow attached to argyrophile fibers which form wide meshes containing scattered fat cells, erythroblasts, myelocytes, and mature myeloid elements.
myeloma [MED] A primary tumor of the bone marrow composed of any of the bone marrow cell types.
myelomalacia [MED] Softening of the spinal cord.
myelomeningitis [MED] Inflammation of the spinal cord and its meninges.
myelomeningocele [MED] Spina bifida with protrusion of the spinal meninges.
myelomonocyte [HISTOL] **1.** A monocyte developing in bone marrow. **2.** A blood cell intermediate between monocytes and granulocytes.
myelomonocytic leukemia *See* monocytic leukemia.
myelopathic anemia *See* myelophthisic anemia.
myelophthisic anemia [MED] An anemia associated with space-occupying disorders of the bone marrow. Also known as leukoerythroblastic anemia; leukoerythroblastosis; metastatic anemia; myelopathic anemia; myelosclerotic anemia; osteosclerotic anemia.
myelophthisis [MED] **1.** Loss of bone marrow. **2.** Atrophy of the spinal cord.
myeloplegia [MED] Spinal paralysis.
myelopoiesis [PHYSIO] The process by which blood cells form in the bone marrow.
myelosclerosis [MED] **1.** Multiple sclerosis of the spinal cord. **2.** Hardening of the bone marrow.
myelosclerotic anemia *See* myelophthisic anemia.
myenteric [HISTOL] Of or pertaining to the muscular coat of the intestine.
myenteric plexus [ANAT] A network of nerves between the circular and longitudinal layers of the muscular coat of the digestive tract. Also known as Auerbach's plexus.
myenteron [HISTOL] The muscular coat of the intestine.
Mygalomorphae [INV ZOO] A suborder of spiders (Araneida) including American tarantulas, trap-door spiders, and purse-web spiders; the tarantulas may attain a leg span of 10 inches (25 centimeters).
myiasis [MED] Infestation of vertebrates by the larvae, or maggots, of flies.
Myklestad method [AERO ENG] A method of determining the mode shapes and frequencies of the lateral bending modes of space vehicles, taking into account secondary effects of shear and rotary inertia, in which one imagines masses to be concentrated at a finite number of points along the beam, with elastic properties remaining constant between consecutive mass points.
Mylabridae [INV ZOO] The equivalent name for Bruchidae.
Mylar capacitor [ELEC] A capacitor that uses Mylar film as a dielectric between rolled strips of metal foil.
Myliobatidae [VERT ZOO] The eagle rays, a family of batoids which may reach a length of 15 feet (4.6 meters).
mylonite [PETR] A hard, coherent, often glassy-looking rock that has suffered extreme mechanical deformation and granulation but has remained chemically unaltered; appearance is flinty, banded, or streaked, but the nature of the parent rock is easily recognized.
mylonite gneiss [PETR] A metamorphic rock intermediate in character between mylonite and schist.
mylonitic structure [PETR] A structure characteristic of mylonites, produced by extreme microbrecciation and shearing which gives the appearance of a flow structure.
mylonitization [GEOL] Rock deformation produced by intense microbrecciation without appreciable chemical alteration of granulated materials.
Mymaridae [INV ZOO] The fairy flies, a family of hymenopteran insects in the superfamily Chalcidoidea.
myoblast [EMBRYO] A precursor cell of a muscle fiber.
myocardial infarct [MED] An infarct in heart muscle.
myocardiopathy [MED] Disease of the myocardium. Also known as cardiomyopathy.
myocarditis [MED] Inflammation of the myocardium.
myocardium [HISTOL] The muscular tissue of the heart wall.
myocardosis [MED] Any noninflammatory disease of the myocardium.
myoclonic epilepsy [MED] Recurrent irregular, arrhythmic clonic muscle spasms, usually occurring more frequently in the morning or on going to sleep and often associated with other types of seizures.
myoclonic status [MED] Continual clonic spasms lasting an hour or more.
myoclonus [MED] **1.** Clonic muscle spasm. **2.** Any disorder characterized by scattered, irregular, arrhythmic muscle spasms.
myocoel [EMBRYO] Portion of the coelom enclosed in a myotome.
myocomma [HISTOL] A ligamentous connection between successive myomeres. Also known as myoseptum.
myocyte [HISTOL] **1.** A contractile cell. **2.** A muscle cell.
Myodaria [INV ZOO] A section of the Schizophora series of cyclorrhaphous dipterans; in this group adult antennae consist of three segments, and all families except the Conopidae have the second cubitus and the second anal veins united for almost their entire length.
Myodocopa [INV ZOO] A suborder of the order Myodocopida; includes exclusively marine ostracods distinguished by possession of a heart.
Myodocopida [INV ZOO] An order of the subclass Ostracoda.
Myodopina [INV ZOO] The equivalent name for Myodocopa.
myodystrophy [MED] Muscle degeneration.
myoelastic fiber [HISTOL] An elastic fiber associated with the smooth muscles in bronchi and bronchioles.
myoelectric potential [PHYSIO] The electrical potential created by muscle action.
myofascitis [MED] Muscular pain of obscure nature and origin in the lower back.
myofibril [CYTOL] A contractile fibril in a muscle cell. [INV ZOO] *See* myoneme.
myofilament [CYTOL] The structural unit of muscle proteins in a muscle cell.
myofrisk [INV ZOO] A contractile structure surrounding the spines of certain radiolarians.
myoglobin [BIOCHEM] A hemoglobinlike iron-containing protein pigment occurring in muscle fibers. Also known as muscle hemoglobin; myohemoglobin.
myoglobinuria [MED] The presence of myoglobin in the urine.

myohematin [BIOCHEM] A cytochrome respiratory enzyme allied to hematin.
myohemoglobin *See* myoglobin.
myoinositol [BIOCHEM] The commonest isomer of inositol. Also known as mesionositol.
myokinase [BIOCHEM] An enzyme that catalyzes the reversible transfer of phosphate groups in adenosinediphosphate; occurs in muscle and other tissues.
myolipoma [MED] A benign tumor composed of adipose and smooth muscle cells.
myology [MED] The study of muscles in both the normal and diseased states.
myoma [MED] **1.** A benign uterine tumor composed principally of smooth muscle cells. **2.** Any neoplasm originating in muscle.
myomalacia [MED] Degeneration, with softening, of muscle tissue.
myomere [EMBRYO] A muscle segment differentiated from the myotome, which divides to form the epimere and hypomere.
myometritis [MED] Inflammation of the myometrium.
myometrium [HISTOL] The muscular tissue of the uterus.
Myomorpha [VERT ZOO] A suborder of rodents recognized in some systems of classification.
myoneme [INV ZOO] A contractile fibril in a protozoan. Also known as myofibril.
myoneural junction [ANAT] The point of junction of a motor nerve with the muscle which it innervates. Also known as neuromuscular junction.
myopathia *See* myopathy.
myopathic facies [MED] An expressionless face with sunken cheeks and a drooping lower lip characteristic of patients with myopathies, especially myotonic dystrophy.
myopathy [MED] Any disease of the muscles. Also known as myopathia.
myopericarditis [MED] A combination of myocarditis and pericarditis.
myophagia [PATH] The invasion of degenerated muscle sarcoplasm by histiocytes.
myophosphorylase deficiency glycogenosis *See* McArdle's syndrome.
myopia [MED] A condition in which the focal image is formed in front of the retina of the eye. Also known as nearsightedness.
myoplasty [MED] Plastic surgery performed on muscle tissue.
Myopsida [INV ZOO] A natural assemblage of cephalopod mollusks considered as a suborder in the order Teuthoida according to some systems of classification, and a group of the Decapoda according to other systems; the eye is covered by the skin of the head in all species.
myopsychopathy [MED] Any disease of the muscles associated with mental retardation or loss of intellect.
myorhythmia [MED] Muscle tremor with a rate of 2–4 per second, and irregular intervals between cycles.
myosarcoma [MED] A sarcoma derived from muscle.
myoseptum *See* myocomma.
myosin [BIOCHEM] A muscle protein, comprising up to 50% of the total muscle proteins; combines with actin to form actomycin.
myositis [MED] Inflammation of muscle. Also known as fibromyositis.
myositis ossificans [MED] Muscle inflammation with bone formation in muscle, tendons, or ligaments.
myostatic reflex *See* stretch reflex.
myosynovitis [MED] Inflammation of synovial membranes and surrounding musculature.
myotasis [PHYSIO] Stretching of a muscle.
myotome [ANAT] A group of muscles innervated by a single spinal nerve. [EMBRYO] The muscle plate that differentiates into myomeres. [ENG] An instrument used to divide a muscle, particularly through its belly.
myotonia [MED] Tonic muscular spasm occurring after injury or infection.
myotonia congenita intermittens *See* paramyotonia congenita.
myotonic [MED] Of, pertaining to, or characterized by myotonia.
myotonic dystrophy [MED] A hereditary disease, transmitted as an autosomal dominant, characterized by lack of normal relaxation of muscles after contraction, slowly progressive muscular weakness and atrophy, especially of the face and neck, cataract formation, early baldness, gonadal atrophy, abnormal glucose tolerance curve, and, frequently, mental deficiency.
β-myrcene [ORG CHEM] $C_{10}H_{16}$ An oily liquid with a pleasant odor; soluble in alcohol, chloroform, ether, and glacial acetic acid; used as an intermediate in the preparation of perfume chemicals. Also known as 2-methyl-6-methylene-2,7-octadiene.
myria- [SCI TECH] A prefix representing 10^4 or 10,000.
myriametric waves [ELECTROMAG] Electromagnetic waves having wavelengths between 10 and 100 kilometers, corresponding to the very low frequency band.
Myriangiales [MYCOL] An order of parasitic fungi of the class Ascomycetes which produce asci at various levels in uniascal locules within stromata.
Myriapoda [INV ZOO] Informal designation for those mandibulate arthropods having two body tagmata, one pair of antennae, and more than three pairs of adult ambulatory appendages.
Myricaceae [BOT] The single family of the plant order Myricales.
Myricales [BOT] An order of dicotyledonous plants in the subclass Hamamelidae, marked by its simple, resinous-dotted, aromatic leaves, and a unilocular ovary with two styles and a single ovule.
myricetin [ORG CHEM] $C_{15}H_{10}O_8$ A yellow, crystalline compound with a melting point of 357°C; soluble in alcohol; used as an inhibitor of adenosinetriphosphatase. Also known as cannabiscetin; delphidenolon.
Myrientomata [INV ZOO] The equivalent name for the Protura.
myringitis [MED] Inflammation of the tympanic membrane.
myrigoplasty [MED] A surgical procedure involving the simple repair of a persistent perforation of the tympanic membrane.
Myriotrochidae [INV ZOO] A family of holothurian echinoderms in the order Apodida, distinguished by eight or more spokes in each wheel-shaped spicule.
myristic acid [ORG CHEM] $CH_3(CH_2)_{12}COOH$ Oily white crystals melting at 58°C; soluble in ether and alcohol, insoluble in water; used to synthesize flavor and perfume esters, and in soaps and cosmetics.
myristica oil *See* nutmeg oil.
myristyl alcohol [ORG CHEM] $C_{14}H_{29}OH$ Liquid boiling at 264°C; soluble in ether and alcohol, insoluble in water; used as a chemical intermediate, plasticizer, and perfume fixative. Also known as 1-tetradecanol.
myristyl mercaptan *See* tetradecyl mercaptan.
Myrmecophagidae [VERT ZOO] A small family of arboreal anteaters in the order Edentata.
myrmecophagous [ZOO] Feeding on ants.
myrmecophile [ECOL] An organism, usually a beetle, that habitually inhabits the nest of ants.
myrmecophyte [ECOL] A plant that houses and benefits from the habitation of ants.
myrmekite [PETR] Intergrowth of plagioclase feldspar and vermicular quartz in an igneous rock.
myrmekitic [PETR] **1.** Pertaining to the texture of an igneous rock marked by intergrowths of feldspar and vermicular quartz. **2.** Having characteristic properties of myrmekite.
Myrmeleontidae [INV ZOO] The ant lions, a family of insects in the order Neuroptera; larvae are commonly known as doodlebugs.
Myrmicinae [INV ZOO] A large diverse subfamily of ants (Formicidae); some members are inquilines and have no worker caste.
myrrh [MATER] A gum resin of species of myrrh (*Commiphora*); partially soluble in water, alcohol, and ether; used in dentifrices, perfumery, and pharmaceuticals.
Myrsinaceae [BOT] A family of mostly woody dicotyledonous plants in the order Primulales characterized by flowers without staminodes, a schizogenous secretory system, and gland-dotted leaves.
Myrtaceae [BOT] A family of dicotyledonous plants in the order Myrtales characterized by an inferior ovary, numerous stamens, anthers usually opening by slits, and fruit in the form of a berry, drupe, or capsule.
Myrtales [BOT] An order of dicotyledonous plants in the subclass Rosidae characterized by opposite, simple, entire leaves and perigynous to epigynous flowers with a compound pistil.
myrtle oil [MATER] Light-yellow liquid distilled from the

MYRIOTROCHIDAE

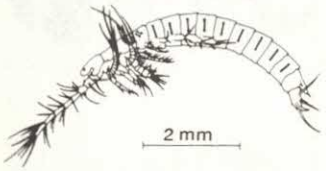
An eight-spoked spicule from the skin of an echinoderm in the Myriotrochidae.

MYSIDA



Neomysis integer, adult male mysid.

MYSTACOCARIDA



Derocheilocaris typicus, lateral view.

MYXOBACTERALES

Myxococcus fulvus, vegetative cells. *(After N. A. Woods, from A. T. Henrici and E. J. Ordal, The Biology of Bacteria, 3d ed., Heath, 1948)*

flowers and leaves of the European myrtle (*Myrtus communis*); aromatic aroma; formerly used in medicine; now used for flavors and as perfume fixative.

myrtle wax *See* bayberry wax.

Mysida [INV ZOO] A suborder of the crustacean order Mysidacea characterized by fusion of the sixth and seventh abdominal somites in the adult, lack of gills, and other specializations.

Mysidacea [INV ZOO] An order of free-swimming Crustacea included in the division Pericarida; adult consists of 19 somites, each bearing one pair of functionally modified, biramous appendages, and the carapace envelops most of the thorax and is fused dorsally with up to four of the anterior thoracic segments.

mysis [INV ZOO] A larva of certain higher crustaceans, characterized by biramous thoracic appendages.

mysophobia [PSYCH] An abnormal fear of contamination or of dirt.

Mystacinidae [VERT ZOO] A monospecific family of insectivorous bats (Chiroptera) containing the New Zealand short-tailed bat; hindlegs and body are stout, and fur is thick.

Mystacocarida [INV ZOO] An order of primitive Crustacea; the body is wormlike and the cephalothorax bears first and second antennae, mandibles, and first and second maxillae.

Mysticeti [VERT ZOO] The whalebone whales, a suborder of the mammalian order Cetacea, distinguished by horny filter plates of suspended from the upper jaws.

mythophobia [PSYCH] An abnormal fear of making an incorrect statement.

Mytilacea [INV ZOO] A suborder of bivalve mollusks in the order Filibranchia.

Mytilidae [INV ZOO] A family of mussels in the bivalve order Anisomyaria.

myx-, myxo- [ZOO] A combining form denoting mucus, mucous, mucin, mucinous.

myxadenitis [MED] Inflammation of mucous glands.

myxadenoma [MED] An adenoma of a mucous gland.

myxameba [BIOL] An independent ameboid cell of the vegetative phase of Acrasiales.

myxedema [MED] A condition caused by hypothyroidism characterized by a subnormal basal metabolic rate, dry coarse hair, loss of hair, mental dullness, anemia, and slowed reflexes.

Myxicolinae [INV ZOO] A subfamily of sedentary polychaete annelids in the family Sabellidae.

Myxiniformes [VERT ZOO] The equivalent name for the Myxinoidea.

Myxinoidea [VERT ZOO] The hagfishes, an order of eellike, jawless vertebrates (Agnatha) distinguished by having the nasal opening at the tip of the snout and leading to the pharynx, with barbels around the mouth and 6–15 pairs of gill pouches.

myxoadenoma [MED] An adenoma of a mucous gland.

Myxobacterales [MICROBIO] An order of gliding bacteria; unicellular, gram-negative rods embedded in a layer of slime and capable of gliding movement; form fruiting bodies containing resting cells (myxospores) under certain environmental conditions.

myxochondrofibrosarcoma [MED] A sarcoma composed of anaplastic myxoid, chondroid, and fibrous cells.

Myxococcaceae [MICROBIO] A family of the order Myxobacterales; vegetative cells are straight to slightly tapered, and spherical to ovoid microcysts (myxospores) are produced.

Myxococcus [MICROBIO] The single genus of the family Myxococcaceae; vegetative cells have tapered or slightly rounded ends, and myxospores are not enclosed in a sporangium.

myxofibroma of nerve sheath *See* neurofibroma.

Myxogastromycetidae [MYCOL] A large subclass of plasmodial slime molds (Myxomycetes).

myxolipoma *See* liposarcoma.

myxoma [MED] A benign tumor composed of mucinous connective tissue.

myxoma lipomatodes *See* liposarcoma.

myxomatosis [VET MED] A virus disease of rabbits producing fever, skin lesions resembling myxomas, and mucoid swelling of mucous membranes.

Myxomycetes [BIOL] Plasmodial (acellular or true) slime molds, a class of microorganisms of the division Mycota; they are on the borderline of the plant and animal kingdoms and have a noncellular, multinucleate, jellylike, creeping, assimilative stage (the plasmodium) which alternates with a myxameba stage.

Myxomycophyta [BOT] An order of microorganisms, equivalent to the Mycetozoia of zoological classification.

Myxophaga [INV ZOO] A suborder of the Coleoptera.

Myxophyceae [BOT] An equivalent name for the Cyanophyceae.

myxosarcoma [MED] A sarcoma whose parenchyma is composed of anaplastic myxoid cells.

Myxosporida [INV ZOO] An order of the protozoan class Myxosporidea characterized by the production of spores with one or more valves and polar capsules, and by possession of a single sporoplasm.

Myxosporidea [INV ZOO] A class of the protozoan subphylum Cnidospora; members are parasitic in some fish, a few amphibians, and certain invertebrates.

myxovirus [VIROL] A group of ribonucleic-acid animal viruses characterized by hemagglutination and hemadsorption; includes influenza and fowl plague viruses and the paramyxoviruses.

Myzopodidae [VERT ZOO] A monospecific order of insectivorous bats (Chiroptera) containing the Old World disk-winged bat of Madagascar; characterized by long ears and by a vestigial thumb with a monostalked sucking disk.

myzorhynchus [INV ZOO] An apical sucker on the scolex of certain tapeworms.

Myzostomaria [INV ZOO] An aberrant group of Polychaeta; most are greatly depressed, broad, and very small, and true segmentation is delayed or absent in the adult; all are parasites of echinoderms.

Myzostomidae [INV ZOO] A monogeneric family of the Myzostomaria.

N

n- [ORG CHEM] Chemical prefix for "normal" (straight-carbon-chain) hydrocarbon compounds.

N *See* newton; nitrogen; normality.

Na *See* sodium.

N.A. *See* numerical aperture.

NAA *See* naphthaleneacetic acid.

nabam [ORG CHEM] $NaSSCNHCH_2CH_2NHCSSNa$ Water-soluble, colorless crystals that will irritate skin and eyes; used as a pesticide and pesticides intermediate. Also known as disodium ethylene-bis-dithiocarbamate.

Nabidae [INV ZOO] The damsel bugs, a family of hemipteran insects in the superfamily Cimicimorpha.

nabla *See* del operator.

Nabothian cyst [MED] Cystic distention of the Nabothian glands of the uterine cervix.

Nabothian glands [ANAT] Mucous glands of the uterine cervix.

nacelle [AERO ENG] A separate streamlined enclosure on an airplane for sheltering or housing something, as the crew or an engine.

nacre [INV ZOO] An iridescent inner layer of many mollusk shells.

nacreous [OPTICS] Having an iridescent luster resembling that of mother-of-pearl. Also known as pearly.

nacreous clouds [METEOROL] Clouds of unknown composition, whose form resembles that of cirrus or altocumulus lenticularis, and which show very strong irisation similar to that of mother-of-pearl, especially when the sun is several degrees below the horizon; they occur at heights of about 20 or 30 kilometers. Also known as mother-of-pearl clouds.

nacré velvet [TEXT] A velvet fabric with a back of one color and a filling or pile of another, giving a changeable, pearly appearance.

nacrite [MINERAL] $Al_2Si_2O_5(OH)_4$ A crystallized clay mineral of the kaolinite group; structurally distinct in being the most closely stacked in the *c*-axis direction.

NAD *See* diphosphopyridine nucleotide.

nadir [ASTRON] That point on the celestial sphere vertically below the observer, or 180° from the zenith.

nadir point *See* photograph nadir.

nadorite [MINERAL] $PbSbO_2Cl$ A smoky brown or brownish-yellow to yellow, orthorhombic mineral consisting of an oxychloride of lead and antimony.

Naegeli-type leukemia [MED] A type of monocytic leukemia in which the leukoyctes resemble cells of the granulocytic series.

naftalan *See* naphthalan.

nagatelite [MINERAL] Black mineral composed of phosphosilicate of an aluminum, rare-earth elements, calcium, and iron; occurs in tabular masses.

nagyagite [MINERAL] $Pb_5Au(Te,Sb)_4S_{5\text{-}8}$ A lead-gray mineral consisting of a sulfide of lead, gold, tellurium, and antimony. Also known as black tellurium; tellurium glance.

nahcolite [MINERAL] $NaHCO_3$ A white, monoclinic mineral consisting of natural sodium bicarbonate.

naif [MINERAL] Of a gemstone, having a true or natural luster when uncut. Also spelled naife.

naife *See* naif.

nail [ANAT] The horny epidermal derivative covering the dorsal aspect of the terminal phalanx of each finger and toe. [DES ENG] A slender, usually pointed fastener with a head, designed for insertion by impact. [ENG] To drive nails in a manner that will position and hold two or more members, usually of wood, in a desired relationship. [MED] A metallic rod with one blunt end and one sharp end, used surgically to anchor bone fragments.

nailer [ENG] A wood strip or block which serves as a backing into which nails can be driven.

nailhead [DES ENG] Flat protuberance at the end of a nail opposite the point.

nailheaded molding [ARCH] A molding consisting of a series of short protuberances resembling nailheads.

nailhead spot [PL PATH] A fungus rot of tomato caused by *Alternaria tomato* and marked by small brown to black sunken spots on the fruit.

nailhead striation [GEOL] A glacial striation with a definite or blunt head or point of origin, generally narrowing or tapering in the direction of ice movement and coming to an indefinite end.

nail-patella syndrome [GEN] A genetic disorder inherited as an autosomal dominant that is part of a linkage group with ABO blood group genes; characterized by defects in the nails and abnormalities of the elbows and other bones, skin, eyes, and kidneys.

Najadaceae [BOT] A family of monocotyledonous, submerged aquatic plants in the order Najadales distinguished by branching stems and opposite or whorled leaves.

Najadales [BOT] An order of aquatic and semiaquatic flowering plants in the subclass Alismatidae; the perianth, when present, is not differentiated into sepals and petals, and the flowers are usually not individually subtended by bracts.

naked bud [BOT] A bud covered only by rudimentary foliage leaves.

naked karst [GEOL] Karst that is developed in a region without soil cover, so that its topographic features are well exposed.

naked light [MIN ENG] Open flame, such as a match or a burning cigarette, that is a fire risk in mines.

naked-light mine [MIN ENG] A coal mine that is nongassy, where naked lights can be used by miners.

nakhlite [GEOL] An achondritic stony meteorite composed of an aggregate of diopside and olivine.

naled [ORG CHEM] $C_4H_7Br_2Cl_2O_4$ A white solid with a melting point of 27°C; slight solubility in water; used as an insecticide and miticide for crops, farm buildings, and kennels, and for mosquito control. Also known as 1,2-dibromo-2,2-dichloroethyl dimethyl phosphate.

nalidixic acid [PHARM] $C_{12}H_{12}N_2O_3$ Pale buff, crystalline powder; melting point is 229–230°C; soluble in chloroform and in potassium hydroxide and sodium hydroxide solutions; used as an antibacterial drug in humans and animals.

Namanereinae [INV ZOO] A subfamily of largely freshwater errantian annelids in the family Nereidae.

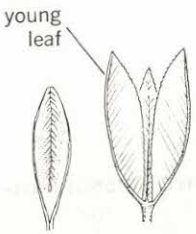
Namurian [GEOL] A European stage of geologic time; divided into a lower stage (Lower Carboniferous or Upper Mississippian) and an upper stage (Upper Carboniferous or Lower Pennsylvanian).

nancy receiver *See* infrared receiver.

NAND [MATH] A logic operator having the characteristic that if P, Q, R, ... are statements, then the NAND of P, Q, R, ... is true if at least one statement is false, false if all statements are true. Derived from NOT-AND. Also known as sheffer stroke.

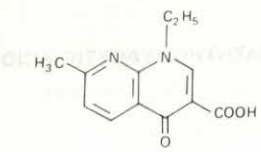
NAND circuit [ELECTR] A logic circuit whose output signal

NAKED BUD



Closed and open naked buds of the hobblebush.

NALIDIXIC ACID

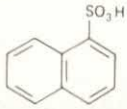


Structural formula.

NAPHTHALENE

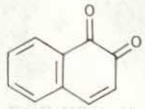
Structural formula of naphthalene showing two benzenoid rings fused together; the numbers identify the carbons at which substitution takes place.

1-NAPHTHALENE-SULFONIC ACID



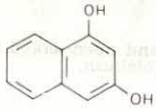
Structural formula.

1,2-NAPHTHOQUINONE



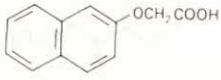
Structural formula.

NAPHTHORESORCINOL



Structural formula.

β-NAPHTHOXYACETIC ACID



Structural formula.

is a logical 1 if any of its inputs is a logical 0, and whose output signal is a logical 0 if all of its inputs are logical 1.

nanism [MED] Dwarfed stature due to arrested development.

Nannocystis [MICROBIO] A genus of bacteria in the family Polyangiaceae; sporangia are sessile and solitary, and vegetative cells are short rods or spheres.

nannoplankton [BIOL] Minute plankton; the smallest plankton, including algae, bacteria, and protozoans.

nano- [BIOL] A prefix meaning dwarfed. [MATH] A prefix representing 10^{-9}, which is 0.000000001 or one-billionth of the unit adjoined. Also known as milli-micro- (deprecated usage).

nanocephalus [MED] A fetus with an undersized head.

nanogram [MECH] One-billionth (10^{-9}) of a gram. Abbreviated ng.

nanometer [MECH] A unit of length equal to one-billionth of a meter, or 10^{-9} meter. Also known as nanon.

nanon *See* nanometer.

nanophanerophyte [ECOL] A shrub not exceeding 2 meters in height.

nanophthalmus *See* microphthalmus.

nanosecond [MECH] A unit of time equal to one-billionth of a second, or 10^{8}ms9 second.

nanozooid [INV ZOO] Dwarf zooid; bryozoan heterozooid possessing only a single tentacle.

Nansen bottle [ENG] A bottlelike water-sampling device with valves at both ends that is lowered into the water by wire; at the desired depth it is activated by a messenger which strikes the reversing mechanism and inverts the bottle, closing the valves and trapping the water sample inside. Also known as Petterson-Nansen water bottle; reversing water bottle.

Nansen cast [OCEANOGR] A series of Nansen-bottle water samples and associated temperature observations resulting from one release of a messenger.

nantokite *See* cuprous chloride.

nap [TEXT] Fuzzy fibers on the surface of a fabric; produced by a finishing process called raising.

napalm [MATER] **1.** Aluminum soap in powder form, used to gelatinize oil or gasoline for use in napalm bombs or flame throwers. **2.** The resultant gelatinized substance.

napalm bomb [ORD] A bomb filled with napalm; primarily an antipersonnel weapon.

nape [ANAT] The back of the neck.

Naperian logarithm *See* logarithm.

napex [ANAT] That portion of the scalp just below the occipital protuberance.

naphtha [MATER] **1.** Petroleum fraction with volatility between gasoline and kerosine; used as a gasoline ingredient, solvent for paints and rubber, and cleaning solvent. **2.** Aromatic solvent from coal tar, either solvent naphtha or heavy naphtha.

naphthacene [ORG CHEM] $C_{18}H_{12}$ A hydrocarbon molecule that may be considered to be four benzene rings fused together; it is explosive when shocked; used in organic synthesis. Also known as rubene; tetracene.

naphtha gas [MATER] Illuminating gas charged with a low-boiling-point fraction of distilled naphtha.

naphthalan [MATER] Soft, greenish-black mass distilled from Armenian naphtha; soluble in ether and hydrocarbons, insoluble in water; melts at 70°C; used in medicine. Also known as naftalan.

naphthalene [ORG CHEM] $C_{10}H_8$ White, volatile crystals with coal tar aroma; insoluble in water, soluble in organic solvents; structurally it is represented as two benzenoid rings fused together; boiling point 218°C, melting point 80.1°C; used for moth repellents, fungicides, lubricants, and resins, and as a solvent. Also known as naphthalin; tar camphor.

naphthaleneacetamide [ORG CHEM] $C_{12}H_{11}NO$ A colorless solid with a melting point of 183°C; used as a growth regulator for root cuttings and for thinning of apples and pears. Also known as 1-naphthaleneacetamide.

1-naphthaleneacetamide *See* naphthaleneacetamide.

naphthaleneacetic acid [ORG CHEM] $C_{10}H_7CH_2CO-OH$ White, odorless crystals, melting at 132–135°C; soluble in organic solvents, slightly soluble in water; used as an agricultural spray. Abbreviated NAA. Also known as 1-naphthylacetic acid.

naphthalene-1,5-disulfonic acid [ORG CHEM] $C_{10}H_6-(SO_3H)_2$ White crystals, decomposing when heated; used to make dyes. Also known as Armstrong's acid.

1-naphthalenesulfonic acid [ORG CHEM] $C_{10}H_8O_3S$ A crystalline compound with a melting point of 90°C (dihydrate); soluble in water or alcohol; used to make α-naphthol.

naphthalic acid *See* phthalic acid.

naphthalin *See* naphthalene.

naphthene [ORG CHEM] Any of the cycloparaffin derivatives of cyclopentane (C_5H_{10}) or cyclohexane (C_6H_{12}) found in crude petroleum.

naphthene base [MATER] Crude oil with a high carbon and low oxygen content that leaves an asphaltic residue after refining. Also known as asphalt base.

naphthenic acid [ORG CHEM] Any of the derivatives of cyclopentane, cyclohexane, cycloheptane, or other naphthenic homologs derived from petroleum; molecular weights 180 to 350; soluble in organic solvents and hydrocarbons, slightly soluble in water; used as a paint drier and wood preservative, and in metals production.

naphthenic crude [MATER] Crude petroleum containing a significant proportion of naphthenic compounds.

naphthine *See* hatchettite.

naphthionic acid [ORG CHEM] $C_{10}H_6(NH_2)SO_3H$ White powder or crystals that decompose when heated; used to manufacture dyes. Also known as 1-aminonaphthalene-4-sulfonic acid; 4-amino-1-naphthalene sulfonic acid; 1-naphthylamine-4-sulfonic acid.

1-naphthol *See* α-naphthol.

2-naphthol *See* β-naphthol.

α-naphthol [ORG CHEM] $C_{10}H_7OH$ Colorless to yellow powder, melting at 96°C; used to make dyes and perfumes, and in synthesis of organic molecules. Also known as 1-hydroxynaphthalene; 1-naphthol.

β-naphthol [ORG CHEM] $C_{10}H_7OH$ White crystals that melt at 121.6°C; insoluble in water; used to make pigments, dyes, and antioxidants. Also known as 2-hydroxynaphthalene; 2-naphthol.

3-naphthol-2-carboxylic acid *See* β-hydroxynaphthoic acid.

β-naphthol methyl ether *See* β-naphthyl methyl ether.

naphthopyrinidine *See* 5,6-benzoquinoline.

β-naphthoquinoline *See* 5,6-benzoquinoline.

1,2-naphthoquinone [ORG CHEM] $C_{10}H_6O_2$ A golden yellow, crystalline compound that decomposes at 145–147°C; soluble in benzene and ether; used as a reagent for resorcinol and thalline. Also known as β-naphthoquinone.

1,4-naphthoquinone [ORG CHEM] $C_{10}H_6O_2$ Greenish-yellow powder soluble in organic solvents, slightly soluble in water; melts at 123–126°C; used as an antimycotic agent, in synthesis, and as a rubber polymerization regulator. Also known as α-naphthoquinone.

α-naphthoquinone *See* 1,4-naphthoquinone.

β-naphthoquinone *See* 1,2-naphthoquinone.

1,2-naphthoquinone-4-sulfonate *See* sodium β-naphthoquinone-4-sulfonate.

1,2-naphthoquinone-4-sulfonic acid sodium salt *See* sodium β-naphthoquinone-4-sulfonate.

β-naphthoquinone-4-sulfonic acid sodium salt *See* sodium β-naphthoquinone-4-sulfonate.

naphthoresorcinol [ORG CHEM] $C_{10}H_6(OH)_2$ Crystals with a melting point of 124–125°C; soluble in ether, alcohol, and water; used as a reagent for sugars and oils, and to determine glucuronic acid in urine. Also known as 1,3-dihydroxynaphthalene.

2-naphthoxyacetic acid *See* β-naphthoxyacetic acid.

β-naphthoxyacetic acid [ORG CHEM] $C_{10}H_9O_2$ A crystalline compound soluble in water, with a melting point of 156°C; used as a growth regulator to set blossoms and regulate growth for pineapples, strawberries, and tomatoes. Also known as BNOA; 2-naphthoxyacetic acid.

2-(α-naphthoxy)-*N*,*N*-diethylpropionamide *See* devrinol.

1-naphthylacetic acid *See* α-naphthaleneacetic acid.

naphthylamine [ORG CHEM] $C_{10}H_7NH_2$ White, toxic crystals, soluble in alcohol and ether; used in dyes; the two forms are α-naphthylamine, boiling at 301°C, and β-naphthylamine, boiling at 306°C.

1-naphthylamine-4-sulfonic acid *See* naphthionic acid.

2-naphthylamine-6-sulfonic acid *See* Brönner's acid.

2,5-naphthylamine sulfonic acid *See* gamma acid.

***O*-(2-naphthyl)glycolic acid** *See* 2-naphthoxyacetic acid.

1-naphthylmethyl carbamate *See* carbaryl.

β-naphthylmethyl ether [ORG CHEM] $C_{10}H_7OCH_3$ White, crystalline scales with a melting point of 72°C; soluble in alcohol and ether; used for soap perfumes. Also known as 2-methoxynaphthalene; methyl naphthyl ether; β-naphthol methyl ether.

***N*-1-naphthylphthalamic acid** [ORG CHEM] $C_{10}H_7NHCOC_6H_4COOH$ A crystalline solid with a melting point of 185°C; used as a preemergence herbicide.

α-naphthylthiocarbamide *See* 1-(1-naphthyl)-2-thiourea.

1-(1-naphthyl)-2-thiourea [ORG CHEM] $C_{10}H_7NHCSNH_2$ A crystalline compound with a melting point of 198°C; soluble in water, acetone, triethylene glycol, and hot alcohol; used as a poison to control the adult Norway rat. Also known as α-naphthylthiocarbamide; α-naphthylthiourea (ANTU); *N*-1-naphthylthiourea.

α-naphthylthiourea *See* 1-(1-naphthyl)-2-thiourea.

***N*-1-naphthylthiourea** *See* 1-(1-naphthyl)-2-thiourea.

napier *See* neper.

Napier diagram [NAV] A diagram on which compass deviation is plotted for various headings, and the points are connected by a smooth curve, permitting deviation problems to be solved quickly without interpolation; it consists of a vertical line, usually in two parts, each part being graduated for 180° of heading, and two additional sets of lines at an angle of 60° to each other and to the vertical lines.

Napierian logarithm *See* logarithm.

Napier's analogies [MATH] Formulas which enable one to study the relationships between the sides and the angles of a spherical triangle.

Napier's rules [MATH] Two rules which give the formulas necessary in the solution of right spherical triangles.

napiform [BOT] Turnip-shaped, referring to roots.

Naples yellow *See* lead antimonite.

napoleonite *See* corsite.

Napoleonville [GEOL] A North American (Gulf Coast) stage of geologic time; a subdivision of the Miocene, above Anahauc and below Duck Lake.

nappe [GEOL] A sheetlike, allochthonous rock unit that is formed by thrust faulting or recumbent folding or both. [MATH] One of the two parts of a conical surface defined by the vertex.

napped leather *See* suede.

naptalam [ORG CHEM] $C_{18}H_{12}O_3NNa$ A light purple solid with a melting point of 185°C; limited solubility in water; used as an herbicide and growth regulator to control weeds and to thin peaches. Also known as *N*-naphthylphthalamic acid, sodium salt (NPA).

naramycin A *See* cycloheximide.

narbonnais [METEOROL] A wind coming from Narbonne; a north wind in the Roussillon region of southern France resembling the tramontana; if associated with an influx of arctic air, it may be very stormy with heavy falls of rain or snow.

narceine [ORG CHEM] $C_{23}H_{27}O_8N{\cdot}3H_2O$ White, odorless crystals with bitter taste; soluble in alcohol and water, insoluble in ether; melts at 170°C; used in medicine.

narcissism [PSYCH] Excessive self-love.

narcissus oil *See* jonquil oil.

narco- [MED] Combining form meaning numbness, narcosis, or stupor.

narcoanalysis [PSYCH] Induction of a reversible sleep by intravenous injections of drugs such as amobarbital or thiopental sodium in order to elicit memories and feelings not expressed by the person in a wakeful state because of resistance.

narcolepsy [MED] A disorder of sleep mechanism characterized by two or more of four distinct symptoms: uncontrollable periods of daytime drowsiness, cataleptic attacks of muscular weakness, sleep paralysis, and vivid nocturnal or hypnogogic hallucinations.

narcomania [MED] Morbid physiologic or psychologic craving for narcotics to avoid painful stimuli.

Narcomedusae [INV ZOO] A suborder of hydrozoan coelenterates in the order Trachylina; the hydroid generation is represented by an actinula larva.

narcosis [MED] Drug-produced state of profound stupor, unconsciousness, or arrested activity.

narcosis therapy [MED] Prolonged, drug-induced sleep as treatment for certain mental disorders. Also known as sleep therapy.

narcospasm [MED] Spasm accompanied by stupor.

narcosynthesis [MED] Psychotherapeutic treatment under partial anesthesia, in which abreaction is a significant factor in obtaining positive results.

narcotic [PHARM] A drug which in therapeutic doses diminishes awareness of sensory impulses, especially pain, by the brain; in large doses, it causes stupor, coma, or convulsions.

narcotine *See* noscapine.

nari *See* caliche.

naringenin-7-rhamnoglucoside *See* naringin.

naringenin-7-rutinoside *See* naringin.

naringin [ORG CHEM] $C_{27}H_{32}O_{14}$ A crystalline bioflavonoid with a melting point of 171°C; soluble in acetone and alcohol; used as a food supplement. Also known as aurantiin; naringenin-7-rhamnoglucoside; naringenin-7-rutinoside.

naris *See* nostril.

Narizian [GEOL] A North American stage of geologic time; a subdivision of the upper Eocene, above Ulatisian and below Fresnian.

narrow [GEOGR] A constricted section of a mountain pass, valley, or cave, or a gap or narrow passage between mountains.

narrow-angle glaucoma [MED] Increased intraocular tension due to a block of the angle of the anterior chamber from contact of the iris by the trabecula. Also known as obstructive glaucoma.

narrow-band amplifier [ELECTR] An amplifier which increases the magnitude of signals over a band of frequencies whose bandwidth is small compared to the average frequency of the band.

narrow-band frequency modulation [COMMUN] Frequency-modulation broadcasting system used primarily for two-way voice communication, having a maximum permissible deviation of 15 kilohertz or less.

narrow-band-pass filter [ELECTR] A band-pass filter in which the band of frequencies transmitted by the filter has a bandwidth which is small compared to the average frequency of the band.

narrow-band path [COMMUN] A communications path having a bandwith of less than 20 kilohertz.

narrow-band pyrometer [ENG] A pyrometer in which light from a source passes through a color filter, which passes only a limited band of wavelengths, before falling on a photoelectric detector. Also known as spectral pyrometer.

narrow-beam antenna [ELECTROMAG] An antenna which radiates most of its power in a cone having a radius of only a few degrees.

narrow gage [CIV ENG] A railway gage narrower than the standard gage of 4 feet 8½ inches (143.51 centimeters).

narrow-gap spark chamber [NUCLEO] A type of spark chamber in which the plates are only 6 to 10 millimeters apart, so that sparks usually follow the electric field perpendicular to the plates, and coincide with the particle track at one point; the great majority of spark chambers are of this type.

narrows [GEOGR] A navigable narrow part of a bay, strait, or river.

narrow-sector recorder [ELECTR] A radio direction finder with which atmospherics are received from a limited sector related to the position of the antenna; this antenna is usually rotated continuously and the bearings of the atmospherics recorded automatically.

narrow-spectrum antibiotic [MICROBIO] An antibiotic effective against a limited number of microorganisms.

narsarsukite [MINERAL] $Na_2(Ti,Fe)Si_4(O,F)$ Mineral composed of sodium titanium iron fluoride and silicate.

narwhal [VERT ZOO] *Monodon monoceros*. An arctic whale characterized by lack of a dorsal fin, and by possession in the male of a long, twisted, pointed tusk (or rarely, two tusks) which is a source of ivory.

N-ary code [COMMUN] Code employing *N* distinguishable types of code elements.

n-ary composition [MATH] A function that associates an element of a set with every sequence of *n* elements of the set.

N-ary pulse-code modulation [COMMUN] Pulse-code modulation in which the code for each element consists of any one of *N* distinguishable types of elements.

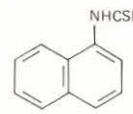
n-ary tree [MATH] A rooted tree in which each vertex has at most *n* successors.

nasal [ANAT] Of or pertaining to the nose.

nasal base breadth [ANTHRO] The distance measured across the alae (wings) of the nose, when they are in rest position.

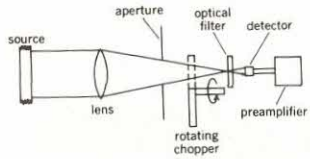
nasal bone [ANAT] Either of two rectangular bone plates

1-(1-NAPHTHYL)-2-THIOUREA



Structural formula.

NARROW-BAND PYROMETER



Components of a narrow-band pyrometer.

forming the bridge of the nose; they articulate with the frontal, ethmoid, and maxilla bones.

nasal bridge breadth [ANTHRO] The width measured between the junctures of the cheekbone and nasal bone, just inside the internal canthi.

nasal bridge salient [ANTHRO] The distance measured from the tip of the bony bridge in the midline of the nose to the juncture of the bony sidewall with the cheek.

nasal cavity [ANAT] Either of a pair of cavities separated by a septum and located between the nasopharynx and anterior nares.

nasal crest [ANAT] **1.** The linear prominence on the medial border of the palatal process of the maxilla. **2.** The linear prominence on the medial border of the palatine bone. **3.** The linear prominence on the internal border of the nasal bone and forming part of the nasal septum.

nasal height [ANTHRO] The height of the nose measured from the nasion to the middle of the lower margin of the anterior nares.

nasal index [ANTHRO] The ratio, × 100, of the greatest width of the anterior nasal openings of the skull to the height of the nasal skeleton.

nasal pit *See* olfactory pit.

nasal process of the frontal bone [ANAT] The downward projection of the nasal part of the frontal bone which terminates as the nasal spine.

nasal process of the maxilla [ANAT] Frontal process of the maxilla.

nasal root breadth [ANTHRO] The distance measured between junctures of the cheekbone and the nasal bone, just inside the internal canthi.

nasal root salient [ANTHRO] The distance measured between the internal canthus and the nasion.

nasal septum [ANAT] The partition separating the two nasal cavities.

nasal tip height [ANTHRO] The distance measured between the subnasale and the pronasale.

nasal tip salient [ANTHRO] The distance measured from the nasal wing to the pronasale.

nascent [CHEM] Pertaining to an atom or simple compound at the moment of its liberation from chemical combination, when it may have greater activity than in its usual state.

n'aschi [METEOROL] A northeast wind which occurs in winter on the Iranian coast of the Persian Gulf, especially near the entrance to the Gulf, and also on the Makran (West Pakistan) coast; it is probably associated with an outflow from the central Asiatic anticyclone which extends over the high land of Iran.

Nasellina [INV ZOO] The equivalent name for Monopylina.

nasion [ANTHRO] Midpoint of the nasofrontal suture.

nasion-menton [ANTHRO] The distance measured between the nasion and the midpoint of the lower edge of the chin.

nasolacrimal canal [ANAT] The bony canal that lodges the nasolacrimal duct. Also known as lacrimal canal.

nasolacrimal duct [ANAT] The membranous duct lodged within the nasolacrimal canal; it gives passage to the tears from the lacrimal sac to the inferior meatus of the nose.

nasolacrimal groove [EMBRYO] The furrow, the maxillary, and the lateral nasal processes of the embryo.

nasonite [MINERAL] $Ca_4Pb_6Si_6O_{21}Cl_2$ A white mineral composed of silicate and chloride of calcium and lead and occurring in granular masses.

nasopalatine cyst *See* median maxillary cyst.

nasopalatine duct [EMBRYO] A canal between the oral and nasal cavities of the embryo at the point of fusion of the maxillary and palatine processes.

nasopharynx [ANAT] The space behind the posterior nasal orifices, above a horizontal plane through the lower margin of the palate.

nastic movement [BOT] Movement of a flat plant part, oriented relative to the plant body and produced by diffuse stimuli causing disproportionate growth or increased turgor pressure in the tissues of one surface.

nasturan *See* pitchblende.

Nasutitermitinae [INV ZOO] A subfamily of termites in the family Termitidae, characterized by having the cephalic glands open at the tip of an elongated tube which projects anteriorly.

Natalidae [VERT ZOO] The funnel-eared bats, a monogeneric family of small, tropical American insectivorous bats (Chiroptera) with large, funnellike ears.

Natantia [INV ZOO] A suborder of decapod crustaceans comprising shrimp and related forms characterized by a long rostrum and a ventrally flexed abdomen.

Nathansohn's theory [OCEANOGR] The theory that nutrient salts in the lighted surface layers of the ocean are consumed by plants, accumulate in the deep ocean through sinking of dead plant and animal bodies, and eventually return to the euphotic layer through diffusion and vertical circulation of the water.

Naticacea [INV ZOO] A superfamily of gastropod mollusks in the order Prosobranchia.

Naticidae [INV ZOO] A family of gastropod mollusks in the order Pectinibranchia comprising the moon-shell snails.

national meridian [GEOD] A meridian chosen in a particular nation as the reference datum for determining longitude for that nation.

native [BIOL] Grown, produced or originating in a specific region or country. [GEOCHEM] Pertaining to an element found in nature in a nongaseous state.

native asphalt [GEOL] Exudations or seepages of asphalt occurring in nature in a liquid or semiliquid state. Also known as natural asphalt.

native coal *See* natural coke.

native element [GEOL] Any of 20 elements, such as copper, gold, and silver, which occur naturally uncombined in a nongaseous state; there are three groups—metals, semimetals, and nonmetals.

native language [COMPUT SCI] Machine language that is executed by the computer for which it is specifically designed, in contrast to a computer using an emulator.

native metal [GEOCHEM] A metallic native element; includes silver, gold, copper, iron, mercury, iridium, lead, palladium, and platinum.

native paraffin *See* ozocerite.

native uranium [GEOCHEM] Uranium as found in nature; a mixture of the fertile uranium-238 isotope (99.3%), the fissionable uranium-235 isotope (0.7%), and a minute percentage of other uranium isotopes. Also known as natural uranium; normal uranium.

natremia [MED] Excessive amounts of sodium in the blood.

natric horizon [GEOL] A soil horizon that has the properties of an argillic horizon, but also displays a blocky, columnar, or prismatic structure and has a subhorizon with an exchangeable-sodium saturation of over 15%.

natrium [CHEM] Latin name for sodium; source of the symbol Na.

natriuretic [PHARM] A medicinal agent which inhibits reabsorption of cations, particularly sodium, from urine.

natroalunite [MINERAL] $NaAl_3(SO_4)_2(OH)_6$ Mineral composed of basic sodium aluminum sulfate. Also known as almerite.

natrochalcite [MINERAL] $NaCu_2(SO_4)(OH)\cdot H_2O$ An emerald-green mineral composed of hydrous basic sulfate of sodium and copper.

natrolite [MINERAL] $Na_2Al_2Si_3O_{10}\cdot 2H_2O$ A zeolite mineral composed of hydrous silicate of sodium and aluminum; usually occurs in slender acicular or prismatic crystals.

natromontebrasite [MINERAL] $(Na,Li)Al(PO_4)(OH,F)$ Mineral composed of hydrous basic phosphate of sodium, lithium, and aluminum; it is isomorphous with montebrasite and amblygonite. Also known as fremontite.

natron [MINERAL] $Na_2CO_3\cdot 10H_{20}$ A white, yellow, or gray mineral that crystallizes in the monoclinic system, is soluble in water, and generally occurs in solution or in saline residues.

natronborocalcite *See* ulexite.

natron lake *See* soda lake.

natrophilite [MINERAL] $NaMn(PO_4)$ A mineral composed of sodium manganese phosphate.

natural aging [MET] Spontaneous aging at room temperature of a supersaturated metallic solid solution.

natural antenna frequency [ELECTROMAG] Lowest resonant frequency of an antenna without added inductance or capacitance.

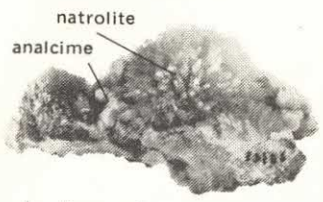
natural arch [GEOL] **1.** A landform similar to a natural bridge but not formed by erosive agencies. **2.** *See* natural bridge.

natural asphalt *See* native asphalt.

natural binary coded decimal system [COMPUT SCI] A particular binary coded decimal system that uses the first ten binary numbers in sequence to represent the digits 0 through 9.

natural bitumen [GEOL] Native mineral pitch, tar, or asphalt.

NATROLITE



Natrolite crystals on analcime, Cape d'Or, Nova Scotia. *(American Museum of Natural History specimen)*

natural boundary [MATH] Those points of the boundary of a region where an analytic function is defined through which the function cannot be continued analytically.

natural bridge [GEOL] An archlike rock formation spanning a ravine or valley and formed by erosion. Also known as natural arch.

natural cement [MATER] Hydraulic cement made from pulverized and heated limestone containing clay, magnesia, and iron.

natural circulation reactor [NUCLEO] A reactor in which the coolant (usually water) circulates without pumping, owing to the different densities of its cold and reactor-heated portions.

natural coke [GEOL] Coal that has been naturally carbonized by contact with an igneous intrusion, or by natural combustion. Also known as black coal; blind coal; carbonite; cinder coal; coke coal; cokeite; finger coal; native coal.

natural convection [THERMO] Convection in which fluid motion results entirely from the presence of a hot body in the fluid, causing temperature and hence density gradients to develop, so that the fluid moves under the influence of gravity. Also known as free convection.

natural coordinates [FL MECH] An orthogonal, or mutually perpendicular, system of curvilinear coordinates for the description of fluid motion, consisting of an axis t tangent to the instantaneous velocity vector and an axis n normal to this velocity vector to the left in the horizontal plane, to which a vertically directed axis z may be added for the description of three-dimensional flow; such a coordinate system often permits a concise formulation of atmospheric dynamical problems, especially in the Lagrangian system of hydrodynamics.

natural draft [FL MECH] Unforced gas flow through a chimney or vertical duct, directly related to chimney height and the temperature difference between the ascending gases and the atmosphere, and not dependent upon the use of fans or other mechanical devices.

natural-draft cooling tower [MECH ENG] A cooling tower that depends upon natural convection of air flowing upward and in contact with the water to be cooled.

natural fiber [TEXT] A textile fiber of mineral, plant, or animal origin.

natural frequency [ELECTR] The lowest resonant frequency of an antenna, circuit, or component. [PHYS] The frequency with which a system oscillates in the absence of external forces; or, for a system with more than one degree of freedom, the frequency of one of the normal modes of vibration.

natural fuel reactor *See* natural uranium reactor.

natural function [MATH] A trigonometric function, as opposed to its logarithm.

natural function generator *See* analytical function generator.

natural gas [MATER] A combustible, gaseous mixture of low-molecular-weight paraffin hydrocarbons, generated below the surface of the earth; contains mostly methane and ethane with small amounts of propane, butane, and higher hydrocarbons, and sometimes nitrogen, carbon dioxide, hydrogen sulfide, and helium.

natural gasoline [MATER] The liquid paraffin hydrocarbon contained in natural gas and recovered by compression, distillation, and absorption.

natural-gasoline plant [CHEM ENG] Compression, distillation, and absorption process facility used to remove natural gasoline (mostly butanes and heavier components) from natural gas.

natural glass [GEOL] An amorphous, vitreous inorganic material that has solidified from magma too quickly to crystallize.

natural harbor [GEOGR] A harbor where the configuration of the coast provides the necessary protection.

natural immunity [IMMUNOL] Native immunity possessed by the individuals of a race, strain, or species.

natural interference [COMMUN] Electromagnetic interference arising from natural terrestrial phenomena (called atmospheric interference), or electromagnetic interference caused by natural disturbances originating outside the atmosphere of the earth (called galactic and solar noise).

naturalized [ECOL] Of a species, having become permanently established after being introduced.

natural laminar flow [AERO ENG] Airflow over a portion of the wing such that local pressure decreases in the direction of flow and flow in the boundary layer is laminar rather than turbulent; frictional drag on the aircraft is greatly reduced.

natural language [COMPUT SCI] A computer language whose rules reflect and describe current rather than prescribed usage; it is often loose and ambiguous in interpretation, meaning different things to different hearers.

natural levee [GEOL] An elongate embankment compounded of sand and silt and deposited along both banks of a river channel during times of flood.

natural load [HYD] The quantity of sediment carried by a stable stream.

natural logarithm *See* logarithm.

natural numbers [MATH] The integers 1,2,3,....

natural period [PHYS] Period of the free oscillation of a body or system; when the period varies with amplitude, the natural period is the period when the amplitude approaches zero.

natural pressure cycle [MET] A cycle in which pressure buildup conforms proportionately to the buildup of stresses due to forming.

natural radiation *See* background radiation.

natural radioactivity [NUCLEO] Radioactivity exhibited by naturally occurring radionuclides.

natural radio-frequency interference [GEOPHYS] Natural terrestrial phenomena of an electromagnetic nature, or natural electromagnetic disturbances originating outside the atmosphere, which interfere with radio communications.

natural red *See* purpurin.

natural remanent magnetization [GEOPHYS] The magnetization of rock which exists in the absence of a magnetic field and has been acquired from the influence of the earth's magnetic field at the time of their formation or, in certain cases, at later times. Abbreviated NRM.

natural resonance [PHYS] Resonance in which the period or frequency of the applied agency maintaining oscillation is the same as the natural period of oscillation of a system.

natural resource [MATER] A deposit of minerals, water, or other materials furnished by nature.

natural scale [GRAPHICS] The ratio between the linear dimensions of a chart or drawing and the actual dimensions represented, expressed as a proportion; for example, 1 inch on a chart of natural scale 1:2,000,000 represents 2,000,000 inches on the earth. Also known as representative fraction.

natural science [SCI TECH] Collectively, the branches of science dealing with objectively measurable phenomena pertaining to the transformations and relationships of energy and matter; includes biology, physics, and chemistry.

natural-seasoned lumber *See* air-dried lumber.

natural selection [EVOL] Darwin's theory of evolution, according to which organisms tend to produce progeny far above the means of subsistence; in the struggle for existence that ensues, only those progeny with favorable variations survive; the favorable variations accumulate through subsequent generations, and descendants diverge from their ancestors.

natural splitting [MIN ENG] In mine ventilation, a flow of air dividing among the branches, of its own accord and without regulation, in inverse relation to the resistance of each airway.

natural steel [MET] **1.** Steel made directly from cast iron. **2.** Steel, such as wootz, made directly from the ore.

natural transmission [COMMUN] The signal transmitted over a line when no traffic is flowing.

natural tunnel [GEOL] A cave that is nearly horizontal and is open at both ends. Also known as tunnel cave.

natural uranium *See* native uranium.

natural uranium reactor [NUCLEO] A nuclear reactor in which natural unenriched uranium is the principal fissionable material. Also known as natural fuel reactor.

natural ventilation [MIN ENG] The weak and varying ventilation in a mine caused by the difference in air density between shafts.

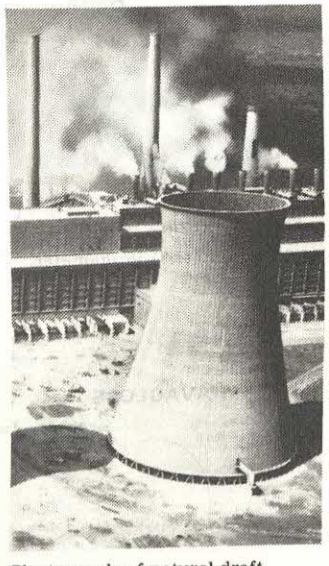
natural ventilation pressure [MIN ENG] A pressure difference across the shaft-bottom doors caused by a lack of balance in the two vertical air columns.

natural wavelength [ELECTROMAG] Wavelength corresponding to the natural frequency of an antenna or circuit.

natural well [GEOL] A sinkhole or other natural opening which resembles a well extending below the water table and from which groundwater can be withdrawn.

natural width of energy level [PHYS] A measure of the spread in energy of an excited state of a quantized system due to spontaneous transitions to other states; quantitatively, it is the difference between the energies for which the intensity of emis-

NATURAL-DRAFT COOLING TOWER



Photograph of natural-draft cooling tower. *(Haman, Inc.)*

sion from or absorption by the state, or of the scattering cross section associated with it, is one-half its maximum value, in the absence of any external influence on the system.

Naucoridae [INV ZOO] A family of hemipteran insects in the superfamily Naucoroidea.

Naucoroidea [INV ZOO] The creeping water bugs, a superfamily of hemipteran insects in the subdivision Hydrocorisae; they are suboval in form, with chelate front legs.

naujaite [PETR] A coarse hypidiomorphic-granular sodalite-rich nepheline syenite that contains microcline and small amounts of albite, analcime, acmite, and sodium amphiboles and is characterized by a poikilitic texture.

Naumanniella [MICROBIO] A genus of bacteria in the family Siderocapsaceae; rod-shaped cells surrounded by a delicate sheath in which iron and manganese oxides are deposited.

naumannite [MINERAL] Ag_2Se An iron-black mineral that crystallizes in the isometric system; consists of silver selenide, and occurs massive or in crystals; specific gravity is 8.

nauplius [INV ZOO] A larval stage characteristic of many groups of Crustacea; the oval, unsegmented body has three pairs of appendages: uniramous antennules, biramous antennae, and mandibles.

nausea [MED] Feeling of discomfort in the stomach region, accompanied by aversion to food and a tendency to vomit.

nautical almanac [NAV] A book published annually by the governments of the principal maritime nations which contains the astronomical data required for navigation by observations of celestial objects; an abridged version is known as the abridged nautical almanac.

nautical astronomy [NAV] The science of determining position and direction of a ship by observation of celestial objects.

nautical chain [MECH] A unit of length equal to 15 feet or 4.572 meters.

nautical chart [NAV] A graphic representation on a plane surface of a section of the earth's sea surface constructed to include known dangers and aids to navigation. Also known as marine chart.

nautical distance [MAP] The length in nautical miles of the rhumb line joining any two places on the earth's surface.

nautical mile [NAV] A unit of distance used principally in navigation; for practical consideration it is usually considered the length of 1 minute of any great circle of the earth, the meridian being the great circle most commonly used; the International Hydrographic Bureau in 1929 proposed a standard length of 1852 meters, which is known as the international nautical mile.

nautical twilight [ASTRON] The interval of incomplete darkness between sunrise or sunset and the time at which the center of the sun's disk is 12° below the celestial horizon.

Nautilidae [INV ZOO] A monogeneric family of cephalopod mollusks in the order Nautiloidea; *Nautilus pompilius* is the only well-known living species.

Nautiloidea [INV ZOO] A primitive order of tetrabranchiate cephalopods; shells are external and smooth, being straight or coiled and chambered with curved transverse septa.

navaglobe [NAV] The portion of the navarho navigation system that provides bearing; it utilizes three antennas located at the apexes of a triangle.

Navaho [ORD] A U.S. Air Force surface-to-surface long-range supersonic strategic missile, powered by two ramjet engines.

Navajo sandstone [GEOL] A fossil dune formation of Jurassic age found in the Colorado Plateau of the United States.

naval architect [NAV ARCH] An individual who designs ships and makes alterations in them.

naval architecture [ENG] The study of the physical characteristics and the design and construction of buoyant structures, such as ships, boats, barges, submarines, and floats, which operate in water; includes the construction and operation of the power plant and other mechanical equipment of these structures.

naval armament [ORD] The combat equipment used in naval ships and by naval aircraft.

naval brass [MET] Brass composed of 60–62% copper, 37–39% zinc, and 0.75–1% tin; relatively resistant to corrosion by seawater. Also known as naval bronze.

naval bronze *See* naval brass.

naval meteorology [METEOROL] The branch of meteorology which studies the interaction between the ocean and the overlying air mass, and which is concerned with atmospheric phenomena over the oceans, the effect of the ocean surface on these phenomena, and the influence of such phenomena on shallow and deep seawater.

naval mine [ORD] An item designed to be located under water and exploded by means of propeller vibration, magnetic attraction, contact, or remote control.

naval ship [NAV ARCH] A ship designed primarily for use in warfare, either directly in combat operations or to provide services and support such operations.

naval stores [MATER] **1.** Pitch and rosin formerly used in the construction of wooden ships. **2.** All pine wood products, including rosin, turpentine, and pine oils.

navar [NAV] A coordinated series of radar air navigation and traffic-control aids utilizing transmissions at wavelengths of 10 and 60 centimeters to provide in an aircraft the distance and bearing from a given point, along with a display of other aircraft in the vicinity and commands from the ground; the system also provides on the ground a display of all aircraft in the vicinity, with their altitudes, identities, and means for transmitting certain commands. Derived from navigation and ranging.

navarho [NAV] A long-distance, low-frequency continuous-wave navigation system providing simultaneous bearing and distance information; the portion providing bearing is termed navaglobe.

Navarroan [PALEON] A North American (Gulf Coast) stage of Upper Cretaceous geologic time, above the Tayloran and below the Midwayan of the Tertiary.

Navascreen [NAV] System for displaying and computing air-traffic control data, using information obtained from radar and other sources.

NAVEAM [NAV] A British-originated radio navigational warning of dangers in the eastern Atlantic, Mediterranean Sea, and Red Sea.

navel [ANAT] The umbilicus.

navel height [ANTHRO] The vertical distance, of a standing subject, measured from the center of the navel to the floor.

navicular [ANAT] A boat-shaped bone, especially the lateral bone on the radial side of the proximal row of the carpus. [BIOL] Resembling or having the shape of a boat.

navicular cells [PATH] Boat-shaped squamous epithelial cells filled with glycogen and prominent in the exfoliated cells of the uterine cervix of pregnant women.

Navier's equation [MECH] A vector partial differential equation for the displacement vector of an elastic solid in equilibrium and subjected to a body force.

Navier-Stokes equations [FL MECH] The equations of motion for a viscous fluid which may be written $d\mathbf{V}/dt = -(1/\rho)\nabla p + \mathbf{F} + \nu\nabla^2\mathbf{V} + (1/3)\nu\nabla(\nabla\cdot\mathbf{V})$, where p is the pressure, ρ the density, F the total external force per unit mass, $\mathbf{V}$ the fluid velocity, and ν the kinematic viscosity; for an incompressible fluid, the term in $\nabla\cdot\mathbf{V}$ (divergence) vanishes, and the effects of viscosity then play a role analogous to that of temperature in thermal conduction and to that of density in simple diffusion.

navigable airspace [NAV] Airspace at and above the minimum safe flight level, including airspace needed for safe takeoff and landing.

navigable semicircle [METEOROL] That half of a cyclonic storm area in which the rotary and progressive motions of the storm tend to counteract each other, and the winds are in such a direction as to blow a vessel away from the storm track.

navigating bridge *See* flying bridge.

navigating officer [NAV] An officer serving as a navigator.

navigating sextant [NAV] A sextant designed and used for observing the altitudes of celestial bodies, as contrasted with a hydrographic sextant.

navigation [ENG] The process of directing the movement of a craft so that it will reach its intended destination; subprocesses are position fixing, dead reckoning, pilotage, and homing.

navigational aid [NAV] An instrument, device, chart, method, or such, intended to assist in the navigation of a craft; this expression should not be confused with "aid to navigation," which refers only to devices external to a craft.

navigational planets [NAV] The four planets commonly observed for obtaining data for use in celestial navigation: Venus, Mars, Jupiter, and Saturn.

navigational plot [NAV] A plot of the movements of a craft.

navigational satellite [AERO ENG] An artificial earth-orbiting satellite designed for use in at least four widely different navigational systems.

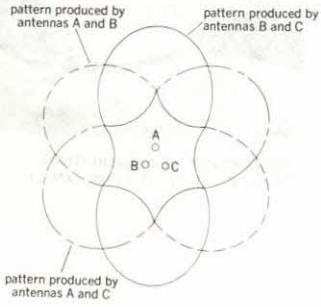
NAUPLIUS

Nauplius of the shrimp *Penaeus*; in addition to their sensory and feeding functions, the three pairs of appendages are organs of locomotion for this free-swimming larva. *(From T. I. Storer and R. L. Usinger, General Zoology, 4th ed., McGraw-Hill, 1965)*

NAUTILIDAE

Shell of *Nautilus pompilius*, which may be up to 10 inches (25 centimeters) in diameter.

NAVAGLOBE



Navaglobe antenna location and field pattern.

navigational triangle [NAV] In celestial navigation, the spherical triangle solved in computing altitude and azimuth and great-circle sailing problems.

navigation computer [NAV] A computer that uses electronic or electric circuits to compute two or more navigation factors such as altitude, direction, and velocity, or to receive such data and compute course information.

navigation dam [CIV ENG] A structure designed to raise the level of a stream to increase the depth for navigation purposes.

navigation dome *See* astrodome.

navigation head [NAV] A transshipment point on a waterway where loads are transferred between water carriers and land carriers.

navigation lights [NAV] Statutory lights shown by aircraft and vessels during the hours between sunset and sunrise, in accordance with international agreements.

navigation radar [NAV] A search radar used on ships primarily for navigation purposes, to provide a visual indication of bearing and distance to any object that projects above the surface of the water within the range of the radar.

navigation receiver [ELECTR] An electronic device that determines a ship's position by receiving and comparing radio signals from transmitters at known locations.

navigator [NAV] A person who navigates or is directly responsible for the navigation of a craft.

navite [MINERAL] A porphyritic basalt containing phenocrysts of altered olivine, augite, and basic plagioclase in a groundmass of labradorite and augite.

NAVSTAR [NAV] A global system of up to 24 navigation satellites developed to provide instantaneous and highly accurate worldwide three-dimensional location by air, sea, and land vehicles equipped with suitable receivers. Derived from navigation system using time and ranging.

Navy Electronics Laboratory International Algol Compilers *See* NELIAC.

Navy Heavy *See* bunker C fuel oil.

Nb *See* niobium.

n-body problem *See* many-body problem.

NBR *See* nitrile rubber.

NC *See* numerical control.

N/C *See* numerical control.

n-channel [ELECTR] A conduction channel formed by electrons in an *n*-type semiconductor, as in an *n*-type field-effect transistor.

n-connected graph [MATH] A connected graph for which the removal of n points is required to disconnect the graph.

N curve [ELECTR] A plot of voltage against current for a negative-resistance device; its slope is negative for some values of current or voltage.

Nd *See* neodymium.

NDGA *See* nordihydroguaiaretic acid.

n-dimensional space [MATH] A vector space whose basis has n vectors.

N display [ELECTR] Radar display in which the target appears as a pair of vertical deflections from a horizontal time base; direction is indicated by relative amplitude of the blips; target distance is determined by moving an adjustable pedestal signal along the base line until it coincides with the horizontal position of the blips; the pedestal control is calibrated in distance.

NDRO *See* nondestructive readout.

Ne *See* neon.

neallotype [SYST] A type specimen that, compared with the holotype, is of the opposite sex, and was collected and described later.

NEA material *See* negative electron affinity material.

Neanderthal man [PALEON] A type of fossil human that is a subspecies of *Homo sapiens* and is distinguished by a low broad braincase, continuous arched browridges, projecting occipital region, short limbs, and large joints.

neap high water *See* mean high-water neaps.

neap low water *See* mean low-water neaps.

neap range [OCEANOGR] The mean semidiurnal range of tide when neap tides are occurring; the mean difference in height between neap high water and neap low water. Also known as mean neap range.

neap rise [OCEANOGR] The height of neap high water above the chart datum.

neaps *See* neap tide.

neap tidal currents [OCEANOGR] Tidal currents of decreased speed occurring at the time of neap tides.

neap tide [OCEANOGR] Tide of decreased range occurring about every 2 weeks when the moon is in quadrature, that is, during its first and last quarter. Also known as neaps.

Nearctic fauna [ECOL] The indigenous animal communities of the Nearctic zoogeographic region.

Nearctic zoogeographic region [ECOL] The zoogeographic region that includes all of North America to the edge of the Mexican Plateau.

near-end crosstalk [COMMUN] A type of interference that may occur at carrier telephone repeater stations when output signals of one repeater leak into the same end of the other repeater.

nearest approach [NAV] The least distance between two objects having relative motion with respect to each other.

nearest neighbors [CRYSTAL] Any pair of atoms in a crystal lattice which are as close to each other, or closer to each other, than any other pair.

near field [ACOUS] The acoustic radiation field that is close to an acoustic source such as a loudspeaker. [ELECTROMAG] The electromagnetic field that exists within one wavelength of a source of electromagnetic radiation, such as a transmitting antenna.

near-infrared radiation [ELECTROMAG] Infrared radiation having a relatively short wavelength, between 0.75 and about 2.5 micrometers (some scientists place the upper limit from 1.5 to 3 micrometers), at which radiation can be detected by photoelectric cells, and which corresponds in frequency range to the lower electronic energy levels of molecules and semiconductors. Also known as photoelectric infrared radiation.

near-infrared spectrophotometry [ANALY CHEM] Spectrophotometry at wavelengths in the near-infrared region, generally using instruments with quartz prisms in the monochromators and lead sulfide photoconductor cells as detectors to observe absorption bands which are harmonics of bands at longer wavelengths.

near miss [ORD] The strike of an explosive missile, especially of an aerial bomb, near but not on the object of attack, and usually close enough to cause effective damage.

near point [PHYSIO] The smallest distance from the eye at which a small object can be seen without blurring.

nearshore [OCEANOGR] An indefinite zone which extends from the shoreline seaward to a point beyond the breaker zone.

nearshore circulation [OCEANOGR] Ocean circulation consisting of both the nearshore currents and the coastal currents.

nearshore current system [OCEANOGR] A current system, caused mainly by wave action in and near the breaker zone, which contains four elements: the shoreward mass transport of water; longshore currents; seaward return flow, including rip currents; and the longshore movement of the expanded heads of rip currents.

nearsightedness *See* myopia.

near stars [ASTRON] Those stars in the celestial neighborhood of the sun, sometimes taken as those 22 stars within 13 light-years of the sun.

nearthrosis [MED] A type of nonunion of broken ends of bones in which a cystic space resembling a joint cavity develops between poorly joined ends.

near-ultraviolet radiation [ELECTROMAG] Ultraviolet radiation having relatively long wavelength, in the approximate range from 300 to 400 nanometers.

near wilt [PL PATH] A fungus disease of peas caused by *Fusarium oxysporum pisi;* affects scattered plants and develops more slowly than true wilt.

neat cement grout [MATER] Grout made from a mixture of cement and water.

neat line [CIV ENG] The line to which a masonry wall should generally conform. [MAP] That border line which indicates the limits of an area shown on a map or chart.

neat plaster [MATER] A base-coat plaster, having sand added at the job location.

neatsfoot oil [MATER] Pale-yellow oil with unusual odor; soluble in organic solvents and kerosine; obtained by boiling shinbones and hoofless feet of cattle; used to treat leather, as a lubricant, and to oil wool. Also known as bubulum oil; hoof oil.

neat soap [MATER] Soap in the molten state formed during manufacture, especially after fitting and settling out of nigre and lye.

Nebaliacea [INV ZOO] A small, marine order of Crustacea in the subclass Leptostraca distinguished by a large bivalve shell, without a definite hinge line, an anterior articulated rostrum, eight thoracic and seven abdominal somites, a pair of articulated furcal rami, and the telson.

Nebraskan drift [GEOL] Rock material transported during the Nebraskan glaciation; it is buried below the Kansan drift in Iowa.

Nebraskan glaciation [GEOL] The first glacial stage of the Pleistocene epoch in North America, beginning about 1,000,000 years ago, and preceding the Aftonian interglacial stage.

nebula [ASTRON] Interstellar clouds of gas or small particles; an example is the Horsehead Nebula in Orion.

nebular hypothesis [ASTROPHYS] A theory, proposed in 1796 by Laplace, supposing that the planets originated from the solar nebula surrounding the proto-sun; as the sun cooled, it contracted, rotated faster, and thus caused a ringlike bulging at the equator; this bulge eventually broke off and formed the planets; Laplace further theorized that the sun and other stars formed from clouds of nebulous matter; the theory in this form is not accepted.

nebular lines [ASTROPHYS] The spectral lines formed in the glow of bright nebulae; they arise from forbidden atomic transition which can take place because of the very low pressure in the nebula itself.

nebular red shift [ASTROPHYS] A systematic shift observed in the spectra of all distant galaxies; the wavelength shift toward the red increases with the distance of the galaxies from the earth.

nebular transitions [ASTROPHYS] Those electronic transitions for doubly ionized argon and chlorine that yield the nebular lines seen in the spectra of gaseous nebulae.

nebular variable *See* T Tauri star.

nebulite [PETR] A chorismite in which one of the textural elements occurs in nebulitic lenticular masses.

nebulitic [PETR] **1.** Having indistinct boundaries between textural elements. **2.** Of or pertaining to a nebulite.

nebulosus [METEOROL] A cloud species with the appearance of a nebulous veil, showing no distinct details; found principally in the genera cirrostratus and stratus.

neburon [ORG CHEM] $C_{12}H_{16}Cl_2N_2O$ A white, crystalline compound with a melting point of 102–103°C; used as an herbicide to control weeds in nursery ornamentals, dichondras, and wheat. Also known as 1-*n*-butyl-3-(3,4-dichlorophenyl)-1-methylurea.

necessary bandwidth [COMMUN] For a given class of emission, the minimum value of the occupied bandwidth sufficient to ensure the transmission of information at the rate and with the quality required for the system employed, under specified conditions.

neck [ANAT] The usually constricted communicating column between the head and trunk of the vertebrate body. [ENG] The part of a furnace where the flame is contracted before reaching the stack. [GEOGR] A narrow strip of land, especially one connecting two larger areas. [GEOL] *See* pipe. [MET] In a tensile test, that portion of the metal at which fracture is imminent during the later stages of plastic deformation in a tensile test. [OCEANOGR] The narrow band of water forming the part of a rip current where feeder currents converge and flow swiftly through the incoming breakers and out to the head.

neck breadth [ANTHRO] The diameter of the neck measured halfway between the otobasion inferior and the shoulder.

neck cutoff [GEOGR] A high-angle meander cutoff formed where a stream breaks through or across a narrow meander neck, as where downstream migration of one meander has been slowed and the next meander upstream has overtaken it.

neck depth [ANTHRO] The diameter of the neck between the tip of the thyroid cartilage and the back of the neck, measured perpendicular to the axis of the neck, with contact only.

neck-down [MET] **1.** A thin core used for restricting the riser neck; facilitates cutting off the riser from the casting. **2.** Localized area reduction of a test piece during plastic deformation.

Neckeraceae [BOT] A family of mosses in the order Isobryales distinguished by undulate leaves.

neck-in [ENG] When coating by extrusion, the width difference between the extruded web leaving the die and that of the coating on the surface.

necking [MET] Reducing the diameter or cross-sectional area of a tube or other piece of metal by stretching.

necking down [MET] Localized reduction in cross-sectional area of a specimen during tensile deformation.

neck rot [PL PATH] A fungus disease of onions caused by species of *Botrytis* and characterized by rotting of the leaves just above the bulb.

necr-, necro- [MED] Combining form denoting death.

necrobiosis [MED] Death of a cell or group of cells under either normal or pathologic conditions.

Necrolestidae [PALEON] An extinct family of insectivorous marsupials.

necrophagous [ZOO] Feeding on dead bodies.

necrophile [PSYCH] A person affected with necrophilia.

necrophilia [PSYCH] **1.** Longing for death. **2.** *See* necrophilism.

necrophilism [PSYCH] Also known as necrophilia. **1.** Unnatural obsession with and usually erotic attraction for dead bodies. **2.** Sexual violation of a corpse.

necrophobia [PSYCH] Abnormal dread of death and of dead bodies.

necropsy [MED] To perform an autopsy.

necrosis [MED] Death of a cell or group of cells as a result of injury, disease, or other pathologic state.

necrotic [MED] Pertaining to, causing, or undergoing necrosis.

necrotic enteritis [VET MED] A bacterial infection of young swine caused by *Salmonella suipestifer* or *S. choleraesuis* and characterized by fever and necrotic and ulcerative inflammation of the intestine.

necrotic ring spot [PL PATH] A virus leaf spot of cherries marked by small, dark water-soaked rings which may drop out, giving the leaf a tattered appearance.

necrotize [MED] To undergo necrosis; to become necrotic.

necrozoospermia [MED] A condition in which spermatozoa are immobile.

nectar [BOT] A sugar-containing liquid secretion of the nectaries of many flowers.

nectarine [BOT] A smooth-skinned, fuzzless fruit originating as a spontaneous somatic mutation of the peach, *Prunus persica* and *P. persica* var. *nectarina*.

nectary [BOT] A secretory organ or surface modification of a floral organ in many flowers, occurring on the receptacle, in and around ovaries, on stamens, or on the perianth; secretes nectar.

nectocalyx [INV ZOO] A swimming bell of a siphonophore. Also known as nectophore.

Nectonematoidea [INV ZOO] A monogeneric order of worms belonging to the class Nematomorpha, characterized by dorsal and ventral epidermal chords, a pseudocoele, and dorsal and ventral rows of bristles; adults are parasites of true crabs and hermit crabs.

nectophore *See* nectocalyx.

nectosome [INV ZOO] The part of a complex siphonophore that bears swimming bells.

Nectridea [PALEON] An order of extinct lepospondylous amphibians characterized by vertebrae in which large fan-shaped hemal arches grow directly downward from the middle of each caudal centrum.

Nectrioidaceae [MYCOL] The equivalent name for Zythiaceae.

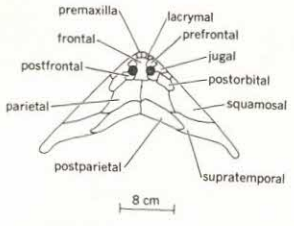
Necturus [VERT ZOO] A genus of mud puppies in the family Proteidae.

need [PSYCH] An acquired or physiological lack or deficit within the individual.

need complementarity [PSYCH] The concept that people having different needs like each other because they provide each other with mutual satisfaction of opposed needs.

needle [BOT] A slender-pointed leaf, as of the firs and other evergreens. [COMPUT SCI] A slender rod or probe used to sort decks of edge-punched cards by inserting it through holes along the margin of the deck and vibrating the deck so that cards having that particular hole are retained, but those having a notch cut at that hole position drop out. [DES ENG] **1.** A device made of steel pointed at one end with a hole at the other; used for sewing. **2.** A device made of steel with a hook at one end; used for knitting. [ENG] **1.** A piece of copper or brass about ½ inch (13 millimeters) in diameter and 3 or 4 feet (90 or 120 centimeters) long, pointed at one end, thrust into a charge of blasting powder in a borehole and then withdrawn, leaving a hole for the priming, fuse, or squib. Also known as pricker. **2.**

NECTRIDEA



Skull of a lower Permian nectridian, *Diplocaulus*. (From E. H. Colbert, Evolution of the Vertebrates, 2d ed., copyright © 1969 by John Wiley & Sons, Inc.; reprinted by permission)

A thin pointed indicator on an instrument dial. [ENG ACOUS] *See* stylus. [GEOL] A pointed, elevated, and detached mass of rock formed by erosion, such as an aiguille. [HYD] A long, slender snow crystal that is at least five times as long as it is broad. [MINERAL] A needle-shaped or acicular mineral crystal.

needlebar [TEXT] A bar for mounting needles on a sewing or knitting machine.

needle beam [CIV ENG] A temporary member thrust under a building or a foundation for use in underpinning.

needle bearing [DES ENG] A roller-type bearing with long rollers of small diameter; the rollers are retained in a flanged cup, have no retainer, and bear directly on the shaft.

needle blow [ENG] A blow-molding technique in which air is injected into the plastic article through a hollow needle inserted in the parison.

needle board [TEXT] A board that holds needles in a loom.

needle dam [CIV ENG] A barrier made of horizontal bars across a pass through a dam or of planks that can be removed in case of flooding.

needle file [DES ENG] A small file with an extended tang that serves as a needle.

needle gap [ELECTR] Spark gap in which the electrodes are needle points.

needle ice *See* frazil ice.

needle nozzle [MECH ENG] A streamlined hydraulic turbine nozzle with a movable element for converting the pressure and kinetic energy in the pipe leading from the reservoir to the turbine into a smooth jet of variable diameter and discharge but practically constant velocity.

needle ore [MINERAL] **1.** Iron ore of very high metallic luster, found in small quantities, which may be separated into long, slender filaments resembling needles. **2.** *See* aikinite.

needlepoint lace [TEXT] A lace which is worked over a paper pattern in a buttonhole stitch and then released from the pattern by a knife passed between the paper and the fibers.

needle scratch *See* surface noise.

needle test point [ELEC] A sharp steel probe connected to a test cord for making contact with a conductor.

needle tubing [ENG] Stainless steel tubing with outside diameters from 0.014 to 0.203 inch (0.36 to 5.16 millimeters); used for surgical instruments and radon implanters.

needle valve [DES ENG] A slender, pointed rod fitting in a hole or circular or conoidal seat; used in hydraulic turbines and hydroelectric systems.

needle weir [CIV ENG] A type of frame weir in which the wooden barrier is constructed of vertical square-section timbers placed side by side against the iron frames.

needling [CIV ENG] Underpinning the upper part of a building with horizontally placed timber or steel beams.

need-to-know [ORD] A criterion used in security procedures in the United States that requires a person requesting classified information to establish the need to know such information in terms of the pertinent mission.

Néel ferromagnetism *See* ferrimagnetism.

Néel point *See* Néel temperature.

Néel's theory [SOLID STATE] A theory of the behavior of antiferromagnetic and other ferrimagnetic materials in which the crystal lattice is divided into two or more sublattices; each atom in one sublattice responds to the magnetic field generated by nearest neighbors in other sublattices, with the result that magnetic moments of all the atoms in any sublattice are parallel, but magnetic moments of two different sublattices can be different.

Néel temperature [SOLID STATE] A temperature, characteristic of certain metals, alloys, and salts, below which spontaneous nonparalleled magnetic ordering takes place so that they become antiferromagnetic, and above which they are paramagnetic. Also known as Néel point.

Néel wall [SOLID STATE] The boundary between two magnetic domains in a thin film in which the magnetization vector remains parallel to the faces of the film in passing through the wall.

neem oil [MATER] An aromatic oil from the seeds and fruit of the neem tree (*Melia azadirachta*); contains sulfur compounds; used as an anthelmintic and as an alcohol denaturant. Also known as margosa oil; nim oil.

neencephalon [ANAT] The neopallium and the phylogenetically new acquisitions of the cerebellum and thalamus collectively. Also spelled neoencephalon.

negation [MATH] The negation of a proposition P is a proposition which is true if and only if P is false; this is often written ~ P.

negative [ELEC] Having a negative charge. [GRAPHICS] The image on film in which the dark tones of the original appear transparent, and the light tones appear black and opaque. Also known as reversed image.

negative acceleration [MECH] Acceleration in a direction opposite to the velocity, or in the direction of the negative axis of a coordinate system.

negative afterimage [PHYSIO] An afterimage that is seen on a bright background and is complementary in color to the initial stimulus.

negative angle [MATH] The angle subtended by moving a ray in the clockwise direction.

negative area [GEOGR] An area that is almost uncultivable or uninhabitable. [GEOL] *See* negative element.

negative booster [ELEC] Booster used in connection with a ground-return system to reduce the difference of potential between two points on the grounded return.

negative catalysis [CHEM] A catalytic reaction such that the reaction is slowed down by the presence of the catalyst.

negative charge [ELEC] The type of charge which is possessed by electrons in ordinary matter, and which may be produced in a resin object by rubbing with wool. Also known as negative electricity.

negative crystal [CRYSTAL] A crystal containing a cavity, where the form of the cavity is one of the characteristic crystal forms of the mineral in question. [OPTICS] A uniaxial crystal in which the extraordinary wave travels faster than the ordinary wave, such as calcite.

negative easement [CIV ENG] An easement that can be exercised to prevent the owner of a piece of land from using his property in certain ways that he would otherwise be entitled to.

negative effective mass amplifiers and generators [ELECTR] Class of solid-state devices for broad-band amplification and generation of electrical waves in the microwave region; these devices use the property of the effective masses of charge carriers in semiconductors becoming negative with sufficiently high kinetic energies.

negative electricity *See* negative charge.

negative electrode *See* cathode; negative plate.

negative electron *See* electron.

negative electron affinity material [ELECTR] A material, such as gallium phosphide, whose surface has been treated with a substance, such as cesium, so that the surface barrier is reduced, band-bending occurs so that the top of the conduction band lies above the vacuum level, and the elctron affinity of the substance in negative. Abbreviated NEA material.

negative element [GEOL] A large structural feature or part of the earth's crust, characterized through a long geologic time period by frequent and conspicuous downward movement (subsidence) or by extensive erosion, or by an uplift that is considerably less rapid or less frequent than that of adjacent positive elements. Also known as negative area.

negative elongation [CRYSTAL] In a section of an anisotropic crystal, a sign of elongation that is parallel to the faster of the two plane-polarized rays.

negative empathy [PSYCH] Empathy which takes place against a certain resistance or unwillingness.

negative feedback [CONT SYS] Feedback in which a portion of the output of a circuit, device, or machine is fed back 180° out of phase with the input signal, resulting in a decrease of amplification so as to stabilize the amplification with respect to time or frequency, and a reduction in distortion and noise. Also known as inverse feedback; reverse feedback; stabilized feedback. [SCI TECH] Feedback which tends to reduce the output in a system.

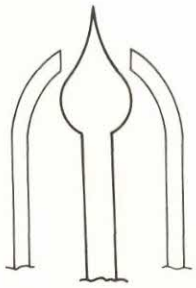
negative g [MECH] In designating the direction of acceleration on a body, the opposite of positive g; for example, the effect of flying an outside loop in the upright seated position.

negative glow [ELECTR] The luminous flow in a glow-discharge cold-cathode tube occurring between the cathode dark space and the Faraday dark space.

negative-grid generator [ELECTR] Conventional oscillator circuit in which oscillation is produced by feedback from the plate circuit to a grid which is normally negative with respect to the cathode, and which is designed to operate without drawing grid current at any time.

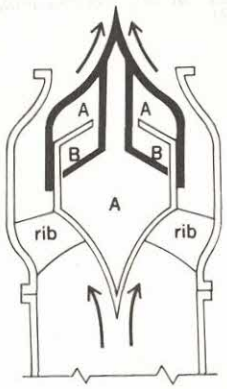
negative-grid thyratron [ELECTR] A thyratron with only

NEEDLE NOZZLE



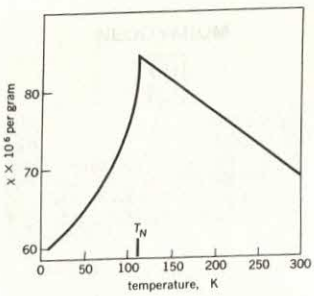
Needle nozzle, the movement of the needle (in the center) backward and forward changes the size of the jet.

NEEDLE VALVE



Large needle valve is actuated hydraulically by pressure in chambers A to close and in annular chambers B to open.

NEEL TEMPERATURE



Magnetic susceptibility of powdered manganese oxide. T_N is the Néel temperature. *(After H. Bizette, C. F. Squire, and B. Tsai, 1938)*

one grid, which serves to prevent the flow of current until its potential relative to the cathode is made less negative than a certain critical value.

negative impedance [ELECTR] An impedance such that when the current through it increases, the voltage drop across the impedance decreases.

negative-impedance repeater [ELECTR] A telephone repeater that provides an effective gain for voice-frequency signals by insertion into the line of a negative impedance that cancels out line impedances responsible for transmission losses.

negative indication [COMPUT SCI] A hole punched in a specified column and specified punch position on a punch card to indicate that a number represented in a particular field of the card has a negative sign.

negative integer [MATH] The additive inverse of a positive integer relative to the additive group structure of the integers.

negative interference [GEN] A crossover exchange between homologous chromosomes which increases the likelihood of another in the same vicinity.

negative ion [CHEM] An atom or group of atoms which by gain of one or more electrons has acquired a negative electric charge. [PHYS] An electron or negatively charged subatomic particle.

negative-ion vacancy [CRYSTAL] A point defect in an ionic crystal in which a negative ion is missing from its lattice site.

negative landform [GEOL] **1.** A relatively depressed or low-lying topographic form, such as a valley, basin, or plain. **2.** A volcanic feature formed by a lack of material (such as a caldera).

negative lens *See* diverging lens.

negative meniscus lens [OPTICS] A lens having one convex and one concave surface, with the radius of curvature of the convex surface greater than that of the concave surface. Also known as diverging meniscus lens.

NEGATIVE MENISCUS LENS

Shape of a negative meniscus lens. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

negative modulation [ELECTR] **1.** Modulation in which an increase in brightness corresponds to a decrease in amplitude-modulated transmitter power; used in United States television transmitters and in some facsimile systems. **2.** Modulation in which an increase in brightness corresponds to a decrease in the frequency of a frequency-modulated facsimile transmitter. Also known as negative transmission.

negative movement [GEOL] **1.** A downward movement of the earth's crust relative to an adjacent part of the crust, such as produced by subsidence. **2.** A relative lowering of the sea level with respect to the land, such as produced by a positive movement of the earth's crust or by a retreat of the sea.

negative nodal points [OPTICS] Two points on the axis of an optical system such that an incident ray passing through one results in an emergent ray passing through the other which makes an angle with the axis having the same magnitude but opposite sign. Also known as antinodal points.

negative phase [IMMUNOL] The temporary quantitative reduction of serum antibodies immediately following a second inoculation of antigen.

negative phase sequence [ELEC] The phase sequence that corresponds to the reverse of the normal order of phases in a polyphase system.

negative-phase-sequence relay [ELEC] Relay which functions in conformance with the negative-phase-sequence component of the current, voltage, or power of the circuit.

negative picture phase [ELECTR] The video signal phase in which the signal voltage swings in a negative direction for an increase in brilliance.

negative pion [PARTIC PHYS] A pion having a negative electric charge.

negative plate [ELEC] The internal plate structure that is connected to the negative terminal of a storage battery. Also known as negative electrode.

negative potential [ELEC] An electrostatic potential which is lower than that of the ground, or of some conductor or point in space that is arbitrarily assigned to have zero potential.

negative pressure [PHYS] A way of expressing vacuum; a pressure less than atmospheric or the standard 760 mmHg (101,325 newtons per square meter).

negative principal planes [OPTICS] Two planes perpendicular to the optical axis such that objects in one plane form images in the other with a lateral magnification of -1. Also known as antiprincipal planes.

negative principal point [OPTICS] The intersection of a negative principal plane with the optical axis. Also known as antiprincipal point.

negative rain [METEOROL] Rain which exhibits a net negative electric charge.

negative rake [MECH ENG] The orientation of a cutting tool whose cutting edge lags the surface of the tooth face.

negative resistance [ELECTR] The resistance of a negative-resistance device.

negative-resistance device [ELECTR] A device having a range of applied voltages within which an increase in this voltage produces a decrease in the current.

negative-resistance oscillator [ELECTR] An oscillator in which a parallel-tuned resonant circuit is connected to a vacuum tube so that the combination acts as the negative resistance needed for continuous oscillation.

negative resistance repeater [ELECTR] Repeater in which gain is provided by a series negative resistance or a shunt negative resistance, or both.

negative shoreline *See* shoreline of emergence.

negative skewness [MATH] Skewness in which the mean is smaller than the mode.

negative staining [BIOL] A method in microscopy for demonstrating the form of cells, bacteria, and other small objects by staining the ground rather than the objects.

negative temperature coefficient [PHYS] Condition wherein the resistance, length, or some other characteristic of a material decreases when temperature increases.

negative terminal [ELEC] The terminal of a battery or other voltage source that has more electrons than normal; electrons flow from the negative terminal through the external circuit to the positive terminal.

negative thermion *See* thermoelectron.

negative-transconductance oscillator [ELECTR] Electron-tube oscillator in which the output of the tube is coupled back to the input without phase shift, the phase condition for oscillation being satisfied by the negative transconductance of the tube.

negative transfer [PSYCH] The harmful effect that occurs on learning in one situation because previous learning, in another situation, required different responses, incompatible with the new learning situation.

negative transmission *See* negative modulation.

negativism [PSYCH] Indifference, opposition, or resistance to suggestions, or persistent refusal to do as asked, without apparent or objective reasons.

negatron *See* dynatron; electron.

negentropy *See* information content.

negotiated contract [IND ENG] A purchase or sales agreement made by a United States government agency without normally employing techniques required by formal advertising.

Negri bodies [PATH] Acidophil cytoplasmic inclusion bodies in neurons, considered diagnostic of rabies.

Neididae [INV ZOO] A small family of thread-legged hemipteran insects in the superfamily Lygaeoidea.

neighbor [CRYSTAL] One of a pair of atoms or ions in a crystal which are close enough to each other for their interaction to be of significance in the physical problem being studied.

neighborhood of a point [MATH] A set in a topological space which contains an open set which contains the point; in euclidean space, an example of a neighborhood of a point is an open (without boundary) ball centered at that point.

Neil's parabola [MATH] The graph of the equation $y = ax^{3/2}$, where a is a constant.

Neisseria [MICROBIO] A genus of bacteria in the family Neisseriaceae; aerobic or facultatively anaerobic cocci occurring singly or in pairs with flattened adjacent sides.

Neisseriaceae [MICROBIO] The single family of gram-negative aerobic cocci and coccobacilli; some species are human parasites and pathogens.

Neisseria flavescens [MICROBIO] A bacterial species marked by greenish-yellow chromogenesis and found within the respiratory tract and in the spinal fluid in certain cases of meningitis.

Neisseria gonorrhoeae [MICROBIO] The bacterial organism that causes gonorrhea; the type species of the genus. Also known as gonococcus.

Neisseria intracellularis *See* Neisseria meningitidis.

Neisseria meningitidis [MICROBIO] The bacterial species that causes epidemic cerebrospinal meningitis. Also known as *Micrococcus meningitidis; Neisseria intracellularis.*

nektobenthos [ECOL] Those forms of marine life that exist just above the ocean bottom and occasionally rest on it.

nekton [INV ZOO] Free-swimming aquatic animals, essentially independent of water movements.

N electron [ATOM PHYS] An electron in the fourth (N) shell of electrons surrounding the atomic nucleus, having the principal quantum number 4.

NELIAC [COMPUT SCI] An early dialect of ALGOL, which was developed for a specific data-processing application but, unlike ALGOL, is not primarily concerned with being used for complex scientific and engineering calculations. Derived from Navy Electronics Laboratory International Algol Compilers.

Nelson diaphragm cell [CHEM ENG] Obsolete carbon-electrode type of electrolytic diaphragm cell once widely used to produce chlorine and caustic soda from brine.

nelsonite [PETR] A group of hypabyssal rocks composed mainly of ilmenite and apatite.

Nelumbonaceae [BOT] A family of flowering aquatic herbs in the order Nymphaeales characterized by having roots, perfect flowers, alternate leaves, and triaperturate pollen.

nemalite [MINERAL] A fibrous brucite that contains ferrous oxide.

Nemata [INV ZOO] A proposed equivalent name for Nematoda.

Nemataceae [BOT] A family of mosses in the order Hookeriales distinguished by having perichaetial leaves only.

nematath [GEOL] A submarine ridge across an Atlantic-type ocean basin which is not an orogenic structure, but which is composed of otherwise undeformed continental crust that has been stretched across a sphenochasm or rhombochasm.

Nemathelminthes [INV ZOO] A subdivision of the Amera which comprised the classes Rotatoria, Gastrotrichia, Kinorhyncha, Nematoda, Nematomorpha, and Acanthocephala.

nematicide [MATER] A chemical used to kill plant-parasitic nematodes. Also spelled nematocide.

nematic phase [PHYS CHEM] A phase of a liquid crystal in the mesomorphic state, in which the liquid has a single optical axis in the direction of the applied magnetic field, appears to be turbid and to have mobile threadlike structures, can flow readily, has low viscosity, and lacks a diffraction pattern.

nematoblastic [PETR] Pertaining to a metamorphic rock with a homeoblastic texture due to development during recrystallization of slender prismatic crystals.

Nematocera [INV ZOO] A series of dipteran insects in the suborder Orthorrhapha; adults have antennae that are usually longer than the head, and the flagellum consists of 10–65 similar segments.

nematocide *See* nematicide.

nematocyst [INV ZOO] An intracellular effector organelle in the form of a coiled tube which may be rapidly everted in food gathering or defense by coelenterates.

Nematoda [INV ZOO] A group of unsegmented worms which have been variously recognized as an order, class, and phylum.

nematode [INV ZOO] **1.** Any member of the Nematoda. **2.** Of or pertaining to the Nematoda.

Nematodonteae [BOT] A group of mosses included in the subclass Eubrya in which there may be faint transverse bars on the peristome teeth.

nematogen [INV ZOO] A reproductive phase of the Dicyemida during which vermiform larvae are formed asexually from the germ cells in the axial cells.

nematogenic solid [PHYS CHEM] A solid which will form a nematic liquid crystal when heated.

Nematognathi [VERT ZOO] The equivalent name for Siluriformes.

Nematoidea [INV ZOO] An equivalent name for Nematoda.

nematology [INV ZOO] The study of nematodes.

Nematomorpha [INV ZOO] A group of the Aschelminthes or a separate phylum that includes the horsehair worms.

Nematophytales [PALEOBOT] A group of fossil plants from the Silurian and Devonian periods that bear some resemblance to the brown seaweeds (Phaeophyta).

Nematosporoideae [BOT] A subfamily of the Saccharomycetaceae containing parasitic yeasts; two genera have been studied in culture: *Nematospora* with asci that contain eight spindle-shaped ascospores, and *Metschnikowia* whose asci contain one or two needle-shaped ascospores.

nematozooid [INV ZOO] A zooid bearing organs of defense, in hydroids and siphonophores.

Nemedri [NAV] A British publication containing danger areas, routes, and instructions for Northwest European waters, the Baltic Sea, the Mediterranean Sea, and the Black Sea; a United States reprint is available to American shipping. Derived from North European and Mediterranean Routing Instructions.

nemere [METEOROL] In Hungary, a stormy, cold fall wind.

Nemertea [INV ZOO] An equivalent name for Rhynchocoela.

Nemertina [INV ZOO] An equivalent name for Rhynchocoela.

Nemertinea [INV ZOO] An equivalent name for Rhynchocoela.

Nemestrinidae [INV ZOO] The hairy flies, a family of dipteran insects in the series Brachycera of the suborder Orthorrhapha.

Nemichthyidae [VERT ZOO] A family of bathypelagic, eellike amphibians in the order Apoda.

Nemognathinae [INV ZOO] A subfamily of the coleopteran family Meloidae; members have greatly elongate maxillae that form a poorly fitted tube.

nemoral [ECOL] Pertaining to or inhabiting a grove or wooded area.

neo-, ne- [ORG CHEM] Prefix indicating hydrocarbons where a carbon is bonded directly to at least four other carbon atoms, such as neopentane. [SCI TECH] Prefix meaning new, or different in form; indicating a compound related to an older one, or a precursor.

Neoanthropinae [PALEON] A subfamily of the Hominidae in some systems of classification, set up to include *Homo sapiens* and direct ancestors of *H. sapiens*.

neoarsphenamine [PHARM] $NH_2OHC_6H_3As{:}AsC_6H_3O{-}HNH(CH_2O)SONa$ A yellow powder, soluble in water; used in the treatment of syphilis.

neoautochthon [GEOL] A stable basement or autochthon formed where a nappe has ceased movement and has become defunct.

neoblast [INV ZOO] Any of various undifferentiated cells in annelids which migrate to and proliferate at sites of repair and regeneration.

Neocathartidae [PALEON] An extinct family of vulturelike diurnal birds of prey (Falconiformes) from the Upper Eocene.

neocerebellum [ANAT] Phylogenetically, the most recent part of the cerebellum; receives cerebral cortex impulses via the corticopontocerebellar tract.

Neocomian [GEOL] A European stage of Lower Cretaceous geologic time; includes Berriasian, Valanginian, Hauterivian, and Barremian.

neocortex [ANAT] Phylogenetically the most recent part of the cerebral cortex; includes all but the olfactory, hippocampal, and piriform regions of the cortex.

neocryst [GEOL] An individual crystal of a secondary mineral in an evaporite.

neodymium [CHEM] A metallic element, symbol Nd, with atomic weight 144.24, atomic number 60; a member of the rare-earth group of elements.

neodymium chloride [INORG CHEM] $NdCl_3 \cdot xH_2O$ Water- and acid-soluble, pink lumps; used to prepare metallic neodymium.

neodymium glass [MATER] A glass containing small amounts of neodymium oxide; used for color television filter plates since it transmits 90% of the blue, green, and red light rays and no more than 10% of the yellow.

neodymium glass laser [OPTICS] An amorphous solid laser in which glass is doped with neodymium; characteristics are comparable with those of a pulsed ruby laser, but the wavelength of radiation is outside the visible range.

neodymium liquid laser *See* inorganic liquid laser.

neodymium oxide [INORG CHEM] Nd_2O_3 A hygroscopic, blue-gray powder; insoluble in water, soluble in acids; used to color glass and in ceramic capacitors.

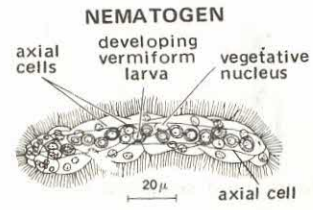
neoencephalon *See* neencephalon.

neoformation *See* neogenesis.

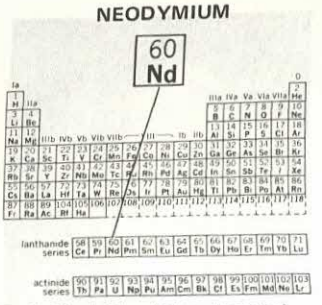
Neogastropoda [INV ZOO] An order of gastropods which contains the most highly developed snails; respiration is by means of ctenidia, the nervous system is concentrated, an operculum is present, and the sexes are separate.

Neogene [GEOL] An interval of geologic time incorporating the Miocene and Pliocene of the Tertiary period; the Upper Tertiary.

neogenesis [GEOL] The formation of new minerals, as by diagenesis or metamorphism. Also known as neoformation.

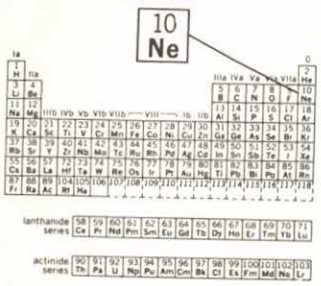


Young stem nematogen, with three axial cells, of *Dicyema schulzianum*. *(After H. Nouvel)*



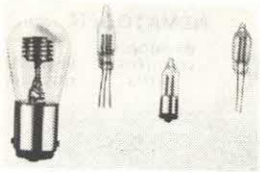
Periodic table of the chemical elements showing the position of neodymium.

NEON



Periodic table of the chemical elements showing the position of neon.

NEON GLOW LAMP



Examples of neon glow lamps.

neoglaciation [GEOL] The removal of glacier ice growth in certain mountain areas during the Little Ice Age, following its shrinkage or disappearance during the Altithermal interval.

Neognathae [VERT ZOO] A superorder of the avian order Neornithes, characterized as flying birds with fully developed wings and sternum with a keel, fused caudal vertebrae, and absence of teeth.

Neogregarinida [INV ZOO] An order of sporozoan protozoans in the subclass Gregarinia which are insect parasites.

neohexane [ORG CHEM] C_6H_{14} Volatile, flammable, colorless liquid boiling at 50°C; used as high-octane component of motor and aviation gasolines.

neohexane alkylation [CHEM ENG] A noncatalytic petroleum-refinery alkylation process that forms neohexane from a feed of ethylene and isobutane.

neomagma [GEOL] Magma formed by partial or complete refusion of preexisting rocks under the conditions of plutonic metamorphism.

neomineralization [GEOCHEM] Chemical interchange within a rock whereby its mineral constituents are converted into entirely new mineral species.

neomycin [MICROBIO] The collective name for several colorless antibiotics produced by a strain of *Streptomyces fradiae;* the commercial fraction ($C_{23}H_{46}N_6O_{13}$) has a broad spectrum of activity.

neon [CHEM] A gaseous element, symbol Ne, atomic number 10, atomic weight 20.183; a member of the family of noble gases in the zero group of the periodic table.

neonatal [MED] Pertaining to a newborn infant.

neonatal impetigo [MED] A type of impetigo occurring in the newborn, characterized by bullae and caused by staphylococci or sometimes streptococci.

neonatal line [ANAT] A prominent incremental line formed in the neonatal period in the enamel and dentin of a deciduous tooth or of a first permanent molar.

neonatal mortality rate [MED] The number of deaths reported among infants under 1 month of age in a calendar year per 1000 live births reported in the same year and place.

neonatal myasthenia [MED] Muscle weakness and ineffective motor activities in infants born of myasthenic mothers.

neonate [MED] A newborn infant.

neonatology [MED] The study of the newborn up to 2 months of age.

neon glow lamp [ELECTR] A glow lamp containing neon gas, usually rated between 1/25 and 3 watts, and producing a characteristic red glow; used as an indicator light and electronic circuit component.

neon-helium laser [OPTICS] A continuous-wave gas laser using a combination of neon and helium gases to obtain a 6328-angstrom (632.8 nanometer) visible red beam.

neonicotine *See* anabasine.

neon oscillator [ELECTR] Relaxation oscillator in which a neon tube or lamp serves as the switching element.

neon tube [ELECTR] An electron tube in which neon gas is ionized by the flow of electric current through long lengths of gas tubing, to produce a luminous red glow discharge; used chiefly in outdoor advertising signs.

neopallium [ANAT] Phylogenetically, the new part of the cerebral cortex; formed from the region between the pyriform lobe and the hippocampus, it comprises the nonolfactory region.

neopalynology [BOT] A field of palynology concerned with extant microorganisms and disassociated microscopic parts of megaorganisms.

neopentane [ORG CHEM] C_5H_{12} Colorless liquid boiling at 10°C; soluble in alcohol, insoluble in water; a hydrocarbon found as a minor component of natural gasoline. Also known as 2,2-dimethylpropane.

neophane glass [MATER] A glass containing neodymium oxide to reduce glare; used for yellow sunglasses or for windshield glass.

neoplasia [MED] **1.** Formation of a neoplasm or tumor. **2.** Formation of new tissue.

neoplasm [MED] An aberrant new growth of abnormal cells or tissues; a tumor.

neoprene [MATER] A synthetic rubber with outstanding resistance to ozone, weathering, various chemicals, oil, and flame, made by polymerization of chloroprene (2-chlorobutadiene-1,3); varies from amber to silver to cream in color; used in paints, putties, adhesives, shoe soles, tank linings, and rubber products.

Neopseustidae [INV ZOO] A family of Lepidoptera in the superfamily Eriocranioidea.

Neoptera [INV ZOO] A section of the insect subclass Pterygota; members have a muscular and articular mechanism allowing the wings to be flexed over the abdomen when at rest.

Neopterygii [VERT ZOO] An equivalent name for Actinopterygii.

Neorhabdocoela [INV ZOO] A group of the Rhabdocoela comprising fresh-water, marine, or terrestrial forms, with a bulbous pharynx, paired protonephridia, sexual reproduction, and ventral gonopores.

Neorickettsia [MICROBIO] A genus of the tribe Ehrlichieae; coccoid or pleomorphic cells; intracellular parasites in cytoplasm of reticular cells of lymphoid tissue of the Canidae.

Neornithes [VERT ZOO] A subclass of the class Aves containing all known birds except the fossil *Archaeopteryx.*

neosilicate [MINERAL] A structural type of silicate mineral characterized by linkage of isolated SiO_4 tetrahedra by ionic bonding only; an example is olivine.

neosome [GEOL] A geometric element of a composite rock or mineral deposit, appearing to be younger than the main rock mass.

neossoptile [VERT ZOO] A downy feather on most newly hatched birds.

neostigmine [PHARM] A quaternary ammonium cation that is used as the bromide ($C_{12}H_{19}BrN_2O_2$) and methylsulfate ($C_{13}H_{22}N_2O_6S$) salts; has anticholinesterase activity.

neostratotype [GEOL] A stratotype established after the holostratotype has been destroyed or is otherwise not usable.

neotectonic map [GEOL] A map depicting neotectonic structures.

neotectonics [GEOL] The study of the most recent structures and structural history of the earth's crust, after the Miocene.

neotenin [BIOCHEM] A hormone secreted by cells of the corpus allatum in arthropod larvae and nymphs; inhibits the development of adult characters. Also known as juvenile hormone.

neoteny [VERT ZOO] A phenomenon peculiar to some salamanders, in which large larvae become sexually mature while still retaining gills and other larval features.

Neotropical zoogeographic region [ECOL] A zoogeographic region that includes Mexico south of the Mexican Plateau, the West Indies, Central America, and South America.

neotype [SYST] A specimen selected as type subsequent to the original description when the primary types are known to be destroyed; a nomenclatural type.

neounitarian theory of hematopoiesis [HISTOL] A theory that under certain conditions, such as in tissue culture or in pathologic states, lymphocytes or cells resembling lymphocytes can become multipotent.

neovolcanic [PETR] Referring to extrusive rocks that are of Tertiary or younger age.

nep [TEXT] Any small entanglement of textile fibers that cannot be unraveled; formed during carding or ginning.

Nepenthaceae [BOT] A family of dicotyledonous plants in the order Sarraceniales; includes many of the pitcher plants.

neper [PHYS] Abbreviated Np. Also known as napier. **1.** A unit used for expressing the ratio of two currents, voltages, or analogous quantities; the number of nepers is the natural logarithm of this ratio. **2.** A unit used for expressing the ratio of two powers (even when this ratio is not the square of the corresponding current or voltage ratio); the number of nepers is the natural logarithm of the square root of this ratio; to avoid confusion, this usage should be accompanied by a specific statement.

nephanalysis [METEOROL] The analysis of a synoptic chart in terms of the types and amount of clouds and precipitation; cloud systems are identified both as entities and in relation to the pressure pattern, fronts, and other aspects.

nephcurve [METEOROL] In nephanalysis, a line bounding a significant portion of a cloud system, for example, a clear-sky line, precipitation line, cloud-type line, or ceiling-height line.

nepheline [MINERAL] $(Na,K)AlSiO_4$ A mineral of the feldspathoid group crystallizing in the hexagonal system and occurring as glassy or coarse crystals or colorless grains or green to brown masses of greasy luster in alkalic igneous rocks;

hardness is 5.5–6 on Mohs scale. Also known as eleolite; nephelite.

nepheline basalt *See* olivine nephelinite.

nepheline monzonite [PETR] A nepheline syenite in which sodic plagioclase exceeds the quantity of alkali feldspar.

nepheline phonolite [PETR] The fine-grained equivalent of nepheline syenite.

nepheline syenite [PETR] A phaneritic plutonic rock with granular texture, composed largely of alkali feldspar, nepheline, and dark-colored materials.

nephelinite [PETR] A dark-colored, aphanitic rock of volcanic origin, composed essentially of nepheline and pyroxene; texture is usually porphyritic with large crystals of augite and nepheline in a very-fine-grained matrix.

nephelite *See* nepheline.

nepheloid zone [OCEANOGR] A layer of water near the bottom of the continental rise and slope of the North Atlantic Ocean that contains suspended sediment of the clay fraction and organic matter.

nephelometer [OPTICS] A type of instrument that measures, at more than one angle, the scattering function of particles suspended in a medium; information obtained may be used to determine the size of the suspended particles and the visual range through the medium.

nephelometry [OPTICS] **1.** The study of suspensoids using the techniques of light scattering. **2.** The study of the scattering properties of small samples of air and its suspensoids.

nepheloscope [ENG] An instrument for the production of clouds in the laboratory by condensation or expansion of moist air.

nephology [METEOROL] The study of clouds.

nephometer [ENG] A general term for instruments designed to measure the amount of cloudiness; an early type consists of a convex hemispherical mirror mapped into six parts; the amount of cloud coverage on the mirror is noted by the observer.

nephoscope [ENG] An instrument for determining the direction of cloud motion.

nephr-, nephro- [ANAT] Combining form denoting kidney.

nephrectomy [MED] Surgical removal of a kidney.

nephric tubule *See* uriniferous tubule.

nephridioblast [INV ZOO] An ecodermal precursor cell of a nephridium in certain animals.

nephridioduct [INV ZOO] The duct of a nephridium, sometimes serving as a common excretory and genital outlet.

nephridiopore [INV ZOO] The external opening of a nephridium.

nephridium [INV ZOO] Any of various paired excretory structures present in the Platyhelminthes, Rotifera, Rhynchocoela, Acanthocephala, Priapuloidea, Entoprocta, Gastrotricha, Kinorhyncha, Cephalochorda, and some Archiannelida and Polychaeta.

nephrite [MINERAL] An exceptionally tough, compact, fine-grained, greenish or bluish amphibole constituting the less valuable type of jade; formerly worn as a remedy for kidney diseases. Also known as greenstone; kidney stone.

nephritic [MED] **1.** Pertaining to or affected with nephritis. **2.** Pertaining to or affecting the kidney.

nephritis [MED] Inflammation of the kidney.

nephroabdominal [ANAT] Of or pertaining to the kidneys and abdomen.

nephroblastoma *See* Wilms' tumor.

nephrocalcinosis [PATH] Deposition of calcium salts in the kidney tubules.

nephrocoel [ANAT] The cavity of a nephrotome.

nephrodystrophy *See* nephrosis.

nephrogenic [EMBRYO] **1.** Having the potential to develop into kidney tissue. **2.** Of renal origin.

nephrogenic cord [EMBRYO] The longitudinal cordlike mass of mesenchyme derived from the mesomere or nephrostomal plate of the mesoderm, from which develop the functional parts of the pronephros, mesonephros, and metanephros.

nephrogenic tissue [EMBRYO] The tissue of the nephrogenic cord derived from the nephrotome plate that forms the blastema or primordium from which the embryonic and definitive kidneys develop.

nephrolithiasis [PATH] Formation of renal calculi.

nephrolithotomy [MED] Excision of renal calculi from the kidney.

nephrology [MED] The study of the kidney, including diseases.

nephrolysin [BIOCHEM] A toxic substance capable of disintegrating kidney cells.

nephrolysis [MED] **1.** Dissolution of kidney tissue by the action of a nephrolysin. **2.** Surgical detachment of a kidney from surrounding adhesions.

nephroma [MED] A tumor of the kidney.

nephromegaly [MED] Enlargement of the kidney.

nephromixium [INV ZOO] A compound nephridium composed of flame cells and the coelomic funnel; functions as both an excretory organ and a genital duct.

nephron [ANAT] The functional unit of a kidney, consisting of the glomerulus with its capsule and attached uriniferous tubule.

nephropathy [MED] **1.** Any disease of the kidney. **2.** *See* nephrosis.

nephropexy [MED] Fixation of a floating kidney by means of surgery.

Nephropidae [INV ZOO] The true lobsters, a family of decapod crustaceans in the superfamily Nephropidea.

Nephropidea [INV ZOO] A superfamily of the decapod section Macrura including the true lobsters and crayfishes, characterized by a rostrum and by chelae on the first three pairs of pereiopods, with the first pair being noticeably larger.

nephroptosis [MED] Prolapse of the kidney.

nephrorrhaphy [MED] **1.** The stitching of a floating kidney to the posterior wall of the abdomen or to the loin. **2.** Suturing a wound in the kidney.

nephros [ANAT] The kidney.

nephrosclerosis [MED] Sclerosis of the renal arteries and arterioles.

nephrosis [PATH] Degenerative or retrogressive renal lesions, distinct from inflammation (nephritis) or vascular involvement (nephrosclerosis), especially as applied to tubular lesions (tubular nephritis). Also known as nephrodystrophy; nephropathy.

nephrostome [INV ZOO] The funnel-shaped opening of a nephridium into the coelom.

nephrotic [MED] Pertaining to or affected by nephroses.

nephrotic edema [MED] A type of edema occurring in persons with chronic lepoid nephrosis or the nephrotic stage of glomerular nephritis.

nephrotic syndrome [MED] A complex of symptoms, including proteinuria, hyperalbuminemia, and hyperlipemia, resulting from damage to the basement membrane of glomeruli.

nephrotome [EMBRYO] The narrow mass of embryonic mesoderm connecting somites and lateral mesoderm, from which the pronephros, mesonephros, metanephros, and their ducts develop.

nephrotomy [MED] Incision of the kidney.

nephsystem *See* cloud system.

Nephtyidae [INV ZOO] A family of errantian annelids of highly opalescent colors, distinguished by an eversible pharynx.

Nepidae [INV ZOO] The water scorpions, a family of hemipteran insects in the superfamily Nepoidea, characterized by a long breathing tube at the tip of the abdomen, chelate front legs, and a short stout beak.

nepit *See* nit.

Nepoidea [INV ZOO] A superfamily of hemipteran insects in the subdivision Hydrocorisae.

Nepticulidae [INV ZOO] The single family of the lepidopteran superfamily Nepticuloidea.

Nepticuloidea [INV ZOO] A monofamilial superfamily of heteroneuran Lepidoptera; members are tiny moths with wing spines, and the females have a single genital opening.

Neptune [ASTRON] The outermost of the four giant planets, and the next to last planet, from the sun; it is 30 astronomical units from the sun, and the sidereal revolution period is 164.8 years.

neptune powder [MATER] An explosive consisting of nitroglycerin with a more or less explosive dope.

neptunian dike [GEOL] A sedimentary dike formed by infilling of sediment, generally sand, in an undersea fissure or hollow.

neptunianism *See* neptunism.

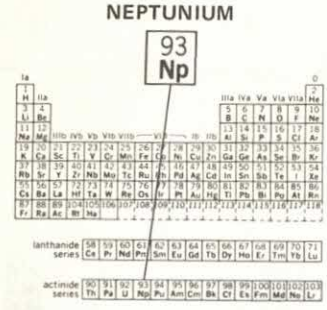
neptunian theory *See* neptunism.

neptunic rock [GEOL] **1.** A rock that is formed in the sea. **2.** *See* sedimentary rock.

neptunism [GEOL] The obsolete theory that all rocks of the

NEPTUNE

Telescopic appearance of Neptune.



Periodic table of the chemical elements showing the position of neptunium.

earth's crust were deposited from or crystallized out of water. Also known as neptunianism; neptunian theory.

neptunite [MINERAL] $(Na,K)_2(Fe,Mn)TiSi_4O_{12}$ Black mineral composed of silicate of sodium, potassium, iron, manganese, and titanium.

neptunium [CHEM] A chemical element, symbol Np, atomic number 93, atomic weight 237.0482; a member of the actinide series of elements.

neptunium decay series [CHEM] Little-known radioactive elements with short lives; produced as successive series of decreasing atomic weight when uranium-237 and plutonium-241 decay radioactively through neptunium-237 to bismuth-209.

nepuite *See* garnierite.

Nereid [ASTRON] One of the two satellites of the planet Neptune; it is the smaller, with a diameter of about 322 kilometers.

Nereidae [INV ZOO] A large family of mostly marine errantian annelids that have a well-defined head, elongated body with many segments, and large complex parapodia on most segments.

Nerillidae [INV ZOO] A family of archiannelids characterized by well-developed parapodia and setae.

Neritacea [INV ZOO] A superfamily of gastropod mollusks in the order Aspidobranchia.

neritic [OCEANOGR] Of or pertaining to the region of shallow water adjoining the seacoast and extending from low-tide mark to a depth of about 200 meters.

Neritidae [INV ZOO] A family of primitive marine, freshwater, and terrestrial snails in the order Archaeogastropoda.

Nernst approximation formula [THERMO] An equation for the equilibrium constant of a gas reaction based on the Nernst heat theorem and certain simplifying assumptions.

Nernst bridge [ELEC] A four-arm bridge containing capacitors instead of resistors, used for measuring capacitance values at high frequencies.

Nernst effect *See* Ettingshausen-Nernst effect.

Nernst equation [PHYS CHEM] The relationship showing that the electromotive force developed by a dry cell is determined by the activities of the reacting species, the temperature of the reaction, and the standard free-energy change of the overall reaction.

Nernst glower *See* Nernst lamp.

Nernst heat theorem [THERMO] The theorem expressing that the rate of change of free energy of a homogeneous system with temperature, and also the rate of change of enthalpy with temperature, approaches zero as the temperature approaches absolute zero.

Nernst lamp [ELEC] An electric lamp consisting of a short, slender rod of zirconium oxide in open air, heated to brilliant white incandescence by current. Also known as Nernst glower.

Nernst-Lindemann calorimeter [ENG] A calorimeter for measuring specific heats at low temperatures, in which the heat reservoir consists of a metal of high thermal conductivity such as copper, to promote rapid temperature equalization; none of the material under study is more than a few millimeters from a metal surface, and the whole apparatus is placed in an evacuated vessel and heated by current through a platinum heating coil.

Nernst-Simon statement of the third law of thermodynamics [THERMO] The statement that the change in entropy which occurs when a homogeneous system undergoes an isothermal reversible process approaches zero as the temperature approaches absolute zero.

Nernst-Thomson rule [PHYS CHEM] The rule that in a solvent having a high dielectric constant the attraction between anions and cations is small so that dissociation is favored, while the reverse is true in solvents with a low dielectric constant.

Nernst zero of potential [PHYS CHEM] An electrode potential corresponding to the reversible equilibrium between hydrogen gas at a pressure of 1 standard atmosphere and hydrogen ions at unit activity.

nerol [ORG CHEM] $C_{10}H_{17}OH$ Colorless liquid with rose-neroli odor; derived from geraniol (a trans isomer); used in perfumery.

nerolidol [ORG CHEM] $C_{15}H_{26}O$ A straw-colored sesquiterpene alcohol; liquid with rose and apple aroma derived from cabreuva oil, oils of orange flower, and ylang ylang; soluble in alcohol; used in perfumery.

neroli oil *See* oil of orange blossoms.

nerve [ANAT] A bundle of nerve fibers or processes held together by connective tissue.

nerve block [PHYSIO] Interruption of impulse transmission through a nerve.

nerve cell *See* neuron.

nerve cord [INV ZOO] Paired, ventral cords of nervous tissue in certain invertebrates, such as insects or the earthworm. [ZOO] Dorsal, hollow tubular cord of nervous tissue in chordates.

nerve deafness [MED] Deafness due to an abnormality of the sense organs or of the nerves involved in hearing.

nerve ending [ANAT] **1.** The structure on the distal end of an axon. **2.** The termination of a nerve.

nerve fiber [CYTOL] The long process of a neuron, usually the axon.

nerve gas [MATER] Chemical agent which is absorbed into the body by breathing, by ingestion, or through the skin, and affects the nervous and respiratory systems and various body functions; an example is isopropylphosphonofluoridate.

nerve impulse [PHYSIO] The transient physicochemical change in the membrane of a nerve fiber which sweeps rapidly along the fiber to its termination, where it causes excitation of other nerves, muscle, or gland cells, depending on the connections and functions of the nerve.

nerve net [INV ZOO] A network of continuous nerve cells characterized by diffuse spread of excitation, local and equipotential autonomy, spatial attenuation of conduction, and facilitation; occurs in coelenterates and certain other invertebrates.

nerve tracing [MED] A method used by chiropractors by which nerves are located and their pathologies are studied.

nerve tract [ANAT] A bundle of nerve fibers having the same general origin and destination.

nervous [BIOL] **1.** Of or pertaining to nerves. **2.** Originating in or affected by nerves. **3.** Affecting or involving nerves. [PSYCH] A state or condition of nervousness.

nervousness [PSYCH] Hyperexcitability of the nervous system; characterized generally by restless or impulsive behavior, shaken mental poise, and an uncomfortable awareness of self.

nervous system [ANAT] A coordinating and integrating system which functions in the adaptation of an organism to its environment; in vertebrates, the system consists of the brain, brainstem, spinal cord, cranial and peripheral nerves, and ganglia.

nervous tissue [HISTOL] The nerve cells and neuroglia of the nervous system.

Nesiotinidae [INV ZOO] A family of bird-infesting biting lice (Mallophaga) that are restricted to penguins.

nesistor [ELECTR] A negative-resistance semiconductor device that is basically a bipolar field-effect transistor.

Nesophontidae [PALEON] An extinct family of large, shrewlike lipotyphlans from the Cenozoic found in the West Indies.

nesosilicate [MINERAL] A mineral (such as olivine) composed of independent silicon-oxygen tetrahedra bonded by ionic bonds, without sharing of oxygens.

nesquehonite [MINERAL] $MgCo_3 \cdot 3H_2O$ A colorless to white, orthorhombic mineral consisting of hydrated magnesium carbonate.

Nessler's reagent [ANALY CHEM] Mercuric iodide-potassium iodide solution, used to analyze for small amounts of ammonia.

Nessler tubes [ANALY CHEM] Standardized glass tubes for filling with standard solution colors for visual color comparison with similar tubes filled with solution samples.

nest [COMPUT SCI] To include data or subroutines in other items of a similar nature with a higher hierarchical level so that it is possible to access or execute various levels of data or routines recursively. [GEOL] A concentration of some relatively conspicuous element of a geologic feature, such as pebbles or inclusions, within a sand layer or igneous rock. [VERT ZOO] A bed, receptacle, or location in which the eggs of animals are laid and hatched.

nested [GEOL] **1.** Property of volcanic cones, craters, or calderas that occur one within another. **2.** Property of two or more calderas that intersect, having been formed at different times or by different explosions.

nested sets [MATH] A family of sets where, given any two of its sets, one is contained in the other.

nesting [COMPUT SCI] **1.** Inclusion of a routine wholly within another routine. **2.** Inclusion of a DO statement within a DO statement in FORTRAN.

nesting storage *See* push-down storage.

Nestor [ASTRON] One of a group of asteroids whose period of revolution is approximately equal to that of Jupiter, or about 12 years (it is one of the Trojan planets).

net [COMMUN] A number of communication stations equipped for communicating with each other, often on a definite time schedule and in a definite sequence. [ENG] **1.** Threads or cords tied together at regular intervals to form a mesh. **2.** A series of surveying or leveling stations that have been interconnected in such a manner that closed loops or circuits have been formed, or that are arranged so as to provide a check on the consistency of the measured values. Also known as network. [GEOL] **1.** In structural petrology, coordinate network of meridians and parallels, projected from a sphere at intervals of 2°; used to plot points whose spherical coordinates are known and to study the distribution and orientation of planes and points. Also known as projection net; stereographic net. **2.** A form of horizontal patterned ground whose mesh is intermediate between a circle and a polygon. [MATH] A set whose members are indexed by elements from a directed set; this is a generalization of a sequence. [TEXT] Any fabric made in open hexagonal mesh.

Net *See* Reticulum.

net aerial production [ECOL] The biomass or biocontent which is incorporated into the aerial parts, that is, the leaf, stem, seed, and associated organs, of a plant community.

net balance [HYD] The change in mass of a glacier from the time of minimum mass in one year to the time of minimum mass in the succeeding year. Also known as net budget.

net blotch [PL PATH] A fungus disease of barley caused by *Helminthosporium teres* and marked by spotting of the foliage.

net budget *See* net balance.

net call sign [COMMUN] A call sign that represents all stations within a net.

net control station [COMMUN] Communications station having the responsibility of clearing traffic and exercising circuit discipline within a net.

NETD *See* noise equivalent temperature difference.

net floor area [BUILD] Gross floor area of a building, excluding the area occupied by walls and partitions, the circulation area (where people walk), and the mechanical area (where there is mechanical equipment).

net flow area [DES ENG] The calculated net area which determines the flow after the complete bursting of a rupture disk.

net head [FL MECH] The difference in elevation between the last free water surface in a power conduit above the waterwheel and the first free water surface in the conduit below the waterwheel, less the friction losses in the conduit.

net heating value *See* low heat value.

net loss [COMMUN] The ratio of the power at the input of a transmission system to the power at the output; expressed in nepers, it is one-half the natural logarithm of this ratio, and in decibels it is 10 times the common logarithm of the ratio.

net plankton [ECOL] Plankton that can be removed from sea water by the process of filtration through a fine net.

net positive suction head [MECH ENG] The minimum suction head required for a pump to operate; depends on liquid characteristics, total liquid head, pump speed and capacity, and impeller design. Abbreviated NPSH.

net power flow [ELECTROMAG] The difference between the power carried by electromagnetic waves traveling in a given direction along a waveguide and the power carried by waves traveling in the opposite direction.

net primary production [ECOL] Over a specified period of time, the biomass or biocontent which is incorporated into a plant community.

net production rate [ECOL] The assimilation rate (gross production rate) minus the amount of matter lost through predation, respiration, and decomposition.

net slip [GEOL] On a fault, the distance between two formerly adjacent points on either side of the fault; defines direction and relative amount of displacement. Also known as total slip.

net thrust [AERO ENG] The gross thrust of a jet engine minus the drag due to the momentum of the incoming air.

nettle [BOT] A prickly or stinging plant of the family Urticaceae, especially in the genus *Urtica*.

nettle cell *See* cnidoblast.

net ton *See* ton.

net tonnage [NAV ARCH] The volume of the interior of a ship measured in tons (100 cubic feet or approximately 2.8317 cubic meters per ton), excluding the space occupied by fuel, the engine room, navigation machinery, and the crew's quarters.

net-veined [BIOL] Having a network of veins, as a leaf or an insect wing.

network [COMMUN] A number of radio or television broadcast stations connected by coaxial cable, radio, or wire lines, so all stations can broadcast the same program simultaneously. [ELEC] A collection of electric elements, such as resistors, coils, capacitors, and sources of energy, connected together to form several interrelated circuits. Also known as electric network. [ENG] *See* net. [MATH] The name given to a graph in applications in management and the engineering sciences; to each segment linking points in the graph, there is usually associated a direction and a capacity on the flow of some quantity.

network admittance [ELEC] The admittance between two terminals of a network under specified conditions.

network analysis [ELEC] Derivation of the electrical properties of a network, from its configuration, element values, and driving forces.

network analyzer [COMPUT SCI] An analog computer in which networks are used to simulate power line systems or physical systems and obtain solutions to various problems before the systems are actually built.

network architecture [COMMUN] The design of a communications system, including the choice of hardware, software, and protocols.

network constant [ELEC] One of the resistance, inductance, mutual inductance, or capacitance values involved in a circuit or network; if these values are constant, the network is said to be linear.

network filter [ELEC] A combination of electrical elements (for example, interconnected resistors, coils, and capacitors) that represents relatively small attenuation to signals of a certain frequency, and great attenuation to all other frequencies.

network flow [ELEC] Flow of current in a network.

network input impedance [ELEC] The impedance between the input terminals of a network under specified conditions.

network master relay [ELEC] Relay that performs the chief functions of closing and tripping an alternating-current low-voltage network protector.

network phasing relay [ELEC] Relay which functions in conjunction with a master relay to limit closure of the network protector to a predetermined relationship between the voltage and the network voltage.

network relay [ELEC] Form of voltage, power, or other type of relay used in the protection and control of alternating-current low-voltage networks.

network structure [MET] A crystal structure in a metal in which one constituent occurs primarily at grain boundaries enveloping the grains made up of other constituents.

network synthesis [ELEC] Derivation of the configuration and element values of a network with given electrical properties.

network theory [ELEC] The systematizing and generalizing of the relations between the currents, voltages, and impedances associated with the elements of an electrical network.

network transfer admittance [ELEC] The current that would flow through a short circuit between one pair of terminals in a network if a unit voltage were applied across the other pair.

Neuberg blue [MATER] Pigment made up of a mixture of copper blue and iron blue.

Neumann bands *See* Neumann lines.

Neumann boundary condition [MATH] The boundary condition imposed on the Neumann problem in potential theory.

Neumann function [MATH] **1.** One of a class of Bessel functions arising in the study of the solutions to Bessel's differential equation. **2.** A harmonic potential function in potential theory occurring in the study of Neumann's problem.

Neumann-Kopp rule [THERMO] The rule that the heat capacity of 1 mole of a solid substance is approximately equal to the sum over the elements forming the substance of the heat capacity of a gram atom of the element times the number of atoms of the element in a molecule of the substance.

Neumann line [MATH] The generalization of the concept of a line occurring in Neumann's study of continuous geometry.

Neumann lines [MET] Mechanical deformation twins seen as straight, serrated narrow bands parallel to preferred planes in the crystals of an etched metal which has been strained, usually

by sudden impact; most often observed along the 112 planes of body-centered-cubic ferrite. Also known as Neumann bands.

Neumann problem [MATH] The determination of a harmonic function within a finite region of three-dimensional space enclosed by a closed surface when the normal derivatives of the function on the surface are specified.

Neumann series *See* Liouville-Neumann series.

Neumann's formula [ELECTROMAG] A formula for the mutual inductance M_{12} between two closed circuits C_1 and C_2; it is

$$M_{12} = \frac{\mu_0}{4\pi} \int_{C_1} \int_{C_2} \frac{ds_1\, ds_2}{r}$$

where r is the distance between line elements ds_1 and ds_2, and μ_0 is the permeability of the empty space.

Neumann's principle [CRYSTAL] The principle that the symmetry elements of the point group of a crystal are included among the symmetry elements of any property of the crystal.

neural arc [PHYSIO] A nerve circuit consisting of effector and receptor with intercalated neurons between them.

neural arch *See* vertebral arch.

neural canal [EMBRYO] The embryonic vertebral canal.

neural crest [EMBRYO] Ectoderm composing the primordium of the cranial, spinal, and autonomic ganglia and adrenal medulla, located on either side of the neural tube.

neural ectoderm [EMBRYO] Embryonic ectoderm which will form the neural tube and neural crest.

neural fold [EMBRYO] Either of a pair of dorsal longitudinal folds of the neural plate which unite along the midline, forming the neural tube.

neuralgia [MED] Pain in or along the course of one or more nerves. Also known as neurodynia.

neural groove [EMBRYO] A longitudinal groove between the neural folds of the vertebrate embryo before the neural tube is completed.

neural lymphomatosis [VET MED] A form of the avian leukosis complex affecting primarily the sciatic nerve.

neural plate [EMBRYO] The thickened dorsal plate of ectoderm that differentiates into the neural tube.

neural spine [ANAT] The spinous process of a vertebra.

neural tube [EMBRYO] The embryonic tube that differentiates into brain and spinal cord.

neuraminic acid [BIOCHEM] $C_9H_{17}NO_8$ An amino acid, the aldol condensation product of pyruvic acid and *N*-acetyl-D-mannosamine, regarded as the parent acid of a family of widely distributed acyl derivatives known as sialic acids.

neuraminidase [MICROBIO] A bacterial enzyme that acts to split salic acid from neuraminic acid glycosides.

neurapophysis [EMBRYO] Either of two projections on each embryonic vertebra which unite to form the neural arch.

neurapraxia [MED] Injury to a nerve in which there is localized degeneration of the myelin sheath with transient nerve block.

neurasthenia [MED] A group of symptoms, now generally subsumed in the neurasthenic neurosis, formerly ascribed to debility or exhaustion of the nerve centers.

neurasthenic neurosis [PSYCH] A neurotic disorder characterized by chronic complaints of easy fatigability, lack of energy, weakness, various aches and pains, and sometimes exhaustion. Also known as psychophysiologic nervous system reaction.

neurectomy [MED] Surgical removal of a portion of a nerve.

neurenteric canal [EMBRYO] A temporary duct connecting the neural tube and primitive gut in certain vertebrate and tunicate embryos.

neurilemma [HISTOL] A thin tissue covering the axon directly, or covering the myelin sheath when present, of peripheral nerve fibers.

neurilemmoma [MED] A solitary, encapsulated benign tumor originating in the neurilemma of peripheral, cranial, and sympathetic nerves. Also known as schwannoma.

neurine [BIOCHEM] $CH_2=CHN(CH_3)_3OH$ A very poisonous, syrupy liquid with fishy aroma; soluble in water and alcohol; a product of putrefaction of choline in brain tissue and bile, and in cadavers. Also known as trimethylvinylammonium hydroxide.

neurinomatosis *See* neurofibromatosis.

neuristor [ELECTR] A device that behaves like a nerve fiber in having attenuationless propagation of signals; one goal of research is development of a complete artificial nerve cell, containing many neuristors, that could duplicate the function of the human eye and brain in recognizing characters and other visual images.

neurite *See* axon.

neuritis [MED] Degenerative or inflammatory nerve lesions associated with pain, hypersensitivity, anesthesia or paresthesia, paralysis, muscular atrophy, and loss of reflexes in the innervated part of the body.

neuroanatomy [ANAT] The study of the anatomy of the nervous system and nerve tissue.

neuroarthropathy [MED] Joint disease associated with disease of the nervous system.

neuroastrocytoma [MED] Ganglioneuroma, especially when on the floor of the third brain ventricle and in the temporal lobes and exhibiting neuronal elements within predominant astrocytic elements.

neurobiotaxis [EVOL] Hypothetical migration of nerve cells and ganglia toward regions of maximum stimulation during phylogenetic development.

neuroblast [EMBRYO] Embryonic, undifferentiated neuron, derived from neural plate ectoderm.

neuroblastoma [MED] A malignant neoplasm composed of anaplastic sympathicoblasts; occurs usually in the adrenal medulla of children.

neuroblastomatosis *See* neurofibromatosis.

neurobrucellosis [MED] Brucellosis with neurologic involvement, manifested by signs and symptoms of meningitis, encephalitis, radiculitis, or neuritis.

neurochemistry [BIOCHEM] Chemistry of the nervous system.

neurochorioretinitis [MED] Chorioretinitis combined with optic neuritis.

neurochoroiditis [MED] Choroiditis combined with optic neuritis.

neurocirculatory [ANAT] Pertaining to both the nervous and the vascular systems.

neurocirculatory asthenia [MED] A syndrome characterized by dyspnea, palpitation, chest pain, fatigue, and faintness.

neurocoele [ANAT] The system of cavities and ventricles in the brain and spinal cord.

neurocranium [ANAT] The portion of the cranium which forms the braincase.

neurocutaneous [ANAT] **1.** Concerned with both the nerves and skin. **2.** Pertaining to innervation of the skin.

neurocyte [CYTOL] The body of a nerve cell.

neurodermatitis [MED] A skin disorder characterized by localized, often symmetrical, patches of pruritic dermatitis with lichenification, occurring in persons of nervous temperament.

neurodermatosis [MED] A skin disease which is presumed to have a psychogenic component or basis.

Neurodontiformes [PALEON] A suborder of Conodontophoridia having a lamellar internal structure.

neurodynia *See* neuralgia.

neuroelectricity [PHYSIO] A current or voltage generated in the nervous system.

neuroendocrine [BIOL] Pertaining to both the nervous and endocrine systems, structurally and functionally.

neuroendocrinology [BIOL] The study of the structural and functional interrelationships between the nervous and endocrine systems.

neuroepidermal [BIOL] Pertaining to both the nerves and epidermis, structurally and functionally.

neuroepithelioma [MED] A tumor resembling primitive medullary epithelium, containing cells of small cuboidal or columnar form with a tendency to form true rosettes, occurring in the retina, central nervous system, and occasionally in peripheral nerves. Also known as diktoma; esthesioneuroblastoma; esthesioneuroepithelioma.

neurofibril [CYTOL] A fibril of a neuron, usually extending from the processes and traversing the cell body.

neurofibroma [MED] A tumor characterized by the diffuse proliferation of peripheral nerve elements. Also known as endoneural fibroma; myxofibroma of nerve sheath; neurofibromyxoma; perineural fibroblastoma; perineural fibroma.

neurofibromatosis [MED] A hereditary disease characterized by the presence of neurofibromas in the skin or along the pathway of peripheral nerves. Also known as fibroma molluscum; multiple neurofibroma; multiple neurofibromatosis;

neurinomatosis; neuroblastomatosis; Smith-Recklinghausen's disease.

neurofibromyxoma *See* neurofibroma.

neurofibrosarcoma [MED] A malignant tumor composed of interlacing bundles of anaplastic spindle-shaped cells which resemble those of nerve sheaths.

neurogenesis [EMBRYO] The formation of nerves.

neurogenic [BIOL] **1.** Originating in nervous tissue. **2.** Innervated by nerves. [MED] Caused or affected by a trauma, dysfunction, or disease of the nervous system.

neurogenic bladder [MED] A urinary bladder disorder due to lesions of the central or peripheral nervous system.

neurogenic shock [MED] Shock caused by vasodilation leading to low blood pressure and serious reduction in venous return and in cardiac output; due to such causes as injury to the central nervous system, spinal anesthesia, or reflex.

neuroglia [HISTOL] The nonnervous, supporting elements of the nervous system.

neurohemal organ [ZOO] Any of various structures in vertebrates and some invertebrates that consist of clusters of bulbous, secretion-filled axon terminals of neurosecretory cells which function as storage-and-release centers for neurohormones.

neurohormone [BIOCHEM] A hormone produced by nervous tissue.

neurohumor [BIOCHEM] A hormonal transmitter substance, such as acetylcholine, released by nerve endings in the transmission of impulses.

neurohypophysis [ANAT] The neural portion or posterior lobe of the hypophysis.

neurolathyrism *See* lathyrism.

neuroleptic [PHARM] **1.** A drug that is useful in the treatment of mental disorders, especially psychoses. **2.** Pertaining to the actions of such a drug.

neuroleptoanalgesia [MED] A state of analgesic consciousness produced by the administration of neuroleptic drugs, allowing painless surgery to be performed on a wakeful subject.

neurologist [MED] A person versed in neurology, usually a physician who specializes in the diagnosis and treatment of disorders of the nervous system and the study of its functioning.

neurology [MED] The study of the anatomy, physiology, and disorders of the nervous system.

neuroma [MED] A tumor of the nervous system.

neuromast [VERT ZOO] A lateral-line sensory organ in fishes and other lower vertebrates consisting of a cluster of receptor cells connected with nerve fibers.

neuromere [EMBRYO] An embryonic segment of the central nervous system in vertebrates.

neuromuscular [BIOL] Pertaining to both nerves and muscles, functionally and structurally.

neuromuscular junction *See* myoneural junction.

neuromyasthenia [MED] Fatigue, headache, intense muscle pain, slight or transient muscle weakness, mental disturbances, objective signs in neurologic examination but usually normal cerebrospinal fluid findings, occurring in epidemics and thought to be viral in origin. Also known as benign myalgic encephalomyelitis.

neuromyelitis [MED] Inflammation of the spinal cord and of nerves.

neuron [HISTOL] A nerve cell, including the cell body, axon, and dendrites.

neuron doctrine [BIOL] A doctrine that the neuron is the basic structural and functional unit of the nervous system, and that it acts upon another neuron through the synapse.

neuronitis [MED] Inflammation of a neuron; particularly, neuritis involving the cells and roots of spinal nerves.

neuropathy [MED] Any disease affecting neurons.

neuropharmacology [MED] The science dealing with the action of drugs on the nervous system.

neurophysiology [PHYSIO] The study of the functions of the nervous system.

neuropil [HISTOL] Nervous tissue consisting of a fibrous network of nonmyelinated nerve fibers; gray matter with few nerve cell bodies; usually a region of synapses between axons and dendrites.

neuroplasm [CYTOL] Protoplasm of nerve cells.

neuropodium [CYTOL] A terminal branch of an axon.

neuropore [EMBRYO] A terminal aperture of the neural tube before complete closure at the 20–25 somite stage.

neuropsychology [PSYCH] A system of psychology based on neurology.

neuropsychopathy [MED] A mental disease based upon or manifesting itself in disorders or symptoms of the nervous system.

Neuroptera [INV ZOO] An order of delicate insects having endopterygote development, chewing mouthparts, and soft bodies.

neuroradiology [MED] The roentgenology of neurologic disease.

neurorrhexis [MED] Surgical tearing away of a nerve from its origin, as in the treatment of neuralgia.

neurosarcoma [MED] A sarcoma composed of elements resembling those of the nervous system, or thought to be neurogenic.

neurosclerosis [MED] Hardening of nervous tissue.

neurosecretion [PHYSIO] The synthesis and release of hormones by nerve cells.

neurosis [PSYCH] A category of emotional maladjustments characterized by some impairment of thinking and judgment, with anxiety as the chief symptom.

neurosurgery [MED] Surgery of the nervous system.

neurosyphilis [MED] Syphilitic infection of the nervous system.

neuroticism [PSYCH] A neurotic condition, character, or trait.

neurotic personality [PSYCH] An individual who exhibits symptoms or manifestations intermediate between normal character traits and true neurotic features.

neurotoxin [BIOCHEM] A poisonous substance in snake venom that acts as a nervous system depressant by blocking neuromuscular transmission by binding acetylcholine receptors on motor end plates, or on the innervated face of an electroplax.

neurotrophic ulcer [MED] A decubitus ulcer due to trophic disturbances following interruption or disease of afferent nerve fibers plus the factor of external trauma.

neurotropic [BIOL] Having an affinity for nerve tissue.

neurovaricosis [MED] The formation or the presence of a varicosity on a nerve fiber.

neurovascular [BIOL] Pertaining structurally and functionally to both the nervous and vascular structures.

neurulation [EMBRYO] Differentiation of nerve tissue and formation of the neural tube.

neuston [BIOL] Minute organisms that float or swim on surface water or on a surface film of water.

neutral atmosphere [ENG] An atmosphere which neither oxidizes nor reduces immersed materials.

neutral atom [ATOM PHYS] An atom in which the number of electrons that surround the nucleus is equal to the number of protons in the nucleus, so that there is no net electric charge.

neutral axis [MECH] In a beam bent downward, the line of zero stress below which all fibers are in tension and above which they are in compression.

neutral beam [PHYS] A stream of uncharged particles.

neutral conductor [ELEC] A conductor of a polyphase circuit or of a single-phase, three-wire circuit which is intended to have a potential such that the potential differences between it and each of the other conductors are approximately equal in magnitude and are also equally spaced in phase.

neutral current interaction [PARTIC PHYS] A weak interaction in which the charges of the interacting fermions are not changed.

neutral-density filter [OPTICS] An optical filter that reduces the intensity of light without appreciably changing its color; used on a camera when the lens cannot be stopped down sufficiently for use with a given film. Also known as gray filter; neutral filter.

neutral equilibrium [FL MECH] A property of the steady state of a system which exhibits neither instability nor stability according to the particular criterion under consideration; a disturbance introduced into such an equilibrium will thus be neither amplified nor damped. Also known as indifferent equilibrium.

neutral estuary [GEOGR] An estuary in which neither freshwater inflow nor evaporation dominates.

neutral fiber [MECH] A line of zero stress in cross section of a bent beam, separating the region of compressive stress from that of tensile stress.

neutral filter *See* neutral-density filter.

neutral flame [CHEM] Gas flame produced by a mixture of fuel and oxygen so as to be neither oxidizing nor reducing.
neutral granulation [CHEM] Propellant granulation in which the surface area of a grain remains constant during burning.
neutral ground [ELEC] Ground connected to the neutral point or points of an electric circuit, transformer, rotating machine, or system.
neutralism [ECOL] A neutral interaction between two species, that is, one having no evident effect on either species.
neutralization equivalent [CHEM] For an acid or base, the same as equivalent weight; multiplication of the neutralization equivalent by the number of acidic or basic groups in the molecule gives the molecular weight.
neutralization fire [ORD] Fire which is delivered to cause casualties, to hamper and interrupt the firing of weapons, movement, or action, and to reduce the combat efficiency of enemy personnel.
neutralization number [ANALY CHEM] Petroleum product test; it is the milligrams of potassium hydroxide required to neutralize the acid in 1 gram of oil; used as an indication of oil acidity.
neutralize [CHEM] To make a solution neutral (neither acidic nor basic, pH of 7) by adding a base to an acidic solution, or an acid to a basic solution. [ELECTR] To nullify oscillation-producing voltage feedback from the output to the input of an amplifier through tube interelectrode capacitances; an external feedback path is used to produce at the input a voltage that is equal in magnitude but opposite in phase to that fed back through the interelectrode capacitance. [ORD] **1.** To destroy or reduce the effectiveness of enemy personnel and materiel by gunfire, bombing, or any other means. **2.** To make a toxic chemical agent harmless by chemical action. **3.** To disarm or otherwise render safe a mine, bomb, missile, or booby trap.
neutralized radio-frequency stage [ELECTR] Stage having an additional circuit connected to feed back, in the opposite phase, an amount of energy equivalent to what is causing the oscillation, thus neutralizing any tendency to oscillate and making the circuit function strictly as an amplifier.
neutralizing antibody [IMMUNOL] An antibody that reduces or abolishes some biological activity of a soluble antigen or of a living microorganism.
neutralizing capacitor [ELECTR] Capacitor, usually variable, employed in a radio receiving or transmitting circuit to feed a portion of the signal voltage from the plate circuit of a stage back to the grid circuit.
neutralizing circuit [ELECTR] Portion of an amplifier circuit which provides an intentional feedback path from plate to grid to prevent regeneration.
neutralizing power of a lens [OPTICS] The power of a lens, measured by neutralizing it with trial lenses of equal and opposite power; for a spectacle lens, it may differ significantly from back vertex power.
neutralizing transformer [ELECTROMAG] A transformer installed on a communication line which produces counter electromotive forces which largely cancel out induced longitudinal voltage and allow normal operation of the line during inductive disturbances.
neutralizing voltage [ELECTR] Voltage developed in the plate circuit (Hazeltine neutralization) or in the grid circuit (Rice neutralization), used to nullify or cancel the feedback through the tube.
neutral line *See* Busch lemniscate.
neutrally buoyant float *See* swallow float.
neutral molecule [PHYS CHEM] A molecule in which the number of electrons surrounding the nuclei is the same as the total number of protons in the nuclei, so that there is no net electric charge.
neutral oil [MATER] Light oil from dewaxed petroleum; medium or low viscosity, flash point 143–160°C.
neutral operation [COMMUN] System whereby marking signals are formed by current impulses of one polarity, either positive or negative, and spacing signals are formed by reducing the current to zero or nearly zero.
neutral particle [PARTIC PHYS] A particle that carries no electric charge.
neutral point [ELEC] Point which has the same potential as the point of junction of a group of equal nonreactive resistances connected at their free ends to the appropriate main terminals or lines of the system. [FL MECH] *See* hyperbolic point. [MET] In rolling mills, the point at which the speed of the work is equal to the peripheral speed of the rolls. [METEOROL] *See* col. [OPTICS] In atmospheric optics, one of several points in the sky for which the degree of polarization of diffuse sky radiation is zero.
neutral potassium phosphate *See* potassium phosphate.
neutral pressure *See* neutral stress.
neutral red [ORG CHEM] $(CH_3)_2NC_6H_3N_2C_6H_2CH_3NH_2 \cdot ClH$ Water- and alcohol-soluble green powder; used as pH 6.8–8.0 acid-base indicator, and as a dye to test stomach function. Also known as dimethyl diaminophenazine chloride; toluylene red.
neutral relay [ELEC] Relay in which the movement of the armature does not depend upon the direction of the current in the circuit controlling the armature. Also known as nonpolarized relay.
neutral return path [ELEC] A route from the load back to the power source, completing a circuit in an electric power distribution system, which is grounded, usually by connections to water pipes.
neutral shoreline [GEOL] A shoreline whose essential features are independent of either the submergence of a former land surface or the emergence of a former underwater surface.
neutral species *See* uncharged species.
neutral stability [CONT SYS] Condition in which the natural motion of a system neither grows nor decays, but remains at its initial amplitude. [METEOROL] The state of an unsaturated or saturated column of air in the atmosphere when its environmental lapse rate of temperature is equal to the dry-adiabatic lapse rate or the saturation-adiabatic lapse rate respectively; under such conditions a parcel of air displaced vertically will experience no buoyant acceleration. Also known as indifferent equilibrium; indifferent stability.
neutral stress [HYD] The stress transmitted through the interstitial fluid of a soil or rock mass. Also known as neutral pressure; pore pressure; pore-water pressure.
neutral surface [MECH] A surface in a bent beam along which material is neither compressed nor extended.
neutral temperature [ELECTR] The temperature of the hot junction of a thermocouple at which the electromotive force of the thermocouple attains its maximum value, when the cold junction is maintained at a constant temperature of 0°C.
neutral transmission [COMMUN] The signal transmitted over a line when no traffic is flowing.
neutral wave [PHYS] Any wave whose amplitude does not change with time; in most contexts the wave is referred to as a stable wave, the term "neutral wave" being used when it is important to emphasize that the wave is neither damped nor amplified.
neutral zone *See* dead band.
neutrino [PHYS] A neutral particle having zero rest mass and spin 1/2 ($h/2\pi$), where h is Planck's constant; experimentally, there are two such particles known as the e-neutrino (ν_e) and the μ-neutrino (ν_μ).
neutrino telescope [ASTRON] Any device for detecting and determining the directions of extraterrestrial neutrinos, such as the deep underwater muon and neutrino detector.
neutron [PHYS] An elementary particle which has approximately the same mass as the proton but lacks electric charge, and is a constituent of all nuclei having mass number greater than 1.
neutron absorber [NUCLEO] A material in which a significant number of neutrons passing through combine with nuclei and are not reemitted.
neutron absorption *See* neutron capture.
neutron activation analysis [NUCLEO] Activation analysis in which the specimen is bombarded with neutrons; identification is made by measuring the resulting radio isotopes.
neutron age *See* Fermi age.
neutron albedo [NUCLEO] The probability, under specified conditions, that a neutron entering into a region through a surface will return through that surface.
neutron binding energy [NUC PHYS] The energy required to remove a single neutron from a nucleus.
neutron bomb *See* neutron radiation weapon.
neutron bottle [NUCLEO] A vacuum vessel for storing ultracold neutrons.
neutron capture [NUC PHYS] A process in which the collision of a neutron with a nucleus results in the absorption of the neutron into the nucleus with the emission of one or more prompt gamma rays; in certain cases, beta decay or fission of the

nucleus results. Also known as neutron absorption; neutron radiative capture.

neutron-capture cross section [NUC PHYS] The cross section for neutron capture by nuclei in a material; it is a measure of the probability that this reaction will occur.

neutron chopper [NUCLEO] A device that interrupts the output beam of neutrons from a nuclear reactor mechanically, to provide bursts or pulses of neutrons for research purposes.

neutron counter [NUCLEO] A neutron detector which counts the number of neutrons passing through the detecting medium.

neutron cross section [NUC PHYS] A measure of the probability that an interaction of a given kind will take place between a nucleus and an incident neutron; it is an area such that the number of interactions which occur in a sample exposed to a beam of neutrons is equal to the product of the number of nuclei in the sample and the number of neutrons in the beam that would pass through this area if their velocities were perpendicular to it.

neutron cycle [NUCLEO] The life history of the neutrons in a nuclear reactor, extending from the initial fission process until all the neutrons have been absorbed or have leaked out.

neutron detector [NUCLEO] Any device which detects passing neutrons, for example, by observing the charged particles or gamma rays released in nuclear reactions induced by the neutrons, or observing the recoil of charged particles caused by collisions with neutrons.

neutron diffraction [PHYS] The phenomenon associated with the interference processes which occur when neutrons are scattered by the atoms within solids, liquids, and gases.

neutron diffractometer [PHYS] A diffractometer in which a beam of neutrons is used for diffraction analysis, and the intensities of the diffracted beams at different angles are measured with an ionization chamber or radiation counter.

neutron economy [NUCLEO] The balance sheet describing the ways neutrons are used in a nuclear reactor, as in fission, leakage, and absorption.

neutron excess [NUC PHYS] The number of neutrons in a nucleus in excess of the number of protons. Also known as difference number; isotopic number.

neutron flux [NUCLEO] The intensity of neutron radiation, expressed as the number of neutrons passing through a unit area per unit time. Also known as neutron flux density.

neutron flux density *See* neutron flux.

neutron-gamma well logging [ENG] Neutron well logging in which the varying intensity of gamma rays produced artificially by neutron bombardment is recorded.

neutron hardening [NUCLEO] The increase which occurs in the average energy of thermal neutrons diffusing in a medium whose absorption cross section decreases as energy increases.

neutron howitzer [NUCLEO] A device which produces a neutron beam; consists of a neutron source contained in a block of moderating material with a small hole from the source to the surface of the block, from which the beam emerges.

neutron inelastic scattering reactions [NUCLEO] Emissions of low-energy neutrons when materials have been bombarded by fast neutrons during neutron activation analysis. Also known as n-n' reactions.

neutron irradiation [NUCLEO] The exposure of a material or object to neutrons.

neutron logging *See* neutron well logging.

neutron magnetic moment [NUC PHYS] A vector whose scalar product with the magnetic flux density gives the negative of the energy of interaction of a neutron with a magnetic field.

neutron multiplication factor *See* multiplication factor.

neutron number [NUC PHYS] The number of neutrons in the nucleus of an atom.

neutron optics [PHYS] The study of certain phenomena, for example, crystal diffraction, in which the wave character of neutrons dominates and leads to behavior similar to that of light.

neutron radiation weapon [ORD] A small nuclear weapon that has a yield of 1–2 kilotons, causes extensive blast and heat damage within a radius of 130–350 meters, and emits neutron and gamma radiation lethal within a radius of 1–2 kilometers. Also known as neutron bomb.

neutron radiative capture *See* neutron capture.

neutron radiography [NUCLEO] Radiography that uses a neutron beam generated by a nuclear reactor; the neutrons are detected by placing a conventional x-ray film next to a converter screen composed of potentially radioactive materials or prompt emission materials which convert the neutron radiation to other types of radiation more easily detected by the film.

neutron reflection [PHYS] Specular reflection of neutrons, either from lattice planes of crystalline substances according to the Bragg law for their de Broglie wavelength, or from highly polished surfaces of certain substances at an angle smaller than their critical angle.

neutron scattering [NUCLEO] The change in direction of neutrons caused by collision with nuclei in a material.

neutron shield [ENG] A shield that protects personnel from neutron irradiation.

neutron soil-moisture meter [ENG] An instrument for measuring the water content of soil and rocks as indicated by the scattering and absorption of neutrons emitted from a source, and resulting gamma radiation received by a detector, in a probe lowered into an access hole.

neutron spectrometer [NUCLEO] An instrument used to determine the energies of neutrons and the relative intensities of neutrons of different energies in a neutron beam.

neutron spectrometry [NUC PHYS] A method of observing excited states of nuclei in which neutrons are used to bombard a target, causing nuclei to be transmuted into excited states by various nuclear reactions; the resultant excited states are determined by observing resonances in the reaction cross sections or by observing spectra of emitted particles or gamma rays. Also known as neutron spectroscopy.

neutron spectroscopy *See* neutron spectrometry.

neutron spectrum [NUC PHYS] A plot or display of the number of neutrons at various energies, such as the neutrons emitted in a nuclear reaction, or the neutrons in a nuclear reactor.

neutron star [ASTRON] A star that is supposed to occur in the final stage of stellar evolution; it consists of a superdense mass mainly of neutrons, and has a strong gravitational attraction from which only neutrinos and high-energy photons could escape so that the star is invisible.

neutron therapy [MED] Medical therapy involving irradiation with neutrons.

neutron transport theory [NUCLEO] Theory of diffusion of neutrons in a material based on the Boltzmann transport equation.

neutron turbine [NUCLEO] A source of ultracold neutrons in which neutrons are slowed down by reflection from a set of moving curved neutron reflectors.

neutron velocity selector [NUCLEO] An instrument that isolates and detects neutrons having a particular range of velocities.

neutron well logging [ENG] Study of formation fluid-content properties down a wellhole by neutron bombardment and detection of resultant radiation (neutrons or gamma rays). Also known as neutron logging.

neutropenia [MED] Abnormally low number of neutrophils in the peripheral circulation.

neutrophil [HISTOL] A large granular leukocyte with a highly variable nucleus, consisting of three to five lobes, and cytoplasmic granules which stain with neutral dyes and eosin.

neutrophilia [BIOL] Affinity for neutral dyes. [MED] An abnormal increase in leukocytes in the tissues or peripheral circulation.

neutrophilic leukemia [MED] Granulocytic leukemia in which the leukocytes resemble cells of the neutrophilic series.

neutrophilous [BIOL] Preferring an environment free of excess acid or base.

neutrosphere [METEOROL] The atmospheric shell from the earth's surface upward, in which the atmospheric constituents are for the most part un-ionized, that is, electrically neutral; the region of transition between the neutrosphere and the ionosphere is somewhere between 70 and 90 kilometers, depending on latitude and season.

nevada [METEOROL] A cold wind descending from a mountain glacier or snowfield, for example, in the higher valleys of Ecuador.

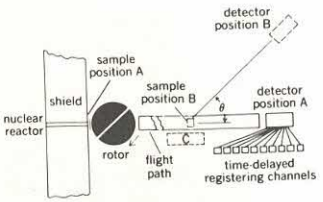
Nevadan orogeny [GEOL] Orogenic episode during Jurassic and Early Cretaceous geologic time in the western part of the North American Cordillera. Also known as Nevadian orogeny; Nevadic orogeny.

Nevadian orogeny *See* Nevadan orogeny.

Nevadic orogeny *See* Nevadan orogeny.

névé [GEOGR] A geographic area of perennial snow. [HYD] An accumulation of compacted, granular snow in tran-

NEUTRON CHOPPER



Schematic diagram of a neutron chopper and time-of-flight apparatus. Registering channels record at successive times following passage of pulse of neutrons through time-of-flight. Sample and detector position A used to measure total cross section. Sample and detector position B used to measure differential cross section for scattering through angle θ. Detector position C used to measure absorption cross section.

NEUTROPHIL

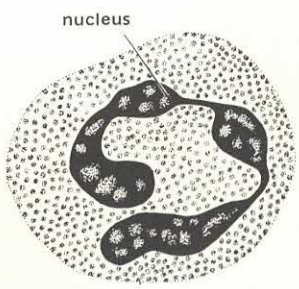


Diagram of neutrophil showing multilobed nucleus.

sition from soft snow to ice; it contains much air; the upper portions of most glaciers and ice shelves are usually composed of névé.

nevocarcinoma [MED] A malignant melanoma.

Nevskia [MICROBIO] A genus of appendaged bacteria; rod-shaped cells produce slime-forming hyaline stalks; reproduce by binary fission.

nevus [MED] A lesion containing melanocytes.

nevus sebaceus [MED] A nevus formed by an aggregate of sebaceous glands. Also known as Jadassohn's nevus.

nevyanskite [MET] A tin-white variety of iridosmine containing 35–50% osmium or more than 50% iridium; occurs in flat scales.

newberyite [MINERAL] $MgH(PO_4)\cdot 3H_2O$ A white, orthorhombic member of the brushite mineral group; it is isostructural with gypsum.

new blue [MATER] Any of several iron blue types of pigments; varieties are called mendola blue and prussian blue.

newborn [MED] Born recently; said of human infants less than a month old, especially of those only a few days old.

new candle *See* candela.

Newcastle disease [VET MED] An acute viral disease of fowls, with respiratory, gastrointestinal, and central nervous system involvement; may be transmitted to human beings as a mild conjunctivitis. Also known as avian pneumoencephalitis; avian pseudoplague; Philippine fowl disease.

Newcastle virus [VIROL] A ribonucleic acid hemagglutinating myxovirus responsible for Newcastle disease.

newel post [CIV ENG] **1.** A pillar at the end of an oblique retaining wall of a bridge. **2.** The post about which a circular staircase winds. **3.** A large post at the foot of a straight stairway or on a landing.

new global tectonics [GEOL] Comprehensive theory relating the formation of mountain belts, island arcs, and ocean trenches to the relative movement of regionally extensive lithospheric plates which are delineated by the major seismic belts of the earth.

New Jersey retort process *See* vertical retort process.

Newland's law of octaves [CHEM] An arrangement of the elements that predated Mendeleeff's periodic table; Newland's arrangement was a grouping of the elements in increasing atomic weights (starting with lithium) in horizontal rows of eight elements, with each new row directly beneath the previous one.

newly formed ice [HYD] Ice in the first stage of formation and development. Also known as fresh ice.

new moon [ASTRON] The moon at conjunction, when little or none of it is visible to an observer on the earth because the illuminated side is turned away.

New Red Sandstone [GEOL] The red sandstone facies of the Permian and Triassic systems exposed in the British Isles.

new snow [METEOROL] **1.** Fallen snow whose original crystalline structure has been retained and is therefore recognizable. **2.** Snow which has fallen in a single day.

Newson's boring method [MIN ENG] A method of boring small shafts, up to 5½ feet (1.7 meters) in diameter using the principle of chilled-shot drilling on a large scale.

newsprint [MATER] The paper used in the publication of newspapers; an impermanent material made from mechanical wood pulp, with some chemical wood pulp.

newt [VERT ZOO] Any of the small, semiaquatic salamanders of the genus *Triturus* in the family Salamandridae; all have an aquatic larval stage.

newton [MECH] The unit of force in the meter-kilogram-second system, equal to the force which will impart an acceleration of 1 meter per second squared to the International Prototype Kilogram mass. Symbolized N. Formerly known as large dyne.

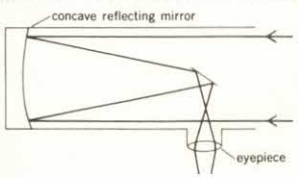
Newton-Cotes formulas [MATH] Approximation formulas for the integral of a function along a small interval in terms of the values of the function and its derivatives.

Newton formula for the stress *See* Newtonian friction law.

Newtonian attraction [MECH] The mutual attraction of any two particles in the universe, as given by Newton's law of gravitation.

Newtonian-Cassegrain telescope [OPTICS] A modification of a Cassegrain telescope in which the light reflected from the hyperboloidal secondary mirror is again reflected from a diagonal plane mirror and focused at a point on the side of the telescope, avoiding the need to pierce the primary mirror and making the eyepiece more accessible. Also known as Cassegrain-Newtonian telescope.

NEWTONIAN TELESCOPE



Simplified diagram of a Newtonian telescope.

Newtonian flow [FL MECH] Flow system in which the fluid performs as a Newtonian fluid, that is, shear stress is proportional to shear rate.

Newtonian fluid [FL MECH] A simple fluid in which the state of stress at any point is proportional to the time rate of strain at that point; the proportionality factor is the viscosity coefficient.

Newtonian focus [OPTICS] The position in a Newtonian telescope at which the image is formed, located at the side of the tube near its open end.

Newtonian friction law [FL MECH] The law that shear stress in a fluid is proportional to the shear rate; it holds only for some fluids, which are then called Newtonian. Also known as Newton formula for the stress.

Newtonian mechanics [MECH] The system of mechanics based upon Newton's laws of motion in which mass and energy are considered as separate, conservative, mechanical properties, in contrast to their treatment in relativistic mechanics.

Newtonian potential [PHYS] A potential which is associated with an inverse square law of force (such as an electrostatic force), and therefore varies with distance in the same manner as a gravitational potential.

Newtonian reference frame [MECH] One of a set of reference frames with constant relative velocity and within which Newton's laws hold; the frames have a common time, and coordinates are related by the Galilean transformation rule.

Newtonian speed of sound [ACOUS] An approximation to the speed of sound in a perfect gas given by the relation $c^2 = p/\rho$, where p is pressure and ρ the density.

Newtonian telescope [OPTICS] A reflecting telescope in which the light reflected from a concave mirror is reflected again by a plane mirror making an angle of 45° with the telescope axis, so that it passes through a hole in the side of the telescope containing the eyepiece.

Newtonian velocity [MECH] The velocity of an object in a Newtonian reference frame, S, which can be determined from the velocity of the object in any other such frame, S', by taking the vector sum of the velocity of the object in S' and the velocity of the frame S' relative to S.

Newtonian viscosity [FL MECH] The viscosity of a Newtonian fluid.

newton-meter of energy *See* joule.

newton-meter of torque [MECH] The unit of torque in the meter-kilogram-second system, equal to the torque produced by 1 newton of force acting at a perpendicular distance of 1 meter from an axis of rotation. Abbreviated N-m.

Newton-Raphson formula [MATH] If c is an approximate value of a root of the equation $f(x) = 0$, then a better approximation is the number $c - [f(c)/f'(c)]$.

Newton's alloy [MET] A fusible alloy made up of 50% bismuth, 31% lead, and 19% tin; melts at 95°C; used in applications where it is required to fall away at predetermined temperatures, as for automatic sprinkler links. Also known as Newton's metal.

Newton's equations of motion [MECH] Newton's laws of motion expressed in the form of mathematical equations.

Newton's first law [MECH] The law that a particle not subjected to external forces remains at rest or moves with constant speed in a straight line. Also known as first law of motion; Galileo's law of inertia.

Newton's identities [MATH] Relations between the coefficients of a polynomial and quantities s_k defined by $s_k = r_1^k + r_2^k + \ldots + r_n^k$, where $r_1, \ldots, r_n$ are the roots of the polynomial; for the polynomial $a_0 x^n + a_1 x^{n-1} + \ldots + a_n$, the relations are $a_0 s_k + a_1 s_{k-1} + \ldots + a_{k-1} s_1 + k a_k = 0$, *for* $k < n$, and $a_0 s_k + a_1 s_{k-1} + \ldots + a_n s_{k-n} = 0$, *for* $k > n$.

Newton's law of cooling [THERMO] The law that the rate of heat flow out of an object by both natural convection and radiation is proportional to the temperature difference between the object and its environment, and to the surface area of the object.

Newton's law of gravitation [MECH] The law that every two particles of matter in the universe attract each other with a force that acts along the line joining them, and has a magnitude proportional to the product of their masses and inversely proportional to the square of the distance between them. Also known as law of gravitation.

Newton's law of resistance [FL MECH] The law that the force opposing the motion of an object through a fluid at moderate velocities is proportional to the square of the velocity.

Newton's laws of motion [MECH] Three fundamental prin-

ciples (called Newton's first, second, and third laws) which form the basis of classical, or Newtonian, mechanics, and have proved valid for all mechanical problems not involving speeds comparable with the speed of light and not involving atomic or subatomic particles.

Newton's metal *See* Newton's alloy.

Newton's method [MATH] A technique to approximate the roots of an equation by the methods of the calculus.

Newton's rings [OPTICS] A series of circular bright and dark bands which appear about the point of contact between a glass plate and a convex lens which is pressed against it and illuminated with monochromatic light.

Newton's second law [MECH] The law that the acceleration of a particle is directly proportional to the resultant external force acting on the particle and is inversely proportional to the mass of the particle. Also known as second law of motion.

Newton's square-root method [MATH] A technique for the estimation of the roots of an equation exhibiting faster convergence than Newton's method; this involves calculus methods and the square-root function.

Newton's theory of lift [FL MECH] A theory of the forces acting on an airfoil in a fluid current in which these forces are assumed to result from the impact of particles of the fluid on the body.

Newton's theory of light *See* corpuscular theory of light.

Newton's third law [MECH] The law that, if two particles interact, the force exerted by the first particle on the second particle (called the action force) is equal in magnitude and opposite in direction to the force exerted by the second particle on the first particle (called the reaction force). Also known as law of action and reaction; third law of motion.

next-event file [COMPUT SCI] A portion of a computer simulation program which maintains a list of all events to be processed and updates the simulated time.

nexus [COMMUN] A connection or interconnection of a communications system, such as a data link or a network of branches and nodes.

Neyman-Pearson theory [STAT] A theory that determines what is the best test to use to examine a statistical hypothesis.

Ney's chart *See* modified Lambert conformal chart.

Ney's projection *See* modified Lambert conformal projection.

ng *See* nanogram.

N galaxy [ASTRON] A galaxy that has the optical appearance of a strongly concentrated object with a semistellar nucleus surrounded by a faint halo or extension.

NGU *See* nongonococcal urethritis.

NH propellant [MATER] A propellant which, by reason of its formulation or method of manufacture, does not absorb moisture from the air.

Ni *See* nickel.

niacin *See* nicotinic acid.

niacinamide *See* nicotinamide.

Niagaran [GEOL] A North American provincial geologic series, in the Middle Silurian.

nib [ENG] A small projecting point.

nibble [COMPUT SCI] A unit of computer storage or information equal to one-half byte.

nibbling [MECH ENG] Contour cutting of material by the action of a reciprocating punch that takes repeated small bites as the work is passed beneath it.

nicad battery *See* nickel-cadmium battery.

nicarbing *See* carbonitriding.

niccolite [MINERAL] NiAs A pale-copper-red, hexagonal mineral with metallic luster; an important ore of nickel; hardness is 5–5.5 on Mohs scale. Also known as arsenical nickel; copper nickel; nickeline.

niche [ECOL] The unique role or way of life of a plant or animal species. [GEOL] A shallow cave or reentrant produced by weathering and erosion near the base of a rock face or cliff or beneath a waterfall.

niche glacier [HYD] A common type of small mountain glacier occupying a funnel-shaped hollow or irregular recess in a mountain slope.

Nichol's chart [CONT SYS] A plot of curves along which the magnitude M or argument α of the frequency control ratio is constant on a graph whose ordinate is the logarithm of the magnitude of the open-loop transfer function, and whose abscissa is the open-loop phase angle.

Nicholson's hydrometer [ENG] A modification of Fahrenheit's hydrometer in which the lower end of the instrument carries a scale pan to permit the determination of the relative density of a solid.

Nichols radiometer [ENG] An instrument, used to measure the pressure exerted by a beam of light, in which there are two small, silvered glass mirrors at the ends of a light rod that is suspended at the center from a fine quartz fiber within an evacuated enclosure.

nick *See* knickpoint.

nickel [CHEM] A chemical element, symbol Ni, atomic number 28, atomic weight 58.71. [MET] A silver-gray, ductile, malleable, tough metal; used in alloys, plating, coins (to replace silver), ceramics, and electronic circuits.

nickel-63 [NUC PHYS] Radioactive nickel with beta radiation and 92-year half-life; derived by pile-irradiation of nickel; used in radioactive composition studies and tracer studies.

nickel acetate [ORG CHEM] $Ni(OOCCH_3)_2 \cdot 4H_2O$ Efflorescent green crystals that decompose upon heating; soluble in alcohol and water; used as textile dyeing mordant.

nickel-aluminum bronze [MET] An alloy composed of an 8–10% aluminum bronze with nickel added to increase strength, corrosion resistance, and heat resistance; used for dies, molds, cast propellers, and valve seats.

nickel ammonium sulfate [INORG CHEM] $NiSO_4 \cdot (NH_4)_2SO_4 \cdot 6H_2O$ A green, crystalline compound, soluble in water; used as a nickel electrolyte for electroplating. Also known as ammonium nickel sulfate; double nickel salt.

nickel-antimony glance *See* ullmannite.

nickel arsenate [INORG CHEM] $Ni_3(AsO_4)_2 \cdot H_2O$ Poisonous yellow-green powder; soluble in acids, insoluble in water; used as a fat-hardening catalyst in soapmaking. Also known as nickelous arsenate.

nickel bloom *See* annabergite.

nickel brass *See* nickel silver.

nickel bronze [MET] Bronze containing nickel; a common type contains 88% copper, 5% tin, 5% nickel, and 2% zinc.

nickel-cadmium battery [ELEC] A sealed storage battery having a nickel anode, a cadmium cathode, and an alkaline electrolyte; widely used in cordless appliances; without recharging, it can serve as a primary battery. Also known as cadmium-nickel storage cell; nicad battery.

nickel carbonate [INORG CHEM] $NiCO_3$ Light-green crystals that decompose upon heating; soluble in acid, insoluble in water; used in electroplating.

nickel carbonyl [INORG CHEM] $Ni(CO)_4$ Colorless, flammable, poisonous liquid boiling at 43°C; soluble in alcohol and concentrated nitric acid, insoluble in water; used in gas plating (vapor decomposes at 60°C) and to produce metallic nickel. Also known as nickel tetracarbonyl.

nickel cast iron [MET] An improved-strength alloy cast iron containing a small percentage of nickel (2–5%); in larger amounts (15–36%) nickel primarily imparts corrosion resistance.

nickel-chromium steel [MET] Steel containing nickel (0.2–3.75%) and chromium (0.3–1.5%) as alloying elements.

nickel cyanide [INORG CHEM] $Ni(CN)_2 \cdot 4H_2O$ Poisonous, water-insoluble apple-green powder; melts and loses water at 200°C, decomposes at higher temperatures; used for electroplating and metallurgy.

nickel delay line [ELECTR] An acoustic delay line in which nickel is used to transmit sound signals.

nickel formate [ORG CHEM] $Ni(HCOO)_2 \cdot 2H_2O$ Water-soluble green crystals; used in hydrogenation catalysts.

nickel glance *See* gersdorffite.

nickeline *See* niccolite.

nickel iodide [INORG CHEM] NiI_2 or $NiI_2 \cdot 6H_2O$ Hygroscopic black or blue-green solid; soluble in water and alcohol; sublimes when heated. Also known as nickelous iodide.

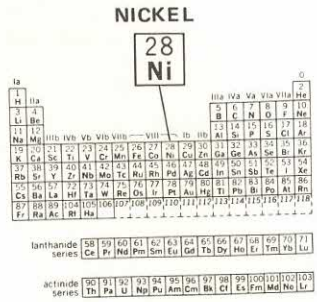
nickel-iron battery *See* Edison battery.

nickel-molybdenum iron [MET] An alloy containing 20–40% molybdenum and up to 60% nickel with some carbon added; has high acid resistance.

nickel-molybdenum steel [MET] Steel containing 0.2–0.3% molybdenum and 1.65–3.75% nickel as alloying elements.

nickel nitrate [INORG CHEM] $Ni(NO_3)_2 \cdot 6H_2O$ Fire-hazardous oxidant; deliquescent, green, water- and alcohol-soluble crystals; used for nickel plating and brown ceramic colors, and in nickel catalysts.

nickelocene [ORG CHEM] $(C_5H_5)_2Ni$ Dark green crystals with a melting point of 171–173°C; soluble in most organic



Periodic table of the chemical elements showing the position of nickel.

solvents; used as an antiknock agent. Also known as dicyclopentadienyl nickel.

nickel ocher *See* annabergite.

nickelous arsenate *See* nickel arsenate.

nickelous iodide *See* nickel iodide.

nickelous oxide *See* nickel oxide.

nickelous phosphate *See* nickel phosphate.

nickel oxide [INORG CHEM] NiO Green powder; soluble in acids and ammonium hydroxide; insoluble in water; used to make nickel salts and for porcelain paints. Also known as green nickel oxide; nickelous oxide.

nickel phosphate [INORG CHEM] $Ni_3(PO_4)_2 \cdot 7H_2O$ A light-green powder; soluble in acids and ammonium hydroxide, insoluble in water; used for electroplating and production of yellow nickel. Also known as nickelous phosphate; trinickelous orthophosphate.

nickel plating [MET] Electrolytic deposition of a metallic nickel coating.

nickel pyrites *See* millerite.

nickel rhodium [MET] Nickel alloy with 25–80% rhodium; can also contain other metals, such as platinum or molybdenum; used for pen points, reflectors, electrodes, and chemical equipment.

nickel silver [MET] A silver-white alloy composed of 52–80% copper, 10–35% zinc, and 5–35% nickel; sometimes also contains a few percent of lead and tin. Also known as German silver; nickel brass.

nickel steel [MET] Carbon steel containing up to 9% nickel as a major alloying element.

nickel tetracarbonyl *See* nickel carbonyl.

nickel-vanadium steel [MET] A nickel steel containing about 1.5% nickel, 1% manganese, 0.28% carbon, and 0.10% vanadium; used for high-strength cast parts.

nickel vitriol *See* morenosite.

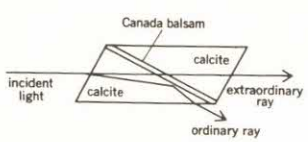
nickpoint *See* knickpoint.

niclosamide [ORG CHEM] $C_{13}H_8Cl_2N_2O_4$ A white powder with a melting point of 227–232°C; insoluble in water; used as an antihelminthic drug for dogs and cats. Also known as 2′,5-dichloro-4′-nitrosalcylanilide.

Nicoletiidae [INV ZOO] A family of the insect order Thysanura proper.

Nicol prism [OPTICS] A device for producing plane-polarized light, consisting of two pieces of transparent calcite (a birefringent crystal) which together form a parallelogram and are cemented together with Canada balsam.

NICOL PRISM



Drawing of path of incident light through a Nicol prism. The extraordinary ray is plane-polarized.

Nicomachinae [INV ZOO] A subfamily of the limnivorous sedentary annelids in the family Maldanidae.

nicotinamide [BIOCHEM] $C_6H_6ON_2$ Crystalline basic amide of the vitamin B complex that is interconvertible with nicotinic acid in the living organism; the amide of nicotinic acid. Also known as niacinamide.

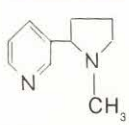
nicotinamide adenine dinucleotide *See* diphosphopyridine nucleotide.

nicotine [ORG CHEM] $C_{10}H_{14}N_2$ A colorless liquid with a boiling point of 247.3°C; miscible with water; used as a contact insecticide fumigant in closed spaces. Also known as 3-(1-methyl-2-pyrrolidyl)pyridine; nicotine sulfate.

nicotine sulfate *See* nicotine.

nicotinic acid [BIOCHEM] $C_6H_5NO_2$ A component of the vitamin B complex; a white, water-soluble powder stable to heat, acid, and alkali; used for the treatment of pellagra. Also known as niacin.

NICOTINE



Structural formula.

nictitating membrane [VERT ZOO] A membrane of the inner angle of the eye or below the eyelid in many vertebrates, and capable of extending over the eyeball.

nidamental gland [ZOO] Any of various structures that secrete covering material for eggs or egg masses.

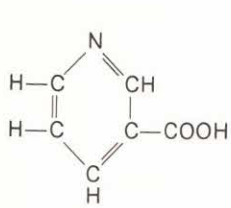
nidicolous [ZOO] **1.** Spending a short time in the nest after hatching. **2.** Sharing the nest of another species.

nidus [MED] A focus of infection. [ZOO] A nest or breeding place.

niello [MATER] Mixture of sulfides of copper, silver, and lead, with black metallic appearance; used in ornamental inlays engraved on metals such as silver.

Niemann-Pick disease [MED] A hereditary sphingolipidosis due to an enzyme deficiency resulting in abnormal accumulation of sphingomyelin; symptoms include anemia, enlargement of the liver, spleen, and lymph nodes, gastrointestinal disturbances, and various neurologic deficits. Also known as lipid hystiocytosis.

NICOTINIC ACID



Structural formula.

nieve penitente [GEOL] A jagged pinnacle or spike of snow or firn, up to several meters in height. Also known as penitent.

NIF *See* noise improvement factor.

niggliite [MINERAL] PtSn or PtTe A silver-white mineral consisting of a platinum telluride compound.

night [ASTRON] The period of darkness between sunset and sunrise.

night ape *See* bushbaby.

night blindness [MED] Reduced dark adaptation resulting from vitamin A deficiency or from retinitis pigmentosa or other peripheral retinal disease. Also known as nyctalopia.

night effect *See* polarization error.

nightglow [GEOPHYS] A subdivision of airglow in which energy comes from reactions of atomic oxygen between 70 and 100 kilometers, and from ionic recombination around 300 kilometers.

night order book [NAV] A notebook in which the commanding officer of a ship writes orders with respect to courses and speeds, any special precautions concerning the speed and navigation of the ship, and all other orders for the night for the officer of the deck.

night-sky camera [OPTICS] A simple camera mounted in a fixed direction to record trails of stars caused by the earth's rotation and the breaks in these trails caused by clouds, in order to determine the reduction, due to clouds, of the effective exposures of astronomical photographs.

night-sky light *See* airglow.

night-sky luminescence *See* airglow.

night sweat [MED] Drenching perspiration occurring at night or during sleep in the course of certain febrile diseases.

nighttime visual range *See* night visual range.

night-vision binoculars [OPTICS] Binoculars that are worn like eyeglasses but use a battery-powered television camera to pick up images; the images are viewed on tiny television picture tubes built into the binoculars.

night-vision telescope [OPTICS] A telescope that has sufficient electronic amplification of images to be used at night without artificial illumination; may have television, optoelectronic, or other means of providing the necessary image amplification.

night visual range [OPTICS] The greatest distance at which a point source of light of a given candlepower can be perceived at night by an observer under given atmospheric conditions. Also known as nighttime visual range; penetration range; transmission range.

night wind [METEOROL] Dry squalls which occur at night in southwest Africa and the Congo; the term is loosely applied to other diurnal local winds such as mountain wind, land breeze, and midnight wind.

nigre [CHEM ENG] Dark-colored layer formed between neat soap and lye during soap manufacture; contains more soap than lye, and a high concentration of salts and colored impurities.

nigrescent [BIOL] Blackish.

nigrite [MATER] A mixture of rubber with ozocerite distillation residue; used as a substitute for gutta-percha.

nigrosine [MATER] Any of a group of blue or black azine dyes used for coloring inks, shoe polish, leather, and wood; can be water-, alcohol-, or oil-soluble.

nihilism [MED] Pessimism in regard to the efficacy of treatment, particularly the use of drugs. [PSYCH] The content of delusions encountered in depressed or melancholic states; the patient insists that his inner organs no longer exist, and that his relatives have passed away.

Nike [ORD] A system of U.S. Army surface-to-air guided missiles designed to seek out, intercept, and destroy enemy aircraft; several weapons of the system are Nike-Ajax, Nike-Hercules, and Nike-Zeus.

Nike-Ajax [ORD] A U.S. Army surface-to-air guided missile that has a range of approximately 25 miles (40 kilometers) and a speed of Mach 2; it is liquid-fueled and rocket-boosted, and directed by command guidance.

Nike-Hercules [ORD] A U.S. Army surface-to-air guided missile that has a range of approximately 70 miles (110 kilometers), a speed of over Mach 3, and nuclear warhead capability; it employs solid fuel, and is directed by command radar guidance.

Nike-Zeus [ORD] A U.S. Army surface-to-air guided missile that is an antimissile weapon with nuclear warhead capability, for attacking intercontinental ballistic missiles; uses solid fuel and radar guidance.

nikkel oil [MATER] A bright-yellow liquid with a lemon and

cinnamon odor obtained from the leaves and twigs of a laurel tree, *Cinnamomum zeylanicum;* contains citral and cineol; used in perfumery.

niklesite [PETR] A pyroxenite containing the three pyroxenes: diopside, enstatite, and diallage.

nilas [HYD] A thin elastic crust of gray-colored ice formed on a calm sea; characterized by a matte surface, and easily bent by waves and thrust into a pattern of interlocking fingers.

nile [NUCLEO] A unit of reactivity; the reactivity of a reactor in niles is equal to $100(1 - 1/k)$, where k is the effective multiplication factor.

Nilionidae [INV ZOO] The false ladybird beetles, a family of coleopteran insects in the superfamily Tenebrionoidea.

nilmanifold [MATH] The factor space of a connected nilpotent Lie group by a closed subgroup.

nilpotent [MATH] An element of some algebraic system which vanishes when raised to a certain power.

nimbostratus [METEOROL] A principal cloud type, or cloud genus, gray-colored and often dark, rendered diffuse by more or less continuously falling rain, snow, or sleet of the ordinary varieties, and not accompanied by lightning, thunder, or hail; in most cases the precipitation reaches the ground.

nimbus [ASTRON] *See* halo. [METEOROL] A characteristic rain cloud; the term is not used in the international cloud classification except as a combining term, as cumulonimbus.

nim oil *See* neem oil.

N indicator *See* N scope.

nine-j symbol [QUANT MECH] A coefficient used in the general recoupling of four angular momenta, as in a transformation from *L-S* to *j-j* coupling in a two-electron system. Also known as X coefficient.

nine-light indicator [ENG] A remote indicator for wind speed and direction used in conjunction with a contact anemometer and a wind vane; the indicator consists of a center light, connected to the contact anemometer, surrounded by eight equally spaced lights which are individually connected to a set of similarly spaced electrical contacts on the wind vane; wind speed is determined by counting the number of flashes of the center light during an interval of time; direction, indicated by the position of illuminated outer bulbs, is given to points of the compass.

nine's complement [COMPUT SCI] The radix-minus-1 complement of a numeral whose radix is 10.

ninety-column card [COMPUT SCI] A card, punched or to be punched, divided in half horizontally, each half containing 45 columns, and each column containing six punch positions.

ninety-six-column card [COMPUT SCI] A punch card divided into three parts horizontally, each third containing 32 columns, and each column containing six punch positions.

ninhydrin [ORG CHEM] $C_9H_4O_3 \cdot H_2O$ White crystals or powder with a melting point of 240–245°C; soluble in water and alcohol; used for the detection and assay of peptides, amines, amino acids, and amino sugars. Also known as triketohydrindene hydrate.

niningerite [MINERAL] (Mg,Fe,Mn)S A mineral found only in meteorites.

ninon [TEXT] A sheer crisp fabric in plain weave of silk, nylon, or rayon.

niobe oil *See* methyl benzoate.

niobic acid [INORG CHEM] $Nb_2O_5 \cdot nH_2O$ Family of hydrates; white precipitate, soluble in inorganic acids and bases, insoluble in water; its formation is part of the analytical determination of niobium.

niobite *See* columbite.

niobium [CHEM] A chemical element, symbol Nb, atomic number 41, atomic weight 92.906. [MET] A platinum-gray, ductile metal with brilliant luster; used in alloys, especially stainless steels. Also known as columbium.

niobium carbide [INORG CHEM] NbC A lavender gray powder with a melting point of 3500°C; used for carbide-tipped tools and special steels.

nip [GEOL] **1.** A small, low cliff or break in slope which is produced by wavelets at the high-water mark. **2.** The point on the bank of a meander lake where erosion takes place due to crowding of the stream current toward the lake. **3.** Thinning of a coal seam, particularly if caused by tectonic movements. Also known as want. [MET] *See* angle of nip. [MIN ENG] *See* squeeze.

Nipher shield [ENG] A conically shaped, copper, rain-gage shield; used to prevent the formation of vertical wind eddies in the vicinity of the mouth of the gage, thereby making the rainfall catch a representative one.

Nipkow disk [COMPUT SCI] In optical character recognition, a disk having one or more spirals of holes around the outer edge, with successive openings positioned so that rotation of the disk provides mechanical scanning, as of a document.

nippers [DES ENG] Small pincers or pliers for cutting or gripping.

nipping [NAV] The forcible closing of ice around a vessel so that it is held fast by ice under pressure.

nipple [ANAT] The conical projection in the center of the mamma, containing the outlets of the milk ducts. [DES ENG] A short piece of tubing, usually with an internal or external thread at each end, used to couple pipes.

nipple chaser [ENG] A member of a drilling crew who procures and delivers the tools and equipment necessary for an operation.

Nippotaeniidea [INV ZOO] An order of tapeworms of the subclass Cestoda including some internal parasites of certain fresh-water fishes; the head bears a single terminal sucker.

Nissen stamp [MIN ENG] **1.** Machine used in crushing rock to sand sizes. **2.** An individual stamp worked in its own circular mortar box.

Nissl bodies [CYTOL] Chromophil granules of nerve cells which ultrastructurally are composed of large ribosomes.

nit [COMMUN] A unit of information content such that the information content of a symbol or message in nits is the negative of the natural logarithm of the probability of selecting that symbol or message from all the symbols or messages which could have been chosen. Also known as nepit. [OPTICS] A unit of luminance, equal to 1 candela per square meter. Abbreviated nt.

Nitelleae [BOT] A tribe of stoneworts, order Charales, characterized by 10 cells in two tiers of five each composing the apical crown.

niter *See* potassium nitrate.

niter balls [MATER] A pellet form of potassium nitrate, used as a fertilizer. Also known as sal prunella; throat balls.

niter cake *See* sodium bisulfate.

Nitidulidae [INV ZOO] The sap-feeding beetles, a large family of coleopteran insects in the superfamily Cucujoidea; individuals have five-jointed tarsi and antennae with a terminal three-jointed clavate expansion.

nitralin [ORG CHEM] $C_{13}H_{19}N_3O_6S$ A light yellow to orange, crystalline compound with a melting point of 151–152°C; slight solubility in water; used as a preemergence herbicide for weed control for cotton, food crops, and ornamentals. Also known as 4-(methylsulfonyl)-2,6-dinitro-*N*,*N*-dipropylaniline.

***meta*-nitraniline** *See meta*-nitroaniline .

***ortho*-nitraniline** *See ortho*-nitroaniline.

***para*- nitraniline** *See para*-nitroaniline.

nitrate [CHEM] **1.** A salt or ester of nitric acid. **2.** Any compound containing the NO_3^- radical.

nitrate mineral [MINERAL] Any of several generally rare minerals characterized by a fundamental ionic structure of NO_3^-; examples are soder niter, niter, and nitrocalcite.

nitratine *See* soda niter.

nitrating acid [INORG CHEM] Sulfuric-nitric acid mix used to nitrate cellulosics and aromatic chemicals. Also known as mixed acid.

nitration [ORG CHEM] Introduction of an NO_2^- group into an organic compound.

nitrene [ORG CHEM] A molecular fragment that is an uncharged, electron-deficient species containing a monocovalent nitrogen.

nitric acid [INORG CHEM] HNO_3 Strong oxidant that is fire-hazardous; colorless or yellowish liquid, miscible with water; boils at 86°C; used for chemical synthesis, explosives, and fertilizer manufacture, and in metallurgy, etching, engraving, and ore flotation. Also known as aqua fortis.

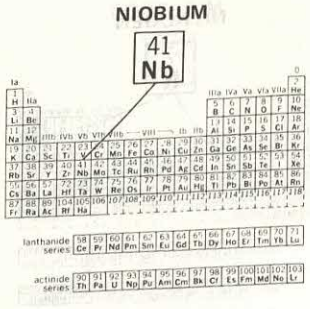
nitric oxide [INORG CHEM] NO A colorless gas that, at room temperature, reacts with oxygen to form nitrogen dioxide (NO_2, a reddish-brown gas); may be used to form other compounds.

nitride [INORG CHEM] Compound of nitrogen and a metal, such as Mg_3N_2.

nitride nuclear fuel [NUCLEO] Fissionable nuclear fuel in nitride form, such as UN and UN_2.

nitriding [MET] Surface hardening of steel by formation of

NIOBIUM



Periodic table of the chemical elements showing the position of niobium.

nitrides; nitrogen is introduced into the steel usually by heating in gaseous ammonia.

nitrification [MICROBIO] Formation of nitrous and nitric acids or salts by oxidation of the nitrogen in ammonia; specifically, oxidation of ammonium salts to nitrites and oxidation of nitrites to nitrates by certain bacteria.

nitrifying bacteria [MICROBIO] Members of the family Nitrobacteraceae.

nitrile [ORG CHEM] RC≡N Cyanide derived by removal of water from an acid amide.

nitrile-butadiene rubber *See* nitrile rubber.

nitrile rubber [MATER] A synthetic rubber formed by polymerization of acrylonitrile with butadiene; the structure of the polymer is $—CH_2CH=CHCH_2CH_2CH(CN)—$. Also known as acrylonitrile-butadiene rubber; acrylonitrile rubber; NBR; nitrile-butadiene rubber; NR.

nitrilotriacetic acid [ORG CHEM] $N(CH_2COOH)_3$ A white powder, melting point 240°C, with some decomposition; soluble in water; it is toxic, and birth abnormalities may result from ingestion; may be used as a chelating agent in the laboratory. Also known as NTA; TGA; triglycine; triglycolamic acid.

nitrite [CHEM] A compound containing the radical NO_2^-; can be organic or inorganic.

nitro- [CHEM] Chemical prefix showing the presence of the NO_2^- radical.

nitroalkane [ORG CHEM] A compound, with the general formula RNO_2, in which the hydrogen atom of an alkane molecule has been replaced by a nitro group.

***meta*-nitroaniline** [ORG CHEM] $NO_2C_6H_4NH_2$ Yellow crystals that melt at 112.5°C; a toxic material; used as a dye intermediate. Also known as *meta*-nitraniline.

***ortho*-nitroaniline** [ORG CHEM] $NO_2C_6H_4NH_2$ Orange-red crystals that melt at 69.7°C, soluble in ethanol; a toxic material; used to manufacture dyes. Also known as *ortho*-nitraniline.

***para*-nitroaniline** [ORG CHEM] $NO_2C_6H_4NH_2$ Yellow crystals that melt at 148°C; insoluble in water, soluble in ethanol; a toxic material; used to make dyes, and as a corrosion inhibitor. Also known as *para*-nitraniline.

nitroaromatic [ORG CHEM] A nitrated benzene or benzene derivative, such as nitrobenzene, $C_6H_5NO_2$, or nitrobenzoic acid, $NO_2{\cdot}C_6H_4{\cdot}COOH$.

Nitrobacter [MICROBIO] A genus of short, rod-shaped (often wedge- or pear-shaped) bacteria in the family Nitrobacteraceae; cells oxidize nitrites to nitrates.

Nitrobacteraceae [MICROBIO] The nitrifying bacteria, a family of gram-negative, chemolithotrophic bacteria; autotrophs which derive energy from nitrification of ammonia or nitrite, and obtain carbon for growth by fixation of carbon dioxide.

nitrobarite *See* barium nitrate.

nitrobenzene [ORG CHEM] $C_6H_5NO_2$ Greenish crystals or a yellowish liquid, melting point 5.70°C; a toxic material; used in aniline manufacture. Also known as oil of mirbane.

***ortho*-nitrobiphenyl** [ORG CHEM] $C_{12}H_9NO_2$ A crystalline compound with a sweetish odor; melting point is 36.7°C; used as a plasticizer for resins, cellulose acetate and nitrate, and polystyrenes, and as a fungicide for textiles. Abbreviated ONB.

nitrobromoform *See* bromopicrin.

nitrocalcite *See* calcium nitrate.

nitrocellulose *See* cellulose nitrate.

nitrocellulose propellant [MATER] A single-base propellant whose main constituent is nitrocellulose, with only minor percentages of additives for stabilizing and other purposes.

Nitrococcus [MICROBIO] A genus of bacteria in the family Nitrobacteraceae; spherical cells which oxidize nitrite to nitrate.

nitrocotton *See* cellulose nitrate.

nitro dye [ORG CHEM] A dye with the NO_2 chromophore group in the molecules.

nitroethane [ORG CHEM] $CH_3CH_2NO_2$ A colorless liquid, slightly soluble in water; boils at 114°C; used as a solvent for cellulosics, resins, waxes, fats, and dyestuffs, and as a chemical intermediate.

nitro explosive [ORG CHEM] Explosive compound containing one or more NO_2^- groups, such as nitroglycerine, $C_3H_5(ONO_2)_3$, or trinitrotoluene, $C_6H_2(CH_3)(NO_2)_3$.

nitrogelatin *See* gelatin dynamite.

nitrogen [CHEM] A chemical element, symbol N, atomic number 1, atomic weight 14.0067; it is a gas, diatomic (N_2) under normal conditions; about 78% of the atmosphere is N_2; in the combined form the element is a constituent of all proteins.

nitrogen acid anhydride *See* nitrogen pentoxide.

nitrogenase [BIOCHEM] An enzyme that catalyzes a six-electron reduction of N_2 in the process of nitrogen fixation.

nitrogenated oil [MATER] A class of essential oils containing carbon, hydrogen, oxygen, and nitrogen; an example is oil of bitter almonds.

nitrogen balance [GEOCHEM] The net loss or gain of nitrogen in a soil. [PHYSIO] The difference between nitrogen intake (as protein) and total nitrogen excretion for an individual.

nitrogen cycle *See* carbon-nitrogen cycle.

nitrogen dioxide [INORG CHEM] NO_2 A reddish-brown gas; it exists in varying degrees of concentration in equilibrium with other nitrogen oxides; used to produce nitric acid. Also known as dinitrogen tetroxide; liquid dioxide; nitrogen peroxide; nitrogen tetroxide.

nitrogen fixation [CHEM ENG] Conversion of atmospheric nitrogen into compounds such as ammonia, calcium cyanamide, or nitrogen oxides by chemical or electric-arc processes. [MICROBIO] Assimilation of atmospheric nitrogen by heterotrophic bacteria. Also known as dinitrogen fixation.

nitrogen monoxide *See* nitrous oxide.

nitrogen mustard [ORG CHEM] Any of the substituted mustard gases in which the sulfur is replaced by an amino nitrogen, such as for methyl bis(2-chlorethyl)amine, $(CH_2ClCH_2)_2NCH_3$; useful in cancer research.

nitrogen narcosis [MED] Narcosis caused by gaseous nitrogen at high pressure in the blood; produced in divers breathing air at depths of 100 feet (30 meters) or more. Also known as rapture of the deep.

nitrogenous fertilizer [MATER] Fertilizer materials, natural or synthesized, containing nitrogen available for fixation by vegetation, such as potassium nitrate, KNO_3, or ammonium nitrate, NH_4NO_3.

nitrogen pentoxide [INORG CHEM] N_2O_5 Colorless crystals, soluble in water (forms HNO_3); decomposes at 46°C. Also known as nitrogen acid anhydride.

nitrogen peroxide *See* nitrogen dioxide.

nitrogen sequence [ASTRON] Wolf-Rayet stars in which nitrogen emission bands dominate the spectrum.

nitrogen solution [INORG CHEM] Mixture used to neutralize super-phosphate in fertilizer manufacture; consists of 60% ammonium nitrate, and the balance a 50% aqua ammonia solution.

nitrogen tetroxide *See* nitrogen dioxide.

nitrogen trifluoride [INORG CHEM] NF_3 A colorless gas that has a melting point of −206.6°C and a boiling point of −128.8°C; used as an oxidizer for high-energy fuels.

nitrogen trioxide [INORG CHEM] N_2O_3 Green, water-soluble liquid; boils at 3.5°C.

nitroglycerin [ORG CHEM] $CH_2NO_3CHNO_3CH_2NO_3$ Highly unstable, explosive, flammable pale-yellow liquid; soluble in alcohol; freezes at 13°C and explodes at 260°C; used as an explosive, to make dynamite, and in medicine.

nitroglycerin powder [MATER] Any explosive characterized by a low nitroglycerin content, up to 10%, and a high ammonium nitrate content of 80–85%, with carbonaceous material forming the remainder.

nitroguanidine [ORG CHEM] $H_2NC(NH)NHNO_2$ Explosive yellow solid, soluble in alcohol; melts at 246°C; used in explosives and smokeless powder.

nitrohydrochloric acid *See* aqua regia.

2-nitro-1-hydroxybenzene-4-arsonic acid *See* 4-hydroxy-3-nitrobenzenearsonic acid.

nitromagnesite [MINERAL] $Mg(NO_3)_2{\cdot}6H_2O$ Mineral consisting of magnesium nitrate, occurring as an efflorescence in limestone caverns.

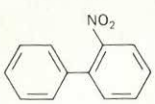
nitromannite *See* mannitol hexanitrate.

nitromannitol *See* mannitol hexanitrate.

nitrometer [ANALY CHEM] Glass apparatus used to collect and measure nitrogen and other gases evolved by a chemical reaction. Also known as azotometer.

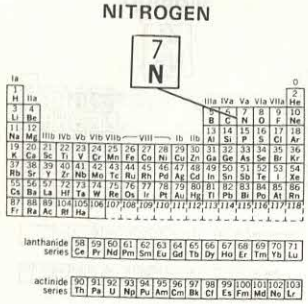
nitromethane [ORG CHEM] CH_3NO_2 A liquid nitro-paraffin compound; oily and colorless; boils at 101°C; used as a monopropellant for rockets, in chemical synthesis, and as an industrial solvent for cellulosics, resins, waxes, fats, and dyestuffs.

ORTHO-NITROBIPHENYL



Structural formula.

NITROGEN



Periodic table of the chemical elements showing the position of nitrogen.

nitromuriatic acid *See* aqua regia.

nitron [ORG CHEM] $CN_4(C_6H_5)_3CH$ Yellow crystals, soluble in chloroform and acetone; used as reagent to detect NO_3 ion in dilute solutions. Also known as diphenylenedianilinohydrotriazole.

nitronium [CHEM] Positively charged NO_2 ion, believed to be formed from HNO_3.

nitroparaffin [ORG CHEM] Any organic compound in which one or more hydrogens of a paraffinic hydrocarbon are replaced by a nitro, or NO_2^-, group, such as nitromethane, CH_3NO_2, or nitroethane, $C_2H_5NO_2$; used as a solvent and a chemical intermediate.

nitrophenide [PHARM] $(NO_2C_6H_4)_2S$ Yellow crystals with a melting point of 83°C; soluble in ether; used in veterinary medicine and pharmaceuticals manufacture.

***ortho*-nitrophenol** [ORG CHEM] $C_6H_5NO_3$ A yellow, crystalline compound; melting point is 44–45°C; soluble in hot water, alcohol, benzene, ether, carbon disulfide, and alkali hydroxides; used in the commercial preparation of many compounds.

nitrophenolarsonic acid *See* 4-hydroxy-3-nitrobenzenearsonic acid.

***para*-nitrophenylazosalicylate sodium** *See* alizarin yellow.

***para*-nitrophenylhydrazine** [ORG CHEM] $C_6H_7N_3O_2$ An orange-red, crystalline compound with a melting point of about 157°C; soluble in hot water or hot benzene; used as a reagent for aliphatic aldehydes and ketones.

***para*-nitrophenyl α,α,α-trifluoro-2-nitro-*para*-tolyl ether** *See* fluorodifen.

nitrophosphate [MATER] A nitrogen-phosphorus fertilizer made by reacting nitric acid with phosphate rock.

nitrophyte [BOT] A plant that requires nitrogen-rich soil for growth.

1-nitropropane [ORG CHEM] $CH_3CH_2CH_2NO_2$ A colorless liquid with a boiling point of 132°C; used as a rocket propellant and gasoline additive.

2-nitropropane [ORG CHEM] $CH_3CHNO_2CH_3$ A colorless liquid with a boiling point of 120°C; used as a solvent for vinyl coatings, as a rocket propellant, and as a gasoline additive.

nitroso [CHEM] The radical NO^- with trivalent nitrogen. Also known as hydroximino; oximido.

Nitrosococcus [MICROBIO] A genus of bacteria in the family Nitrobacteraceae; spherical cells which oxidize ammonia to nitrite.

Nitrosolobus [MICROBIO] A genus of bacteria in the family Nitrobacteraceae; cells are lobate and partially compartmentalized by plasma membranes; organisms oxidize ammonia to nitrite.

Nitrosomonas [MICROBIO] A genus of bacteria in the family Nitrobacteraceae; straight, rod-shaped cells which oxidize ammonia to nitrite.

nitrosophenylhydroxylamine *See* cupferron.

Nitrospina [MICROBIO] A genus of bacteria in the family Nitrobacteraceae; rod-shaped cells are long and slender; nitrite is oxidized to nitrate.

Nitrospira [MICROBIO] A genus of bacteria in the family Nitrobacteraceae; spiral cells which oxidize ammonia to nitrite.

nitrostarch [ORG CHEM] $C_{12}H_{12}(NO_2)_8O_{10}$ Orange powder, soluble in ethyl alcohol; used in explosives. Also known as starch nitrate.

***meta*-nitrotoluene** [ORG CHEM] $NO_2C_6H_4CH_3$ Yellow powder that melts at 15°C; insoluble in water; used in organic synthesis. Also known as *meta*-methylnitrobenzene.

***ortho*-nitrotoluene** [ORG CHEM] $NO_2C_6H_4CH_3$ A yellow liquid boiling at 220.4°C; insoluble in water; used to produce toluidine and dyes. Also known as *ortho*-methylnitrobenzene.

***para*-nitrotoluene** [ORG CHEM] $NO_2C_6H_4CH_3$ Yellow crystals that melt at 51.7°C; insoluble in water, soluble in ethanol; used to produce toluidine and to manufacture dyes. Also known as *para*-methylnitrobenzene.

nitrourea [ORG CHEM] $NH_2CONHNO_2$ Highly explosive white crystals, melting at 159°C; soluble in ether and alcohol, slightly soluble in water; used as a chemical intermediate.

nitrous acid [INORG CHEM] HNO_2 Aqueous solution of nitrogen trioxide, N_2O_3.

nitrous oxide [INORG CHEM] N_2O. Colorless, sweet-tasting gas, boiling at -90°C; slightly soluble in water, soluble in alcohol; used as a food aerosol, and as an anesthetic in dentistry and surgery. Also known as laughing gas; nitrogen monoxide.

nitroxanthic acid *See* picric acid.

nitroxylene [ORG CHEM] $C_6H_3(CH_3)_2NO_2$ Any of three isomers occurring either as a yellow liquid or as crystalline needles with a melting point of 2°C and boiling point of 246°C; soluble in alcohol and ether; used in gelatinizing accelerators for pyroxylin. Also known as dimethylnitrobenzene.

nitryl halide [INORG CHEM] NO_2X Compound containing a halide (X) and a nitro group (NO_2).

nival [ECOL] **1.** Characterized by or living in or under the snow. **2.** Of or pertaining to a snowy environment.

nival gradient [GEOL] The angle between a nival surface and the horizon.

nival surface [GEOL] The hypothetical planar surface containing all of the different snowlines of the same geologic time period.

nivation [GEOL] Rock or soil erosion beneath a snowbank or snow patch, due mainly to frost action but also involving chemical weathering, solifluction, and meltwater transport of weathering products. Also known as snow patch erosion.

nivation cirque *See* nivation hollow.

nivation glacier [HYD] A small, newly formed glacier; represents the initial stage of glaciation. Also known as snowbank glacier.

nivation hollow [GEOL] A small, shallow depression formed, and occupied during part of the year, by a snow patch or snowbank that, through nivation, is thought to initiate glaciation. Also known as nivation cirque; snow niche.

nivation ridge *See* winter-talus ridge.

niveal [GEOL] Property of features and effects resulting from the action of snow and ice.

nivenite [MINERAL] UO_2 A velvet-black member of the uranite group; contains rare-earth metals cerium and yttrium; a source of uranium.

niveoglacial [GEOL] Pertaining to the combined action of snow and ice.

niveolian [GEOL] Pertaining to simultaneous accumulation and intermixing of snow and airborne sand at the side of a gentle slope.

niveous *See* niveus.

niveus [BIOL] Snow-white in color. Also spelled niveous.

NIXIE display indicator *See* NIXIE Tube.

NIXIE Tube [ELECTR] Trademark of Burroughs Corporation for a cold-cathode gas readout tube having a common anode and 10 different metallic cathodes, each formed in the shape of a different numeral, alphabetic character, or special symbol; the desired character is surrounded with a brilliant glow when the corresponding cathode is energized. Also known as NIXIE display indicator.

Nix Olympica *See* Olympus Mons.

N-level address [COMPUT SCI] A multilevel address specifying *N* levels of addressing.

N-level logic [ELECTR] An arrangement of gates in a digital computer in which not more than *N* gates are connected in series.

NLGI number [ENG] One of a series of numbers developed by the National Lubricating Grease Institute and used to classify the consistency range of lubricating greases; NLGI numbers are based on the ASTM cone penetration number.

N line [SPECT] One of the characteristic lines in an atom's x-ray spectrum, produced by excitation of an *N* electron.

N-m *See* newton-meter of torque.

N-modular redundancy [COMPUT SCI] A generalization of triple modular redundancy in which there are *N* identical units, where *N* is any odd number.

NMR *See* nuclear magnetic resonance.

NMRR *See* normal-mode rejection ratio.

NMR tomography *See* zeugmatography.

nn junction [ELECTR] In a semiconductor, a region of transition between two regions having different properties in *n*-type semiconducting material.

n-n′ reactions *See* neutron inelastic scattering reactions.

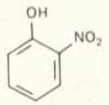
No *See* nobelium.

no-address instruction [COMPUT SCI] An instruction which a computer can carry out without using an operand from storage.

no-atmospheric control [AERO ENG] Any device or system designed or set up to control a guided rocket missile, rocket craft, or the like outside the atmosphere or in regions where the atmosphere is of such tenuity that it will not affect aerodynamic controls.

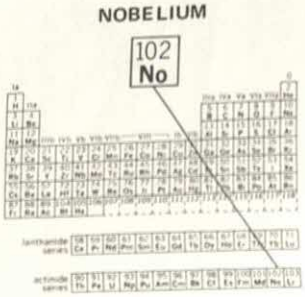
nobelium [CHEM] A chemical element, symbol No, atomic

ORTHO-NITROPHENOL



Structural formula.

NOBELIUM



Periodic table of the chemical elements showing the position of nobelium.

number 102, atomic weight 254 when the element is produced in the laboratory; a synthetic element, in the actinium series.

noble gas [CHEM] A gas in group 0 of the periodic table of the elements; it is monatomic and, with limited exceptions, chemically inert. Also known as inert gas.

noble metal [MET] A metal, or alloy, such as gold, silver, or platinum having high resistance to corrosion and oxidation; used in the construction of thin-film circuits, metal-film resistors, and other metal-film devices.

noble potential [PHYS CHEM] A potential equaling or approaching that of the noble elements, such as gold, silver, or copper, of the electromotive series.

no-bottom sounding [ENG] A sounding in the ocean in which the bottom is not reached.

no-break power [ELEC] Power system designed to fulfill load requirements during the interval between the failure of the primary power and the time the auxiliary power can be made available.

Nocardia [MICROBIO] A genus of bacteria in the family Nocardiaceae; mycelium production is sparse to abundant; reproduction is by mycelial fragments.

Nocardiaceae [MICROBIO] A family of aerobic bacteria in the order Actinomycetales; mycelium and spore production is variable.

nocardiosis [MED] Infection by species of the fungus *Nocardia* characterized by spreading granulomatous lesions.

nocerite *See* fluoborite.

nocioceptive reflex *See* flexion reflex.

noct-, nocti-, nocto-, noctu- [SCI TECH] Combining form meaning night.

noctalbuminuria [MED] Excretion of protein in night urine only.

Noctilionidae [VERT ZOO] The fish-eating bats, a tropical American monogeneric family of the Chiroptera having small eyes and long, narrow wings.

noctilucent cloud [METEOROL] A cloud of unknown composition which occurs at great heights and high altitudes; photometric measurements have located such clouds between 75 and 90 kilometers; they resemble thin cirrus, but usually with a bluish or silverish color, although sometimes orange to red, standing out against a dark night sky.

noctiphobia [PSYCH] Abnormal fear of night or darkness.

Noctuidae [INV ZOO] A large family of dull-colored, medium-sized moths in the superfamily Noctuoidea; larva are mostly exposed foliage feeders, representing an important group of agricultural pests.

Noctuoidea [INV ZOO] A large superfamily of lepidopteran insects in the suborder Heteroneura; most are moderately large moths with reduced maxillary palpi.

nocturnal emission [PHYSIO] Normal, involuntary seminal discharge occurring during sleep in males after puberty.

nocturnal enuresis [MED] Involuntary nocturnal urination during sleep.

nocturnal radiation *See* effective terrestrial radiation.

no-cut rounds [MIN ENG] Set of holes drilled straight into the face for blasting underground.

NODA *See* *n*-octyl *n*-decyl adipate.

nodal analysis [ELEC] A method of electrical circuit analysis in which potential differences are taken as independent variables and the sum of the currents flowing into a node is equated to 0.

nodal line [ASTRON] The line passing through the ascending and descending nodes of the orbit of a celestial body. [PHYS] **1.** A line or curve in a two-dimensional standing-wave system, such as a vibrating diaphragm, where some specified characteristic of the wave, such as velocity of pressure, does not oscillate. **2.** A line which remains fixed during some deformation or rotation of a body or coordinate system.

nodal points [ELEC] Junction points in a transmission system; the automatic switches and switching centers are the nodal points in automated systems. [OCEANOGR] The no-tide points in amphidromic regions. [OPTICS] A pair of points on the axis of an optical system such that an incident ray passing through one of them results in a parallel emergent ray passing through the other.

nodal rhythm [PHYSIO] A cardiac rhythm characterized by pacemaker function originating in the atrioventricular node, with a heart rate of 40–70 per minute.

nodal tachycardia [MED] A cardiac arrhythmia characterized by a heart rate of 140–220 per minute.

nodal tissue [HISTOL] **1.** Tissue from the sinoatrial node, and the atrioventricular node and bundle and its branches, composed of a dense network of Purkinje fibers. **2.** Tissue from a lymph node.

nodal zone [OCEANOGR] A zone in which there is a change in the prevailing direction of the littoral transport.

node [ANAT] **1.** A knob or protuberance. **2.** A small, rounded mass of tissue, such as a lymph node. **3.** A point of constriction along a nerve. [ASTRON] **1.** One of two points at which the orbit of a planet, planetoid, or comet crosses the plane of the ecliptic. **2.** One of two points at which a satellite crosses the equatorial plane of its primary. [ELEC] *See* branch point. [ELECTR] A junction point within a network. [GEOL] That point along a fault at which the direction of apparent displacement changes. [MATH] *See* crunode. [PHYS] A point, line, or surface in a standing-wave system where some characteristic of the wave has essentially zero amplitude.

node cycle [ASTRON] The period of time needed for the regression of the moon's nodes to conclude a circuit of 360° of longitude; approximately equal to 18.61 Julian years.

node of Ranvier [ANAT] The region of a local constriction in a myelinated nerve; formed at the junction of two Schwann cells.

nodical month [ASTRON] The average period of revolution of the moon about the earth with respect to the moon's ascending node, a period of 27 days 5 hours 5 minutes 35.8 seconds, or approximately 27¼ days. Also known as draconitic month.

Nodosariacea [INV ZOO] A superfamily of Foraminiferida in the suborder Rotaliina characterized by a radial calcite test wall with monolamellar septa, and a test that is coiled, uncoiled, or spiral about the long axis.

nodose [BIOL] Having many or noticeable protuberances; knobby.

no-draft forging [MET] A forging designed with little or no taper for removal from dies, and with extremely fine tolerances for closer control of grain flow during production of the final part.

nodular [SCI TECH] Occurring in the form of small, rounded lumps.

nodular cast iron [MET] Cast iron treated in the molten state with a master alloy containing an element such as magnesium which favors formation of spheroidal graphite. Also known as ductile iron; spheroidal graphite cast iron.

nodular chert [GEOL] Chert occurring as nodular or concretionary segregations (chert nodules).

nodular goiter *See* adenomatous goiter.

nodular powder [MET] Irregularly shaped metal powder particles.

nodule [ANAT] **1.** A small node. **2.** A small aggregation of cells. [GEOL] A small, hard mass or lump of a mineral or mineral aggregate characterized by a contrasting composition from and a greater hardness than the surrounding sediment or rock matrix in which it is embedded. [MED] A primary skin lesion, seen as a circumscribed solid elevation.

nodules of the semilunar valves [ANAT] Small nodes in the midregion of the pulmonary and aortic semilunar valves.

nodulizing [ENG] Creation of spherical lumps from powders by working them together, coalescing them with binders, drying fluid-solid mixtures, heating, or chemical reaction.

nodulose [BIOL] Having minute nodules or fine knobs.

Noeggerathiales [PALEOBOT] A poorly defined group of fossil plants whose geologic range extends from Upper Carboniferous to Triassic.

Noetherian ring [MATH] A ring in which every nested family of ideals possesses only a finite number of members.

no-fines concrete [MATER] Concrete made without sand and therefore containing a high proportion of communicating pores which provide thermal insulation and drainage.

No. 6 fuel *See* bunker C fuel oil.

nog [MIN ENG] **1.** Roof support for stopes, formed of rectangular piles of logs squared at the ends and filled with waste rock. **2.** A wood block wedged tightly into the cut in a coal seam after the coal cutter has passed; it forms a temporary support.

nogalamycin [MICROBIO] $C_{39}H_{45}NO_{16}$ An antineoplastic antibiotic produced by *Streptomyces nogalaster*.

no-go gage [ENG] A limit gage designed not to fit a part being tested; usually employed with a go gage to set the acceptable maximum and minimum dimension limits of the part.

noil [TEXT] Short-staple, wool fiber combings used in the manufacture of worsted fabrics.

noise [ACOUS] Sound which is unwanted, either because of its effect on humans, its effect on fatigue or malfunction of physical equipment, or its interference with the perception or detection of other sounds. [ELEC] Interfering and unwanted currents or voltages in an electrical device or system.

noise analysis [PHYS] Determination of the frequency components that make up a particular noise being studied.

noise analyzer [ELECTR] A device used for noise analysis.

noise-canceling microphone *See* close-talking microphone.

noise control [ACOUS] The process of obtaining an acceptable noise environment for a particular observation point or receiver, involving control of the noise source, transmission path, or receiver, or all three.

noise digit [COMPUT SCI] A digit, usually 0, inserted into the rightmost position of the mantissa of a floating point number during a left-shift operation associated with normalization. Also known as noisy digit.

noise equivalent temperature difference [THERMO] The change in equivalent blackbody temperature that corresponds to a change in radiance which will produce a signal-to-noise ratio of 1 in an infrared imaging device. Abbreviated NETD.

noise factor [ELECTR] The ratio of the total noise power per unit bandwidth at the output of a system to the portion of the noise power that is due to the input termination, at the standard noise temperature of 290 K. Also known as noise figure.

noise figure *See* noise factor.

noise filter [ELECTR] **1.** A filter that is inserted in an alternating-current power line to block noise interference that would otherwise travel through the line in either direction and affect the operation of receivers. **2.** A filter used in a radio receiver to reduce noise, usually an auxiliary low-pass filter which can be switched in or out of the audio system.

noise generator [ELECTR] A device which produces (usually random) electrical noise, for use in tests of the response of electrical systems to noise, and in measurements of noise intensity. Also known as noise source.

noise grade [COMMUN] Number which defines the relative noise at a particular location with respect to other locations throughout the world.

noise improvement factor [COMMUN] In pulse modulation, the receiver output signal-to-noise ratio divided by the receiver input signal-to-noise ratio. Abbreviated NIF. Also known as improvement factor; signal-to-noise improvement factor.

noise jammer [ELECTR] **1.** An electronic jammer that emits a carrier modulated with recordings or synthetic reproductions of natural atmospheric noise; the radio-frequency carrier may be suppressed; used to discourage the enemy by simulating naturally adverse communications conditions. **2.** During World War II, a powerful transmitter modulated with white noise tuned to the approximate frequency of an enemy transmitter and used to obscure intelligible output at the receiver.

noise killer [ELECTR] **1.** Device installed in a circuit to reduce its interference to other circuits. **2.** *See* noise suicide circuit.

noiseless channel [COMMUN] In information theory, a communications channel in which the effects of random influences are negligible, and there is essentially no random error.

noise level [PHYS] The intensity of unwanted sound, or the magnitude of unwanted currents or voltages, averaged over a specified frequency range and time interval, and weighted with frequency in a specified manner; usually expressed in decibels relative to a specified reference.

noise limiter [ELECTR] A limiter circuit that cuts off all noise peaks that are stronger than the highest peak in the desired signal being received, thereby reducing the effects of atmospheric or man-made interference. Also known as noise silencer; noise suppressor.

noise measurement [ACOUS] The process of quantitatively determining one or more properties of acoustic noise. [ELECTR] Any of a wide range of measurements of random and nonrandom electrical noise, but usually noise-power measurement.

noise-metallic [ELECTR] In telephone communications, weighted noise current in a metallic circuit at a given point when the circuit is terminated at that point in the nominal characteristic impedance of the circuit.

noise-modulated jamming [ELECTR] Random electronic noise that appears at the radar receiver as background noise and tends to mask the desired radar echo or radio signal.

noise pollution [ACOUS] Excessive noise in the human environment.

noise-power measurement [ELECTR] Measurement of the power carried by electrical noise averaged over some brief interval of time, usually by amplifying noise from the source in a linear amplifier and then using a quadratic detector followed by a low-pass filter and an indicating device.

noise radial [ENG] The brightening of all range points on a particular plan position indicator bearing on a radar screen caused by noise reception from the indicated direction.

noise rating number [ACOUS] The perceived noise level of the noise that can be tolerated under specified conditions; for example, the noise rating number of a bedroom is 25, that of a workshop is 65.

noise-reducing antenna system [ELECTROMAG] Receiving antenna system so designed that only the antenna proper can pick up signals; it is placed high enough to be out of the noise-interference zone, and is connected to the receiver with a shielded cable or twisted transmission line that is incapable of picking up signals.

noise reduction [ENG ACOUS] A process whereby the average transmission of the sound track of a motion picture print, averaged across the track, is decreased for signals of low level; since background noise introduced by the sound track is less at low transmission, this process reduces noise during soft passages.

noise reduction coefficient [ACOUS] The average over the logarithm of frequency, in the frequency range from 256 to 2048 hertz inclusive, of the sound absorption coefficient of a material.

noise silencer *See* noise limiter.

noise source *See* noise generator.

noise suicide circuit [ELECTR] A circuit which reduces the gain of an amplifier for a short period whenever a sufficiently large noise pulse is received. Also known as noise killer.

noise suppression [ELECTR] Any method of reducing or eliminating the effects of undesirable electrical disturbances, as in frequency modulation whenever the signal carrier level is greater than the noise level.

noise suppressor [ELECTR] **1.** A circuit that blocks the audio-frequency amplifier of a radio receiver automatically when no carrier is being received, to eliminate background noise. Also known as squelch circuit. **2.** A circuit that reduces record surface noise when playing phonograph records, generally by means of a filter that blocks out the higher frequencies where such noise predominates. **3.** *See* noise limiter.

noise temperature [ELEC] The temperature at which the thermal noise power of a passive system per unit bandwidth would be equal to the actual noise at the actual terminals; the standard reference temperature for noise measurements is 290 K.

noise testing [ELECTR] The measurement of the power dissipated in a resistance termination of given value joined to one end of a telephone or telegraph circuit when no test power is applied to the circuit.

noise tube [ELECTR] A gas tube used as a source of white noise.

noise-type flowmeter [ENG] A flowmeter that measures the noise generated in a selected frequency band.

noise weighting [ELECTR] Use of an electrical network to obtain a weighted average over frequency of the noise power, which is representative of the relative disturbing effects of noise in a communications system at various frequencies.

noisy channel [COMMUN] In information theory, a communications channel in which the effects of random influences cannot be dismissed.

noisy digit *See* noise digit.

noisy mode [COMPUT SCI] A floating-point arithmetic procedure associated with normalization in which "1" bits, rather than "0" bits, are introduced in the low-order bit position during the left shift.

no-load current [ELEC] The current which flows in a network when the output is open-circuited.

no-load loss [ELEC] The power loss of a device that is operated at rated voltage and frequency but is not supplying power to a load.

no-load voltage *See* open-circuit voltage.

noma [MED] Spreading gangrene beginning in a mucous

NOISE-POWER MEASUREMENT

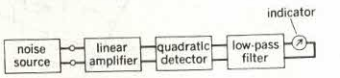


Diagram of setup for noise-power measurement.

membrane; considered to be a malignant form of infection by fusospirochetal organisms. Also known as gangrenous stomatitis.

Nomarski microscope [OPTICS] A type of interference microscope that is used to study reflecting specimens, such as metallic surfaces or metallized replicas of surfaces, and that gives a true relief image uncomplicated by variations in refractive index.

nomenclature [SCI TECH] A systematic arrangement of the distinctive names employed in any science.

nomenclature plate [ORD] Plate, usually made of metal, which is conspicuously mounted on military equipment, giving model letters, symbols, and numbers, together with other pertinent information.

nomen dubium [SYST] A proposed taxonomic name invalid because it is not accompanied by a definition or description of the taxon to which it applies.

nomen nudum [SYST] A proposed taxonomic name invalid because the accompanying definition or description of the taxon cannot be interpreted satisfactorily.

nominal band [COMMUN] Frequency band of a facsimile-signal wave equal in width to that between zero frequency and maximum modulating frequency; the frequency band occupied in the transmitting medium will, in general, be greater than the nominal band.

nominal bandwidth [COMMUN] The interval between the assigned frequency limits of a channel. [ENG] The difference between the nominal upper and lower cutoff frequencies of an acoustic or electric filter.

nominal decline rate [PETRO ENG] The negative slope of the curve representing the hydrocarbon production rate versus time for an oil gas reservoir.

nominal diameter [GEOL] The diameter computed for a hypothetical sphere which would have the same volume as the calculated volume for a specific sedimentary particle. Also known as equivalent diameter.

nominal impedance [ELEC] Impedance of a circuit under conditions at which it was designed to operate; normally specified at center of operating frequency range.

nominal line width [COMMUN] **1.** In television, the reciprocal of the number of lines per unit length in the direction of line progression. **2.** In facsimile transmission, the average separation between centers of adjacent scanning or recording lines.

nominal pass-band center frequency [ENG] The geometric mean of the nominal upper and lower cutoff frequencies of an acoustic or electric filter.

nominal size [DES ENG] Size used for purposes of general identification; the actual size of a part will be approximately the same as the nominal size but need not be exactly the same; for example, a rod may be referred to as ¼ inch, although the actual dimension on the drawing is 0.2495 inch, and in this case ¼ inch is the nominal size.

nominal stress [MET] The stress calculated by simple elasticity theory, ignoring stress raisers and plastic flow; in tensile testing of a notched specimen, the load applied at the notch divided by the initial cross-sectional area at the notch.

nominal value [ELEC] The value of some property (such as resistance, capacitance, or impedance) of a device at which it is supposed to operate, under normal conditions, as opposed to actual value.

nomogram *See* nomograph.

nomograph [MATH] A chart which represents an equation containing three variables by means of three scales so that a straight line cuts the three scales in values of the three variables satisfying the equation. Also known as abac; alignment chart; nomogram.

nonacosane [ORG CHEM] $C_{29}H_{60}$ Colorless hydrocarbon, melting at 63°C; found in beeswax and the fat of cabbage leaves.

nonadecane [ORG CHEM] $CH_3(CH_2)_{17}CH_3$ Flammable crystals, soluble in ether and alcohol, insoluble in water; melts at 32°C; used as a chemical intermediate.

nonagon [MATH] A nine-sided polygon.

nonambiguity [COMMUN] The property of a code in which any character can be recognized uniquely without reference to preceding characters or the spatial position of a character.

nonanal [ORG CHEM] $C_8H_{17}CHO$ A colorless liquid with an orange rose odor; used in perfumes and for flavoring. Also known as aldehyde C–9; *n*-nonyl aldehyde; pelargonic aldehyde.

nonane [ORG CHEM] $CH_3(CH_2)_7CH_3$ Flammable, colorless liquid, boiling at 151°C; soluble in alcohol, insoluble in water; used as a chemical intermediate. Also known as nonyl hydride.

nonanedioic acid *See* azelaic acid.

***n*-nonanoic acid** *See* pelargonic acid.

nonanol *See* *n*-nonyl alcohol.

nonanticipatory system *See* causal system.

nonaqueous [CHEM] Pertaining to a liquid or solution containing no water.

nonarithmetic shift *See* cyclic shift.

nonasphaltic road oil [MATER] Any of the nonhardening petroleum distillates or residual oils used to lay road dust; they have viscosities low enough to be applied without prior heating.

nonassociated-gas reservoir [PETRO ENG] Formation in which gaseous hydrocarbons exist as a free phase in a reservoir that is not commercially productive of crude oil.

nonatomic Boolean algebra [MATH] A Boolean algebra in which there is no element x with the property that if $y \cdot x = y$ for some y, then $y = 0$.

nonatomic measure space [MATH] A measure space in which no point has positive measure.

nonbanded coal [GEOL] Coal without lustrous bands, composed mainly of clarain or durain without nitrain.

nonbearing wall [CIV ENG] A wall that bears no vertical weight other than its own.

nonbenzenoid aromatic compound [ORG CHEM] A compound exhibiting aromatic character but not containing a benzene nucleus, or having one or more rings in a fused ring system that are not benzene rings.

nonblackbody [THERMO] A body that reflects some fraction of the radiation incident upon it; all real bodies are of this nature.

nonblocking access [COMMUN] Connection of the incoming line or trunk made within the switching center at all times, provided that the required outgoing line or trunk is not busy.

non-bore-safe [ORD] Pertaining to a fuse or booster that does not include a safety device to prevent the explosion of the main charge of a projectile prematurely, while it is still in the bore of the gun.

noncaking coal [GEOL] Hard or dull coal that does not cake when heated. Also known as free-burning coal.

Noncalcic Brown soil [GEOL] A great soil group having a slightly acidic, light-pink or reddish-brown A horizon and a light-brown or dull-red B horizon, and developed under a mixture of grass and forest vegetation in a subhumid climate. Also known as Shantung soil.

noncapillary porosity [GEOL] The property of a volume of large interstices in a rock or soil that do not hold water by capillarity.

noncarbon oil [MATER] **1.** Oil in which little or no free carbon is suspended. **2.** Oil which, upon decomposition, contributes little so-called carbon deposits.

noncentral distribution [STAT] A distribution of random variables which is not normal.

noncentral force [PHYS] A force between two particles, other than an attraction or repulsion, directed along the line connecting them; for example, a tensor force between two nucleons.

noncentral quadric [MATH] A quadric surface that does not have a point about which the surface is symmetrical; namely, an elliptic or hyperbolic paraboloid, or a quadric cylinder.

nonclastic [GEOL] Of the texture of a sediment or sedimentary rock, formed chemically or organically and showing no evidence of a derivation from preexisting rock or mechanical deposition. Also known as nonmechanical.

noncohesive *See* cohesionless.

noncombat vehicle [ORD] An unofficial term used to distinguish a vehicle not classed as a combat vehicle; that is, the vehicle lacks means for engaging in combat.

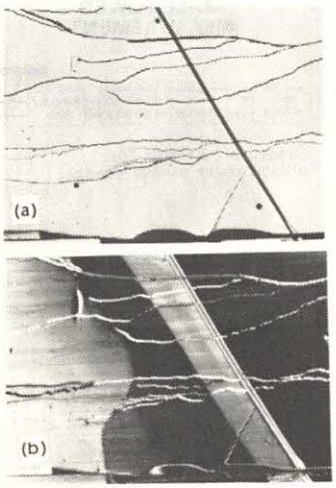
noncommunicating hydrocephaly *See* obstructive hydrocephaly.

noncompetitive inhibition [BIOCHEM] Enzyme inhibition in which the inhibitor can combine with either the free enzyme or the enzyme-substrate complex so that the inhibitor does not compete with the substrate for the enzyme.

noncompulsory reporting points [NAV] In air operations, those reports established by air-traffic control without the requirement for rule-making action.

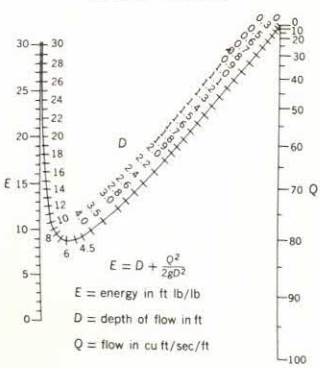
noncondensable gas [MATER] A gas from chemical or petroleum processing units (such as distillation columns or steam

NOMARSKI MICROSCOPE



Application of the Nomarski interference microscope to a metallurgical specimen. *(a)* Cleavage surface of a zinc crystal, showing mechanical twins and irregular cleavage steps; vertical illumination. *(b)* As *a* with slight surface tilts (∿1°), much fine detail is revealed between the large cleavage steps. Magnification ×60. *(Courtesy of A. R. Entwisle)*

NOMOGRAPH



Nomograph for energy content of a rectangular channel with uniform flow.

ejectors) that is not easily condensed by cooling; consists mostly of nitrogen, light hydrocarbons, carbon dioxide, or other gaseous materials.

nonconformity [GEOL] A type of unconformity in which rocks below the surface of unconformity are either igneous or metamorphic.

nonconservative element [OCEANOGR] An element in sea water which is so uncommon that a large proportion of its total composition enters and leaves the particulate phase.

nonconsumable electrode [MET] An electrode, such as of carbon or tungsten, that is not consumed during a welding or melting operation.

noncontacting piston *See* choke piston.

noncontacting plunger *See* choke piston.

noncontributing area [HYD] An area with closed drainage.

noncoring bit [ENG] A general type of bit made in many shapes which does not produce a core and with which all the rock cut in a borehole is ejected as sludge; used mostly for blasthole drilling and in the unmineralized zones in a borehole where a core sample is not wanted. Also known as borehole bit; plug bit.

noncorrosive flux [MET] A soldering flux composed of rosin or of rosin in a volatile solvent; the residue is nonhygroscopic, noncorrosive, and nonconducting; suitable for soldering electronic components. Also known as activated rosin flux.

noncrossing rule [PHYS CHEM] The rule that when the potential energies of two electronic states of a diatomic molecule are plotted as a function of distance between the nuclei, the resulting curves do not cross, unless the states have different symmetry.

noncyclic terrace [GEOL] One of a series of terraces representing previous valley floors formed during periods when continued valley deepening accompanied lateral erosion.

nondeforming steel [MET] A group of alloy steels which do not easily deform when heat-treated. Also known as nonshrinking steel.

nondegenerate amplifier [ELECTR] Parametric amplifier that is characterized by a pumping frequency considerably higher than twice the signal frequency; the output is taken at the signal input frequency; the amplifier exhibits negative impedance characteristics, indicative of infinite gain, and is therefore capable of oscillation.

nondegenerative basic feasible solution [COMPUT SCI] In linear programming, a basic feasible solution with exactly m positive variables x_i, where m is the number of constraint equations.

nondelay fuse [ORD] Fuse that functions as a result of inertia of the firing pin (or primer) as the missile is retarded during penetration of the target; the inertia causes the firing pin to strike the primer (or the primer, the firing pin), initiating fuse action.

nondepositional unconformity *See* paraconformity.

nondestructive breakdown [ELECTR] Breakdown of the barrier between the gate and channel of a field-effect transistor without causing failure of the device; in a junction field-effect transistor, avalanche breakdown occurs at the *pn* junction.

nondestructive read [COMPUT SCI] A reading process that does not erase the data in memory; the term sometimes includes a destructive read immediately followed by a restorative write-back. Also known as nondestructive readout (NDRO).

nondestructive readout *See* nondestructive read.

nondestructive testing [ENG] Any testing method which does not involve damaging or destroying the test sample; includes use of x-rays, ultrasonics, radiography, magnetic flux, and so on.

nondeterministic [SCI TECH] Unpredictable in terms of observable antecedents and known laws; this is a relative term pertaining to a given state of knowledge but not necessarily implying ultimate unpredictability.

nondeviated absorption [PHYS] Absorption that occurs without any appreciable slowing up of waves.

nondifferentiable programming [MATH] The branch of nonlinear programming which does not require the objective and constraint functions to be differentiable.

nondimensional parameter *See* dimensionless number.

nondirectional *See* omnidirectional.

nondirectional antenna *See* omnidirectional antenna.

nondirectional beacon [NAV] A beacon that provides navigational guidance over a 360° azimuth.

nondirective therapy [PSYCH] Type of psychotherapy in which the patient is in the dominant position and is given complete freedom to express himself.

nondisjunction mosaic [GEN] A population of cells with different chromosome numbers produced when one chromosome is lost during mitosis or when both members of a pair of chromosomes are included in the same daughter nucleus; can occur during embryogenesis or adulthood.

nondissipative muffler *See* reactive muffler.

nondissipative stub [ELECTROMAG] Nondissipative length of waveguide or transmission line.

nondivergent flow [OCEANOGR] Fluid flow in which the divergence of the ocean current field is zero.

nonene *See* 1-nonylene.

nonequilibrium thermodynamics [THERMO] A quantitative treatment of irreversible processes and of rates at which they occur. Also known as irreversible thermodynamics.

nonerasable storage [COMPUT SCI] A device that permits a nondestructive read, such as punched cards, electrically conductive sheets, or paper tape.

nonesite [PETR] A porphyritic basalt composed of enstatite, labradorite, and augite phenocrysts in a groundmass of plagiocase and augite.

nonessential amino acid [BIOCHEM] An amino acid which can be synthesized by an organism and thus need not be supplied in the diet.

noneuclidean geometry [MATH] A geometry in which one or more of the axioms of euclidean geometry are modified or discarded.

nonexecutable statement [COMPUT SCI] A statement in a higher-level programming language which cannot be related to the instructions in the machine language program ultimately produced, but which provides the compiler with essential information from which it may determine the allocation of storage and other organizational characteristics of the final program.

nonexpendable [ENG] Pertaining to a supply item or piece of equipment that is not consumed, and does not lose its identity, in use, as a weapon, vehicle, machine, tool, piece of furniture, or instrument.

nonfaradaic path [PHYS CHEM] One of the two available paths for transfer of energy across an electrolyte-metal interface, in which energy is carried by capacitive transfer, that is, by charging and discharging the double-layer capacitance.

nonfatal error [COMPUT SCI] An error in a computer program which does not result in termination of execution, but which causes the processor to invent an interpretation, issue a warning, and continue processing.

nonfeasible method *See* goal coordination method.

nonferrous metal [MET] Any metal other than iron and its alloys.

nonferrous metallurgy [MET] A branch of metallurgy that deals with metals other than iron and iron-base alloys.

nonflowing well [ENG] A well that yields water at the land surface only by means of a pump or other lifting device.

nonfluent aphasia [PSYCH] Aphasia characterized by effortful articulation and loss of syntax, but relatively well-preserved auditory comprehension; generally the result of injury to the speech zone anterior to the rolandic fissure.

nonfragmenting projectile [ORD] Projectile for antiaircraft gun practice, containing a smoke-producing substance, available in various colors, which makes it possible to observe the burst without a close burst destroying the target.

nonfreezing explosive [MATER] An explosive to which 15–20% of nitroethylene glycol has been added.

nonfrontal squall line *See* prefrontal squall line.

nonfunctional packages software [COMPUT SCI] General-purpose software which permits the user to handle his particular applications requirements with little or no additional program or systems design work, or to perform certain specialized computational functions.

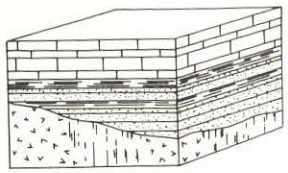
nongonococcal urethritis [MED] Human urethral inflammation not associated with common bacterial pathogens; thought to be caused by bacteria of the Bedsonia group. Abbreviated NGU.

nongraded [GEOL] Pertaining to a soil or an unconsolidated sediment consisting of particles of essentially the same size.

nongranular leukocyte [HISTOL] A white blood cell, such as a lymphocyte or monocyte, with clear homogeneous cytoplasm.

nonholonomic constraints [MATH] A nonintegrable set of

NONCONFORMITY



Drawing of a nonconformity type of unconformity showing the lack of stratification in the rocks below the break.

differential equations which describe the restrictions on the motion of a system or in optimization.

nonholonomic system [MECH] A system of particles which is subjected to restraints of such a nature that the system cannot be described by independent coordinates; examples are a rolling hoop, or an ice skate which must point along its path.

nonhoming [CONT SYS] Not returning to the starting or home position, as when the wipers of a stepping relay remain at the last-used set of contacts instead of returning to their home position.

nonhoming tuning system [ELECTR] Motor-driven automatic tuning system in which the motor starts up in the direction of previous rotation; if this direction is incorrect for the new station, the motor reverses, after turning to the end of the dial, then proceeds to the desired station.

nonhypergolic [CHEM] Not capable of igniting spontaneously upon contact; used especially with reference to rocket fuels.

***n*-nonic acid** *See* pelargonic acid.

nonideal gas [STAT MECH] A gas whose molecules have significant interaction, more than that needed to bring about the equilibrium.

nonideal solution [PHYS CHEM] A solution whose behavior does not conform to that of an ideal solution; that is, the behavior is not predictable over a wide range of concentrations and temperatures by the use of Raoult's law.

nonimpact printer [GRAPHICS] A line printer in which the characters are produced electrically, electronically, or optically rather than mechanically; only a single copy can be produced.

nonimpinging injector [AERO ENG] An injector used in rocket engines which employs parallel streams of propellant usually emerging normal to the face of the injector.

noninductive [ELEC] Having negligible or zero inductance.

noninductive capacitor [ELEC] A capacitor constructed so it has practically no inductance; foil layers are staggered during winding, so an entire layer of foil projects at either end for contact-making purposes; all currents then flow laterally rather than spirally around the capacitor.

noninductive resistor [ELEC] A wire-wound resistor constructed to have practically no inductance, either by using a hairpin winding or be reversing connections to adjacent sections of the winding.

noninductive winding [ELEC] A winding constructed so that the magnetic field of one turn or section cancels the field of the next adjacent turn or section.

nonine *See* nonyne.

nonintelligible crosstalk [COMMUN] Crosstalk which cannot be understood regardless of its received volume, but which because of its syllabic nature is more annoying subjectively than thermal-type noise.

noninteracting control [CONT SYS] A feedback control in a system with more than one input and more than one output, in which feedback transfer functions are selected so that each input influences only one output.

noninverting amplifier [ELECTR] An operational amplifier in which the input signal is applied to the ungrounded positive input terminal to give a gain greater than unity and make the output voltage change in phase with the input voltage.

noninverting parametric device [ELECTR] Parametric device whose operation depends essentially upon three frequencies, a harmonic of the pump frequency and two signal frequencies, of which one is the sum of the other plus the pump harmonic.

Nonionacea [INV ZOO] A superfamily of Foraminiferida in the suborder Orbitoidacea, characterized by a granular calcite test wall with monolamellar septa, and a planispiral to trochospiral test.

nonionic detergent [MATER] A detergent with molecules that do not ionize in aqueous solution, for example, detergents derived from condensation products of long-chain glycols and octyl or nonyl phenols.

nonlinear [PHYS] Pertaining to a response which is other than directly or inversely proportional to a given variable.

nonlinear amplifier [ELECTR] An amplifier in which a change in input does not produce a proportional change in output.

nonlinear capacitor [ELEC] Capacitor having a mean charge characteristic or a peak charge characteristic that is not linear, or a reversible capacitance that varies with bias voltage.

nonlinear circuit [ELEC] A circuit in which the current and voltage in any element that results from two sources of energy acting together is not equal to the sum of the currents or voltages that result from each of the sources acting alone.

nonlinear circuit component [ELECTR] An electrical device for which a change in applied voltage does not produce a proportional charge in current. Also known as nonlinear device; nonlinear element.

nonlinear coil [ELECTROMAG] Coil having an easily saturable core, possessing high impedance at low or zero current and low impedance when current flows and saturates the core.

nonlinear control [CONT SYS] An on-line process control which can stabilize operations by means of nonlinear compensatory functions.

nonlinear coupler [ELECTR] A type of frequency multiplier which uses the nonlinear capacitance of a junction diode to couple energy from the input circuit, which is tuned to the fundamental, to the output circuit, which is tuned to the desired harmonic.

nonlinear crystal [SOLID STATE] A crystal in which some influence (such as stress, electric field, or magnetic field) produces a response (such as strain, electric polarization, or magnetization) which is not proportional to the influence.

nonlinear damping [PHYS] Damping that is not proportional to velocity.

nonlinear detection [ELECTR] Detection based on the curvature of a tube characteristic, such as square-law detection.

nonlinear device *See* nonlinear circuit component.

nonlinear dielectric [ELEC] A dielectric whose polarization is not proportional to the applied electric field.

nonlinear distortion [ELECTR] Distortion in which the output of a system or component does not have the desired linear relation to the input. [ENG ACOUS] The ratio of the total root-mean-square (rms) harmonic distortion output of a microphone to the rms value of the fundamental component of the output.

nonlinear element *See* nonlinear circuit component.

nonlinear equation [MATH] An equation in variables $x_1,\ldots,x_n,y$ which cannot be put into the form $a_1x_1 + \ldots + a_nx_n = y$.

nonlinear feedback control system [CONT SYS] Feedback control system in which the relationships between the pertinent measures of the system input and output signals cannot be adequately described by linear means.

nonlinear inductance [ELEC] The behavior of an inductor for which the voltage drop across the inductor is not proportional to the rate of change of current, such as when the inductor has a core of magnetic material in which magnetic induction is not proportional to magnetic field strength.

nonlinearity [SCI TECH] The deviation of any functional relationship from direct proportionality.

nonlinear material [PHYS] A material in which some specified influence (such as stress, electric field, or magnetic field) produces a response (such as strain, electric polarization, or magnetization) which is not proportional to the influence.

nonlinear molecule [ORG CHEM] A branched-chain molecule, that is, one whose atoms do not all lie along a straight line. Also known as isomolecule.

nonlinear network [ELEC] A network in which the current or voltage in any element that results from two sources of energy acting together is not equal to the sum of the currents or voltages that result from each of the sources acting alone.

nonlinear optics [OPTICS] The study of the interaction of radiation with matter in which certain variables describing the response of the matter (such as electric polarization or power absorption) are not proportional to variables describing the radiation (such as electric field strength or energy flux).

nonlinear oscillator [ELECTR] A radio-frequency oscillator that changes frequency in response to an audio signal; it is the basic circuit used in eavesdropping devices.

nonlinear programming [MATH] A branch of applied mathematics concerned with finding the maximum or minimum of a function of several variables, when the variables are constrained to yield values of other functions lying in a certain range, and either the function to be maximized or minimized, or at least one of the functions whose value is constrained, is nonlinear.

nonlinear reactance [ELECTR] The behavior of a coil or capacitor whose voltage drop is not proportional to the rate of change of current through the coil, or the charge on the capacitor.

nonlinear refraction [OPTICS] The phenomenon whereby

the refractive index of certain substances varies with light intensity.

nonlinear regression *See* curvilinear regression.

nonlinear resistance [ELECTR] The behavior of a substance (usually a semiconductor) which does not obey Ohm's law but has a voltage drop across it that is proportional to some power of the current.

nonlinear spectroscopy [SPECT] The study of energy levels not normally accessible with optical spectroscopy, through the use of nonlinear effects such as multiphoton absorption and ionization.

nonlinear system [MATH] A system in which the interrelationships among the quantities involved are expressed by equations, some of which are not linear. [SCI TECH] A system in which outputs are not linear functions of vectors whose components represent the inputs.

nonlinear taper [ELEC] Nonuniform distribution of resistance throughout the element of a potentiometer or rheostat.

nonlinear vibration [MECH] A vibration whose amplitude is large enough so that the elastic restoring force on the vibrating object is not proportional to its displacement.

nonlinear viscoelasticity [FL MECH] The behavior of a fluid which does not obey a first-order differential equation in stress and strain.

non-load-bearing tile [MATER] Tile unable to carry superimposed loads.

nonloaded Q [ELEC] Of an electric impedance, the Q value of the impedance without external coupling or connection. Also known as basic Q.

nonlocalized electron [PHYS] An electron whose wave function is not confined to the vicinity of one or two nuclei, but is spread out over a molecule or a crystal lattice.

nonmagnetic [ELECTROMAG] Not magnetizable, and therefore not affected by magnetic fields.

nonmagnetic steel [MET] A steel alloy containing about 12% manganese and sometimes a small quantity of nickel; it is practically nonmagnetic at ordinary temperatures.

nonmaintenance time [COMPUT SCI] The elapsed time during scheduled working hours between the determination of a machine failure and placement of the equipment back into operation.

nonmechanical *See* nonclastic.

nonmetallic sheathed cable [ELEC] Assembly of two or more rubber-covered conductors in an outer sheath of nonconducting fibrous material that has been treated to make it flame-resistant and moisture-repellent.

non-minimum-phase system [CONT SYS] A linear system whose transfer function has one or more poles or zeros with positive, nonzero real parts.

nonmultiple switchboard [ELEC] Manual telephone switchboard in which each subscriber line is attached to only one jack.

nonnegative semidefinite *See* positive semidefinite.

non-Newtonian fluid [FL MECH] A fluid whose flow behavior departs from that of a Newtonian fluid, so that the rate of shear is not proportional to the corresponding stress. Also known as non-Newtonian system.

non-Newtonian fluid flow [FL MECH] The flow behavior of non-Newtonian fluids, whose study has applications in many important problems of practical significance such as flow in tubes, extrusion, flow through dies, coating operations, rolling operations, and mixing of fluids.

non-Newtonian system *See* non-Newtonian fluid.

non-Newtonian viscosity [FL MECH] The behavior of a fluid which, when subjected to a constant rate of shear, develops a stress which is not proportional to the shear. Also known as anomalous viscosity.

nonnitroglycerin explosive [MATER] An explosive which contains TNT instead of nitroglycerin to sensitize ammonium nitrate, and a little aluminum powder may also be added to increase the power and sensitivity.

nonnumeric character [COMPUT SCI] Any character except a digit.

nonodontogenic cyst [MED] Any oral cyst that develops from epithelium which has been sequestered in bony or soft-tissue suture lines during embryonic development.

nonoic acid [ORG CHEM] $C_8H_{17}COOH$ Any of a family of acids which are mixed isomers produced in the Fischer-Tropsch process; pelargonic acid is the straight-chain member; used as a chemical intermediate.

nonosteogenic fibroma [MED] A tumor of bone, usually in the shaft of long bones; characterized by whorls of spindle-shaped connective tissue cells.

nonparalytic poliomyelitis [MED] Infection by poliomyelitis virus accompanied by upper respiratory or gastrointestinal symptoms, muscular pain and stiffness, and mild fever.

nonparametric statistics [STAT] A class of statistical methods applicable to a large set of probability distributions used to test for correlation, location, independence, and so on.

nonpareil [GRAPHICS] A designation to indicate a specific amount of space surrounding the type, for example, interlinear space; the space is 6 points in the American point system.

nonpenetrative [GEOL] Of a type of deformation, affecting only part of a rock, such as kink bands.

nonpersistent war gas [ORD] A chemical agent, that is, a war gas, normally effective in the open for 10 minutes or less at the point of dispersion.

nonplunging fold [GEOL] A fold with a horizontal axial surface. Also known as horizontal fold; level fold.

nonpolar [CHEM] Pertaining to an element or compound which has no permanent electric dipole moment.

nonpolarized relay *See* neutral relay.

nonprecision [NAV] In air operations, pertaining to a navigational facility without a glide slope; does not imply an unacceptable quality of course guidance.

nonprint code [COMPUT SCI] A bit combination which is interpreted as no printing, no spacing.

nonpriority interrupt [COMPUT SCI] Any one of a group of interrupts which may be disregarded by the central processing unit.

nonprocedural language [COMPUT SCI] A programming language in which the program does not follow the actual steps a computer follows in executing a program.

nonprotein nitrogen [BIOCHEM] The nitrogen fraction in the body tissues, excretions, and secretions, not precipitated by protein precipitants.

nonprotic solvent [CHEM] A solvent that does not contain a hydrogen ion source.

nonpsychotic organic brain syndrome [MED] Organic brain syndrome in which there is no apparent psychosis.

nonquantum mechanics [MECH] The classical mechanics of Newton and Einstein as opposed to the quantum mechanics of Heisenberg, Schrödinger, and Dirac; particles have definite position and velocity, and they move according to Newton's laws.

nonreactive [ELEC] Pertaining to a circuit, component, or load that has no capacitance or impedance, so that an alternating current is in phase with the corresponding voltage.

nonreactive load *See* resistive load.

nonreclosing pressure relief device [MECH ENG] A device which remains open after relieving pressure and must be reset before it can operate again.

nonrecording rain gage [ENG] A rain gage which indicates but does not record the amount of precipitation.

nonrecurring issue [ORD] An ordnance issue made on a one-time basis with no foreseeable subsequent demand from the consignee to whom issue was made.

nonredundant system [COMPUT SCI] A computer system designed in such a way that only the absolute minimum amount of hardware is utilized to implement its function.

nonrelativistic approximation [PHYS] The approximation in which it is assumed that speeds of objects are small compared to the speed of light.

nonrelativistic kinematics [MECH] The study of motions of systems of objects at speeds which are small compared to the speed of light, without reference to the forces which act on the system.

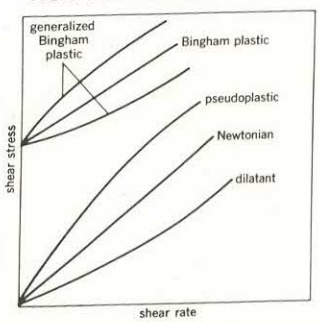
nonrelativistic mechanics [MECH] The study of the dynamics of systems in which all speeds are small compared to the speed of light.

nonrelativistic particle [RELAT] A particle whose velocity is small with respect to that of light.

nonrelativistic quantum mechanics [QUANT MECH] The modern theory of matter and its interaction with radiation, applicable to systems of material particles which move slowly compared to the speed of light, which are neither created or destroyed, and whose internal structure (except for spin) either does not change or is irrelevant to the description of the system.

nonremovable discontinuity [MATH] A point at which a

NON-NEWTONIAN FLUID



Typical flow curves, giving rate of shear as a function of shear stress, for a Newtonian fluid and for the three types of time-independent non-Newtonian fluid: Bingham plastic, pseudoplastic fluid, and dilatant fluid.

function is not continuous or is undefined, and cannot be made continuous by being given a new value at the point.

nonrenewable fuse unit [ELEC] Fuse unit that cannot be readily restored for service after operation.

nonreproducible drawing [GRAPHICS] An opaque drawing which cannot be used to make copies by any contact (print-through) process.

nonreproducing code [COMPUT SCI] A code which normally does not appear as such in a generated output but will result in a function such as paging or spacing.

nonresident routine [COMPUT SCI] Any computer routine which is not stored permanently in the memory but must be read into memory from a data carrier or external storage device.

nonresonant antenna [ELECTROMAG] A long-wire or traveling-wave antenna which does not have natural frequencies of oscillation, and responds equally well to radiation over a broad range of frequencies.

nonresonant line [ELECTROMAG] Transmission line having no reflected waves, and neither current nor voltage standing waves.

non-return-to-zero [COMPUT SCI] A mode of recording and readout in which it is not necessary for the signal to return to zero after each item of recorded data.

nonrigid plastic [MATER] A plastic with modulus of elasticity not greater than 50,000 psi (3.45×10^8 newtons per square meter) at 25°C, according to standard ASTM test procedures.

nonrotational strain *See* irrotational strain.

nonsaccharine sorghum *See* grain sorghum.

nonsegregated reservoir [PETRO ENG] Solution-gas-drive oil reservoir in which the gas does not separate from the oil as a function of height or upward movement.

nonselective mining [MIN ENG] Mining methods permitting low cost, generally by using a cheap stoping method combined with large-scale operations; can be used in deposits where the individual stringers, bands, or lenses of high-grade ore are numerous and so irregular in occurrence and separated by such thin lenses of waste that a selective method cannot be employed.

nonselective radiator *See* graybody.

nonsense mutation [MOL BIO] A mutation that changes a codon that codes for one amino acid into a codon that does not specify any amino acid (a nonsense codon).

nonshared control unit [COMPUT SCI] A control unit which controls only one device. Also known as unipath.

nonshattering glass [MATER] Two sheets of plate glass with a sheet of transparent resinoid between, the whole molded together under heat and pressure; it will crack without shattering. Also known as laminated glass; shatterproof glass.

nonshorting contact switch [ELEC] Selector switch in which the width of the movable contact is less than the distance between contact clips, so that the old circuit is broken before the new circuit is completed.

nonshrinking steel *See* nondeforming steel.

nonsingular matrix [MATH] A matrix which has an inverse; equivalently, its determinant is not zero.

nonsingular transformation [MATH] A linear transformation which has an inverse; equivalently, it has null space kernel consisting only of the zero vector.

nonsinusoidal waveform [ELEC] The representation of a wave which does not vary in a sinusoidal manner, and which therefore contains harmonics.

nonskid [CIV ENG] Pertaining to a surface that is roughened to reduce slipping, as a concrete floor treated with iron filings or carborundum powder, or indented while wet.

nonslip concrete [MATER] Rough-surface concrete made by applying oxide grains to the mixture before it hardens; used for steps.

nonsoap grease [MATER] Mineral oil thickened with solid lubricants such as graphite, mica, talc, molybdenum sulfide, asbestos fiber, uncombined fats, or rosin oils; used as a lubricant.

nonsorted polygon [GEOL] A form of patterned ground which has a dominantly polygonal mesh and an unsorted appearance due to the absence of border stones, and whose borders are generally marked by wedge-shaped fissures narrowing downward.

nonspecific [MED] Not attributable to any one definite cause, as a disease not caused by one particular microorganism, or an immunity not conferred by a specific antibody.

[PHARM] Of medicines or therapy, not counteracting any one causative agent.

nonspecific hepatitis *See* interstitial hepatitis.

nonspecific immunity [IMMUNOL] Resistance attributable to factors other than specific antibodies, including genetic, age, or hormonal factors.

nonspherical nucleus [NUC PHYS] A nucleus which appears to have a permanent ellipsoidal shape in its ground state, as suggested by a large electric quadrupole moment.

nonstandard [ORD] Differing from specifications, conditions, or procedures that have been prescribed or established; for instance, weather conditions different from those assumed in firing tables are nonstandard.

nonstorage camera tube [ELECTR] Television camera tube in which the picture signal is, at each instant, proportional to the intensity of the illumination on the corresponding area of the scene.

nonstranded rope [DES ENG] A wire rope with the wires in concentric sheaths instead of in strands, and in opposite directions in the different sheaths, giving the rope nonspinning properties. Also known as nonspinning rope.

nonstriated muscle fiber *See* smooth muscle fiber.

nonsymmetrical aquifer [PETRO ENG] In an oil reservoir formation, a water-containing part that is irregular, being neither radial nor linear.

nonsynchronous [ELEC] Not related in phase, frequency, or speed to other quantities in a device or circuit.

nonsynchronous initiation [MET] In resistance welding, random starting and stopping of transformer primary current relative to the voltage wave.

nonsynchronous timer [ELECTR] A circuit at the receiving end of a communications link which restores the time relationship between pulses when no timing pulses are transmitted.

nonsynchronous transmission [ELECTR] A data transmission process in which a clock is not used to control the unit intervals within a block or a group of data signals.

nonsynchronous vibrator [ELECTR] Vibrator that interrupts a direct-current circuit at a frequency unrelated to the other circuit constants and does not rectify the resulting stepped-up alternating voltage.

nonsystematic joint [GEOL] A joint that is not part of a set.

nontectonite [PETR] Any rock whose fabric shows no influence of movement of adjacent grains; for example, a rock formed by mechanical settling.

nonterminal vertex [MATH] A vertex in a rooted tree that has at least one successor.

nonthermal decimetric emission [ELECTROMAG] A radio-wave emission above the 4-centimeter wavelength from the planet Jupiter that has a nearly constant flux between 5-centimeter and 1-meter wavelength. Also known as DIM.

nonthermal radiation [PHYS] Electromagnetic radiation emitted by accelerated charged particles that are not in thermal equilibrium; aurora light and fluorescent-lamp light are examples.

nontidal current [OCEANOGR] Any current due to causes other than tidal, as a permanent ocean current.

nontransferred arc [MET] In arc welding and cutting, an arc made between the electrode and constricting nozzle, excluding the workpiece from the circuit.

nontrivial solution [MATH] A solution to a homogeneous equation which is not the zero solution.

nontronite [MINERAL] $Na(Al,Fe,Si)O_{10}(OH)_2$ An iron-rich clay mineral of the montmorillonite group that represents the end member in which the replacement of aluminum by ferric ion is essentially complete. Also known as chloropal; grammenite; morencite; pinguite.

nonuniform flow [FL MECH] Fluid flow which does not have the same velocity at all points in a medium, at a given instant.

nonvenereal syphilis [MED] Syphilis not acquired during sexual intercourse.

nonviscous flow *See* inviscid flow.

nonviscous fluid *See* inviscid fluid.

nonviscous neutral [MATER] A neutral petroleum-derived oil with viscosity less than 135 SSU (Saybolt Seconds Universal) at 100°F (38°C).

nonvolatile memory *See* nonvolatile storage.

nonvolatile random-access memory [COMPUT SCI] A semiconductor storage device which has two memory cells for each bit, one of which is volatile, as in a static RAM (random-access memory), and provides unlimited read and write opera-

tions, while the other is nonvolatile, and provides the ability to retain information when power is removed. Abbreviated NV RAM.

nonvolatile storage [COMPUT SCI] A computer storage medium that retains information in the absence of power, such as a magnetic tape, drum, or core. Also known as nonvolatile memory.

nonwetting [MET] Of a metal or alloy, when it is molten, not adhering to or wetting the surface of a diamond which is to be set.

nonwetting phase [PETRO ENG] The oil phase contained in a reservoir pore structure when the reservoir fluid is two-phase (oil and water) or three-phase (oil, water, and gas).

nonwetting sand [GEOL] Sand that resists infiltration of water; consists of angular particles of various sizes and occurs as a tightly packed lens.

nonwoven fabric [TEXT] Cloth produced from a random arrangement or matting of natural or synthetic fibers held together by adhesives, heat and pressure, or needling; felt is an example.

nonyl acetate [ORG CHEM] $C_9H_{19}OOCCH_3$ Any of a family of isomers, such as *n*-nonyl acetate and diisobutyl carbinyl acetate, which are products of Fischer-Tropsch and oxo syntheses.

***n*-nonyl acetate** [ORG CHEM] $CH_3COO(CH_2)_8CH_3$ Alcohol-soluble, colorless liquid with pungent odor; boiling point 208–212°C; used in perfumery.

***n*-nonyl alcohol** [ORG CHEM] $CH_3(CH_2)_7CH_2OH$ One of a family of $C_9H_{19}OH$ isomers; a colorless liquid with rose aroma; boils at 215°C; insoluble in water, soluble in alcohol; used in perfumery and flavorings. Also known as alcohol C-9; octyl carbinol; nonanol; pelargonic alcohol.

nonyl benzene [ORG CHEM] $C_9H_{19}C_6H_5$ Liquid boiling at 245–252°C; straw-colored with aromatic aroma; used to make surface-active agents.

nonyl carbinol *See* decyl alcohol.

1-nonylene [ORG CHEM] C_9H_{18} Colorless liquid boiling at 150°C; soluble in alcohol, insoluble in water; used as a chemical intermediate. Also known as nonene.

nonyl hydride *See* nonane.

***n*-nonylic acid** *See* pelargonic acid.

nonyl phenol [ORG CHEM] $C_9H_{19}C_6H_4OH$ Pale-yellow liquid boiling at 283–302°C; soluble in organic solvents, insoluble in water; a mixture of monoalkyl phenol isomers, mostly para-substituted; used to make surface-active agents, resins, and plasticizers.

nonylphenoxyacetic acid [ORG CHEM] $C_9H_{19}C_6H_4OCH_2COOH$ A viscous, amber-colored liquid, soluble in alkali; used in turbine oils, lubricants, greases, and other materials as a corrosion inhibitor.

nonyne [ORG CHEM] $CH_3(CH_2)_6{\equiv}CCH$ Water-insoluble, colorless liquid boiling at 160°C. Also known as *n*-heptylacetylene; nonine.

noon [ASTRON] The instant at which a time reference is over the upper branch of the reference meridian.

noon constant [NAV] A predetermined value added to a meridian or ex-meridian sextant altitude to determine the latitude.

noon interval [ASTRON] The predicted time interval between a given instant, usually the time of a morning observation, and local apparent noon; it is used to predict the time for observing the sun on the celestial meridian.

Noon pollen unit [BIOL] The quantity of pollen extract which contains 0.00001 milligram of total nitrogen.

noon sight [NAV] **1.** Measurement of the altitude of the sun at local apparent noon. **2.** The altitude so measured.

NO OP [COMPUT SCI] An instruction telling the computer to do nothing, except to proceed to the next instruction in sequence. Also known as no-operation instruction.

no-operation instruction *See* NO OP.

noosphere *See* anthroposphere.

nopinene *See* pinene.

nor- [CHEM] Chemical formula prefix for normal; indicates a parent for another compound to be formed by removal of one or more carbons and associated hydrogens.

NOR [MATH] A logic operator having the property that if P, Q, R, ... are statements, then the NOR of P, Q, R, ... is true if all statements are false, false if at least one statement is true. Derived from NOT-OR. Also known as Peirce stroke relationship.

noradrenaline *See* norepinephrine.

norbergite [MINERAL] $Mg_3SiO_4(F,OH)_2$ A yellow or pink orthorhombic mineral composed of magnesium silicate with fluoride and hydroxyl; it is a member of the humite group.

NOR circuit [ELECTR] A circuit in which output voltage appears only when signal is absent from all of its input terminals.

Norden bombsight [ORD] A gyroscopically stabilized synchronizing bombsight used mainly for synchronous bombing but useful for fixed-angle bombing.

nordenskioldine [MINERAL] $CaSn(BO_3)_2$ A colorless or sulfur-, lemon-, or wine-yellow, hexagonal mineral consisting of a borate of calcium and tin; occurs in tabular form and as lenslike crystals.

Nordenskjöld line [CLIMATOL] The line connecting all places at which the mean temperature of the warmest month is equal (in degrees Celsius) to $9 - 0.1k$, where k is the mean temperature of the coldest month (in degrees Fahrenheit it becomes $51.4 - 0.1k$).

Nordheim's rule [SOLID STATE] The rule that the residual resistivity of a binary alloy that contains mole fraction x of one element and $1 - x$ of the other is proportional to $x(1 - x)$.

nordihydroguaiaretic acid [ORG CHEM] $C_{18}H_{22}O_4$ A crystalline compound with a melting point of 184–185°C; soluble in alcohols, ether, acetone, glycerol, and propyleneglycol; used as an antioxidant in fats and oils. Abbreviated NDGA.

nordmarkite [PETR] A quartz-bearing alkalic syenite that has microperthite as its main component with smaller amounts of oligocase, quartz, and biotite and is characterized by granitic or trachytoid texture.

nor'easter *See* northeaster.

norepinephrine [BIOCHEM] $C_8H_{11}O_3N$ A hormone produced by chromaffin cells of the adrenal medulla; acts as a vasoconstrictor and mediates transmission of sympathetic nerve impulses. Also known as noradrenaline.

norflurazon [ORG CHEM] $C_{12}H_9ClF_3N_3O$ An off-white powder with a melting point of 175–178°C; slightly soluble in water; used as a preemergence herbicide for cotton, cranberries, and fruit trees. Also known as 4-chloro-5-(methylamino)-2-(α,α,α-trifluoro-*meta*-tolyl)-3-(2*H*)-pyridazine.

Norian [GEOL] A European stage of Upper Triassic geologic time that lies above the Carnian and below the Rhaetian.

norite [PETR] A coarse-grained plutonic rock composed principally of basic plagioclase with orthopyroxene (hypersthene) as the dominant mafic material. Also known as hypersthenfels.

norm [MATH] A scalar valued function on a vector space with properties analogous to those of the modulus of a complex number; namely: the norm of the zero vector is zero, all other vectors have positive norm, the norm of a scalar times a vector equals the absolute value of the scalar times the norm of the vector, and the norm of a sum is less than or equal to the sum of the norms. [PETR] The theoretical mineral composition of a rock expressed in terms of standard mineral molecules as determined by means of chemical analyses. [QUANT MECH] **1.** The square of the modulus of a Schrödinger-Pauli wave function, integrated over the space coordinates and summed over the spin coordinates of the particles it describes. **2.** The square root of this quantity.

Norma [ASTRON] A southern constellation; right ascension 16 hours, declination 50°S. Also known as Rule.

normal [METEOROL] The average value of a meteorological element over any fixed period of years that is recognized as standard for the country and element concerned.

normal acceleration [MECH] **1.** The component of the linear acceleration of an aircraft or missile along its normal, or Z, axis. **2.** The usual or typical acceleration.

normal aeration [GEOL] The complete renewal of soil air to a depth of 20 centimeters about once each hour.

normal aiming error [ORD] In bombing, an aiming error that falls within the boundary for gross errors.

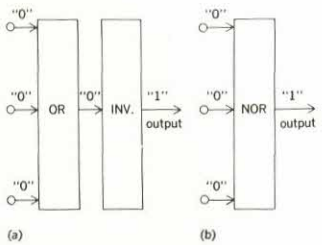
normal anticlinorium [GEOL] An anticlinorium in which axial surfaces of the subsidiary folds converge downward.

normal axis [MECH] The vertical axis of an aircraft or missile.

normal barometer [ENG] A barometer of such accuracy that it can be used for the determination of pressure standards; an instrument such as a large-bore mercury barometer is usually used.

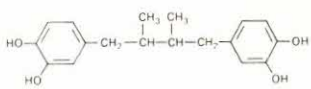
normal benzine [MATER] A mixture of hydrocarbons; clear,

NOR CIRCUIT



NOR circuit. *(a)* OR gate followed by an inverter; if all inputs are "0," the output is "1." *(b)* OR-inverter (NOR) combination shown as a single symbol.

NORDIHYDROGUAIARETIC ACID



Structural formula.

colorless, water-insoluble liquid distilled from petroleum; boils at 65–95°C; density 0.695–0.705. Also known as benzoline.

normal bonded-phase chromatography [ANALY CHEM] A technique of bonded-phase chromatography in which the stationary phase is polar and the mobile phase is nonpolar.

normal chart [METEOROL] Any chart that shows the distribution of the official normal values of a meteorological element. Also known as normal map.

normal consolidation [GEOL] Consolidation of a sedimentary material in equilibrium with overburden pressure.

normal contour *See* accurate contour.

normal coordinates [MECH] A set of coordinates for a coupled system such that the equations of motion each involve only one of these coordinates.

normal curvature [MATH] The normal curvature at a point on a surface is the curvature of the normal section to the point.

normal curve *See* Gaussian curve.

normal cycle [GEOL] A cycle of erosion whereby a region is reduced to base level by running water, especially by the action of rivers. Also known as fluvial cycle of erosion.

normal density function [STAT] A normally distributed frequency distribution of a random variable x with mean e and variance σ is given by $(1/\sigma\sqrt{2\pi})\exp[-(x-e)^2/2\sigma^2]$.

normal depth [FL MECH] The depth in an open channel at which a given flow has uniform velocity.

normal derivative [MATH] The directional derivative of a function at a point on a given curve or surface in the direction of the normal to the curve or surface.

normal dip *See* regional dip.

normal direction flow [COMPUT SCI] The direction from left to right or top to bottom in flow charting.

normal dispersion [GEOPHYS] The dispersion of seismic waves in which the recorded wave period increases with time. [OPTICS] Dispersion in which the refractive index decreases monotonically and continuously with increasing wavelength.

normal displacement *See* dip slip.

normal distribution [STAT] The most commonly occurring probability distributions have the form

$$(1/\sigma\sqrt{2\pi})\int_{-\infty}^{u}\exp(-u^2/2)du,\ u=(x-e)/\sigma$$

where e is the mean and σ is the variance. Also known as Gauss' error curve; Gaussian distribution.

normal divisor *See* normal subgroup.

normal effort [IND ENG] The effort expended by the average operator in performing manual work with average skill and application.

normal electrode [ELEC] Standard electrode used for measuring electrode potentials.

normal elemental time [IND ENG] The selected or average elemental time adjusted to obtain the elemental time used by an average qualified operator. Also known as base time; leveled elemental time.

normal erosion [GEOL] Erosion effected by prevailing agencies of the natural environment, including running water, rain, wind, waves, and organic weathering. Also known as geologic erosion.

normal family [MATH] A family of complex functions analytic in a common domain where every sequence of these functions has a subsequence converging uniformly on compact subsets of the domain to an analytic function on the domain or to $+\infty$.

normal fault [GEOL] A fault, usually of 45–90°, in which the hanging wall appears to have shifted downward in relation to the footwall. Also known as gravity fault; normal slip fault; slump fault.

normal fluid [CRYO] The component of liquid helium II, postulated in the two-fluid theory, that has viscosity and behaves like an ordinary fluid.

normal fold *See* symmetrical fold.

normal frequencies [MECH] The frequencies of the normal modes of vibration of a system.

normal function *See* normalized function.

normal horizontal separation *See* offset.

normal hydrostatic pressure [HYD] In porous strata or in a well, the pressure at a given point that is approximately equal to the weight of a column of water extending from the surface to that point.

normal impact [MECH] **1.** Impact on a plane perpendicular to the trajectory. **2.** Striking of a projectile against a surface that is perpendicular to the line of flight of the projectile.

normal impedance *See* free impedance.

normal-incidence pyrheliometer [ENG] An instrument that measures the energy in the solar beam; it usually measures the radiation that strikes a target at the end of a tube equipped with a shutter and baffles to collimate the beam.

normal incidence reflectivity [ELECTROMAG] The ratio of the energy of electromagnetic radiation reflected from the interface between two media to the energy of the incident radiation when the incident radiation travels in a direction perpendicular to the surface.

normal induction [ELECTROMAG] Limiting induction, either positive or negative, in a magnetic material that is under the influence of a magnetizing force which varies between two specific limits.

normality [CHEM] Measure of the number of gram-equivalent weights of a compound per liter of solution. Abbreviated N.

normalization [COMPUT SCI] Breaking down of complex data structures into flat files.

normalize [COMPUT SCI] **1.** To adjust the representation of a quantity so that this representation lies within a prescribed range. **2.** In particular, to adjust the exponent and mantissa of a floating point number so that the mantissa falls within a prescribed range. [MATH] To multiply a quantity by a suitable constant or scalar so that it then has norm one; that is, its norm is then equal to one. [MET] To heat a ferrous alloy to some temperature above the transformation range, followed by air cooling. [QUANT MECH] To multiply a wave function by a constant so that its norm is equal to unity. [STAT] To carry out a normal transformation on a variate.

normalized admittance [ELECTROMAG] The reciprocal of the normalized impedance.

normalized coupling coefficient [ELECTROMAG] Mutual inductance, expressed on a scale running from zero to one.

normalized current [ELECTROMAG] The current divided by the square root of the characteristic admittance of a waveguide or transmission line.

normalized function [MATH] A function with norm one; the norm is usually given by an integral $(\int|f|^p d\mu)^{1/p}$, $1\leq p<\infty$. Also known as normal function.

normalized impedance [ELECTROMAG] An impedance divided by the characteristic impedance of a transmission line or waveguide.

normalized Q [ELEC] The ratio of the reactive component of the impedance of a filter section to the resistive component.

normalized susceptance [ELECTROMAG] The susceptance of an element of a waveguide or transmission line divided by the characteristic admittance.

normalized voltage [ELECTROMAG] The voltage divided by the square root of the characteristic impedance of a waveguide or transmission line.

normally dispersive waves [PHYS] Waves which move more rapidly as their wavelengths increase.

normally distributed observations [STAT] Any set of observations whose histogram looks like the normal curve.

normal magnetization curve [ELECTROMAG] Curve traced on a graph of magnetic induction versus magnetic field strength in an originally unmagnetized specimen, as the magnetic field strength is increased from zero. Also known as magnetization curve.

normal map *See* normal chart.

normal mass shift [NUC PHYS] The portion of the mass shift that corresponds to the variation of reduced mass, and is thus easily calculated for all transitions.

normal matrix [MATH] A matrix is normal if multiplying it on the right by its adjoint is the same as multiplying it on the left.

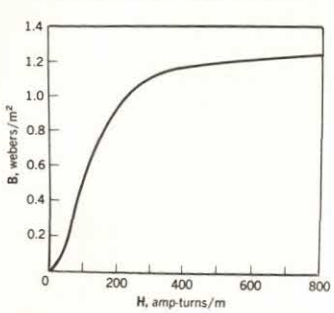
normal mode [COMPUT SCI] Operation of a computer in which it executes its own instructions rather than those of a different computer.

normal-mode helix [ELECTROMAG] A type of helical antenna whose diameter and electrical length are considerably less than a wavelength, and which has a radiation pattern with greatest intensity normal to the helix axis.

normal mode of vibration [MECH] Vibration of a coupled system in which the value of one of the normal coordinates oscillates and the values of all the other coordinates remain stationary.

normal-mode rejection ratio [ELECTR] The ability of an

NORMAL MAGNETIZATION CURVE



Normal magnetization curve; the magnetic induction is the ordinate and the magnetic field strength is the abscissa.

amplifier to reject spurious signals at the power-line frequency or at harmonics of the line frequency. Abbreviated NMRR.

normal moveout [GEOPHYS] In seismic prospecting, the increase in stepout time that results from an increase in distance from source to detector when there is no dip.

normal operation [MECH ENG] The operation of a boiler or pressure vessel at or below the conditions of coincident pressure and temperature for which the vessel has been designed.

normal operator [MATH] A linear operator where composing it with its adjoint operator in either order gives the same result. Also known as normal transformation.

normal orientation [COMPUT SCI] In optical character recognition, that determinate position which indicates that the line elements of an inputted source document appear parallel with the document's leading edge.

normal pace [IND ENG] The manual pace achieved by normal effort.

normal pitch [MECH ENG] The distance between working faces of two adjacent gear teeth, measured between the intersections of the line of action with the faces.

normal-plate anemometer [ENG] A type of pressure-plate anemometer in which the plate, restrained by a stiff spring, is held perpendicular to the wind; the wind-activated motion of the plate is measured electrically; the natural frequency of this system can be made high enough so that resonance magnification does not occur.

normal polarity [GEOPHYS] Natural remanent magnetism nearly identical to the present ambient field.

normal potassium pyrophosphate *See* potassium pyrophosphate.

normal pressure *See* standard pressure.

normal projection [MAP] A projection in which a three-dimensional object is projected onto two mutually perpendicular planes.

normal range [COMPUT SCI] An interval within which results are expected to fall during normal operations.

normal reaction [MECH] The force exerted by a surface on an object in contact with it which prevents the object from passing through the surface; the force is perpendicular to the surface, and is the only force that the surface exerts on the object in the absence of frictional forces.

normal ripple mark [GEOL] An aqueous current ripple mark consisting of a simple asymmetrical ridge that may have various configurations.

normal saline [PHYSIO] U.S. Pharmacopoeia title for a sterile solution of sodium chloride in purified water, containing 0.9 gram of sodium chloride in 100 milliliters; isotonic with body fluids. Also known as isotonic sodium chloride solution; normal salt solution; physiological saline; physiological salt solution; physiological sodium chloride solution; sodium chloride solution.

normal salt [CHEM] A salt in which all of the acid hydrogen atoms have been replaced by a metal, or the hydroxide radicals of a base are replaced by an acid radical; for example, Na_2CO_3.

normal salt solution *See* normal saline.

normal section [MATH] Relative to a surface, this is a planar section produced by a plane containing the normal to a point.

normal segregation [MET] Segregation of the lower-melting-point constituents of an alloy primarily near the center of a casting (last portion to solidify).

normal silver sulfate *See* silver sulfate.

normal slip fault *See* normal fault.

normal soil [GEOL] A soil having a profile that is more or less in equilibrium with the environment.

normal solution [CHEM] An aqueous solution containing one equivalent of the active reagent in grams in 1 liter of the solution.

normal space [MATH] A topological space in which any two disjoint closed sets may be covered respectively by two disjoint open sets.

normal spiral galaxy [ASTRON] A galaxy that has a lens-shaped central portion with two arms that begin to coil in the same plane and in the same fashion immediately upon emerging from opposite sides of it.

normal-stage punching [COMPUT SCI] A system of card punching in which only even number rows of the card are used.

normal state [NUC PHYS] A term sometimes used for ground state.

normal stress [MECH] The stress component at a point in a structure which is perpendicular to the reference plane.

normal subgroup [MATH] A subgroup N of a group G where every expression $g^{-1}ng$ is in N for every g in G and every n in N. Also known as invariant subgroup; normal divisor.

normal surface [OPTICS] The surface that is generated by taking, at each point of the ray surface, the intersection of the tangent plane to the ray surface at that point with the perpendicular from the origin to this plane.

normal synclinorium [GEOL] A synclinorium in which the axial surfaces of the subsidiary folds converge upward.

normal temperature and pressure *See* standard conditions.

normal thorium sulfate *See* thorium sulfate.

normal time [IND ENG] **1.** The time required by a trained worker to perform a task at a normal pace. **2.** The total of all the normal elemental times constituting a cycle or operation. Also known as base time; leveled time.

normal to a curve [MATH] The normal to a curve at a point is the line perpendicular to the tangent line at the point.

normal to a surface [MATH] The normal to a surface at a point is the line perpendicular to the tangent plane at that point.

normal transformation [MATH] *See* normal operator. [STAT] A transformation on a variate that converts it into a variate which has a normal distribution.

normal twin [CRYSTAL] A twin crystal whose twin axis is perpendicular to the composition surface.

normal uranium *See* native uranium.

normal volume *See* standard volume.

normal water [OCEANOGR] Water whose chlorinity lies between 19.30 and 19.50 parts per thousand and has been determined to within ± 0.001 per thousand. Also known as Copenhagen water; standard seawater.

normative mineral *See* standard mineral.

normed linear space [MATH] A vector space which has a norm defined on it. Also known as normed vector space.

normed vector space *See* normed linear space.

normoblast [HISTOL] The smallest of the nucleated precursors of the erythrocyte; slightly larger than a mature adult erythrocyte. Also known as acidophilic erythroblast; arthochromatic erythroblast; eosinophilic erythroblast; karyocyte; metakaryocyte; metanitricyte; metarubricyte.

normochromatic [CYTOL] Pertaining to cells of the erythrocytic series which have a normal staining color; attributed to the presence of a full complement of hemoglobin.

normochromic [CYTOL] Pertaining to erythrocytes which have a mean corpuscular hemoglobin (MCH), or color, index and a mean corpuscular hemoglobin concentration (MCHC), or saturation, index within two standard deviations above or below the mean normal.

normocyte [HISTOL] An erythrocyte having both a diameter and a mean corpuscular volume (MCV) within two standard deviations above or below the mean normal.

norm of a complex number *See* absolute value of a complex number.

norm of a matrix [MATH] The square root of the sum of the squares of the moduli of the matrix entries.

normothermia [PHYSIO] A state of normal body temperature.

norphytane *See* pristane.

Norris-Eyring reverberation formula [ACOUS] The reverberation time of a chamber, in seconds, is equal to 0.05 times its volume, in cubic feet, divided by the product of its surface area, in square feet, and the negative of the natural logarithm of 1 minus the absorption coefficient averaged over the surface.

norsympatol *See* octopamine.

norsynephrine *See* octopamine.

norte [METEOROL] **1.** The winter north wind in Spain. **2.** A strong, cold northeasterly wind which blows in Mexico and on the shores of the Gulf of Mexico, and results from an outbreak of cold air from the north; actually, the Mexican extension of a norther.

north [GEOD] The direction of the north terrestrial pole; the primary reference direction on the earth; the direction indicated by 000° in any system other than relative.

North America [GEOGR] The northern of the two continents of the New World or Western Hemisphere, extending from narrow parts in the tropics to progressively broadened portions in middle latitudes and Arctic polar margins.

North American anticyclone *See* North American high.

North American blastomycosis [MED] A type of blastomycosis caused by the diphasic fungus *Blastomyces dermatitidis*; two recognized forms are cutaneous and systemic.

North American high [METEOROL] The relatively weak general area of high pressure which, as shown on mean charts of sea-level pressure, covers most of North America during winter. Also known as North American anticyclone.

North American Nebula [ASTRON] A cloud of dust and gas in the constellation Cygnus; the density of this gas and dust is possibly a thousand times greater than the average density of interstellar gas; a much denser cloud of dust between the nebula and earth obscures portions of the emission nebula to create the appearance of the "Gulf of Mexico" and the "Atlantic Ocean."

North Atlantic Current [OCEANOGR] A wide, slow-moving continuation of the Gulf Stream originating in the region east of the Grand Banks of Newfoundland.

northbound node *See* ascending node.

North Cape Current [OCEANOGR] A warm current flowing northeastward and eastward around northern Norway, and curving into the Barents Sea.

Northeast Drift Current [OCEANOGR] A North Atlantic Ocean current flowing northeastward toward the Norwegian Sea, gradually widening and, south of Iceland, branching and continuing as the Irminger Current and the Norwegian Current; it is the northern branch of the North Atlantic Current.

northeaster [METEOROL] A northeast wind, particularly a strong wind or gale. Also spelled nor'easter.

northeast storm [METEOROL] A cyclonic storm of the east coast of North America, so called because the winds over the coastal area are from the northeast; they may occur at any time of year but are most frequent and most violent between September and April.

northeast trades [METEOROL] The trade winds of the Northern Hemisphere.

North Equatorial Current [OCEANOGR] Westward ocean currents driven by the northeast trade winds blowing over tropical oceans of the Northern Hemisphere. Also known as Equatorial Current.

norther [METEOROL] A northerly wind.

northerly turning error [AERO ENG] An acceleration error in the magnetic compass of an aircraft in a banked attitude during a turn, so called because it was first noted and is most pronounced during turns made from initial north-south courses; during a turn the magnetic needle is tilted from the horizontal, due to acceleration and the banking of the aircraft; in this position the compass needle will be acted upon by the vertical as well as the horizontal component of the earth's magnetic field; in addition, the compass needle is mechanically restricted in movement, due to tilt. Also known as turning error.

northern anthracnose [PL PATH] A fungus disease of red and crimson clovers in North America, Asia, and Europe caused by *Kabatulla caulivora*; depressed, linear brown lesions form on the stems and petioles.

Northern Cross *See* Cygnus.

Northern Crown *See* Corona Borealis.

Northern Hemisphere [GEOGR] The half of the earth north of the Equator.

northern lights *See* aurora borealis.

north foehn [METEOROL] A foehn condition sustained by wind flow across the Alps from north to south.

north frigid zone [GEOGR] That part of the earth north of the Arctic Circle.

north geographic pole *See* North Pole.

north geomagnetic pole *See* north pole.

Northill anchor [NAV ARCH] A lightweight kedge anchor with large flukes and a stock added to the crown perpendicular to them; used in sizes up to 100 pounds (45.4 kilograms).

northing [NAV] The difference in latitude to the north between the present reckoning and the previous reckoning.

north magnetic pole *See* north pole.

North Pacific Current [OCEANOGR] The warm branch of the Kuroshio Extension flowing eastward across the Pacific Ocean.

north point [ASTRON] The point on the celestial sphere, due north of the observer, at which the celestial meridian intersects the celestial horizon.

north polar distance [ASTRON] The angular distance between a celestial object and the north celestial pole.

north polar sequence [ASTRON] A list of stars in the vicinity of the north celestial pole whose photographic magnitudes have been measured as accurately as possible, and which are used as a basis for determining the magnitudes of other stars.

north pole [ASTRON] The north celestial pole that indicates the zenith of the heavens when viewed from the north geographic pole. [ELECTROMAG] The pole of a magnet at which magnetic lines of force are considered as leaving the magnet; the lines enter the south pole; if the magnet is freely suspended, its north pole points toward the north geomagnetic pole. [GEOPHYS] The geomagnetic pole in the Northern Hemisphere, at approximately latitude 78.5°N, longitude 69°W. Also known as north geomagnetic pole; north magnetic pole.

North Pole [GEOGR] The geographic pole located at latitude 90°N in the Northern Hemisphere of the earth; it is the northernmost point of the earth, and the northern extremity of the earth's axis of rotation. Also known as north geographic pole.

north-stabilized plan-position indicator [ENG] A heading-upward plan-position indicator; this term is deprecated because it may be confused with azimuth-stabilized plan-position indicator, a north-upward plan-position indicator.

North Star *See* Polaris.

north temperate zone [CLIMATOL] That part of the earth between the Tropic of Cancer and the Arctic Circle.

northupite [MINERAL] $Na_3MgCl(CO_3)_2$ A white, yellow, gray, or colorless isometric mineral composed of magnesium sodium carbonate; occurs in octahedral crystals.

north-upward plan position indicator [ENG] A plan position indicator on which north is maintained at the top of the indicator, regardless of the heading of the craft.

north-upward presentation [NAV] An indicator presentation, such as that of a plan position indicator or a radio direction finder, on which north is at the top of the indicator regardless of the heading of the craft.

northwester [METEOROL] A northwest wind. Also spelled nor'wester.

Norton's theorem [ELEC] The theorem that the voltage across an element that is connected to two terminals of a linear network is equal to the short-circuit current between these terminals in the absence of the element, divided by the sum of the admittances between the terminals associated with the element and the network respectively.

Norway Current [OCEANOGR] A continuation of the North Atlantic Current, which flows northward along the coast of Norway. Also known as Norwegian Current.

Norwegian Current *See* Norway Current.

nor'wester *See* northwester.

noscapine [PHARM] $C_{22}H_{23}NO_7$ A white, colorless, tasteless alkaloid obtained from opium; used as a nonaddicting antitussive. Formerly known as narcotine.

nose [ANAT] The nasal cavities and the structures surrounding and associated with them in all vertebrates. [ENG] The foremost point or section of a bomb, missile, or something similar. [FL MECH] The dense, forward part of a turbidity current. [GEOL] **1.** A plunging anticline that is short and without closure. **2.** A projecting and generally overhanging buttress of rock. **3.** The projecting end of a hill, spur, ridge, or mountain. **4.** The central forward part of a parabolic dune.

nosean *See* noselite.

nose cone [AERO ENG] A protective cone-shaped case for the nose section of a missile or rocket; may include the warhead, fusing system, stabilization system, heat shield, and supporting structure and equipment.

nose fuse [ORD] A fuse for use in the forward end (nose) of a bomb or other missile.

nose-heavy [AERO ENG] Pertaining to an airframe in which the nose tends to sink when the longitudinal control is released in any attitude of normal flight.

nose height [ANTHRO] The distance measured between the nasion and the subnasale.

nose leaf [VERT ZOO] A leaflike expansion of skin on the nose of certain bats; believed to have a tactile function.

nose length [ANTHRO] The distance measured between the nasion and the pronasale.

noselite [MINERAL] $Na_8Al_3Si_3O_{12}\cdot SO_4$ A gray, blue or brown mineral of the sodalite group; similar to haüynite; hardness is 5.5 on Mohs scale. Also known as nosean.

nose radius [MECH ENG] The radius measured in the back rake or top rake plane of a cutting tool.

nose sill [ENG] A short timber located under the end of the main sill of a standard rig front of a well.

nose spray [ORD] Fragments of a bursting projectile that are thrown forward in the line of flight, in contrast to base spray and side spray.

nosing [BUILD] Projection of a tread of a stair beyond the riser below it.

nosocomial [MED] **1.** Pertaining to a hospital. **2.** Of disease, caused or aggravated by hospital life.

Nosodendridae [INV ZOO] The wounded-tree beetles, a small family of coleopteran insects in the superfamily Dermestoidea.

nosophobia [PSYCH] An abnormal fear of disease.

nostopathy [PSYCH] Pathogenic homecoming, that is, stress-precipitated illness as observed in individuals who have spent a considerable length of time in institutions such as hospitals or prisons.

nostril [ANAT] One of the external orifices of the nose. Also known as naris.

nostrum [PHARM] A quack medicine.

Notacanthidae [VERT ZOO] A family of benthic, deep-sea teleosts in the order Notacanthiformes, including the spiny eel.

Notacanthiformes [VERT ZOO] An order of actinopterygian fishes whose body is elongated, tapers posteriorly, and has no caudal fin.

NOTAM [COMMUN] The aviation communications code word for "notice to airmen"; used to provide timely information or conditions which are essential to flight operations; these notices are controlled by the National Flight Data Center.

NOT-AND *See* NAND.

Notarys-Mercereau microbridge *See* proximity-effect microbridge.

notation [COMPUT SCI] *See* positional notation. [MATH] **1.** The use of symbols to denote quantities or operations. **2.** *See* positional notation.

notch [ELECTR] Rectangular depression extending below the sweep line of the radar indicator in some types of equipment. [ENG] A V-shaped indentation or cut in a surface or edge. [GEOL] A deep, narrow cut near the high-water mark at the base of a sea cliff. [GEOGR] A narrow passage between mountains or through a ridge, hill, or mountain.

notch acuity [MET] The severity of the stress concentration produced by a given notch in a structure; it is expressed as the ratio of the notch depth to the notch radius (depth is small compared to width, or diameter, of the narrowest cross section).

notch antenna [ELECTROMAG] Microwave antenna in which the radiation pattern is determined by the size and shape of a notch or slot in a radiating surface.

notch binding *See* slot binding.

notch brittleness [MET] Susceptibility of a material to brittle fracture at areas of stress concentration; in notch tensile testing, a material has notch brittleness if the notch strength lies below the tensile strength.

notch depth [MET] The distance from the surface of a metal specimen to the bottom of the notch.

notch ductility [MET] Percentage reduction in area of the specimen after failure in a notched tensile test.

notched-bar test [MET] Test in which a notched metal specimen is bent with the notch in tension.

notch filter [ELECTR] A band-rejection filter that produces a sharp notch in the frequency response curve of a system; used in television transmitters to provide attenuation at the low-frequency end of the channel, to prevent possible interference with the sound carrier of the next lower channel.

notch graft [BOT] A plant graft in which the scion is inserted in a narrow slit in the stock.

notching [ELEC] Term indicating that a predetermined number of separate impulses are required to complete operation of a relay. [MECH ENG] Cutting out various shapes from the ends or edges of a workpiece.

notching press [MECH ENG] A mechanical press for notching straight or rounded edges.

notch sensitivity [MET] A measure of the reduction in strength of a metal caused by the presence of a notch.

notch strength [MET] The ratio of maximum tensional load required to fracture a notched specimen to the original minimum cross-sectional area.

notch test [MET] A tensile or creep test of a metal to determine the effect of a surface notch.

NOT circuit [ELECTR] A logic circuit with one input and one output that inverts the input signal at the output; that is, the output signal is a logical 1 if the input signal is a logical 0, and vice versa. Also known as inverter circuit.

note [ACOUS] **1.** A conventional sign indicating the pitch of a musical sound by its position on a staff, and the duration of the sound by its shape. **2.** The sound indicated by this sign.

Noteridae [INV ZOO] The burrowing water beetles, a small family of coleopteran insects in the suborder Adephaga.

NOT function [MATH] A logical operator having the property that if P is a statement, then the NOT of P is true if P is false, and false if P is true.

Nothosauria [PALEON] A suborder of chiefly marine Triassic reptiles in the order Sauropterygia.

Notice to Mariners [NAV] A weekly publication prepared jointly by the U.S. Coast Guard and the U.S. Naval Oceanographic Office, giving information on changes in aids to navigation (lights, buoyage, harbor construction), dangers to navigation (rocks, shoals, banks, bars), important new soundings, and in general, all such information as affects mariners' charts, manuals, and sailing directions.

Notidanoidea [VERT ZOO] A suborder of rare sharks in the order Selachii; all retain the primitive jaw suspension of the order.

Notiomastodontinae [PALEON] A subfamily of extinct elephantoid proboscidean mammals in the family Gomphotheriidae.

Notioprogonia [PALEON] A suborder of extinct mammals comprising a diversified archaic stock of Notoungulata.

notochord [VERT ZOO] An elongated dorsal cord of cells which is the primitive axial skeleton in all chordates; persists in adults in the lowest forms (*Branchiostoma* and lampreys) and as the nuclei pulposi of the intervertebral disks in adult vertebrates.

notochordal canal [EMBRYO] A canal formed by a continuation of the primary pit into the head process of mammalian embryos; provides a temporary connection between the yolk sac and amnion.

notochordal plate [EMBRYO] A plate of cells representing the root of the head process of the embryo after the embryo becomes vesiculated.

Notodelphyidiformes [INV ZOO] A tribe of the Gnathostoma in some systems of classification.

Notodelphyoida [INV ZOO] A small group of crustaceans bearing a superficial resemblance to many insect larvae as a result of uniform segmentation, comparatively small trunk appendages, and crowding of inconspicuous oral appendages into the anterior portion of the head.

Notodontidae [INV ZOO] The puss moths, a family of lepidopteran insects in the superfamily Noctuoidea, distinguished by the apparently three-branched cubitus.

Notogaean [ECOL] Pertaining to or being a biogeographic region including Australia, New Zealand, and the southwestern Pacific islands.

Notommatidae [INV ZOO] A family of rotifers in the order Monogonota including forms with a cylindrical body covered by a nonchitinous cuticle and with a slender posterior foot.

Notomyotina [INV ZOO] A suborder of echinoderms in the order Phanerozonida in which the upper marginals alternate in position with the lower marginals, and each tube foot has a terminal sucking disk.

Notonectidae [INV ZOO] The backswimmers, a family of aquatic, carnivorous hemipteran insects in the superfamily Notonectoidea; individuals swim ventral side up, aided in breathing by an air bubble.

Notonectoidea [INV ZOO] A superfamily of Hemiptera in the subdivision Hydrocorisae.

notopodium [INV ZOO] The dorsal branch of a parapodium in certain annelids.

Notopteridae [VERT ZOO] The featherbacks, a family of actinopterygian fishes in the order Osteoglossiformes; bodies are tapered and compressed, with long anal fins that are continuous with the caudal fin.

NOT-OR *See* NOR.

Notoryctidae [PALEON] An extinct family of Australian insectivorous mammals in the order Marsupialia.

Notostigmata [INV ZOO] The single suborder of the Opilioacriformes, an order of mites.

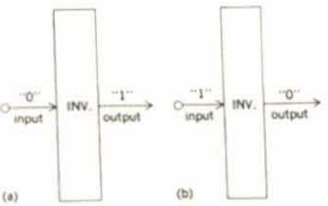
Notostigmophora [INV ZOO] A subclass or suborder of the Chilopoda, including those centipedes embodying primitive as well as highly advanced characters, distinguished by dorsal respiratory openings.

Notostraca [INV ZOO] The tadpole shrimps, an order of crustaceans generally referred to the Branchiopoda, having a cylindrical trunk that consists of 25–44 segments, a dorso-

NOTACANTHIFORMES

Spiny eel (*Notacanthus nasus*). (*After D. S. Jordan and B. W. Evermann, The Fishes of North and Middle America, U.S. Nat. Mus. Bull. no. 47, 1900*)

NOT CIRCUIT

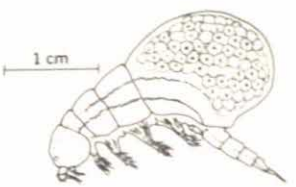


NOT circuit, also known as inverter circuit. *(a)* A "0" input produces a "1" output. *(b)* A "1" input produces a "0" output.

NOTHOSAURIA

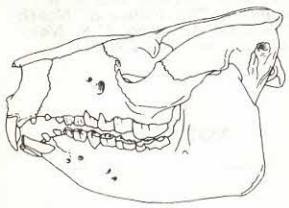
Ceresiosaurus calcagnii, ventral view; skeleton of a nothosaur with elongated neck; Triassic, Switzerland. (*From B. Peyer, 1944*)

NOTODELPHYOIDA



Doropygus psyllus Thorell, female; eggs are incubated in swollen part of thorax.

NOTOUNGULATA



Skull and jaw of *Adinotherium ovinum*, an early Miocene toxodontid notoungulate from the Santa Cruz formation of Patagonia, Argentina. *(After W. Scott)*

ventrally flattened dorsal shield, and two narrow, cylindrical cercopods on the telson.

Nototheniidae [VERT ZOO] A family of perciform fishes in the suborder Blennioidei, including most of the fishes of the permanently frigid waters surrounding Antarctica.

Notoungulata [PALEON] An extinct order of hoofed herbivorous mammals, characterized by a skull with an expanded temporal region, primitive dentition, and primitive feet with five toes, the weight borne mainly by the third digit.

nought state *See* zero condition.

noumeite *See* garnierite.

nourishment [GEOL] The replenishment of a beach, either naturally (such as by littoral transport) or artificially (such as by deposition of dredged materials). [HYD] *See* accumulation.

nova [ASTRON] A star that suddenly becomes explosively bright, the term is a misnomer because it does not denote a new star but the brightening of an existing faint star.

novaculite [GEOL] A siliceous sedimentary rock that is dense, hard, even-textured, light-colored, and characterized by dominance of microcrystalline quartz over chalcedony. Also known as razor stone.

novaculitic chert [GEOL] A gray chert that fragments into slightly rough, splintery pieces.

novar [ELECTR] Beam-power tube having a nine-pin base.

novobiocin [MICROBIO] $C_{30}H_{36}O_{11}N_2$ A moderately broad-spectrum antibiotic produced by strains of *Streptomyces niveus* and *S. spheroides*; it is a dibasic acid and is converted either to the monosodium salt or to the calcium acid salt for pharmaceutical use.

novolac resin [MATER] Any of the thermoplastic phenol-formaldehyde resins made with an excess of phenol in the reaction; used in varnishes.

nowhere dense set [MATH] A set in a topological space whose closure has empty interior.

no-wind heading [NAV] A heading determined without allowance for wind, and hence equal to the course.

no-wind position *See* air position.

nox [OPTICS] A unit of illumination, used in measuring low-level illumination, equal to 10^{-3} lux.

noy [ACOUS] A unit of perceived noisiness equal to the perceived noisiness of random noise occupying the frequency band 910–1090 hertz at a sound pressure level of 40 decibels above 0.0002 microbar; a sound that is n times as noisy as this sound has a perceived noisiness of n noys, under the assumption that the perceived noisiness of a sound increases with physical intensity at the same rate as the loudness.

nozzle [DES ENG] A tubelike device, usually streamlined, for accelerating and directing a fluid, whose pressure decreases as it leaves the nozzle.

nozzle blade [AERO ENG] Any one of the blades or vanes in a nozzle diaphragm. Also known as nozzle vane.

nozzle-contraction-area ratio [DES ENG] Ratio of the cross-sectional area for gas flow at the nozzle inlet to that at the throat.

nozzle-divergence loss factor [FL MECH] The ratio between the momentum of the gases in a nozzle and the momentum of an ideal nozzle.

nozzle efficiency [MECH ENG] The efficiency with which a nozzle converts potential energy into kinetic energy, commonly expressed as the ratio of the actual change in kinetic energy to the ideal change at the given pressure ratio.

nozzle exit area [DES ENG] The cross-sectional area of a nozzle available for gas flow measured at the nozzle exit.

nozzle-expansion ratio [DES ENG] Ratio of the cross-sectional area for gas flow at the exit of a nozzle to the cross-sectional area available for gas flow at the throat.

nozzle-mix gas burner [ENG] A burner in which injection nozzles mix air and fuel gas at the burner tile.

nozzle process [NUCLEO] A method of separating isotopes by allowing a gaseous compound to exhaust through a properly shaped nozzle.

nozzle throat [DES ENG] The portion of a nozzle with the smallest cross section.

nozzle throat area [DES ENG] The area of the minimum cross section of a nozzle.

nozzle thrust coefficient [AERO ENG] A measure of the amplification of thrust due to gas expansion in a particular nozzle as compared with the thrust that would be exerted if the chamber pressure acted only over the throat area. Also known as thrust coefficient.

nozzle vane *See* nozzle blade.

Np *See* neptunium.

npin transistor [ELECTR] An *npn* transistor which has a layer of high-purity germanium between the base and collector to extend the frequency range.

N-plus-one address instruction [COMPUT SCI] An instruction with N + 1 address parts, one of which gives the location of the next instruction to be carried out.

npnp diode *See* pnpn diode.

npnp transistor [ELECTR] An *npn*-junction transistor having a transition or floating layer between p and n regions, to which no ohmic connection is made. Also known as *pnpn* transistor.

npn semiconductor [ELECTR] Double junction formed by sandwiching a thin layer of p-type material between two layers of n-type material of a semiconductor.

npn transistor [ELECTR] A junction transistor having a p-type base between an n-type emitter and an n-type collector; the emitter should then be negative with respect to the base, and the collector should be positive with respect to the base.

NPO-body [ELEC] Referring to a series of temperature-compensating capacitors that have an invariant dielectric constant over a specified temperature range.

np semiconductor [ELECTR] Region of transition between n- and p-type material.

NPSH *See* net positive suction head.

NR *See* nitrile rubber.

NRM *See* natural remanent magnetization.

NRM wind scale [METEOROL] A wind scale adapted by the United States Forest Service for use in the forested areas of the Northern Rocky Mountains (NRM); it is an adaptation of the Beaufort wind scale; the difference between these two scales lies in the specification of the visual effects of the wind; the force numbers and the corresponding wind speeds are the same in both.

N rod bit [DES ENG] A Canadian standard noncoring bit having a set diameter of 2.940 inches (74.676 millimeters).

NRS *See* nuclear reaction spectrometry.

N scan *See* N scope.

N scope [ELECTR] A cathode-ray scope combining the features of K and M scopes. Also known as N indicator; N scan.

N shell [ATOM PHYS] The fourth layer of electrons about the nucleus of an atom, having electrons characterized by the principal quantum number 4.

N star [ASTRON] An obsolete classification for a star in the carbon sequence; has about the same temperature as an M star in the Draper catalog.

nt *See* nit.

NTA *See* nitrilotriacetic acid.

NTP *See* standard conditions.

n-type conduction [ELECTR] The electrical conduction associated with electrons, as opposed to holes, in a semiconductor.

N-type crystal rectifier [ELECTR] Crystal rectifier in which forward current flows when the semiconductor is negative with respect to the metal.

n-type germanium [ELECTR] Germanium to which more impurity atoms of donor type (with valence 5, such as antimony) than of acceptor type (with valence 3, such as indium) have been added, with the result that the conduction electron density exceeds the hole density.

n-type semiconductor [ELECTR] An extrinsic semiconductor in which the conduction electron density exceeds the hole density.

nub [TEXT] A planned knot or tangle in yarn to give a desired irregular texture to a fabric.

nubbin [GEOL] **1.** One of the isolated bedrock knobs or small hills forming the last remnants of a mountain crest or mountain range that has succumbed to desert erosion. **2.** A residual boulder, commonly granitic, occurring on a desert dome or broad pediment.

Nubeculae *See* Magellanic Clouds.

Nubecula Major *See* Large Magellanic Cloud.

Nubecula Minor *See* Small Magellanic Cloud.

nub yarns *See* knop.

nucellus [BOT] The oval central mass of tissue in the ovule; contains the embryo sac.

nucha [ANAT] The nape of the neck.

nuchal ligament [ANAT] An elastic ligament extending from the external occipital protuberance and middle nuchal line

to the spinous process of the seventh cervical vertebra. Also known as ligamentum nuchae.

nuchal organ [INV ZOO] Any of various sense organs on the prostomium of many annelids, which are sensitive to changes in the immediate environment of the individual.

nuchal rigidity [MED] Stiffness in the nape of the neck, often accompanied by pain and spasm on attempts to move the head; the most common sign of meningitis.

nuchal tentacle [INV ZOO] Any of various filiform or thick, fleshy tactoreceptors on anterior segments of many annelids.

nuclear [CHEM] Pertaining to a group of atoms joined directly to the central group of atoms or central ring of a molecule. [NUCLEO] Pertaining to nuclear energy. [NUC PHYS] Pertaining to the atomic nucleus.

nuclear absorption [NUC PHYS] Absorption of energy by the nucleus of an atom.

nuclear adiabatic demagnetization [CRYO] A technique for cooling substances, in which the sample is first cooled to temperatures on the order of 10^{-2} K in an extremely intense magnetic field and is then thermally isolated and removed from the field to reach temperatures on the order of 10^{-6} K.

nuclear age determination *See* radiometric dating.

nuclear angular momentum *See* nuclear spin.

nuclear atom [CHEM] An atomic structure consisting of dense, positively charged nucleus (neutrons and protons) surrounded by a corresponding set of negatively charged electrons.

nuclear battery [NUCLEO] A primary battery in which the energy of radioactive material is converted into electric energy by solar cells or other energy converters. Also known as atomic battery; radioisotope battery; radioisotopic generator.

nuclear binding energy [NUC PHYS] The energy required to separate an atom into its constituent protons, neutrons, and electrons.

nuclear boiler [NUCLEO] A nuclear reactor in which water is the primary coolant and is converted to steam, such as a pressurized-water reactor or a boiling-water reactor.

nuclear bomb *See* atomic bomb.

nuclear breeder [NUCLEO] A nuclear reactor in which more fissionable material is formed in each generation than is used up in fission.

nuclear capture [NUC PHYS] Any process in which a particle, such as a neutron, proton, electron, muon, or alpha particle, combines with a nucleus.

nuclear chain reaction [NUCLEO] A succession of generation after generation of acts of nuclear division such that the neutrons set free in the nuclear disruptions of the nth generation split the fissile nuclei (U^{233}, U^{235}, Pu^{239}) of the $(n + 1)$st generation. Also known as chain reaction.

nuclear chemistry [ATOM PHYS] Study of the atomic nucleus, including fission and fusion reactions and their products.

nuclear cloud [NUCLEO] The cloud of dust and gas formed from the debris of a nuclear explosion.

nuclear collision [NUC PHYS] A collision between an atomic nucleus and another nucleus or particle.

nuclear converter *See* converter.

nuclear cross section [NUC PHYS] A measure of the probability for a reaction to occur between a nucleus and a particle; it is an area such that the number of reactions which occur in a sample exposed to a beam of particles equals the product of the number of nuclei in the sample and the number of incident particles which would pass through this area if their velocities were perpendicular to it.

nuclear decay mode [NUC PHYS] One of the ways in which a nucleus can undergo radioactive decay, distinguished from other decay modes by the resulting isotope and the particles emitted.

nuclear density [NUC PHYS] The mass per unit volume of a nucleus as a function of distance from the center of the nucleus, as determined by a number of different types of experiments which are in reasonably good agreement.

nuclear device [NUCLEO] A nuclear explosive used for peaceful purposes, tests, or experiments.

nuclear electric power generation [ELEC] Large-scale generation of electric power in which the source of energy is nuclear fission, generally in a nuclear reactor, or nuclear fusion.

nuclear-electric propulsion [AERO ENG] A system of propulsion utilizing a nuclear reactor to generate electricity which is then used in an electric propulsion system or as a heat source for the working fluid.

nuclear-electric rocket engine [AERO ENG] A rocket engine in which a nuclear reactor is used to generate electricity that is used in an electric propulsion system or as a heat source for the working fluid.

nuclear emulsion [NUCLEO] A photographic emulsion specially designed to register individual tracks of ionizing particles.

nuclear emulsion counter [NUCLEO] A device used to measure the intensity of ionizing radiation by counting the number of tracks in an emulsion which has been exposed to the radiation.

nuclear energy [NUCLEO] Energy released by nuclear fission or nuclear fusion. Also known as atomic energy.

nuclear engine [NUCLEO] A type of thermal engine utilizing nuclear fission or fusion reactions to heat a working fluid for propulsive purposes.

nuclear engineering [NUCLEO] The branch of technology that deals with the utilization of the nuclear fission process, and is concerned with the design and construction of nuclear reactors and auxiliary facilities, the development and fabrication of special materials, and the handling and processing of reactor products.

nuclear excavation [ENG] The use of nuclear explosions to remove earth for constructing harbors, canals, and other facilities.

nuclear explosion [NUCLEO] An explosion for which the energy is produced by a nuclear transformation, either fission or fusion.

nuclear fission *See* fission.

nuclear force [NUC PHYS] That part of the force between nucleons which is not electromagnetic; it is much stronger than electromagnetic forces, but drops off very rapidly at distances greater than about 10^{-13} centimeter; it is responsible for holding the nucleus together.

nuclear fuel [NUCLEO] A fissionable or fertile isotope with a reasonably long half-life, used as a source of energy in a nuclear reactor. Also known as fission fuel; reactor fuel.

nuclear fuel cycle *See* reactor fuel cycle.

nuclear fuel element [NUCLEO] A piece of nuclear fuel which has been formed and coated, and is ready to be placed in a reactor fuel assembly. Also known as reactor fuel element.

nuclear fuel form [NUCLEO] Any chemical form of fissionable nuclear fuel, such as UO_2.

nuclear fuel pebble *See* nuclear fuel pellet.

nuclear fuel pellet [NUCLEO] A piece of nuclear fuel usually in the shape of a sphere or cylinder, used in pebble-bed reactors, inserted in graphite blocks, or used in metallic tubular fuel elements. Also known as fuel ball; nuclear fuel pebble; reactor fuel pellet.

nuclear fuel plate [NUCLEO] A flat or curved sandwich of metallic cladding, with nuclear fuel inside.

nuclear fuel reprocessing [NUCLEO] The periodic chemical, physical, and metallurgical treatment of materials used as fuel elements in nuclear reactors, to recover and purify the residual fissionable and fertile materials.

nuclear fusion *See* fusion.

nuclear ground state [NUC PHYS] The stationary state of lowest energy of an isotope.

nuclear gyroscope [ENG] A gyroscope in which the conventional spinning mass is replaced by the spin of atomic nuclei and electrons; one version uses optically pumped mercury isotopes, and another uses nuclear magnetic resonance techniques.

nuclear heat [NUCLEO] The heat released in a nuclear reactor due to the fission process.

nuclear induction [PHYS] Magnetic induction originating in the magnetic moments of nuclei; the effect depends on the unequal population of energy states available when the material is placed in a magnetic field.

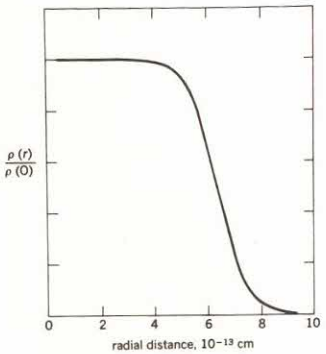
nuclear laser [OPTICS] A gas laser in which the gas molecules are excited by high-energy fission particles produced by a pulsed nuclear reactor.

nuclear magnetic moment [NUC PHYS] The magnetic dipole moment of an atomic nucleus; a vector whose scalar product with the magnetic flux density gives the negative of the energy of interaction of a nucleus with a magnetic field.

nuclear magnetic resonance [PHYS] A phenomenon exhibited by a large number of atomic nuclei, in which nuclei in a static magnetic field absorb energy from a radio-frequency field at certain characteristic frequencies. Abbreviated NMR. Also known as magnetic nuclear resonance.

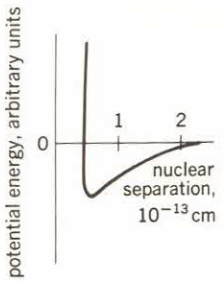
nuclear magnetic resonance flowmeter [ENG] A flowme-

NUCLEAR DENSITY



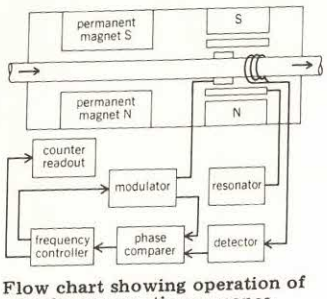
Distribution of charge in a nucleus of gold; this is believed to be approximately proportional to the nuclear mass density, on the assumption that the distributions of protons and neutrons are approximately the same; $\rho(r)$ = density at distance r from the center; $\rho(O)$ = density at the center.

NUCLEAR FORCE



The potential operating between two nucleons due to the nuclear forces.

NUCLEAR MAGNETIC RESONANCE FLOWMETER



Flow chart showing operation of a nuclear magnetic resonance flowmeter.

ter in which nuclei of the flowing fluid are resonated by a radio-frequency field superimposed on an intense permanent magnetic field, and a detector downstream measures the amount of decay of the resonance, thereby sensing fluid velocity.

nuclear magnetic resonance spectrometer [SPECT] A spectrometer in which nuclear magnetic resonance is used for the analysis of protons and nuclei and for the study of changes in chemical and physical quantities over wide frequency ranges.

nuclear magnetic resonance tomography *See* zeugmatography.

nuclear magnetism [PHYS] The phenomena associated with the magnetic dipole, octupole, and higher moments of a nucleus, including the magnetic field generated by the nucleus, the force on the nucleus in an inhomogeneous magnetic field, and the splitting of nuclear energy levels in a magnetic field.

nuclear magnetometer [ENG] Any magnetometer which is based on the interaction of a magnetic field with nuclear magnetic moments, such as the proton magnetometer. Also known as nuclear resonance magnetometer.

nuclear magneton [NUC PHYS] A unit of magnetic dipole moment used to express magnetic moments of nuclei and baryons; equal to the electron charge times Planck's constant divided by the product of 4π, the proton mass, and the speed of light.

nuclear mass [NUC PHYS] The mass of an atomic nucleus, which is usually measured in atomic mass units; it is less than the sum of the masses of its constituent protons and neutrons by the binding energy of the nucleus divided by the square of the speed of light.

nuclear membrane [CYTOL] The envelope surrounding the cell nucleus, separating the nucleoplasm from the cytoplasm; composed of two membranes and contains numerous pores.

nuclear moment [NUC PHYS] One of the various static electric or magnetic multipole moments of a nucleus.

nuclear number *See* mass number.

nuclear paramagnetism [PHYS] Paramagnetism in which a substance develops a net magnetic moment because the magnetic moments of nuclei tend to point in the direction of the field.

nuclear physics [PHYS] The study of the characteristics, behavior, and internal structures of the atomic nucleus.

nuclear pile *See* nuclear reactor.

nuclear polarization [NUC PHYS] For a nucleus in a mixed state, with spin I and probability $p(I_z)$ that the I_z substate is populated, the polarization is the sum over allowed values of I_z of $I_z p(I_z)/I$.

nuclear potential [NUC PHYS] The potential energy of a nuclear particle as a function of its position in the field of a nucleus or of another nuclear particle.

nuclear potential energy [NUC PHYS] The average total potential energy of all the protons and neutrons in a nucleus due to the nuclear forces between them, excluding the electrostatic potential energy.

nuclear potential scattering [NUC PHYS] That part of elastic scattering of particles by a nucleus which may be treated by studying the scattering of a wave which obeys the Schrödinger equation with a potential determined by the properties of the nucleus.

nuclear power [NUCLEO] Power whose source is nuclear fission or fusion

nuclear power plant [MECH ENG] A power plant in which nuclear energy is converted into heat for use in producing steam for turbines, which in turn drive generators that produce electric power.

nuclear propulsion [NAV ARCH] Propulsion of a ship or submarine by an engine driven by steam generated by nuclear energy in a reactor, rather than combustion of fuel in a boiler.

nuclear quadrupole moment [NUC PHYS] The electric quadrupole moment of an atomic nucleus.

nuclear quadrupole resonance [PHYS] The phenomenon in which certain nuclei in a static, inhomogeneous electric field absorb energy from a radio-frequency field.

nuclear radiation [NUC PHYS] A term used to denote alpha particles, neutrons, electrons, photons, and other particles which emanate from the atomic nucleus as a result of radioactive decay and nuclear reactions.

nuclear radiation spectroscopy [NUC PHYS] Study of the distribution of energies or momenta of particles emitted by nuclei.

nuclear radius [NUC PHYS] The radius of a sphere within which the nuclear density is large, and at the surface of which it falls off sharply.

nuclear reaction [NUC PHYS] A reaction involving a change in an atomic nucleus, such as fission, fusion, neutron capture, or radioactive decay, as distinct from a chemical reaction, which is limited to changes in the electron structure surrounding the nucleus. Also known as reaction.

nuclear reaction spectrometry [SPECT] A method of determining the concentration of a given element as a function of depth beneath the surface of a sample, by measuring the yield of characteristic gamma rays from a resonance reaction occurring when the surface is bombarded by a beam of ions. Abbreviated NRS.

nuclear reactor [NUCLEO] A device containing fissionable material in sufficient quantity and so arranged as to be capable of maintaining a controlled, self-sustaining nuclear fission chain reaction. Also known as atomic pile (deprecated usage); atomic reactor; fission reactor; nuclear pile (deprecated); pile (deprecated); reactor.

nuclear relaxation [PHYS] The approach of a system of nuclear spins to a steady-state or equilibrium condition over a period of time, following a change in the applied magnetic field.

nuclear resonance [NUC PHYS] **1.** An unstable excited state formed in the collision of a nucleus and a bombarding particle, and associated with a peak in a plot of cross section versus energy. **2.** The absorption of energy by nuclei from radio-frequency fields at certain frequencies when these nuclei are also subjected to certain types of static fields, as in magnetic resonance and nuclear quadrupole resonance.

nuclear resonance magnetometer *See* nuclear magnetometer.

nuclear rocket *See* atomic rocket.

nuclear scattering [NUC PHYS] The change in directions of particles as a result of collisions with nuclei.

nuclear sclerosis [MED] Hardening of the ocular lens nucleus.

nuclear ship [NAV ARCH] A ship in which nuclear energy in a reactor, rather than combustion of fuel in a boiler, generates steam which drives the engine to propel the ship.

nuclear snow gage [ENG] Any type of gage using a radioactive source and a detector to measure, by the absorption of radiation, the water-equivalent mass of a snowpack.

nuclear spallation *See* spallation.

nuclear species *See* nuclide.

nuclear spectrum [NUC PHYS] **1.** The relative number of particles emitted by atomic nuclei as a function of energy or momenta of these particles. **2.** The graphical display of data from devices used to measure these quantities.

nuclear spin [NUC PHYS] The total angular momentum of an atomic nucleus, resulting from the coupled spin and orbital angular momenta of its constituent nuclei. Also known as nuclear angular momentum. Symbolized I.

nuclear spontaneous reaction *See* radioactive decay.

nuclear stability [NUC PHYS] The ability of an isotope to resist decay or fission.

nuclear star *See* star.

nuclear submarine [NAV ARCH] A submarine in which nuclear energy in a reactor generates steam which drives the engine to propel the ship.

nuclear superheating [NUCLEO] Superheating the steam produced in a reactor by using additional heat from a reactor; two methods may be used: recirculating the steam through the same core in which it is first produced (integral superheating) or passing the steam through a second and separate reactor.

nuclear thermionic converter [NUCLEO] A thermionic converter whose heat source is a nuclear reactor or radioisotope.

nuclear transformation *See* transmutation.

nuclear triode detector [ELECTR] A type of junction detector that has two outputs which together determine the precise location on the detector where the ionizing radiation was incident, as well as the energy of the ionizing particle.

nuclear twin-probe gage *See* profiling snow gage.

nuclear warhead [ORD] A warhead that contains fissionable or fissionable-fusionable material.

nuclear weapon *See* atomic weapon.

nuclear yield [NUCLEO] The energy released by the detonation of a nuclear weapon; measured in terms of megatons of trinitrotoluene (TNT) required to release the same energy.

nuclear Zeeman effect [SPECT] A splitting of atomic spectral lines resulting from the interaction of the magnetic moment of the nucleus with an applied magnetic field.

nuclease [BIOCHEM] An enzyme that catalyzes the splitting

of nucleic acids to nucleotides, nucleosides, or the components of the latter.

nucleate boiling [CHEM ENG] Boiling in which bubble formation is at the liquid-solid interface rather than from external or mechanical devices; occurs in kettle-type and natural-circulation heaters or reboilers.

nucleated glass [MATER] Glass treated with a nucleating agent to transform it into a crystalline material.

nucleation [CHEM] In crystallization processes, the formation of new crystal nuclei in supersaturated solutions.

nucleic acid [BIOCHEM] A large, acidic, chainlike molecule containing phosphoric acid, sugar, and purine and pyrimidine bases; two types are ribonucleic acid and deoxyribonucleic acid.

nuclein [BIOCHEM] Any of a poorly defined group of nucleic acid protein complexes occurring in cell nuclei.

nucleocytoplasmic ratio [CYTOL] The ratio between the measured cross-sectional area or estimated volume of the nucleus of a cell to the volume of its cytoplasm. Also known as karyoplasmic ratio.

nucleofuge *See* leaving group.

nucleogenesis [ASTROPHYS] The origin of chemical elements in the universe.

nucleolar [CYTOL] Of or pertaining to the nucleolus.

nucleolus [CYTOL] A small, spherical body composed principally of protein and located in the metabolic nucleus. Also known as plasmosome.

nucleon [PHYS] A collective name for a proton or a neutron; these particles are the main constituents of atomic nuclei, have approximately the same mass, have a spin of ½, and can transform into each other through the process of beta decay.

nucleonics [ENG] The technology based on phenomena of the atomic nucleus such as radioactivity, fission, and fusion; includes nuclear reactors, various applications of radioisotopes and radiation, particle accelerators, and radiation-detection devices.

nucleonium [ATOM PHYS] A bound state of a nucleus and an antinucleus.

nucleon number *See* mass number.

nucleoplasm [CYTOL] The protoplasm of a nucleus. Also known as karyoplasm.

nucleoprotein [BIOCHEM] Any member of a class of conjugated proteins in which molecules of nucleic acid are closely associated with molecules of protein.

nucleoreticulum [CYTOL] Any type of network found within a nucleus.

nucleosidase [BIOCHEM] An enzyme that catalyzes the hydrolysis of a nucleoside to its component pentose and its purine or pyrimidine base.

nucleoside [BIOCHEM] The glycoside resulting from removal of the phosphate group from a nucleotide; consists of a pentose sugar linked to a purine or pyrimidine base.

nucleosome [CYTOL] A morphologically repeating unit of DNA containing 190 base pairs of DNA folded together with eight histone molecules. Also known as ν-body.

nucleospindle [CYTOL] A mitotic spindle derived from nuclear material.

nucleosynthesis [ASTROPHYS] The formation of the various nuclides present in the universe by various nuclear reactions, occurring chiefly in the early universe following the big bang, in the interiors of stars, and in supernovae.

nucleotidase [BIOCHEM] Any of a group of enzymes which split phosphoric acid from nucleotides, leaving nucleosides.

nucleotide [BIOCHEM] An ester of a nucleoside and phosphoric acid; the structural unit of a nucleic acid.

nucleus [COMPUT SCI] **1.** That portion of the control program that must always be present in main storage. **2.** The main storage area used in the nucleus (first definition) and other transient control program routines. [ASTRON] The small permanent body of a comet, believed to have a diameter between one and a few tens of kilometers, and to be composed of water and volatile hydrocarbons. [CYTOL] A small mass of differentiated protoplasm rich in nucleoproteins and surrounded by a membrane; found in most animal and plant cells, contains chromosomes, and functions in metabolism, growth, and reproduction. [HISTOL] A mass of nerve cells in the central nervous system. [HYD] A particle of any nature upon which, or a locus at which, molecules of water or ice accumulate as a result of a phase change to a more condensed state. [NUC PHYS] The central, positively charged, dense portion of an atom. Also known as atomic nucleus. [SCI TECH] A central mass about which accretion takes place.

nucleus counter [ENG] An instrument which measures the number of condensation nuclei or ice nuclei per sample volume of air.

nuclide [NUC PHYS] A species of atom characterized by the number of protons, number of neutrons, and energy content in the nucleus, or alternatively by the atomic number, mass number, and atomic mass; to be regarded as a distinct nuclide, the atom must be capable of existing for a measurable lifetime, generally greater than 10^{-10} second. Also known as nuclear species; species.

Nuda [INV ZOO] A class of the phylum Ctenophora distinguished by the lack of tentacles.

Nudechiniscidae [INV ZOO] A family of heterotardigrades in the suborder Echiniscoidea characterized by a uniform cuticle.

Nudibranchia [INV ZOO] A suborder of the Opisthobranchia containing the sea slugs; these mollusks lack a shell and a mantle cavity, and the gills are variable in size and shape.

nudism [PSYCH] Intolerance for wearing clothing, with a morbid tendency for the individual to remove his clothing.

nuée ardente [GEOL] A turbulent, rapidly flowing, and sometimes incandescent gaseous cloud erupted from a volcano and containing ash and other pyroclastics in its lower part. Also known as glowing cloud; Pelean cloud.

nugget [GEOL] A small mass of metal found free in nature. [MET] A weld bead.

null [MATH] A term meaning that an object is nonexistent or a quantity is zero. [NAV] **1.** The azimuth or elevation reading on a navigational device indicated by minimum signal output. **2.** Any of the nodal points on the radiation patterns of some antennas.

nullary composition [MATH] The selection of a particular element of a set.

null-balance recorder [ENG] An instrument in which a motor-driven slide wire in a measuring circuit is continuously adjusted so that the voltage or current to be measured will be balanced against the voltage or current from this circuit; a pen linked to the slide wire makes a graphical record of its position as a function of time.

null character [COMPUT SCI] A control character used as a filler in data processing; may be inserted or removed from a sequence of characters without affecting the meaning of the sequence, but may affect format or control equipment.

null-current circuit [ELECTR] A circuit used to measure current, in which the unknown current is opposed by a current resulting from applying a voltage controlled by a slide wire across a series resistor, and the slide wire is continuously adjusted so that the resulting current, as measured by a direct-current detector amplifier, is equal to zero.

null-current measurement [ELECTR] Measurement of current using a null-current circuit.

null detection [ELEC] Altering of adjustable bridge circuit components, to obtain zero current. [NAV] Method of determining the radio direction by altering the antenna position to obtain minimum signal strength.

null detector *See* null indicator.

null geodesic [MATH] In a Riemannian space, a minimal geodesic curve. [RELAT] A curve in space-time which has the property that the infinitesimal interval between any two neighboring points on the curve equals zero; it represents a possible path of a light ray. Also known as zero geodesic.

null hypothesis [STAT] The hypothesis that there is no validity to the specific claim that two variations (treatments) of the same thing can be distinguished by a specific procedure.

null indicator [ENG] A galvanometer or other device that indicates when voltage or current is zero; used chiefly to determine when a bridge circuit is in balance. Also known as null detector.

nullity [MATH] The dimension of the null space of a linear transformation.

null matrix [MATH] The matrix all of whose entries are zero.

null method [ENG] A method of measurement in which the measuring circuit is balanced to bring the pointer of the indicating instrument to zero, as in a Wheatstone bridge, and the settings of the balancing controls are then read. Also known as balance method; zero method.

null reference system [NAV] A type of instrument landing system in which the antenna array consists of two elements, one

twice as high as the other; the lower element radiates with maximum intensity along the glide path, while the upper element produces a signal null at the glide path angle.

null sequence [MATH] A sequence of numbers or functions which converges to the number zero or the zero function.

null set [MATH] The empty set; the set which contains no elements.

null space [MATH] For a linear transformation, the vector subspace of all vectors which the transformation sends to the zero vector. Also known as kernel.

null vector [MATH] A vector whose invariant length, that is, the sum over the coordinates of the vector space of the product of its covariant component and contravariant component, is equal to zero. [RELAT] In special relativity, a four vector whose spatial part in any Lorentz frame has a magnitude equal to the speed of light multiplied by its time part in that frame; a special case of the mathematics definition.

number [MATH] **1.** Any real or complex number. **2.** The number of elements in a set is the cardinality of the set.

number class modulo N [MATH] The class of all numbers which differ from a given number by a multiple of N.

number cruncher [COMPUT SCI] A computer with great power to carry out computations, designed to maximize this ability rather than to process large amounts of data.

number record printers [COMMUN] Printers in a relay station to provide a complete automatic written record of channel numbers and the fixed routing line associated with each message that is relayed through that particular station.

number scale [MATH] Representation of points on a line with numbers arranged in some order.

Number six fuel *See* bunker C fuel oil.

number theory [MATH] The study of integers and relations between them.

numeral [MATH] A symbol used to denote a number.

numeral system *See* numeration system.

numeration [MATH] The listing of numbers in their natural order.

numeration system [MATH] An orderly method of representing numbers by numerals in which each numeral is associated with a unique number. Also known as numeral system.

numerator [MATH] In a fraction a/b, the numerator is the quantity a.

numeric [COMPUT SCI] In computers, pertaining to data composed wholly or partly of digits, as distinct from alphabetic.

numerical [MATH] Pertaining to numbers.

numerical analysis [MATH] The study of approximation techniques using arithmetic for solutions of mathematical problems.

numerical aperture [OPTICS] A measure of the resolving power of a microscope objective, equal to the product of the refractive index of the medium in front of the objective and the sine of the angle between the outermost ray entering the objective and the optical axis. Abbreviated N.A.

numerical control [CONT SYS] A control system for machine tools and some industrial processes, in which numerical values corresponding to desired positions of tools or controls are recorded on punched paper tapes, punched cards, or magnetic tapes so that they can be used to control the operation automatically. Abbreviated NC; N/C.

numerical decrement *See* decrement.

numerical display device [ELECTR] Any device for visually displaying numerical figures, such as a numerical indicator tube, a device utilizing electroluminescence, or a device in which any one of a stack of transparent plastic strips engraved with digits can be illuminated by a small light at the edge of the strip.

numerical equation [MATH] An equation all of whose constants and coefficients are numbers.

numerical forecasting [METEOROL] The forecasting of the behavior of atmospheric disturbances by the numerical solution of the governing fundamental equations of hydrodynamics, subject to observed initial conditions. Also known as dynamic forecasting; mathematical forecasting; numerical weather prediction; physical forecasting.

numerical indicator tube [ELECTR] An electron tube capable of visually displaying numerical figures; some varieties also display alphabetical characters and commonly used symbols.

numerical system [TEXT] A grade scale for calculating the quality of wool. Also known as count system.

numerical tape [COMPUT SCI] The tape required by a computer operating a machine tool.

numerical taxonomy [SYST] The numerical evaluation of the affinity or similarity between taxonomic units and the ordering of these units into taxa on the basis of their affinities.

numerical value of a real number *See* absolute value of a real number.

numerical weather prediction *See* numerical forecasting.

numeric character *See* digit.

numeric coding [COMPUT SCI] Code in which only digits are used, usually binary or octal.

numeric control [COMPUT SCI] The action of programs written for specialized computers which operate machine tools.

numeric data [COMPUT SCI] Data consisting of digits and not letters of the alphabet or special characters.

numeric printer [COMPUT SCI] Old type of printer which positioned its keys to print a field in one operation, rather than one digit at a time.

numeric punch [COMPUT SCI] Punching of holes in a column of a computer card so that only one hole in rows zero through nine is punched in the column.

Numididae [VERT ZOO] A family of birds in the order Galliformes commonly known as guinea fowl; there are few if any feathers on the neck or head, but there may be a crest of feathers and various fleshy appendages.

nunatak [GEOL] An isolated hill, knob, ridge, or peak of bedrock projecting prominently above the surface of a glacier and completely surrounded by glacial ice.

nun buoy [NAV] A red buoy made of two conical or truncated cone-shaped sections joined at the base; marks the starboard side when entering a channel from the sea.

N unit [OPTICS] A unit of index of refraction; a mathematical simplification designed to replace rather awkward numbers involved in the values of the index of refraction n for the atmosphere; it is defined by the relation $N=(n-1)10^6$.

nuplex [NUCLEO] Proposed nuclear reactor which would both produce electrical power and heat water for desalination and other industrial benefits.

nurse cell [HISTOL] A cell type of the ovary of many animals which nourishes the developing egg cell.

nurse graft [BOT] A plant graft in which the scion remains united with the stock only until roots develop on the scion.

nursing [MED] The application of the principles of physical, biological, and social sciences in the physical and mental care of people.

Nusselt equation [THERMO] Dimensionless equation used to calculate convection heat transfer for heating or cooling of fluids outside a bank of 10 or more rows of tubes to which the fluid flow is normal.

Nusselt number [PHYS] A dimensionless number used in the study of mass transfer, equal to the mass-transfer coefficient times the thickness of a layer through which mass transfer is taking place divided by the moleculor diffusivity. Symbolized Nu_m; N_{Num}. Also known as Sherwood number (N_{Sh}). [THERMO] A dimensionless number used in the study of forced convection which gives a measure of the ratio of the total heat transfer to conductive heat transfer, and is equal to the heat-transfer coefficient times a characteristic length divided by the thermal conductivity. Symbolized N_{Nu}.

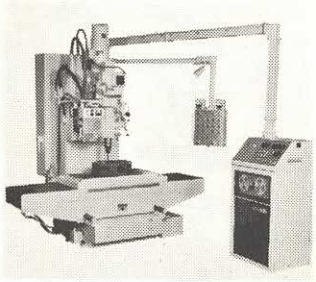
nut [BOT] **1.** A fruit which has at maturity a hard, dry shell enclosing a kernel consisting of an embryo and nutritive tissue. **2.** An indehiscent, one-celled, one-seeded, hard fruit derived from a single, simple, or compound ovary. [DES ENG] An internally threaded fasterner for bolts and screws.

nutating antenna [ENG] An antenna system used in conical scan radar, in which a dipole or feed horn moves in a small circular orbit about the axis of a paraboloidal reflector without changing its polarization.

nutating-disk meter [ENG] An instrument for measuring flow of a liquid in which liquid passing through a chamber causes a disk to nutate, or roll back and forth, and the total number of rolls is mechanically counted.

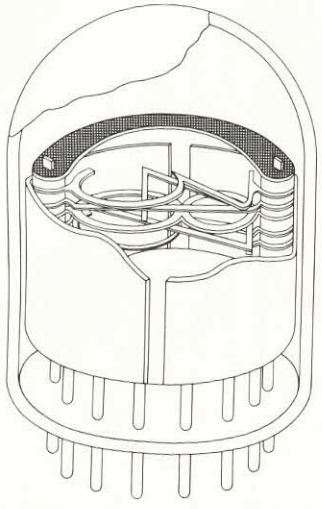
nutation [ASTRON] A slight, slow, nodding motion of the earth's axis of rotation which is superimposed on the precession of the equinoxes; it is the combination of a number of perturbations (lunar, solar, and fortnightly nutation). [BOT] The rhythmic change in the position of growing plant organs caused by variation in the growth rates on different sides of the growing apex. [MECH] A bobbing or nodding up-and-down motion

NUMERICAL CONTROL



A typical numerically controlled machine tool, showing the numerical control system or "director" at the right. *(Cintimatic Div., Cincinnati Milacron Co.)*

NUMERICAL INDICATOR TUBE



Cold-cathode gas-type numerical indicator tube.

of a spinning rigid body, such as a top, as it precesses about its vertical axis.

nutational scanner [OPTICS] An optical-mechanical system for scanning an image along a series of closely spaced parallel lines, using an oscillating plane mirror and a rotating prism.

nutator [ENG] A mechanical or electrical device used to move a radar beam in a circular, conical, spiral, or other manner periodically to obtain greater air surveillance than could be obtained with a stationary beam.

nutgall [PL PATH] A nutlike gall.

nutmeg [BOT] *Myristica fragrans*. A dark-leafed evergreen tree of the family Myristicaceae cultivated for the golden-yellow fruits which resemble apricots; a delicately flavored spice is obtained from the kernels inside the seeds.

nutmeg liver [MED] Chronic passive hyperemia of the liver; the cut surface of the diseased organ resembles the cut surface of a nutmeg.

nutmeg oil [MATER] A pale-yellow or colorless essential oil with spicy taste and nutmeg aroma; obtained from nutmegs; soluble in alcohol, carbon bisulfide, and glacial acetic acid; chief constituents are myristin, pinene, and dipentene; used in flavors, perfumes, and medicines. Also known as myristica oil.

nutrient [BIOL] Providing nourishment.

nutrient foramen [ANAT] The opening into the canal which gives passage to the blood vessels of the medullary cavity of a bone.

nutrition [BIOL] The science of nourishment, including the study of nutrients that each organism must obtain from its environment in order to maintain life and reproduce.

nutritional anemia [MED] Anemia resulting from certain nutritional deficiencies.

nutritional dystrophy *See* kwashiorkor.

nutritional edema [MED] Edema resulting from starvation or malnutrition.

nutritional hypochromic anemia *See* iron-deficiency anemia.

Nuttalliellidae [INV ZOO] A family of ticks (Ixodides) containing one rare African species, *Nuttalliella namaqua*, morphologically intermediate between the families Argasidae and Ixodidae.

nu value [OPTICS] The reciprocal of the dispersive power of a medium. Also known as constringence.

nuvistor [ELECTR] Electron tube in which all electrodes are cylindrical, placed one inside the other with close spacing, in a ceramic envelope.

nux vomica [BOT] The seed of *Strychnos nux-vomica*, an Indian tree of the family Loganiaceae; contains the alkaloid strychnine, and was formerly used in medicine.

n value *See* field index.

NV RAM *See* nonvolatile random-access memory.

nybble [COMPUT SCI] A string of bits, smaller than a byte, operated on as a unit.

Nyctaginaceae [BOT] A family of dicotyledonous plants in the order Caryophyllales characterized by an apocarpous, monocarpous, or syncarpous gynoecium, sepals joined to a tube, a single carpel, and a cymose inflorescence.

nyctalopia *See* night blindness.

Nycteridae [VERT ZOO] The slit-faced bats, a monogeneric family of insectivorous chiropterans having a simple, well-developed nose leaf, and large ears joined together across the forehead.

Nyctibiidae [VERT ZOO] A family of birds in the order Caprimulgiformes including the neotropical potoos.

nyctinasty [BOT] A nastic movement in higher plants associated with diurnal light and temperature changes.

nyctophobia [PSYCH] An abnormal fear of night and darkness.

Nyctribiidae [INV ZOO] The bat tick flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

Nylander reagent [CHEM] A solution of Rochelle salt (potassium sodium tartrate), potassium or sodium hydroxide, and bismuth subnitrate in water; used to test for sugar in urine.

nylon [MATER] Generic name for long-chain polymeric amide molecules in which recurring amide groups are part of the main polymer chain; used to make fibers, fabrics, sheeting, and extruded forms.

nylon 6 [MATER] Nylon made by polycondensation of caprolactam.

nylon 6,6 [MATER] Nylon made by condensation of hexamethylene diamine with adipic acid.

nylon 6,10 [MATER] Nylon made by the condensation of hexamethylene diamine with sebacic acid.

nymph [INV ZOO] Any immature larval stage of various hemimetabolic insects.

Nymphaeaceae [BOT] A family of dicotyledonous plants in the order Nymphaeales distinguished by the presence of roots, perfect flowers, alternate leaves, and uniaperturate pollen.

Nymphaeales [BOT] An order of flowering aquatic herbs in the subclass Magnoliidae; all lack cambium and vessels and have laminar placentation.

Nymphalidae [INV ZOO] The four-footed butterflies, a family of lepidopteran insects in the superfamily Papilionoidea; prothoracic legs are atrophied, and the well-developed patagia are heavily sclerotized.

Nymphalinae [INV ZOO] A subfamily of the lepidopteran family Nymphalidae.

nymphomania [PSYCH] Excessive sexual desire on the part of a woman. Also known as hysteromania.

Nymphonidae [INV ZOO] A family of marine arthropods in the subphylum Pycnogonida; members have chelifores, five-jointed palpi, and ten-jointed ovigers.

Nymphulinae [INV ZOO] A subfamily of the lepidopteran family Pyralididae which is notable because some species are aquatic.

Nyquist contour [CONT SYS] A directed closed path in the compiex frequency plane used in constructing a Nyquist diagram, which runs upward, parallel to the whole length of the imaginary axis at an infinitesimal distance to the right of it, and returns from $+j\infty$ to $-j\infty$ along a semicircle of infinite radius in the right half-plane.

Nyquist diagram [CONT SYS] A plot in the complex plane of the open-loop transfer function as the complex frequency is varied along the Nyquist contour; used to determine stability of a control system.

Nyquist interval [COMMUN] Maximum separation in time which can be given to regularly spaced instantaneous samples of a wave of specified bandwidth for complete determination of the waveform of the signal.

Nyquist rate [COMMUN] The maximum rate at which code elements can be unambiguously resolved in a communications channel with a limited range of frequencies; equal to twice the frequency range.

Nyquist stability criterion *See* Nyquist stability theorem.

Nyquist stability theorem [CONT SYS] The theorem that the net number of counterclockwise rotations about the origin of the complex plane carried out by the value of an analytic function of a complex variable, as its argument is varied around the Nyquist contour, is equal to the number of poles of the variable in the right half-plane minus the number of zeros in the right half-plane. Also known as Nyquist stability criterion.

Nyquist's theorem [ELECTR] The mean square noise voltage across a resistance in thermal equilibrium is four times the product of the resistance, Boltzmann's constant, the absolute temperature, and the frequency range within which the voltage is measured.

Nysa [ASTRON] An asteroid whose surface composition resembles that of the aubrites; it has a diameter of approximately 70 kilometers and a mean distance from the sun of 2.422 astronomical units.

Nysmyth's membrane [ANAT] The primary enamel cuticle which is the transitory remnants of the enamel organ and oral epithelium covering the enamel of a tooth after eruption.

Nyssaceae [BOT] A family of dicotyledonous plants in the order Cornales characterized by perfect or unisexual flowers with imbricate petals, a solitary ovule in each locule, a unilocular ovary, and more stamens than petals.

nystagmus [MED] Involuntary oscillatory movement of the eyeballs.

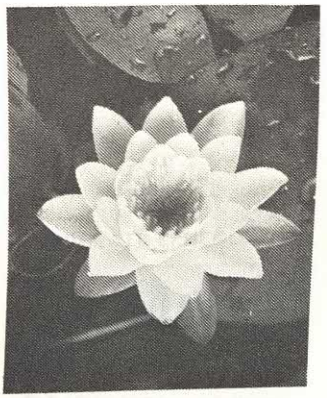
nystatin [MICROBIO] $C_{46}H_{77}NO_{19}$ An antifungal antibiotic produced by *Streptomyces noursei*; used for the treatment of infections caused by *Candida* (*Monilia*) *albicans*.

nytril [TEXT] A manufactured fiber containing at least 85% of a long-chain polymer of vinylidene dinitrile, where the vinylidene dinitrile content is no less than every other unit in the polymer chain.

NUTMEG

Nutmeg (*Myristica fragrans*), mature fruits. (*USDA*)

NYMPHAEACEAE



A common eastern American species of water lily (*Nymphaea odorata*) in the family Nymphaeaceae of the order Nymphaeales. The large and indefinite number of tepals, stamens, and carpels is characteristic of the family and a large part of the order. (*Photograph by Hugh Spencer, National Audubon Society*)

O

O *See* oxygen.

oak [BOT] Any tree of the genus *Quercus* in the order Fagales, characterized by simple, usually lobed leaves, scaly winter buds, a star-shaped pith, and its fruit, the acorn, which is a nut; the wood is tough, hard, and durable, generally having a distinct pattern.

oakmoss resin [MATER] Concrete oleoresin from the oakmoss lichens *Evernia prunastri* and *E. furfuracea*; used as a perfume fixative. Also known as mousse de chêne.

oakum [MATER] Old hemp or jute fiber, loosely twisted and impregnated with tar or a tar derivative, used to caulk sides and decks of ships and to pack joints of pipes and caissons.

oak wilt [PL PATH] A fungus disease of oak trees caused by *Chalara quercina*, characterized by wilting and yellow and red discoloration of the leaves progressing from the top downward and inward.

O antigen [MICROBIO] A somatic antigen of certain flagellated microorganisms.

oasis [GEOGR] An isolated fertile area, usually limited in extent and surrounded by desert, and marked by vegetation and a water supply.

oat [BOT] Any plant of the genus *Avena* in the family Gramineae, cultivated as an agricultural crop for its seed, a cereal grain, and for straw.

oatmeal paper [MATER] A paper in which fine sawdust is added to produce a sheet with a coarse texture; it can be used as an inexpensive sketching paper for work in pastels and charcoal, or as wallpaper.

O attenuator [ELECTR] A dissipative attenuator in which the circuit has the form of a ladder with two rungs, and the resistances across the rungs are unequal, so that the impedances across the two pairs of terminals are unequal.

OBA *See* octave-band analyzer.

obclavate [BIOL] Inversely clavate.

obcordate [BOT] Referring to a leaf, heart-shaped with the notch apical.

obdiplostemonous [BOT] Having the stamens arranged in two whorls, with members of the outer whorl positioned opposite the petals.

obduction [MED] The act or instance of performing a postmortem examination.

obelion [ANTHRO] The point where the line which joins the parietal foramens crosses the sagittal suture.

obelisk [ARCH] A four-sided pillar, tapering toward the top. [MATH] A frustrum of a regular, rectangular pyramid.

Obermayer's reagent [CHEM] A 0.4% solution of ferric chloride in concentrated hydrochloric acid; used to test for indican in urine, with a pale-blue or deep-violet color indicating positive.

Oberon [ASTRON] One of the five satellites of Uranus; diameter about 1400 kilometers.

oberwind [METEOROL] A night wind from mountains or the upper ends of lakes; a wind of Salzkammergut in Austria.

obese [ANAT] Extremely fat.

obfuscation [PSYCH] Mental confusion.

object [OPTICS] A collection of points which may be regarded as a source of light rays in an optical system, whether it actually has this function (as in a real object) or does not (as in a virtual object).

object computer [COMPUT SCI] The computer processing an object program; the same computer compiling the source program could, therefore, be called the source computer; such terminology is seldom used in practice.

object deck [COMPUT SCI] The set of machine-readable computer instructions produced by a compiler, either in absolute format (that is, containing only fixed addresses) or, more frequently, in relocatable format.

object glass *See* objective.

objective [OPTICS] The first lens, lens system, or mirror through which light passes or from which it is reflected in an optical system; many scientists exclude mirrors from the definition. Also known as object glass.

objective basic research [SCI TECH] Basic research in fields recognized as having a potential technological importance.

objective function [MATH] In nonlinear programming, the function, expressing given conditions for a system, which one seeks to minimize subject to given constraints.

objective grating [OPTICS] A series of equally spaced parallel wires placed over the objective lens of a telescope; photographic magnitudes of stars are calculated from the relative brightnesses of images in the resulting diffraction pattern.

objective plane [ORD] Plane tangent to the ground or coinciding with the surface of the target, especially such a plane at the point of impact of a bomb or projectile.

objective prism [OPTICS] A large prism, usually having a small angle, which is placed in front of the objective of a photographic telescope to make spectroscopic observations.

objective sign [MED] A sign which can be detectable by someone other than the patient.

object language [COMPUT SCI] The intended and desired output language in the translation or conversion of information from one language to another.

object library *See* object program library.

object module [COMPUT SCI] The computer language program prepared by an assembler or a compiler after acting on a programmer-written source program.

object program [COMPUT SCI] The computer language program prepared by an assembler or a compiler after acting on a programmer-written source program. Also known as object routine; target program; target routine.

object program library [COMPUT SCI] A collection of computer programs in the form of relocatable instructions, which reside on, and may be read from, a mass storage device. Also known as object library.

object relationship [PSYCH] The attitudes and responses of one person toward another; the capacity of an individual to react appropriately to and to accept and love other people.

object routine *See* object program.

object space [OPTICS] The region of space where objects are located so that a given optical system can form images of them.

object tape [COMPUT SCI] A tape, paper or magnetic, containing the machine language instructions resulting from a compiler or assembler, often found in minicomputer environments.

object time [COMPUT SCI] The time during which execution of an object program is carried out.

oblanceolate [SCI TECH] Inversely lanceolate.

oblate ellipsoid *See* oblate spheroid.

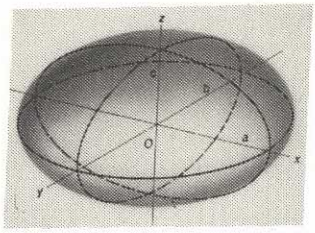
oblateness [ASTRON] The distortion from a spherical shape in which the diameter at the equator exceeds that at the poles.

oblate spheroid [MATH] The surface or ellipsoid generated

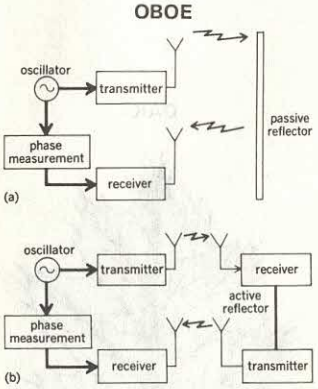
OAK

Terminal bud, leaf, and twig of white oak *(Quercus alba)*.

OBLATE SPHEROID



Drawing of an oblate spheroid generated by rotating an ellipse about its minor axis lying along z-axis of coordinate system, with center of ellipse at origin of coordinates, O. Diameters $2a$ and $2b$ along x and y axes are equal to each other, and greater than axis of revolution $2c$.



The single-path round-trip system used in oboe. *(a)* With passive reflector. *(b)* With active reflector.

by rotating an ellipse about one of its axes so that the diameter of its equatorial circle exceeds the length of the axis of revolution. Also known as oblate ellipsoid.

obligate [BIOL] Restricted to a specified condition of life, as an obligate parasite.

oblique [ANAT] Referring to a muscle, positioned obliquely and having one end that is not attached to bone. [BOT] Referring to a leaf, having the two sides of a blade unequal. [SCI TECH] Having a slanted direction or position.

oblique angle [MATH] An angle that is neither a right angle nor a multiple of a right angle.

oblique ascension [ASTRON] The arc of the celestial equator, or the angle at the celestial pole, between the hour circle of the vernal equinox and the hour circle through the intersection of the celestial equator and the eastern horizon at the instant a point on the oblique sphere rises, measured eastward from the hour circle of the vernal equinox through 24 hours.

oblique chart [MAP] A chart on an oblique projection.

oblique coordinates [MATH] Magnitudes defining a point relative to two intersecting nonperpendicular lines, called axes; the magnitudes indicate the distance from each axis, measured along a parallel to the other axis; oblique coordinates are a form of cartesian coordinates.

oblique cylindrical orthomorphic projection *See* oblique Mercator projection.

oblique equator [MAP] A great circle, the plane of which is perpendicular to the axis of an oblique projection; an oblique equator serves as the origin for measurement of oblique latitude; on an oblique Mercator projection, the oblique equator is the tangent great circle.

oblique extinction *See* inclined extinction.

oblique fault *See* diagonal fault.

oblique fire [ORD] Fire placed on a target from a direction diagonal to the long dimension of the target, or on an enemy from a direction between his front and his flank.

oblique graticule [MAP] A fictitious graticule based upon an oblique projection.

oblique-incidence reflectivity [OPTICS] The reflectivity of an interface between two media when the direction of propagation of the incident electromagnetic radiation is not perpendicular to the interface; it differs for the component whose electric vector lies in the plane containing the perpendicular to the surface and the propagation direction, and the component for which this vector is perpendicular to this plane.

oblique-incidence transmission [COMMUN] Transmission of a radio wave obliquely up to the ionosphere and down again.

oblique joint *See* diagonal joint.

oblique lines [MATH] Lines that are neither perpendicular nor parallel.

oblique Mercator projection [MAP] A conformal cylindrical map projection in which points on the surface of a sphere or spheroid, such as the earth, are conceived as developed by Mercator principles on a cylinder tangent along an oblique great circle. Also known as oblique cylindrical orthomorphic projection.

oblique meridian [MAP] A great circle perpendicular to an oblique equator; the reference oblique meridian is called the prime oblique meridian.

oblique parallel [MAP] A circle or line parallel to an oblique equator, connecting all points of equal oblique latitude.

oblique photograph [GRAPHICS] An aerial photograph taken with the camera axis intentionally inclined between the horizontal and the vertical.

oblique pole [MAP] One of the two points 90° from an oblique equator.

oblique projection [MAP] A map projection with its axis at an oblique angle to the plane of the equator.

oblique rhumb line [MAP] **1.** A line making the same oblique angle with all fictitious meridians of an oblique Mercator projection; oblique parallels and meridians may be considered special cases of the oblique rhumb line. **2.** Any rhumb line, real or fictitious, making an oblique angle with its meridians; in this sense the expression is used to distinguish such rhumb lines from parallels and meridians, real or fictitious, which may be included in the expression "rhumb line."

oblique shock *See* oblique shock wave.

oblique shock wave [FL MECH] A shock wave inclined at an oblique angle to the direction of flow in a supersonic flow field. Also known as oblique shock.

oblique slip fault [GEOL] A fault which has slippage along both the strike and dip of the fault plane.

oblique sphere [ASTRON] The celestial sphere as it appears to an observer between the equator and the pole, where celestial bodies appear to rise obliquely to the horizon.

oblique triangle [MATH] A triangle that does not contain a right angle.

oblique visibility *See* oblique visual range.

oblique visual range [OPTICS] The greatest distance at which a specified target can be perceived when viewed along a line of sight inclined to the horizontal. Also known as oblique visibility; slant visibility.

obliquity factor [OPTICS] A function which is proportional to the amplitudes of secondary waves propagating in various directions according to Huygens' principle; it is $1 + \cos\theta$, where θ is the angle between the normal to the original wavefront and the normal to the secondary wavefront.

obliquity of the ecliptic [ASTRON] The acute angle between the plane of the ecliptic and the plane of the celestial equator, about 23°27′.

obliterated corner [CIV ENG] In surveying, a corner for which visible evidence of the previous surveyor's work has disappeared, but whose original position can be established from other physical evidence and testimony.

obliterating endarteritis *See* endarteritis obliterans.

obliteration [MED] **1.** Complete removal of an organ or other body part by disease or surgical excision. **2.** Closure of a lumen. **3.** Loss of memory or consciousness of specific events.

obliterative appendicitis [MED] Obliteration of the lumen of the appendix by fibrofatty tissue.

oblong mesh *See* rectangular mesh.

oboe [NAV] An electronic navigation system utilizing a single-path round-trip system for determination of transmission times and distance; used for bombing in World War II.

Obolellida [PALEON] A small order of Early and Middle Cambrian inarticulate brachiopods, distinguished by a shell of calcium carbonate.

obovate [BIOL] Inversely ovate.

obscuration [METEOROL] In United States weather observing practice, the designation for the sky cover when the sky is completely hidden by surface-based obscuring phenomena, such as fog. Also known as obscured sky cover.

obscured sky cover *See* obscuration.

obscure glass [MATER] Translucent glass.

obscuring phenomenon [METEOROL] In United States weather observing practice, any atmospheric phenomenon (not including clouds) which restricts the vertical visibility or slant visibility, that is, which obscures a portion of the sky from the point of observation.

obsequent [GEOL] Of a stream, valley, or drainage system, being in a direction opposite to that of the original consequent drainage.

obsequent fault-line scarp [GEOL] A fault-line scarp which faces in the direction opposite to that of the original fault scarp or in which the structurally upthrown block is topographically lower than the downthrown block.

observability [CONT SYS] Property of a system for which observation of the output variables at all times is sufficient to determine the initial values of all the state variables.

observable operator [QUANT MECH] A Hermitian operator with a complete, orthonormal set of eigenfunctions on the Hilbert space representing the states of a physical system; such operators are postulated to represent the observable quantities of the system.

observable quantity [PHYS] A measurable physical quantity.

observational day [GEOPHYS] Any 24-hour period selected as the basis for climatological or hydrological observations.

observation of fire [ORD] Act of watching artillery fire in order to locate the burst or impact of projectiles in respect to the target and to correct firing data; surveillance of fire; may be made from the ground or from the air.

observation spillover [CONT SYS] The part of the sensor output of an active control system caused by modes that have been omitted from the control algorithm in the process of model reduction.

observation well [PETRO ENG] A special well drilled in a selected location for the purpose of observing parameters such as fluid levels and pressure changes (for example, within an oil reservoir) as production proceeds.

observed fire [ORD] Fire for which the points of impact or burst can be seen by an observer on the ground, in aircraft, or on a naval vessel; it can be controlled and adjusted on the basis of the observations.
observed latitude [NAV] Latitude determined from observations which result in lines of position extending in a generally east-west direction.
observed longitude [NAV] Longitude determined from observations which result in lines of position extending in a generally north-south direction.
observed position [ORD] Position of a moving target at the instant of observation.
observer [CONT SYS] A linear system B driven by the inputs and outputs of another linear system A which produces an output that converges to some linear function of the state of system A. Also known as state estimator; state observer.
observing angle [ORD] Angle at the target between a line to the observer and a line to the gun or battery; the angular distance of an observer from the gun or battery.
obsession [PSYCH] Persistence of or anxious preoccupation with an idea or emotion recognized as unreasonable by the individual.
obsessive-compulsive neurosis [PSYCH] A neurotic disorder in which anxiety relates to obsessions against which the individual fights but which he cannot control and by which he is dominated.
obsessive-compulsive personality [PSYCH] A behavioral disorder in which a person is generally characterized by chronic, excessive concern with conformity or adherence to standards, resulting in inhibited, inflexible behavior, inability to relax, and the performance of an inordinate amount of work.
obsidian [GEOL] A jet-black volcanic glass, usually of rhyolitic composition, formed by rapid cooling of viscous lava; generally forms the upper parts of lava flows. Also known as hyalopsite; Iceland agate; mountain mahogany.
obsidianite *See* tektite.
obsolescence [ENG] Decreasing value of functional and physical assets or value of a product or facility from technological changes rather than deterioration.
obsolete [BIOL] A part of an organism that is imperfect or indistinct, compared with a corresponding part of similar organisms. [ENG] No longer satisfactory for the purpose for which obtained, due to improvements or revised requirements.
obstacle [NAV] In air operations, a natural or artificial object which by its geographical location requires that its vertical dimension be considered in establishing the permissible flight paths in an area; this leads to the concept of the fictitious height for various obstacles; for example, a moving vehicle 17 feet high is assumed to be on an interstate highway 15 feet high, and thus the area is assumed to have an obstacle 32 feet high.
obstacle clearance [NAV] In air operations, the vertical distance between the lowest and the authorized height of operation.
obstacle clearance box [NAV] A rectangle on an aeronautical chart which encloses a number indicating the obstacle clearance required (in feet) on an approach segment where the box appears.
obstetric [MED] **1.** Of or pertaining to obstetrics. **2.** Of or pertaining to pregnancy and childbirth.
obstetrical analgesia [MED] Analgesia induced to diminish or obliterate the pain of childbirth.
obstetric forceps [MED] A perforated, double-bladed traction forceps which can be applied to the fetal head in cases of difficult labor.
obstetrician [MED] One who practices obstetrics.
obstetrics [MED] The branch of medicine that deals with pregnancy, labor, and the puerperium.
obstipation [MED] Constipation that is difficult to relieve.
obstructed stream [GEOL] A stream whose valley has been blocked by a landslide, glacial moraine, sand dune, or lava flow; it frequently consists of a series of ponds or small lakes.
obstruction [MED] Occlusion or stenosis of hollow viscera, ducts, and vessels. [NAV] Anything that hinders or prevents movement, particularly anything that endangers or prevents passage of a vessel or aircraft; usually refers to an isolated danger to navigation, such as a submerged rock or pinnacle in the case of marine navigation, and a tower, tall building, mountain peak, and so forth, in the case of air navigation.
obstruction beacon [NAV] A beacon marking an obstruction or hazard. Also known as hazard beacon.
obstruction buoy [NAV] A buoy marking an obstruction.
obstruction light [NAV] A light indicating the presence of an obstruction.
obstruction marker [NAV] A marker indicating the presence of an obstruction.
obstruction moraine [GEOL] A moraine formed where the movement of ice is obstructed, for example, by a ridge of bedrock.
obstruction to vision [METEOROL] In United States weather observing practice, one of a class of atmospheric phenomena, other than the weather class of phenomena, which may reduce horizontal visibility at the earth's surface; examples are fog, smoke, and blowing snow.
obstructive atelectasis [MED] Collapse of all or a portion of the lung due to bronchial obstruction or occlusion. Also known as absorption atelectasis.
obstructive dysmenorrhea *See* mechanical dysmenorrhea.
obstructive emphysema [MED] Overdistension of the lung due to partial obstruction of the air passages, which permits air to enter the alveoli but which resists expiration of the air.
obstructive glaucoma *See* narrow-angle glaucoma.
obstructive hydrocephaly [MED] Accumulation of cerebrospinal fluid in the brain ventricles caused by obstruction of the passage of the fluid from the ventricles to the subarachnoid space. Also known as internal hydrocephaly; noncommunicating hydrocephaly.
obstructive jaundice [MED] Jaundice caused by mechanical obstruction of the biliary passages, preventing the outflow of bile.
obtund [MED] To make dull or reduce, as to obtund sensibility.
obturating cup [ORD] An inverted cup, sealing against passage of gases of explosion, which inverts due to pressure and actuates a firing pin or other mechanism.
obturation [MED] **1.** The closing of an opening or passage. **2.** A form of intestinal obstruction in which the lumen is occupied by its normal contents or by foreign bodies. [ORD] Sealing of the breech of a gun to prevent escape of propellant gases in firing.
obturator [ANAT] **1.** Pertaining to that which closes or stops up, as an obturator membrane. **2.** Either of two muscles, originating at the pubis and ischium, which rotate the femur laterally. [MED] A solid wire or rod contained within a hollow needle or cannula. [ORD] **1.** Assembly of steel spindle, mushroom head, obturator rings, and a gas-check or obturator pad of tough plastic material used as a seal to prevent the escape of propellant gases around the breechblock of guns using separate-loading ammunition, and therefore not having the obturation provided by a cartridge case. **2.** A device incorporated in a projectile to make the tube of a weapon gastight, preventing escape of gas until the projectile has left the muzzle of the weapon.
obturator artery [ANAT] A branch of the internal iliac; it branches into the pubic and acetabular arteries.
obturator foramen [ANAT] A large opening in the pelvis, between the ischium and the pubis, that gives passage to vessels and nerves; it is partly closed by a fibrous obturator membrane.
obturator membrane [ANAT] **1.** A fibrous membrane closing the obturator foramen of the pelvis. **2.** A thin membrane between the crura and foot plates of the stapes.
obturator nerve [ANAT] A mixed nerve arising in the lumbar plexus; innervates the adductor, gracilis, and obturator externus muscles, and the skin of the medial aspect of the thigh, hip, and knee joints.
obturator pad [ORD] Pad of tough plastic material, forming part of an obturator.
obturator spindle [ORD] Part of the breechblock assembly of a gun which fires separate-loading ammunition; it extends through the breechblock and holds in position the various parts of the obturator, while permitting the breechblock to rotate independently about these parts.
obtuse [BOT] Of a leaf, having a blunt or rounded free end.
obtuse angle [MATH] An angle of more than 90° and less than 180°.
obtuse bisectrix [CRYSTAL] The bisectrix of the obtuse angle between the axes of a biaxial crystal.
obtuse triangle [MATH] A triangle having one obtuse angle.
obvallate [BIOL] Surrounded by or as if by a wall.
obvolute [BIOL] Overlapping.
occasional fog signal [NAV] A fog signal not sounded regularly in fog.

occasional light [NAV] A light not regularly exhibited for navigation purpose.
occidental [LAP] **1.** Property of a gemstone which is of an inferior quality (grade, luster, or value) or is an inferior variety. **2.** Property of a substitute gemstone that is misrepresented as being the genuine gem.
occipital arch [INV ZOO] A part of an insect cranium lying between the occipital suture and postoccipital suture.
occipital artery [ANAT] A branch of the external carotid which branches into the mastoid, auricular, sternocleidomastoid, and meningeal arteries.
occipital bone [ANAT] The bone which forms the posterior portion of the skull, surrounding the foramen magnum.
occipital condyle [ANAT] An articular surface on the occipital bone which articulates with the atlas. [INV ZOO] A projection on the posterior border of an insect head which articulates with the lateral neck plates.
occipital crest [ANAT] Either of two transverse ridges connecting the occipital protuberances with the foramen magnum.
occipital ganglion [INV ZOO] One of a pair of ganglia located just posterior to the brain in insects.
occipital lobe [ANAT] The posterior lobe of the cerebrum having the form of a three-sided pyramid.
occipital pole [ANAT] The tip of the occipital lobe of the brain.
occipital protuberance [ANAT] A prominence on the surface of the occipital bone to which the ligamentum nuchae is attached.
occipitofrontalis [ANAT] A muscle in two parts, the frontal (inserting in the skin of the forehead) and the occipital (inserting in the galea sponeurotica).
occiput [ZOO] The back of the head of an insert or vertebrate.
occluded cyclone [METEOROL] Any cyclone (or low) within which there has developed an occluded front.
occluded front [METEOROL] A composite of two fronts, formed as a cold front overtakes a warm front or quasi-stationary front. Also known as frontal occlusion; occlusion.
occluded gases [MIN ENG] Gases entering the mine atmosphere from feeders and blowers, and also from blasting operations.
occlusal disharmony [MED] Increased or maldirected occlusal force on individual teeth or groups of teeth causing a malposition or functional aberration.
occlusion [ANAT] The relationship of the masticatory surfaces of the maxillary teeth to the masticatory surfaces of the mandibular teeth when the jaws are closed. [ENG] The retention of undissolved gas in a solid during solidification. [MED] A closing or shutting up. [METEOROL] *See* occluded front. [PHYS] Adhesion of gas or liquid on a solid mass, or the trapping of a gas or liquid within a mass. [PHYSIO] The deficit in muscular tension when two afferent nerves that share certain motor neurons in the central nervous system are stimulated simultaneously, as compared to the sum of tensions when the two nerves are stimulated separately.
occultation [ASTRON] The disappearance of the light of a celestial body by intervention of another body of larger apparent size; especially, a lunar eclipse of a star or planet.
occult blood [PATH] Blood in body products such as feces, not detectable on gross examination.
occult hydrocephaly [MED] A syndrome in which the brain ventricular system is enlarged while cerebrospinal fluid pressure remains normal, causing dementia, disturbances of equilibrium, and disorders of sphincter control.
occulting bar [ASTRON] A bar placed in the focal plane of a telescope eyepiece to cover part of the field of view, usually to cover a bright object in order to permit observation of a nearby faint object.
occulting disk [ASTRON] A small metal disk placed in the focal plane of the eyepiece of a telescope, usually to cover a bright object in order to permit observation of a faint one.
occulting light [NAV] A navigational light totally interrupted at intervals by periods of darkness; the duration of the light period is equal to or greater than that of the dark period.
occulting quick-flashing light [NAV] A light showing flashes for several seconds, followed by a shorter period of darkness.
occult mineral [MINERAL] A mineral component of rock which cannot be seen through a microscope, but whose presence can be detected by chemical analyses.
occult virus [VIROL] A virus whose presence is assumed but which cannot be recovered.
occupational acne [MED] Acne acquired from regular exposure to acnegenic materials in certain industries; disappears when the cause is removed.
occupational disease [MED] A functional or organic disease caused by factors arising from the operations or materials of an individual's industry, trade, or occupation.
occupational medicine [MED] The branch of medicine which deals with the relationship of humans to their occupations, for the purpose of the prevention of disease and injury and the promotion of optimal health, productivity, and social adjustment.
occupational neurosis [PSYCH] Any neurotic disorder manifested by the individual's inability to use those parts of his body commonly employed in his occupation, such as a writer's inability to write due to a painful feeling of fatigue in the hand.
occupational therapy [MED] The teaching of skills or the use of selected occupations for therapeutic or rehabilitation purposes.
occupied bandwidth [COMMUN] Frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5% of the total mean power radiated by a given emission.
occupy [ENG] To set a surveying instrument over a point for the purpose of making observations or measurements.
OC curve *See* operating characteristic curve.
ocean [GEOGR] A major primary subdivision of the intercommunicating body of salt water occupying the depressions of the earth's surface; bounded by continents and imaginary lines. Also known as sea.
ocean basin [GEOL] The great depression occupied by the ocean on the surface of the lithosphere.
ocean circulation [OCEANOGR] **1.** Water current flow in a closed circular pattern within an ocean. **2.** Large-scale horizontal water motion within an ocean.
ocean current [OCEANOGR] A net transport of ocean water along a definable path.
ocean engineering [ENG] A subfield of engineering involved with the development of new equipment concepts and the methodical improvement of techniques which allow humans to operate successfully beneath the ocean surface in order to develop and utilize marine resources.
ocean floor [GEOL] The near-horizontal surface of the ocean basin.
ocean floor spreading *See* sea floor spreading.
Oceanian [ECOL] Of or pertaining to the zoogeographic region that includes the archipelagos and islands of the central and south Pacific.
oceanic anticyclone *See* subtropical high.
oceanic basalt [PETR] Rocks of the oceanic island volcanoes.
oceanic climate *See* marine climate.
oceanic crust [GEOL] A thick mass of igneous rock which lies under the ocean floor.
oceanic heat flow [GEOPHYS] The amount of thermal energy escaping from the earth through the ocean floor per unit area and unit time.
oceanic high *See* subtropical high.
oceanic island [GEOL] Any island which rises from the deep-sea floor rather than from shallow continental shelves.
oceanicity [CLIMATOL] The degree to which a point on the earth's surface is in all respects subject to the influence of the sea; it is the opposite of continentality; oceanicity usually refers to climate and its effects; one measure for this characteristic is the ratio of the frequencies of maritime to continental types of air mass. Also known as oceanity.
oceanic ridge *See* mid-oceanic ridge.
oceanic rise [GEOL] A long, broad elevation of the bottom of the ocean.
oceanic stratosphere *See* cold-water sphere.
oceanic zone [OCEANOGR] The biogeographic area of the open sea.
oceanite [PETR] A picritic basalt in which olivine is a great deal more abundant than plagioclase.
oceanity *See* oceanicity.
oceanization [GEOL] Process by which continental crust (sial) is converted into oceanic crust (sima).
oceanodromous [VERT ZOO] Of a fish, migratory in salt water.

oceanographic dredge [ENG] A device used aboard ship to bring up large samples of deposits and sediments from the ocean bottom.

oceanographic equator [OCEANOGR] **1.** The region of maximum temperature of the ocean surface. **2.** The region in which the temperature of the ocean surface is greater than 28°C.

oceanographic model [OCEANOGR] A theoretical representation of the marine environment which relates physical, chemical, geological, biological, and other oceanographic properties.

oceanographic platform [ENG] A man-made structure with a flat horizontal surface higher than the water, on which oceanographic equipment is suspended or installed.

oceanographic ship *See* research ship.

oceanographic station [OCEANOGR] A geographic location at which oceanographic observations are taken from a stationary ship.

oceanographic submersible [NAV ARCH] Any small research vessel designed for undersea operations.

oceanographic survey [OCEANOGR] A study of oceanographic conditions with reference to physical, chemical, biological, geological, and other properties of the ocean.

oceanographic vessel [NAV ARCH] A research ship or other manned vehicle used in oceanography.

oceanography [GEOPHYS] The scientific study and exploration of the oceans and seas in all their aspects. Also known as oceanology.

oceanology *See* oceanography.

ocean station vessel [NAV ARCH] A vessel assigned to patrol at a specified geographical position on the ocean; such vessels are specially equipped to make comprehensive meteorological and some oceanographic observations, and to provide meteorological observations, navigation assistance, and other services to transiting aircraft.

ocean thermal energy conversion [MECH ENG] The conversion of energy arising from the temperature difference between warm surface water of oceans and cold deep-ocean current into electrical energy or other useful forms of energy.

ocean weather station [METEOROL] As defined by the World Meteorological Organization, a specific maritime location occupied by a ship equipped and staffed to observe weather and sea conditions and report the observations by international exchange.

ocellar [PETR] Of the texture of an igneous rock, having crystalline aggregates of phenocrysts arranged radially or tangentially around larger euhedral crystals or which form rounded branching forms.

ocellus [INV ZOO] A small, simple invertebrate eye composed of photoreceptor cells and pigment cells. [PETR] A phenocryst in an ocellar rock.

ocelot [VERT ZOO] *Felis pardalis*. A small arboreal wild cat, of the family Felidae, characterized by a golden head and back, silvery flanks, and rows of somewhat metallic spots on the body.

ocher [MINERAL] A yellow, brown, or red earthy iron oxide, or any similar earthy, pulverulent metallic oxides used as pigments.

ochlophobia [PSYCH] An abnormal fear of crowds.

Ochnaceae [BOT] A family of dicotyledonous plants in the order Theales, characterized by simple, stipulate leaves, a mostly gynobasic style, and anthers that generally open by terminal pores.

Ochoan [GEOL] A North American provincial series that is uppermost in the Permian, lying above the Guadalupian and below the lower Triassic.

Ochotonidae [VERT ZOO] A family of the mammalian order Lagomorpha; members are relatively small, and all four legs are about equally long.

ochratoxin A [BIOCHEM] $C_{20}H_{18}ClNO_6$ A toxic metabolite from *Aspergillus ochraceus*; a crystalline compound which exhibits green fluorescence; melting point is 169°C; inhibits phosphorylase and mitochondrial respiration in rat liver.

ochre mutation [GEN] Alteration of a codon to *UGA*, a codon that results in premature termination of the polypeptide chain in bacteria.

Ochrept [GEOL] A suborder of the soil order Inceptisol, with horizon below the surface, lacking clay, sesquioxides, or humus; widely distributed, occurring from the margins of the tundra region through the temperate zone, but not into the tropics.

Ochrobium [MICROBIO] A genus of bacteria in the family Siderocapsaceae; cells are ellipsoidal to rod-shaped and are surrounded by a delicate sheath, resembling a horseshoe, that is heavily embedded with iron oxides.

ochroleucous [BIOL] Pale ocher or buff colored.

ochronosis [MED] A blue or brownish-blue discoloration of cartilage and connective tissue, especially around joints, caused by melanotic pigment.

Ochteridae [INV ZOO] The velvety shorebugs, the single family of the hemipteran superfamily Ochteroidea.

Ochteroidea [INV ZOO] A monofamilial tropical and subtropical superfamily of hemipteran insects in the subdivision Hydrocorisae; individuals are black with a silky sheen, and the antennae are visible from above.

ocotea oil [MATER] A volatile essential oil obtained from the wood of a Brazilian tree, *Ocotea cymbarum*; a source of safrole; used to make heliotropin and other technical preparations.

OCR *See* optical character recognition.

ocrea [BOT] A tubular stipule or pair of coherent stipules.

9,12-octadecadienoic acid *See* linoleic acid.

octadecanamide *See* stearamide.

***n*-octadecane** [ORG CHEM] $C_{18}H_{38}$ Colorless liquid boiling at 318°C; soluble in alcohol, acetone, ether, and petroleum, insoluble in water; used as a solvent and chemical intermediate.

***n*-octadecanoic acid** *See* stearic acid.

1-octadecanol *See* stearyl alcohol.

octadeca-9,11,13-trienoic acid *See* eleostearic acid.

9,12,15-octadecatrienoic acid *See* linolenic acid.

octadecatrienol *See* linolenyl alcohol.

9-octadecen-1,12-diol *See* ricinoleyl alcohol.

1-octadecene [ORG CHEM] $C_{18}H_{36}$ Colorless liquid boiling at 180°C; soluble in alcohol, acetone, ether, and petroleum, insoluble in water; used as a chemical intermediate.

***trans*-9-octadecenoic acid** *See* elaidic acid.

octadecenol *See* oleyl alcohol.

octadecenyl aldehyde [ORG CHEM] $C_{17}H_{35}CHO$ A flammable liquid with a boiling point of 167°C; used in the manufacture of vulcanization accelerators, rubber antioxidants, and pesticides. Also known as oleyl aldehyde.

octadecyl alcohol *See* stearyl alcohol.

octafluorocyclobutane [ORG CHEM] C_4F_8 A colorless gas or liquid with a boiling point of −4°C and a freezing point of −41.4°C; soluble in ether; used as a dielectric, refrigerant, and aerosol propellant. Also known as perfluorocyclobutane.

octafluoropropane [ORG CHEM] C_3F_8 A colorless gas with a boiling point of −36.7°C and a freezing point of approximately −160°C; used as a refrigerant and gaseous insulator. Also known as perfluoropropane.

octagon [MATH] A polygon with eight sides.

octahedral borax *See* tincalconite.

octahedral cleavage [CRYSTAL] Crystal cleavage in the four planes parallel to the face of the octahedron.

octahedral coordination [MINERAL] An atomic structure where six cations surround every anion, and vice versa.

octahedral copper ore *See* cuprite.

octahedral iron ore *See* magnetite.

octahedral normal stress [MECH] The normal component of stress across the faces of a regular octahedron whose vertices lie on the principal axes of stress; it is equal in magnitude to the spherical stress across any surface. Also known as mean stress.

octahedral plane [CRYSTAL] The plane in a cubic lattice having three numerically equal Miller indices.

octahedral shear stress [MECH] The tangential component of stress across the faces of a regular octahedron whose vertices lie on the principal axes of stress; it is a measure of the strength of the deviatoric stress.

octahedrite [GEOL] The most common iron meteorite, containing 6–18% nickel in the metal phase and having intimate intergrowths lying parallel to the octahedral planes. [MINERAL] *See* anatase.

octahedron [MATH] A polyhedron having eight faces, each of which is an equilateral triangle.

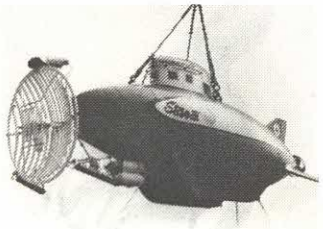
octal [MATH] Pertaining to the octal number system.

octal base [ELECTR] Tube base having a central aligning key and positioned for eight equally spaced pins.

octal debugger [COMPUT SCI] A simple debugging program which permits only octal (instead of symbolic) address references.

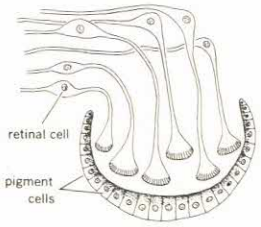
octal digit [MATH] The symbol 0, 1, 2, 3, 4, 5, 6, or 7 used as a digit in the octal number system.

OCEANOGRAPHIC SUBMERSIBLE



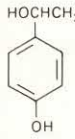
Outboard view of *Star III*, an oceanographic submersible vessel, 24.5 feet (7.7 meters) long.

OCELLUS



Simple pigment cup ocellus of flatworm. *(After L. Hyman; from R. D. Barnes, Invertebrate Zoology, 2d ed., W. B. Saunders Co., 1968)*

OCTOPAMINE



Structural formula.

OCTOPUS

Octopus bairdi with a body length of 3 inches (7.6 centimeters) and arms up to 40 inches (1 meter) long, webbed for one-third of their length.

octal loading program [COMPUT SCI] Computer utility program providing a method for making changes in programs and tables existing in core memory or drum storage, by reading in words coded in octal notation on punched cards or tape.

octal number system [MATH] A number system in which a number r is written as $n_k n_{k-1} \ldots n_1$ where $r = n_1 8^0 + n_2 8^1 + \ldots + n_k 8^{k-1}$.

octanal *See* octyl aldehyde.

***n*-octane** [ORG CHEM] C_8H_{18} Colorless liquid boiling at 126°C; soluble in alcohol, acetone, and ether, insoluble in water; used as a solvent and chemical intermediate.

octanedioic acid *See* suberic acid.

octane number [ENG] A rating that indicates the tendency to knock when a fuel is used in a standard internal combustion engine under standard conditions; *n*-heptane is 0, isooctane is 100; different test methods give research octane, motor octane, and road octane.

octane requirement [MECH ENG] The fuel octane number needed for efficient operation (without knocking or spark retardation) of an internal combustion engine.

octane scale [ENG] Series of arbitrary numbers from 0 to 120.3 used to rate the octane number of a gasoline; *n*-heptane is 0 octane, isooctane is 100, and isooctane + 6 milliliters TEL (tetraethyllead) is 120.3.

***n*-octanoic acid** *See* caprylic acid.

octanone-3 *See* ethyl amyl ketone.

2-octanone *See* methyl hexyl ketone.

octant [MATH] **1.** One of the eight regions into which three-dimensional euclidean space is divided by the coordinate planes of a cartesian coordinate system. **2.** A unit of plane angle equal to 45° or $\pi/8$ radians. [NAV] A double-reflecting instrument used primarily for measuring altitudes of celestial bodies from a moving ship or airplane; has a range of 90°, and while a sextant has the capability up to 120°, the common practice applies the name sextant to both types of instruments.

octant error *See* sextant error.

octaphyllite [MINERAL] **1.** A group of mica minerals that contain eight cations per ten oxygen and two hydroxyl ions. **2.** Any mineral of this group, such as biotite.

octave [ACOUS] The interval in pitch between two tones such that one tone may be regarded as duplicating at the next higher pitch the basic musical import of the other tone; the sounds producing these tones then have a frequency ratio of 2 to 1. [PHYS] The interval between any two frequencies having a ratio of 2 to 1.

octave-band analyzer [ENG ACOUS] A portable sound analyzer which amplifies a microphone signal, feeds it into one of several band-pass filters selected by a switch, and indicates the magnitude of sound in the corresponding frequency band on a logarithmic scale; all the bands except the highest and lowest span an octave in frequency. Abbreviated OBA.

octave-band filter [ENG ACOUS] A band-pass filter in which the upper cutoff frequency is twice the lower cutoff frequency.

octave-band oscillator [ELECTR] An oscillator that can be tuned over a frequency range of 2 to 1, so that its highest frequency is twice its lowest frequency.

octave frequency band [PHYS] A band of frequencies whose highest frequency is twice its lowest frequency.

1-octene [ORG CHEM] $CH_3(CH_2)_5CHCH_2$ A colorless, flammable liquid; used as a plasticizer and in synthesis of organic compounds. Also known as 1-caprylene; 1-octylene.

2-octene [ORG CHEM] $CH_3(CH_2)_4CHCHCH_3$ A colorless, flammable liquid, with trans and cis forms; used to manufacture lubricants and to synthesize organic materials.

octet [ATOM PHYS] A collection of eight valence electrons in an atom or ion, which form the most stable configuration of the outermost, or valence, electron shell. [PARTIC PHYS] A multiplet of eight elementary particles, corresponding to a representation of the approximate unitary symmetry (SU_3) of the strong interactions.

octillion [MATH] **1.** The number 10^{27}. **2.** In British and German usage, the number 10^{48}

octine *See* octyne.

Octocorallia [INV ZOO] The equivalent name for Alcyonaria.

octode [ELECTR] An eight-electrode electron tube containing an anode, a cathode, a control electrode, and five additional electrodes that are ordinarily grids.

octoid [DES ENG] Pertaining to a gear tooth form used to generate the teeth in bevel gears; the octoid form closely resembles the involute form.

octomethylene *See* cyclooctane.

octonary signaling [COMMUN] A communications mode in which information is passed by the presence and absence of plus and minus variation of eight discrete levels of one parameter of the signaling medium.

octonions *See* Cayley numbers.

octopamine [PHARM] $C_8H_{11}NO_2$ A crystalline compound, used as an adrenergic drug. Also known as *para*-hydroxyphenylethanolamine; norsympatol; norsynephrine.

Octopoda [INV ZOO] An order of the dibranchiate cephalopods, characterized by having eight arms equipped with one to three rows of suckers.

Octopodidae [INV ZOO] The octopuses, in family of cephalopod mollusks in the order Octopoda.

octopus [INV ZOO] Any member of the genus *Octopus* in the family Octopodidae; the body is round with a large head and eight partially webbed arms, each bearing two rows of suckers, and there is no shell.

octupole [PHYS] **1.** Two electric or magnetic quadrupoles having charge distributions of opposite signs and separated from each other by a small distance. **2.** Any device for controlling beams of electrons or other charged particles, consisting of eight electrodes or magnetic poles arranged in a circular pattern, with alternating polarities; commonly used to correct aberrations of quadrupole systems.

octyl- [ORG CHEM] Prefix indicating the eight-carbon hydrocarbon radical ($C_8H_{17}-$).

***n*-octyl acetate** [ORG CHEM] $CH_3COO(CH_2)_7CH_3$ A colorless liquid with a fruity odor and a boiling point of 199°C; soluble in alcohol and other organic liquids; used for perfumes and flavoring. Also known as acetate C-8; caprylyl acetate.

octylacetic acid *See* capric acid.

octyl alcohol *See* 2-ethylhexyl alcohol.

octyl aldehyde [ORG CHEM] $C_8H_{16}O$ A liquid aldehyde boiling at 172°C; found in essential oils of many plants; used in perfume compositions. Also known as caprylaldehyde; octanal.

***n*-octyl bromide** *See* 1-bromooctane.

octyl carbinol *See* *n*-nonyl alcohol.

***n*-octyl *n*-decyl adipate** [ORG CHEM] A liquid with a boiling range of 250–254°C; used as a low-temperature plasticizer. Abbreviated NODA.

***n*-octyl *n*-decyl phthalate** [ORG CHEM] A clear liquid with a boiling range of 232–267°C; used as a plasticizer for vinyl resins.

1-octylene *See* 1-octene.

octylene glycol *See* ethohexadiol.

octyl formate [ORG CHEM] $C_8H_{17}OOCH$ A colorless liquid with a fruity odor; soluble in mineral oil; used for flavoring.

octylic acid *See* caprylic acid.

***n*-octyl mercaptan** [ORG CHEM] $C_8H_{17}SH$ Clear, colorless liquid boiling at 199°C; used as a chemical intermediate and polymerization conditioner.

octyl phenol [ORG CHEM] $C_8H_{17}C_6H_4OH$ White flakes, congealing at 73°C; soluble in organic solvents, insoluble in water; used to make surfactants, plasticizers, and antioxidants. Also known as diisobutyl phenol.

octyne [ORG CHEM] $CHC(CH_2)_5CH_3$ Colorless hydrocarbon liquid, boiling at 125°C. Also known as caprilydene; hexylacetylene; octine.

ocuba wax [MATER] A waxy fat obtained from the fruit of the myrtle *Myristica ocuba;* melting point, 40°C; used in candles.

ocular [BIOL] Of or pertaining to the eye. [OPTICS] *See* eyepiece.

ocular prism [OPTICS] The prism employed in a range finder to bend the line of sight through the instrument into the eyepiece.

ocular skeleton [VERT ZOO] A rigid structure in most submammalian vertebrates consisting of a cup of hyaline cartilage enclosing the posterior part of the eye, and a thin-walled ring of intramembranous bones in the edge of the sclera at its junction with the cornea.

oculist *See* ophthalmologist.

oculoagravic illusion *See* agravic illusion.

oculoglandular tularemia [MED] Infection by *Pasteurella tularensis* which, in addition to the usual symptoms of

tularemia, causes swollen eyelids, conjunctivitis, swollen lymph nodes, and ulcers on the conjunctivae.

oculomotor [PHYSIO] **1.** Pertaining to eye movement. **2.** Pertaining to the oculomotor nerve.

oculomotor nerve [ANAT] The third cranial nerve; a paired somatic motor nerve arising in the floor of the midbrain, which innervates all extrinsic eye muscles except the lateral rectus and superior oblique, and furnishes autonomic fibers to the ciliary and pupillary sphincter muscles within the eye.

oculomotor nucleus [ANAT] A nucleus in the floor of the midbrain that gives rise to motor fibers of the oculomotor nerve.

oculomotor paralysis [MED] Paralysis of the oculomotor nerve.

Oculosida [INV ZOO] An order of the protozoan subclass Radiolaria; pores are restricted to certain areas in the central capsule, and an olive-colored material is always present near the astropyle.

OD *See* optical density; outside diameter.

odd-even check [COMPUT SCI] A means of detecting certain kinds of errors in which an extra bit, carried along with each word, is set to zero or one so that the total number of zeros or ones in each word is always made even or always made odd. Also known as parity check.

odd-even nucleus [NUC PHYS] A nucleus which has an odd number of protons and an even number of neutrons.

odd function [MATH] A function $f(x)$ is odd if, for every x, $f(-x) = -f(x)$.

odd-leg caliper [DES ENG] A caliper in which the legs bend in the same direction instead of opposite directions.

odd number [MATH] A natural number not divisible by 2.

odd-odd nucleus [NUC PHYS] A nucleus that has an odd number of protons and an odd number of neutrons.

odd parity [COMPUT SCI] Property of an expression in binary code which has an odd number of ones. [QUANT MECH] Property of a system whose state vector is multiplied by -1 under the operation of space inversion, that is, the simultaneous reflection of all spatial coordinates through the origin.

odd parity check [COMPUT SCI] A parity check in which the number of 0's or 1's in each word is expected to be odd; if the number is even, the check bit is 1, and if the number is odd, the check bit is 0.

odd-pinnate [BOT] Of a compound leaf, having a single leaflet at the tip of the petiole with leaflets on both sides of the petiole. Also known as imparipinnate.

odds ratio [STAT] The ratio of the probability of occurrence of an event to the probability of the event not occurring.

odd term [ATOM PHYS] A term of an atom or molecule for which the sum of the angular-momentum quantum numbers of all the electrons is odd, so that the states have odd parity; designated by a superscript o or u.

Odessey protractor [NAV] A device used in plotting shoran, EPI (electronic position indicator), and Raydist positions; it consists of a transparent plate on which closely spaced concentric circles are drawn; these circles represent distances from the center in terms of miles, microseconds, or lanes, constructed to fit the electronic system in use and the scale at which the survey is to be plotted.

Odiniidae [INV ZOO] A family of cyclorrhaphous myodarian dipteran insects in the subsection Acalyptratae.

odinite [PETR] A grayish-green lamprophyre composed of labradorite and augite or diallage; sometimes containing hornblende, phenocrysts in a groundmass of fine lath-shaped or equigranular feldspar, and a felty mesh of acicular hornblende crystals.

Odobenidae [VERT ZOO] A family of carnivorous mammals in the suborder Pinnipedia; contains a single species, the walrus (*Odobenus rosmarus*).

odograph [ENG] An instrument installed in a vehicle to automatically plot on a map the course and distance traveled by the vehicle.

odometer [ENG] **1.** An instrument for measuring distance traversed, as of a vehicle. **2.** The indicating gage of such an instrument. **3.** A wheel pulled by surveyors to measure distance traveled.

O'Donahue's theory [MIN ENG] A mine subsidence theory, with subsidence regarded as taking place in two stages: first, a breaking of the rocks in which the lines of fracture tend to run at right angles to the stratification; then, an inward movement from the sides, resulting in a pull or draw beyond the edges of the workings.

Odonata [INV ZOO] The dragonflies, an order of the class Insecta, characterized by a head with large compound eyes, and wings with clear or transparent membranes traversed by networks of veins.

odont-, odonto- [VERT ZOO] A combining form meaning tooth.

odontalgia *See* toothache.

odontectomy [MED] Surgical excision of a tooth.

odontexesis [MED] Removal of deposits from the surface of teeth.

odontoblast [HISTOL] One of the elongated, dentin-forming cells covering the dental papilla.

odontoblastoma *See* ameloblastic odontoma.

Odontoceti [VERT ZOO] The toothed whales, a suborder of cetacean mammals distinguished by a single blowhole.

odontoclast [HISTOL] A multinuclear cell concerned with resorption of the roots of milk teeth.

odontogenesis [EMBRYO] Formation of teeth.

odontogenic [HISTOL] **1.** Pertaining to the origin and development of teeth. **2.** Originating in tissues associated with teeth.

odontogenic cyst [MED] A cyst originating in tissues associated with teeth.

odontogenic fibroma [MED] A benign tumor originating in the mesenchymal derivatives of the tooth germ.

Odontognathae [PALEON] An extinct superorder of the avian subclass Neornithes, including all large, flightless aquatic forms and other members of the single order Hesperornithiformes.

odontoid [BIOL] Toothlike.

odontoid process [ANAT] A toothlike projection on the anterior surface of the axis vertebra with which the atlas articulates.

odontology [VERT ZOO] A branch of science that deals with the formation, development, and abnormalities of teeth.

odontoma [MED] A benign tumor representing a developmental excess, composed of mesodermal or octodermal tooth-forming tissue, alone or in association with the calcified derivatives of these structures.

odontophobia [PSYCH] An abnormal fear of teeth.

Odontostomatida [INV ZOO] An order of the protozoan subclass Spirotrichia; individuals are compressed laterally and possess very little ciliature.

odorant [MATER] Material added to odorless fuel gases to give them a distinctive odor for safety purposes; usually a sulfur- or mercaptan-containing compound. Also known as malodorant; stench; warning agent.

odoriferous homing [ELECTR] Homing on the ionized air produced by the exhaust gases of a snorkeling submarine.

odorize [CHEM ENG] To add an unpleasant odor as a safety measure to an odorless material such as fuel gas.

Oecophoridae [INV ZOO] A family of small to moderately small moths in the lepidopteran superfamily Tineoidea, characterized by a comb of bristles, the pecten, on the scape of the antennae.

Oedemeridae [INV ZOO] The false blister beetles, a large family of coleopteran insects in the superfamily Tenebrionoidea.

oedipal [PSYCH] Pertaining to the Oedipus complex.

Oedipus complex [PSYCH] In psychoanalytic theory, the attraction and attachment of the child to the parent of the opposite sex, accompanied by feelings of envy and hostility toward the parent of the child's sex, whose displeasure and punishment the child so fears that the child represses his feelings toward the parent of opposite sex.

Oedogoniales [BOT] An order of fresh-water algae in the division Chlorophyta; characterized as branched or unbranched microscopic filaments with a basal holdfast cell.

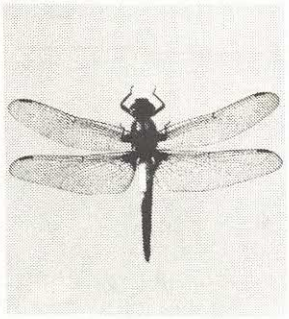
Oegophiurida [INV ZOO] An order of echinoderms in the subclass Ophiuroidea, represented by a single living genus; members have few external skeletal plates and lack genital bursae, dorsal and ventral arm plates, and certain jaw plates.

Oegopsida [INV ZOO] A suborder of cephalopod mollusks in the order Decapoda of one classification system, and in the order Teuthoidea of another system.

Oehman's survey instrument [ENG] A drill-hole surveying apparatus that makes a photographic record of the compass and clinometer readings.

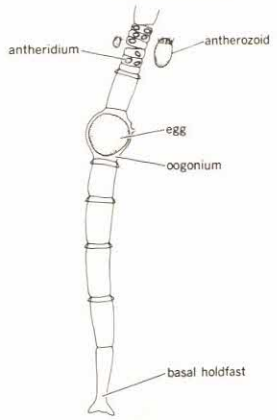
O electron [ATOM PHYS] An electron in the fifth (O) shell of

ODONATA



Adult dragonfly showing the four membranous wings.

OEDOGONIALES



Oedogonium, an attached, unbranched, microscopic filament arising from a basal holdfast cell.

electrons surrounding the atomic nucleus, having the principal quantum number 5.

Oepikellacea [PALEON] A dimorphic superfamily of extinct ostracods in the order Paleocopa, distinguished by convex valves and the absence of any trace of a major sulcus in the external configuration.

Oerlikon gun [ORD] Any of certain Swiss-developed, 20-millimeter automatic aircraft or antiaircraft cannons that shoot greased ammunition; used by various nations.

oersted [ELECTROMAG] The unit of magnetic field strength in the centimeter-gram-second electromagnetic system of units, equal to the field strength at the center of a plane circular coil of one turn and 1-centimeter radius, when there is a current of $1/2\ \pi$ abamp in the coil.

Oestridae [INV ZOO] A family of cyclorrhaphous myodarian dipteran insects in the subsection Calypteratae.

Oetling freezing method [MIN ENG] A method of shaft sinking by freezing the wet ground in sections as the sinking proceeds.

off [ENG] Designating the inoperative state of a device, or one of two possible conditions (the other being "on") in a circuit.

off-airways [AERO ENG] Pertaining to any aircraft course or track that does not lie within the bounds of prescribed airways.

off-carriage fire control [ORD] Process of controlling fire on a target with the aid of a sighting device which is not mounted directly on the weapon.

off-carriage fire control equipment [ORD] Fire control items, such as directors, aiming circles, and observation instruments, which are required for directing the fire of the weapon and which are separately transported.

off-center plan position indicator [ELECTR] A plan position indicator in which the center of the display that represents the location of the radar can be moved from the center of the screen to any position on the face of the PPI.

offense against the sine condition [OPTICS] A numerical measure of coma, equal to the sagittal coma divided by the perpendicular distance from the image point to the optical axis.

offensive grenade [ORD] A hand grenade having a nonmetallic container, designed to kill or injure by blast and concussion.

off-highway truck [MIN ENG] A truck of such size, weight, or dimensions that is cannot be used on public highways.

off-hook [COMMUN] The active state (closed loop) of a subscriber or PBX user loop.

off-hook service [COMMUN] Priority telephone service for key personnel that affords a connection from caller to receiver by the simple expedient of removing the phone from its cradle or hook.

office automation [COMPUT SCI] Use of an electronic computer or computing system for routine clerical jobs.

official master drawing [GRAPHICS] That drawing which is established as the official drawing upon which any revision will originally be made and from which copies of the current drawing will originally be reproduced.

officials' inspection lamp [MIN ENG] A portable combined electric lamp and battery, fitted with a reflector to provide directional illumination.

offing [NAV] That part of the visible sea a considerable distance from the shore, or that part just beyond the limits of the area in which a pilot is needed.

offlap [GEOL] The successive lateral contraction extent of strata (in an upward sequence) due to their deposition in a shrinking sea or on the margin of a rising landmass. Also known as regressive overlap.

off-line [COMPUT SCI] Describing equipment not connected to a computer, or temporarily disconnected from one. [ENG] **1.** A condition existing when the drive rod of the drill swivel head is not centered and parallel with the borehole being drilled. **2.** A borehole that has deviated from its intended course. **3.** A condition existing wherein any linear excavation (shaft, drift, borehole) deviates from a previously determined or intended survey line or course. [IND ENG] State in which an equipment or subsystem is in standby, maintenance, or mode of operation other than on-line.

off-line cipher [COMMUN] Method of encrypting which is not associated with a particular transmission system and in which the resulting encrypted message can be transmitted by any means.

off-line computer *See* course-line computer.

off-line equipment [COMPUT SCI] Peripheral equipment or devices not in direct communication with the central processing unit of a computer.

off-line mode [COMPUT SCI] Any operation such as printing, punching, converting which does not involve the main computer.

off-line operation [COMPUT SCI] Operation of peripheral equipment in conjunction with, but not under the control of, the central processing unit.

off-line processing [COMPUT SCI] Any processing which takes place independently of the central processing unit; for instance, card-to-tape conversion using auxiliary equipment.

off-line storage [COMPUT SCI] A storage device not under control of the central processing unit.

off-line unit [COMPUT SCI] Any operation device which is not attached to the main computer.

off-lining [COMPUT SCI] The process of separating card reading and printing from the actual running of jobs, by transcribing data to and from magnetic tape or other high-speed input/output devices.

off-peak [SCI TECH] Not at the maximum.

off-punch [COMPUT SCI] A hole which is not punched in precise position on a computer card.

off-reef facies [GEOL] Facies of the inclined strata made up of reef detritus deposited along the seaward margin of a reef.

offset [CONT SYS] The steady-state difference between the desired control point and that actually obtained in a process control system. [ENG] **1.** A short perpendicular distance measured to a traverse course or a surveyed line or principal line of measurement in order to locate a point with respect to a point on the course or line. **2.** In seismic prospecting, the horizontal distance between a shothole and the line of profile, measured perpendicular to the line. **3.** In seismic refraction prospecting, the horizontal displacement, measured from the detector, of a point for which a calculated depth is relevant. **4.** In seismic reflection prospecting, the correction of a reflecting element from its position on a preliminary working profile to its actual position in space. [GEOL] **1.** The movement of an upcurrent part of a shore to a more seaward position than a downcurrent part. **2.** A spur from a mountain range. **3.** A level terrace on the side of a hill. **4.** The horizontal displacement component in a fault, measured parallel to the stroke of the fault. Also known as normal horizontal separation. [MAP] During construction of a map projection, the small distance added to the length of meridians on either side of the central meridian in order to determine the chart's top latitude. [MECH] The value of strain between the initial linear portion of the stress-strain curve and a parallel line that intersects the stress-strain curve of an arbitrary value of strain; used as an index of yield stress; a value of 0.2% is common. [MIN ENG] **1.** A short drift or crosscut driven from a main gangway or level. **2.** The horizontal distance between the outcrops of a dislocated bed. [NAV ARCH] One of a series of measurements of the perpendicular distance of various points on a ship's hull from the centerline and above the molded baseline; used in ship construction. [ORD] The horizontal distance of forward travel covered by the missile after it strikes the ground; this distance is measured from the center of the hole of entry to the most forward part of the missile.

offset bombing [ORD] Any bombing procedure which employs a reference or aiming point other than the actual target.

offset cab [ENG] Operator's cab positioned to one side of earthmoving equipment for greater visibility and safety.

offset-center plan position indicator *See* off-center plan position indicator.

offset-course computer *See* course-line computer.

offset cylinder [MECH ENG] A reciprocating part in which the crank rotates about a center off the centerline.

offset deposit [GEOL] A mineral deposit, especially of sulfides, formed partly by magmatic segregation and partly by hydrothermal solution and located near the source rock.

offset drilling [PETRO ENG] The drilling of a well on property under which oil is being drained away by a well on adjacent property to make up for the loss of oil from the first property.

offset duplicating [GRAPHICS] A method of duplicating in which an ink-receptive image is typed or drawn on a paper master or produced photographically on a sensitized metal plate; the master or plate is then placed on the master cylinder of an offset press; the inked image built up on the master is transferred onto a blanket cylinder; the paper picks up the inked

image as it passes between the blanket cylinder and an impression cylinder.

offset ground zero [ORD] A case where the desired ground zero in an atomic explosion is displaced some distance and direction from the target center.

offset line [ENG] A secondary line established close to and roughly parallel with the primary survey line to which it is referenced by measured offsets.

offset lithography [GRAPHICS] A system of printing that depends on the principle that the printing area accepts greasy ink while the nonprinting area is dampened with water and repels the ink; in practice, the image from a plate is offset onto the rubber blanket of an impression cylinder, and transferred to a sheet of paper.

offset paper [MATER] Paper with a certain degree of porosity as a result of coating with an alkali-swelling resin; used for offset printing.

offset plan position indicator *See* off-center plan position indicator.

offset plotting [ORD] Method of plotting firing data when different ranges and azimuths must be sent to each gun of a battery.

offset press [GRAPHICS] A printing press for offset lithography printing.

offset ridge [GEOL] A ridge consisting of resistant sedimentary rock that has been made discontinuous as a result of faulting.

offset screwdriver [DES ENG] A screwdriver with the blade set perpendicular to the shank for access to screws in otherwise awkward places.

offset stacker [COMPUT SCI] A card stacker which is capable, under machine control, of stacking cards so that some of them stick out from the deck, permitting their identification.

offset stream [GEOL] A stream displaced laterally or vertically by faulting.

offset well [PETRO ENG] A well made by offset drilling.

offset yield strength [MECH] That stress at which the strain surpasses by a specific amount (called the offset) an extension of the initial proportional portion of the stress-strain curve; usually expressed in pounds per square inch.

offshore [GEOL] The comparatively flat zone of variable width extending from the outer margin of the shoreface to the edge of the continental shelf.

offshore bar *See* longshore bar.

offshore beach *See* barrier beach.

offshore current [OCEANOGR] **1.** A prevailing nontidal current usually setting parallel to the shore outside the surf zone. **2.** Any current flowing away from shore.

offshore drilling [PETRO ENG] The drilling of oil or gas wells into water-covered locations, usually on submerged continental shelves.

offshore gas [PETRO ENG] Nautral gas produced from reservoirs under the offshore continental shelves.

offshore navigation [NAV] Navigation at a distance from a coast, in contrast with coastwise navigation in the vicinity of a coast.

offshore oil [PETRO ENG] Oil produced from reservoirs under the offshore continental shelves.

offshore slope [GEOL] The frontal slope below the outer edge of an offshore terrace.

offshore survey [PETRO ENG] Seismic geophysical survey procedures conducted over water-covered continental-shelf areas in the search for possible oil reservoirs.

offshore terrace [GEOL] A wave-built terrace in the offshore zone composed of gravel and coarse sand.

offshore water [OCEANOGR] Water adjacent to land in which the physical properties are slightly influenced by continental conditions.

offshore wind [METEOROL] Wind blowing from the land toward the sea.

off-site facility [CHEM ENG] In a chemical process plant, any supporting facility that is not a direct part of the reaction train, such as utilities, steam, and waste-treatment facilities.

off soundings [NAV] Of a vessel, navigating beyond the 100-fathom (183-meter) curve; in earlier times, the term was applied to a vessel in water deeper than could be sounded with the sounding lead.

off-the-road equipment [MIN ENG] Tires and earthmoving equipment designed for off-highway duty in surface mines and quarries.

off-the-road hauling [MIN ENG] Hauling off the public highways, and generally on the mining site or excavation site.

off-the-shelf [IND ENG] Available for immediate shipment. [ORD] Referring to those items required by the military services which are generally used throughout the civilian economy and which are available through normal commercial distribution channels.

off time [MET] In resistance welding, usually in repetitive cycles, the time that the electrode is not in contact with the work.

ogdosymmetric class [CRYSTAL] A merohedral crystal class whose general form has one-eighth the number of equivalent faces of the corresponding holohedral form.

ogee [ARCH] A reverse curve, shaped like an elongated letter S, as the outline of an ogee molding.

ogive [ARCH] **1.** An arch or rib placed diagonally across a Gothic vault. **2.** A pointed arch. [GEOL] One of a periodically repeated series of dark, curved structures occurring down a glacier that resemble a pointed arch. [ORD] The curved or tapered front of a projectile.

Ohio sampler [MIN ENG] A single tube or pipe with a thread on top, and the bottom beveled and hardened for driving into the ground to obtain a soil sample.

ohm [ELEC] The unit of electrical resistance in the rationalized meter-kilogram-second system of units, equal to the resistance through which a current of 1 ampere will flow when there is a potential difference of 1 volt across it. Symbolized Ω.

ohmic contact [ELEC] A region where two materials are in contact, which has the property that the current flowing through it is proportional to the potential difference across it.

ohmic dissipation [ELECTR] Loss of electric energy when a current flows through a resistance due to conversion into heat. Also known as ohmic loss.

ohmic loss *See* ohmic dissipation.

ohmic resistance [ELEC] Property of a substance, circuit, or device for which the current flowing through it is proportional to the potential difference across it.

ohmmeter [ENG] An instrument for measuring electric resistance; scale may be graduated in ohms or megohms.

Ohm's law [ELEC] The law that the direct current flowing in an electric circuit is directly proportional to the voltage applied to the circuit; it is valid for metallic circuits and many circuits containing an electrolytic resistance.

ohms per volt [ENG] Sensitivity rating for measuring instruments, obtained by dividing the resistance of the instrument in ohms at a particular range by the full-scale voltage value at that range.

OHV engine *See* overhead-valve engine.

-oic [ORG CHEM] A suffix indicating the presence of a —COOH group, as in ethyloic ($—CH_2—COOH$).

oidiophore [MYCOL] A hypha that produces oidia.

oidium [MYCOL] One of the small, thin-walled spores with flat ends produced by autofragmentation of the vegetative hyphae in certain Eumycetes.

oikocryst [PETR] One of the enclosing crystals in a poikilitic fabric.

Oikomonadidae [INV ZOO] A family of protozoans in the order Kinetoplastida containing organisms that have a single flagellum.

oikophobia [PSYCH] An abnormal fear of the home, or of a house.

oil [GEOL] *See* petroleum. [MATER] Any of various viscous, combustible, water-immiscible liquids that are soluble in certain organic solvents, as ether and naphtha; may be of animal, vegetable, mineral, or synthetic origin; examples are fixed oils, volatile or essential oils, and mineral oils.

oil accumulation *See* oil pool.

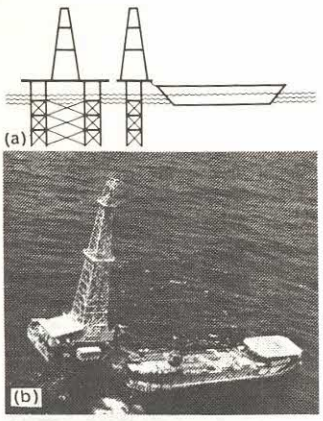
oil ammoniac [MATER] A yellow liquid distilled from gum ammoniac; boiling point is 275°C; soluble in alcohol and benzene.

oil asphalt [MATER] Water-insoluble, heavy black residue left after removing the tar tailings during the distillation of petroleum; used in roofing, paints, and coatings.

oil-base mud [PETRO ENG] Drilling mud made with oil as the solvent carrier for the solids content.

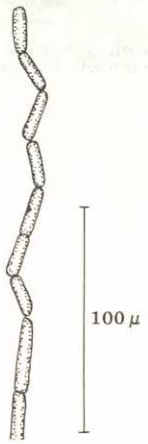
oil bath [ENG] **1.** Oil, in a container, within which a mechanism works or into which it dips. **2.** Oil in which a piece of apparatus is submerged. **3.** Oil that is poured on a cutting tool. [MET] Oil used in tempering.

OFFSHORE DRILLING



An offshore drilling platform of the "fixed" type, one of several types used in offshore applications. *(a)* Underwater design *(World Petroleum)*. *(b)* Rig on a drilling site *(Marathon Oil Co., Findlay, Ohio)*.

OIDIOPHORE

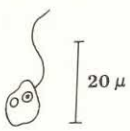


An oidiophore type of hypha showing the divisions that are the beginning of the oidia.

OIDIUM

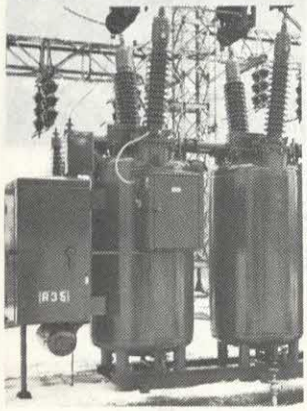
Two oidia showing the flat ends of this thin-walled spore.

OIKOMONADIDAE



Oikomonas, a genus in the Oikomonadidae, showing the single flagellum characteristic of the family.

OIL CIRCUIT BREAKER



Bulk oil circuit breakers for 138-kilovolt application.

oil blue [INORG CHEM] Violet-blue copper sulfide pigment used in varnishes.

oil-break [ELEC] Property of an electrical switch, circuit breaker, or similar apparatus whose contacts separate in oil.

oil buffer [ORD] A mechanism on certain types of automatic weapons, especially the caliber-.50 guns, for absorbing the shock of recoil and regulating the speed of firing.

oil burner [ENG] Liquid-fuel burner device using a mixture of air and vaporized or atomized oil for combustion.

oil cake [MATER] Solid residue after removal of vegetable oils from oil-bearing seeds (such as soya beans) by expression or solvent extraction; used as fertilizer and animal feed.

oil circuit breaker [ELECTR] A high-voltage circuit breaker in which the arc is drawn in oil to dissipate the heat and extinguish the arc; the intense heat of the arc decomposes the oil, generating a gas whose high pressure produces a flow of fresh fluid through the arc that furnishes the necessary insulation to prevent a restrike of the arc.

oilcloth [TEXT] **1.** A fabric coated with a mixture of oil and clay, used as a waterproof covering. **2.** A floor covering made of a heavy fabric treated with oil paint.

oil column [GEOL] The difference in elevation between the highest and lowest portions of various producing zones of an oil-producing formation.

oil core [MET] A core in which sand is held together by an oil binder.

oil cup [ENG] A permanently mounted cup used to feed lubricant to a gear, usually with some means of regulating the flow.

oil cut [PETRO ENG] A mixture of oil and drilling mud that is recovered during oil exploration.

oil derrick [PETRO ENG] Tower structure used during oil well drilling to aid in raising and lowering of drill and piping strings.

oil dilution valve [MECH ENG] A valve used to mix gasoline with engine oil to permit easier starting of the gasoline engine in cold weather.

oiled silk [TEXT] Soft woven silk made waterproof by treatment with boiled linseed oil, followed by drying.

oil emulsion [MATER] Suspension of oil droplets in another liquid in which the oil is insoluble.

oil-extended rubber [MATER] Synthetic rubber into which 25–50% of a petroleum oil emulsion has been incorporated to decrease cost and increase low-temperature flexibility and resilience.

oil field [PETRO ENG] The surface boundaries of an area from which petroleum is obtained; may correspond to an oil pool or may be circumscribed by political or legal limits.

oil-field brine [HYD] Connate waters, usually containing a high concentration of calcium and sodium salts and found during deep rock penetration by the drill.

oil field emulsion [PETRO ENG] A crude oil that reaches the surface as an oil-water emulsion.

oil field model [PETRO ENG] Laboratory simulation of steady-state fluid flow through porous reservoir media by electrical (Ohm's-law system), electronic (graphite-impregnated cloth), or electrolytic (gelatin, blotter, potentiometric-liquid) models.

oil-field separator *See* gas-oil separator.

oil-filled cable [ELEC] Cable having insulation impregnated with an oil which is fluid at all operating temperatures and provided with facilities such as longitudinal ducts or channels and with reservoirs; by this means positive oil pressure can be maintained within the cable at all times, incipient voids are promptly filled during periods of expansion, and all surplus oil is adequately taken care of during periods of contraction.

oil filter [ENG] Cartridge-type filter used in automotive oil-lubrication systems to remove metal particles and products of heat decomposition from the circulating oil.

oil fogging [ENG] Spraying a fine oil mist into the gas stream of a distribution system to alleviate the drying effects of gas on certain kinds of distribution and utilization equipment.

oil furnace [MECH ENG] A combustion chamber in which oil is the heat-producing fuel.

oil garlic *See* allyl sulfide.

oil gas [MATER] A heating gas made by interaction of petroleum oil vapors and steam in a process similar to the water-gas reaction.

oil-gas process [CHEM ENG] Process to manufacture high-caloric-value fuel gas by the destructive distillation of high-boiling petroleum oils.

oil-gas separator *See* gas-oil separator.

oil gas tar [MATER] A type of tar produced during the oil gas process by cracking the oil vapors at high temperatures.

oil gland *See* uropygial gland.

oil groove [DES ENG] One of the grooves in a bearing which distribute and collect lubricating oil.

oil hardening [MET] Quenching of carbon steel in an oil bath; the steel cools slowly and a more uniform and desirable hardness is attained.

oil hole [ENG] A small hole for injecting oil for a bearing.

oil-hole drill [DES ENG] A twist drill containing holes through which oil can be fed to the cutting edges.

oil horizon [PETRO ENG] The upper surface of oil in a well, or the stratum in which the oil surface is located.

oil-immersed [ELEC] Property of a transformer, reactor, regulator, or similar apparatus whose coils are immersed in an insulating liquid that is usually, but not necessarily, oil.

oiliness [ENG] The effect of a lubricant to reduce friction between two solid surfaces in contact; the effect is more than can be accounted for by viscosity alone.

oil in place [PETRO ENG] The total volume of oil estimated to be present in an oil reservoir.

oil isoperms [PETRO ENG] Reservoir-map plotting areas of equal oil permeability.

oil length [MATER] The ratio of oil to resin in varnish; expressed as gallons of oil per 100 pounds (45.3 kilograms) of resin.

oilless bearing [MECH ENG] A self-lubricating bearing containing solid or liquid lubricants in its material.

oil lift [MECH ENG] Hydrostatic lubrication of a journal bearing by using oil at high pressure in the area between the bottom of the journal and the bearing itself so that the shaft is raised and supported by an oil film whether it is rotating or not.

oil of amber [MATER] Brown essential oil distilled from amber; miscible with alcohol; has balsamic aroma.

oil of bitter almond [MATER] A fatty, nondrying oil obtained from bitter almond kernels and used in cosmetics and perfumes.

oil of cloves [MATER] A thin, colorless to pale-yellow liquid distilled from cloves; thickens and darkens with time; boils at 250–260°C; has aromatic aroma and pungent taste; soluble in ether and chloroform; chief component is eugenol; used in medicine, perfumery, flavoring, and soaps. Also known as caryophyllus oil; clove oil.

oil of coriander [MATER] A colorless or pale-yellow essential oil extracted from the dried seed of the coriander plant (*Coriandrum sativum*); used in medicines, beverages, and flavoring extracts.

oil of cubeb [MATER] A camphorous tasting, colorless, or pale green or yellow liquid with a peppery odor; distilled from cubebs; soluble in ether, alcohol, and chloroform; boils at 175–180°C; chief components are sesquiterpenes, cadinene, and dipentane; used in medicine. Also known as cubeb oil.

oil of grapefruit *See* grapefruit oil.

oil of mirbane *See* nitrobenzene.

oil of orange blossoms [MATER] Bitter-tasting, fluorescent, pale-yellow essential oil with orange aroma; soluble in alcohol; main components are limonene, linalool, and geraniol; used for perfumes and flavors. Also known as neroli oil; orange flower oil.

oil of peppermint [MATER] Colorless or slightly yellow essential oil with minty aroma and taste; soluble in ether, alcohol, and chloroform; derived from leaves and flowering tops of the peppermint plant (*Mentha piperita*); has high menthol content; used in medicines, flavors, perfumes, and liqueurs. Also known as peppermint oil.

oil of sage [MATER] **1.** An alcohol-soluble yellow oil with sage aroma; obtained from leaves of the common sage (*Salvia officinalis*); used chiefly in flavors. Also known as dalmatian sage oil; sage oil; salvia oil. **2.** A pale-yellow oil with ambergris aroma obtained from the flowers of *Salvia sclarea*; used chiefly in perfumes.

oil of sassafras [MATER] A pungent, aromatic, yellowish or reddish-yellow liquid obtained from the bark of American sassafras (*Sassafras albidum*); soluble in organic solvents, glacial acetic acid, and carbon disulfide; used for flavors, perfumes, and medicines. Also known as clary sage oil; sassafras oil.

oil of shaddock *See* grapefruit oil.

oil of turpentine [MATER] Water-insoluble, colorless, vol-

atile essential oil distilled from turpentine; contains pinene, sylvestrene, and dipentene; used as a carminative, solvent, paint vehicle, and disinfectant.

oil of vitriol *See* sulfuric acid.

oil paint [MATER] A paint made with a vegetable oil as the filmogen.

oil painting [GRAPHICS] A method of painting in which pigments are bound together, and to the canvas, by a drying oil; the oil, usually linseed, is thinned with solvents such as turpentine and mineral spirits; the pigments should dry in linseed oil to form an acceptably strong paint film.

oil pool [GEOL] An accumulation of petroleum locally confined by subsurface geologic features. Also known as oil accumulation; oil reservoir.

oil pump [MECH ENG] A pump of the gear, vane, or plunger type, usually an integral part of the automotive engine; it lifts oil from the sump to the upper level in the splash and circulating systems, and in forced-feed lubrication it pumps the oil to the tubes leading to the bearings and other parts.

oil-quench *See* oil-harden.

oil reclaiming [ENG] **1.** A process in which oil is passed through a filter as it comes from equipment and then returned for reuse, in the same manner that crank case oil is cleaned by an engine filter. **2.** A method in which solids are removed from oil by treatment in settling tanks.

oil reservoir *See* oil pool.

oil-reservoir water *See* formation water.

oil ring [MECH ENG] **1.** A ring located at the lower part of a piston to prevent an excess amount of oil from being drawn up onto the piston during the suction stroke. **2.** A ring on a journal, dipping into an oil bath for lubrication.

oil rock [GEOL] A rock stratum containing oil.

oil sand [GEOL] An unconsolidated, porous sand formation or sandstone containing or impregnated with petroleum or hydrocarbons.

oil saturation [PETRO ENG] Measurement of the degree of saturation of reservoir pore structure by reservoir oil.

oil seal [ENG] **1.** A device for preventing the entry or return of oil from a chamber. **2.** A device using oil as the sealing medium to prevent the passage of fluid from one chamber to another.

oil seed [MATER] Seeds of plants from which oil can be derived by expression or solvent extraction, such as soya beans.

oil seep [GEOL] The emergence of liquid petroleum at the land surface as a result of slow migration from its buried source through minute pores or fissure networks. Also known as petroleum seep.

oil separator *See* gas-oil separator.

oil shale [GEOL] A finely layered brown or black shale that contains kerogen and from which liquid or gaseous hydrocarbons can be distilled. Also known as kerogen shale.

oilskin [TEXT] A fabric made of cotton or linen and waterproofed with linseed oil.

oil-soluble resin [MATER] A resin that, at moderate temperatures, dissolves in, disperses in, or reacts with drying oils to produce a homogeneous film of modified characteristics.

oil stain [MATER] Thin oil paint with very little pigment, used to stain wood surfaces.

oilstone [MATER] A whetstone used with oil.

oil string *See* long string.

oil switch [ELEC] A switch whose contacts are immersed in oil in order to suppress the arc and prevent the contacts from being damaged.

oil tanker [NAV ARCH] A very large ship which carries crude oil or other petroleum products in big tanks.

oil trap [GEOL] An accumulation of petroleum which, by a combination of physical conditions, is prevented from escaping laterally or vertically. Also known as trap.

Oiluvium *See* Pleistocene.

oil varnish [MATER] A varnish composed of resins dissolved in oil.

oil-water contact *See* oil-water surface.

oil-water interface *See* oil-water surface.

oil-water surface [GEOL] The datum of a two-dimensional oil-water interface. Also known as oil-water contact; oil-water interface.

oil well [PETRO ENG] A hole drilled (usually vertically) into an oil reservoir for the purpose of recovering the oil trapped in porous formations.

oil-well cement [MATER] A type of hydraulic cement which has a slow setting rate under the high temperatures obtained in oil wells; uses include support of tubing and bypassing of unwanted zones.

oil-well drive *See* reservoir drive mechanism.

oil-well pump [PETRO ENG] Device for artificial or secondary (non-gas-lift) oil production; about 85% of the production is by ground-level sucker-rod pumps, the remainder by downhole hydraulic lift pumps.

oil white [MATER] Mixture of lithopone and zinc white or white lead; used as a house-paint pigment.

oil zone [GEOL] The formation or horizon from which oil is produced, usually immediately under the gas zone and above the water zone if all three fluids are present and segregated.

O indicator *See* O scope.

ointment [PHARM] A semisolid preparation used for a protective and emollient effect or as a vehicle for the local or endermic administration of medicaments; ointment bases are composed of various mixtures of fats, waxes, animal and vegetable oils, and solid and liquid hydrocarbons.

oiticica oil [MATER] A light-yellowish oil obtained from seeds of the Brazilian oiticica tree (*Licania rigida*); raw oil becomes buttery unless heat-treated (semipolymerized); used principally in paint and varnish as a drying oil as a substitute for tung oil or with tung oil.

okaite [PETR] An ultramafic igneous rock composed chiefly of melilite and haüyne, with accessory biotite, perovskite, apatite, calcite, and opaque oxides.

okapi [VERT ZOO] *Okapia johnstoni*. An artiodactylous mammal in the family Giraffidae; has a hazel coat with striped hindquarters, and the head shape, lips, and tongue are the same as those of the giraffe, but the neck is not elongate.

okenite [MINERAL] $CaSi_2O_4(OH)_2 \cdot H_2O$ A whitish mineral consisting of calcium silicate and occurring in fibrous masses.

okonite [MATER] Insulating material made from the vulcanization of ozokerite and resin with rubber and sulfur.

okra [BOT] *Hibiscus esculentus*. A tall annual plant grown for its edible immature pods. Also known as gumbo.

-ol [ORG CHEM] Chemical suffix for an —OH group in organic compounds, such as phenol (C_6H_5OH).

OL *See* only loadable.

Olacaceae [BOT] A family of dicotyledonous plants in the order Santalales characterized by dry or fleshy indehiscent fruit, the presence of petals, stamens, and chlorophyll, and a 2–5-celled ovary.

Olbers' paradox [ASTRON] If the universe were static, of infinite age, and the galaxies distributed isotropically, the distance attenuation of their light would be exactly balanced by the increase in number in successive spherical shells centered at the earth; hence the night sky would be of daylight brightness instead of dark.

old age [GEOL] The last stage of the erosion cycle in the development of the topography of a region in which erosion has reduced the surface almost to base level and the land forms are marked by simplicity of form and subdued relief. Also known as topographic old age.

Oldham coupling *See* slider coupling.

Oldhaminidina [PALEON] A suborder of extinct articulate brachiopods in the order Strophomenida distinguished by a highly lobate brachial valve seated within an irregular convex pedicle valve.

oldhamite [MINERAL] CaS A pale-brown mineral known only from meteorites; unstable under earth conditions; member of the galena group with face-centered isometric structure.

Oldham-Wheat lamp [MIN ENG] A cap lamp designed for full self-service.

old ice [OCEANOGR] Floating sea ice that is more than 2 years old.

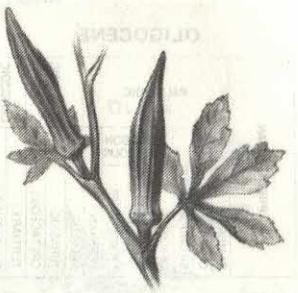
old lake [GEOL] **1.** A lake in an advanced stage of filling by sediments. **2.** A eutrophic or dystrophic lake. **3.** A lake whose shoreline exhibits an advanced stage of development.

oldland [GEOL] **1.** An extensive area (as the Canadian Shield) of ancient crystalline rocks reduced to low relief by long, continuous erosion from which the materials of later sedimentary rocks were derived. **2.** A region of older land, projected above sea level behind a coastal plain, that supplied the material of which the coastal-plain strata were formed.

old mountain [GEOL] A mountain that was formed before the beginning of the Tertiary Period.

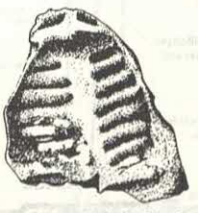
Old Red Sandstone [GEOL] A Devonian formation in Great Britain and northwestern Europe, of nonmarine, predominantly

OKRA



Okra (*Hibiscus esculentus*), branch with pods.

OLDHAMINIDINA



Dorsal view of the shell of *Leptodus*.

red sedimentary rocks, consisting principally of sandstone, conglomerates, and shales.

old snow [HYD] Deposited snow in which the original crystalline forms are no longer recognizable, such as firn or spring snow. Also known as firn snow.

old wives' summer [METEOROL] A period of calm, clear weather, with cold nights and misty mornings but fine warm days, which sets in over central Europe toward the end of September; comparable to Indian summer.

old workings [MIN ENG] Mines which have been abandoned, allowed to collapse, and sometimes sealed off.

Oleaceae [BOT] A family of dicotyledonous plants in the order Scrophulariales characterized generally by perfect flowers, two stamens, axile to parietal or apical placentation, a four-lobed corolla, and two ovules in each locule.

oleandomycin [MICROBIO] $C_{35}H_{61}O_{12}N$ A macrolide antibotic produced by *Streptomyces antibioticus*; active mainly against gram-positive microorganisms. Also known as matromycin.

oleate [ORG CHEM] Salt made up of a metal or alkaloid with oleic acid; used for external medicines and in soaps and paints.

olecranon [ANAT] The large process at the distal end of the ulna that forms the bony prominence of the elbow and receives the insertion of the triceps muscle.

olefiant gas *See* ethylene.

olefin [ORG CHEM] C_nH_{2n} A family of unsaturated, chemically active hydrocarbons with one carbon-carbon double bond; includes ethylene and propylene. [TEXT] A manufactured fiber in which the fiber-forming substance is any long-chain synthetic polymer composed of at least 85% by weight of ethylene, propylene, or other olefin units except amorphous (noncrystalline) polyolefins qualifying as rubber.

olefin copolymer [ORG CHEM] Polymer made by the interreaction of two or more kinds of olefin monomers, such as butylene and propylene.

olefin resin [ORG CHEM] Long-chain polymeric material produced by the chain reaction of olefinic monomers, such as polyethylene from ethylene, or polypropylene from propylene.

oleic acid [ORG CHEM] $C_{17}H_{33}COOH$ Yellowish, unsaturated fatty acid with lardlike aroma; soluble in organic solvents, slightly soluble in water; boils at 286°C (100 mm Hg); the main component of olive and cooking oils; used in soaps, ointments, cosmetics, and ore beneficiation. Also known as red oil.

olein [ORG CHEM] $(C_{17}H_{33}COO)_3C_3H_5$ Oleic acid triglyceride; yellow liquid melting at −5°C; slightly soluble in alcohol, soluble in chloroform, ether, and carbon tetrachloride; found in most fats and oils; used in textile lubrication.

olemeter [ENG] **1.** A device for measuring specific gravity of oils. **2.** An instrument for determining the proportion of oil in a substance.

Olenellidae [PALEON] A family of extinct arthropods in the class Trilobita.

oleo oil [MATER] Yellow liquid fat used to make oleomargarine; consists of liquid olein and palmitin from cold-pressed tallow.

oleoresin [MATER] A resin-essential oil mixture with pungent taste; extracted from various plants; used in pharmaceutical preparations; examples are Peru, tulu, and styrax balsams.

oleoresinous varnish [MATER] A varnish made by compounding the resin with oxidizable oil, such as linseed oil.

oleostearin [MATER] Edible solid fat from tissues of cattle (genus *Bos*); the solid remaining after oleo oil or tallow oil is removed from tallow. Also known as beef stearin.

oleo strut [MECH ENG] A shock absorber consisting of a telescoping cylinder that forces oil into an air chamber, thereby compressing the air; used on aircraft landing gear.

Olethreutidae [INV ZOO] A family of moths in the superfamily Tortricoidea whose hindwings usually have a fringe of long hairs along the basal part of the cubitus.

oleum [CHEM] **1.** Latin name for oil. **2.** *See* fuming sulfuric acid.

oleum gossypii seminis *See* cotton oil.

oleum morrhuae *See* cod-liver oil.

oleum theobromatis *See* cocoa butter.

oleyl alcohol [ORG CHEM] $C_{18}H_{35}OH$ Clear liquid, boiling at 282–349°C; fatty alcohol derived from oleic acid; commercial grade 80–90% pure; used to make resins and surface-active agents, and as a chemical intermediate. Also known as octadecenol.

oleyl aldehyde *See* octadecenyl aldehyde.

olfaction [PHYSIO] **1.** The function of smelling. **2.** The sense of smell.

olfactoreceptor [PHYSIO] A structure which is a receptor for the sense of smell.

olfactory aura [MED] Prodromal disagreeable olfactory sensation preceding or characterizing an epileptic attack.

olfactory bulb [VERT ZOO] The bulbous distal end of the olfactory tract located beneath each anterior lobe of the cerebrum; well developed in lower vertebrates.

olfactory cell [PHYSIO] One of the sensory nerve cells in the olfactory epithelium.

olfactory foramen [ANAT] Any of the openings in the cribriform plate of the ethmoid bone through which pass the fila olfactoria of the olfactory nerves.

olfactory gland [PHYSIO] A type of serous gland in the nasal mucous membrane.

olfactory lobe [VERT ZOO] A lobe projecting forward from the inferior surface of the frontal lobe of each cerebral hemisphere, including the olfactory bulb, tracts, and trigone; well developed in most vertebrates, but reduced in man.

olfactory nerve [ANAT] The first cranial nerve; a paired sensory nerve with its origin in the olfactory lobe and formed by processes of the olfactory cells which lie in the nasal mucosa; greatly reduced in man.

olfactory organ [PHYSIO] Any of the small chemoreceptors in the mucous membrane lining the upper part of the nasal gravity which receive stimuli interpreted as odors.

olfactory pit [EMBRYO] A depression near the olfactory placode in the embryo that develops into part of the nasal cavity. Also known as nasal pit.

olfactory region [ANAT] The area on and above the superior conchae and on the adjoining nasal septum where the mucous membrane has olfactory epithelium and olfactory glands.

olfactory stalk [ANAT] The structure that connects the olfactory bulb to the cerebrum of the vertebrate brain.

olfactory tract [ANAT] A narrow tract of white nerve fibers originating in the olfactory bulb and extending posteriorly to the anterior perforated substance, where it enlarges to form a lateral root (olfactory trigone).

olibanum [MATER] A gum resin distilled from the dried exudation of African and Arabian trees of the genus *Boswellia*; used as a perfume, fixative, in incense, in fumigants, and in pharmacy. Also known as frankincense; gum thus.

olibanum oil [MATER] Colorless oil with balsamic aroma; distilled from olibanum; soluble in ether, chloroform, and carbon disulfide; main components are pinene, phellandrene, and dipentene; used in medicine. Also known as frankincense oil.

olig-, oligo- [SCI TECH] A combining form denoting few, scant, or deficiency.

oligemia [MED] A state in which the total blood volume is reduced.

Oligobrachiidae [INV ZOO] A monotypic family of the order Athecanephria.

Oligocene [GEOL] The third of the five major worldwide divisions (epochs) of the Tertiary period (Cenozoic era), extending from the end of the Eocene to the beginning of the Miocene.

Oligochaeta [INV ZOO] A class of the phylum Annelida including worms that exhibit both external and internal segmentation, and setae which are not borne on parapodia.

oligochromemia *See* anemia.

oligoclase [MINERAL] A plagioclase feldspar mineral with a composition ranging from $Ab_{90}An_{10}$ to $Ab_{70}An_{30}$, where Ab = $NaAlSi_3O_8$ and An = $CaAl_2O_8$.

oligoclasite [PETR] A granular plutonic rock composed almost entirely of oligoclase. Also known as oligosite.

oligocythemia [MED] A reduction in the total number of red blood cells in the body.

oligodendroglia [HISTOL] Small neuroglial cells with spheroidal or ovoid nuclei and fine cytoplasmic processes with secondary divisions.

oligodendroglioma [MED] A slowly growing, large, well-defined cerebral glioma, composed of small cells with richly chromatic nuclei and scanty, poorly staining cytoplasm.

oligodynamic action [MICROBIO] The inhibiting or killing of microorganisms by use of very small amounts of a chemical substance.

oligomenorrhea [MED] Abnormally infrequent menstruation.

OLIGOCENE

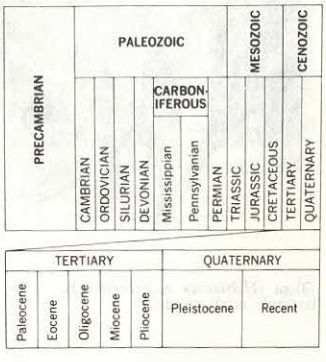


Chart showing position of Oligocene epoch in relation to the eras and periods of geologic time.

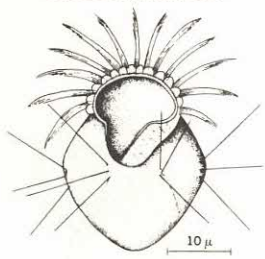
OLIGOCLASE

Oligoclase from North Carolina. *(Specimen from Department of Geology, Bryn Mawr College)*

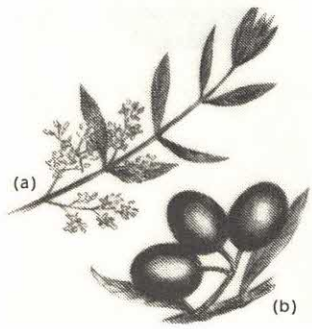
oligomer [ORG CHEM] A polymer made up of two, three, or four monomer units.
Oligomera [INV ZOO] A subphylum of the phylum Vermes comprising groups with two or three coelomic divisions.
oligomeric protein [BIOCHEM] A protein composed of two or more polypeptide chains.
oligomerous [BOT] Having one or more whorls with fewer members than other whorls of the flower.
oligomictic [HYD] Pertaining to a lake that circulates only at rare, irregular intervals during abnormal cold spells. [PETR] Of a clastic sedimentary rock, composed of a single rock type.
oligomycin [MICROBIO] $C_{25}H_{40-42}O_7$ An antifungal antibiotic produced by an actinomycete resembling *Streptomyces diastachromogenes*; the colorless, hexagonal crystals are soluble in many organic solvents.
oligonucleotide [BIOCHEM] A polynucleotide of low molecular weight, consisting of less than 20 nucleotide polymers.
oligopelic [GEOL] Property of a lake bottom deposit which contains very little clay.
oligopeptide [ORG CHEM] A peptide composed of no more than 10 amino acids.
oligophagous [ZOO] Eating only a limited variety of foods.
oligophyre [PETR] A light-colored diorite containing oligoclase phenocrysts in a groundmass of the same minerals.
Oligopygidae [PALEON] An extinct family of exocyclic Euechinoidia in the order Holectypoida which were small ovoid forms of the Early Tertiary.
oligosaccharide [BIOCHEM] A sugar composed of two to eight monosaccharide units joined by glycosidic bonds. Also known as compound sugar.
oligosite *See* oligoclasite.
oligospermia [MED] Scarcity of spermatozoa in the semen.
Oligotrichida [INV ZOO] A minor order of the Spirotrichia; the body is round in cross section, and the adoral zone of membranelles is often highly developed at the oral end of the organism.
oligotrophic [HYD] Of a lake, lacking plant nutrients and usually containing plentiful amounts of dissolved oxygen without marked stratification.
oliguria [MED] Diminished excretion of urine.
olistolith [GEOL] An exotic block or other rock mass that has been transported by submarine gravity sliding or slumping and is included in the binder of an olistostrome.
olistostrome [GEOL] A sedimentary deposit composed of a chaotic mass of heterogeneous material that is intimately mixed; accumulated in the form of a semifluid body by submarine gravity sliding or slumping of unconsolidated sediments.
olivaceous [BIOL] **1.** Resembling an olive. **2.** Olive colored.
olivary nucleus [ANAT] A prominent, convoluted gray band that opens medially and occupies the upper two-thirds of the medulla oblongata.
olive [BOT] Any plant of the genus *Olea* in the order Schrophulariales, especially the evergreen olive tree (*O. europeae*) cultivated for its drupaceous fruit, which is eaten ripe (black olives) and unripe (green), and is of high oil content.
olive hole [HOROL] In a watch, a jeweled bearing hole in which the sharp corners have been smoothed by grinding to reduce friction between the sides of the hole and the pivot that turns in it.
olive infused oil [MATER] A synthetic olive oil made by infusing corn oil with a paste of finely ground, partly dehydrated ripe olives; contains carotene.
oliveiraite [MINERAL] $Zr_3Ti_3O_{10}\cdot 2H_2O$ An isotropic mineral consisting of an oxide of titanium and zirconium.
olive knot [PL PATH] A bacterial disease of the olive caused by *Pseudomonas sevastonoi* and characterized by excrescences on the foliage and branches, and sometimes on the trunk. Also known as olive tubercle.
olivenite [MINERAL] $Cu_2(AsO_4)(OH)$ An olive-green, dull-brown, gray, or yellow mineral crystallizing in the orthorhombic system and consisting of a basic arsenate of copper. Also known as leucochalcite; wood copper.
olive oil [MATER] Pale- or greenish-yellow edible oil; main components are olein and palmitin; soluble in ether, chloroform, and carbon disulfide; derived from the pulp of olive tree fruit; used in foods, ointments, linaments, and soaps, as a lubricant, and for tanning. Also known as Florence oil; lucca oil; sweet oil.
Oliver filter [MIN ENG] A continuous-type filter made in the form of a cylindrical drum with filter cloth stretched over the convex surface of the drum.
olivette [ELEC] Standing floodlight used in the wings for lighting stage entrances and acting areas at fairly close range; bulb wattage ranges from 500 to 1500 watts.
olive tubercle *See* olive knot.
Olividae [INV ZOO] A family of snails in the gastropod order Neogastropoda.
olivine [MINERAL] $(Mg,Fe_2)SiO_4$ A neosilicate group of olive-green magnesium-iron silicate minerals crystallizing in the orthorhombic system and having a vitreous luster; hardness is 6½–7 on Mohs scale; specific gravity is 3.27–3.37.
olivine basalt [PETR] Any of a group of olivine-bearing basalts.
olivine diabase [PETR] An igneous rock composed principally of olivine and formed from tholeiitic magmas by differentiation in thick sills.
olivine nephelinite [PETR] An extrusive igneous rock differing in composition from nephelinite only by the presence of olivine. Also known as ankaratrite; nepheline basalt.
ollenite [PETR] A type of hornblende schist characterized by abundant epidote, sphene, and rutile.
Ollier's disease *See* enchondromatosis.
Olsen ductility test [MET] A cupping test in which a piece of sheet metal is deformed at the center by a steel ball until fracture occurs; ductility is measured by the height of the cup at the time of failure.
Olympus Mons [ASTRON] The largest volcano on Mars; it is approximately 600 kilometers across at its base and stands approximately 26 kilometers above the surrounding terrain. Also known as Nix Olympica.
omasum [VERT ZOO] The third chamber of the ruminant stomach where the contents are mixed to a more or less homogeneous state. Also known as manyplies; psalterium.
ombré [TEXT] Referring to colors on fabrics that are shaded or graduated from light to dark tones, or to tones that shade from one color into another.
ombrometer *See* rain gage.
ombrophilous [ECOL] Able to thrive in areas of abundant rainfall.
ombrophobia [PSYCH] An abnormal fear of rain.
ombrophobous [ECOL] Unable to live in the presence of long, continuous rain.
ombroscope [ENG] An instrument consisting of a heated, water-sensitive surface which indicates by mechanical or electrical techniques the occurrence of precipitation; the output of the instrument may be arranged to trip an alarm or to record on a time chart.
Omega [NAV] A worldwide radio navigation system providing navigational parameters by phase comparison of very-low-frequency (10 to 14 kilohertz), continuous-wave radio signals.
omega hyperon [PARTIC PHYS] A semistable baryon with a mass of approximately 1672 MeV, negative charge, spin of 3/2, and positive parity; constitutes an isoptic spin singlet. Also known as omega particle. Symbolized Ω^-.
omega meson [PARTIC PHYS] An unstable, neutral vector meson having a mass of about 783 MeV, a width of about 12 MeV, and negative charge parity and G parity. Symbolized $\omega(783)$.
omega particle *See* omega hyperon.
omegatron [ELECTR] A miniature mass spectrograph, about the size of a receiving tube, that can be sealed to another tube and used to identify the residual gases left after evacuation.
omentum [ANAT] A fold of the peritoneum connecting or supporting abdominal viscera.
omethioate *See* folimat.
omission [GEOL] The elimination or nonexposure of certain stratigraphic beds at the surface of any specified section because of disruption and displacement of the beds by faulting.
omission factor [COMPUT SCI] In information retrieval, the ratio obtained in dividing the number of nonretrieved relevant documents by the total number of relevant documents in the file.
omission solid solution [CRYSTAL] A crystal with certain atomic sites incompletely filled.
ommatidium [INV ZOO] The structural unit of a compound eye, composed of a cornea, a crystalline cone, and a receptor element connected to the optic nerve.
ommatophore [INV ZOO] A movable peduncle that bears an eye, as in snails.

OLIGOTRICHIDA



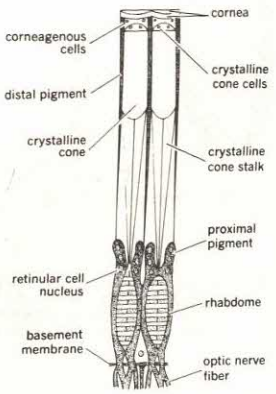
Halteria, an example of an oligotrichid. The long bristles are used in a kind of jumping motion.

OLIVE



Olive *(Olea europeae)* branches. *(a)* Bearing small white flowers. *(b)* Bearing drupes, or fruit.

OMMATIDIUM



Two ommatidia from the compound eye of the crayfish *Astacus. (After H. Bernhards, from R. D. Barnes, Invertebrate Zoology, 2d ed., W. B. Saunders Co., 1968)*

omnibearing [NAV] The magnetic bearing of an omnidirectional radio range.
omnibearing beacon [NAV] A beacon transmitter capable of providing bearing information in all horizontal directions, particularly a very-high-frequency omnidirectional radio range.
omnibearing converter [ENG] An electromechanical device which combines an omnirange signal with heading information to furnish electrical signals for the operation of the pointer of a radio magnetic indicator.
omnibearing-distance navigation [NAV] Navigation based upon polar coordinates relative to a reference point. Also known as r-theta navigation; rho-theta navigation.
omnibearing-distance station [NAV] A radio station having an omnidirectional radio range and a distance-measuring-equipment (DME) transponder in combination.
omnibearing indicator [ENG] An instrument providing automatic and continuous indication of omnibearing.
omnibearing line [NAV] One of an infinite number of straight lines radiating from the geographical location of a VHF omnirange.
omnibearing selector [ENG] A device capable of being set manually to any desired omnibearing, or its reciprocal, to control a course-line deviation indicator. Also known as radial selector.
omnidirectional [ELECTR] Radiating or receiving equally well in all directions. Also known as nondirectional.
omnidirectional antenna [ELECTROMAG] An antenna that has an essentially circular radiation pattern in azimuth and a directional pattern in elevation. Also known as nondirectional antenna.
omnidirectional hydrophone [ENG ACOUS] A hydrophone whose response is fundamentally independent of the incident sound wave's angle of arrival.
omnidirectional range *See* omnirange.
omnidistance [NAV] The distance indicated on the meter of an aircraft's distance-measuring equipment when this equipment is interrogating and receiving replies from a transponder beacon located at an omnirange station; thus it is the slant distance.
omnigraph [COMMUN] An instrument that converts Morse code signals on punched tape into corresponding buzzer-produced audio signals for training purposes. [ENG] An automatic acetylene cutter controlled by a mechanical pointer that traces a pattern; capable of cutting several duplicates simultaneously.
omnimeter [ENG] A theodolite with a microscope that can be used to observe vertical angular movement of the telescope.
omnirange [NAV] A radio aid to navigation providing direct indication of the magnetic bearing (omnibearing) of that station from any direction. Also known as omnidirectional range.
omnivore [ZOO] An organism that eats both animal and vegetable matter.
omohyoid [ANAT] **1.** Pertaining conjointly to the scapula and the hyoid bone. **2.** A muscle attached to the scapula and the hyoid bone.
Omophronidae [INV ZOO] The savage beetles, a small family of coleopteran insects in the suborder Adephaga.
omphacite [MINERAL] A grassy- to pale-green, granular or foliated, high-temperature aluminous clinopyroxene mineral with a vitreous luster that commonly occurs in the rock eclogite; a variety of augite.
omphalitis [MED] Inflammation of the umbilicus.
omphalomesenteric artery *See* vitelline artery.
omphalomesenteric duct *See* vitelline duct.
omphalomesenteric vein *See* vitelline vein.
omphaloproptosis [MED] Abnormal protrusion of the navel.
Omphralidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Nematocera.
OMR *See* optical mark reading.
OMS *See* ovonic memory switch.
on [ENG] Designating the operating state of a device or one of two possible conditions (the other being "off") in a circuit.
Onagraceae [BOT] A family of dicotyledonous plants in the order Myrtales characterized generally by an inferior ovary, axile placentation, twice as many stamens as petals, a four-nucleate embryo sac, and many ovules.
ONB *See ortho*-nitrobiphenyl.
on-call circuit [COMMUN] A permanently designated circuit that is activated only upon request of the user; this type of circuit is usually provided when a full-period circuit cannot be justified and the duration of use cannot be anticipated; during unactivated periods, the communications facilities required for the circuit are available for other requirements.
on-carriage equipment [ORD] Items of supply which, although not part of the cannon carriage proper, are mounted on the carriage and remain in their respective mounts, brackets, or containers on the carriage when it is being towed.
on-carriage fire control [ORD] Process of controlling fire on a target with the aid of a sighting device mounted directly on the weapon.
on-carriage fire control equipment [ORD] Fire control items, such as telescope mounts, which are built into the cannon carriage or mount, or which are carried on the carriage or mount in the traveling position.
on center [BUILD] The measurement made between the centers of two adjacent members.
once-through boiler [MECH ENG] A boiler in which water flows, without recirculation, sequentially through the economizer, furnace wall, and evaporating and superheating tubes.
Onchidiidae [INV ZOO] An intertidal family of sluglike pulmonate mollusks of the order Systellommatophora in which the body is oval or lengthened, with the convex dorsal integument lacking a mantle cavity or shell.
onchocerciasis [MED] Infection with the filaria *Onchocerca volvulus*; results in skin tumors, papular dermatitis, and ocular complications.
onchogryposis [MED] A thickened, ridged, and curved condition of a nail.
oncholysis [MED] A slow process of loosening of a nail from its bed, beginning at the free edge and progressing gradually toward the root.
onchomycosis [MED] Any fungus disease of the nail.
onchosphere [INV ZOO] The hexacanth embryo identified as the earliest differentiated stage of cyclophyllidean tapeworms.
oncocyte [HISTOL] A columnar-shaped cell with finely granular eosinophilic cytoplasm, found in salivary and certain endocrine glands, nasal mucosa, and other locations.
oncocytoma [MED] A benign tumor composed principally of oncocytes; usually occurs in salivary glands.
oncogene [GEN] A gene that causes cancer in an animal; the gene specifies the structure of an enzyme that catalyzes events that can induce cancerous growth.
oncogenesis [MED] Processes of tumor formation.
oncolite [GEOL] A small, variously shaped (often spheroidal), concentrically laminated, calcareous sedimentary structure resembling an oolith; formed by accretion of successive, layered masses of gelatinous sheaths of blue-green algae.
oncology [MED] The study of the causes, development, characteristics, and treatment of tumors.
Oncopoda [INV ZOO] A phylum of the superphylum Articulata.
oncotic pressure [PHYSIO] Also known as colloidal osmotic pressure. **1.** The osmotic pressure exerted by colloids in a solution. **2.** The pressure exerted by plasma proteins.
oncotomy [MED] Surgical incision of a tumor, abscess, or other swelling.
ondograph [ELECTR] An instrument that draws the waveform of an alternating-current voltage step by step; a capacitor is charged momentarily to the amplitude of a point on the voltage wave, then discharged into a recording galvanometer, with the action being repeated a little further along on the waveform at intervals of about 0.01 second.
ondoscope [ELECTR] A glow-discharge tube used to detect high-frequency radiation, as in the vicinity of a radar transmitter; the radiation ionizes the gas in the tube and produces a visible glow.
ondulé [TEXT] A wavy effect on the surface of a woven fabric that has been achieved by alternate spreading and converging of some of the warp threads.
-one [ORG CHEM] Chemical suffix indicating a ketone, a substance related to starches and sugars, or an alkone.
one-address code [COMPUT SCI] In computers, a code using one-address instructions.
one-address instruction [COMPUT SCI] A digital computer programming instruction that explicitly describes one operation and one storage location. Also known as single-address instruction.
one condition [COMPUT SCI] The state of a magnetic core or

other computer memory element in which it represents the value 1. Also known as one state.

one-digit subtracter *See* half-subtracter.

one-dimensional flow [FL MECH] Fluid flow in which all flow is parallel to some straight line, and characteristics of flow do not change in moving perpendicular to this line.

one-dimensional lattice [CRYSTAL] A simplified model of a crystal lattice consisting of particles lying along a straight line at either equal or periodically repeating distances.

one-ended tape Turing machine [COMPUT SCI] A variation of a Turing machine in which the tape can be extended to the right, but not to the left.

one-face-centered lattice [CRYSTAL] A crystal lattice in which there are lattice points at the centers of one pair of faces in each unit cell as well as at the corners.

one-group model [NUCLEO] A neutron-behavior model in which neutrons of all energies are treated as having the same characteristics.

one-hundred-percent premium plan [IND ENG] A wage incentive plan wherein each unit produced by an employee in excess of standard is compensated at the same rate paid for each unit of standard production. Also known as straight piecework system; straight proportional system.

one-level address [COMPUT SCI] In digital computers, an address that directly indicates the location of an instruction or some data.

one-level code [COMPUT SCI] Any code using absolute addresses and absolute operation codes.

one-level subroutine [COMPUT SCI] A subroutine that does not use other subroutines during its execution.

one-line adapter [COMPUT SCI] A unit connecting central processes and permitting high-speed transfer of data under program control.

one-part code [COMMUN] Code in which the plain text elements are arranged in alphabetical or numerical order, accompanied by their code groups also arranged in alphabetical, numerical, or other systematic order.

one-particle exchange [PARTIC PHYS] A model for the interaction of two particles in which the interaction results entirely from a single virtual particle being emitted by one interacting particle and absorbed by the other.

one-pass operation [COMPUT SCI] An operating method, now standard, which produces an object program from a source program in one pass.

one-piece set [MIN ENG] A single stick of timber used as a post, stull, or prop.

one-plus-one address instruction [COMPUT SCI] A digital computer instruction whose format contains two address parts; one address designates the operand to be involved in the operation; the other indicates the location of the next instruction to be executed.

one-point perspective *See* parallel perspective.

one-quadrant multiplier [ELECTR] Of an analog computer, a multiplier in which operation is restricted to a single sign of both input variables.

one-sample problem [STAT] The problem of testing the hypothesis that the average of a sequence of observations or measurement of the same kind has a specified value.

one's complement [COMPUT SCI] A numeral in binary notation, derived from another binary number by simply changing the sense of every digit.

ones-complement code [COMPUT SCI] A number coding system used in some computers, where, for any number x, $x = (1-2^{n-1})\cdot a_0 + 2^{n-2}a_1 + \ldots + a_{n-1}$, where $a_i = 1$ or 0.

one-shot molding [ENG] Production of urethane-plastic foam in which the isocynate, polyol, and catalyst and other additives are mixed directly together and a foam is produced immediately.

one-shot multivibrator *See* monostable multivibrator.

one-shot operation *See* single-step operation.

one-sided abrupt junction [ELECTR] An abrupt junction that is realized by giving one side of the junction a high doping level compared with the other; that is, an n^+p or p^+n junction.

one-sided acceptance sampling test [IND ENG] A test against a single specification only, in which permissible values in one direction are not limited.

one-sided limit [MATH] Either a limit on the left or a limit on the right.

one-sided test [STAT] A test statistic T which rejects a hypothesis only for $T \geq d$ or $T \leq c$ but not for both (here d and c are critical values).

Onesquethawan [GEOL] A North American stage in the Lower and Middle Devonian, lying above the Deerparkian and below the Cazenovian.

one state *See* one condition.

one-step operation *See* single-step operation.

one-to-one assembler [COMPUT SCI] An assembly program which produces a single instruction in machine language for each statement in the source language. Also known as one-to-one translater.

one-to-one mapping *See* injection.

one-to-one translater *See* one-to-one assembler.

O network [ELEC] Network composed of four impedance branches connected in series to form a closed circuit, two adjacent junction points serving as input terminals, the remaining two junction points serving as output terminals.

one-way slab [CIV ENG] A concrete slab in which the reinforcing steel runs perpendicular to the supporting beams, that is, one way.

one-way trunk [ELEC] Trunk between two central offices, used for calls that originate at one of those offices, but not for calls that originate at the other. Also known as outgoing trunk.

one-year ice [OCEANOGR] Sea ice formed the previous season, not yet 1 year old.

on grade [CIV ENG] **1.** At ground level. **2.** Supported directly on the ground.

on-hook [COMMUN] The idle state (open loop) of a subscriber or PBX user loop.

onion [BOT] **1.** *Allium cepa*. A biennial plant in the order Liliales cultivated for its edible bulb. **2.** Any plant of the genus *Allium*.

onion oil [MATER] A sharp-odored yellow liquid; derived from the bulb of the onion *Allium cepa*; soluble in ether, chloroform, and carbon disulfude; main component is allyl propyl disulfide; used in flavorings.

onion scab *See* onion smudge.

onionskin paper [MATER] A lightweight, durable bond paper; usually quite translucent, resembling the dry outer skin of an onion; used for duplicate typewriter copies and in interleaving order books.

onionskin weathering [GEOL] A type of spheroidal weathering in which successive shells of decayed rock resembling the layers of an onion are produced.

onion smudge [PL PATH] A fungus disease of the onion caused by *Colletotrichum circinans* and characterized by black concentric integral rings or smutty spots on the bulb scales. Also known as onion scab.

onion smut [PL PATH] A fungus disease of onion, especially seedlings, caused by *Urocystis cepulae* and characterized by elongate black blisters on the scales and foliage.

Oniscoidea [INV ZOO] A terrestrial suborder of the Isopoda; the body is either dorsoventrally flattened or highly vaulted, and the head, thorax, and abdomen are broadly joined.

-onium [INORG CHEM] Chemical suffix indicating a complex cation, as for oxonium, $(H_3O)^+$.

onlap [GEOL] A type of overlap characterized by regular and progressive pinching out of the strata toward the margins of a depositional basin; each unit transgresses and extends beyond the point of reference of the underlying unit. Also known as transgressive overlap.

on-line [COMPUT SCI] Pertaining to equipment capable of interacting with a computer. [ELECTR] The state in which a piece of equipment or a subsystem is connected and powered to deliver its proper output to the system.

on-line analyzer [MIN ENG] An instrument which monitors the content of materials at various stages in flotation or other mineral-processing flow sheets.

on-line central file [COMPUT SCI] An organized collection of data, such as an on-line disk file, in a storage device under direct control of a central processing unit, that serves as a continually available source of data in applications where real-time or direct-access capabilites are required.

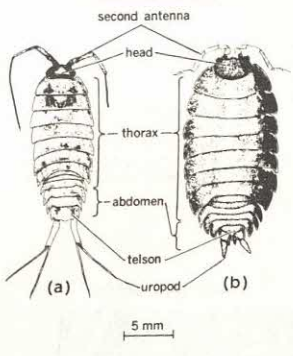
on-line cipher [COMMUN] A method of encryption directly associated with a particular transmission system, whereby messages may be encrypted and simultaneously transmitted from one station to one or more stations where reciprocal equipment is automatically operated.

on-line computer system [COMPUT SCI] A computer system which is adapted to on-line operation.

ONION

Onion flower and an oblate type of bulb.

ONISCOIDEA



Genera of oniscoideans. *(a) Ligia*, the shore slater found above tidewater mark. *(b) Porcellio*, the sow bug or wood louse.

on-line cryptographic operation *See* on-line operation.

on-line data reduction [COMPUT SCI] The processing of information as rapidly as it is received by the computing system.

on-line disk file [COMPUT SCI] A magnetic disk directly connected to the central processing unit, thereby increasing the memory capacity of the computer.

on-line equipment [COMPUT SCI] The equipment or devices in a system whose operation is under control of the central processing unit, and in which information reflecting current activity is introduced into the data-processing system as soon as it occurs.

on-line inquiry [COMPUT SCI] A level of computer processing that results from adding to an expanded batch system the capability to immediately access, from any terminal, any record that is stored in the disk files attached to the computer.

on-line mode [COMPUT SCI] Mode of operation in which all devices are responsive to the central processor.

on-line operation [COMPUT SCI] Computer operation in which input data are fed into the computer directly from observing instruments or other input equipment, and computer results are obtained during the progress of the event. [COMMUN] A method of operation whereby messages are encrypted and simultaneously transmitted from one station to one or more other stations where reciprocal equipment is automatically operated to permit reception and simultaneous decryptment of the message. Also known as on-line cryptographic operation.

on-line secured communications system [COMMUN] Any combination of interconnected communications centers partially or wholly equipped for on-line cryptographic operation and capable of relaying or switching message traffic using on-line cryptographic procedures.

on-line storage [COMPUT SCI] Storage controlled by the central processing unit of a computer.

on-line typewriter [COMPUT SCI] A typewriter which transmits information into and out of a computer, and which is controlled by the central processing unit and thus by whatever program the computer is carrying out.

only loadable [COMPUT SCI] Attribute of a load module which can be brought into main memory only by a LOAD macroinstruction given from another module. Abbreviated OL.

on-off control [CONT SYS] A simple control system in which the device being controlled is either full on or full off, with no intermediate operating positions. Also known as on-off system.

on-off keying [COMMUN] Binary form of amplitude modulation in which one of the states of the modulated wave is the absence of energy in the keying interval.

on-off switch [ELEC] A switch used to turn a receiver or other equipment on or off; often combined with a volume control in radio and television receivers.

on-off system *See* on-off control.

on-off tests [ELEC] Tests conducted to determine the source of interference by switching various suspected sources on and off while observing the victim receiver.

Onsager equation [PHYS CHEM] An equation which relates the measured equivalent conductance of a solution at a certain concentration to that of the pure solvent.

Onsager reciprocal relations [THERMO] A set of conditions which state that the matrix, whose elements express various fluxes of a system (such as diffusion and heat conduction) as linear functions of the various conjugate affinities (such as mass and temperature gradients) for systems close to equilibrium, is symmetric when certain definitions are chosen for these fluxes and affinities.

Onsager theory of dielectrics [ELEC] A theory for calculating the dielectric constant of a material with polar molecules in which the local field at a molecule is calculated for an actual spherical cavity of molecular size in the dielectric using Laplace's equation, and the polarization catastrophe of the Lorentz field theory is thereby avoided.

onsetter [MIN ENG] The worker in charge of hoisting coal, ore, men, or materials in a mine shaft.

onshore [GEOGR] Pertaining to, in the direction toward, or located on the shore. Also known as shoreside.

onshore wind [METEOROL] Wind blowing from the sea toward the land.

on soundings [NAV] Of a vessel, navigating within the 100-fathom curve; in earlier times, the term was applied to a vessel in water sufficiently shallow for sounding by sounding lead.

on stream [CHEM ENG] Of plant or process-operations, unit, being in operation.

on-stream time [CHEM ENG] In plant or process operations, the actual time that a unit is operating and producing product.

on the beam [ELECTR] Centered on a beam of, or on an equisignal zone of, radiant energy, as a radio range. [NAV] Bearing approximately 090° relative (on the starboard beam) or 270° relative (on the port beam); the expression is often used loosely for broad on the beam, or bearing exactly 090° or 270° relative. Also known as abeam.

on the bow [NAV] Bearing approximately 045° relative (on the starboard bow) or 315° relative (on the port bow); the expression is often used loosely for broad on the bow, or bearing exactly 045° or 315° relative.

on-the-fly printer [COMPUT SCI] A high-speed line printer using continuously rotating print wheels and fast-acting hammers to print the letters contained on one line of text so rapidly that the characters appear to be printed simultaneously.

on the quarter [NAV] Bearing approximately 135° relative (on the starboard quarter) or 225° relative (on the port quarter); the expression is often used loosely for broad on the quarter, or bearing exactly 135° or 225° relative.

on the run [MIN ENG] Manner of working a seam of coal when there is sufficient inclination to cause the coal, as worked toward the rise, to fall by gravity to the gangways for loading into cars.

on the solid [MIN ENG] **1.** Pertaining to the practice of blasting heavy charges of explosives, in lieu of undercutting or channeling. **2.** *See* into the solid.

on the way [ORD] An expression sent over the communication system from the firing position to the observation position when the weapon is fired, thus warning the observers to be on the alert for spotting the impact.

ontogeny [EMBRYO] The origin and development of an organism from conception to adulthood.

on-top flight [AERO ENG] Flight above an overcast.

Onuphidae [INV ZOO] A family of tubicolous, herbivorous, scavenging errantian annelids in the superfamily Eunicea.

on-vehicle materiel [ORD] Items of supply which, although not part of the vehicle proper, are issued with, and carried on, ordnance or other technical service vehicles; the items are required for vehicular maintenance, armament, fire protection, or communication, to complete the major combination; examples are guns, gun mounts, radios, flashlights, and fire extinguishers.

onych-, onycho- [ZOO] A combining form denoting claw or nail.

onychia [MED] Inflammation of the nail matrix.

Onychodontidae [PALEON] A family of Lower Devonian lobefin fishes in the order Osteolepiformes.

onychomycosis [MED] A fungus disease of the nails.

Onychopalpida [INV ZOO] A suborder of mites in the order Acarina.

Onychophora [INV ZOO] A phylum of wormlike animals that combine features of both the annelids and the arthropods.

onychorrhexis [MED] Longitudinal striation of the nail plate, with or without the formation of fissures.

Onygenaceae [MYCOL] A family of ascomycetous fungi in the order Eurotiales comprising forms that inhabit various animal substrata, such as horns and hoofs.

onyx [MINERAL] **1.** Banded chalcedonic quartz, in which the bands are straight and parallel; natural colors are usually red or brown with white, although black is occasionally encountered. **2.** *See* onyx marble.

onyx agate [MINERAL] A banded agate with straight, parallel, alternating bands of white and different tones of gray.

onyx marble [MINERAL] A hard, compact, dense, generally translucent variety of calcite resembling true onyx and usually banded. Also known as alabaster; Algerian onyx; Gibraltar stone; Mexican onyx; onyx; oriental alabaster.

onyx opal [MINERAL] Common opal with straight, parallel markings.

oocyst [INV ZOO] The encysted zygote of some Sporozoa.

oocyte [HISTOL] An egg before the completion of maturation.

oogamete [BIOL] A large, nonmotile female gamete containing reserve materials.

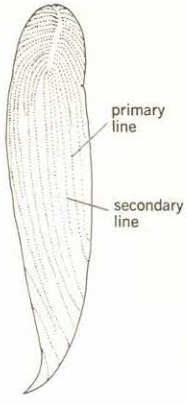
oogamous [BIOL] Of sexual reproduction, characterized by fusion of a motile sperm with an oogamete.

oogenesis [PHYSIO] Processes involved in the growth and maturation of the ovum in preparation for fertilization.
oogonium [BOT] The unisexual female sex organ in oogamous algae and fungi. [HISTOL] A descendant of a primary germ cell which develops into an oocyte.
ookinete [INV ZOO] The elongated, mobile zygote of certain Sporozoa, as that of the malaria parasite.
oolemma *See* zona pellucida.
oolicast [PETR] A small, nearly spherical feature occurring in an oolith as a result of a selective dissolution that did not destroy the matrix but left an opening that was subsequently filled.
oolicastic porosity [PETR] The porosity produced in an oolitic rock by removal of the ooids and formation of oolicasts.
oolite [PETR] A sedimentary rock, usually a limestone, composed principally of cemented ooliths. Also known as eggstone; roestone.
oolith [PETR] A small (0.25–2.0 millimeters), rounded accretionary body in a sedimentary rock; generally formed of calcium carbonate by inorganic precipitation or by replacement; ooliths generally exhibit concentric or radial internal structure.
oolitic chert [PETR] Chert composed chiefly of ooliths.
oolitic limestone [PETR] An even-textured limestone made up almost entirely of calcareous ooliths with essentially no matrix.
oology [VERT ZOO] A branch of zoology concerned with the study of eggs, especially bird eggs.
oomicrite [PETR] A limestone containing at least 25% ooliths and no more than 25% intraclasts in which the carbonate-mud matrix (micrite) is more abundant than the sparry-calcite cement.
oomicrudite [PETR] An oomicrite containing ooliths that are more than 1 millimeter in diameter.
Oomycetes [MYCOL] A class of the Phycomycetes comprising the biflagellate water molds and downy mildews.
oophagous [ZOO] Feeding or living on eggs.
oophoritis [MED] Inflammation of the ovaries.
ooplasm [CYTOL] Cytoplasm of an egg.
Oort's Cloud [ASTRON] A cloud of comets at distances from 75,000 to 150,000 astronomical units from the sun, which has been proposed as a source of comets that pass near the sun.
oosparenite [PETR] An oosparite containing medium sand or coarse sand-sized ooliths.
oosparite [PETR] A limestone containing at least 25% ooliths and no more than 25% intraclasts in which the sparry-calcite cement is more abundant that the carbonate-mud matrix.
oosparrudite [PETR] An oosparite containing ooliths that are more than 1 millimeter in diameter.
oospore [BOT] A spore which is produced by heterogamous fertilization and from which the sporophytic generation develops.
oostegite [INV ZOO] In many crustaceans, a platelike expansion of the basal segment of a thoracic appendage that aids in forming an egg receptacle.
ootype [INV ZOO] In trematodes and tapeworms, a thickening of the oviduct near the ovaries.
oovoid [PETR] A void in the center of an incompletely replaced oolith.
ooze [GEOL] **1.** A soft, muddy piece of ground, such as a bog, usually resulting from the flow of a spring or brook. **2.** A marine pelagic sediment composed of at least 30% skeletal remains of pelagic organisms, the rest being clay minerals. **3.** Soft mud or slime, typically covering the bottom of a lake or river.
opacifier [MATER] A substance, used to treat a solid rocket propellant, that absorbs light and heat and protects the propellant from deterioration until ready for use.
opacite [PETR] Masses of opaque, microscopic grains in rocks, particularly in the groundmass of an igneous rock.
opacity [OPTICS] The light flux incident upon a medium divided by the light flux transmitted by it.
opacus [METEOROL] A variety of cloud (sheet, layer, or patch), the greater part of which is sufficiently dense to obscure the sun; found in the genera altocumulus, altostratus, stratocumulus, and stratus; cumulus and cumulonimbus clouds are inherently opaque.
opal [MINERAL] A natural hydrated form of silica; it is amorphous, usually occurs in botryoidal or stalactic masses, has a hardness of 5–6 on Mohs scale, and specific gravity is 1.9–2.2.
opal agate [PETR] A variety of banded opal that displays different shades of color, is agatelike in structure, and consists of alternating layers of opal and chalcedony.
opal-CT [PETR] A poorly ordered crystalline form of silica thought to be the intermediate phase in quartz chert formation.
opalescence [OPTICS] The milky, iridescent appearance of a dense, transparent medium or colloidal system when it is illuminated by polychromatic radiation in the visible range, such as sunlight.
opal glass [MATER] Translucent or opaque glass, often milky white, made by adding impurities such as fluorine compounds to the melt; it appears white by reflected light but shows color images through thin sections; used for ornamental glass and as an efficient light diffuser.
Opalinata [INV ZOO] A superclass of the subphylum Sarcomastigophora containing highly specialized forms which resemble ciliates.
opaline [MINERAL] **1.** Any of several minerals related to or resembling opal. **2.** An earthy form of gypsum.
opalized wood *See* silicified wood.
opaque attritus [GEOL] Attritus that does not contain large quantities of transparent humic degradation matter.
opaque medium [OPTICS] A medium impervious to rays of light, that is, not transparent to the human eye. [PHYS] **1.** A medium which does not transmit electromagnetic radiation of a specified type, such as that in the infrared, x-ray, ultraviolet, and microwave regions. **2.** A medium which prevents the passage of particles of a specified type.
opaque projector [OPTICS] A projector designed to project the image of an opaque object, or of graphic material on an opaque support, by reflected light.
opaque sky cover [METEOROL] In United States weather observing practice, the amount (in tenths) of sky cover that completely hides all that might be above it; opposed to transparent sky cover.
opaquing [GRAPHICS] A technique in photoengraving or offset lithography in which unwanted areas are eliminated from a negative by application of an opaque substance.
OPDAR [ENG] A laser system for measuring elevation angle, azimuth angle, and slant range of a missile during its firing period. Derived from optical direction and ranging. Also known as optical radar.
Opegraphaceae [BOT] A family of the Hysteriales characterized by elongated ascocarps; members are crustose on bark and rocks.
open [ELEC] **1.** Condition in which conductors are separated so that current cannot pass. **2.** Break or discontinuity in a circuit which can normally pass a current.
open ammunition space [ORD] Ground area prepared or improvised for storage of ammunition in open areas to supplement magazine space.
open-angle glaucoma [MED] Bilateral, increased intraocular tension due to reduced aqueous outflow but with the angle open and the aqueous in free contact with the trabecula.
open arc [ASTRON] A crater arc in which the craters do not touch each other.
open-arc furnace [MET] An electrosmelting furnace in which the arc is generated above the level of the furnace feed.
open ball [MATH] In a metric space, an open set about a point x which consists of all points within a fixed distance from x.
open bay [GEOGR] An indentation between two capes or headlands which is so broad and open that waves coming directly into it are nearly as high near its center as they are in adjacent parts of the open sea.
open-belt drive [DES ENG] A belt drive having both shafts parallel and rotating in the same direction.
open berth [CIV ENG] An anchorage berth in an open roadstead.
open caisson [CIV ENG] A caisson in the form of a cylinder or shaft that is open at both ends; it is set in place, pumped dry, and filled with concrete.
open-cast mining *See* open-pit mining.
open-cell foam [MATER] Foamed material, natural or synthetic, rigid or flexible, organic or metallic, in which there is interconnection between the cells.
open-center plan position indicator [ENG] A plan position indicator on which no signal is displayed within a set distance from the center.
open chain [ASTRON] A crater chain in which the craters do not touch each other.

OOLITIC LIMESTONE

Oolitic limestone, from Volksen, Deister Mountains, Germany, showing the fragments of shell encased by fragments of microcrystalline calcite (dark stippling). It is often an important ore reservoir, and is quarried for building purposes.

OPALINATA



An opalinid *(Protoopalina axonucleata)* showing primary and secondary lines of blepharoplasts.

OPEN-BELT DRIVE

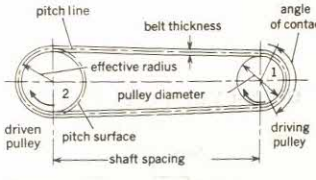


Diagram of open-belt drive; 1 and 2 indicate two pulleys whose shafts are parallel.

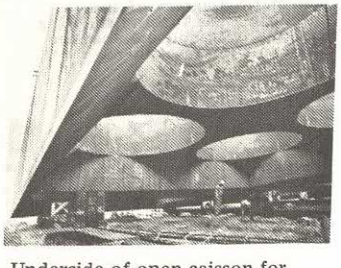
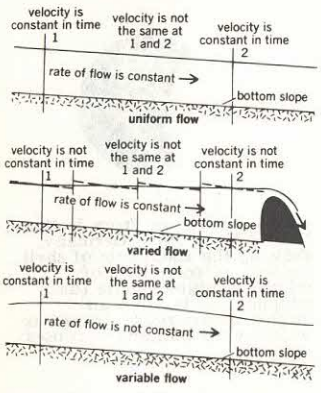
OPEN CAISSON



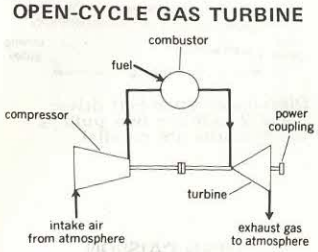
Underside of open caisson for Greater New Orleans bridge over Mississippi River. Note prefabricated steel cutting edge. *(Dravo Corp.)*

OPEN CHANNEL



Three types of flow in open channels (rivers, streams, canals, flumes).

OPEN-CYCLE GAS TURBINE



Schematic diagram of the open-cycle gas turbine showing that the inlet and exhaust are open to the atmosphere.

open channel [SCI TECH] Any natural or artificial, covered or uncovered conduit in which liquid (usually water) flows with its top surface bounded by the atmosphere.

open-circle deoxyribonucleic acid *See* relaxed circular deoxyribonucleic acid.

open circuit [ELEC] An electric circuit that has been broken, so that there is no complete path for current flow.

open-circuited line [ELECTROMAG] A microwave discontinuity which reflects an infinite impedance.

open-circuit grinding [MECH ENG] Grinding system in which material passes through the grinder without classification of product and without recycle of oversize lumps; in contrast to closed-circuit grinding.

open-circuit impedance [ELEC] Of a line or four-terminal network, the driving-point impedance when the far end is open.

open-circuit jack [ELEC] Jack that normally leaves its circuit open; the circuit can be closed only through a circuit connected to the plug that is inserted in the jack.

open-circuit potential [PHYS CHEM] The steady-state or equilibrium potential of an electrode in absence of external current flow to or from the electrode.

open-circuit scuba [ENG] The simplest type of scuba equipment, in which all exhaled gas is discharged directly into the water and the utilization of gas is therefore equal to the mass exhaled.

open-circuit signaling [COMMUN] Type of signaling in which no current flows while the circuit is in the idle condition.

open-circuit voltage [ELEC] The voltage at the terminals of a source when no appreciable current is flowing. Also known as no-load voltage.

open cluster [ASTRON] One of the groupings of stars that are concentrated along the central plane of the Milky Way; most have an asymmetrical appearance and are loosely assembled, and the stars are concentrated in their central region; they may contain from a dozen to many hundreds of stars. Also known as galactic cluster.

open coast [GEOGR] A coast that is not sheltered from the sea.

open community [ECOL] A community which other organisms readily colonize because some niches are unoccupied.

opencut [CIV ENG] An open trench, such as across a hill. [MIN ENG] **1.** To drive headings out, or to commence working in the coal after sinking the shafts. **2.** To commence longwall working. **3.** To increase the size of a shaft when it intersects a drift.

opencut mining *See* open-pit mining.

open cycle [THERMO] A thermodynamic cycle in which new mass enters the boundaries of the system and spent exhaust leaves it; the automotive engine and the gas turbine illustrate this process.

open-cycle engine [MECH ENG] An engine in which the working fluid is discharged after one pass through boiler and engine.

open-cycle gas turbine [MECH ENG] A gas turbine prime mover in which air is compressed in the compressor element, fuel is injected and burned in the combustor, and the hot products are expanded in the turbine element and exhausted to the atmosphere.

open-cycle reactor system [NUCLEO] A reactor system in which the coolant passes through the reactor core only once and is then discarded.

open-delta connection [ELEC] An unsymmetrical transformer connection which is employed when one transformer of a bank of three single-phase delta-connected units must be cut out, because of failure. Also known as V connection.

open die [MET] A forming or forging die in which there is little or no restriction to the lateral flow of metal within the die set.

open-die forging [MET] Forging performed with open dies.

open-ended [COMPUT SCI] Of techniques, designed to facilitate or permit expansion, extension, or increase in capability; the opposite of closed-in and artificially constrained.

open-ended system [COMPUT SCI] In character recognition, a system in which the input data to be read are derived from sources other than the computer with which the character reader is associated.

open-end method [MIN ENG] A technique of mining pillars in which no stump is left.

open-end wrench [DES ENG] A wrench consisting of fixed jaws at one or both ends of a handle.

open fault [GEOL] A fault, or section of a fault, whose two walls have become separated along the fault surface.

open file [COMPUT SCI] A file that can be accessed for reading, writing, or both.

open fire [MIN ENG] A fire at a roadway or at the coal face in a mine.

open-flow capacity [PETRO ENG] Fluid flow rate from a gas well flowing open to the atmosphere.

open-flow potential [PETRO ENG] Gas flow rate in thousands of cubic feet of gas per 24 hours that would be produced by a well if the only pressure against the face of the producing formation wellbore were atmospheric pressure.

open-flow test [PETRO ENG] The flowing of wells wide open to the atmosphere with simultaneous measurement of gas-flow rate and pressure drop; used to analyze the potential of a reservoir to deliver gas to the wellbore.

open-flow well [PETRO ENG] Gas well flowing open to the atmosphere.

open fold [GEOL] A fold having only moderately compressed limbs.

open form [CRYSTAL] A crystal form in which the crystal faces do not entirely enclose a space.

open-fuse cutout [ELEC] Enclosed fuse cutout in which the fuse support and fuse holder are exposed.

open harbor [GEOGR] An unsheltered harbor exposed to the sea.

open-hearth furnace [MET] A reverberatory melting furnace with a shallow hearth and a low roof, in which the charge is heated both by direct flame and by radiation from the roof and walls of the furnace.

open-hearth process [MET] A steel-making process carried out in an open-hearth furnace in which selected pig iron and malleable scrap iron are melted, with the addition of pure iron ore.

open hole [ENG] **1.** A well or borehole, or a portion thereof, that has not been lined with steel tubing at the depth referred to. **2.** An unobstructed borehole. **3.** A borehole being drilled without cores. [PETRO ENG] In an oil-drilling operation, the unprotected hole which lies below the shoes of the last landed string of casing.

open ice [OCEANOGR] On navigable waters, ice that has broken apart sufficiently to permit passage of vessels.

opening [GEOGR] A break in a coastline or a passage between shoals, and so forth. [MIN ENG] **1.** A widening of a crevice, in consequence of a softening or decomposition of the adjacent rock, so as to leave a vacant space. **2.** A short heading driven between two or more parallel headings or levels for ventilation. **3.** An area in a coal mine between pillars, or between pillars and ribs. [OCEANOGR] Any break in sea ice which reveals the water.

opening die [MECH ENG] A die head for cutting screws that opens automatically to release the cut thread.

opening material [MATER] A material added to plastic clay in ceramic making to speed drying and reduce shrinking.

opening pressure [MECH ENG] The static inlet pressure at which discharge is initiated.

open interval [MATH] An open interval of real numbers, denoted by (a,b), consists of all numbers strictly greater than a and strictly less than b.

open lake [HYD] **1.** A lake that has a stream flowing out of it. **2.** A lake whose water is free of ice or emergent vegetation.

open lead [NAV] A navigable passage through ice or between rocks or shoals not covered with ice.

open-link fuse [ELEC] A simple type of fuse that consists of a strip of fuse material bolted to open terminal blocks.

open-loop control system [CONT SYS] A control system in which the system outputs are controlled by system inputs only, and no account is taken of actual system output.

open map [MATH] A function between two topological spaces which sends each open set of one to an open set of the other.

open mapping theorem [MATH] A continuous linear function between Banach spaces which has closed range must be an open map.

open-packed structure [CRYSTAL] A crystal structure corresponding to the stacking of spheres in an orthogonal arrangement so that each sphere is in contact with six others.

open pack ice [OCEANOGR] Floes of sea ice that are seldom in contact with each other, generally covering between four-tenths and six-tenths of the sea surface.

open-phase protection [ELEC] Effect of a device operating on the loss of current in one phase of a polyphase circuit to cause and maintain the interruption of power in the circuit.

open-phase relay [ELEC] Relay which functions by reason of the opening of one or more phases of a polyphase circuit, when sufficient current is flowing in the remaining phase or phases.

open-pit mining [MIN ENG] Extracting metal ores and minerals that lie near the surface by removing the overlying material and breaking and loading the ore. Also known as open-cast mining; opencut mining.

open-pit quarry [MIN ENG] A quarry in which the opening is the full size of the excavation.

open plan [BUILD] Arrangement of the interior of a building without distinct barriers such as partitions.

open plug [ELEC] Plug designed to hold jack springs in their open position.

open roadstead [NAV] An area near the shore where vessels anchor with relatively little protection from the sea.

open rock [GEOL] Any stratum sufficiently open or porous to contain a significant amount of water or to convey water along its bed.

open routine [COMPUT SCI] **1.** A routine which can be inserted directly into a larger routine without a linkage or calling sequence. **2.** A computer program that changes the state of a file from closed to open.

open sand [GEOL] A formation of sandstone that has porosity and permeability sufficient to provide good storage for oil.

open sea [GEOGR] **1.** That part of the ocean not enclosed by headlands, not within narrow straits, and so on. **2.** That part of the ocean outside the territorial jurisdiction of any country.

open set [MATH] A set included in a topology; equivalently, a set which is a neighborhood of each of its points; a topology on a space is determined by a collection of subsets which are called open.

open shop [COMPUT SCI] A data-processing-center organization in which individuals from outside the data-processing community are permitted to implement their own solutions to problems. [IND ENG] A shop in which employment is not restricted to members of a labor union.

openside planer [DES ENG] A planer constructed with one upright or housing to support the crossrail and tools.

open-side tool block [DES ENG] A toolholder on a cutting machine consisting of a T-slot clamp, a C-shaped block, and two or more tool clamping screws. Also known as heavy-duty tool block.

open sight [ORD] A rear gunsight having a notch.

open-space structure [GEOL] A structure in a carbonate sedimentary rock formed by a partial or complete occupation by internal sediments or cement.

open stope [MIN ENG] Underground working place that is unsupported, or supported by timbers or pillars of rock.

open-stope method [MIN ENG] Stoping in which no regular artificial method of support is employed, although occasional props or cribs may be used to hold local patches of insecure ground.

open storage [ORD] The storage of certain ordnance materiel outdoors.

open subroutine [COMPUT SCI] A set of computer instructions that collectively perform some particular function and are inserted directly into the program each and every time that particular function is required.

open system [HYD] A condition of freezing of the ground in which additional groundwater is available either through free percolation or through capillary movement. [THERMO] A system across whose boundaries both matter and energy may pass.

open-timbered roof [BUILD] A roof in which the supporting timbers are left uncovered, forming part of the ceiling.

open timbering [MIN ENG] A method of supporting the ground in a mine shaft or tunnel; supports are several feet apart, with the ground between them secured by struts.

open traverse [ENG] A surveying traverse in which the last leg, because of error, does not terminate at the origin of the first leg.

open tuberculosis [MED] Tuberculosis in which tubercle bacilli are being discharged from the body; tuberculosis capable of transmission to other persons.

open universe [ASTRON] A cosmological model in which the volume of the universe is infinite and its expansion will continue forever.

open water [ECOL] Lake water that is free from emergent vegetation, artificial obstructions, or tangled masses of underwater vegetation at very shallow depths. [HYD] Lake water that does not freeze during the winter. [OCEANOGR] Water less than one-tenth covered with floating ice.

open-web girder *See* lattice girder.

open well [CIV ENG] **1.** A well whose diameter is great enough (1 meter or more) for a person to descend to the water level. **2.** An artificial pond filling a large excavation in the zone of saturation up to the water table.

open-window unit *See* sabin.

open wire [ELEC] A conductor supported above the ground, separate from other conductors.

open-wire carrier system [COMMUN] A system for carrier telephony, using an open-wire line.

open-wire feeder *See* open-wire transmission line.

open-wire loop [ELEC] Branch line on a main open-wire line.

open-wire transmission line [ELEC] A transmission line consisting of two spaced parallel wires supported by insulators, at the proper distance to give a desired value of surge impedance. Also known as open-wire feeder.

open workings [MIN ENG] Surface workings, for example, a quarry or open-cast mine.

opera glasses [OPTICS] Small binocular telescopes, usually of the Galilean type, adapted for use where magnification and field of view are secondary to compactness and cost.

operand [COMPUT SCI] Any one of the quantities entering into or arising from an operation.

operand-precision register [COMPUT SCI] A special register found in some minicomputers which can be programmed from 8- to 32-bit precision.

operant conditioning [PSYCH] A form of learning in which the subject, in a given situation, tends to respond in a way that produces rewarding effects, reinforcing previous pleasurable experiences. Also known as instrumental conditioning; reinforcement conditioning.

operate time [COMPUT SCI] The phase of computer operation when an instruction is being carried out. [ELEC] Total elapsed time from application of energizing current to a relay coil to the time the contacts have opened or closed.

operating angle [ELECTR] Electrical angle of the input signal (for example, portion of a cycle) during which plate current flows in a vacuum tube amplifier.

operating characteristic curve [STAT] In hypothesis testing, a plot of the probability of accepting the hypothesis against the true state of nature. Abbreviated OC curve.

operating delay [COMPUT SCI] Computer time lost because of mistakes or inefficiency of operating personnel or users of the system, excluding time lost because of defects in programs or data.

operating handle [ORD] Handle or bar with which the operating lever of a gun is operated to open and close the breech.

operating instructions [COMPUT SCI] A detailed description of the actions that must be carried out by a computer operator in running a program or group of interrelated programs, usually included in the documentation of a program supplied by a programmer or systems analyst, along with the source program and flow charts.

operating lever [ORD] Lever device on a gun with which the breech is opened and closed.

operating line [CHEM ENG] In the graphical solution of equilibrium processes (such as distillation absorption extraction), the actual liquid-vapor relationship of a key component, in contrast to a true equilibrium relationship.

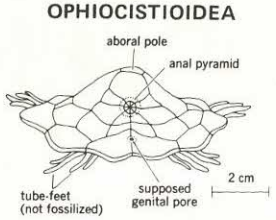
operating point [ELECTR] Point on a family of characteristic curves of a vacuum tube or transistor where the coordinates of the point represent the instantaneous values of the electrode voltages and currents for the operating conditions under study or consideration.

operating position [COMMUN] Terminal of a communications channel which is attended by an operator; usually the term refers to a single operator, such as a radio operator's position or a telephone operator's position; however, certain terminals may require more than one operating position.

operating power [ELECTROMAG] Power that is actually supplied to a radio transmitter antenna.

operating pressure [ENG] The system pressure at which a process is operating.
operating range [ELECTR] The frequency range over which a reversible transducer is operable. [NAV] The maximum distance at which reliable service is provided by an aid to navigation.
operating ratio [COMPUT SCI] The time during which computer hardware operates and gives reliable results divided by the total time scheduled for computer operation.
operating slide [ORD] Mechanism in a Browning machine gun that permits opening the breech for loading, unloading, and clearing out stoppages, and closing the breech for firing.
operating stress [MECH] The stress to which a structural unit is subjected in service.
operating system *See* executive system.
operating system supervisor [COMPUT SCI] The control program of a set of programs which guide a computer in the performance of its tasks and which assist the program with certain supporting functions.
operating water level [MECH ENG] The water level in a boiler drum which is normally maintained above the lowest safe level.
operation [COMPUT SCI] **1.** A process or procedure that obtains a unique result from any permissible combination of operands. **2.** The sequence of actions resulting from the execution of one digital computer instruction. [IND ENG] A job, usually performed in one location, and consisting of one or more work elements.
operational [ENG] Of equipment such as aircraft or vehicles, being in such a state of repair as to be immediately usable.
operational advantage [NAV] In air operations, an improvement which benefits the users of an instrument procedure, such as the ability to use lower minimums.
operational amplifier [ELECTR] An amplifier having high direct-current stability and high immunity to oscillation, generally achieved by using a large amount of negative feedback; used to perform analog-computer functions such as summing and integrating.
operational analysis *See* operational calculus.
operational calculus [MATH] A technique by which problems in analysis, in particular differential equations, are transformed into algebraic problems, usually the problem of solving a polynomial equation. Also known as operational analysis.
operational game *See* management game.
operational label [COMPUT SCI] A combination of letters and digits at the beginning of the tape which uniquely identify the tape required by the system.
operational maintenance [ENG] The cleaning, servicing, preservation, lubrication, inspection, and adjustment of equipment; it includes that minor replacement of parts not requiring high technical skill, internal alignment, or special locative training.
operational standby program [COMPUT SCI] The program operating in the standby computer when in the duplex mode of operation.
operational unit [GEOL] An arbitrary stratigraphic unit that is distinguished by objective criteria for some practical purpose. Also known as parastratigraphic unit.
operational weather limits [METEOROL] The limiting values of ceiling, visibility, and wind, or runway visual range, established as safety minima for aircraft landings and takeoffs.
operation analysis [IND ENG] An analysis of all procedures concerned with the design or improvement of production, the purpose of the operation, inspection standards, materials used and the manner of handling them, the setup, tool equipment, and working conditions and methods.
operation analysis chart [IND ENG] A form that lists all the essential factors influencing the effectiveness of an operation.
operation breakdown *See* job breakdown.
operation code [COMPUT SCI] A field or portion of a digital computer instruction that indicates which action is to be performed by the computer. Also known as command code.
operation cycle [COMPUT SCI] The portion of a memory cycle required to perform an operation; division and multiplication usually require more than one memory cycle to be completed.
operation decoder [COMPUT SCI] A device that examines the operation contained in an instruction of a computer program and sends signals to the circuits required to carry out the operation.
operation number [COMPUT SCI] **1.** Number designating the position of an operation, or its equivalent subroutine, in the sequence of operations composing a routine. **2.** Number identifying each step in a program stated in symbolic code.
operation part [COMPUT SCI] That portion of a digital computer instruction which is reserved for the operation code.
operation process chart [IND ENG] A graphic representation that gives an overall view of an entire process, including the points at which materials are introduced, the sequence of inspections, and all operations not involved in material handling.
operation register [COMPUT SCI] A register used to store and decode the operation code for the next instruction to be carried out by a computer.
operations research [MATH] The mathematical study of systems with input and output from the viewpoint of optimization subject to given constraints. [SCI TECH] The application of objective and quantitative criteria to decision making previously undertaken by empirical methods.
operation time [COMPUT SCI] The time elapsed during the interpretation and execution of an arithmetic or logic operation by a computer.
operative ankylosis *See* arthrodesis.
operator [COMPUT SCI] Anything that designates an action to be performed, especially the operation code of a computer instruction. [ENG] A person whose duties include the operation, adjustment, and maintenance of a piece of equipment. [GEN] A sequence at one end of an operon on which a repressor acts, thus regulating the transcription of the operon. [MATH] A function between vector spaces.
operator hierarchy [COMPUT SCI] A sequence of mathematical operators which designates the order in which these operators are to be applied to any mathematical expression in a given programming language.
operator interrupt [COMPUT SCI] A step whereby control is passed to the monitor, and a message, usually requiring a typed answer, is printed on the console typewriter.
operator process chart [IND ENG] A chart of the time relationship of the movements made by the body members of a workman performing an operation.
operator productivity [IND ENG] The ratio of standard hours to actual hours for a given task.
operator's console [COMPUT SCI] Equipment which provides for manual intervention and monitoring computer operation.
operator subgoaling [COMPUT SCI] A computer problem-solving method in which the inability of the computer to take the desired next step at any point in the problem-solving process leads to a subgoal of making that step feasible.
operator theory [MATH] The general qualitative study of operators in terms of such concepts as eigenvalues, range, domain, and continuity.
operator training [IND ENG] The process used to prepare the employee to make his expected contribution to his employer, usually involving the teaching of specialized skills.
operator utilization [IND ENG] The ratio of working time to total clock time; a ratio of 1.00 (or 100%) indicates full utilization of the operator's work time.
operculum [ANAT] **1.** The soft tissue partially covering the crown of an erupting tooth. **2.** That part of the cerebrum which borders the lateral fissure. [BIOL] **1.** A lid, flap, or valve. **2.** A lidlike body process.
operon [GEN] A functional unit composed of a number of adjacent cistrons on the chromosome; its transcription is regulated by a receptor sequence, the operator, and a repressor.
Opheliidae [INV ZOO] A family of limivorous worms belonging to the annelid group Sedentaria.
Ophiacodonta [VERT ZOO] A suborder of extinct reptiles in the order Pelycosauria, including primitive, partially aquatic carnivores.
ophicalcite [PETR] A recrystallized limestone composed of calcite and serpentine and formed by dedolomitization of a siliceous dolomite.
Ophidiidae [VERT ZOO] A family of small actinopterygian fishes in the order Gadiformes, comprising the cusk eels and brotulas.
ophidiophobia [PSYCH] An abnormal fear of snakes.
Ophiocanopidae [INV ZOO] A family of asterozoan echinoderms in the subclass Ophiuroidea.
Ophiocistioidea [PALEON] A small class of extinct Echi-

OPHIOCISTIOIDEA



Volchovia volborthi (Ordovician, Soviet Union).

nozoa in which the domed aboral surface of the test was roofed by polygonal plates and carried an anal pyramid.

Ophioglossales [BOT] An order of ferns in the subclass Ophioglossidae.

Ophioglossidae [BOT] The adder's-tongue ferns, a small subclass of the class Polypodiopsida; the plants are homosporous and eusporangiate and are distinguished by the arrangement of the sporogenous tissue in the characteristic fertile spike of the sporophyte.

ophiolite [PETR] A group of mafic and ultramafic igneous rocks, including spilite, basalt, gabbro, peridotite, and their metamorphic alternation products such as serpentine.

ophiolitic eclogite [PETR] Any of the eclogites which are products of early orogenic volcanism and which by later metamorphism transformed into rocks of the high-pressure facies series.

Ophiomyxidae [INV ZOO] The single family of the echinoderm suborder Ophiomyxina distinguished by a soft, unprotected integument.

Ophiomyxina [INV ZOO] A monofamilial suborder of ophiuroid echinoderms in the order Phrynophiurida.

ophiopluteus [INV ZOO] The pluteus larva of brittle stars.

ophite [PETR] A diabase in which the ophitic structure is retained even though the pyroxene is altered to uralite.

ophitic [PETR] Of the holocrystalline, hypidiomorphic-granular texture of an igneous rock, exhibiting lath-shaped plagioclase crystals partly or wholly included within pyroxene crystals.

Ophiurida [INV ZOO] An order of echinoderms in the subclass Ophiuroidea in which the vertebrae articulate by means of ball-and-socket joints, and the arms, which do not branch, move mainly from side to side.

Ophiuroidea [INV ZOO] The brittle stars, a subclass of the Asterozoa in which the arms are usually clearly demarcated from the central disk and perform whiplike locomotor movements.

ophryon [ANTHRO] The point where the sagittal plane intersects an arc drawn horizontally from the frontotemporalis across the frontal bone.

ophthalmectomy [MED] Excision, or enucleation, of the eye.

ophthalmia [MED] Inflammation of the eye, especially involving the conjunctiva.

ophthalmia neonatorum [MED] Inflammation of the eyes in the newborn contracted during passage through the birth canal; may be gonorrheal or purulent.

ophthalmia nodosa [MED] Inflammation of the eye due to lodging of caterpillar hairs in the conjunctiva, cornea, or iris.

ophthalmic [ANAT] Of or pertaining to the eye.

ophthalmic nerve [ANAT] A sensory branch of the trigeminal nerve which supplies the lacrimal glands, upper eyelids, skin of the forehead, and anterior portion of the scalp, meninges, nasal mucosa, and frontal, ethmoid, and sphenoid air sinuses.

ophthalmodynamometer [MED] An instrument which measures the pressure necessary to collapse the retinal arteries.

ophthalmological [PHARM] Any drugs used in the treatment of eye disease.

ophthalmologist [MED] A physician who specializes in ophthalmology. Also known as oculist.

ophthalmology [MED] The study of the anatomy, physiology, and diseases of the eye.

ophthalmomalacia [MED] Abnormal softness or subnormal tension of the eye.

ophthalmometer [OPTICS] **1.** An instrument for measuring refractive errors, especially astigmatism. **2.** An instrument for measuring the capacity of the chamber of the eye. **3.** An instrument for measuring the eye as a whole.

ophthalmorrhexis [MED] Rupture of the eyeball.

ophthalmoscope [OPTICS] An instrument, consisting essentially of a concave mirror with a hole in it and fitted with lenses of different powers, for examining the interior of the eye through the pupil.

opianyl *See* meconin.

opiate [PHARM] **1.** A sleep-inducing drug. **2.** Any narcotic. **3.** An opium preparation. **4.** Any tranquilizing agent.

Opilioacaridae [INV ZOO] The single family of moderately large mites of the suborder Notostigmata which comprises the Opiliocariformes.

Opilioacariformes [INV ZOO] A small monofamilial order of the Acari comprising large mites characterized by long legs and by the possession of a pretarsus on the pedipalp, with prominent claws.

opine [BIOCHEM] A type of amino acid usually not found in nature, such as that secreted by a crown gall.

opisometer [ENG] An instrument for measuring the length of curved lines, such as those on a map; a wheel on the instrument is traced over the line.

opisthaptor [INV ZOO] A posterior adhesive organ in monogenetic trematodes.

Opisthobranchia [INV ZOO] A subclass of the class Gastropoda containing the sea hares, sea butterflies, and sea slugs; generally characterized by having gills, a small external or internal shell, and two pairs of tentacles.

Opisthocoela [VERT ZOO] A suborder of the order Anura; members have opisthocoelous trunk vertebrae, and the adults typically have free ribs.

opisthocoelous [ANAT] Of, related to, or being a vertebra with the centrum convex anteriorly and concave posteriorly.

Opisthocomidae [VERT ZOO] A family of birds in the order Galliformes, including the hoatzins.

opisthocranion [ANTHRO] The point, wherever it may lie in the sagittal plane on the occipital bone, which marks the posterior extremity of the longest diameter of the skull, measured from the glabella.

opisthognathous [INV ZOO] Having the mouthparts ventral and posterior to the cranium. [VERT ZOO] Having retreating jaws.

opisthonephros [VERT ZOO] The fundamental adult kidney in amphibians and fishes.

Opisthopora [INV ZOO] An order of the class Oligochaeta distinguished by meganephridiostomal, male pores opening posteriorly to the last testicular segment.

opisthotic [ANAT] Of, relating to, or being the posterior and inferior portions of the bony elements in the inner ear capsule.

opisthotonus [MED] A condition, caused by a tetanic spasm of the back muscles, in which the trunk is arched forward while the head and lower limbs are bent backward.

opium [PHARM] A narcotic obtained from the unripe capsules of the opium poppy (*Papaver somniferum*); crude extract contains alkaloids such as morphine (5–15%), narcotine (2–8%), and codeine (0.1–2.5%).

opoka [PETR] A porous, flinty, and calcareous sedimentary rock, with conchoidal or irregular fracture, consisting of fine-grained opaline silica (up to 90%), and hardened by the presence of silica of organic origin.

Opomyzidae [INV ZOO] A family of cyclorrhaphous myodarian dipteran insects in the subsection Acalypteratae.

opossum [VERT ZOO] Any member of the family Didelphidae in the order Marsupialia; these mammals are arboreal and mainly omnivorous, and have many incisors, with all teeth pointed and sharp.

Oppenauer oxidation [ORG CHEM] The oxidation of a primary or secondary hydroxyl compound to form the corresponding carbonyl compound; aluminum alkoxide and an excess amount of a carbonyl hydrogen acceptor, such as benzophenone or acetone, are required.

Oppenheimer-Phillips reaction [NUC PHYS] A type of stripping reaction which can occur when a deuteron passes near a nucleus, in which the proton in the deuteron experiences Coulomb repulsion from the nucleus while the neutron is attracted to the nucleus by nuclear forces, with the result that the neutron-proton bond in the deuteron is broken, the neutron is absorbed into the nucleus, and the proton is repelled.

Oppenheim's disease *See* amyotonia congenita.

opponent-colors theory [OPTICS] A theory of color vision according to which various processes in the visual system are capable of responding in two opposite ways; the Hering theory is an example.

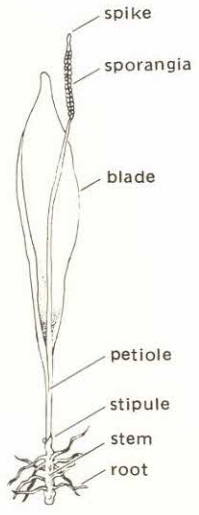
opportunistic microorganism [MICROBIO] A normally harmless endogenous microorganism that produces disease due to fortuitous events that affect the host.

opposed engine [MECH ENG] A reciprocating engine having the pistons on opposite sides of the crankshaft, with the piston strokes on each side working in a direction opposite to the direction of the strokes on the other side.

opposing wind [OCEANOGR] In wave forecasting, a wind blowing in opposition to the direction that the waves are traveling.

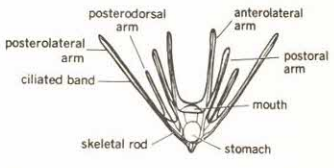
opposite [BOT] **1.** Located side by side. **2.** Of leaves, being

OPHIOGLOSSIDAE



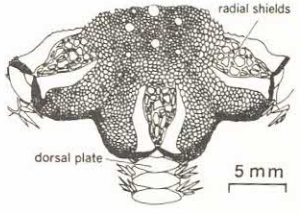
Adder's-tongue fern (*Ophioglossum*) with a single leaf.

OPHIOPLUTEUS



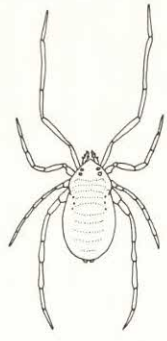
Bilateral symmetrical larva of the brittle stars.

OPHIUROIDEA



Pectinura cylindrica, ophiuroid showing central disk and a part of one of the arms with the dorsal plate showing.

OPILIOACARIDAE



An opilioacarid mite, dorsal view. (*Acarology Laboratory, Ohio State University*)

in pairs on an axis with each member separated from the other of the pair by half the circumference of the axis.

opposite tide [OCEANOGR] A high tide at a corresponding place on the opposite side of the earth which accompanies a direct tide.

opposition [ASTRON] The situation of two celestial bodies having either celestial longitudes or sidereal hour angles differing by 180°; the term is usually used only in relation to the position of a superior planet or the moon with reference to the sun. [PHYS] The condition in which the phase difference between two periodic quantities having the same frequency is 180°, corresponding to one half-cycle.

opsonic action [IMMUNOL] The effect produced upon susceptible microorganisms and other cells by opsonins, which renders them vulnerable to phagocytes.

opsonic index [IMMUNOL] A numerical measure of the opsonic activity of sera, expressed as the ratio of the average number of bacteria engulfed per phagocytic cell in immune serum compared with the corresponding value for normal serum.

opsonin [IMMUNOL] A substance in blood serum that renders bacteria more susceptible to phagocytosis by leukocytes.

opsonize [IMMUNOL] To render microorganisms susceptible to phagocytosis.

-opsy [MED] A combining form denoting examination, or denoting a condition of vision.

optic [BIOL] Pertaining to the eye. [OPTICS] Pertaining to the lenses, prisms, and mirrors of a camera, microscope, or other conventional optical instrument.

optical [OPTICS] Pertaining to or utilizing visible or near-visible light; the extreme limits of the optical spectrum are about 100 nanometers (0.1 micrometer or 3×10^{15} hertz) in the far ultraviolet and 30,000 nanometers (30 micrometers or 10^{13} hertz) in the far infrared.

optical aberration [OPTICS] Deviation from perfect image formation by an optical system; examples are spherical aberration, coma, astigmatism, curvature of field, distortion, and chromatic aberration. Also known as aberration.

optical achromatism *See* visual achromatism.

optical activity [OPTICS] The behavior of substances which rotate the plane of polarization of plane-polarized light, as it passes through them. Also known as rotary polarization.

optical air mass [GEOPHYS] A measure of the length of the path through the atmosphere to sea level traversed by light rays from a celestial body, expressed as a multiple of the path length for a light source at the zenith.

optical amplifier [ENG] An optoelectronic amplifier in which the electric input signal is converted to light, amplified as light, then converted back to an electric signal for the output.

optical analysis [OPTICS] Study of properties of a substance or medium, such as its chemical composition or the size of particles suspended in it, through observation of effects on transmitted light, such as scattering, absorption, refraction, and polarization.

optical anisotropy [OPTICS] The behavior of a medium, or of a single molecule, whose effect on electromagnetic radiation depends on the direction of propagation of the radiation.

optical anomaly [PHYS CHEM] The phenomenon in which an organic compound has a molar refraction which does not agree with the value calculated from the equivalents of atoms and other structural units composing it.

optical antipode *See* enantiomorph.

optical aspherical surface [OPTICS] An optical surface that does not form part of a sphere, such as a paraboloidal or ellipsoidal surface.

optical axis [ANAT] An imaginary straight line passing through the midpoint of the cornea (anterior pole) and the midpoint of the retina (posterior pole). [OPTICS] **1.** A line passing through a radially symmetrical optical system such that rotation of the system about this line does not alter it in any detectable way. **2.** *See* optic axis.

optical bar-code reader [COMPUT SCI] A device which uses any of various photoelectric methods to read information which has been coded by placing marks in prescribed boxes on documents with ink, pencil, or other means.

optical bench [ENG] A rigid horizontal bar or track for holding optical devices in experiments; it allows device positions to be changed and adjusted easily.

optical bistability [OPTICS] The property of a substance or device which has two stable states of transmission, high or low, for a single input light intensity.

optical branch [SOLID STATE] The vibrations of an optical mode plotted on a graph of frequency versus wave number; it is separated from, and has higher frequencies than, the acoustic branch.

optical calcite [MINERAL] The type of calcite used to make Nicol prisms.

optical center [OPTICS] A point on the axis of a lens so that, for any ray passing through this point, the incident part and the emergent part are parallel.

optical character recognition [COMPUT SCI] That branch of character recognition concerned with the automatic identification of handwritten or printed characters by any of various photoelectric methods. Abbreviated OCR. Also known as electrooptical character recognition.

optical coating [OPTICS] Either a mirror coating, or a film of the proper thickness and refractive index applied to the air-glass surface of a lens to reduce reflection.

optical communication [COMMUN] The use of electromagnetic waves in the region of the spectrum near visible light for the transmission of signals representing speech, pictures, data pulses, or other information, usually in the form of a laser beam modulated by the information signal.

optical comparator [ENG] Any comparator in which movement of a measuring plunger tilts a small mirror which reflects light in an optical system. Also known as visual comparator.

optical computer [COMPUT SCI] A computer that uses various combinations of holography, lasers, and mass-storage memories for such applications as ultra-high-speed signal processing, image deblurring, and character recognition.

optical contact [OPTICS] Contact between two surfaces in which the surfaces are separated by a distance much less than a wavelength of light, so that interference fringes are not formed.

optical coupler *See* optoisolator.

optical coupling [ELECTR] Coupling between two circuits by means of a light beam or light pipe having transducers at opposite ends, to isolate the circuits electrically.

optical crystal [CRYSTAL] Any natural or synthetic crystal, such as sodium chloride, calcium fluoride, silver chloride, potassium iodide, or stilbene, that is used in infrared and ultraviolet optics and for its piezoelectric effects.

optical cytopherometry *See* microelectrophoresis.

optical density [OPTICS] The degree of opacity of a translucent medium expressed by $\log I_0/I$, where I_0 is the intensity of the incident ray, and I is the intensity of the transmitted ray. Abbreviated OD.

optical depth *See* optical thickness.

optical diffraction velocimeter *See* diffraction velocimeter.

optical direction and ranging *See* OPDAR.

optical disk [COMPUT SCI] A type of video disk storage device consisting of a pressed disk with a spiral groove at the bottom of which are submicrometer-sized depressions that are sensed by a laser beam.

optical disk storage [COMPUT SCI] A computer storage technology in which information is stored in submicrometer-sized holes on a rotating disk, and is recorded and read by laser beams focused on the disk. Also known as video disk storage.

optical dispersion [OPTICS] Separation of different colors of light such as occurs when it passes from one medium to another or is reflected from a diffraction grating.

optical distance *See* optical path.

optical Doppler effect [ELECTROMAG] A change in the observed frequency of light or other electromagnetic radiation caused by relative motion of the source and observer.

optical double star [ASTRON] Two stars not formally a physical system but that appear to be a typical double star; a false binary star whose components happen to lie nearby in the same line of sight.

optical electronic reproducer *See* optical sound head.

optical element [OPTICS] A part of an optical instrument which acts upon the light passing through the instrument, such as a lens, prism, or mirror.

optical encoder [ELECTR] An encoder that converts positional information into corresponding digital data by interrupting light beams directed on photoelectric devices.

optical exaltation [PHYS CHEM] Optical anomaly in which the observed molar refraction exceeds the calculated one; most cases of optical anomaly are in this category.

optical fiber [OPTICS] A long, thin thread of fused silica, or

other transparent substance, used to transmit light. Also known as light guide.

optical-fiber cable *See* optical waveguide.

optical figuring [OPTICS] The final polishing or grinding process used to give glass components of optical instruments their desired shape.

optical filter *See* filter.

optical flat [OPTICS] **1.** A disk of high-grade quartz glass approximately 2 centimeters thick, with a deviation in flatness usually not exceeding 0.05 micrometer all over, and a surface quality of 5 microfinish or less; used in determinations of surface contour and in comparison of lineal measurement. **2.** A plane surface, with deviations from a plane surface generally not exceeding 1/10 of a wavelength of light, used to redirect light in a telescope or other optical instrument.

optical fluid-flow measurement [ENG] Any method of measuring the varying densities of a fluid in motion, such as schlieren, interferometer, or shadowgraph, which depends on the fact that light passing through a flow field of varying density is retarded differently through the field, resulting in refraction of the rays, and in a relative phase shift among different rays.

optical frequency [PHYS] A frequency comparable to that of electromagnetic waves in the optical region, above about 3×10^{11} hertz.

optical gage [ENG] A gage that measures an image of an object, and does not touch the object itself.

optical galaxy [ASTRON] One of the galaxies that appear as nearly starlike, generally having compact nuclei.

optical glass [MATER] A type of glass which is free from imperfections, such as unmelted particles, bubbles, and chemical inhomogeneities, which would affect its transmission of light.

optical harmonic [SOLID STATE] Light, generated by passing a laser beam with a power density on the order of 10^{10} watts/cm^2 or more through certain transparent materials, which has a frequency which is an integral multiple of that of the incident laser light.

optical haze *See* terrestrial scintillation.

optical horizon [GEOD] Locus of points at which a straight line from the given point becomes tangential to the earth's surface.

optical indicator [ENG] An instrument which makes a plot of pressure in the cylinder of an engine as a function of piston (or volume) displacement, making use of magnification by optical systems and photographic recording; for example, the small motion of a pressure diaphragm may be transmitted to a mirror to deflect a beam of light.

optical indicatrix *See* index ellipsoid.

optical instrument [OPTICS] An optical system which acts on light in some desired way, such as to form a real or virtual image, to form an optical spectrum, or to produce light with a specified polarization or wavelength.

optical interference [OPTICS] Interference of light waves.

optical isolator *See* optoisolator.

optical isomer *See* enantiomorph.

optical isomerism [PHYS CHEM] Existence of two forms of a molecule such that one is a mirror image of the other; the two molecules differ in that rotation of light is equal but in opposite directions.

optical landing system [NAV] A shipboard gyro-stabilized device or a short-based device which indicates to the pilot his displacement from a preselected glide path.

optical lantern [ENG] A device for projecting positive transparent pictures from glass or film onto a reflecting screen; it consists of a concentrated source of light, a condenser system, a holder (or changer) for the slide, a projection lens, and (usually) a blower for cooling the slide. Also known as slide projector.

optical length *See* optical path.

optical lens *See* lens.

optically coupled isolator *See* optoisolator.

optically effective atmosphere [GEOPHYS] That portion of the atmosphere lying below the altitude (50–60 kilometers) from which scattered light at twilight still reaches the observer with sufficient intensity to be discerned. Also known as effective atmosphere.

optically pumped magnetometer [ENG] A type of magnetometer that measures total magnetic field intensity by observation of the precession frequency of magnetic atoms, usually gaseous rubidium, cesium, or helium, which are magnetized by irradiation with circularly polarized light of a suitable wavelength.

optical mark reading [COMPUT SCI] Optically sensing information encoded as a series of marks, such as lines or filled-in boxes on a test answer sheet, or some special pattern, such as the Universal Product Code. Abbreviated OMR.

optical maser *See* laser.

optical mask [ELECTR] A thin sheet of metal or other substance containing an open pattern, used to suitably expose to light a photoresistive substance overlaid on a semiconductor or other surface to form an integrated circuit.

optical material [MATER] A material which is transparent to light or to infrared, ultraviolet, or x-ray radiation, such as glass and certain single crystals, polycrystalline materials (chiefly for the infrared), and plastics.

optical measurement [OPTICS] Measurement of the intensity, spectral distribution, polarization, or other characteristics of light or of infrared or ultraviolet radiation, which is emitted by or reflected from an object or passes through some medium.

optical memory [COMPUT SCI] A computer memory that uses optical techniques which generally involve an addressable laser beam, a storage medium which responds to the beam for writing and sometimes for erasing, and a detector which reacts to the altered character of the medium when it uses the beam to read out stored data.

optical meteor [OPTICS] Any phenomenon of the atmosphere explained in terms of optical laws, such as a mirage or a halo.

optical microscope [OPTICS] An instrument used to obtain an enlarged image of a small object, utilizing visible light; in general it consists of a light source, a condenser, an objective lens, and an ocular or eyepiece, which can be replaced by a recording device. Also known as light microscope; photon microscope.

optical mode [SOLID STATE] A type of vibration of a crystal lattice whose frequency varies with wave number only over a limited range, and in which neighboring atoms or molecules in different sublattices move in opposition to each other.

optical model *See* cloudy crystal-ball model.

optical modulator [COMMUN] A device used for impressing information on a light beam, such as a blinker system or a device which electrically changes the properties of a material through which light is being transmitted.

optical moment [OPTICS] For a ray of light passing through an optical system, the triple product of a vector from an arbitrary origin on the optical axis to a point on the ray, a vector tangent to the ray at that point whose length equals the refractive index, and a unit vector along the optical axis; it does not depend on the point on the ray.

optical monochromator [SPECT] A monochromator used to observe the intensity of radiation at wavelengths in the visible, infrared, or ultraviolet regions.

optical null method [SPECT] In infrared spectrometry, the adjustment of a reference beam's energy transmission to match that of a beam that has been passed through a sample being analyzed.

optical oceanography [OCEANOGR] That aspect of physical oceanography which deals with the optical properties of sea water and natural light in sea water.

optical parallax [OPTICS] A fault in an optical measuring instrument in which the image being observed does not lie in the plane of the wires or marks used to make the measurement, so that motion of the observer's eye causes displacement of the image relative to these wires or marks.

optical parametric oscillator [OPTICS] A device, employing a nonlinear dielectric, which when pumped by a laser can generate coherent light whose wavelength can be varied continuously over a wide range.

optical path [OPTICS] For a ray of light traveling along a path between two points, the optical path is the integral, over elements of length along the path, of the refractive index. Also known as optical distance; optical length.

optical-path difference *See* retardation.

optical phase conjugation [OPTICS] The use of nonlinear optical effects to precisely reverse the direction of propagation of each plane wave in an arbitrary beam of light, thereby causing the return beam to exactly retrace the path of the incident beam. Also known as time-reversal reflection; wavefront reversal.

optical phenomena [ELECTROMAG] Phenomena associated

with the generation, transmission, and detection of electromagnetic radiation in the visible, infrared, or ultraviolet regions.

optical phonon [SOLID STATE] A quantum of an optical mode of vibration of a crystal lattice.

optical plastic [MATER] A plastic which is transparent to light, occasionally used in optical systems for reasons of economy, special index-dispersion relation, light weight, and nonbrittleness.

optical printing [GRAPHICS] Any printing technique in which a process camera is used in one step to form the end item; enlargements, reductions, or same-size negatives may be formed.

optical prism *See* prism.

optical processing [COMPUT SCI] The use of light, including visible and infrared, to handle data-processing information.

optical projection system [OPTICS] An optical system which forms a real image of a suitably illuminated object so that it can be viewed, photographed, or otherwise observed. Also known as optical projector; projector.

optical projector *See* optical projection system.

optical properties [ELECTROMAG] The effects of a substance or medium on light or other electromagnetic radiation passing through it, such as absorption, scattering, refraction, and polarization.

optical pumping [OPTICS] The process of causing strong deviations from thermal equilibrium populations of selected quantized states of different energy in atomic or molecular systems by the use of electromagnetic radiation in or near the visible region.

optical pyrometer [ENG] An instrument which determines the temperature of a very hot surface from its incandescent brightness; the image of the surface is focused in the plane of an electrically heated wire, and current through the wire is adjusted until the wire blends into the image of the surface. Also known as disappearing filament pyrometer.

optical quenching [OPTICS] Reduction in the intensity of luminescent radiation by long-wavelength, visible or infrared radiation.

optical radar *See* OPDAR.

optical rangefinder [ENG] An optical instrument for measuring distance, usually from its position to a target point, by measuring the angle between rays of light from the target, which enter the rangefinder through the windows spaced apart, the distance between the windows being termed the baselength of the rangefinder; the two types are coincidence and stereoscopic.

optical reader [COMPUT SCI] A computer data-entry machine that converts printed characters, bar or line codes, and pencil-shaded areas into a computer-input code format.

optical recording [ENG] Production of a record by focusing on photographic paper a beam of light whose position on the paper depends on the quantity to be measured, as in a light-beam galvanometer.

optical rectification [OPTICS] An effect whereby one or more electromagnetic waves propagating in a nonlinear medium produce a second-order polarization that does not oscillate and, in turn, produces an electrical voltage.

optical reflectometer [ENG] An instrument which measures on surfaces the reflectivity of electromagnetic radiation at wavelengths in or near the visible region.

optical relay [ELECTR] An optoisolator in which the output device is a light-sensitive switch that provides the same on and off operations as the contacts of a relay.

optical-righting reflex *See* visual-righting reflex.

optical rotary dispersion [OPTICS] Specific rotation, considered as a function of wavelength. Abbreviated ORD.

optical rotation [OPTICS] Rotation of the plane of polarization of plane-polarized light, or of the major axis of the polarization ellipse of elliptically polarized light by transmission through a substance or medium.

optical scanner *See* flying-spot scanner.

optical sight [OPTICS] A sight with lenses, prisms, or mirrors that is used in laying weapons, for aerial bombing, or for surveying.

optical sound head [ELECTR] The assembly in motion picture projection which reproduces photographically recorded sound; light from an incandescent lamp is focused on a slit, light from the slit is in turn focused on the optical sound track of a film, and the light passing through the film is detected by a photoelectric cell. Also known as optical electronic reproducer.

optical sound recorder *See* photographic sound recorder.

optical sound reproducer *See* photographic sound reproducer.

optical spectra [SPECT] Electromagnetic spectra for wavelengths in the ultraviolet, visible and infrared regions, ranging from about 10 nanometers to 1 millimeter, associated with excitations of valence electrons of atoms and molecules, and vibrations and rotations of molecules.

optical spectrograph [SPECT] An optical spectroscope provided with a photographic camera or other device for recording the spectrum made by the spectroscope.

optical spectrometer [SPECT] An optical spectroscope that is provided with a calibrated scale either for measurement of wavelength or for measurement of refractive indices of transparent prism materials.

optical spectroscope [SPECT] An optical instrument, consisting of a slit, collimator lens, prism or grating, and a telescope or objective lens, which produces an optical spectrum arising from emission or absorption of radiant energy by a substance, for visual observation.

optical spectroscopy [SPECT] The production, measurement, and interpretation of optical spectra arising from either emission or absorption of radiant energy by various substances.

optical spherical surface [OPTICS] An optical surface which forms part of a sphere.

optical square [ENG] A surveyor's hand instrument used for laying of right angles; employs two mirrors at a 45° angle.

optical staining *See* Rheinberg illumination.

optical storage [COMPUT SCI] Storage of large amounts of data in permanent form on photographic film or its equivalent, for nondestructive readout by means of a light source and photodetector.

optical superposition principle [OPTICS] The principle that the optical rotation produced by a compound which is made up of two radicals of opposite optical activity is the algebraic sum of the rotations of each radical alone; not always valid.

optical surface [OPTICS] An interface between two media, such as between air and glass, which is used to reflect or refract light.

optical system [OPTICS] A collection comprising mirrors, lens, prisms, and other devices, placed in some specified configuration, which reflect, refract, disperse, absorb, polarize, or otherwise act on light.

optical thickness [METEOROL] **1.** In calculations of the transfer of radiant energy, the mass of a given absorbing or emitting material lying in a vertical column of unit cross-sectional area and extending between two specified levels. Also known as optical depth. **2.** Subjectively, the degree to which a cloud prevents light from passing through it; depends upon the physical constitution (crystals, drops, droplets), the form, the concentration of particles, and the vertical extent of the cloud. [OPTICS] The thickness of an optical material times its index of refraction.

optical-to-optical interface device [OPTICS] A device that converts a noncoherently illuminated image into a coherently illuminated object, which can then be used as input to certain types of data processor. Abbreviated OTTO.

optical tracking [ENG] The determination of spatial positions of distant airplanes, missiles, and artificial satellites as a function of time, or the recording of engineering events, by precise time-correlated observations with various types of telescopes or ballistic cameras.

optical train [OPTICS] The series of lenses, mirrors, and prisms of an optical apparatus, such as a microscope or telescope, through which the light rays pass.

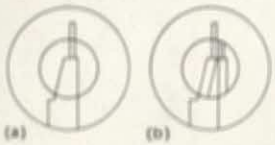
optical transition [PHYS] A process in which an atom or molecule changes from one energy state to another and emits or absorbs electromagnetic radiation in the visible, infrared, or ultraviolet region.

optical twinning [CRYSTAL] Growing together of two crystals which are the same except that the structure of one is the mirror image of the structure of the other. Also known as twin twinning.

optical type font [COMPUT SCI] A special type font whose characters are designed to be easily read by both people and optical character recognition machines.

optical waveguide [ELECTROMAG] A waveguide in which a light-transmitting material such as a glass or plastic fiber is used for transmitting information from point to point at wavelengths somewhere in the ultraviolet, visible-light, or infrared portions of the spectrum. Also known as fiber waveguide; optical-fiber cable.

OPTICAL RANGEFINDER



(a) (b)

View in camera coincidence range finder. (a) Images in coincidence. (b) Images unmatched.

OPTICAL TRACKING

Contraves Model E cinetheodolite, a surveying theodolite having a 35-millimeter motion-picture camera with 60- and 120-inch (1.5- and 3-meter) focal-length objectives substituted for the surveyor's eye and telescope. Tracking of missiles, airplanes, and so on, by servos with either slaved single-operator, or dual-operator control. (*Fecker Systems Division, Owens-Illinois and Contraves AG*)

optical window [OPTICS] The spectral region between 300 and 2000 nanometers (0.3 and 2 micrometers in wavelength), in which visible and near-visible radiation will pass through the earth's atmosphere.

optic angle *See* axial angle.

optic apraxia [MED] A form of apraxia in which the individual fails to represent spatial relations correctly in drawing or construction by other means. Also known as constructional apraxia.

optic-axial angle *See* axial angle.

optic axis [OPTICS] The axis in a doubly refracting medium in which the ordinary and extraordinary waves propagate with the same velocity, and double refraction vanishes. Also known as optical axis; principal axis.

optic canal [ANAT] The channel at the apex of the orbit, the anterior termination of the optic groove, just beneath the lesser wing of the sphenoid bone; it gives passage to the optic nerve and ophthalmic artery.

optic capsule [VERT ZOO] A cartilaginous capsule that develops around the eye in elasmobranchs and higher vertebrate embryos.

optic chiasma [ANAT] The partial decussation of the optic nerves on the undersurface of the hypothalamus.

optic cup [EMBRYO] A two-layered depression formed by invagination of the optic vesicle from which the pigmented and sensory layers of the retina will develop.

optic disk [ANAT] The circular area in the retina that is the site of the convergence of fibers from the ganglion cells of the retina to form the optic nerve.

optic ellipse [OPTICS] Any section through the index ellipsoid.

optic gland [INV ZOO] Either of a pair of endocrine glands in the octopus and squid which are found near the brain and produce a substance which causes gonadal maturation.

optician [ENG] A maker of optical instruments or lenses.

optic lobe [ANAT] One of the anterior pair of colliculi of the mammalian corpora quadrigemina. [INV ZOO] A lateral lobe of the forebrain in certain arthropods. [VERT ZOO] Either of the corpora bigemina of lower vertebrates.

optic nerve [ANAT] The second cranial nerve; a paired sensory nerve technically consisting of three layers of special nerve cells in the retina of the eye; fibers converge to form the optic tracts.

optic normal [OPTICS] The axis that lies perpendicular to the optic axis.

optics [PHYS] **1.** Narrowly, the science of light and vision. **2.** Broadly, the study of the phenomena associated with the generation, transmission, and detection of electromagnetic radiation in the spectral range extending from the long-wave edge of the x-ray region to the short-wave edge of the radio region, or in wavelength from about 1 nanometer to about 1 millimeter.

optic stalk [EMBRYO] The constriction of the optic vesicle which connects the embryonic eye and forebrain in vertebrates.

optic tectum [VERT ZOO] The roof of the mesencephalon constituting a major visual center and association area of the brain of premature vertebrates.

optic tract [ANAT] The band of optic nerve fibers running from the optic chiasma to the lateral geniculate body and midbrain.

optic vesicle [EMBRYO] An evagination of the lateral wall of the forebrain in vertebrate embryos which precedes formation of the optic cup.

optimal control theory [MATH] A generalized calculus of variations dealing with the analysis of dynamical systems with the viewpoint of finding optimizing conditions.

optimal policy [MATH] In optimization problems of systems, a sequence of decisions changing the states of a system in such a manner that a given criterion function is minimized.

optimal regulator problem *See* linear regulator problem.

optimal smoother [CONT SYS] An optimal filer algorithm which generates the best estimate of a dynamical variable at a certain time based on all available data, both past and future.

optimal systems [MATH] Systems where the variables representing the various states are so determined that a given criterion function is minimized subject to given constraints.

optimization [MATH] The maximizing or minimizing of a given function possibly subject to some type of constraints. [ENG] **1.** Broadly, the efforts and processes of making a decision, a design, or a system as perfect, effective, or functional as possible. **2.** Narrowly, the specific methodology, techniques, and procedures used to decide on the one specific solution in a defined set of possible alternatives that will best satisfy a selected criterion. Also known as system optimization.

optimization theory [MATH] The specific methodology, techniques, and procedures used to decide on the one specific solution in a defined set of possible alternatives that will best satisfy a selected criterion; includes linear and nonlinear programming, stochastic programming, and control theory. Also known as mathematical programming.

optimize [COMPUT SCI] To rearrange the instructions or data in storage so that a minimum number of time-consuming jumps or transfers are required in the running of a program.

optimizing control function [CONT SYS] That level in the functional decomposition of a large-scale control system which determines the necessary relationships among the variables of the system to achieve an optimal, or suboptimal, performance based on a given approximate model of the plant and its environment.

optimum array current [ELECTROMAG] The current distribution in a broadside antenna array which is such that for a specified side-lobe level the beam width is as narrow as possible, and for a specified first null the side-lobe level is as small as possible.

optimum bunching [ELECTR] Bunching condition required for maximum output in a velocity modulation tube.

optimum charge [ORD] Propelling charge, with web and propellant weight combination, which produces maximum velocity at a specified pressure.

optimum code [COMPUT SCI] A computer code which is particularly efficient with regard to a particular aspect; for example, minimum time of execution, minimum or efficient use of storage space, and minimum coding time.

optimum coupling *See* critical coupling.

optimum cure [CHEM ENG] The degree of vulcanization at which maximum desired property is reached.

optimum filter [ELECTR] An electric filter in which the mean square value of the error between a desired output and the actual output is at a minimum.

optimum flight [AERO ENG] An aircraft flight so planned and navigated that it is completed under the optimum conditions of minimum time and minimum exposure to dangerous flying weather.

optimum moisture content [GEOL] The water content at which a specified compactive force can compact a soil mass to its maximum dry unit weight.

optimum programming [COMPUT SCI] Production of computer programs that maximize efficiency with respect to some criteria such as least cost, least use of storage, least time, or least use of time-sharing peripheral equipment.

optimum reverberation time [ACOUS] The reverberation time which is most desirable for a given room size and a given use, such as speech, chamber music, or symphony orchestra.

optimum separation point [PETRO ENG] In extraction of natural gasoline, the pressure and temperature conditions necessary for maximum condensation in the separators under field conditions.

optimum-track ship routing [NAV] The selection of an optimum track for a transoceanic crossing by the application of long-range predictions of winds, waves, and currents to the knowledge of how the routed ship reacts to these variables.

optimum traffic frequency *See* optimum working frequency.

optimum working frequency [COMMUN] The most effective frequency at a specified time for ionospheric propagation of radio waves between two specified points. Also known as frequency optimum traffic; optimum traffic frequency.

optional halt instruction [COMPUT SCI] A halt instruction that can cause a computer program to stop either before or after the instruction is obeyed if certain criteria are met. Also known as optional stop instruction.

optional stop instruction *See* optional halt instruction.

optoacoustic detection method [ANALY CHEM] A method of detecting trace impurities in a gas, in which the absorption of a sample of the gas at various light frequencies is measured by directing a periodically interrupted laser beam through the sample in a spectrophone and measuring the sound generated by the optoacoustic effect at the frequency of interruption of the beam.

optoacoustic effect [PHYS] A phenomenon in which a periodically interrupted beam of light generates sound in a gas through which it is passing; this results from energy in the light

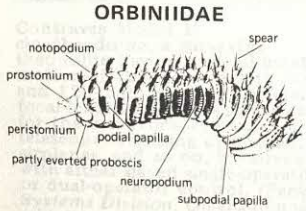
ORANGE

Foliage, flowers, and fruit of *Citrus sinensis.*

ORANGUTAN

The orangutan *(Pongo pygmaeus)*, a long-armed primate that frequently moves about on all fours.

ORBINIIDAE



Anterior parts of the body of *Phylo*, a genus of Orbiniidae.

beam being transformed first into internal motions of the gas molecules, then into random translational motions of these molecules, or heat, and finally into periodic pressure fluctuations or sound. Also known as thermoacoustic effect.

optoacoustic modulator *See* acoustooptic modulator.

optocoupler *See* optoisolator.

optoelectronic amplifier [ENG] An amplifier in which the input and output signals and the method of amplification may be either electronic or optical.

optoelectronic isolator *See* optoisolator.

optoelectronics [ELECTR] The branch of electronics that deals with solid-state and other electronic devices for generating, modulating, transmitting, and sensing electromagnetic radiation in the ultraviolet, visible-light, and infrared portions of the spectrum.

optoelectronic scanner [ELECTR] A scanner in which lenses, mirrors, or other optical devices are used between a light source or image and a photodiode or other photoelectric device.

optoelectronic shutter [ENG] A shutter that uses a Kerr cell to modulate a beam of light.

optoisolator [ELECTR] A coupling device in which a light-emitting diode, energized by the input signal, is optically coupled to a photodetector such as a light-sensitive output diode, transistor, or silicon controlled rectifier. Also known as optical coupler; optical isolator; optically coupled isolator; optocoupler; optoelectronic isolator; photocoupler; photoisolator.

optometrist [MED] One who measures the degrees of visual powers, without the aid of cycloplegic or mydriatic agents.

optometry [MED] Measurement of visual powers.

optophone [ENG ACOUS] A device with a photoelectric cell to convert ordinary printed letters into a series of sounds; used by the blind.

or [COMPUT SCI] An instruction which performs the logical operation "or" on a bit-by-bit basis for its two or more operand words, usually storing the result in one of the operand locations. Also known as OR function. [MATH] A logical operation whose result is false (or zero) only if every one of its operands is false, and true (or one) otherwise. Also known as inclusive or.

ora [METEOROL] A regular valley wind at Lake Garda in Italy.

oral [ANAT] Of or pertaining to the mouth.

oral arm [INV ZOO] In a jellyfish, any of the prolongations of the distal end of the manubrium.

oral cavity [ANAT] The cavity of the mouth.

oral character [PSYCH] A Freudian term applied to persons who have undergone an unusual degree of oral stimulation during the developmental period and are characterized by an attitude of carefree indifference and by dependence on a mother figure.

oral contraceptive [PHARM] Any medication taken by mouth that renders a woman nonfertile as long as the medication is continued.

oral disc [INV ZOO] The flattened upper or free end of the body of a polyp that has the mouth in the center and tentacles around the margin.

oral erotic stage [PSYCH] In psychoanalysis, the first, or receptive, part of the oral phase of psychosexual development, dominated by sucking and lasting for the first 6 to 9 months of life.

oral erotism [PSYCH] The primordial pleasurable experience of nursing, reappearing in usually disguised and sublimated form in later life.

oral groove [INV ZOO] A depressed, groovelike peristome.

oral personality [PSYCH] An individual who is mouth-centered far beyond the age when the oral phase should have been passed, and who exhibits oral erotism and sadism in disguised and sublimated form.

oral phase [PSYCH] In psychoanalysis, the initial stage in the psychosexual development of a child, extending from birth to about 18 months, in which the mouth is the focus of sensations, interests, and activities and hence the source of gratification and security.

orange [BOT] Any of various evergreen trees of the genus *Citrus*, cultivated for the edible fruit, a berry with an aromatic, leathery rind containing numerous oil glands. [OPTICS] The hue evoked in an average observer by monochromatic radiation having a wavelength in the approximate range from 597 to 622 nanometers; however, the same sensation can be produced in a variety of other ways.

orange flower oil *See* oil of orange blossoms.

orange lake [MATER] Any of various transparent orange pigments from the precipitation of an orange dyestuff on aluminum hydrate or other base; used to produce transparent coatings for metal cans and bottle caps.

orange mineral [MATER] A bright orange-red lead oxide pigment used in printing inks and primers.

orange oil *See* bitter orange oil; sweet orange oil.

orangeophile [HISTOL] A type of acidophile cell of the anterior lobe of the adenohypophysis, presumed to elaborate growth hormone.

orange oxide *See* uranium trioxide.

orange peel [MATER] A pebbled film surface, resembling an orange skin, on lacquer or enamel as a result of too rapid drying after spraying, or failure to exhibit the desired leveling effects. [MET] A rough, pebble-grained metal surface resulting from either plastic deformation or electropolishing. Also known as alligator effect; pebbling.

orange-peel bucket [DES ENG] A type of grab bucket that is multileaved and generally round in configuration.

orange sapphire [MINERAL] An orange variety of gem corundum (sapphire). Also known as padparadsha.

orange spectrometer [SPECT] A type of beta-ray spectrometer that consists of a number of modified double-focusing spectrometers employing a common source and a common detector, and has exceptionally high transmission.

orange toner [ORG CHEM] A diazo dyestuff coupled to diacetoacetic acid anhydride; contains no sulfonic or carboxylic groups; used for printing inks.

orangutan [VERT ZOO] *Pongo pygmaeus*. The largest of the great apes, a long-armed primate distinguished by long sparse reddish-brown hair, naked face and hands and feet, and a large laryngeal cavity which appears as a pouch below the chin.

O ray *See* ordinary ray.

orbicular [PETR] Of the structure of a rock, containing large quantities of orbicules. [SCI TECH] Having the form of a sphere or orb.

orbicule [GEOL] A nearly spherical body, up to 2 or more centimeters in diameter, in which the components are arranged in concentric layers.

Orbiniidae [INV ZOO] A family of polychaete annelids belonging to the Sedentaria; the prostomium is exposed, and the thorax and abdomen are weakly separated.

Orbiniinae [INV ZOO] A subfamily of sedentary polychaete annelids in the family Orbiniidae.

orbit [ANAT] The bony cavity in the lateral front of the skull beneath the frontal bone which contains the eyeball. Also known as eye socket. [OCEANOGR] The path of a water particle affected by wave motion; it is almost circular in deep-water waves and almost elliptical in shallow-water waves. [PHYS] **1.** Any closed path followed by a particle or body, such as the orbit of a celestial body under the influence of gravity, the elliptical path followed by electrons in the Bohr theory, or the paths followed by particles in a circular particle accelerator. **2.** More generally, any path followed by a particle, such as helical paths of particles in a magnetic field, or the parabolic path of a comet.

orbital [ATOM PHYS] The space-dependent part of the Schrödinger wave function of an electron in an atom or molecule in an approximation such that each electron has a definite wave function, independent of the other electrons.

orbital angular momentum [MECH] The angular momentum associated with the motion of a particle about an origin, equal to the cross product of the position vector with the linear momentum. Also known as orbital momentum. [QUANT MECH] The angular momentum operator associated with the motion of a particle about an origin, equal to the cross product of the position vector with the linear momentum, as opposed to the intrinsic spin angular momentum. Also known as orbital moment.

orbital current [OCEANOGR] The flow of water which follows the orbital motion of water particles in a wave.

orbital curve [AERO ENG] One of the tracks on a primary body's surface traced by a satellite that orbits about it several times in a direction other than normal to the primary body's axis of rotation; each track is displaced in a direction opposite and by an amount equal to the degrees of rotation between each satellite orbit.

orbital decay [AERO ENG] The lessening of the eccentricity of the elliptical orbit of an artificial satellite. [ATOM PHYS]

A change of an atom from one energy state to another of lower energy in which the orbital of one of the electrons changes.

orbital direction [AERO ENG] The direction that the path of an orbiting body takes; in the case of an earth satellite, this path may be defined by the angle of inclination of the path to the equator.

orbital electron [ATOM PHYS] An electron which has a high probability of being in the vicinity (at distances on the order of 10^{-10} meter or less) of a particular nucleus, but has only a very small probability of being within the nucleus itself. Also known as planetary electron.

orbital elements [PHYS] A set of seven parameters defining the orbit of a body attracted by a central, inverse-square force.

orbital fossa [INV ZOO] A depression from which the eyestalk arises on the front of the carapace of crustaceans.

orbital index [ANTHRO] The ratio of the orbital height, taken at right angles to the orbital width between the upper and lower orbital margins, times 100, to the orbital width, taken between the maxillofrontale and lateral margin of the orbit in such a manner that the line of the orbital width bisects the plane of the orbital entrance.

orbital magnetic moment [QUANT MECH] The magnetic dipole moment associated with the motion of a charged particle about an origin, rather than with its intrinsic spin.

orbital moment *See* orbital angular momentum.

orbital momentum *See* orbital angular momentum.

orbital motion [PHYS] Continuous motion of a body in a closed path, such as a circle or an ellipse, about some point.

orbital node [ASTRON] One of the two points at which the orbit of a planet or satellite crosses the plane of the ecliptic or equator.

orbital parity [QUANT MECH] The parity associated with the wave function of a particle, or system of particles, as a function of spatial coordinates; it is opposed to intrinsic parity; if the orbital angular momentum quantum number is l, the orbital parity is $(-1)^l$.

orbital period [ASTRON] The interval between successive passages of a satellite through the same specified point in its orbit.

orbital plane [MECH] The plane which contains the orbit of a body or particle in a central force field; it passes through the center of force.

orbital rendezvous [AERO ENG] **1.** The meeting of two or more orbiting objects with zero relative velocity at a preconceived time and place. **2.** The point in space at which such an event occurs.

orbital symmetry [PHYS CHEM] The property of certain molecular orbitals of being carried into themselves or into the negative of themselves by certain geometrical operations, such as a rotation of 180° about an axis in the plane of the molecule, or reflection through this plane.

orbital velocity [ASTRON] The instantaneous velocity at which an earth satellite or other orbiting body travels around the origin of its central force field.

orbite [PETR] An igneous rock containing large phenocrysts of hornblende, or plagioclase and hornblende, in a groundmass with the composition of malachite.

Orbitoidacea [INV ZOO] A superfamily of foraminiferan protozoans in the suborder Rotaliina characterized by a low trochospire or a planispiral, uncoiled or branching test composed of radial calcite with bilamellar septa.

orbit point [AERO ENG] A geographically defined reference point over land or water, used in stationing airborne aircraft.

orcanette *See* alkanette.

orch-, orchi-, orchid-, orchido-, orchio- [ZOO] A combining form denoting testis.

orchard [AGR] A group of fruit-bearing, nut-bearing, or sugar maple trees under cultivation.

orchid [BOT] Any member of the family Orchidaceae; plants have complex, specialized irregular flowers usually with only one or two stamens.

Orchidaceae [BOT] A family of monocotyledonous plants in the order Orchidales characterized by irregular flowers with only one or two stamens which are adnate to the style, and pollen grains which cohere in large masses called pollinia.

Orchidales [BOT] An order of monocotyledonous plants in the subclass Liliidae; plants are mycotropic and sometimes nongreen with numerous tiny seeds that have an undifferentiated embryo and little or no endosperm.

orchiectomy [MED] Surgical removal of one or both testes.

orchil [MATER] Dark-brownish-red coloring matter derived from lichens as paste or aqueous extract; main components are orcin and orcein; used as carpet-yarn dye. Also known as orseille.

orchiopexy [MED] Surgical fixation of a testis.

orcin [ORG CHEM] $CH_3C_6H_3(OH)_2 \cdot H_2O$ White crystals with strong, sweet, unpleasant taste; soluble in water, alcohol, and ether; extracted from lichens; used in medicine and as an analytical reagent. Also known as 3,5-dihydroxytoluene; orcinol.

orcinol *See* orcin.

OR circuit *See* OR gate.

ORD *See* optical rotary dispersion.

order [CHEM] A classification of chemical reactions, in which the order is described as first, second, third, or higher, according to the number of molecules (one, two, three, or more) which appear to enter into the reaction; decomposition of H_2O_2 to form water and oxygen is a first-order reaction. [PHYS] A range of magnitudes of a quantity (and of all other quantities having the same physical dimensions) extending from some value of the quantity to some small multiple of the quantity (usually 10). Also known as order of magnitude. [SYST] A taxonomic category ranked below the class and above the family, made up either of families, subfamilies, or suborders.

order-disorder transition [SOLID STATE] The transition of an alloy or other solid solution between a state in which atoms of one element occupy certain regular positions in the lattice of another element, and a state in which this regularity is not present.

ordered field [MATH] A field with an ordering as a set analogous to the properties of less than or equal for real numbers relative to addition and multiplication.

ordered pair [MATH] A pair of elements x and y from a set, written (x,y), where x is distinguished as first and y as second.

ordered rings [MATH] Rings which have an ordering on them as sets in a manner analogous to the behavior of the usual ordering of the real numbers relative to addition and multiplication.

ordering [MATH] A binary relation, denoted $\leqslant$, among the elements of a set such that $a \leqslant b$ and $b \leqslant c$ implies $a \leqslant c$, and $a \leqslant b$, $b \leqslant a$ implies $a = b$; it need not be the case that either $a \leqslant b$ or $b \leqslant a$. Also known as order relation; partial ordering. [SOLID STATE] A solid-state transformation in certain solid solutions, in which a random arrangement in the lattice is transformed into a regular ordered arrangement of the atoms with respect to one another; a so-called superlattice is formed.

order of a differential equation [MATH] An equation has order n if the derivatives of a function appear up to the nth derivative.

order of a group [MATH] The number of elements contained within the group.

order of a matrix [MATH] A square matrix with n rows and n columns has order n.

order of an elliptic function [MATH] The number of poles an elliptic function has in a parallelogram region where it repeats its values.

order of an infinitesimal [MATH] A characteristic of infinitesimals used in their comparison.

order of a polynomial [MATH] The largest exponent appearing in the polynomial.

order of degeneracy *See* degree of degeneracy.

order of interference [OPTICS] The difference in the number of wavelengths along the paths of two constructively interfering rays of light.

order of magnitude *See* order.

order of phase transition [THERMO] A phase transition in which there is a latent heat and an abrupt change in properties, such as in density, is a first-order transition; if there is not such a change, the order of the transition is one greater than the lowest derivative of such properties with respect to temperature which has a discontinuity.

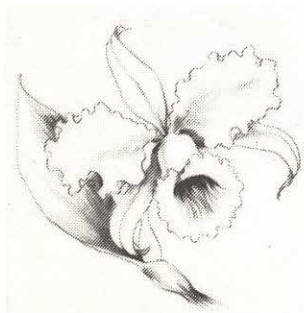
order parameter [STAT MECH] A measure of the degree of ordering of a system which has value zero above the temperature of a phase transition and acquires some nonzero value below the transition temperature.

order point [IND ENG] The inventory level at which a replenishment order must be placed.

order quantity [IND ENG] The number of pieces ordered to replenish the inventory.

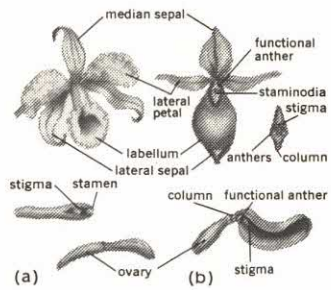
order relation *See* ordering.

ORCHID



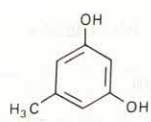
A typical orchid.

ORCHIDACEAE



The two common floral types found in orchids. *(a) Cattleya. (b) Cypripedium.*

ORCIN



Structural formula.

order tone [COMMUN] Tone sent over a trunk to indicate that the trunk is ready to receive an order or, to the receiving operator, that an order is about to arrive.

ordinal number [MATH] A generalized number which expresses the size of a set, in the sense of "how many" elements.

ordinary cut [MIN ENG] The arrangement of drill holes in a mine in which the drill holes are symmetrical with respect to the vertical center-line of the section, extend horizontally, and make a large angle with the working face.

ordinary differential equation [MATH] An equation involving functions of one variable and their derivatives.

ordinary gear train [MECH ENG] A gear train in which all axes remain stationary relative to the frame.

ordinary index [OPTICS] The index of refraction of the ordinary ray in a crystal.

ordinary point of a curve [MATH] A point where a curve does not cross itself and where there is a smoothly turning tangent.

ordinary ray [OPTICS] One of two rays into which a ray incident on an anisotropic uniaxial crystal is split; it obeys the ordinary laws of refraction, in contrast to the extraordinary ray. Also known as O ray.

ordinary sheathed explosive [MATER] A permitted explosive (one passing certain safety tests) whose safety has been further increased by a sheath of sodium bicarbonate; when the explosive is detonated, the sheath forms carbon dioxide, which tends to extinguish the flame around the detonator wave.

ordinary tides [OCEANOGR] Tides which have cycles of 12 to 24 hours.

ordinary-wave component [GEOPHYS] One of the two components into which an electromagnetic wave entering the ionosphere is divided under the influence of the earth's magnetic field; it has characteristics more nearly like those expected in the absence of a magnetic field. Also known as O-wave component. [OPTICS] The component of electromagnetic radiation propagating in an anisotropic uniaxial crystal whose electric displacement vector is perpendicular to the optical axis and the direction normal to the wavefront; gives rise to the ordinary ray.

ordinate [MATH] The perpendicular distance of a point (x,y) of the plane from the x-axis.

ordnance [ENG] Military materiel, such as combat weapons of all kinds, with ammunition and equipment for their use, vehicles, and repair tools and machinery.

Ordnance Corps [ORD] A technical service of the U.S. Army, charged with the design, construction, testing, and supply of ordnance materiel; the corps provides guns, ammunition, missiles, armored and track-laying vehicles, and apparatus for sighting and firing guns; it maintains arsenals and depots for the design, manufacture, testing, storage, and issue of such material; it also maintains an extensive research program.

ordnance service [ORD] All activities necessary to maintain in usable condition the ordnance equipment of a command and such other equipment as directed by proper authority.

ordnance stores [ORD] All commodities and materials used by the U.S. Army Ordnance Corps in the design, manufacture, testing, preservation, and overhaul of ordnance property or supplies.

ordnance supplies [ORD] All military supplies assigned to the U.S. Army Ordnance Corps for storage, issue, and maintenance; ordnance supplies consist of all raw materials, completely manufactured articles, and parts of such articles assigned to the corps.

ordnance troops [ORD] Technically trained troops assigned or attached to a tactical unit to provide ordnance maintenance, supply, or technical service; they also give instruction in the use, maintenance, and adjustment of ordnance materiel.

Ordovician [GEOL] The second period of the Paleozoic era, above the Cambrian and below the Silurian, from approximately 500 million to 440 million years ago.

ore [GEOL] **1.** The naturally occurring material from which economically valuable minerals can be extracted. **2.** Specifically, a natural mineral compound of the elements, of which one element at least is a metal. **3.** More loosely, all metalliferous rock, though it contains the metal in a free state. **4.** Occasionally, a compound of nonmetallic substances, as sulfur ore.

ore bed [GEOL] An economic aggregation of minerals occurring between or in rocks of sedimentary origin.

ORDOVICIAN

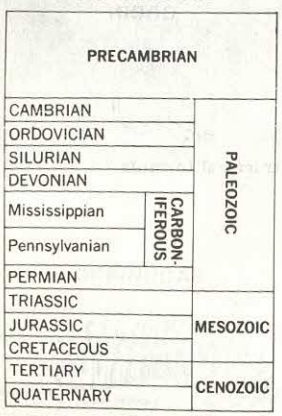


Chart showing the position of the Ordovician period in relation to the other periods and to the eras of geologic time.

ore bin [MIN ENG] A receptacle for ore awaiting treatment or shipment.

ore block [MIN ENG] A vein of ore which is bound above, below, and at one or both ends; it is ready for excavation.

ore blocked out [MIN ENG] Ore exposed on three sides within a reasonable distance of each other.

orebody [GEOL] Generally, a solid and fairly continuous mass of ore, which may include low-grade ore and waste as well as pay ore, but is individualized by form or character from adjoining country rock.

ore bridge [MIN ENG] A gantry crane used to load and unload stockpiles of ore.

ore car [MIN ENG] A mine car for carrying ore or waste rock.

ore carrier [NAV ARCH] A vessel designed to carry ore in bulk, and similar in construction to a collier.

ore chimney *See* pipe.

ore chute [MIN ENG] An inclined passage for the transfer of ore to a lower level.

ore cluster [GEOL] A group of interconnected ore bodies.

ore control [GEOL] A geologic feature that has influenced the ore deposition.

ore crusher [MIN ENG] A machine for breaking up masses of ore, usually previous to passing through other size-reduction equipment.

Orectolobidae [VERT ZOO] An ancient isurid family of galeoid sharks, including the carpet and nurse sharks, which are primarily bottom feeders with small teeth and a blunt rostrum with barbels near the mouth.

ore deposit [GEOL] Rocks containing minerals of economic value in such amount that they can be profitably exploited.

ore developed [MIN ENG] Ore exposed on four sides in blocks variously prescribed.

ore district [GEOL] A combination of several ore deposits into one common whole or system.

ore dressing [MIN ENG] The cleaning of ore by the removal of certain valueless portions, as by jigging, cobbing, or vanning.

ore expectant [MIN ENG] The whole or any part of the ore below the lowest level or beyond the range of vision.

ore faces [MIN ENG] Those ore bodies that are exposed on one side, or show only one face.

ore flotation promoter [MATER] Material that gives a water-repellent surface to mineral particles so that air bubbles will adhere and cause selective flotation.

oregano [FOOD ENG] A spice prepared from leaves of various aromatic mints, especially wild marjoram.

ore grader [MIN ENG] In metal mining, a person who directs the storage of iron ores in bins at shipping docks so that the various grades in each bin will contain approximate percentages of iron.

oreide bronze [MET] A series of brass compositions containing 68–87% copper, 10–32% zinc, and sometimes small amounts of tin; used for hardware.

ore in sight [MIN ENG] **1.** Ore exposed on at least three sides within reasonable distance of each other. **2.** Ore which may be reasonably assumed to exist, though not actually blocked out. **3.** *See* developed reserves.

ore intersection [MIN ENG] **1.** The point at which a borehole, crosscut, or other underground opening encounters an ore vein or deposit. **2.** The thickness of the ore-bearing deposit so traversed.

ore-lead age [GEOL] Measurement of the age of the earth by comparing the relative progress of the two radioactive decay schemes ^{235}U–^{207}Pb and ^{238}U–^{206}Pb.

ore microscopy [MINERAL] The use of a reflecting microscope to study polished sections of ore minerals. Also known as mineragraphy; mineralography.

orendite [PETR] A porphyritic extrusive rock containing phlogopite phenocrysts in a nepheline-free reddish-gray groundmass of leucite, sanidine, phlogopite, amphibole, and diopside.

oreodont [PALEON] Any member of the family Merycoidodontidae.

ore of sedimentation *See* placer.

ore pass [MIN ENG] A vertical or inclined passage for the downward transfer of ore.

ore pipe *See* pipe.

ore pocket [MIN ENG] **1.** Excavation near the hoisting shaft into which ore from stopes is moved, preliminary to hoisting. **2.** An unusual concentration of ore in the lode.

ore reduction [MIN ENG] The size reduction of solids by crushing and grinding in mineral processing plants.
ore reserve [MIN ENG] The total tonnage and average value of proved ore, plus the total tonnage and value (assumed) of the probable ore.
ore sampling [MIN ENG] The process in which a portion of ore is selected so that its composition will represent the average composition of the entire bulk of ore.
ore shoot [GEOL] **1.** A large, generally vertical, pipelike ore body that is economically valuable. Also known as shoot. **2.** A large and usually rich aggregation of mineral in a vein.
OR function *See* or.
organ [ANAT] A differentiated structure of an organism composed of various cells or tissues and adapted for a specific function.
organdy [TEXT] A sheer, crisp fabric woven of fine combed cotton yarns.
organelle [CYTOL] A specialized subcellular structure, such as a mitochondrion, having a special function; a condensed system showing a high degree of internal order and definite limits of size and shape.
organic [ORG CHEM] Of chemical compounds, based on carbon chains or rings and also containing hydrogen with or without oxygen, nitrogen, or other elements.
organic acid [ORG CHEM] A chemical compound with one or more carboxyl radicals (COOH) in its structure; examples are butyric acid, $CH_3(CH_2)_2COOH$, maleic acid, HOOCCHCHCOOH, and benzoic acid, C_6H_5COOH.
organic bonded wheel [DES ENG] A grinding wheel in which organic bonds are used to hold the abrasive grains.
organic brain syndrome [MED] A mental condition of multiple etiologies, resulting in diffuse impairment of brain tissue function and manifested by a complex of symptoms including impaired judgment and intellectual function, and often somatic and motor dysfunctions.
organic chemistry [CHEM] The study of the composition, reactions, and properties of carbon-chain or carbon-ring compounds or mixtures thereof.
organic coating [MATER] Material used to protect metal surfaces from chemical or atmospheric attack; includes latex paints, plastics, asphaltic materials, rubbers, and elastomers.
organic-cooled reactor [NUCLEO] A reactor that uses organic chemicals, such as mixtures of polyphenyls (diphenyls and terphenyls), as coolant.
organic electrolyte cell [ELEC] A type of wet cell that is based on the use of particularly reactive metals such as lithium, calcium, or magnesium in conjunction with organic electrolytes; the best-known type is the lithium–cupric fluoride cell.
organic evolution [EVOL] The processes of change in organisms by which descendants come to differ from their ancestors, and a history of the sequence of such changes.
organic geochemistry [GEOCHEM] A branch of geochemistry which deals with naturally occurring carbonaceous and biologically derived substances which are of geological interest.
organic glass [MATER] An amorphous, solid, glasslike material made of transparent plastic.
organicism *See* holism.
organic lattice *See* growth lattice.
organic-moderated reactor [NUCLEO] A nuclear reactor in which organic compounds are used as moderator and coolant.
organic mound *See* bioherm.
organic pigment [ORG CHEM] Any of the materials with organic-chemical bases used to add color to dyes, plastics, linoleum, tones, and lakes.
organic quantitative analysis [ANALY CHEM] Quantitative determination of elements, functional groups, or molecules in organic materials.
organic reaction mechanism [ORG CHEM] A pathway of chemical states traversed by an organic chemical system in its passage from reactants to products.
organic reef [GEOL] A sedimentary rock structure of significant dimensions erected by, and composed almost exclusively of the remains of, corals, algae, bryozoans, sponges, and other sedentary or colonial organisms.
organic rock [PETR] A sedimentary rock composed principally of the remains of plants and animals.
organic salt [ORG CHEM] The reaction product of an organic acid and an inorganic base, for example, sodium acetate (CH_3COONa) from the reaction of acetic acid (CH_3COOH) and sodium hydroxide (NaOH).
organic semiconductor [MATER] An organic material having unusually high conductivity, often enhanced by the presence of certain gases, and other properties commonly associated with semiconductors; an example is anthracene.
organic soil [GEOL] Any soil or soil horizon consisting chiefly of, or containing at least 30% of, organic matter; examples are peat soils and muck soils.
organic solvent [ORG CHEM] Liquid organic compound with the power to dissolve solids, gases, or liquids (miscibility); examples are methanol (methyl alcohol), CH_3OH, and benzene, C_6H_6.
organic texture [GEOL] A sedimentary texture resulting from the activity of organisms such as the secretion of skeletal material.
organic weathering [GEOL] Biological processes and changes that contribute to the breakdown of rocks. Also known as biological weathering.
organism [BIOL] An individual constituted to carry out all life functions.
organismic psychology [PSYCH] A movement in psychology based on the theory that the individual is made up of elements composing a single organized system, and an element in the system cannot be evaluated independently of its position within the system.
organisol [MATER] A dispersion of very finely divided resin particles that are suspended in an organic-liquid mixture which cannot dissolve the resin at normal temperatures.
organization chart [IND ENG] Graphic representation of the interrelationships within an organization, depicting lines of authority and responsibility and provisions for control.
organized ferment *See* intracellular enzyme.
organizer [EMBRYO] Any part of the embryo which exerts a morphogenetic stimulus on an adjacent part or parts, as in the induction of the medullary plate by the dorsal lip of the blastopore.
organizing pneumonia [MED] Pneumonia in which the healing process is characterized by organization and cicatrization of the exudate rather than by resolution and resorption. Also known as unresolved pneumonia.
organ of Corti [ANAT] A specialized structure located on the basilar membrane of the mammalian cochlea, which contains rods of Corti and hair cells connected to ganglia of the cochlear nerve. Also known as spiral organ.
organ of Leydig [VERT ZOO] Two large accumulations of lymphoid tissues which run longitudinally the length of the esophagus in selachian fishes.
organogenesis [EMBRYO] The formation of an organ.
organogenic [GEOL] Property of a rock or sediment derived from organic substances.
organoleptic [PHYSIO] Having an effect or making an impression on sense organs; usually used in connection with subjective testing of food and drug products.
organolite [GEOL] Any rock consisting mainly of organic material.
organometallic compound [ORG CHEM] Molecules containing carbon-metal linkage; a compound containing an alkyl or aryl radical bonded to a metal, such as tetraethyllead, $Pb(C_2H_5)_4$.
organophosphate [ORG CHEM] A soluble fertilizer material made up of organic phosphate esters such as glucose, glycol, or sorbitol; useful for providing phosphorus to deep-root systems.
organosol [MATER] Finely divided or colloidal suspension of insoluble material in a suspending organic liquid; known as plastisol when the solid is a synthetic resin suspended in an organic liquid; used for coatings, moldings, and casting of films.
organosulfur compound [ORG CHEM] One of a group of substances which contain both carbon and sulfur.
organotropic [MICROBIO] Of microorganisms, localizing in or entering the body by way of the viscera or, occasionally, somatic tissue.
organs of Zuckerkandl *See* aortic paraganglion.
organza [TEXT] An organdy fabric woven from silk yarns.
organzine [TEXT] A fine silk yarn of the best quality, consisting of two or three filaments twisted together.
orgasm [PHYSIO] The intense, diffuse, and subjectively pleasurable sensation experienced during sexual intercourse or

genital manipulation, culminating in the male with seminal ejaculation and in the female with uterine contractions, warm suffusion, and pelvic throbbing sensations.

orgasmolepsy [MED] Sudden loss of muscle tone during orgasm, accompanied by a transitory loss of consciousness.

OR gate [ELECTR] A multiple-input gate circuit whose output is energized when any one or more of the inputs is in a prescribed state; performs the function of the logical inclusive-or; used in digital computers. Also known as OR circuit.

Oribatei [INV ZOO] A heavily sclerotized group of free-living mites in the suborder Sarcoptiformes which serve as intermediate hosts of tapeworms.

Oribatulidae [INV ZOO] A family of oribatid mites in the suborder Sarcoptiformes.

orient [COMPUT SCI] To change relative and symbolic addresses to absolute form. [ENG] **1.** To place or set a map so that the map symbols are parallel with their corresponding ground features. **2.** To turn a transit so that the direction of the 0° line of its horizontal circle is parallel to the direction it had in the preceding or initial setup, or parallel to a standard reference line. [OPTICS] The play of color upon or just below the surface of a gem-quality pearl.

orientability of sound signal [ACOUS] The property of a sound signal by virtue of which a listener can estimate the direction of the location of the apparatus producing the signal.

oriental alabaster *See* onyx marble.

oriental amethyst [MINERAL] A violet to purple variety of sapphire.

oriental jasper *See* bloodstone.

oriental linaloe [MATER] A rosewood oil distilled from highly perfumed parts of *Aquilaria agollocha* trees of Burma, eastern India, and Java. Also known as agar attar; aloe wood oil.

oriental topaz [MINERAL] A yellow variety of corundum, used as a gem.

Oriental zoogeographic region [ECOL] A zoogeographic region which encompasses tropical Asia from the Iranian Peninsula eastward through the East Indies to, and including, Borneo and the Philippines.

orientation [CRYSTAL] The directions of the axes of a crystal lattice relative to the surfaces of the crystal, to applied fields, or to some other planes or directions of interest. [ELECTROMAG] The physical positioning of a directional antenna or other device having directional characteristics. [ENG] Establishment of the correct relationship in direction with reference to the points of the compass. [MATH] A choice of sense or direction in a topological space. [PHYS] **1.** The direction of some vector or set of vectors, such as the direction of the electric vector and the propagation direction of plane polarized light, or the direction of a preponderance of nuclear spins in a crystal near absolute zero, relative to some other directions of interest. **2.** Any process in which vectors associated with atoms or molecules in the substance are organized relative to some direction, rather than pointed at random; examples include dipole moments of polar molecules in an electric field, and nuclear spins in a crystal in a magnetic field at temperatures near absolute zero. [PHYS CHEM] The arrangement of radicals in an organic compound in relation to each other and to the parent compound. [PSYCH] Determination of one's relation to the environment.

orientation diagram [GEOL] Any point or contour diagram used in structural petrology.

orientation effect [ELEC] Those bulk properties of a material which result from orientation polarization. [PHYS CHEM] A method of determining attractive forces among molecules, or components of these forces, from the interaction energy associated with the relative orientation of molecular dipoles.

orientation force [PHYS CHEM] A type of van der Waals force, resulting from interaction of the dipole moments of two polar molecules. Also known as dipole-dipole force; Keesom force.

orientation polarization [ELEC] Polarization arising from the orientation of molecules which have permanent dipole moments arising from an asymmetric charge distribution. Also known as dipole polarization.

oriented [GEOL] Pertaining to a specimen that is so marked as to show its exact, original position in space.

oriented core [ENG] A core that can be positioned on the surface in the same way that it was arranged in the borehole before extraction.

oriented graph [MATH] A directed graph in which there is no pair of points a and b such that there is both an arc directed from a to b and an arc directed from b to a.

oriented-strategic research [SCI TECH] That background research considered to be required in order to achieve a specified objective.

orifice [ELECTROMAG] Opening or window in a side or end wall of a waveguide or cavity resonator through which energy is transmitted. [SCI TECH] An aperture or hole.

orifice gas [MET] The torch gas in a plasma arc welding or cutting process which becomes ionized in the arc to form plasma and is ejected from the orifice in a jet stream.

orifice meter [ENG] An instrument that measures fluid flow by recording differential pressure across a restriction placed in the flow stream and the static or actual pressure acting on the system.

orifice mixer [MECH ENG] Arrangement in which two or more liquids are pumped through an orifice constriction to cause turbulence and consequent mixing action.

orifice plate [DES ENG] A disk, with a hole, placed in a pipeline to measure flow.

orifice well tester [PETRO ENG] Velocity-type meter used to measure gas flow quantity from a gas well; static pressure differences before and after a sharp-edged orifice are converted to flow values.

origanum oil [MATER] A light-yellow essential oil obtained from herbs of the genus *Origanum*; contains carvacrol and cymene plus other components; used in flavors and pharmaceuticals.

origin [COMPUT SCI] Absolute storage address in relative coding to which addresses in a region are referenced. [MATH] The center of a coordinate system, where all coordinate axes meet, usually denoted by $(O,O, \ldots ,O)$.

original dip *See* primary dip.

original document *See* source document.

original interstice [PETR] An interstice that formed contemporaneously with the enclosing rock. Also known as primary interstice.

original valley [GEOL] A valley formed by hypogene action or by epigene action other than that of running water.

origin of rifling [ORD] The position in a rifled gun bore at which the rifling begins; more specifically, the plane, perpendicular to the axis of the gun bore, in which the rifling starts.

origin of the trajectory [ORD] Center of the muzzle of a gun at the instant when the projectile leaves it.

O ring [DES ENG] A flat ring made from synthetic rubber, used as an airtight seal or a seal against high pressures.

Orion [ASTRON] A northern constellation near the celestial equator, right ascension 5 hours, declination 5° north. Also known as Warrior.

Orionids [ASTRON] A meteor shower seen in October in the northern hemisphere; its radiant lies in the constellation Orion.

Orion Nebula [ASTRON] A luminous cloud surrounding Ori, the northern star in Orion's dagger; visible to the naked eye as a hazy object. Also known as Great Nebula of Orion.

orlop deck [NAV ARCH] The lowest continuous deck of a ship having four or more decks.

ormer *See* abalone.

Ormyridae [INV ZOO] A small family of hemipteran insects in the superfamily Chalcidoidea.

Orneodidae [INV ZOO] A small family of lepidopteran insects in the superfamily Tineoidea; adults have each wing divided into six featherlike plumes.

ornithine [BIOCHEM] $C_5H_{12}O_2N_2$ An amino acid occurring in the urine of some birds, but not found in native proteins.

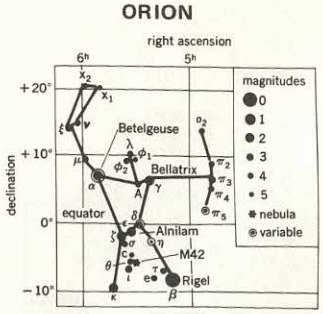
Ornithischia [PALEON] An order of extinct terrestrial reptiles, popularly known as dinosaurs; distinguished by a four-pronged pelvis, and a median, toothless predentary bone at the front of the lower jaw.

ornithology [VERT ZOO] The study of birds.

Ornithopoda [PALEON] A suborder of extinct reptiles in the order Ornithischia including all bipedal forms in the order.

Ornithorhynchidae [VERT ZOO] A monospecific order of monotremes containing the semiaquatic platypus; characterized by a duck-billed snout, horny plates instead of teeth in the adult, and a flattened, well-developed tail.

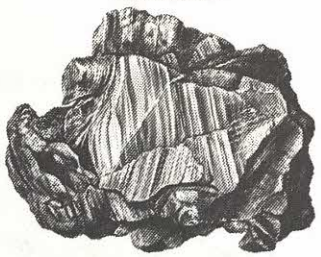
ornithosis [MED] Any form of psittacosis originating in birds other than psittacines.



Line pattern of the constellation Orion. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the size of the dots, graded by appropriate numbers.

orocline [GEOL] An orogenic belt with a change in horizontal direction, either a horizontal curvature or a sharp bend. Also known as geoflex.
orocratic [GEOL] Pertaining to a period of time in which there is much diastrophism.
orogen *See* orogenic belt.
orogene *See* orogenic belt.
orogenesis *See* orogeny.
orogenic belt [GEOL] A linear region that has undergone folding or other deformation during the orogenic cycle. Also known as fold belt; orogen; orogene.
orogenic cycle [GEOL] A time interval during which a mobile belt evolved into an orogenic belt, passing through preorogenic, orogenic, and postorogenic stages. Also known as geotectonic cycle.
orogenic sediment [GEOL] Any sediment that is produced as the result of an orogeny or that is directly attributable to the orogenic region in which it is later found.
orogenic unconformity [GEOL] An angular unconformity produced locally in a region affected by mountain-building movements.
orogeny [GEOL] The process or processes of mountain formation, especially the intense deformation of rocks by folding and faulting which, in many mountainous regions, has been accompanied by metamorphism, invasion of molten rock, and volcanic eruption; in modern usage, orogeny produces the internal structure of mountains, and epeirogeny produces the mountainous topography. Also known as orogenesis; tectogenesis.
orogeosyncline [GEOL] A geosyncline that later became an area of orogeny.
orograph [ENG] A machine that records both distance and elevations as it is pushed across land surfaces; used in making topographic maps.
orographic [GEOL] Pertaining to mountains, especially in regard to their location and distribution.
orographic cloud [METEOROL] A cloud whose form and extent is determined by the disturbing effects of orography upon the passing flow of air; because these clouds are linked with the form of the terrestrial relief, they generally move very slowly, if at all, although the winds at the same level may be very strong.
orographic lifting [METEOROL] The lifting of an air current caused by its passage up and over surface elevations.
orographic occlusion [METEOROL] An occluded front in which the occlusion process has been hastened by the retardation of the warm front along the windward slopes of a mountain range.
orographic precipitation [METEOROL] Precipitation which results from the lifting of moist air over an orographic barrier such as a mountain range; strictly, the amount so designated should not include that part of the precipitation which would be expected from the dynamics of the associated weather disturbance, if the disturbance were over flat terrain.
orography [GEOGR] The branch of geography dealing with mountains.
orohydrography [HYD] A branch of hydrography dealing with the relations of mountains to drainage.
Oromericidae [VERT ZOO] An extinct family of camellike tylopod ruminants in the superfamily Cameloidea.
orometer [ENG] A barometer with a scale that indicates elevation above sea level.
oropharynx [ANAT] The oral pharynx, located between the lower border of the soft palate and the larynx.
orophyte [ECOL] Any plant that grows in the subalpine region.
orotath [GEOL] An orogenic belt that has been stretched substantially in a lengthwise direction.
orotic acid [BIOCHEM] $C_4H_4O_4N_2$ A crystalline acid which is a growth factor for certain bacteria and is also a pyrimidine precursor.
Oroya fever [MED] The severe form of Carrion's disease, characterized by a sudden, severe, and rapid course, often fatal anemia, and remittent fever.
orpiment [MINERAL] As_2S_3 A lemon-yellow mineral, crystallizing in the monoclinic system, and generally occurring in foliated or columnar masses; luster is resinous and pearly on the cleavage surface, hardness is 1.5–2 on Mohs scale, and specific gravity is 3.49. Also known as yellow arsenic.
orrery [ASTRON] A model of the solar system equipped with mechanical devices to make the planets move at their correct relative velocities around the sun.
orris [MATER] The fragrant powder from the root of the plants *Iris florentinea, I. germanica,* and *I. pallida;* used in perfume, medicine, and tooth powder. Also known as orrisroot.
orris oil [MATER] A yellow, fatty, semisolid, fragrant essential oil obtained from roots of the Florentine iris; melts at 44–50°C; soluble in ether, chloroform, and alcohol; main components are myristic acid, oleic acid, and irone; used in flavoring and perfumes.
orrisroot *See* orris.
Orr's white *See* lithopone.
Orsat analyzer [ANALY CHEM] Gas analysis apparatus in which various gases are absorbed selectively (volumetric basis) by passing them through a series of preselected solvents.
orseille *See* orchil.
Orthacea [PALEON] An extinct group of articulate brachiopods in the suborder Orthidina in which the delthyrium is open.
orthamine *See* phenylenediamine.
Orthent [GEOL] A suborder of the soil order Entisol, well drained and of medium or fine texture, usually shallow to bedrock and lacking evidence of horizonation; occurs mostly on strong slopes.
Orthezиinae [INV ZOO] A subfamily of homopteran insects in the superfamily Coccoidea having abdominal spiracles present in all stages and a flat anal ring bearing pores and setae in immature forms and adult females.
orthicon [ELECTR] A camera tube in which a beam of low-velocity electrons scans a photoemissive mosaic that is capable of storing a pattern of electric charges; has higher sensitivity than the iconoscope.
Orthid [GEOL] A suborder of the soil order Aridisol, mostly well drained, gray or brownish-gray with little change from top to bottom of the soil profile; occupies younger, but not the youngest, land surfaces in deserts.
Orthida [PALEON] An order of extinct articulate brachiopods which includes the oldest known representatives of the class.
Orthidina [PALEON] The principal suborder of the extinct Orthida, including those articulate brachiopods characterized by biconvex, finely ribbed shells with a straight hinge line and well-developed interareas on both valves.
orthite [MINERAL] Allanite in the form of slender prismatic or acicular crystals.
ortho acid [ORG CHEM] **1.** Aromatic acid with a carboxyl group in the ortho position (1,2 position). **2.** Organic acid with one added molecule of water in chemical combination; for example, $HC(OH)_3$, orthoformic acid, in contrast to HCOOH, formic acid; $H_3PO_4(P_2O_5 \cdot 3H_2O)$, orthophosphoric acid, in contrast to the less hydrated form, metaphosphoric acid, $HPO_3(P_2O_5 \cdot H_2O)$.
orthoarsenic acid *See* arsenic acid.
orthoaxis [CRYSTAL] The diagonal or lateral axis perpendicular to the vertical axis in the monoclinic system.
orthobaric density [PHYS] The density of a liquid and of a saturated vapor with which it is at equilibrium at a given temperature.
orthobituminous coal [GEOL] Bituminous coal that contains 87–89% carbon, analyzed on a dry, ash-free basis.
orthoboric acid *See* boric acid.
orthocenter [MATH] The point at which the altitudes of a triangle intersect.
orthocephaly [ANTHRO] The condition of having the skull with a vertical index of 70.1–75.
orthoceratite [INV ZOO] Any nautiloid belonging to the genus *Orthoceras*, characterized by the presence of three longitudinal furrows on the body chamber.
orthochem [GEOCHEM] A precipitate formed within a depositional basin or within the sediment itself by direct chemical action.
orthochromatic [BIOL] Having normal staining characteristics. [GRAPHICS] Pertaining to sensitized materials that can be exposed by ultraviolet, blue, and green light, but not deep orange or red.
orthochronology [GEOL] Geochronology based on a standard succession of biostratigraphically significant faunas or floras, or based on irreversible evolutionary processes.
orthoclase [MINERAL] $KAlSi_3O_8$ A colorless, white, cream-yellow, flesh-reddish, or gray potassium feldspar that usually contains some sodium feldspar, either as albite or ana-

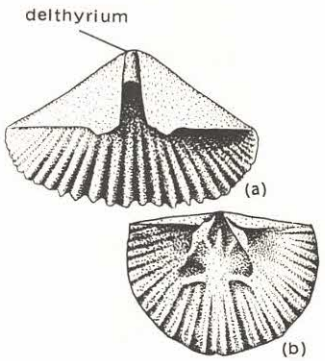
ORPIMENT



2.5 cm

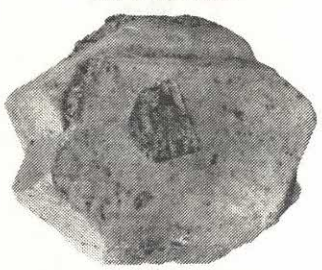
Foliated masses of orpiment found at Mercer, Utah. *(Specimen from Department of Geology, Bryn Mawr College)*

ORTHACEA



Shell of *Hesperothis.* *(a)* Pedicle valve posterior. *(b)* Brachial valve interior.

ORTHOCLASE



2.5 cm

Twinned orthoclase crystals from Gunnison County, Colorado. *(American Museum of Natural History Specimens)*

ORTHONECTIDA

The orthonectid *Rhopalura ophiocomae*, male discharging sperm near genital pore of female.

Ibite or in some intermediate state; it is or appears to be monoclinic. Also known as common feldspar; orthose; pegmatolite.

orthoconglomerate [GEOL] A conglomerate with an intact gravel framework held together by mineral cement and deposited by ordinary water currents.

orthocumulate [PETR] A cumulate composed chiefly of one or more cumulus minerals plus the crystallization products of the intercumulus liquid.

Orthod [GEOL] A suborder of the soil order Spodosol having accumulations of humus, aluminum, and iron; widespread in Canada and the Soviet Union.

orthodolomite [PETR] **1.** A primary dolomite, or one formed by sedimentation. **2.** A dolomite rock so well cemented that the particles interlock.

orthodontics [MED] A branch of dentistry that deals with the prevention and treatment of malocclusion.

orthodromic projection [MAP] A map projection, which is taken from the gnomonic projection, where angles are correct at two points and all great circles are straight lines.

orthoferrosilite [MINERAL] An orthopyroxene consisting of the orthorhombic silicate $FeSiO_3$.

orthogeosyncline [GEOL] A linear geosynclinal belt lying between continental and oceanic cratons, and having internal volcanic belts (eugeosynclinal) and external nonvolcanic belts (miogeosynclinal). Also known as geosynclinal couple; primary geosyncline.

orthognathic [ANTHRO] Pertaining to a condition of the upper jaw in which it is in an approximately vertical relationship to the profile of the facial skeleton, when the skull is oriented on the Frankfort horizontal plane; having a gnathic index of 97.9 or less.

orthogneiss [GEOL] Gneiss originating from igneous rock.

orthogonal [MATH] Perpendicular, or some concept analogous to it.

orthogonal antennas [ELECTROMAG] In radar, a pair of transmitting and receiving antennas, or a single transmitting-receiving antenna, designed for the detection of a difference in polarization between the transmitted energy and the energy returned from the target.

orthogonal basis [MATH] A basis for an inner product space consisting of mutually orthogonal vectors.

orthogonal complement [MATH] In an inner product space, the orthogonal complement of a vector **v** consists of all vectors orthogonal to **v**; the orthogonal complement of a subset S consists of all vectors orthogonal to each vector in S.

orthogonal crystal [CRYSTAL] A crystal whose axes are mutually perpendicular.

orthogonal family *See* orthogonal system.

orthogonal functions [MATH] Two real-valued functions are orthogonal if their inner product vanishes.

orthogonal group [MATH] The group of matrices arising from the orthogonal transformations of a euclidean space.

orthogonality [MATH] Two geometric objects have this property if they are perpendicular.

orthogonalization [MATH] A procedure in which, given a set of linearly independent vectors in an inner product space, a set of orthogonal vectors is recursively obtained so that each set spans the same subspace.

orthogonal lines [MATH] Lines which are perpendicular.

orthogonal matrix [MATH] A matrix whose inverse and transpose are identical.

orthogonal parity check [COMPUT SCI] A parity checking system involving both a lateral and a longitudinal parity check.

orthogonal polynomial [MATH] Orthogonal polynomials are various families of polynomials, which arise as solutions to differential equations related to the hypergeometric equation, and which are mutually orthogonal as functions.

orthogonal projection [MATH] A continuous linear map P of a Hilbert space H onto a subspace M such that if **h** is any vector in H, $\mathbf{h} = P\mathbf{h} + \mathbf{w}$, where **w** is in the orthogonal complement of M. Also known as orthographic projection.

orthogonal system [MATH] **1.** A system made up of n families of curves on an n-dimensional manifold in an $n + 1$ dimensional euclidean space, such that exactly one curve from each family passes through every point in the manifold, and, at each point, the tangents to the n curves that pass through that point are mutually perpendicular. **2.** A set of real-valued functions, the inner products of any two of which vanish. Also known as orthogonal family.

orthogonal trajectory [MATH] A curve that intersects all the curves of a given family at right angles.

orthogonal transformation [MATH] A linear transformation between real inner product spaces which preserves the length of vectors.

orthogonal vectors [MATH] In an inner product space, two vectors are orthogonal if their inner product vanishes.

orthographic chart [MAP] A chart on the orthographic projection.

orthographic projection [CRYSTAL] A projection for displaying the poles of a crystal in which the poles are projected from a reference sphere onto an equatorial plane by dropping perpendiculars from the poles to the plane. [MAP] A perspective azimuthal projection of one hemisphere produced by straight parallel lines from any point desired from an infinite distance; it is true to scale at the center only. [MATH] *See* orthogonal projection.

orthohelium [ATOM PHYS] Those states of helium atoms in which the spins of the two electrons are parallel.

orthohexagonal axes [CRYSTAL] A set of crystallographic axes, two of which have a fixed ratio, as in hexagonal or trigonal crystals.

orthohydrogen [ATOM PHYS] Those states of hydrogen molecules in which the spins of the two nuclei are parallel.

orthohydrous coal [GEOL] Coal that contains 5–6% hydrogen, analyzed on a dry, ash-free basis.

orthokeratology [MED] A procedure designed to reduce or eliminate refractive anomalies and binocular dysfunctions of the eye by the programmed application of contact lenses.

orthokinesis [BIOL] Random movement of a motile cell or organism in response to a stimulus.

ortholignitous coal [GEOL] Coal that contains 75–80% carbon, analyzed on a dry, ash-free basis.

orthomagmatic stage [GEOL] The principal stage in the crystallization of silicates from a typical magma; up to 90% of the magma may crystallize during this stage. Also known as orthotectic stage.

orthometric correction [ENG] A systematic correction that must be applied to a measured difference in elevation since level surfaces at varying elevations are not absolutely parallel.

orthometric height [ENG] The distance above sea level measured along a plumb line.

orthomimic feldspars [MINERAL] A group of feldspars that by repeated twinning simulate a higher degree of symmetry with rectangular cleavages.

orthomorphic [MAP] Preserving the correct shape.

orthomorphic chart [MAP] A chart on which very small shapes are correctly represented.

orthomorphic map projection *See* conformal map projection.

Orthonectida [INV ZOO] An order of Mesozoa; orthonectids parasitize various marine invertebrates as multinucleate plasmodia, and sexually mature forms are ciliated organisms.

Orthonik [MET] A magnetic alloy composed of 45–50% nickel, with the remainder iron, having a grainy structure, high permeability, and a rectangular hysteresis loop; used in magnetic cores.

orthonormal coordinates [MATH] In an inner product space, the coordinates for a vector expressed relative to an orthonormal basis.

orthonormal functions [MATH] Orthogonal functions f_1, f_2 ... with the additional property that the inner product of $f_n(x)$ with itself is 1.

orthonormal vectors [MATH] A collection of mutually orthogonal vectors, each having length 1.

orthopedics [MED] The branch of surgery concerned with corrective treatment of musculoskeletal deformities, diseases, and ailments by manual and instrumental measures.

Orthoperidae [INV ZOO] The minute fungus beetles, a family of coleopteran insects in the superfamily Cucujoidea.

orthophosphate [INORG CHEM] One of the possible salts of orthophosphoric acid; the general formula is M_3PO_4, where M may be potassium as in potassium orthophosphate, K_3PO_4.

orthophosphoric acid *See* phosphoric acid.

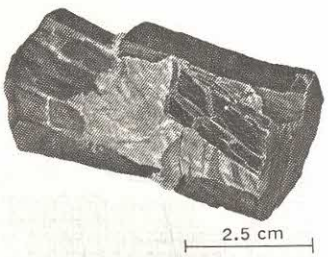
orthophotograph [GEOL] A photographic copy, prepared from a photograph formed by a perspective projection, in which the displacements due to tilt and relief have been removed.

orthophyric [PETR] Of the texture of the matrix of certain igneous rocks, having feldspar crystals with quadratic or short and stumpy rectangular cross sections.

orthopinacoid *See* front pinacoid.

orthopnea [MED] A condition in which there is difficulty in breathing except when sitting or standing upright.
orthopositronium [PARTIC PHYS] The state of positronium in which the positron and electron have parallel spins.
Orthopsida [INV ZOO] An order of echinoderms in the subclass Euechinoidea.
Orthopsidae [PALEON] A family of extinct echinoderms in the order Hemicidaroida distinguished by a camarodont lantern.
Orthoptera [INV ZOO] A heterogeneous order of generalized insects with gradual metamorphosis, chewing mouthparts, and four wings.
orthopyroxene [MINERAL] A series of pyroxene minerals crystallizing in the orthorhombic system; members include enstatite, bronzite, hypersthene, ferrohypersthene, eulite, and orthoferrosilite.
orthoquartzite [PETR] A clastic sedimentary rock composed almost entirely of detrital quartz grains; a quartzite of sedimentary origin. Also known as orthoquartzitic sandstone; sedimentary quartzite.
orthoquartzitic conglomerate [GEOL] A lithologically homogeneous, light-colored orthoconglomerate composed of quartzose residues that is commonly interbedded with pure quartz sandstone. Also known as quartz-pebble conglomerate.
orthoquartzitic sandstone *See* orthoquartzite.
orthorhombic lattice [CRYSTAL] A crystal lattice in which the three axes of a unit cell are mutually perpendicular, and no two have the same length. Also known as rhombic lattice.
orthorhombic pyroxene [MINERAL] A member of the mineral series enstatite($Mg_2[Si_2O_6]$)-orthoferrosilite($Fe_2[Si_2O_6]$), crystallizing in the orthorhombic system, space group *Pbca*.
orthorhombic system [CRYSTAL] A crystal system characterized by three axes of symmetry that are mutually perpendicular and of unequal length. Also known as rhombic system.
Orthorrhapha [INV ZOO] A suborder of the Diptera; in this group of flies, the adult escapes from the puparium through a T-shaped opening.
orthoschist [PETR] A schist derived from igneous rocks.
orthoscope [MED] **1.** An instrument for examination of the eye through a layer of water, whereby the curvature and hence the refraction of the cornea is neutralized. **2.** An instrument used in drawing the projections of skulls. [OPTICS] A polarizing microscope in which light is transmitted by a crystal which is parallel to the microscope axis.
orthoscopic eyepiece [OPTICS] An eyepiece that consists of a single lens, made up of three cemented elements, to which a planoconvex lens is added; designed to minimize distortion and spherical aberration.
orthoscopic system [OPTICS] An optical system that has been corrected so that distortion and spherical aberration are eliminated. Also known as rectilinear system.
orthose *See* orthoclase.
orthosite [PETR] A light-colored coarse-grained igneous rock composed almost entirely of orthoclase.
orthostatic [MED] Pertaining to or caused by standing upright.
orthostratigraphy [GEOL] Standard stratigraphy based on fossils which identify recognized biostratigraphic zones.
orthosymmetric crystal [CRYSTAL] A crystal that has orthorhombic symmetry.
orthotectic stage *See* orthomagmatic stage.
orthotill [GEOL] A till formed by immediate release of material from transported ice, such as by ablation and melting.
orthotomic system [OPTICS] An optical system in which all the rays may be interesected at right angles by a suitably chosen surface.
orthotonus [MED] Tetanic muscle spasm in which the body assumes a posture of rigid straightness.
orthotronic error control [COMPUT SCI] An error check carried out to ensure correct transmission, which uses lateral and longitudinal parity checks.
orthotropic [MECH] Having elastic properties such as those of timber, that is, with considerable variations of strength in two or more directions perpendicular to one another.
orthotropic deck [CIV ENG] A bridge deck constructed typically of flat steel plate and longitudinal and transverse ribs; functions in carrying traffic and acting as top flanges of floor beams.
orthotropism [BOT] The tendency of a plant to grow with the longer axis oriented vertically.
orthotropous [BOT] Having a straight ovule with the micropyle at the end opposite the stalk.
orthotungstic acid *See* tungstic acid.
Orthox [GEOL] A suborder of the soil order Oxisol that is moderate to low in organic matter, well drained, and moist all or nearly all year; believed to be extensive at low altitudes in the heart of the humid tropics.
Orussidae [INV ZOO] A small family of hymenopteran insects in the superfamily Siricoidea.
orvietite [PETR] An extrusive rock composed of approximately equal amounts of plagioclase and sanidine; includes leucite, augite, minor biotite, and olivine, and accessory apatite and opaque oxides.
oryctocoenosis [PALEON] The part of a thanatocoenosis that has been preserved as a fossil.
Os *See* osmium.
Osagean [GEOL] A provincial series of geologic time in North America; Lower Mississippian (above Kinderhookian, below Meramecian).
osage orange [BOT] *Maclura pomifera*. A tree in the mulberry family of the Urticales characterized by yellowish bark, milky sap, simple entire leaves, strong axillary thorns, and aggregate green fruit about the size and shape of an orange.
osar *See* esker.
osazone [BIOCHEM] Any of the compounds that contain two phenylhydrazine residues and are produced by a reaction between a reducing sugar and phenylhydrazine.
O scan *See* O scope.
osciducer [ELECTR] Transducer in which information pertaining to the stimulus is provided in the form of deviation from the center frequency of an oscillator.
oscillating conveyor [MECH ENG] A conveyor on which pulverized solids are moved by a pan or trough bed attached to a vibrator or oscillating mechanism. Also known as vibrating conveyor.
oscillating granulator [MECH ENG] Solids size-reducer in which particles are broken by a set of oscillating bars arranged in cylindrical form over a screen of suitable mesh.
oscillating magnetic field [ELECTROMAG] A magnetic field which varies periodically in time.
oscillating screen [MECH ENG] Solids separator in which the sifting screen oscillates at 300 to 400 revolutions per minute in a plane parallel to the screen.
oscillation [CONT SYS] *See* cycling. [PHYS] Any effect that varies periodically back and forth between two values.
oscillation of a function [MATH] **1.** The oscillation of a real-valued function on an interval is the difference between its least upper bound and greatest lower bound there. **2.** The oscillation of a real-valued function at a point x is the limit of the oscillation of the function on the interval $[x - e, x + e]$ as e approaches 0. Also known as saltus.
oscillation ripple *See* oscillation ripple mark.
oscillation ripple mark [GEOL] A symmetric ripple mark having a sharp, narrow, and relatively straight crest between broadly rounded troughs, formed by the motion of water agitated by oscillatory waves on a sandy base at a depth shallower than wave base. Also known as oscillation ripple; oscillatory ripple mark; wave ripple mark.
oscillator [ELECTR] **1.** An electronic circuit that converts energy from a direct-current source to a periodically varying electric output. **2.** The stage of a superheterodyne receiver that generates a radio-frequency signal of the correct frequency to mix with the incoming signal and produce the intermediate-frequency value of the receiver. **3.** The stage of a transmitter that generates the carrier frequency of the station or some fraction of the carrier frequency. [PHYS] Any device (mechanical or electrical) which, in the absence of external forces, can have a periodic back-and-forth motion, the frequency determined by the properties of the oscillator.
oscillator harmonic interference [ELECTR] Interference occurring in a superheterodyne receiver due to the interaction of incoming signals with harmonics (usually the second harmonic) of the local oscillator.
Oscillatoriales [BOT] An order of blue-green algae (Cyanophyceae) which are filamentous and truly multicellular.
oscillator-mixer-first detector *See* converter.
oscillator strength [ATOM PHYS] A quantum-mechanical analog of the number of dispersion electrons having a given natural frequency in an atom, used in an equation for the

ORTHORHOMBIC PYROXENE

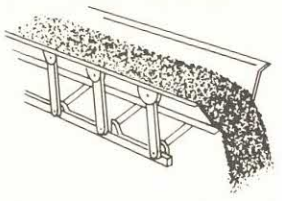


A black crystal of enstatite, which is an end member of the orthorhombic pyroxene series, found in Bomlo, Norway. *(Specimen from Department of Geology, Bryn Mawr College)*

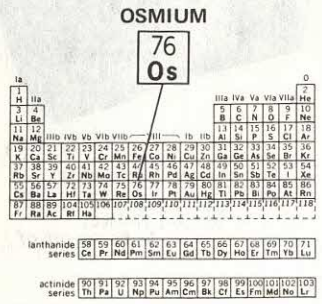
OSAGE ORANGE

Leaf and branch of *Maclura pomifera*.

OSCILLATING CONVEYOR



Oscillating conveyor, with whole trough oscillating.



Periodic table of the chemical elements showing the position of osmium.

absorption coefficient of a spectral line; it need not be a whole number. Also known as f value; Ladenburg f value.

oscillatory circuit [ELEC] Circuit containing inductance or capacitance, or both, and resistance, connected so that a voltage impulse will produce an output current which periodically reverses or oscillates.

oscillatory discharge [ELEC] Alternating current of gradually decreasing amplitude which, under certain conditions, flows through a circuit containing inductance, capacitance, and resistance when a voltage is applied.

oscillatory extinction *See* undulatory extinction.

oscillatory reaction [CHEM] A chemical reaction in which a variable of a chemical system exhibits regular periodic changes in time or in space.

oscillatory ripple mark *See* oscillation ripple mark.

oscillatory shear [FL MECH] Application of small-amplitude oscillations to produce shear in viscoelastic fluids for the study of dynamic viscosity.

oscillatory surge [ELEC] Surge which includes both positive and negative polarity values.

oscillatory twinning [CRYSTAL] Repeated, parallel twinning.

oscillatory wave [PHYS] A wave composed of individual particles, each of which oscillates about a point with little, if any, permanent change in position.

oscillistor [ELECTR] A bar of semiconductor material, such as germanium, that will oscillate much like a quartz crystal when it is placed in a magnetic field and is carrying direct current that flows parallel to the magnetic field.

oscillogram [ENG] The permanent record produced by an oscillograph, or a photograph of the trace produced by an oscilloscope.

oscillograph [ENG] A measurement device for determining waveform by recording the instantaneous values of a quantity such as voltage as a function of time.

oscillographic polarography [PHYS CHEM] A type of voltammetry using a dropping mercury electrode with oscillographic scanning of the applied potential; used to measure the concentration of electroactive species in solutions.

oscillograph tube [ELECTR] Cathode-ray tube used to produce a visible pattern, which is the graphical representation of electric signals, by variations of the position of the focused spot or spots according to these signals.

oscillometric titration [PHYS CHEM] Radio-frequency technique used for conductometric and dielectrometric titrations; the changes in conductance or dielectric properties changes the solution capacity and thus the frequency of the connected oscillator circuit.

oscillometry [PHYS CHEM] Electrode measurement of oscillation-frequency changes to detect the progress of a titration of electrolytic solutions.

oscilloscope *See* cathode-ray oscilloscope.

Oscillospira [MICROBIO] A genus of endospore-forming, motile rods or filaments of uncertain affiliation; have not been grown in pure culture.

Oscillospiraceae [MICROBIO] Formerly a family of large, gram-negative, motile bacteria of the order Caryophanales which lose motility on exposure to oxygen.

oscine *See* scopoline.

Oscines [VERT ZOO] The songbirds, a suborder of the order Passeriformes.

O scope [ELECTR] An A scope modified by the inclusion of an adjustable notch for measuring range. Also known as O indicator; O scan.

osculating orbit [ASTRON] The orbit which would be followed by a body such as an asteroid or comet if, at a given time, all the planets suddenly disappeared, and it then moved under the gravitational force of the sun alone.

osculating plane [MATH] For a curve C at some point p, this is the limiting plane obtained from taking planes through the tangent to C at p and containing some variable point p' and then letting p' approach p along C.

osculum [INV ZOO] An excurrent orifice in Porifera.

Oseen's flow [FL MECH] Fluid flow in which the velocity of flow is very small but the Reynold's number is greater than 1.

Osgood-Schlatter disease *See* osteochondrosis.

O shell [ATOM PHYS] The fifth layer of electrons about the nucleus of an atom, having electrons characterized by the principal quantum number 5.

Osler-Rendu-Weber disease *See* hereditary hemorrhagic telangiectasia.

osmate [INORG CHEM] A salt or ester of osmic acid, containing the osmate radical, OsO_4^{--}; for example, potassium osmate (K_2OsO_4).

osmic acid anhydride [INORG CHEM] OsO_4 Poisonous yellow crystals with disagreeable odor; melts at 40°C; soluble in water, alcohol, and ether; used in medicine, photography, and catalysis. Also known as osmium oxide; osmium tetroxide.

osmium [CHEM] A chemical element, symbol Os, atomic number 76, atomic weight 190.2. [MET] A hard white metal of rare natural occurrence.

osmium oxide *See* osmic acid anhydride.

osmium tetroxide *See* osmic acid anhydride.

osmolality [CHEM] The molality of an ideal solution of a nondissociating substance that exerts the same osmotic pressure as the solution being considered.

osmolarity [CHEM] The molarity of an ideal solution of a nondissociating substance that exerts the same osmotic pressure as the solution being considered.

osmole [CHEM] **1.** The unit of osmolarity equal to the osmolarity of a solution that exerts an osmotic pressure equal to that of an ideal solution of a nondissociating substance that has a concentration of 1 mole of solute per liter of solution. **2.** The unit of osmolality equal to the osmolality of a solution that exerts an osmotic pressure equal to that of an ideal solution of a nondissociating substance that has a concentration of 1 mole of solute per kilogram of solvent.

osmometer [ANALY CHEM] A device for measuring molecular weights by measuring the osmotic pressure exerted by solvent molecules diffusing through a semipermeable membrane.

osmophile [MICROBIO] A microorganism adapted to media with high osmotic pressure.

osmophobia [PSYCH] An abnormal fear of odors.

osmoreceptor [PHYSIO] One of a group of structures in the hypothalamus which respond to changes in osmotic pressure of the blood by regulating the secretion of the neurohypophyseal antidiuretic hormone.

osmoregulatory mechanism [PHYSIO] Any physiological mechanism for the maintenance of an optimal and constant level of osmotic activity of the fluid in and around the cells.

osmosis [PHYS CHEM] The transport of a solvent through a semipermeable membrane separating two solutions of different solute concentration, from the solution that is dilute in solute to the solution that is concentrated.

osmotic fragility [PHYSIO] Susceptibility of red blood cells to lyses when placed in dilute (hypotonic) salt solutions.

osmotic gradient *See* osmotic pressure.

osmotic pressure [PHYS CHEM] **1.** The applied pressure required to prevent the flow of a solvent across a membrane which offers no obstruction to passage of the solvent, but does not allow passage of the solute, and which separates a solution from the pure solvent. **2.** The applied pressure required to prevent passage of a solvent across a membrane which separates solutions of different concentration, and which allows passage of the solute, but may also allow limited passage of the solvent. Also known as osmotic gradient.

osmotic shock [PHYSIO] The bursting of cells suspended in a dilute salt solution.

Osos wind [METEOROL] In California, a strong northwest wind blowing from the Loa Osos valley to the San Luis valley.

osphradium *See* asphradium.

osseine [MATER] The organic residue formed when bone is dissolved in hydrochloric acid; used to make glue and gelatin.

osseous [ANAT] Bony; composed of or resembling bone.

osseous system [ANAT] The skeletal system of the body.

osseous tissue [HISTOL] Bone tissue.

ossicle [ANAT] Any of certain small bones, as those of the middle ear. [INV ZOO] Any of various calcareous bodies.

ossify [PHYSIO] To form or turn into bone.

ossifying fibroma [MED] A benign bone tumor derived from ossiferous connective tissue. Also known as fibrous osteoma; osteogenic fibroma.

ossipite [PETR] A coarse-grained variety of troctolite containing labradorite, olivine, magnetite, and a small amount of diallage.

ost-, oste-, osteo- [ANAT] A combining form meaning bone.

Ostariophysi [VERT ZOO] A superorder of actinopterygian fishes distinguished by the structure of the anterior four or five

vertebrae which are modified as an encasement for the bony ossicles connecting the inner ear and swim bladder.

Osteichthyes [VERT ZOO] The bony fishes, a class of fishlike vertebrates distinguished by having a bony skeleton, a swim bladder, a true gill cover, and mesodermal ganoid, cycloid, or ctenoid scales.

osteitis [MED] Inflammation of bone.

osteitis fibrosa cystica [MED] Generalized skeletal demineralization due to an increased rate of bone destruction resulting from hyperparathyroidism. Also known as Engel-Recklinghausen disease; osteitis fibrosa generalisata.

osteitis fibrosa generalisata *See* osteitis fibrosa cystica.

osteoarthritis *See* degenerative joint disease.

osteoarthropathy [MED] Any disease of bony articulations.

osteoblast [HISTOL] A bone-forming cell of mesenchymal origin.

osteochondritis [MED] Inflammation of both bone and cartilage.

osteochondroma [MED] A benign hamartomatous tumor originating in bone or cartilage.

osteochondrosis [MED] A disease characterized by avascular necrosis of ossification centers followed by regeneration. Also known as Calvé's disease; Kienböck's disease; Kohler's disease; Osgood-Schlatter disease; Scheuermann's disease.

osteoclasis [MED] Forcible fracture of a long bone without open operation, to correct a deformity. [PHYSIO] **1.** Destruction of bony tissue. **2.** Bone resorption.

osteoclast [HISTOL] A large multinuclear cell associated with bone resorption. [MED] A large surgical apparatus through which leverage can be exerted to effect osteoclasis.

osteocyte [HISTOL] A bone cell.

osteodermia [MED] A condition characterized by ossification within the skin.

osteodystrophy [MED] Any defective bone formation, as in rickets or dwarfism.

osteofibrosis [MED] Fibrosis of bone.

osteogenesis [PHYSIO] Formation or histogenesis of bone.

osteogenesis imperfecta [MED] A disease inherited as an autosomal dominant and characterized by hypoplasia of osteoid tissue and collagen, resulting in bone fractures.

osteogenesis imperfecta congenita [MED] A form of osteogenesis imperfecta in which fractures occur at or before birth.

osteogenic fibroma *See* ossifying fibroma.

osteogenic sarcoma *See* osteosarcoma.

Osteoglossidae [VERT ZOO] The bony tongues, a family of actinopterygian fishes in the order Osteoglossiformes.

Osteoglossiformes [VERT ZOO] An order of soft-rayed, actinopterygian fishes distinguished by paired, usually bony rods at the base of the second gill arch, a single dorsal fin, no adipose fin, and a usually abdominal pelvic fin.

osteoid [HISTOL] The young hyaline matrix of true bone in which the calcium salts are deposited.

osteolathyrism [MED] Degeneration of bone collagen resulting from experimental administration of β-aminoproprionitrile.

Osteolepidae [PALEON] A family of extinct fishes in the order Osteolepiformes.

Osteolepiformes [PALEON] A primitive order of fusiform lobefin fishes, subclass Crossopterygii, generally characterized by rhombic bony scales, two dorsal fins placed well back on the body, and a well-ossified head covered with large dermal plating bones.

osteolith [PALEON] A fossil bone.

osteology [ANAT] The study of anatomy and structure of bone.

osteolysis [MED] Degeneration of bone tissue. [PHYSIO] Resorption of bone.

osteoma [MED] A benign bone tumor, especially in membrane bones of the skull.

osteomalacia [MED] Failure of bone to ossify due to a reduced amount of available calcium. Also known as adult rickets.

osteometry [ANAT] The study of the size and proportions of the osseous system.

osteomyelitis [MED] Inflammation of bone tissue and bone marrow.

osteon [HISTOL] A microscopic unit of mature bone composed of layers of osteocytes and bone surrounding a central canal. Also known as Haversian system.

osteonephropathy [MED] Any syndrome involving bone changes accompanying kidney disease.

osteopath [MED] A physician who specializes in osteopathy.

osteopathy [MED] **1.** A school of healing which teaches that the body is a vital mechanical organism whose structural and functional integrity are coordinate and interdependent, the abnormality of either constituting disease. **2.** Any disease of bone.

osteopetrosis [MED] A rare developmental error of unknown cause but of familial tendency, characterized chiefly by excessive radiographic density of most or all of the bones. Also known as marble bone disease.

osteophony [PHYSIO] Conduction of sound by bone.

osteoplasty [MED] Plastic surgery performed on bone, particularly bone tissue replacement or reconstruction.

osteopoikilosis [MED] A bone affection of unknown cause and no symptoms, characterized by ellipsoidal, dense foci in all bones.

osteoporosis [MED] Deossification with absolute decrease in bone tissue, resulting in enlargement of marrow and Haversian spaces, decreased thickness of cortex and trabeculae, and structural weakness.

osteosarcoma [MED] A malignant tumor principally composed of anaplastic cells of mesenchymal derivation. Also known as osteogenic sarcoma.

osteosclerotic anemia *See* myelophthisic anemia.

Osteostraci [PALEON] An order of extinct jawless vertebrates; they were mostly small, with the head and part of the body encased in a solid armor of bone, and the posterior part of the body and the tail covered with thick scales.

osteotomy [MED] **1.** Surgical division of a bone. **2.** Making a section of a bone for the purpose of correcting a deformity.

ostiole [BIOL] A small orifice or pore.

ostium [BIOL] A mouth, entrance, or aperture.

Ostomidae [INV ZOO] The bark-gnawing beetles, a family of coleopteran insects in the superfamily Cleroidea.

Ostracoda [INV ZOO] A subclass of the class Crustacea containing small, bivalved aquatic forms; the body is unsegmented and there is no true abdominal region.

ostracoderm [PALEON] Any of various extinct jawless vertebrates covered with an external skeleton of bone which together with the Cyclostomata make up the class Agnatha.

Ostreidae [INV ZOO] A family of bivalve mollusks in the order Anisomyaria containing the oysters.

ostria [METEOROL] A warm southerly wind on the Bulgarian coast; it is considered a precursor of bad weather. Also known as auster.

ostrich [VERT ZOO] *Struthio camelus*. A large running bird with soft plumage, naked head, neck and legs, small wings, and thick powerful legs with two toes on each leg; the only living species of the Struthioniformes.

Ostwald dilution law [PHYS CHEM] The law that for a sufficiently dilute solution of univalent electrolyte, the dissociation constant approximates $a^2c/(1-a)$, where c is the concentration of electrolyte and a is the degree of dissociation.

Ostwald process [CHEM ENG] An industrial preparation of nitric acid by the oxidation of ammonia; the oxidation takes place in successive stages to nitric oxide, nitrogen dioxide, and nitric acid; a catalyst of platinum gauze is used and high temperatures are needed.

Ostwald ripening [CHEM] Solution-crystallizer phenomenon in which small crystals, more soluble than large ones, dissolve and reprecipitate onto larger particles.

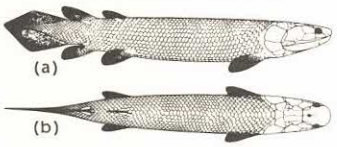
Ostwald's adsorption isotherm [THERMO] An equation stating that at a constant temperature the weight of material adsorbed on an adsorbent dispersed through a gas or solution, per unit weight of adsorbent, is proportional to the concentration of the adsorbent raised to some constant power.

Ostwald viscometer [ENG] A viscometer in which liquid is drawn into the higher of two glass bulbs joined by a length of capillary tubing, and the time for its meniscus to fall between calibration marks above and below the upper bulb is compared with that for a liquid of known viscosity.

osumilite [MINERAL] $(K,Na)(Mg,Fe^{2+})_2(Al,Fe^{3+})_3(Si,Al)_{12}O_{30}\cdot H_2O$ A mineral that crystallizes in the hexagonal system and is commonly mistaken for cordierite.

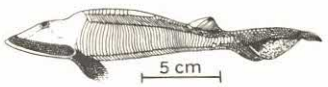
Oswald diagram [ANALY CHEM] Diagram used in fuel Orsat

OSTEOLEPIFORMES



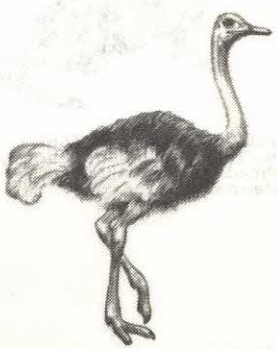
Devonian osteolepid *Gyroptychius agassizi*, with a length of 18 inches (46 centimeters), shown in *(a)* lateral and *(b)* dorsal aspects. *(Restorations, after E. Jarvik, On the Morphology and Taxonomy of the Middle Devonian Osteolepid Fishes of Scotland, Kgl. Svenska Vetenskapsakad, Handl., Tredje Serien, Band 25, no. 1, Stockholm, 1948)*

OSTRACODERM



The ostracoderm *Hemicyclaspis*, a cephalaspid, a Lower Devonian jawless vertebrate. *(From E. H. Colbert, Evolution of the Vertebrates, 2d ed., copyright © 1969 by John Wiley & Sons, Inc.; reprinted by permission)*

OSTRICH



The ostrich *(Struthio camelus)*, a large African running bird, grows to 8 feet (2 meters).

analyses by plotting percent by volume CO_2 maximum in the fuel (ordinate) versus percent by volume O_2 in air (abscissa); O_2 and CO_2 Orsat readings should fall on a line connecting these maximum values if the analysis is proceeding properly.

ot-, oto- [ANAT] A combining form meaning ear.

otalgia [MED] Pain in the ear.

Otariidae [VERT ZOO] The sea lions, a family of carnivorous mammals in the superfamily Canoidea.

otavite [MINERAL] $CdCO_3$ A mineral that crystallizes in the hexagonal system and is isostructural with calcite.

Othmer process [CHEM ENG] Process to produce acetic acid from pyroligneous acid by azeotropic distillation.

Othniidae [INV ZOO] The false tiger beetles, a small family of coleopteran insects in the superfamily Tenebrionoidea.

otic [ANAT] Of or pertaining to the ear or a part thereof.

-otic [SCI TECH] A suffix meaning of, pertaining to, characterized by, or causing the process.

otic capsule [EMBRYO] A cartilaginous capsule surrounding the auditory vesicle during development, later fusing with the spheroid and occipital cartilages.

otic ganglion [ANAT] The nerve ganglion located immediately below the foramen ovale of the sphenoid bone.

Otitidae [INV ZOO] A family of cyclorrhaphous myodarian dipteran insects in the subsection Acalyptratae.

otitis [MED] Inflammation of the ear.

otitis externa [MED] Inflammation of the external ear.

otitis media [MED] Inflammation of the middle ear.

otocyst [EMBRYO] The auditory vesicle of vertebrate embryos. [INV ZOO] An auditory vesicle, otocell, or otidium in some invertebrates.

otolaryngology [MED] A branch of medicine that deals with the ear, nose, and throat. Also known as otorhinolaryngology.

otolith [ANAT] A calcareous concretion on the end of a sensory hair cell in the vertebrate ear and in some invertebrates.

otology [MED] A branch of medicine that deals with the ear and its diseases.

otomycosis [MED] Fungus infection of the external ear, usually caused by *Aspergillus niger* and *A. fumigatus*.

Otopheidomenidae [INV ZOO] A family of parasitic mites in the suborder Mesostigmata.

otorhinolaryngology *See* otolaryngology.

otosclerosis [MED] Sclerosis of the inner ear, causing a progressive increase in deafness.

otoscope [MED] An apparatus designed for examination of the ear and for rendering the tympanic membrane visible.

OTS *See* ovonic threshold switch.

otter [ENG] *See* paravane. [VERT ZOO] Any of various members of the family Mustelidae, having a long thin body, short legs, a somewhat flattened head, webbed toes, and a broad flattened tail; all are adapted to aquatic life.

otter trawl [NAV ARCH] A large commercial fishing trawl which uses kitelike wooden boards at the corners of the mouth of the net.

Otto cycle [THERMO] A thermodynamic cycle for the conversion of heat into work, consisting of two isentropic phases interspersed between two constant-volume phases. Also known as spark-ignition combustion cycle.

Otto engine [MECH ENG] An internal combustion engine that operates on the Otto cycle, where the phases of suction, compression, combustion, expansion, and exhaust occur sequentially in a four-stroke-cycle or two-stroke-cycle reciprocating mechanism.

Otto-Lardillon method [MECH] A method of computing trajectories of missiles with low velocities (so that drag is proportional to the velocity squared) and quadrant angles of departure that may be high, in which exact solutions of the equations of motion are arrived at by numerical integration and are then tabulated.

ottoman [TEXT] Heavyweight fabric with pronounced crosswise rounded ribs, often padded, with heavier ribs than those of faille or bengaline.

otto of rose oil *See* rose oil.

ottrelite [MINERAL] A gray to black variety of chloritoid containing manganese.

O-type backward-wave oscillator [ELECTR] A backward-wave tube in which an electron gun produces an electron beam focused longitudinally throughout the length of the tube, a slow-wave circuit interacts with the beam, and at the end of the tube a collector terminates the beam. Also known as O-type carcinotron; type-O carcinotron.

OTTER

North American otter (*Lutra canadensis*), with supple body, webbed feet, and thick water-resistant fur.

O-type carcinotron *See* O-type backward-wave oscillator.

O-type star [ASTRON] A spectral-type classification in the Draper catalog of stars; a star having spectral type O; a very hot, blue star in which the spectral lines of ionized helium are prominent.

ouabain [ORG CHEM] $C_{29}H_{44}O_{12}\cdot 8H_2O$ White crystals that melt with decomposition at 190°C, soluble in water and ethanol; used in medicine.

ouachitite [PETR] A biotite monchiquite with no olivine and a glassy or analcime groundmass.

ouari [METEOROL] A south wind of Somaliland, Africa; it is similar to the khamsin.

Oudeman law [PHYS CHEM] The law that the molecular rotations of the various salts of an acid or base tend toward an identical limiting value as the concentration of the solution is reduced to zero.

ounce [MECH] **1.** A unit of mass in avoirdupois measure equal to 1/16 pound or to approximately 0.0283495 kilogram. Abbreviated oz. **2.** A unit of mass in either troy or apothecaries' measure equal to 480 grains or exactly 0.0311034768 kilogram. Also known as apothecaries' ounce or troy ounce (abbreviations are oz ap and oz t in the United States, and oz apoth and oz tr in the United Kingdom).

ouncedal [MECH] A unit of force equal to the force which will impart an acceleration of 1 foot per second per second to a mass of 1 ounce; equal to 0.0086409346485 newton.

ounce metal [MET] An alloy composed of 1 ounce each of lead, tin, and zinc to 1 pound of copper. Also known as composition metal.

ouricury wax [MATER] A hard brown wax obtained from leaves of the ouricury palm (*Cocos coronapa*); similar to carnauba wax in use and properties.

outage [ELEC] A failure in an electric power system. [PETRO ENG] The difference between the full or rated capacity of a barrel, tank, or tank car as compared to actual content.

outage method [PETRO ENG] Deduction of the liquid content of a tank by measurement of the distance from the top of the tank to the surface of the liquid; in contrast to the innage method.

outboard [NAV ARCH] Toward the outside of a vessel; outside the hull.

outboard engine [NAV ARCH] A unit assembly of engine, propeller, and vertical drive shaft used to propel a boat and usually clamped to the boat transom; power of various models ranges from 1 horsepower (approximately 750 watts) to well over 100 horsepower. Also known as outboard motor.

outboard motor *See* outboard engine.

outboard profile [NAV ARCH] A plan representing the longitudinal exterior of a vessel showing the starboard side of the shell, all deck erections, masts, yards, rigging, rails, and so on.

outbreeding *See* exogamy.

outburst [MIN ENG] The sudden issue of gases, chiefly methane (sometimes accompanied by coal dust), from the working face of a coal mine.

outby [MIN ENG] Toward the mine entrance or shaft and therefore away from the working face.

outcrop [GEOL] Exposed stratum or body of ore at the surface of the earth. Also known as cropout.

outcrop curvature *See* settling.

outcrop map [GEOL] A type of geologic map that shows the distribution and shape of actual outcrops, leaving those areas without outcrops blank.

outcrop water [HYD] Rain and surface water which seeps downward through outcrops of porous and fissured rock, fault planes, old shafts, or surface drifts.

outer atmosphere [METEOROL] Very generally, the atmosphere at a great distance from the earth's surface; possibly best usage of the term is as an approximate synonym for exosphere.

outer automorphism [MATH] Any element of the quotient group formed from the group of automorphisms of a group and the subgroup of inner automorphisms.

outer bar [GEOL] A bar formed at the mouth of an ebb channel of an estuary.

outer beach [GEOL] The part of a beach that is ordinarily dry and reached only by the waves generated by a violent storm.

outer bottom [NAV ARCH] A part of a double-bottom ship, specifically, the bottom shell plating.

outer bremsstrahlung [PHYS] Bremsstrahlung involving the acceleration of a charged particle coming from outside the

atom whose nucleus produces the acceleration, and in which the energy loss by radiation is much greater than that by ionization, usually seen in electrons with energies greater than about 50 MeV (million electron volts).

outer core [GEOL] The outer or upper zone of the earth's core, extending to a depth of 5100 kilometers, and including the transition zone.

outer fix [NAV] A fix in the destination terminal area, other than the approach fix, to which aircraft are normally cleared by an air route traffic-control center or a terminal area traffic-control facility, and from which aircraft are cleared to the approach fix or final approach course.

outer harbor [GEOGR] The part of a harbor toward the sea, through which a vessel enters the inner harbor.

outer keel [NAV ARCH] The outer plate of a double flat-plate keel.

outer mantle *See* upper mantle.

outer marker [NAV] That instrument landing system (ILS) marker farthest from the approach end of the instrument runway; the marker is located 4.5 miles ± 1000 feet (7240 ± 305 meters) from the end of the runway and not more than 250 feet (75 meters) from the extended center line of the runway.

outer measure [MATH] A function with the same properties as a measure except that it is only countably subadditive rather than countably additive; usually defined on the collection of all subsets of a given set.

outer orbital complex [PHYS CHEM] A metal coordination compound in which the *d* orbital used in forming the coordinate bond is at the same energy level as the *s* and *p* orbitals.

outer planets [ASTRON] The planets with orbits larger than that of Mars: Jupiter, Saturn, Uranus, Neptune, and Pluto.

outer-shell electron *See* conduction electron.

outer space [ASTRON] A general term for any region that is beyond the earth's atmosphere.

outface *See* dip slope.

outfall [CIV ENG] The point at which a sewer or drainage channel discharges to the sea or to a river. [HYD] The narrow part of a stream, lake, or other body of water where it drops away into a larger body.

outflow [CHEM ENG] Flow of fluid product out of a process facility.

outflow cave [GEOL] A cave from which a stream issues or is known to have issued.

outgassing [ENG] The release of adsorbed or occluded gases or water vapor, usually by heating, as from a vacuum tube or other vacuum system.

outgoing trunk *See* one-way trunk.

outlet [ELEC] A power line termination from which electric power can be obtained by inserting the plug of a line cord. Also known as convenience receptacle; electric outlet; receptacle.

outlet box [ELEC] A box at which lines in an electric wiring system terminate, so that electric appliances or fixtures may be connected.

outlet glacier [HYD] A stream of ice from an ice cap to the sea.

outlet head [HYD] The place where water leaves a lake and enters an effluent.

outlier [GEOL] A group of rocks separated from the main mass and surrounded by outcrops of older rocks. [STAT] In a set of data, a value so far removed from other values in the distribution that its presence cannot be attributed to the random combination of chance causes.

outline map [MAP] A map that presents minimal geographic information, usually only coastlines, principal streams, major civil boundaries, and large cities, leaving as much space as possible for the addition of specific data.

out-of-line coding [COMPUT SCI] Instructions in a routine that are stored in a different part of computer storage from the rest of the instructions.

out of phase [PHYS] Having waveforms that are of the same frequency but do not pass through corresponding values at the same instant.

out-of-service jack [ELEC] Jack associated with a test jack which removes the circuit from service when a shorted plug is inserted.

outpatient [MED] A patient who comes to the hospital or clinic for diagnosis and treatment but who does not occupy a bed in the institution.

out-plant system [COMPUT SCI] A data-processing system that has one or more remote terminals from which information is transmitted to a central computer.

output [COMPUT SCI] **1.** The data produced by a data-processing operation, or the information that is the objective or goal in data processing. **2.** The data actively transmitted from within the computer to an external device, or onto a permanent recording medium (paper, microfilm). **3.** The activity of transmitting the generated information. **4.** The readable storage medium upon which generated data are written, as in hard-copy output. [ELECTR] **1.** The current, voltage, power, driving force, or information which a circuit or device delivers. **2.** Terminals or other places where a circuit or device can deliver current, voltage, power, driving force, or information. [SCI TECH] The product of a system.

output area [COMPUT SCI] A part of storage that has been reserved for output data. Also known as output block.

output block [COMPUT SCI] **1.** A portion of the internal storage of a computer that is reserved for receiving, processing, and transmitting data to be transferred out. **2.** *See* output area.

output bus driver [ELECTR] A device that power-amplifies output signals from a computer to allow them to drive heavy circuit loads.

output capacitance [ELECTR] Of an *n*-terminal electron tube, the short-circuit transfer capacitance between the output terminal and all other terminals, except the input terminal, connected together.

output device *See* output unit.

output equipment [COMPUT SCI] Equipment, such as punched cards, printers, and magnetic tape recorders, which transfers data from within a computer to its outside environment.

output gap [ELECTR] An interaction gap by means of which usable power can be abstracted from an electron stream in a microwave tube.

output impedance [ELECTR] The impedance presented by a source to a load.

output indicator [ENG] A meter or other device that is connected to a radio receiver to indicate variations in output signal strength for alignment and other purposes, without indicating the exact value of output.

output-limited [ENG] Restricted by the need to await completion of an output operation, as in process control or data processing.

output link [COMMUN] The last link in a communications chain.

output magazine [COMPUT SCI] A mechanism that accumulates cards after they have passed through a machine.

output meter [ENG] An alternating-current voltmeter connected to the output of a receiver or amplifier to measure output signal strength in volume units or decibels.

output-meter adapter [ENG] Device that can be slipped over the plate prong of the output tube of a radio receiver to provide a conventional terminal to which an output meter can be connected during alignment.

output monitor interrupt [COMPUT SCI] A data-processing step in which control is passed to the monitor to determine the precedence order for two requests having the same priority level.

output power [ELEC] Power delivered by a system or transducer to its load.

output program *See* output routine.

output punch [COMPUT SCI] A device that transcribes data generated by a computer onto paper tape or punch cards.

output rating *See* carrier power output rating.

output record [COMPUT SCI] **1.** A unit of data that has been transcribed from a computer to an external medium or device. **2.** The unit of data that is currently held in the output area of a computer before being transcribed to an external medium or device.

output resistance [ELECTR] The resistance across the output terminals of a circuit or device.

output routine [COMPUT SCI] A series of computer instructions which organizes and directs all operations associated with the transcription of data from a computer to various media and external devices by various types of output equipment. Also known as output program.

output shaft [MECH ENG] The shaft that transfers motion from the prime mover to the driven machines.

output stage [ELECTR] The final stage in any electronic equipment.

output standard *See* standard time.
output transformer [ELECTR] The iron-core audio-frequency transformer used to match the output stage of a radio receiver or an amplifier to its loudspeaker or other load.
output tube [ELECTR] Power-amplifier tube designed for use in an output stage.
output unit [COMPUT SCI] In computers, a unit which delivers information from the computer to an external device or from internal storage to external storage.
output winding [ELECTROMAG] Of a saturable reactor, a winding, other than a feedback winding, which is associated with the load, and through which power is delivered to the load.
output word [COMPUT SCI] Any running word into which an input word is to be translated.
outrigger [ENG] A steel beam or lattice girder extending from a crane to provide stability by widening the base.
outside air temperature *See* indicated air temperature.
outside caliper [DES ENG] A caliper having two curved legs which point toward each other; used for measuring outside dimensions of a workpiece.
outside diameter [DES ENG] The outer diameter of a pipe, including the wall thickness; usually measured with calipers. Abbreviated OD.
outside extension [COMMUN] Telephone extension on premises separated from the main station.
outside fix [NAV] The fix position determined by the method of bisectors when the lines of position result from observations of objects or celestial bodies lying within a 180° arc of the horizon.
outside strake [NAV ARCH] The outer strake of an in-and-out system of shell plating; a strake which laps on the inner strake and which is the thickness of the plating outside the molded frame line.
outward bound [NAV] Heading for the open sea.
outwash [GEOL] **1.** Sand and gravel transported away from a glacier by streams of meltwater and either deposited as a floodplain along a preexisting valley bottom or broadcast over a preexisting plain in a form similar to an alluvial fan. Also known as glacial outwash; outwash drift; overwash. **2.** Soil material washed down a hillside by rainwater and deposited on more gently sloping land.
outwash apron *See* outwash plain.
outwash cone [GEOL] A cone-shaped deposit consisting chiefly of sand and gravel found at the edge of shrinking glaciers and ice sheets.
outwash drift *See* outwash.
outwash fan [GEOL] A fan-shaped accumulation of outwash deposited by meltwater streams in front of the terminal moraine of a glacier.
outwash plain [GEOL] A broad, outspread flat or gently sloping alluvial deposit of outwash in front of or beyond the terminal moraine of a glacier. Also known as apron; frontal apron; frontal plain; marginal plain; morainal apron; morainal plain; outwash apron; overwash plain; sandur; wash plain.
outwash terrace [GEOL] A dissected and incised valley train or benchlike deposit extending along a valley downstream from an outwash plain or terminal moraine.
outwash train *See* valley train.
ouvarovite *See* uvarovite.
oval [MATH] A curve shaped like a section of an egg.
ovalbumin [BIOCHEM] The major, conjugated protein of eggwhite.
oval of Cassini [MATH] An ovallike curve similar to a lemniscate obtained as the locus corresponding to a general type of quadratic equation in two variables x and y; it is expressed as $[(x + a)^2 + y^2]\,[(x - a)^2 + y^2] = k^4$, where a and k are constants.
oval window [ANAT] The membrane-covered opening into the inner ear of tetrapods, to which the ossicles of the middle ear are connected.
ovarian [ANAT] Of or pertaining to the ovaries.
ovarian agenesis [MED] Failure of the ovaries to develop.
ovarian dysmenorrhea [MED] Dysmenorrhea caused by ovarian disease.
ovarian follicle [HISTOL] An ovum and its surrounding follicular cells, found in the ovarian cortex.
ovarian insufficiency [MED] Deficient functioning of the ovaries, leading to amenorrhea, oligomenorrhea, or abnormal dysfunctional uterine bleeding.
ovariectomy [MED] Excision of an ovary.

OUTSIDE CALIPER

Outside caliper. *(From R. J. Sweeney, Measurement Techniques in Mechanical Engineering, Wiley, 1953)*

ovariole [INV ZOO] The tubular structural unit of an insect ovary.
ovary [ANAT] A glandular organ that produces hormones and gives rise to ova in female vertebrates. [BOT] The enlarged basal portion of a pistil that bears the ovules in angiosperms.
oven [ENG] A heated enclosure for baking, heating, or drying. [GEOL] **1.** A rounded, saclike, chemically weathered pit or hollow in a rock (especially a granitic rock) which has an arched roof and resembles an oven. **2.** *See* spouting horn.
over [ORD] A bomb or projectile hit beyond or past the target.
overaging [MET] Aging at a higher temperature or for a longer time than is required to produce maximum or optimum properties.
overall drilling time [MIN ENG] The total time for rock drilling including time for setting up, withdrawing, and moving drills, time for mechanical delays, and the time for the actual drilling.
overall efficiency [AERO ENG] The efficiency of a jet engine, rocket engine, or rocket motor in converting the total heat energy of its fuel first into available energy for the engine, then into effective driving energy.
overall plate efficiency [CHEM ENG] For a specified liquid-mixture separation in a fractionation (or distillation) tower, the ratio of actual to theoretical plates (or trays) required.
overall response [ELECTR] The ratio between system input and output.
overall stability constant [ANALY CHEM] Reaction equilibrium constant for the reaction forming soluble complexes during complexiметric titration.
overarching weight [MIN ENG] The pressure of the rocks over the active mine workings.
overarm [MECH ENG] One of the adjustable supports for the end of a milling-cutter arbor farthest from the machine spindle.
overbank deposit [GEOL] Fine-grained sediment (silt and clay) deposited from suspension on a floodplain by floodwaters from a stream channel.
overbanking [HOROL] A malfunction in which the escape wheel unlocks prematurely, without the fork contacting the roller jewel.
overbending [MET] Compensation for springback in metal-forming by bending the material through a greater arc than that required for the finished part.
overbreak [CIV ENG] Rock excavated in excess of the neat lines of a tunnel or cutting. Also known as backbreak.
overbunching [ELECTR] In velocity-modulated streams of electrons, the bunching condition produced by the continuation of the bunching process beyond the optimum condition.
overburden [GEOL] **1.** Rock material overlying a mineral deposit or coal seam. Also known as baring; top. **2.** Material of any nature, consolidated or unconsolidated, that overlies a deposit of useful materials, ores, or coal, especially those deposits that are mined from the surface by open cuts. **3.** Loose soil, sand, or gravel that lies above the bedrock. [MIN ENG] To charge in a furnace too much ore and flux in proportion to the amount of fuel.
overburdened stream *See* overloaded stream.
overcast [METEOROL] **1.** Pertaining to a sky cover of 1.0 (95% or more) when at least a portion of this amount is attributable to clouds or obscuring phenomena aloft, that is, when the total sky cover is not due entirely to surface-based obscuring phenomena. **2.** Cloud layer that covers most or all of the sky; generally, a widespread layer of clouds such as that which is considered typical of a warm front. [MIN ENG] **1.** An enclosed airway to permit one air current to pass over another without interruption. **2.** To move overburden removed from coal mined from surface mines to an area from which the coal has been mined.
overcast bombing [ORD] The bombing of a target through an overcast above the target, using radar or other equipment to aid in sighting through the overcast.
overcheck [TEXT] A fabric pattern in which one check of different size or color is superimposed upon another.
overcoating [ENG] Extruding a plastic web beyond the edge of the substrate web in extrusion coating.
overcompound [ELEC] To use sufficiently many series turns in a compound-wound generator so that the terminal voltage at rated load is greater than at no load, usually to compensate for increased line drop.

overconsolidation [GEOL] Consolidation of sedimentary material exceeding that which is normal for the existing overburden.

overcoupled circuits [ELECTR] Two resonant circuits which are tuned to the same freqency but coupled so closely that two response peaks are obtained; used to attain broad-band response with substantially uniform impedance.

overcritical binding [ATOM PHYS] A binding energy for electrons in atoms which is so large that a vacancy in the bound state results in the spontaneous formation of an electron-positron pair; predicted to occur when the atomic number exceeds 173.

overcritical electric field [ATOM PHYS] An electric field so strong that an electron-positron pair is created spontaneously; quantum electrodynamics predicts that this will happen near a nucleus having more than approximately 173 protons.

overcuring [CHEM ENG] A condition resulting from vulcanizing longer than necessary to achieve full development of physical strength; causes softness or brittleness and impaired age-resisting quality of the material.

overcurrent [ELECTR] An abnormally high current, usually resulting from a short circuit.

overcurrent protection *See* overload protection.

overcut [MIN ENG] A machine cut made along the top or near the top of a coal seam; sometimes used in a thick seam or a seam with sticky coal.

overcutting machine [MIN ENG] A coal-cutting machine designed to make the cut at a desired place in the coal seam some distance above the floor.

overdamping [PHYS] Damping greater than that required for critical damping.

overdeepening [GEOL] The erosive process by which a glacier deepens and widens an inherited preglacial valley to below the level of the subglacial surface.

overdevelop [GRAPHICS] To process a photographic film or plate for too long a time or in a solution that is too concentrated.

overdominance [GEN] Monohybrid heterosis, that is, the phenomenon of the phenotype being more pronounced in the heterozygote than in either homozygote with respect to a single specified pair of alleles.

overdose [MED] An excessive dose of medicine.

overdraft [MET] Upward curving of a piece of metal after leaving the rolls during forming, due to higher speed of the lower roll.

overdrilling [ENG] The act or process of drilling a run or length of borehole greater than the core-capacity length of the core barrel, resulting in loss of the core.

overdrive [MECH ENG] An automobile engine device that lowers the gear ratio, thereby reducing fuel consumption.

overdriven amplifier [ELECTR] Amplifier stage which is designed to distort the input-signal waveform by permitting the grid signal to drive the stage beyond cutoff or plate-current saturation.

overexpose [GRAPHICS] To expose a photographic film or plate with too much light or for too long a time.

overfall dam *See* overflow dam.

overfalls [OCEANOGR] Short, breaking waves occurring when a strong current passes over a shoal or other submarine obstruction or meets a contrary current or wind.

overfeed [MIN ENG] To attempt to make a diamond- or rock-drill bit penetrate rock at a rate in excess of that at which the optimum economical performance of the bit is attained, needlessly damaging the bit and shortening its life.

overfire draft [MECH ENG] The air pressure in a boiler furnace during occurrence of the main flame.

overflow [CIV ENG] Any device or structure that conducts excess water or sewage from a conduit or container. [COMPUT SCI] **1.** The condition that arises when the result of an arithmetic operation exeeds the storage capacity of the indicated result-holding storage. **2.** That part of the result which exceeds the storage capacity. [SCI TECH] Excess liquid which overflows its given limits.

overflow bucket [COMPUT SCI] A unit of storage in a direct-access storage device used to hold an overflow record.

overflow capacity [ENG] Capacity of a container measured to its top, or to the point of overflow.

overflow channel [CIV ENG] An artificial waterway for conducting water away from an overflowing structure such as a reservoir or canal. [GEOL] A channel or notch cut by the overflow waters of a lake, especially the channel draining meltwater from a glacially dammed lake.

overflow check indicator *See* overflow indicator.

overflow dam [CIV ENG] A dam built with a crest to allow the overflow of water. Also known as overfall dam; spillway dam.

overflow error [COMPUT SCI] The condition in which the numerical result of an operation exceeds the capacity of the register.

overflow groove [ENG] Small groove on a plastics mold that allows material to flow freely, to prevent weld lines and low density in the finished product and to dispose of excess material.

overflow ice [HYD] Ice formed during high spring tides by water rising through cracks in the surface ice and then freezing.

overflow indicator [COMPUT SCI] A bistable device which changes state when an overflow occurs in the register associated with it, and which is designed so that its condition can be determined, and its original condition restored. Also known as overflow check indicator.

overflow pipe [ENG] Open pipe protruding above the surface of a liquid in a container, such as a distillation or absorption column or a toilet tank, to control the height of the liquid; excess liquid enters the pipe's open end and drains away.

overflow record [COMPUT SCI] A unit of data whose length is too great for it to be stored in an assigned section of a direct-access storage, and which must be stored in another area from which it may be retrieved by means of a reference stored in the original assigned area in place of the record.

overflow spring [HYD] A type of contact spring that develops where a permeable deposit dips beneath an impermeable mantle.

overflow storage [COMMUN] Additional storage provided in a store-and-forward-switching center to prevent the loss of messages (or parts of messages) offered to a completely filled line store.

overflow stream [HYD] **1.** A stream containing water that has overflowed the banks of a river or another stream. Also known as spill stream. **2.** An effluent from a lake, carrying water to a stream, a sea, or another lake.

overfold [GEOL] A fold that is overturned.

overgear [MECH ENG] A gear train in which the angular velocity ratio of the driven shaft to driving shaft is greater than unity, as when the propelling shaft of an automobile revolves faster than the engine shaft.

overglaze color [MATER] Any of the mixtures of ground pigment and low-melting glass melting at 704–816°C; used for decorative designs fired onto china and ceramics.

overgrinding [MIN ENG] Grinding an ore to a smaller particle size than that necessary to free the desired mineral from other materials.

overgrowth [CRYSTAL] A crystal growth in optical and crystallographic continuity around another crystal of different composition. [MINERAL] A mineral deposited on and growing in oriented, crystallographic directions on the surface of another mineral.

overhand cut and fill [MIN ENG] A method of mining ore in which material removed from the roof of a drive drops through chutes to a lower drive, from which the material is removed.

overhand stope [MIN ENG] A stope in which the ore above the point of entry is attacked, so that severed ore tends to gravitate toward discharge chutes, and the stope is self-draining.

overhand stoping [MIN ENG] A method of mining in which the ore is blasted from a series of ascending stepped benches; both horizontal and vertical holes may be employed.

overhang [BUILD] The distance measured horizontally that a roof projects beyond a wall. [GEOL] The part of a salt plug that projects from the top.

overhaul [ENG] A maintenance procedure for machinery involving disassembly, the inspecting, refinishing, adjusting, and replacing of parts, and reassembly and testing.

overhauling [MET] Removing scale and surface defects from metal castings or slabs by cutting away surface layers.

Overhauser effect [ATOM PHYS] The effect whereby, if a radio frequency field is applied to a substance in an external magnetic field, whose nuclei have spin ½ and which has unpaired electrons, at the electron spin resonance frequency, the resulting polarization of the nuclei is as great as if the nuclei had the much larger electron magnetic moment.

overhead [CHEM ENG] Pertaining to fluid (gas or liquid) effluent from the top of a process vessel, such as a distillation

column. [COMPUT SCI] The time a computer system spends doing computations that do not contribute directly to the progress of any user tasks in the system, such as allocation of resources, responding to exceptional conditions, providing protection and reliability, and accounting.

overhead cableway [MIN ENG] A type of equipment for the removal of soil or rock, consisting of a strong overhead cable which is usually attached to towers at either end, and on which a car or traveler may run back and forth; from this car a pan or bucket may be lowered to the surface, then raised and locked to the car and transported to any position on the cable where it is desired to dump.

overhead camshaft [MECH ENG] A camshaft mounted above the cylinder head.

overhead compass *See* inverted compass.

overhead cost *See* fixed cost.

overhead fire [ORD] Fire that is delivered over the heads of friendly troops.

overhead position [MET] In welding, the position by which the deposit is made from the underside of the joint.

overhead shovel [MECH ENG] A tractor which digs with a shovel at its front end, swings the shovel rearward overhead, and dumps the shovel at its rear end.

overhead-traveling crane [MECH ENG] A hoisting machine with a bridgelike structure moved on wheels along overhead trackage which is usually fixed to the building structure.

overhead-valve engine [MECH ENG] A four-stroke-cycle internal combustion engine having its valves located in the cylinder head, operated by pushrods that actuate rocker arms. Abbreviated OHV engine. Also known as valve-in-head engine.

overheat [MET] To heat a metal or alloy to such high temperatures that its physical properties are impaired.

overhit [ORD] To hit a target with more destructive force than necessary to accomplish the desired amount of damage.

overite [MINERAL] $Ca_3Al_8(PO_4)_8(OH)_6 \cdot 15H_2O$ A mineral composed of hydrous basic calcium aluminum phosphate.

overland flow [HYD] Water flowing over the ground surface toward a channel; upon reaching the channel, it is called surface runoff. Also known as surface flow.

overlap [COMMUN] **1.** In teletypewriter practice, the selecting of another code group while the printing of a previously selected code group is taking place. **2.** Amount by which the effective height of the scanning facsimile spot exceeds the nominal width of the scanning line. [COMPUT SCI] To perform some or all of an operation concurrently with one or more other operations. [GEOL] **1.** Movement of an upcurrent part of a shore to a position extending seaward beyond a downcurrent part. **2.** Extension of strata over or beyond older underlying rocks. **3.** The horizontal component of separation measured parallel to the strike of a fault. [MET] **1.** Projection of the weld metal beyond the bond at the toe of the weld. **2.** Extension of one sheet over another in spot, seam, or projection welding.

overlap fault [GEOL] A fault structure in which the displaced strata are doubled back upon themselves.

overlap integral [QUANT MECH] The integral over space of the product of the wave function of a particle and the complex conjugate of the wave function of another particle.

overlapped memories [COMPUT SCI] An arrangement of computer memory banks in which, to cut down access time, successive words are taken from different memory banks, rewriting in one bank being overlapped by logic operations in another bank, with memory access in still another bank.

overlapping [COMPUT SCI] An operation whereby, if the processor determines that the current instruction and the next instruction lie in different storage modules, the two words may be retrieved in parallel.

overlapping orbitals [ATOM PHYS] Two orbitals (usually of electrons associated with different atoms in a molecule) for which there is a region of space where both are of appreciable magnitude.

overlapping pair [GRAPHICS] Two aerial photographs taken at different camera locations so that part of one photograph shows terrain which is also shown on part of the other photograph.

overlap radar [ENG] Radar located in one sector whose area of useful radar coverage includes a portion of another sector.

overlay [CIV ENG] A repair topping of asphalt or concrete placed on a worn roadway. [COMPUT SCI] A technique for bringing routines into high-speed storage from some other form of storage during processing, so that several routines will occupy the same storage locations at different times; overlay is used when the total storage requirements for instructions exceed the available main storage. [ENG] **1.** Nonwoven fibrous mat (glass or other fiber) used as the top layer in a cloth or mat lay-up to give smooth finish to plastic products or to minimize the fibrous pattern on the surface. Also known as surfacing mat. **2.** An ornamental covering, as of wood or metal. [GRAPHICS] **1.** A sheet attached to copy or artwork and containing special instructions about reproduction or arrangement. **2.** A transparent or translucent film attached to artwork and carrying additional detail to be reproduced; in multicolor printing these overlays may represent the separation of the colors to be printed.

overlay plywood [MATER] Plywood with a resin-treated fiber surface.

overlay transistor [ELECTR] Transistor containing a large number of emitters connected in parallel to provide maximum power amplification at extremely high frequencies.

overline [COMMUN] In teletypewriter practice, the printing of one group of characters over another.

overload [ELECTR] A load greater than that which a device is designed to handle; may cause overheating of power-handling components and distortion in signal circuits. [GEOL] The amount of sediment that exceeds the ability of a stream to transport it and is therefore deposited.

overload capacity [ELEC] Current, voltage, or power level beyond which permanent damage occurs to the device considered.

overload current [ELECTR] A current greater than that which a circuit is designed to carry; may melt wires or damage elements of the circuit.

overloaded stream [HYD] A stream so heavily loaded with sediment that its velocity is lessened and it is forced to deposit part of its load. Also known as overburdened stream.

overloader [MIN ENG] A loading machine which digs with a bucket, raises the bucket, and swings it in a wide horizontal arc to the dumping point.

overload level [ELEC] Level above which operation ceases to be satisfactory as a result of signal distortion, overheating, damage, and so forth.

overload protection [ELEC] Effect of a device operative on excessive current, but not necessarily on short circuit, to cause and maintain the interruption of current flow to the device governed. Also known as overcurrent protection.

overload relay [ELEC] A relay that opens a circuit when the load in the circuit exceeds a preset value, in order to provide overload protection; usually responds to excessive current, but may respond to excessive values of power, temperature, or other quantities. Also known as overload release.

overload release *See* overload relay.

overmatching plate [ORD] Armor plate whose thickness exceeds the diameter of the projectile.

overmatching projectile [ORD] A projectile whose diameter exceeds the thickness of the armor plate.

overmodulation [COMMUN] Amplitude modulation greater than 100%, causing distortion because the carrier voltage is reduced to zero during portions of each cycle.

overpass [CIV ENG] **1.** A grade separation in which traffic at the higher level is raised, and traffic at the lower level moves at approximately its original level. **2.** The upper part of a grade crossing.

overplaid [TEXT] A fabric design consisting of a double plaid in which weave or the color effect is in blocks of the same or different sizes, arranged one over the other.

overpoint [CHEM] The initial boiling point in a distillation process; specifically, the temperature at which the first drop falls from the tip of the condenser into the condensate flask.

overpotential *See* overvoltage.

overpressure [FL MECH] The transient pressure, usually expressed in pounds per square inch, exceeding existing atmospheric pressure and manifested in the blast wave from an explosion.

overprint [GEOCHEM] A complete or partial disturbance of an isolated radioactive system by thermal, igneous, or tectonic activities which results in loss or gain of radioactive or radiogenic isotopes and, hence, a change in the radiometric age that will be given the disturbed system. [GEOL] The development or superposition of metamorphic structures on original structures. Also known as imprint; metamorphic overprint;

superprint. [GRAPHICS] **1.** To imprint over something that has been printed. **2.** To apply a varnish or lacquer to printed matter from a type or litho process, by means of a brush, spray, or roller coating. **3.** To print in a primary color over an existing color print to obtain a compound shade.

overpunch [COMPUT SCI] A hole punch in any one of the three rows above the zero row in an punch card, usually combined with a second punch on the same column to represent a character.

override [CONT SYS] To cancel the influence of an automatic control by means of a manual control.

overriding process control [CONT SYS] Process control in which any one of several controllers associated with one control valve can be made to override another in accordance with a priority requirement of the process.

overrun [CIV ENG] A cleared area extending beyond the end of a runway.

overrunning [METEOROL] A condition existing when an air mass is in motion aloft above another air mass of greater density at the surface; this term usually is applied in the case of warm air ascending the surface of a warm front or quasi-stationary front.

overrunning clutch [MECH ENG] A clutch that allows the driven shaft to turn freely only under certain conditions; for example, a clutch in an engine starter that allows the crank to turn freely when the engine attempts to run.

oversaturated *See* silicic.

overseeding [METEOROL] Cloud seeding in which an excess of nucleating material is released; as the term is normally used, the excess is relative to that amount of nucleating material which would, theoretically, maximize the precipitation received at the ground.

overshoot [ELECTROMAG] The reception of microwave signals where they were not intended, due to an unusual atmospheric condition that sets up variations in the index of refraction. [ENG] **1.** An initial transient response to a unidirectional change in input which exceeds the steady-state response. **2.** The maximum amount by which this transient response exceeds the steady-state response.

overshot [ENG] **1.** A fishing tool for recovering lost drill pipe or casing. **2.** *See* bullet.

overshot wheel [MECH ENG] A horizontal-shaft waterwheel with buckets around the circumference; the weight of water pouring into the buckets from the top rotates the wheel.

oversize control screen [MIN ENG] A screen used to prevent the entry into a machine of coarse particles which might interfere with its operation. Also known as check screen; guard screen.

oversize powder [MET] A metal powder having coarser particles than the maximum permitted.

oversize rod *See* guide rod.

overspeed governor [MECH ENG] A governor that stops the prime mover when speed is excessive.

overspin [MECH] In a spin-stabilized projectile, the overstability that results when the rate of spin is too great for the particular design of projectile, so that its nose does not turn downward as it passes the summit of the trajectory and follows the descending branch. Also known as overstabilization.

oversquare engine [MECH ENG] An engine with bore diameter greater than the stroke length.

overstability [PL PHYS] Condition in which the restoring forces acting on an oscillation of a plasma or other conducting fluid drive the fluid back to its equilibrium state at a speed greater than its original outward speed, resulting in continually greater oscillation.

overstabilization *See* overspin.

oversteepening [GEOL] The process by which an eroding alpine glacier steepens the sides of an inherited preglacial valley.

overstep [GEOL] **1.** An overlap characterized by the regular truncation of older units of a complete sedimentary sequence by one or more later units of the sequence. **2.** A stratum deposited on the upturned edges of underlying strata.

overstressed area [MIN ENG] In strata control, an area where the force is concentrated on pillars.

overstressing [ENG] Cyclically stressing a material at a level higher than that used at the end of a fatigue test.

over-the-horizon propagation *See* scatter propagation.

over-the-horizon radar [ELECTROMAG] Long-range radar in which the transmitted and reflected beams are bounced off the ionosphere layers to achieve ranges far beyond line of sight.

overthrow distortion [COMMUN] Distortion caused when the maximum amplitude of the signal wavefront exceeds the steady state of amplitude of the signal wave.

overthrust [GEOL] **1.** A thrust fault that has a low dip or a net slip that is large. Also known as low-angle thrust; overthrust fault. **2.** A thrust fault with the active element being the hanging wall.

overthrust black *See* overthrust nappe.

overthrust fault *See* overthrust.

overthrust nappe [GEOL] The body of rock making up the hanging wall of a large-scale overthrust. Also known as overthrust block; overthrust sheet; overthrust slice.

overthrust sheet *See* overthrust nappe.

overthrust slice *See* overthrust nappe.

overtide [OCEANOGR] A harmonic tidal component which has a speed that is an exact multiple of the speed of one development of the tide-producing force.

overtone [ACOUS] **1.** A component of a complex sound whose frequency is an integral multiple, greater than 1, of the fundamental frequency. **2.** A component of a complex tone having a pitch higher than that of the fundamental pitch. [MECH] One of the normal modes of vibration of a vibrating system whose frequency is greater than that of the fundamental mode. [PHYS] A harmonic other than the fundamental component.

overtone band [SPECT] The spectral band associated with transitions of a molecule in which the vibrational quantum number changes by 2 or more.

overtone crystal [ELECTR] Quartz crystal cut in such a manner that it will operate at a higher order than its fundamental frequency, or operate at two frequencies simultaneously as in a synthesizer.

overtravel [ORD] In machine guns, the distance the firing notch overrides the sear notch in cocking, to ensure positive engagement of the two notches.

overtub system [MIN ENG] An endless-rope system in which the rope runs over the tubs or cars in the center of the rails.

overturn [HYD] Renewal of bottom water in lakes and ponds in regions where winter temperatures are cold; in the fall, cooled surface waters become denser and sink, until the whole body of water is at 4°C; in the spring, the surface is warmed back to 4°C, and the lake is homothermous. Also known as convective overturn.

overturned [GEOL] Of a fold or the side of a fold, tilted beyond the perpendicular. Also known as inverted; reversed.

overvoltage [ELEC] A voltage greater than that at which a device or circuit is designed to operate. Also known as overpotential. [ELECTR] The amount by which the applied voltage exceeds the Geiger threshold in a radiation counter tube. [PHYS CHEM] The difference between electrode potential under electrolysis conditions and the thermodynamic value of the electrode potential in the absence of electrolysis for the same experimental conditions. Also known as overpotential.

overvoltage crowbar [ELEC] A circuit that monitors the output of a power supply and prevents the output voltage from exceeding a preset voltage, under any failure condition, by having a low resistance (crowbar) placed across the output terminals when an overvoltage occurs.

overwash [GEOL] **1.** A mass of water representing the part of the wave advancing up a beach that runs over the highest part of the berm (or other structure) and that does not flow directly back to the sea or lake. **2.** *See* outwash.

overwash mark [GEOL] A narrow, tonguelike ridge of sand formed by overwash on the landward side of a berm.

overwash plain *See* outwash plain.

overwash pool [OCEANOGR] A tidal pool between a berm and a beach scarp which water enters only at high tide.

overwind [ENG] To wind a spring, rope, or cable too tightly or too far.

overwrite [COMPUT SCI] To enter information into a storage location and destroy the information previously held there.

ovex [ORG CHEM] $ClC_6H_4OSO_2C_6H_4Cl$ A white, crystalline solid with a melting point of 86.5°C; soluble in acetone and aromatic solvents; used as an insecticide and acaricide.

ovicell [INV ZOO] A broad chamber in certain bryozoans.

ovicyst [INV ZOO] The pouch of a tunicate in which the eggs develop.

oviduct [ANAT] A tube that serves to conduct ova from the ovary to the exterior or to an intermediate organ such as the uterus. Also known in mammals as Fallopian tube; uterine tube.

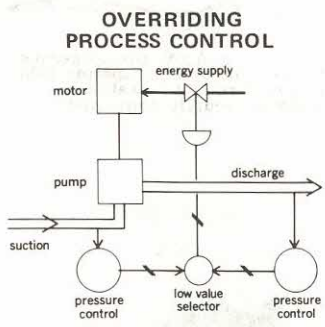


Diagram of overriding process control in an oil pipeline. Motor driving the pipeline is controlled by suction pressure when this pressure approaches the atmospheric value, and by the discharge pressure when this is close to the maximum allowable value. The low-value selector passes the lower of its inputs, in order to prevent the noncritical controlled value from increasing the speed of the pump.

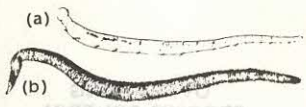
OWENIIDAE

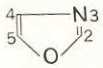


Myriochele. (a) Entire ovigerous individual. *(b)* The tapering tube in which the mud-swallowing worm is securely contained.

OWL

Great horned owl *(Bubo virginianus)*, a nocturnal bird of prey.

OXAZOLE



Structure and numbering system for a representative oxazole, 1,3-oxazole.

oviger [INV ZOO] A modified leg used for carrying eggs in some pycnogonids.

ovine encephalomyelitis *See* louping ill.

oviparous [VERT ZOO] Producing eggs that develop and hatch externally.

ovipositor [INV ZOO] A specialized structure in many insects for depositing eggs. [VERT ZOO] A tubular extension of the genital orifice in most fishes.

ovography [GRAPHICS] A printing method based upon the use of a drum coated with ovonic memory material, in which a permanent but alterable image can be "written" onto the drum by a computer-controlled energy beam, such as a laser, and printout can be achieved by electrostatic printing techniques.

ovonic device *See* glass switch.

ovonic memory switch [ELECTR] A glass switch which, after being brought from the highly resistive state to the conducting state, remains in the conducting state until a current pulse returns it to its highly resistive state. Abbreviated OMS. Also known as memory switch.

ovonic threshold switch [ELECTR] A glass switch which, after being brought from the highly resistive state to the conducting state, returns to the highly resistive state when the current falls below a holding current value. Abbreviated OTS.

ovotesticular hermaphroditism [MED] A rare form of hermaphroditism in which an ovotestis is present on one or both sides.

ovoviviparous [VERT ZOO] Producing eggs that develop internally and hatch before or soon after extrusion.

Ovshinsky effect [ELECTR] The characteristic of a special thin-film solid-state switch that responds identically to both positive and negative polarities so that current can be made to flow in both directions equally.

ovulation [PHYSIO] Discharge of an ovum or ovule from the ovary.

ovule [BOT] A structure in the ovary of a seed plant that develops into a seed following fertilization.

ovum [CYTOL] A female gamete. Also known as egg.

O-wave component *See* ordinary-wave component.

Owen bridge [ELECTR] A four-arm alternating-current bridge used to measure self-inductance in terms of capacitance and resistance; bridge balance is independent of frequency.

Oweniidae [INV ZOO] A family of limivorous polychaete annelids of the Sedentaria.

owl [VERT ZOO] Any of a number of diurnal and nocturnal birds of prey composing the order Strigiformes; characterized by a large head, more or less forward-directed large eyes, a short hooked bill, and strong talons.

Owl Nebula [ASTRON] A large planetary nebula in Ursa Major which has two large, circular darker areas in an otherwise opaque spherical shell.

own coding [COMPUT SCI] A series of instructions added to a standard software routine to change or extend the routine so that it can carry out special tasks.

owned program *See* proprietary program.

OW unit *See* sabin.

oxadiazon [ORG CHEM] $C_{13}H_{18}Cl_2N_2O_3$ A white solid with a melting point of 88–90°C; slight solubility in water; used as a pre- and postemergence herbicide to control weeds in rice, turf, soybeans, peanuts, and orchards. Also known as 2-*tert*-butyl-4-(2,4-dichloro-5-isopropoxyphenyl)-δ-2-1-1,3,4 oxadiazalin-5-one.

oxalate [ORG CHEM] Salt of oxalic acid; contains the $(COO)_2$ radical; examples are sodium oxalate, $Na_2C_2O_4$, ammonium oxalate, $(NH_4)_2C_2O_4 \cdot H_2O$, and ethyl oxalate, $C_2H_5(C_2O_4)C_2H_5$.

oxaldehydic acid *See* glyoxalic acid.

oxalic acid [ORG CHEM] $HOOCCOOH \cdot 2H_2O$ Poisonous, transparent, colorless crystals melting at 187°C; soluble in water, alcohol, and ether; used as a chemical intermediate and a bleach, and in polishes and rust removers.

Oxalidaceae [BOT] A family of dicotyledonous plants in the order Geraniales, generally characterized by regular flowers, two or three times as many stamens as sepals or petals, a style which is not gynobasic, and the fruit which is a beakless, loculicidal capsule.

oxalite *See* humboldtine.

oxalosis [MED] A rare hereditary metabolic disorder, inherited as an autosomal recessive, in which glyoxylic acid metabolism is impaired, resulting in overproduction of oxalic acid and deposition of calcium oxalate in body tissues.

oxaluria [MED] The presence of oxalic acid or oxalates in the urine.

oxalyl chloride [INORG CHEM] $(COCl)_2$ Toxic, colorless liquid boiling at 64°C; soluble in ether, benzene, and chloroform; used as a chlorinating agent and for military poison gas. Also known as ethanedioyl chloride.

oxalylurea *See* parabanic acid.

oxamic acid hydrazine *See* semioxamazide.

oxamide [ORG CHEM] $NH_2COCONH_2$ Water-insoluble white powder, melting at 419°C; used as a stabilizer for nitrocellulose products.

oxammite [MINERAL] $(NH_4)_2C_2O_4 \cdot H_2O$ A yellowish-white, orthorhombic mineral consisting of ammonium oxalate monohydrate; occurs as lamellar masses.

oxammonium hydrochloride *See* hydroxylamine hydrochloride.

oxamyl [ORG CHEM] $C_7H_{13}N_3O_3S$ A white, crystalline compound with a melting point of 100–102°C; used to control pests of tobacco, ornamentals, fruits, and crops. Also known as methyl *N'*,*N'*-dimethyl *N*[(methylcarbamoyl)oxy]-1-thiooxamimidate.

oxazole [ORG CHEM] C_3H_3ON A structure that consists of a five-membered ring containing oxygen and nitrogen in the 1 and 3 position; a colorless liquid (boiling point 69–70°C) that is miscible with organic solvents and water; used to prepare other organic compounds.

oxbow [HYD] **1.** A closely looping, U-shaped stream meander whose curvature is so extreme that only a neck of land remains between the two parts of the stream. Also known as horseshoe bend. **2.** *See* oxbow lake. [GEOL] The abandoned, horseshoe-shaped channel of a former stream meander after the stream formed a neck cutoff. Also known as abandoned channel.

oxbow lake [HYD] The crescent-shaped body of water located alongside a stream in an abandoned oxbow after a neck cutoff is formed and the ends of the original bends are silted up. Also known as crescentic lake; cutoff lake; horseshoe lake; loop lake; moat; mortlake; oxbow.

oxford cloth [TEXT] A strong fabric, usually cotton or cotton blended with a synthetic fiber, finished with a silk luster.

Oxfordian [GEOL] A European stage of geologic time, in the Upper Jurassic (above Callovian, below Kimmeridgean). Also known as Divesian.

Oxford unit [MICROBIO] The minimum quantity of penicillin which, when dissolved in 50 milliliters of a meat broth, is sufficient to inhibit completely the growth of a test strain of *Micrococcus aureus*; equivalent to the specific activity of 0.6 microgram of the master standard penicillin.

oxidase [BIOCHEM] An enzyme that catalyzes oxidation reactions by the utilization of molecular oxygen as an electron acceptor.

oxidate [GEOL] A sediment made up of iron and manganese oxides and hydroxides crystallized from aqueous solution.

oxidation [CHEM] **1.** A chemical reaction that increases the oxygen content of a compound. **2.** A chemical reaction in which a compound or radical loses electrons, that is in which the positive valence is increased.

oxidation number [CHEM] **1.** Numerical charge on the ions of an element. **2.** *See* oxidation state.

oxidation pond [CIV ENG] A shallow lagoon or basin in which wastewater is purified by sedimentation and aerobic and anaerobic treatment.

oxidation potential [PHYS CHEM] The difference in potential between an atom or ion and the state in which an electron has been removed to an infinite distance from this atom or ion.

oxidation-reduction indicator [ANALY CHEM] A compound whose color in the oxidized state differs from that in the reduced state.

oxidation-reduction potential *See* redox potential.

oxidation-reduction reaction [CHEM] An oxidizing chemical change, where an element's positive valence is increased (electron loss), accompanied by a simultaneous reduction of an associated element (electron gain).

oxidation state [CHEM] The number of electrons to be added (or subtracted) from an atom in a combined state to convert it to elemental form. Also known as oxidation number.

oxidative phosphorylation [BIOCHEM] Conversion of inorganic phosphate to the energy-rich phosphate of adenosinetriphosphatase by reactions associated with the electron transfer system.

oxide [CHEM] Binary chemical compound in which oxygen is combined with a metal (such as Na_2O; basic) or nonmetal (such as NO_2; acidic).

oxide-coated cathode [ELECTR] A cathode that has been coated with oxides of alkaline-earth metals to improve electron emission at moderate temperatures. Also known as Wehnelt cathode.

oxide fuel reactor [NUCLEO] A nuclear fission reactor with fuel in the form UO_2 or PuO_2.

oxide isolation [ELECTR] Isolation of the elements of an integrated circuit by forming a layer of silicon oxide around each element.

oxide mineral [MINERAL] A naturally occurring material in oxide form such as silicon dioxide, SiO_2, magnetite, Fe_3O_4, or lime, CaO.

oxide nuclear fuel [NUCLEO] The fissionable nuclear fuel UO_2 or PuO_2.

oxide passivation [ELECTR] Passivation of a semiconductor surface by producing a layer of an insulating oxide on the surface.

oxidite *See* shale ball.

oxidized cellulose *See* oxycellulose.

oxidized microcrystalline wax [MATER] Refined, oxidized wax from bottoms of storage tanks for solvent-extracted petroleum; used in floor polishes.

oxidized shale *See* burnt shale.

oxidized zone [GEOL] A region of mineral deposits which has been altered by oxidizing surface waters.

oxidizing agent [CHEM] Compound that gives up oxygen easily, removes hydrogen from another compound, or attracts negative electrons.

oxidizing atmosphere [CHEM] Gaseous atmosphere in which an oxidation reaction occurs; usually refers to the oxidation of solids.

oxidizing flame [CHEM] A flame, or the portion of it, that contains an excess of oxygen.

oxidoreductase [BIOCHEM] An enzyme catalyzing a reaction in which two molecules of a compound interact so that one molecule is oxidized and the other reduced, with a molecule of water entering the reaction.

oxime [ORG CHEM] Compound containing the CH(:NOH) radical; condensation product of hydroxylamine with aldehydes or ketones.

oximeter [MED] A photoelectric photometer used to measure the oxygenated fraction of the hemoglobin in blood which is either circulating in a particular tissue of an intact animal or human being, or during, or shortly after, its withdrawal from the vascular system, by observation of the absorption of light transmitted through or reflected from the blood.

oximetry [PHYSIO] Measurement of the degree of oxygen saturation of the blood.

oximido *See* nitroso.

oxine [ORG CHEM] C_9H_6NOH White powder that darkens when exposed to light; slightly soluble in water, dissolves in ethanol, acetone, and benzene; used to prepare fungicides and to separate metals by precipitation. Also known as 8-hydroxyquinoline; oxyquinoline; 8-quinolinol.

oxine sulfate *See* 8-hydroxyquinoline sulfate.

Oxisol [GEOL] A soil order characterized by residual accumulations of inactive clays, free oxides, kaolin, and quartz; mostly tropical.

oxo- [ORG CHEM] Chemical prefix designating the keto group, C:O.

oxoethanoic acid *See* glyoxalic acid.

oxoferrite [GEOL] A variety of naturally occurring iron with some ferrous oxide in solid solution.

para-oxon [ORG CHEM] $(C_2H_5O)_2P(O)C_6H_4NO_2$ A reddish-yellow oil with a boiling point of 148–151°C; soluble in most organic solvents; used as an insecticide. Also known as diethyl *para*-nitrophenyl phosphate.

oxonium ion *See* hydronium ion.

oxo process [CHEM ENG] Catalytic process for production of alcohols, aldehydes, and other oxygenated organic compounds by reaction of olefin vapors with carbon monoxide and hydrogen.

oxosilane *See* siloxane.

oxoxanthone *See* genicide.

oxy- [CHEM] **1.** Prefix indicating the oxygen radical (—O—) in a chemical compound. **2.** Prefix incorrectly used as a substitute for hydroxy-.

oxyacanthine [ORG CHEM] $C_{37}H_{40}N_2O_6$ An alkaloid obtained from the root of *Berberis vulgaris*; a white, crystalline powder with a melting point of 202–214°C; soluble in water, chloroform, benzene, alcohol, and ether; used in medicine. Also known as vinetine.

oxyacetylene cutting [ENG] The flame cutting of ferrous metals in which the preheating of the metal is accomplished with a flame produced by an oxyacetylene torch. Also known as acetylene cutting.

oxyacetylene torch [ENG] An acetylene gas-mixing and burning tool that produces a hot flame for the welding or cutting of metal. Also known as acetylene torch.

oxyacetylene welding [MET] A welding process in which the heat is supplied by an oxyacetylene flame. Also known as acetylene welding.

Oxyaenidae [PALEON] An extinct family of mammals in the order Deltatheridea; members were short-faced carnivores with powerful jaws.

oxyamination *See* ammoxidation.

oxybenzone [ORG CHEM] $C_{14}H_{12}O_3$ A crystalline substance with a melting point of 66°C; used as a sunscreen agent. Also known as 4-methoxy-2-hydroxybenzophenone.

oxybiotite [MINERAL] Phenocrystic biotite with increased amounts of Fe(III).

oxycarboxin [ORG CHEM] $C_{12}H_{13}NO_4S$ An off-white, crystalline compound with a melting point of 127.5–130°C; used to control rust disease in greenhouse carnations. Also known as 5,6-dihydro-2-methyl-1,4-oxathiin-3,carboxanilide-4,4-dioxide.

oxycellulose [MATER] Cellulose mixed with reaction products from oxidation of cellulose in the presence of steam or alkalies or by strong sunlight. Also known as oxidized cellulose.

oxycephaly [MED] A condition in which the head assumes a roughly conical shape due to premature closure of the coronal or lambdoid sutures, or to artificial pressure on the frontal and occipital regions of the infant's head. Also known as acrocephaly.

oxychloride cement [MATER] A strong, hard cement composed of magnesium chloride and calcined magnesia; used for floors and stucco. Also known as Sorel cement.

oxydemeton methyl *See* demeton-*S*-methyl sulfoxide.

oxyethylsulfonic acid *See* isethionic acid.

oxygen [CHEM] A gaseous chemical element, symbol 0, atomic number 8, and atomic weight 15.9994; an essential element in cellular respiration and in combustion processes; the most abundant element in the earth's crust, and about 20% of the air by volume.

oxygen-18 [NUC PHYS] Oxygen isotope with atomic weight 18; found 8 parts to 10,000 of oxygen-16 in water, air, and rocks; used in tracer experiments. Also known as heavy oxygen.

oxygen absorbent [CHEM] Any material that will absorb (dissolve) oxygen into its body without reacting with it.

oxygenase [BIOCHEM] An oxidoreductase that catalyzes the direct incorporation of oxygen into its substrate.

oxygenate [CHEM] To treat, infuse, or combine with oxygen.

oxygenated oil [MATER] A class of essential oils containing carbon, hydrogen, and oxygen; an example is oil of cassia.

oxygenator [MED] An apparatus for introducing oxygen into the blood during extracorporal circulation.

oxygen bomb calorimeter [ENG] Device to measure heat of combustion; the sample is burned with oxygen in a closed vessel, and the temperature rise is noted.

oxygen burning [NUC PHYS] The synthesis of nuclei in stars through reactions involving the fusion of two oxygen-16 nuclei at temperatures of about 10^9 K.

oxygen cell *See* aeration cell.

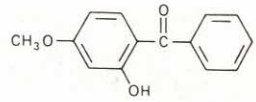
oxygen corrosion [MET] The reaction of oxygen with metallic surfaces to form an oxide of the metal or alloy.

oxygen cutting [ENG] Any of several types of cutting processes in which metal is removed with or without a flux by a chemical reaction of the base metal with oxygen at high temperatures.

oxygen debt [PHYSIO] **1.** A bodily condition in which oxygen demand is greater than oxygen supply. **2.** The amount of oxygen needed to restore the body to a steady state after a muscular exertion.

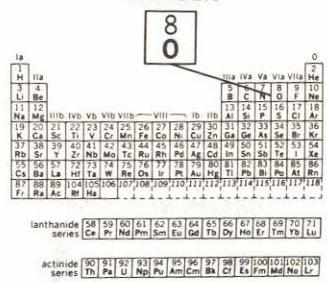
oxygen deficit [GEOCHEM] The difference between the actual amount of dissolved oxygen in lake or sea water and the

OXYBENZONE



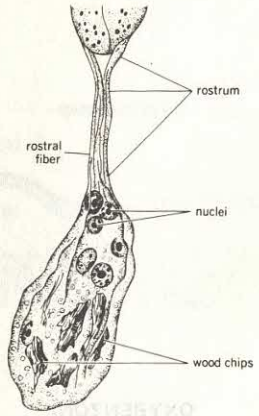
Structural formula.

OXYGEN



Periodic table of the chemical elements showing the position of oxygen.

OXYMONADIDA

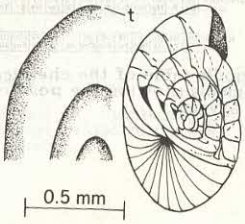


An oxymonad, *Microrhopalodina inflata*. The pliable necklike rostrum attaches the organism to the host's intestinal wall. The ingested wood chips taken in by the host are shown. *(After McCracken)*

OYSTER

Valve of an oyster.

OZAWAINELLIDAE



A representative of the Ozawainellidae. The initial wall, the tectum (t), is shown on the left, and the calcareous shell on the right.

saturation concentration at the temperature of the water mass sampled.

oxygen distribution [OCEANOGR] The concentration of dissolved oxygen in ocean water as a function of depth, ranging from as much as 5 milliliters of oxygen per liter at the surface to a fraction of that value at great depths.

oxygen-flask method [ANALY CHEM] Technique to determine the presence of combustible elements; the sample is burned with oxygen in a closed flask, and combustion products are absorbed in water of dilute alkali with subsequent analysis of the solution.

oxygen-free copper [MET] Pure copper having a conductivity greater than that of copper containing impurities such as cuprous oxide; used for the construction of high-power electron tubes because it does not release appreciable gas when hot.

oxygen furnace steel [MET] Steel made by a process in which oxygen under pressure is directed onto or into the molten metal.

oxygen gouging *See* flame gouging.

oxygen isotope fractionation [GEOCHEM] The use of temperature-dependent variations of the oxygen-18/oxygen-16 ratio in the carbonate shells of marine organisms, to measure water temperature at the time of deposition.

oxygen-kerosine burner [ENG] Liquid-fuel device using a mixture of oxygen and vaporized or atomized kerosine for combustion.

oxygen lance [MET] A pipe used to direct oxygen under pressure into a bath of molten steel.

oxygen mask [ENG] A mask that covers the nose and mouth and is used to administer oxygen.

oxygen minimum layer [HYD] A subsurface layer in which the content of dissolved oxygen is very low (or absent), lower than in the layers above and below.

oxygen point [THERMO] The temperature at which liquid oxygen and its vapor are in equilibrium, that is, the boiling point of oxygen, at standard atmospheric pressure; it is taken as a fixed point on the International Practical Temperature Scale of 1968, at −182.962°C.

oxygen propellant [MATER] A propellant having a minimum assay by volume of 99.9% oxygen when gasified.

oxygen ratio *See* acidity coefficient.

oxygen steelmaking [MET] The manufacture of steel from molten pig iron and steel scrap by methods which employ pure oxygen gas (99 + %) and suitable fluxes to remove carbon and phosphorus (and in part, sulfur) without introducing nitrogen or hydrogen.

oxygen toxicity [PHYSIO] Harmful effects of breathing oxygen at pressures greater than atmospheric.

oxyheeite [MINERAL] $Pb_5Ag_2Sb_6S_{15}$ A light steel gray to silver white mineral consisting of lead and silver antimony sulfide; occurs as acicular needles or in massive form.

oxyhemoglobin [BIOCHEM] The red crystalline pigment formed in blood by the combination of oxygen and hemoglobin, without the oxidation of iron.

oxyhornblende *See* basaltic hornblende.

oxyhydrogen flame [CHEM] A flame obtained from the combustion of a mixture of oxygen and hydrogen.

oxyhydrogen welding [MET] Welding with an oxyhydrogen flame.

oxylophyte [ECOL] A plant that thrives in or is restricted to acid soil.

oxyl process [CHEM ENG] Modified Fischer-Tropsch process used to make alcohols, other oxygenated compounds, paraffins, and olefin hydrocarbons from carbon monoxide and hydrogen.

Oxymonadida [INV ZOO] An order of xylophagous protozoans in the class Zoomastigophorea; colorless flagellate symbionts in the digestive tract of the roach *Cryptocercus* and of certain termites.

β-oxynaphthoic acid *See* β-hydroxynaphthoic acid.

oxyneurine *See* betaine.

oxyntic cell *See* parietal cell.

4-oxypentanoic acid *See* levulinic acid.

oxypetalous [BOT] Having sharp-pointed petals.

oxyphile *See* lithophile.

oxyphilia *See* eosinophilia.

oxyphytia [ECOL] Discordant habitat control due to an excessively acidic substratum.

oxyquinoline *See* oxine.

oxyquinoline sulfate *See* 8-hydroxyquinoline sulfate.

oxysphere *See* lithosphere.

Oxystomata [INV ZOO] A subsection of the Brachyura, including those true crabs in which the first pair of pereiopods is chelate, and the mouth frame is triangular and forward.

Oxystomatidae [INV ZOO] A family of free-living marine nematodes in the superfamily Enoploidea, distinguished by amphids that are elongated longitudinally.

oxytetracycline [MICROBIO] $C_{22}H_{24}O_8N_2$ A crystalline, amphoteric, broad-spectrum antibiotic produced by *Streptomyces rimosus*; produced commercially by fermentation.

oxythioquinox [ORG CHEM] $C_{10}H_6N_2OS_2$ A yellow, crystalline powder with a melting point of 172°C; insoluble in water; used as an insecticide, fungicide, and miticide for fruit and nut trees, for ornamentals, and in greenhouses. Also known as 6-methyl-2,3-quinoxalinedithiol cyclic-*S*,*S*-dithiocarbonate.

oxytocic [MED] Hastening parturition. [PHARM] A drug that hastens parturition.

oxytocin [BIOCHEM] $C_{43}H_{66}O_{12}N_{12}S_2$ A polypeptide hormone secreted by the neurohypophysis that stimulates contraction of the uterine muscles.

Oxyurata [INV ZOO] The equivalent name for Oxyurina.

Oxyuridae [INV ZOO] A family of the nematode superfamily Oxyuroidea.

Oxyurina [INV ZOO] A suborder of nematodes in the order Ascaridida.

Oxyuroidea [INV ZOO] A superfamily of the class Nematoda.

Oyashio [OCEANOGR] A cold current flowing from the Bering Sea southwest along the coast of Kamchatka, past the Kuril Islands, continuing close to the northeast coast of Japan, and reaching nearly 35°N.

oyster [INV ZOO] Any of various bivalve mollusks of the family Ostreidae; the irregular shell is closed by a single adductor muscle, the foot is small or absent, and there is no siphon.

oz *See* ounce.

ozalid [GRAPHICS] A print on light-sensitized material produced directly from a positive transparency and developed via a dry process with ammonia vapor.

oz ap *See* ounce.

oz apoth *See* ounce.

Ozawainellidae [PALEON] A family of extinct protozoans in the superfamily Fusulinacea.

ozocerite [GEOL] A natural, brown to jet black paraffin wax occurring in irregular veins; consists principally of hydrocarbons, is soluble in water, and has a variable melting point. Also known as ader wax; earth wax; fossil wax; mineral wax; native paraffin; ozokerite. [MATER] *See* ceresin.

ozokerite *See* ozocerite.

ozone [CHEM] O_3 Unstable blue gas with pungent odor; an allotropic form of oxygen; a powerful oxidant boiling at −112°C; used as an oxidant, bleach, and water purifier, and to treat industrial wastes.

ozone cloud [METEOROL] A limited region in which the total ozone content of the ozonosphere is greater than normal.

ozone generator [ENG] Apparatus that converts oxygen, O_2, into ozone, O_3, by subjecting the oxygen to an electric-brush discharge. Also known as ozonizer.

ozone layer *See* ozonosphere.

ozonide [ORG CHEM] Any of the oily, thick, unstable compounds formed by reaction of ozone with unsaturated compounds; an example is oleic ozonide from the reaction of oleic acid and ozone.

ozonization [CHEM] The process of treating, impregnating, or combining with ozone.

ozonizer *See* ozone generator.

ozonolysis [ANALY CHEM] The use of ozone to locate double bonds. [ORG CHEM] Oxidation of an organic substance by means of ozone.

ozonosphere [METEOROL] The general stratum of the upper atmosphere in which there is an appreciable ozone concentration and in which ozone plays an important part in the radiative balance of the atmosphere; lies roughly between 10 and 50 kilometers, with maximum ozone concentration at about 20 to 25 kilometers. Also known as ozone layer.

oz t *See* ounce.

oz tr *See* ounce.

p

p- *See* para-; peta-.

P *See* phosphorus; poise.

P_1 [GEN] The parental generation; parents of the F_1 generation.

pA *See* picoampere.

Pa *See* pascal; protactinium.

Paal-Knorr synthesis [ORG CHEM] A method of converting a 1,4-dicarbonyl compound by cyclization with ammonia or a primary amine to a pyrrole.

paar [GEOL] A depression produced by the moving apart of crustal blocks rather than by subsidence within a crustal block.

Paar turbidimeter [ANALY CHEM] A visual-extinction device for measurement of solution turbidity; the length of the column of liquid suspension is adjusted until the light filament can no longer be seen.

PABA *See para*-aminobenzoic acid.

PABA sodium *See* sodium *para*-aminobenzoate.

PABX *See* private automatic branch exchange.

paca [VERT ZOO] Any of several rodents of the genus *Cuniculus*, especially *C. paca*, with a white-spotted brown coat, found in South and Central America.

Pacchionian bodies *See* arachnoidal granulations.

pacemaker [MED] A pulsed battery-operated oscillator implanted in the body to deliver electric impulses to the muscles of the lower heart, either at a fixed rate or in response to a sensor that detects when the patient's pulse rate slows or ceases. Also known as cardiac pacemaker; heart pacer.

pace rating *See* effort rating.

pachnolite [MINERAL] $NaCaAlF_6 \cdot H_2O$ Colorless to white mineral composed of hydrous sodium calcium aluminum fluoride, occurring in monoclinic crystals.

pachoidal structure *See* flaser structure.

Pachuca tank [CHEM ENG] Air-agitated, solid-liquid mixing vessel in which the air is injected into the bottom of a center draft tube; air and solids rise through the tube, with solids exiting the top of the tube and falling through the bulk of the liquid.

pachycephalosaur [PALEON] A bone-headed dinosaur, composing the family Pachycephalosauridae.

Pachycephalosauridae [PALEON] A family of ornithischian dinosaurs characterized by a skull with a solid rounded mass of bone 10 centimeters thick above the minute brain cavity.

pachyderm [VERT ZOO] Any of various nonruminant hooved mammals characterized by thick skin, including the elephants, hippopotamuses, rhinoceroses, and others.

pachydermatous [MED] Abnormally thick-skinned.

pachydermia [MED] Abnormal thickening of the skin.

pachyglossal [VERT ZOO] Of lizards, having a thick tongue.

pachyglossia [MED] Abnormal thickness of the tongue.

pachygyria [MED] A malformation of the brain characterized by its being too broad in form.

pachymeningitis [MED] Inflammation of the dura mater.

pachymeter [ENG] An instrument used to measure the thickness of a material, for example, a sheet of paper.

pachynema *See* pachytene.

pachytene [CYTOL] The third stage of meiotic prophase during which paired chromosomes thicken, each chromosome splits into chromatids, and breakage and crossing over between nonsister chromatids occur. Also known as pachynema.

Pacific anticyclone *See* Pacific high.

Pacific Equatorial Countercurrent [OCEANOGR] The Equatorial Countercurrent flowing east across the Pacific Ocean between 3° and 10°N.

Pacific faunal region [ECOL] A marine littoral faunal region including offshore waters west of Central America, running from the coast of South America at about 5° south latitude to the southern tip of California.

Pacific high [METEOROL] The nearly permanent subtropical high of the North Pacific Ocean, centered, in the mean, at 30–40°N and 140–150°W. Also known as Pacific anticyclone.

Pacific North Equatorial Current [OCEANOGR] The North Equatorial Current which flows westward between 10° and 20°N in the Pacific Ocean.

Pacific Ocean [GEOGR] The largest division of the hydrosphere, having an area of 165,000,000 square kilometers and covering 46% of the surface of the total extent of the oceans and seas; it is bounded by Asia and Australia on the west and North and South America on the east.

Pacific South Equatorial Current [OCEANOGR] The South Equatorial Current flowing westward between 3°N and 10°S in the Pacific Ocean.

Pacific Standard Time *See* Pacific time.

Pacific suite [PETR] A large group of igneous rocks characterized by calcic and calc-alkalic rocks, especially in the region of the circum-Pacific orogenic belt. Also known as anapeirean; circum-Pacific province.

Pacific temperate faunal region [ECOL] A marine littoral faunal region including a narrow zone in the North Pacific Ocean, from Indochina to Alaska and along the west coast of the United States to about 40° north latitude.

Pacific time [ASTRON] The time for a given time zone that is based on the 120th meridian and is the eighth zone west of Greenwich. Also known as Pacific Standard Time.

Pacific-type continental margin [GEOL] A continental margin typified by that of the western Pacific where oceanic lithosphere descends beneath an adjacent continent and produces an intervening island arc system.

Pacinian corpuscle [ANAT] An encapsulated lamellar sensory nerve ending that functions as a kinesthetic receptor.

pack [COMPUT SCI] To reduce the amount of storage required to hold information by changing the method of encoding the data. [IND ENG] To provide protection for an article or group of articles against physical damage during shipment; packing is accomplished by placing articles in a shipping container, and blocking, bracing, and cushioning them when necessary, or by strapping the articles or containers on a pallet or skid. [ORD] Part of a parachute assembly in which the canopy and shroud lines are folded and carried. Also known as pack assembly. [MIN ENG] **1.** A pillar built in the waste area or roadside within a mine to support the mine roof; constructed from loose stones and dirt. **2.** Waste rock or timber used to support the roof or underground workings or used to fill excavations. Also known as fill. [OCEANOGR] *See* pack ice.

package [COMPUT SCI] A program that is written for a general and widely used application in such a way that its usefulness is not impaired by the problems of data or organization of a particular user.

packaged circuit *See* rescap.

packaged magnetron [ELECTR] Integral structure comprising a magnetron, its magnetic circuit, and its output matching device.

PACHYCEPHALOSAURIDAE

Head of *Stegocerus*, a member of the Pachycephalosauridae, Late Cretaceous, Canada. Dome above level of eyes is solid bone.

package freight [IND ENG] Freight shipped in lots insufficient to fill a complete car; billed by the unit instead of by the carload.

package power reactor [NUC PHYS] A small nuclear power plant designed to be crated in packages small enough for transportation to remote locations.

packaging [ELEC] The process of physically locating, connecting, and protecting devices or components.

packaging density [ELECTR] The number of components per unit volume in a working system or subsystem.

pack artillery [ORD] Artillery weapons designed for transport in sections by animals or delivery by parachute; the weapon and carriage are partially disassembled for transport and reassembled for firing from ground positions.

pack assembly *See* pack.

pack builder [MIN ENG] **1.** One who builds packs or pack walls. **2.** In anthracite and bituminous coal mining, one who fills worked-out rooms, from which coal has been mined, with rock, slate, or other waste to prevent caving of walls and roofs, or who builds rough walls and columns of loose stone, heavy boards, timber, or coal along haulageways and passageways and in rooms where coal is being mined to prevent caving of roof or walls during mining operations. Also known as packer; pillar man; timber packer; waller.

pack carburizing [MET] A method of surface hardening of steel in which parts are packed in a steel box with the carburizing compound and heated to elevated temperatures.

packed bed [CHEM ENG] A fixed layer of small particles or objects arranged in a vessel to promote intimate contact between gases, vapors, liquids, solids, or various combinations thereof; used in catalysis, ion exchange, sand filtration, distillation, absorption, and mixing.

packed decimal [COMPUT SCI] A means of representing two digits per character, to reduce space and increase transmission speed.

packed tower [CHEM ENG] A fractionating or absorber tower filled with small objects (packing) to bring about intimate contact between rising fluid (vapor or liquid) and falling liquid.

packed tube [CHEM ENG] A pipe or tube filled with high-heat-capacity granular material; used to heat gases when tubes are externally heated.

packer *See* pack builder; production packer.

packer fluid [PETRO ENG] Fluid inserted in the annulus between the tubing and casing above a packer in order to reduce pressure differentials between the formation and the inside of the casing and across the packer.

packet [BIOL] A cluster of organisms in the form of a cube resulting from cell division in three planes.

packet gland [INV ZOO] A cluster of gland cells opening through the epidermis of nemertines.

packet transmission [COMMUN] Transmission of standardized packets of data over transmission lines in a fraction of a second by networks of high-speed switching computers that have the message packets stored in fast-access core memory.

packfong [MET] Chinese name for an alloy of nickel, zinc, and copper, which resembles nickel silver.

pack hardening [MET] A process of heat treating in which the workpiece is packed in a metal box together with carbonaceous material; carbon penetration is proportional to the length of heating; after treatment the workpiece is reheated and quenched.

pack ice [OCEANOGR] Any area of sea ice, except fast ice, composed of a heterogeneous mixture of ice of varying ages and sizes, and formed by the packing together of pieces of floating ice. Also known as ice canopy; ice pack; pack.

packing [CRYSTAL] Arrangement of atoms or ions in a crystal lattice. [ENG] *See* stuffing. [ENG ACOUS] Excessive crowding of carbon particles in a carbon microphone, produced by excessive pressure or by fusion particles due to excessive current, and causing lowered resistance and sensitivity. [GEOL] The arrangement of solid particles in a sediment or in sedimentary rock. [GRAPHICS] Paper used as a layer under the image or impression cylinder in letterpress printing or under the plate or blanket in lithographic printing in order to produce suitable pressure. [MET] In powder metallurgy, a material in which compacts are embedded during presintering or sintering operations.

packing density [COMPUT SCI] The amount of information per unit of storage medium, as characters per inch on tape, bits per inch or drum, or bits per square inch in photographic storage. [ELECTR] The number of devices or gates per unit area of an integrated circuit. [GEOL] A measure of the extent to which the grains of a sedimentary rock occupy the gross volume of the rock in contrast to the spaces between the grains; equal to the cumulative grain-intercept length along a traverse in a thin section.

packing fraction [NUC PHYS] The quantity $(M-A)/A$, where M is the mass of an atom in atomic mass units and A is its atomic number.

packing house [FOOD ENG] **1.** A food processing plant generally requiring the use of refrigeration. **2.** A building in which livestock are slaughtered and processed, and the meat products and by-products are packed.

packing house pitch [MATER] Dark-brown to black by-product residue from manufacturing soap and candle stock or from refining vegetable oils, refuse, or wool grease; soluble in naphtha and carbon disulfide; used to make paints, varnishes, and tar paper, and in marine caulking and waterproofing. Also known as fatty-acid pitch.

packing index [CRYSTAL] The volume of ion divided by the volume of the unit cell in a crystal.

packing proximity [GEOL] In a sedimentary rock, an estimate of the number of grains that are in contact with adjacent grains; equal to the total percentage of grain-to-grain contacts along a traverse measured on a thin section.

packing radius [CRYSTAL] One-half the smallest approach distance of atoms or ions.

packing ring *See* piston ring.

packing routine [COMPUT SCI] A subprogram which compresses data so as to eliminate blanks and reduce the storage needed for a file.

pack rolling [MET] Hot rolling of two or more sheets of metal packed together; a thin surface oxide film prevents their welding.

packsand [PETR] A very fine-grained sandstone that is so loosely consolidated by a slight calcareous cement that it can be readily cut by a spade.

packstone [PETR] A sedimentary carbonate rock whose granular material is arranged in a self-supporting framework, yet also contains some matrix of calcareous mud.

pack unit [COMMUN] A compact, combination radio transmitter-receiver that can be carried or strapped on the back; some pack units are popularly known as walkie-talkies.

pack wall [MIN ENG] A wall of dry stone built along the side of a roadway, or in the waste area, of a coal or metal mine to help support the roof and to retain the packing material and prevent its spreading into the roadway.

pactamycin [MICROBIO] An antitumor and antibacterial antibiotic produced by *Streptomyces pactum* var. *pactum*.

pad [AERO ENG] *See* launch pad. [ANAT] A small circumscribed mass of fatty tissue, as in terminal phalanges of the fingers or the underside of the toes of an animal, such as a dog. [ELECTR] **1.** An arrangement of fixed resistors used to reduce the strength of a radio-frequency or audio-frequency signal by a desired fixed amount without introducing appreciable distortion. Also known as fixed attenuator. **2.** *See* terminal area. [ENG] **1.** A layer of material used as a cushion or for protection. **2.** A projection of excess metal on a casting forging, or welded part. **3.** A takeoff or landing point for a helicopter or space vehicle. [MET] The brickwork that is beneath the molten iron at the base of a blast furnace.

padder [ELECTR] A trimmer capacitor inserted in series with the oscillator tuning circuit of a superheterodyne receiver to control calibration at the low-frequency end of a tuning range.

padding [COMPUT SCI] The adding of meaningless data (usually blanks) to a unit of data to bring it up to some fixed size.

paddle [AERO ENG] A large, flat, paddle-shaped support for solar cells, used on some satellites. [DES ENG] Any of various implements consisting of a shaft with a broad, flat blade or bladelike part at one or both ends.

paddle wheel [MECH ENG] **1.** A device used to propel shallow-draft vessels, consisting of a wheel with paddles or floats on its circumference, the wheel rotating in a plane parallel to the ship's length. **2.** A wheel with paddles used to move leather in a processing vat.

paddle-wheel steamer [NAV ARCH] A steamer propelled by a wheel or wheels having long paddles, some of which are curved and feathering; the wheel revolves in a vertical plane parallel to the length of the ship; one type of craft has a wide stern wheel, and the other type has two narrow side wheels.

pad dyeing [TEXT] A process in which fabrics are dyed by passing them between rollers.

Pade table [MATH] A table associated to a power series having in its pth row and qth column the ratio of a polynomial of degree q by one of degree p so that this fraction expanded into a power series agrees with the original up to the $p + q$ term.

padlock [DES ENG] An unmounted lock with a shackle that can be opened and closed; the shackle is usually passed through an eye, then closed to secure a hasp.

padparadsha *See* orange sapphire.

paedogamy [INV ZOO] A type of autogamy in certain protozoans whereby there is mutual fertilization of gametes derived from a single cell.

paedomorphosis [EVOL] Phylogenetic change in which adults retain juvenile characters, accompanied by an increased capacity for further change; indicates potential for further evolution.

Paenungulata [VERT ZOO] A superorder of mammals, including proboscideans, xenungulates, and others.

Paeoniaceae [BOT] A monogeneric family of dicotyledonous plants in the order Dilleniales; members are mesophyllic shrubs characterized by cleft leaves, flowers with an intrastaminal disk, and seeds having copious endosperm.

paesa [METEOROL] A violent north-northeast wind of Lake Garda in Italy.

paesano [METEOROL] A northerly night breeze, blowing down from the mountains, of Lake Garda in Italy.

page [COMPUT SCI] **1.** A standard quantity of main-memory capacity, usually 512 to 4096 bytes or words, used for memory allocation and for partitioning programs into control sections. **2.** A standard quantity of source program coding, usually 8 to 64 lines, used for displaying the coding on a cathode-ray tube.

page boundary [COMPUT SCI] The address of the first (lowest) word or byte within a page of memory.

page fault [COMPUT SCI] An interruption that occurs while a page which is referred to by the program is being read into memory.

page printer [COMMUN] A high-speed printer used to transpose messages received on paper tape to full-page format, by printing characters one at a time. [COMPUT SCI] A computer output device which composes a full page of characters before printing the page.

page proof [GRAPHICS] A proof received from a compositor after the galley, and having the form of the final page, usually including any illustrations.

page reader [COMPUT SCI] In character recognition, a character reader capable of processing cut-form documents of varying sizes; sometimes capable of reading information in reel forms.

page table [COMPUT SCI] A key element in the virtual memory technique; a table of addresses where entries are adjusted for easy relocation of pages.

Paget's cells [PATH] Large, epithelial cells with clear cytoplasm found in certain breast and skin cancers.

Paget's disease [MED] **1.** A type of carcinoma of the breast that involves the nipple or areola and the larger ducts, characterized by the presence of Paget's cells. **2.** Osseous hyperplasia simultaneous with accelerated deossification. **3.** An apocrine gland skin cancer, composed principally of Paget's cells.

page turning [COMPUT SCI] **1.** The process of moving entire pages of information between main memory and auxiliary storage, usually to allow several concurrently executing programs to share a main memory of inadequate capacity. **2.** In conversational time-sharing systems, the moving of programs in and out of memory on a round-robin, cyclic schedule so that each program may use its allotted share of computer time.

pagination [GRAPHICS] The art of planning page format to allow sequence page numbering.

paging [COMPUT SCI] The scheme used to locate pages, to move them between main storage and auxiliary storage, or to exchange them with pages of the same or other computer programs; used in computers with virtual memories.

paging system [COMMUN] A system which gives an indication to a particular individual that he is wanted at the telephone, such as by sounding a number on musical gongs, calling by name over a loudspeaker, or producing an audible signal in a radio receiver carried in the individual's pocket.

pagoda stone [GEOL] **1.** A Chinese limestone showing in section fossil orthoceratites arranged in pagodalike designs. **2.** An agate whose markings resemble pagodas.

pagodite *See* agalmatolite.

Paguridae [INV ZOO] The hermit crabs, a family of decapod crustaceans belonging to the Paguridea.

Paguridea [INV ZOO] A group of anomuran decapod crustaceans in which the abdomen is nearly always asymmetrical, being either soft and twisted or bent under the thorax.

paha [GEOL] A low, elongated, rounded glacial ridge or hill which consists mainly of drift, rock, or windblown sand, silt, or clay but is capped with a thick cover of loess.

pahoehoe [GEOL] A type of lava flow whose surface is glassy, smooth, and undulating; the lava is basaltic, glassy, and porous. Also known as ropy lava.

paigeite [MINERAL] $(Fe,Mg)FeBO_5$ A black mineral composed of iron magnesium borate, occurring as fibrous aggregates.

pail [DES ENG] A cylindrical or slightly tapered container.

pain [PHYSIO] Patterns of somesthetic sensation, generally unpleasant, or causing suffering or distress.

pain spot [PHYSIO] Any of the small areas of skin overlying the endings of either very small myelinated (delta) or unmyelinated (C) nerve fibers whose stimulation, depending on the intensity and duration, results in the sensation of either pain or itching.

paint [ELECTR] Vernacular for a target image on a radarscope. [MATER] A mixture of a pigment and a vehicle, such as oil or water, that together form a liquid or paste that can be applied to a surface to provide an adherent coating that imparts color to and often protects the surface.

paint clay [MATER] A light-yellow to dark-reddish-brown iron- or manganese-bearing clay that mixes easily with linseed oil.

painter [METEOROL] A fog frequently experienced on the coast of Peru; the brownish deposit which it often leaves upon exposed surfaces is sometimes called Peruvian paint. Also known as Callao painter.

pain threshold [PHYSIO] The lowest limit for the perception of pain sensations.

paint pot [GEOL] A mud pot containing multicolored mud.

paint remover [MATER] Liquid or paste formulation used to remove dried paint, varnish, enamel, or lacquer; contains solvents such as methanol, ethyl alcohol, acetone, toluene, benzene, and ethyl acetate.

paint vehicle [MATER] The liquid constituent of paint; consists of volatile solvent or thinner and a film-forming component.

pair [ELEC] Two like conductors employed to form an electric circuit. [MECH ENG] Two parts in a kinematic mechanism that mutually constrain relative motion; for example, a sliding pair composed of a piston and cylinder. [SCI TECH] A set of two things that are identical or nearly so, or are designed to function as a unit.

paired cable [ELEC] Cable in which the single conductors are twisted together in groups of two, none of which is arranged with others to form quads.

paired terrace [GEOL] One of two stream terraces that face each other at the same elevation from opposite sides of the stream valley and represent the remnants of the same floodplain or valley floor. Also known as matched terrace.

pairing [ELECTR] In television, imperfect interlace of lines composing the two fields of one frame of the picture; instead of having the proper equal spacing, the lines appear in groups of two.

pairing element [MECH ENG] Either of two machine parts connected to permit motion.

pairing isomer [NUC PHYS] An excited nuclear state which has an unusually long lifetime because the microscopic motions of its constituent nucleons differ sharply from those of states of lower energy into which it is permitted to decay.

pair production [PHYS] The conversion of a photon into an electron and a positron when the photon traverses a strong electric field, such as that surrounding a nucleus or an electron.

paisanite *See* ailsyte.

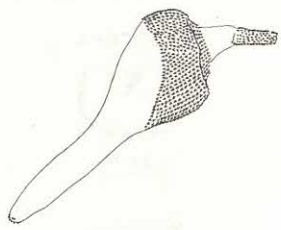
Palaeacanthaspidoidei [PALEON] A suborder of extinct, placoderm fishes in the order Rhenanida; members were primitive, arthrodire-like species.

Palaeacanthocephala [INV ZOO] An order of the Acanthocephala including parasitic worms characterized by fragmented nuclei in the hypodermis, lateral placement of the chief lacunar vessels, and proboscis hooks arranged in long rows.

PAEONIACEAE

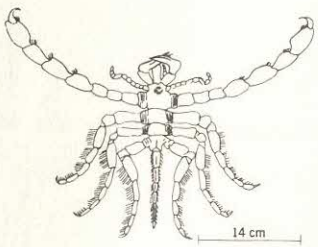
The garden peony *(Paeonia lactiflora)*, member of the family Paeoniaceae in the order Dilleniales. *(Courtesy of F. E. Westlake, from National Audubon Society)*

PALAEACANTHOCEPHALA



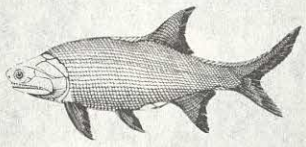
Corynosoma reductum, a palaeacanthocephalan. The anterior end of the body is provided with spines of various forms which aid in attachment to the host animal. *(From H. J. Van Cleave, Acanthocephala of North American Mammals, University of Illinois Press, 1953)*

PALAEOISOPUS



Palaeoisopus problematicus. (After Broili)

PALAEONISCOIDEI



Elonichthys robisoni Hibbert (Palaeoniscoidei), a Lower Carboniferous palaeoniscoid from Scotland, which attained a length of 12 inches (30 centimeters). *(After R. H. Traquair, The ganoid fishes of the British Carboniferous formations, Palaeontographical Society, vol. 55, 1901)*

PALEOCENE

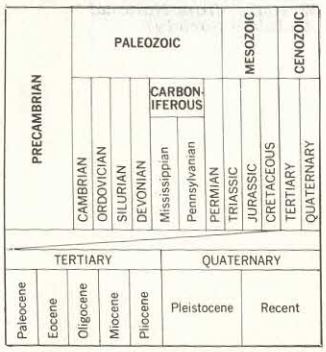


Chart showing the relationship of the Paleocene to the eras and periods of geologic time.

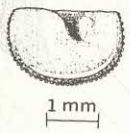
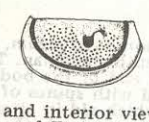
PALEOCOPA





Exterior and interior views of right valve of *Eurychilina subradiata* Ulrich, showing wide complete frill; from the Ordovician of Minnesota.

Palaechinoida [PALEON] An extinct order of echinoderms in the subclass Perischoechinoidea with a rigid test in which the ambulacra bevel over the adjoining interambulacra.

Palaemonidae [INV ZOO] A family of decapod crustaceans in the group Caridea.

Palaeocaridacea [INV ZOO] An order of crustaceans in the superorder Syncarida.

Palaeocaridae [INV ZOO] A family of the crustacean order Palaeocaridacea.

Palaeoconcha [PALEON] An extinct order of simple, smooth-hinged bivalve mollusks.

Palaeocopida [PALEON] An extinct order of crustaceans in the subclass Ostracoda characterized by a straight hinge and by the anterior location for greatest height of the valve.

Palaeodonta [VERT ZOO] A suborder of artiodactylous mammals including piglike forms such as the extinct "giant pigs" and the hippopotami.

Palaeognathae [VERT ZOO] The ratites, making up a superorder of birds in the subclass Neornithes; merged with the Neognathae in some systems of classification.

Palaeoisopus [PALEON] A singular, monospecific, extinct arthropod genus related to the pycnogonida, but distinguished by flattened anterior appendages.

Palaeomastodontinae [PALEON] An extinct subfamily of elaphantoid proboscidean mammals in the family Mastodontidae.

Palaeomerycidae [PALEON] An extinct family of pecoran ruminants in the superfamily Cervoidea.

Palaeonemertini [INV ZOO] A family of the class Anopla distinguished by the two- or three-layered nature of the body-wall musculature.

Palaeonisciformes [PALEON] A large extinct order of chondrostean fishes including the earliest known and most primitive ray-finned forms.

Palaeoniscoidei [PALEON] A suborder of extinct fusiform fishes in the order Palaeonisciformes with a heavily ossified exoskeleton and thick rhombic scales on the body surface.

Palaeopantopoda [PALEON] A monogeneric order of extinct marine arthropods in the subphylum Pycnogonida.

Palaeopneustidae [INV ZOO] A family of deep-sea echinoderms in the order Spatangoida characterized by an oval test, long spines, and weakly developed fascioles and petals.

Palaeopterygii [VERT ZOO] An equivalent name for the Actinopterygii.

Palaeoryctidae [PALEON] A family of extinct insectivorous mammals in the order Deltatheridia.

Palaeospondyloidea [PALEON] An ordinal name assigned to the single, tiny fish *Palaeospondylus*, known only from Middle Devonian shales in Carthness, Scotland.

Palaeotheriidae [PALEON] An extinct family of perissodactylous mammals in the superfamily Equoidea.

palaeotheriodont [VERT ZOO] Being or having lophodont teeth with longitudinal external tubercles that are connected with inner tubercles by transverse oblique crests.

palaeotropical *See* paleotropical.

palagonite [GEOL] A brown to yellow altered basaltic glass found as interstitial material or amygdules in pillow lavas.

palagonite tuff [PETR] A pyroclastic rock composed of angular fragments of palagonite.

palama [VERT ZOO] The membranous web on the feet of aquatic birds.

palasite [GEOL] The most abundant of the intermediate types of meteorites, consisting of olivine enclosed in a nickel-iron matrix.

palatal index [ANTHRO] The ratio, multiplied by 100, of the length to the breadth of the hard palate.

palate [ANAT] The roof of the mouth.

palatine bone [ANAT] Either of a pair of irregularly L-shaped bones forming portions of the hard palate, orbits, and nasal cavities.

palatine canal [ANAT] One of the canals in the palatine bone, giving passage to branches of the descending palatine nerve and artery.

palatine gland [ANAT] Any of numerous small oral glands on the palate of mammals.

palatine process [ANAT] A thick process that projects horizontally mediad from the medial aspect of the maxilla. [EMBRYO] An outgrowth on the ventromedial aspect of the maxillary process that develops into the definite palate.

palatine suture [ANAT] The median suture joining the bones of the palate.

palatine tonsil [ANAT] Either of a pair of almond-shaped aggregations of lymphoid tissue embedded between folds of tissue connecting the pharynx and posterior part of the tongue with the soft palate. Also known as faucial tonsil; tonsil.

palatomaxillary arch [ANAT] An arch formed by the palatine, maxillary, and premaxillary bones. Also known as maxillary arch.

palatomaxillary index [ANTHRO] An index denoting the form of the dental arch and palate, expressed by the formula: palatomaxillary width multiplied by 100, divided by the palatomaxillary length.

palatoquadrate [VERT ZOO] A series of bones or a cartilaginous rod constituting part of the roof of the mouth or upper jaw of most nonmammalian vertebrates.

palau [MET] A palladium-gold alloy; used as a platinum substitute in analytical chemistry.

palba wax [MATER] A grayish-yellow wax from older green leaves of the palm tree *Copernicia cerifera*.

palea [BOT] **1.** The upper, enclosing bract of a grass flower. **2.** A chaffy scale found on the receptacle of the disk flowers of some composite plants. [INV ZOO] One of the enlarged flattened setae forming the operculum of the tube of certain polychaete worms.

Palearctic [ECOL] Pertaining to a biogeographic region including Europe, northern Asia and Arabia, and Africa north of the Sahara.

paleate [BOT] Having a covering of chaffy scales, as some rhizomes.

pale catechu *See* gambir.

paleic surface [GEOL] A smooth, preglacial erosion surface.

paleoagrostology [PALEOBOT] The study of fossil grasses.

paleoalgology [PALEOBOT] The study of fossil algae. Also known as paleophycology.

paleoanthropology [ANTHRO] A branch of anthropology concerned with the study of fossil man.

paleobiochemistry [PALEON] The study of chemical processes used by organisms that lived in the geologic past.

paleobioclimatology [PALEON] The study of climatological events affecting living organisms for millennia or longer.

paleobiocoenosis [PALEON] An assemblage of organisms that lived together in the geologic past as an interrelated community. Also known as paleocoenosis.

paleobotanic province [GEOL] A large region defined by similar fossil floras.

paleobotany [PALEON] The branch of paleontology concerned with the study of ancient and fossil plants and vegetation of the geologic past.

paleoceanography [OCEANOGR] The study of the history of the circulation, chemistry, biogeography, fertility, and sedimentation of the oceans.

Paleocene [GEOL] A major worldwide division (epoch) of geologic time of the Tertiary period; extends from the end of the Cretaceous period to the Eocene epoch.

paleochannel [GEOL] A remnant of a stream channel cut in older rock and filled by the sediments of younger overlying rock.

Paleocharaceae [PALEOBOT] An extinct group of fossil plants belonging to the Charophyta distinguished by sinistrally spiraled gyrogonites.

paleoclimate [GEOL] The climate of a given period of geologic time. Also known as geologic climate.

paleoclimatic sequence [GEOL] The sequence of climatic changes in geologic time; it shows a succession of oscillations between warm periods and ice ages, but superimposed on this are numerous shorter oscillations.

paleoclimatology [GEOL] The study of climates in the geologic past, involving the interpretation of glacial deposits, fossils, and paleogeographic, isotopic, and sedimentologic data.

paleocoenosis *See* paleobiocoenosis.

Paleocopa [PALEON] An order of extinct ostracods distinguished by a long, straight hinge.

paleocrystic ice [HYD] Sea ice generally considered to be at least 10 years old, especially well-weathered polar ice.

paleocurrent [GEOL] Ancient fluid current flow whose orientation can be inferred by primary sedimentary structures and textures.

paleodepth [PALEON] The water level at which an ancient organism or group of organisms flourished.
paleoecology [PALEON] The ecology of the geologic past.
paleoequator [GEOL] The position of the earth's equator in the geologic past as defined for a specific geologic period and based on geologic evidence.
paleofluminology [GEOL] The study of ancient stream systems.
Paleogene [GEOL] A geologic time interval comprising the Oligocene, Eocene, and Paleocene of the lower Tertiary period. Also known as Eogene.
paleogeographic event *See* palevent.
paleogeographic stage *See* palstage.
paleogeography [GEOL] The geography of the geologic past; concerns all physical aspects of an area that can be determined from the study of the rocks.
paleogeologic map [GEOL] An areal map of the geology of an ancient surface immediately below a buried unconformity, showing the geology as it appeared at some time in the geologic past at the time the surface of unconformity was completed and before the overlapping strata were deposited.
paleogeology [GEOL] The geology of the past, applied particularly to the interpretation of the rocks at a surface of unconformity.
paleogeomorphology [GEOL] A branch of geomorphology concerned with the recognition of ancient erosion surfaces and the study of ancient topographies and topographic features that are now concealed beneath the surface and have been removed by erosion. Also known as paleophysiography.
paleoherpetology [PALEON] The study of fossil reptiles.
paleohydrology [GEOL] The study of ancient hydrologic features preserved in rock.
paleoichnology [PALEON] The study of trace fossils in the fossil state. Also spelled palichnology.
pale oil [MATER] A petroleum lubricating or process oil refined until its color (measured by transmitted light) is straw to pale yellow.
paleoisotherm [GEOL] The locus of points of equal temperature for some former period of geologic time.
paleokarst [GEOL] A rock or area that has been karsified and subsequently buried under sediments.
paleolatitude [GEOL] The latitude of a specific area on the earth's surface in the geologic past.
paleolimnology [GEOL] **1.** The study of the past conditions and processes of ancient lakes. **2.** The study of the sediments and history of existing lakes.
paleolithologic map [GEOL] A paleogeologic map indicating lithologic variations at a buried horizon or within a restricted zone at a specific time in the geologic past.
paleomagnetics [GEOPHYS] The study of the direction and intensity of the earth's magnetic field throughout geologic time.
paleomagnetic stratigraphy [GEOPHYS] The use of natural remanent magnetization in the identification of stratigraphic units. Also known as magnetic stratigraphy.
paleometeoritics [GEOL] The study of variation of extraterrestrial debris as a function of time over extended parts of the geologic record, especially in deep-sea sediments and possibly in sedimentary rocks, and, for more recent periods, in ice.
paleomorphology [PALEON] The study of the form and structure of fossil remains in order to describe the original anatomy of an organism.
paleomycology [PALEOBOT] The study of fossil fungi.
Paleonthropinae [PALEON] A former subfamily of fossil man in the family Hominidae; set up to include the Neanderthalers together with Rhodesian man.
paleontology [BIOL] The study of life of the past as recorded by fossil remains.
paleopalynology [PALEON] A field of palynology concerned with fossils of microorganisms and of dissociated microscopic parts of megaorganisms.
Paleoparadoxidae [PALEON] A family of extinct hippopotamuslike animals in the order Desmostylia.
paleopedology [GEOL] The study of soils of past geologic ages, including determination of their ages.
paleophycology *See* paleoalgology.
paleophysiography *See* paleogeomorphology.
Paleophytic [PALEOBOT] A paleobotanic division of geologic time, signifying that period during which the pteridophytes flourished, sometime between the evolution of the algae and the appearance of the first gymnosperms. Also known as Pteridophytic.
paleoplain [GEOL] An ancient degradational plain that is buried beneath later deposits.
paleopole [GEOL] A pole of the earth, either magnetic or geographic, in past geologic time.
Paleoptera [INV ZOO] A section of the insect subclass Pterygota including primitive forms that are unable to flex their wings over the abdomen when at rest.
paleosalinity [GEOL] The salinity of a body of water in the geologic past, as evaluated on the basis of chemical analyses of sediment or formation water.
paleosere [ECOL] A series of ecologic communities that have led to a climax community.
paleoslope [GEOL] The direction of initial dip of a former land surface, such as an ancient continental slope.
paleosol [GEOL] A soil horizon that formed on the surface during the geologic past, that is, an ancient soil. Also known as buried soil; fossil soil.
paleosome [GEOL] A geometric element of a composite rock or mineral deposit which appears to be older than an associated younger rock element.
paleostructure [GEOL] The geologic structure of a region or sequence of rocks in the geologic past.
paleotectonic map [GEOL] Regional map that shows the structural patterns that existed during a particular period of geologic time, for example, the Lower Cretaceous in western Canada.
paleotemperature [GEOL] **1.** The temperature at which a geologic process took place in ancient past. **2.** The mean climatic temperature at a given time or place in the geologic past.
paleothermal [GEOL] Pertaining to warm climates of the geologic past.
paleothermometry [GEOL] Measurement or estimation of past temperatures.
paleotopography [GEOL] The topography of a given area in the geologic past.
paleotropical [ECOL] Of or pertaining to a biogeographic region that includes the Oriental and Ethiopian regions. Also spelled palaeotropical.
Paleozoic [GEOL] The era of geologic time from the end of the Precambrian (600 million years before present) until the beginning of the Mesozoic era (225 million years before present).
paleozoology [PALEON] The branch of paleontology concerned with the study of ancient animals as recorded by fossil remains.
palette [GEOL] A broad sheet of calcite representing a solutional remnant in a cave. Also known as shield.
palevent [GEOL] A relatively sudden and short-lived paleogeographic happening, such as the short, static existence of a particular depositional environment, or a rapid geographic change separating two palstages. Also known as paleogeographic event.
palichnology *See* paleoichnology.
palilalia [MED] Pathologic repetition of words or phrases.
palimpsest [GEOL] **1.** Referring to a kind of drainage in which a modern, anomalous drainage pattern is superimposed upon an older one, clearly indicating different topographic and possibly structural conditions at the time of development. **2.** In sedimentology, autochthonous sediment deposits which exhibit some of the attributes of the source sediment. [PETR] Of a metamorphic rock, having remnants of the original structure or texture preserved.
palindrome [GEN] A nucleic acid sequence that is self-complementary.
palingenesis [EMBRYO] Unaltered recapitulation of ancestral features by the developing stages of an organism. [PETR] In-place formation of new magma by the melting of preexisting rock material.
palingenetic *See* resurrected.
palinspastic map [GEOL] A paleogeographic or paleotectonic map showing restoration of the features to their original geographic positions, before thrusting or folding of the crustal rocks.
Palinuridae [INV ZOO] The spiny lobsters or langoustes, a family of macruran decapod crustaceans belonging to the Scyllaridea.
palisade cell [BOT] One of the columnar cells of the palisade mesophyll which contain numerous chloroplasts.

PALEOZOIC

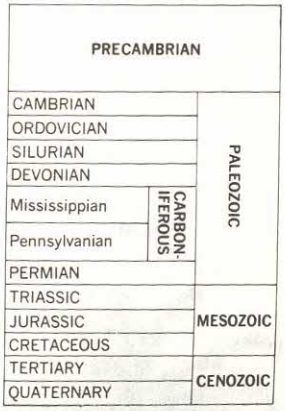


Chart showing the relationship of the Paleozoic to the other eras and to the periods of geologic time.

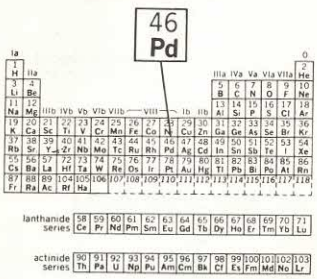
PALLADIUM



Periodic table of the chemical elements showing the position of palladium.

PALM

The common coconut palm (*Cocos nucifera*). The coconut fruit can be seen on the tree hanging below the branches.

Palisade disturbance [GEOL] Appalachian orogenic episode occurring during Triassic time which produced a series of faultlike basins.

palisade mesophyll [BOT] A tissue system of the chlorenchyma in well-differentiated broad leaves composed of closely spaced palisade cells oriented parallel to one another, but with their long axes perpendicular to the surface of the blade.

palisades [GEOL] A series of sharp cliffs.

Palladian window [ARCH] An arched central window with a narrower, square-headed window on each side.

palladium [CHEM] A chemical element, symbol Pd, atomic number 46, atomic weight 106.4. [MET] A white, ductile malleable metal that resembles platinum and follows it in abundance and importance of applications; does not tarnish at normal temperatures.

palladium amalgam *See* potarite.

palladium barrier leak detector [ENG] A type of leak detector in which hydrogen is diffused through a barrier of hot palladium into an evacuated vacuum gage.

palladium bichloride *See* palladium chloride.

palladium chloride [INORG CHEM] $PdCl_2$ or $PdCl_2 \cdot 2H_2O$ Dark-brown, deliquescent powder that decomposes at 501°C; soluble in water, alcohol, acetone, and hydrochloric acid; used in medicine, analytical chemisty, photographic chemicals, and indelible inks. Also known as palladium bichloride; palladous chloride.

palladium gold *See* porpezite.

palladium iodide [INORG CHEM] PdI_2 Black powder that decomposes above 100°C; soluble in potassium iodide solution, insoluble in water and alcohol. Also known as palladous iodide.

palladium monoxide *See* palladium oxide.

palladium nitrate [INORG CHEM] $Pd(NO_3)_2$ Brown, water-soluble, deliquescent salt; used as an analytical reagent. Also known as palladous nitrate.

palladium oxide [INORG CHEM] PdO Amber or black-green powder that decomposes at 750°C; soluble in dilute acids; used in chemical synthesis as a reduction catalyst. Also known as palladium monoxide.

palladous chloride *See* palladium chloride.

palladous iodide *See* palladium iodide.

palladous nitrate *See* palladium nitrate.

pallanesthesia [MED] Absence of pallesthesia, or vibration sense.

Pallas [ASTRON] The second-largest asteroid, with a diameter of about 540 kilometers, mean distance from the sun of 2.769 astronomical units, and C-type surface composition.

pallasite [GEOL] **1.** A stony-iron meteorite composed essentially of large single glassy crystals of olivine embedded in a network of nickel-iron. **2.** An ultramafic rock, of either meteoric or terrestrial origin, which contains more than 60% iron in the former, or more iron oxides than silica in the latter.

pallasite shell *See* lower mantle.

pallet [BUILD] A flat piece of wood laid in a wall to which woodwork may be securely fastened. [ENG] **1.** A lever that regulates or drives a ratchet wheel. **2.** A hinged valve on a pipe organ. **3.** A tray or platform used in conjunction with a fork lift for lifting and moving materials. [INV ZOO] One of a pair of plates on the siphon tubes of certain Bivalvia. [GRAPHICS] An instrument consisting of a flat blade with a handle, used in clay work. [MECH ENG] One of the disks or pistons in a chain pump.

palletize [IND ENG] To package material for convenient handling on a pallet or lift truck.

palletized ship [NAV ARCH] A ship designed to carry palletized cargo.

pallet stone [HOROL] A stone or jewel face on a pallet; reduces friction and wear.

pallial artery [INV ZOO] The artery that supplies blood to the mantle of a mollusk.

pallial chamber [INV ZOO] The mantle cavity in mollusks.

pallial line [INV ZOO] A mark on the inner surface of a bivalve shell caused by attachment of the mantle.

pallial nerve [INV ZOO] One of the pair of dorsal nerves that innervate the mantle in mollusks.

pallial sinus [INV ZOO] An inward bend in the posterior portion of the pallial line in bivalve mollusks.

palliative [PHARM] **1.** Having a soothing or relieving quality. **2.** A drug that soothes or relieves symptoms of a disease.

pallium [ANAT] The cerebral cortex. [INV ZOO] The mantle of a mollusk or brachiopod.

Pallopteridae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

pallor [MED] Paleness, especially of the skin and mucous membranes.

pall ring [CHEM ENG] A specially shaped steel ring used as packing for distillation columns.

palm [ANAT] The flexor or volar surface of the hand. [BOT] Any member of the monocotyledonous family Arecaceae; most are trees with a slender, unbranched trunk and a terminal crown of large leaves that are folded between the veins.

Palmales [BOT] An equivalent name for Arecales.

palmar [ANAT] Of or pertaining to the palm of the hand.

palmar aponeurosis [ANAT] Bundles of fibrous connective tissue which radiate from the tendons of the deep fascia of the forearm toward the proximal ends of the fingers.

palmar arch *See* deep palmar arch; superficial palmar arch.

palmarosa oil [MATER] Colorless to light-yellow, volatile essential oil with roselike aroma obtained from a rosha grass (*Cymbopogon martinii* var. *motia*); soluble in alcohol and mineral oils; main component is geraniol; used in soaps and perfumes. Also known as East Indian geranium oil; Indian grass oil; Rusa oil; Turkish geranium oil.

palmar reflex [PHYSIO] Flexion of the fingers when the palm of the hand is irritated.

palmate [BOT] Having lobes, such as on leaves, that radiate from a common point. [VERT ZOO] Having webbed toes. [ZOO] Having the distal portion broad and lobed, resembling a hand with the fingers spread.

palm butter [MATER] A reddish-yellow edible fatty oil expressed from putrid or fermented fruit pulp of the African oil palm (*Elaesis guineensis*); soluble in alcohol, ether, carbon disulfide, and chloroform; main components are palmitic acid, stearic acid, and glycerides of palmitic and oleic acids; melts at 27–42°C; used to make soaps and candles, as a lubricant, a color for butter substitutes, and an emollient. Also known as palm grease; palm oil.

Palmer scan [ELECTR] Combination of circular or raster and conical radar scans; the beam is swung around the horizon, and at the same time a conical scan is performed.

palmetto fiber [BOT] Brush or broom fiber obtained from young leafstalks of the cabbage palm tree (*Sabal palmetto*).

palm grease *See* palm butter.

palmierite [MINERAL] $(K,Na)_2Pb(SO_4)_2$ A white hexagonal mineral composed of potassium sodium lead sulfate.

palmitate [ORG CHEM] A derivative ester or salt of palmitic acid.

palmitic acid [ORG CHEM] $C_{15}H_{31}COOH$ A fatty acid; white crystals, soluble in alcohol and ether, insoluble in water; melts at 63.4°C, boils at 271.5°C (100 mm Hg); derived from spermaceti; used to make metallic palmitates and in soaps, waterproofing, and lube oils. Also known as cetylic acid; palmitinic acid.

palmitin *See* tripalmitin.

palmitinic acid *See* palmitic acid.

palmitoleic acid [ORG CHEM] $C_{16}H_{30}O_2$ An unsaturated fatty acid, found in marine animal oils; it is a clear liquid used as a standard in chromatography. Also known as *cis*-9-hexadecenoic acid.

palm kernel oil *See* palm nut oil.

palm nut [BOT] The edible seed of the African oil palm (*Elaeis guineensis*).

palm nut oil [MATER] Yellowish fatty oil; soluble in alcohol, either, carbon disulfide, and chloroform; main components are triolein and triglycerides of stearic, palmitic, myristic, lauric, and other fatty acids; used to make soap, chocolate products, margarine, cosmetics, and candles, and as an illuminant and a color for butter substitutes. Also known as palm kernel oil.

palm oil *See* palm butter.

palm wax [MATER] A yellow wax from the Ecuadoran palm (*Ceroxylon andicola*); used as a beeswax substitute.

Palmyridae [INV ZOO] A mongeneric family of errantian polychaete annelids.

palouser [METEOROL] A dust storm of northwestern Labrador.

palp [INV ZOO] Any of various sensory, usually fleshy appendages near the oral aperture of certain invertebrates.

palpable [MED] **1.** Capable of being felt or touched. **2.** Evident.

palpable coordinate [MECH] A generalized coordinate that appears explicitly in the Lagrangian of a system.

palpal organ [INV ZOO] An organ on the terminal joint of each pedipalp of a male spider which functions to convey sperm to the female genital orifice.

palpation [MED] Diagnostic examination by touch.

Palpatores [INV ZOO] A suborder of long-legged arachnids in the order Phalangida.

palpebra [ANAT] The eyelid.

palpebral disk [VERT ZOO] A scale, often transparent, covering the eyelid of certain lizards.

palpebral fissure [ANAT] The opening between the eyelids.

palpebral fold [ANAT] A fold formed by the reflection of the conjunctiva from the eyelid onto the eye.

Palpicornia [INV ZOO] The equivalent name for Hydrophiloidea.

palpiger [INV ZOO] The palpi-bearing portion of an insect labium.

Palpigradida [INV ZOO] An order of rare tropical and warm-temperate arachnids; all are minute, whitish, eyeless animals with an elongate body that terminates in a slender, multisegmented flagellum set with setae.

palpitate [MED] To flutter, or beat abnormally fast; applied especially to the rate of the heartbeat.

palpocil [INV ZOO] A fine, filamentous tactile hair.

palpus [INV ZOO] **1.** A process on a mouthpart of an arthropod that has a tactile or gustatory function. **2.** Any similar process on other invertebrates.

palstage [GEOL] A period of time when paleogeographic conditions were relatively static or were changing gradually and progressively with relation to such factors as sea level, surface relief, or the distance of the shoreline from the region in question. Also known as paleogeographic stage.

palsy [MED] Any of various special types of paralysis, such as cerebral palsy.

PAL system *See* phase-alternation line system.

paludal [ECOL] Relating to swamps or marshes and to material that is deposited in a swamp environment.

paludification [ECOL] Bog expansion resulting from the gradual rising of the water table as accumulation of peat impedes water drainage.

palustrine [ECOL] Being, living, or thriving in a marsh.

palygorskite [MINERAL] **1.** A chain-structure type of clay mineral. **2.** A group of lightweight, tough, fibrous clay minerals showing extensive substitution of aluminum for magnesium.

palynofacies [PALEON] An assemblage of palynomorphs in a portion of a sediment, representing local environmental conditions, but not representing the regional palynoflora.

palynology [PALEON] The study of spores, pollen, microorganisms, and microscopic fragments of megaorganisms that occur in sediments.

palynomorph [PALEON] A microscopic feature such as a spore or pollen that is of interest in palynological studies.

palynostratigraphy [PALEON] The stratigraphic application of palynologic methods.

palytoxin [BIOCHEM] A water-soluble toxin produced by several species of *Palythoa;* considered to be one of the most poisonous substances known.

PAM *See* pulse-amplitude modulation.

pamabrom [PHARM] $C_{11}H_{18}BrN_3O_3$ A water-soluble, fine white powder, decomposing at 300°C; used in medicine as a diuretic. Also known as 2-amino-2-methyl-1-propanol-8-bromotheophyllinate.

pamaquine naphthoate [PHARM] $C_{42}H_{45}N_3O_7$ A yellow to orange-yellow powder, soluble in alcohol and acetone; used as an antimalarial drug.

pampa [ECOL] An extensive plain in South America, usually covered with grass.

pampero [METEOROL] A wind of gale force blowing from the southwest across the pampas of Argentina and Uruguay, often accompanied by squalls, thundershowers, and a sudden drop of temperature; it is comparable to the norther of the plains of the United States.

Pamphiliidae [INV ZOO] The web-spinning sawflies, a family of hymenopteran insects in the superfamily Megalodontoidea.

pampiniform [ANAT] Of the network of veins in the spermatic cord and in the broad ligament, having the form of a tendril.

pampiniform plexus [ANAT] A venous network in the spermatic cord in the male, and in the broad ligament in the female.

pamprodactylous [VERT ZOO] Having the toes turned forward, as of certain birds.

pan [COMMUN] To tilt or otherwise move a television or movie camera vertically and horizontally to keep it trained on a moving object or to secure a panoramic effect. [GEOL] **1.** A shallow, natural depression or basin containing a body of standing water. **2.** A hard, cementlike layer, crust, or horizon of soil within or just beneath the surface; may be compacted, indurated, or very high in clay content. [MIN ENG] **1.** A shallow, circular, concave steel or porcelain dish in which drillers or samplers wash the drill sludge to gravity-separate the particles of heavy, dense minerals from the lighter rock powder as a quick visual means of ascertaining if the rocks traversed by the borehole contain minerals of value. **2.** The act or process of performing the above operation. [OCEANOGR] *See* pancake ice.

panabase *See* tetrahedrite.

panacinar emphysema [MED] Emphysema characterized by diffuse destruction of one lung.

panadapter *See* panoramic adapter.

panagglutinin [IMMUNOL] An agglutinin lacking specificity, which agglutinates erythrocytes of various types.

panama [TEXT] A plain woven hopsacking of coarse-yarn basket weave, plain or in two colors, producing an effect similar to the texture of panama hats.

Panama disease [PL PATH] A fungus disease of banana caused by invasion of the vascular system by *Fusarium oxysporum cubense*, resulting in yellowing and wilting of the foliage and ultimate death of the shoots.

pan-amalgamation process [MIN ENG] A process for extracting gold or silver from their ores; the ore is crushed and mixed with salt, copper sulfate, and mercury, and the gold or silver amalgamize with the mercury.

Pan-American jig [MIN ENG] Mineral jig developed to treat alluvial sands; the jig cell is pulsated vertically on a flexible diaphragm seated above the stationary hutch.

panarteritis [MED] **1.** Arteritis involving all the coats of an artery. **2.** *See* polyarteritis.

panarthritis [MED] Inflammation of several joints.

panas oetara [METEOROL] A strong, warm, dry north wind in February in Indonesia.

panautomorphic rock *See* panidiomorphic rock.

Panavision [GRAPHICS] A process for making wide-screen motion picture films which uses 65-millimeter film in the camera, and an anamorphic lens which gives a compression of 1.33:1 in the width.

pan bolt [DES ENG] A bolt with a head resembling an upside-down pan.

pancake [MIN ENG] A concrete disk employed in stope support. [OCEANOGR)] *See* pancake ice.

pancake auger [DES ENG] An auger having one spiral web, 12 to 15 inches (30 to 38 centimeters) in diameter, attached to the bottom end of a slender central shaft; used as removable deadman to which a drill rig or guy line is anchored.

pancake coil [ELEC] A coil having the shape of a pancake, usually with the turns arranged in the form of a flat spiral.

pancake engine [MECH ENG] A compact engine with cylinders arranged radially.

pancake forging [MET] A rough, flat, forged shape made quickly with a minimum of tooling.

pancake ice [OCEANOGR] One or more small, newly formed pieces of sea ice, generally circular with slightly raised edges and about 1 to 10 feet (0.3 to 3 meters) across. Also known as lily-pad ice; pan; pancake; pan ice; plate ice.

pancake landing [AERO ENG] Landing of an aircraft at a low forward speed and at a very high rate of descent.

pancarditis [MED] Carditis involving the endocardium, myocardium, and pericardium.

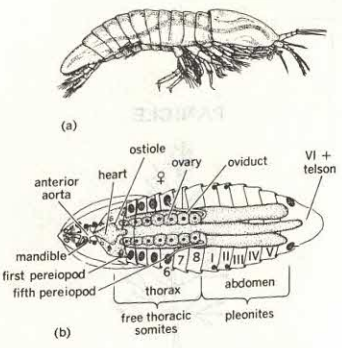
Pancarida [INV ZOO] A superorder of the subclass Malacostraca; the cylindrical, cruciform body lacks an external division between the thorax and pleon and has the cephalon united with the first thoracomere.

panchromatic [GRAPHICS] Of a photographic emulsion, film, or plate, sensitive to all wavelengths within the visible spectrum, though not uniformly so.

panchromatic film [GRAPHICS] Photographic film that is sensitive to light of all colors.

panclimax [ECOL] Two or more related climax communities

PANCARIDA



Female *Thermosbaena mirabilis* Monod. *(a)* Lateral view *(after A. Bzuun). (b)* Ventral section *(after R. Siewing).*

PANDARIDAE

Pandarus satyrus Dana, male.

PANGOLIN

Giant pangolin (*Manis gigantea*), a native to tropical Africa, maximum length 5 feet (1.5 meters).

PANICLE

Drawing of a panicle showing the branching of this type of inflorescence.

or formations having similar climate, life forms, and genera or dominants. Also known as panformation.

pan coefficient [METEOROL] The ratio of the amount of evaporation from a large body of water to that measured in an evaporation pan.

pan conveyor [MECH ENG] A conveyor consisting of a series of pans. [MIN ENG] *See* jigging conveyor.

pancreas [ANAT] A composite gland in most vertebrates that produces and secretes digestive enzymes, as well as at least two hormones, insulin and glucagon.

pancreatectomy [MED] Surgical removal of the pancreas.

pancreatic diarrhea [MED] Diarrhea due to deficiency of pancreatic digestive enzymes, characterized by the passage of large, greasy stools having a high fat and nitrogen content.

pancreatic diverticulum [EMBRYO] One of two diverticula (dorsal and ventral) from the embryonic duodenum or hepatic diverticulum that form the pancreas or its ducts.

pancreatic duct [ANAT] The main duct of the pancreas formed from the dorsal and ventral pancreatic ducts of the embryo.

pancreatic juice [PHYSIO] The thick, transparent, colorless secretion of the pancreas.

pancreatic lipase *See* steapsin.

pancreatin [BIOCHEM] A cream-colored, amorphous powder obtained from the fresh pancreas of a hog; contains amylopsin, trypsin, steapsin, and other enzymes.

pancreatitis [MED] Inflammation of the pancreas.

pancreozymin [BIOCHEM] A crude extract of the intestinal mucosa that stimulates secretion of pancreatic juice.

pan crusher [MECH ENG] Solids-reduction device in which one or more grinding wheels or mullers revolve in a pan containing the material to be pulverized.

pancytopenia [MED] Abnormally low numbers of all formed elements in the blood.

panda [VERT ZOO] Either of two Asian species of carnivores in the family Procyonidae; the red panda (*Ailurus fulgens*) has long, thick, red fur, with black legs; the giant panda (*Ailuropoda melanoleuca*) is white, with black legs and black patches around the eyes.

Pandanaceae [BOT] The single, pantropical family of the plant order Pandanales.

Pandanales [BOT] A monofamilial order of monocotyledonous plants; members are more or less arborescent and sparingly branched, with numerous long, firm, narrow, parallel-veined leaves that usually have spiny margins.

Pandaridae [INV ZOO] A family of dimorphic crustaceans in the suborder Caligoida; members are external parasites of sharks.

pandemic [MED] Epidemic occurring over a widespread geographic area.

pandermite *See* priceite.

Pandionidae [VERT ZOO] A monospecific family of birds in the order Falconiformes; includes the osprey (*Pandion haliaetus*), characterized by a reversible hindtoe, well-developed claws, and spicules on the scales of the feet.

pandurate [BOT] Of a leaf, having the outline of a fiddle.

pane [BUILD] A sheet of glass in a window or door. [DES ENG] One of the sides on a nut or on the head of a bolt.

panel [CIV ENG] **1.** One of the divisions of a lattice girder. **2.** A sheet of material held in a frame. **3.** A distinct, usually rectangular, raised or sunken part of a construction surface or a material. [COMPUT SCI] The face of the console, which is normally equipped with lights, switches, and buttons to control the machine, correct errors, determine the status of the various CPU (central processing unit) parts, and determine and revise the contents of various locations. Also known as control panel; patch panel. [ENG] A metallic or nonmetallic sheet on which operating controls and dials of an electronic unit or other equipment are mounted. [MIN ENG] **1.** A system of coal extraction in which the ground is laid off in separate districts or panels, pillars of extra-large size being left between. **2.** A large rectangular block or pillar of coal.

panel board [ELECTR] *See* control board. [ENG] A drawing board with an adjustable outer frame that is forced over the drawing paper to hold and strain it. [MATER] A rigid paperboard used for paneling in buildings and automobile bodies.

panel code [COMMUN] Prearranged code designed for visual communications between ground units and friendly aircraft.

panel coil *See* plate coil.

panel cooling [CIV ENG] A system in which the heat-absorbing units are in the ceiling, floor, or wall panels of the space which is to be cooled.

panel display [ELECTR] An unconventional method of displaying color television pictures in which luminescent conversion devices, such as light-emitting diodes or electroluminescent devices, are arranged in a matrix array, forming a flat-panel screen, and are controlled by signals sent over vertical and horizontal wires connected to both electrodes of the devices.

panel heating [CIV ENG] A system in which the heat-emitting units are in the ceiling, floor, or wall panels of the space which is to be heated.

panel length [CIV ENG] The distance between adjacent joints on a truss, measured along the upper or lower chord.

panel point [CIV ENG] The point in a framed structure where a vertical or diagonal member and a chord intersect.

panel system [BUILD] A wall composed of factory-assembled units connected to the building frame and to each other by means of anchors.

panel wall [BUILD] A nonbearing partition between columns or piers.

panendoscope [MED] A modification of the cystoscope, utilizing a Foroblique lens system, permitting adequate visualization of both the urinary bladder and the urethra.

Paneth cells *See* cells of Paneth.

panethite [MINERAL] A phosphate mineral known only in meteorites; contains sodium, potassium, magnesium, calcium, iron, and manganese.

Paneth's adsorption rule [PHYS CHEM] The rule that an element is strongly absorbed on a precipitate which has a surface charge opposite in sign to that carried by the element, provided that the resulting adsorbed compound is very sparingly soluble in the solvent.

panfan *See* pediplain.

panformation *See* panclimax.

Pangea [GEOL] Postulated former supercontinent supposedly composed of all the continental crust of the earth, and later fragmented by drift into Laurasia and Gondwana.

pangene [CYTOL] A hypothetical heredity-controlling protoplasmic particle proposed by Darwin.

pangenesis [BIOL] Darwin's comprehensive theory of heredity and development, according to which all parts of the body give off gemmules which aggregate in the germ cells; during development, they are sorted out from one another and give rise to parts similar to those of their origin.

pangolin [VERT ZOO] Any of seven species composing the mammalian family Manidae; the entire dorsal surface of the body is covered with broad, horny scales, the small head is elongate, and the mouth is terminal in the snout.

pan head [DES ENG] The head of a screw or rivet in the shape of a truncated cone.

panhypopituitarism *See* hypopituitarism.

pan ice *See* pancake ice.

panicle [BOT] A branched or compound raceme in which the secondary branches are often racemose as well.

panidiomorphic rock [GEOL] An igneous rock that is completely or predominantly idiomorphic. Also known as panautomorphic rock.

panmixis [BIOL] Random mating within a breeding population; in a closed population this results in a high degree of uniformity.

Panmycin [MICROBIO] A trade name for tetracycline.

panniculitis [MED] Inflammation of the layer of subcutaneous fat, especially in the abdomen.

panniculus [ANAT] A membrane or layer.

pannier *See* gabion.

Pannonian [GEOL] A European stage of geologic time comprising the lower Pliocene.

pannose [BIOL] Having a felty or woolly texture.

pannus [MED] **1.** Vascularization accompanied by deposition of connective tissue beneath the corneal epithelium. **2.** Overgrowth of connective tissue on the articular surface of a diarthrodial joint. [METEOROL] Numerous cloud shreds below the main cloud; may constitute a layer separated from the main part of the cloud or attached to it.

panophthalmitis [MED] Inflammation of all the tissues of the eyeball.

panoramic [OPTICS] Property of a lens or optical instrument that has a wide field of view.

panoramic adapter [ELECTR] A device designed to operate with a search receiver to provide a visual presentation on an oscilloscope screen of a band of frequencies extending above and below the center frequency to which the search receiver is tuned. Also known as panadapter.

panoramic display [ELECTR] A display that simultaneously shows the relative amplitudes of all signals received at different frequencies.

panoramic radar [ENG] Nonscanning radar which transmits signals over a wide beam in the direction of interest.

panoramic receiver [ELECTR] Radio receiver that permits continuous observation on a cathode-ray-tube screen of the presence and relative strength of all signals within a wide frequency range.

pan out [MIN ENG] To give a result, especially as compared with expectations; for example, in mining, the gravel may be said to pan out.

panplain [GEOL] A broad, level plain formed by coalescence of several adjacent flood plains. Also spelled panplane.

panplanation [GEOL] The action or process of formation or development of a panplain.

panplane *See* panplain.

pan-range [ELECTR] Intensity-modulated, A-type radar indication with a slow vertical sweep applied to video; stationary targets give solid vertical deflection, and moving targets give broken vertical deflection.

panspermia [BIOL] A 19th-century theory in opposition to the theory of spontaneous generation and proposing that all reproductive bodies are universal, developing wherever there is a favorable environment.

pansporoblast [INV ZOO] A sporont of cnidosporan protozoans that contains two sporoblasts.

pan tank *See* rundown tank.

pantellerite [PETR] A green to black extrusive rock characterized by acmite-augite or diopside, anorthoclase, and cossyrite phenocrysts in an acmite or feldspar matrix that is either pumiceous, partly glassy, fine-grained holocrystalline trachytic, or microlitic.

Panthalassa [GEOL] The hypothetical proto-ocean surrounding Pangea, supposed by some geologists to have combined all the oceans or areas of oceanic crust of the earth at an early time in the geologic past.

panting [NAV ARCH] A series of pulsations resulting from repeated minor explosions in the furnace of a ship's boiler or from vibration of a ship's plating due to sea loads.

panting beam [NAV ARCH] A beam fitted athwartship in the bow or stern of a vessel to prevent panting of the sides.

Pantodonta [PALEON] An extinct order of mammals which included the first large land animals of the Tertiary.

Pantodontidae [VERT ZOO] A family of fishes in the order Osteoglossiformes; the single, small species is known as African butterflyfish because of its expansive pectoral fins.

pantograph [ENG] A device that sits on the top of an electric locomotive or cars in an electric train and picks up electricity from overhead wires to run the train. [GRAPHICS] A drawing instrument used for copying and consisting of four rigid bars linked together in a parallelogram form; one arm, equipped with a pencil, is connected through the bars to a pointer that is used to trace the original drawing.

pantography [ENG] System for transmitting and automatically recording radar data from an indicator to a remote point.

Pantolambdidae [PALEON] A family of middle to late Paleocene mammals of North America in the superfamily Pantolambdoidea.

Pantolambdodontidae [PALEON] A family of late Eocene mammals of Asia in the superfamily Pantolambdoidea.

Pantolambdoidea [PALEON] A superfamily of extinct mammals in the order Pantodonta.

Pantolestidae [PALEON] An extinct family of large aquatic insectivores referred to the Proteutheria.

pantometer [ENG] An instrument that measures all the angles necessary for determining distances and elevations.

pantophagous [ZOO] Feeding on a variety of foods.

pantophobia [PSYCH] An abnormal fear of everything.

Pantophthalmidae [INV ZOO] The wood-boring flies, a family of orthorrhaphous dipteran insects in the series Brachycera.

Pantopoda [INV ZOO] The equivalent name for Pycnogonida.

pantothenate [BIOCHEM] A salt or ester of pantothenic acid.

pantothenic acid [BIOCHEM] $C_9H_{17}O_5N$ A member of the vitamin B complex that is essential for nutrition of some animal species. Also known as vitamin B_3.

Pantotheria [PALEON] An infraclass of carnivorous and insectivorous Jurassic mammals; early members retained many reptilian features of the jaws.

pan-type car [MIN ENG] A vehicle for removing material from quarries; it is doorless, is reversible in direction, and can be dumped from either side.

panuveitis [MED] Inflammation of the entire uveal tract.

Panzer-Forderer snaking conveyor [MIN ENG] An armored conveyor that is moved forward behind the coal plough by means of a traveling wedge pulled along by the plough or by means of jacks or compressed-air-operated rams attached at intervals to the conveyor structure.

panzootic [VET MED] Affecting many animals of different species.

papagayo [METEOROL] A violent, northeasterly fall wind on the Pacific coast of Nicaragua and Guatemala; it consists of the cold air mass of a norte which has overridden the mountains of Central America and, being a descending wind, it brings fine, clear weather.

papain [BIOCHEM] An enzyme preparation obtained from the juice of the fruit and leaves of the papaya (*Carica papaya*); contains proteolytic enzymes.

Papanicolaou's stains [CHEM] A group of stains used on exfoliated cells, particularly those from the vagina, for examination and diagnosis.

Papanicolaou test [PATH] A technique for the detection of precancerous and early noninvasive cancer by the staining and examination of exfoliated cells; used especially in the diagnosis of uterine cervical and endometrial cancer. Also known as Pap test.

Papaveraceae [BOT] A family of dicotyledonous plants in the order Papaverales, with regular flowers, numerous stamens, and a well-developed latex system.

Papaverales [BOT] An order of dicotyledonous plants in the subclass Magnoliidae, marked by a syncarpous gynoecium, parietal placentation, and only two sepals.

papaverine [ORG CHEM] $C_{20}H_{21}O_4N$ A white, crystalline alkaloid, melting at 147°C; soluble in acetone and chloroform, insoluble in water; used as a smooth muscle relaxant and weak analgesic, usually as the water-soluble hydrochloride salt. Also known as 6,7-dimethoxy-1-veratrylisoquinoline.

paper [MATER] Felted or matted sheets of cellulose fibers, formed on a fine-wire screen from a dilute water suspension, and bonded together as the water is removed and the sheet is dried.

paperboard [MATER] A composition board available in varying thicknesses and degrees of rigidity.

paper capacitor [ELEC] A capacitor whose dielectric material consists of oiled paper sandwiched between two layers of metallic foil.

paper chromatography [ANALY CHEM] Procedure for analysis of complex chemical mixtures by the progressive absorption of the components of the unknown sample (in a solvent) on a special grade of paper.

paper clay [MATER] A special-grade clay that is mixed with paper pulp to add body, weight, and finish to paper products.

paper coating [MATER] Surface coating for paper; made from suspension of clays, starches, casein, rosin, polymers, wax, or various combinations; used to give strength and special surface qualities.

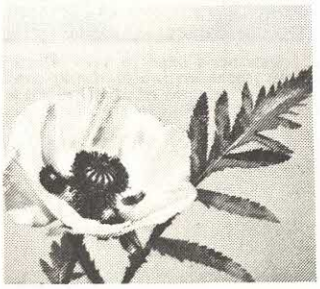
paper cutter [DES ENG] A hand-operated paper cutter and trimmer, consisting of a cutting blade bolted at one end to a ruled board; when the blade is drawn flush with the board, which has a metal strip at the cutting edge, a shearing action takes place which cuts the paper cleanly and evenly.

paper electrochromatography [ANALY CHEM] Variation of paper electrophoresis in which the electrolyte-impregnated absorbent paper is suspended vertically and the electrodes are connected to the sides of the paper, producing a current at right angles to the downward movement of the unknown sample.

paper electrophoresis [ANALY CHEM] A variation of paper chromatography in which an electric current is applied to the ends of the electrolyte-impregnated absorbent paper, thus moving chargeable molecules of the unknown sample toward the appropriate electrode.

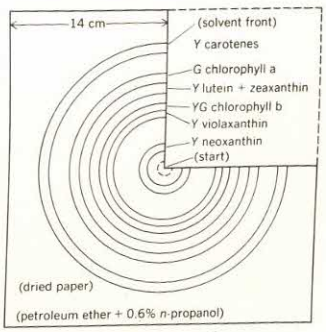
paper insulation [MATER] Electrical insulation made of paper, chiefly from coniferous woods but also from rags, rope, and

PAPAVERACEAE



Oriental poppy *(Papaver orientale)*, of the family Papaveraceae in the order Papaverales. *(Photograph by John H. Gerard, from National Audubon Society)*

PAPER CHROMATOGRAPHY



Paper chromatogram of chlorophyll showing ring separation. The circular type shown is one kind of paper chromatogram. *G* signifies green; *Y*, yellow.

other materials, which are chemically treated, beaten into a dispersed pulp, formed into a loose sheet by filtering on a moving wire screen, and compacted into paper by calendering with heated rolls.

paper machine [MECH ENG] A synchronized series of mechanical devices for transforming a dilute suspension of cellulose fibers into a dry sheet of paper.

paper master [GRAPHICS] A paper printing plate that is used on an offset duplicator.

paper mill [IND ENG] A building or complex of buildings housing paper machines.

paperoid [MATER] A heavy composition board, generally made of rope pulp and having a reddish color; used for large expandible filing envelopes.

paper shale [GEOL] A shale that easily separates on weathering into very thin, tough, uniform, and somewhat flexible layers or laminae suggesting sheets of paper.

paper spar [GEOL] A crystallized variety of calcite occurring in thin lamellae or paperlike plates.

paper tape [COMPUT SCI] A paper ribbon in which data may be represented by means of partially or completely punched holes.

paper-tape chemical analyzer [ANALY CHEM] Chemically treated paper tape that is continuously unreeled, exposed to the sample, and viewed by a phototube to measure the color change that is empirically related to changes in the sample's chemical composition.

paper-tape code [COMPUT SCI] The system by which data are represented by means of holes punched on a paper tape.

paper-tape punch [COMPUT SCI] Device which places binary characters on a paper tape by punching holes in appropriate channels on the tape; a binary one is placed on the tape by punching a hole; a zero is indicated by the absence of a punched hole.

paper-tape reader [COMPUT SCI] A reader used to sense information punched in paper tape as a series of holes. Also known as punched-tape reader; tape reader.

paper-tape Turing machine [COMPUT SCI] A variation of a Turing machine in which a blank square can have a nonblank symbol written on it, but this symbol cannot be changed thereafter.

paper-tape unit [COMPUT SCI] The mechanism which handles punched paper tape and usually consists of a paper-tape transport, sensing and recording or perforating heads, and associated electrical and electronic equipment.

paper throw [COMPUT SCI] The movement of paper through a computer printer for a purpose other than printing, in which the distance traveled, and usually the speed, is greater than that of a single line spacing.

papier maché [MATER] A lightweight molding material made from paper pulped with glue and other additives; dries to a hard finish that can be drilled, sanded, or painted.

Papilionidae [INV ZOO] A family of lepidopteran insects in the superfamily Papilionoidea; members are the only butterflies with fully developed forelegs bearing an epiphysis.

Papilionoidea [INV ZOO] A superfamily of diurnal butterflies (Lepidoptera) with clubbed antennae, which are rounded at the tip, and forewings that always have two or more veins.

Papilionoideae [BOT] A subfamily of the family Leguminosae with characteristic irregular flowers that have a banner, two wing petals, and two lower petals united to form a boat-shaped keel.

papilla [BIOL] A small, nipplelike eminence.

papilla of Vater *See* ampulla of Vater.

papillary adenoma of ovary *See* serous cystadenoma.

papillary carcinoma [MED] A carcinoma characterized by fingerlike outgrowths.

papillary muscle [ANAT] Any of the muscular eminences in the ventricles of the heart from which the chordae tendineae arise.

papillate [BIOL] **1.** Having or covered with papillae. **2.** Resembling a papilla.

papilledema [MED] Edema of the optic disk. Also known as choked disk.

papillocystoma *See* serous cystadenoma.

papilloma [MED] A growth pattern of epithelial tumors in which the proliferating epithelial cells grow outward from a surface, accompanied by vascularized cores of connective tissue, to form a branching structure.

papillomatosis [MED] Widespread formation of papillomas.

papillomatous [MED] Characterized by or pertaining to a papilloma.

papite [MATER] A poison gas composed of acrolein with stannic chloride.

papovavirus [VIROL] A deoxyribonucleic acid–containing group of animal viruses, including papilloma and vacuolating viruses.

pappataci fever *See* phlebotomus fever.

Pappotheriidae [PALEON] A family of primitive, tenreclike Cretaceous insectivores assigned to the Proteutheria.

pappus [BOT] An appendage or group of appendages consisting of a modified perianth on the ovary or fruit of various seed plants; adapted to dispersal by wind and other means.

Pappus' theorems [MATH] Theorems which give the area of a surface of revolution and volume of a solid of revolution.

paprika [BOT] *Capsicum annuum*. A type of pepper with nonpungent flesh, grown for its long red fruit from which a dried, ground condiment is prepared.

Pap test *See* Papanicolaou test.

papula [BIOL] A small papilla.

papule [MED] A solid circumscribed elevation of the skin varying from less than 0.1 to 1 centimeter in diameter.

papulonecrotic [MED] Papule formation with a tendency to central necrosis; applied especially to a variety of skin tuberculosis.

papyrus [MATER] A paperlike material made by pressing the pith of the papyrus plant in water.

PAR *See* precision approach radar.

para- [ORG CHEM] Chemical prefix designating the positions of substituting radicals on the opposite ends of a benzene nucleus, for example, paraxylene, $CH_3C_6H_4CH_3$. Abbreviated *p-*.

paraaortic body [ANAT] One of the small masses of chromaffin tissue lying along the abdominal aorta. Also known as glomus aorticum.

paraballoon [ELECTROMAG] Air-inflated radar antenna.

parabanic acid [ORG CHEM] $C_3H_2O_3N_2$ A water-soluble cyclic compound that decomposes when heated to about 227°C; used in organic synthesis. Also known as imidazoletrione; oxalylurea.

parabasal body *See* kinetoplast.

parabiosis [BIOL] Experimental joining of two individuals to study the effects of one partner upon the other.

parabituminous coal [GEOL] Bituminous coal that contains 84–87% carbon, analyzed on a dry, ash-free basis.

parabola [MATH] The U-shaped curve in the plane given by an equation of the form $y = ax^2 + bx + c$.

parabolic antenna [ELECTROMAG] Antenna with a radiating element and a parabolic reflector that concentrates the radiated power into a beam.

parabolic differential equation [MATH] A general type of second-order partial differential equation which includes the heat equation and has the form

$$\sum_{i,u=1}^{n} A_{ij}(\partial^2 u/\partial x_i \partial x_j) + \sum_{i=1}^{n} B_i(\partial u/\partial x_i) + Cu + F = 0,$$

where the A_{ij}, B_i, C, and F are suitably differentiable real functions of $x_1, x_2, \ldots, x_n$, and there exists at each point $(x_1, \ldots, x_n)$ a real linear transformation on the x_i which reduces the quadratic form

$$\sum_{i,j=1}^{n} A_{ij} x_i x_j$$

to a sum of $n - 1$ squares all of which have the same sign, while the same transformation does not reduce the B_i to 0. Also known as parabolic partial differential equation.

parabolic dune [GEOL] A long, scoop-shaped sand dune having a ground plan approximating the form of a parabola, with the horns pointing windward (upwind). Also known as blowout dune.

parabolic flight [AERO ENG] A space flight occurring in a parabolic orbit.

parabolic microphone [ENG ACOUS] A microphone used at the focal point of a parabolic sound reflector to give improved sensitivity and directivity, as required for picking up a band marching down a football field.

parabolic orbit [ASTRON] An orbit whose overall shape is

like a parabola; the orbit represents the least eccentricity for escape from an attracting body.

parabolic point of a surface [MATH] A point on a surface where the total curvature vanishes.

parabolic reflector [ELECTROMAG] An antenna having a concave surface which is generated either by translating a parabola perpendicular to the plane in which it lies (in a cylindrical parabolic reflector), or rotating it about its axis of symmetry (in a paraboloidal reflector). Also known as dish. [OPTICS] *See* paraboloidal reflector.

parabolic segment [MATH] The line segment given by a chord perpendicular to the axis of a parabola.

parabolic spiral [MATH] The curve whose equation in polar coordinates is $r^2 = a\theta$.

parabolic velocity [ASTRON] The velocity attained by a celestial body in a parabolic orbit.

paraboloid [ENG] A reflecting surface which is a paraboloid of revolution and is used as a reflector for sound waves and microwave radiation. [MATH] A surface where sections through one of its axes are ellipses or hyperbolas, and sections through the other are parabolas.

paraboloidal antenna *See* paraboloidal reflector.

paraboloidal reflector [ELECTROMAG] An antenna having a concave surface which is a paraboloid of revolution; it concentrates radiation from a source at its focal point into a beam. Also known as paraboloidal antenna. [OPTICS] A concave mirror which is a paraboloid of revolution and produces parallel rays of light from a source located at the focus of the parabola. Also known as parabolic reflector.

paraboloid of revolution [MATH] The surface obtained by spinning a parabola about its axis.

parabomb [ENG] An equipment container with a parachute which is capable of opening automatically after a delayed drop.

parabutlerite *See* butlerite.

paracaisson [ORD] Small, two-wheeled, hand-drawn vehicle whose body forms an aerial delivery container for artillery ammunition and which, upon being assembled, becomes a utility cart.

Paracanthopterygii [VERT ZOO] A superorder of teleost fishes, including the codfishes and allied groups.

paracentesis [MED] Puncture of the wall of a fluid-filled cavity by means of a hollow needle to draw off the contents.

paracentric [DES ENG] Pertaining to a key and keyway with longitudinal ribs and grooves that project beyond the center, as used in pin-tumbler cylinder locks to deter lockpicking.

paracentric inversion [GEN] A type of chromosomal alteration that occurs within one arm of a chromosome and does not span the centromere.

paracetaldehyde *See* paraldehyde.

parachlorometaxylenol *See* 4-chloro-3,5-xylenol.

parachor [PHYS] The molecular weight of a liquid times the fourth root of its surface tension, divided by the difference between the density of the liquid and the density of the vapor in equilibrium with it; essentially constant over wide ranges of temperature.

parachronology [GEOL] **1.** Practical dating and correlation of stratigraphic units. **2.** Geochronology based on fossils that supplement, or replace, biostratigraphically significant fossils.

parachute [AERO ENG] **1.** A contrivance that opens out somewhat like an umbrella and catches the air so as to retard the movement of a body attached to it. **2.** The canopy of this contrivance. [MIN ENG] A kind of safety catch for mine shaft cages.

parachute flare [ENG] Pyrotechnic device attached to a parachute and designed to provide intense illumination for a short period; it may be discharged from aircraft or from the surface.

parachute fragmentation bomb [ORD] A fragmentation bomb adapted for drop by parachute, used in low-level bombing to give the bombing plane time to escape.

parachute-opening shock [AERO ENG] The shock or jolt exerted on a suspended parachute load when the parachute fully catches the air.

parachute troops [ORD] Troops organized and trained to be carried into battle by transport aircraft and dropped by parachute, as distinguished especially from airborne infantry. Also known as paratroops.

parachute weather buoy [ENG] A general-purpose automatic weather station which can be air-dropped; it is 10 feet (3 meters) long and 22 inches (56 centimeters) in diameter, and is designed to operate for 2 months on a 6-hourly schedule, transmitting station identification, wind speed, wind direction, barometric pressure, air temperature, and sea-water temperature.

paraclinal [GEOL] Referring to a stream or valley that is oriented in a direction parallel to the fold axes of a region.

paracoccidioidomycosis *See* South American blastomycosis.

Paracoccus [MICROBIO] A genus of gram-negative, aerobic, coccoid, or nearly spherical bacteria of uncertain affiliation.

paracolon bacteria [MICROBIO] A group of bacteria intermediate between the *Escherichia-Aerobacter* genera and the *Salmonella-Shigella* group.

paracompact space [MATH] A Hausdorff space with the property that for every open covering F there is a locally finite open covering G, such that every element of G is a subset of an element of F.

paracondyloid [VERT ZOO] A process on the outer side of each condyle of the occipital bone in the skull of certain mammals.

paracone [VERT ZOO] **1.** The anterior cusp of a primitive tricuspid upper molar. **2.** The principal anterior, external cusp of an upper molar in higher forms.

paraconformity [GEOL] A type of unconformity in which strata are parallel; there is little apparent erosion and the unconformity surface resembles a simple bedding plane. Also known as nondepositional unconformity; pseudoconformity.

paraconglomerate [GEOL] A conglomerate that is not a product of normal aqueous flow but is deposited by such modes of mass transport as subaqueous turbidity currents and glacier ice; characterized by a disrupted gravel framework, often unstratified, and notable for a matrix of greater than gravel-sized fragments.

paraconid [VERT ZOO] **1.** The cusp of a primitive lower molar corresponding to the paracone. **2.** The anterior, internal cusp of a lower molar in higher forms.

paracoquimbite [MINERAL] $Fe_2(SO_4)_3 \cdot 9H_2O$ A pale-violet rhombohedral mineral composed of hydrous ferric iron sulfate; it is dimorphous with coquimbite.

paracrate [ENG] Rigid equipment container for dropping equipment from an airplane by parachute.

Paracrinoidea [PALEON] A class of extinct Crinozoa characterized by the numerous, irregularly arranged plates, uniserial armlike appendages, and no clear distinction between adoral and aboral surfaces.

Paracucumidae [INV ZOO] A family of holothurian echinoderms in the order Dendrochirotida; the body is invested with plates and has a simplified calcareous ring.

paracyanic acid *See* fulminic acid.

paracyanogen [INORG CHEM] (CN)$_x$ A white solid produced by polymerization of cyanogen gas when heated to 400°C.

paracystitis [MED] Inflammation of the connective tissue surrounding the urinary bladder.

paradidymis [ANAT] Atrophic remains of the paragenital tubules of the mesonephros, occurring near the convolutions of the epididymal duct.

paradox [SCI TECH] An argument which gives a contradictory conclusion.

paradoxical embolus [MED] An embolus which is transported to the circulation in peripheral arteries through septal defect in the heart, usually a patent foramen ovale.

paraesophageal cyst [MED] A bronchogenic cyst intimately connected with the esophageal wall, containing cartilage, and usually filled with a mucoid material and desquamated epithelial cells.

paraffin [MATER] *See* paraffin wax. [ORG CHEM] Any of the saturated aliphatic hydrocarbons of the methane series C_nH_{2n+2}.

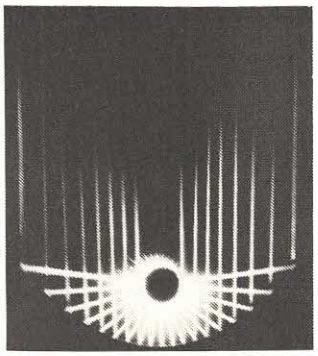
paraffin-base crude [MATER] Crude petroleum oil that contains predominately paraffin hydrocarbons, as contrasted with asphaltic- or naphthenic-base crudes; used as a source of fuels and high-grade lubricating oils.

paraffin coal [GEOL] A type of light-colored bituminous coal from which oil and paraffin are produced.

paraffin dirt [GEOL] A clay soil appearing rubbery or curdy and occurring in the upper several inches of a soil profile near gas seeps; probably formed by biodegradation of natural gas.

paraffin distillate [MATER] In a petroleum refinery, the distillate oils ready for pressing to produce crystalline paraffin wax and paraffin oil.

PARABOLOIDAL REFLECTOR



Parallel rays of light produced from paraboloidal reflector; dark circle is the light source.

PARACENTRIC INVERSION

Schematic drawing of the change taking place in paracentric inversion.

paraffinicity [ORG CHEM] The paraffinic nature or composition of crude petroleum or its products.

paraffin jelly [MATER] A light, amber-colored petrolatum; used for medicinal purposes.

paraffin oil [MATER] A viscous, pale to yellow oil made from petroleum; used as a lubricant, medicine, and leather dressing.

paraffin press [ENG] A filter press used during petroleum refining for the separation of paraffin oil and crystallizable paraffin wax from distillates.

paraffin scale [MATER] Unrefined paraffin wax remaining in the chamber after oil has been removed from a mixture of oil and paraffin by sweating.

paraffinum liquidum *See* white mineral oil.
